7. A frame for emery grinders comprising a seat-post and a gear-post, the latter having upright holes in its upper end and side recesses intersecting said holes near their lower extremities, and a driving-gear journaled on said gear-post; combined with a gear-case fitting over the upper end of the gear-post, an emery-carrying shaft journaled therein, a pinion on the shaft meshing with the driving-gear, bolts passing downward through said case into the holes of the post, and nuts on the bolts within the recesses of the post.

8. In an emery grinder, the combination with the seat-post and gear-post, and braces connecting them and standing in an upright plane; of the driving-shaft supported in bearings on the gear-post and having two cranks, a driving-wheel between them, a driven mechanism connected with said wheel, two treadles hinged to the frame, and pitman-rods connecting the treadles with the cranks, one treadle and its pitman-rod on either side of said braces.

9. In an emery grinder, the combination with the seat-post and gear-post, braces connecting them and standing in an upright plane, legs secured at their upper ends to the sides of both said posts with their bodies leading obliquely downward and outward, and cross-braces connecting said feet and secured between their ends to the lower ends of the posts; of the driving-shaft supported in bearings on the gear-post and having two cranks, a driving-wheel between them, a driven mechanism connected with said wheel, two treadles hinged to the frame, and pitman-rods connecting the treadles with the cranks, one treadle and its pitman-rod on either side of said braces.

10. In a machine of the character described, the combination with the two posts connected by braces in an upright plane, a driving-shaft mounted in bearings on one post and having oppositely-disposed grooved cranks, ball-cases surrounding said cranks, and series of balls therein; of two treadles hinged to the opposite post, and two pitman-rods each connecting a treadle with a casing, each treadle and rod standing to one side of said braces.

11. In a machine of the character described, the combination with the driven shaft and mechanism, the driving-shaft having cranks, the driving-wheel between said cranks and connected with the driven shaft, and an upright post having bearings for said driving-shaft and a slot for said driving-wheel; of ball-bearings mounted within casings on said cranks, two treadles, and pitman-rods connecting the treadles with the casings respectively.

12. The combination of a crank-shaft, with a hinged treadle, a pitman-rod pivoted at one end to the treadle, and a ball-bearing between its other end and the crank, substantially as described.

710,099. METHOD OF EXHAUSTING INCANDESCENT ELECTRIC LAMPS OF RELATIVELY LOW VOLTAGE. SAMUEL E. DOANE, Marlboro, Mass., assignor to The Bryan-Marsh Company, New York, N. Y., a Corporation of New York. Filed Feb. 7, 1902. Serial No. 93,049. (No model.)

Claim.—The described method or process of exhausting an incandescent electric lamp of relatively low voltage, consisting in first, producing a partial vacuum within the bulb thereof; second, generating a gas therein; third, passing a current of electricity through the filament of the lamp sufficient to heat it to incandescence and finally, passing an additional current of electricity of higher voltage directly through the gases in the vacuous space so as to act upon said gases in such manner as to dissipate them.

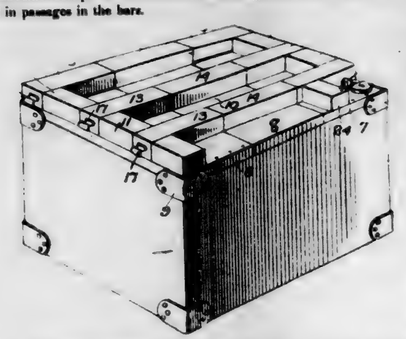
710,100. SHIPPING-BOX. JOHN T. HIGGS, Boston, Mass. Filed May 23, 1902. Serial No. 108,612. (No model.)

Claim.—1. In a shipping-box, the combination with the body of the box having compartments, of a sectional cover, two portions of which are permanently attached to the body while the third part is removable, said cover being provided with longitudinal and transverse reinforcing bars or cleats, and means for locking the cover in position consisting of longitudinal pieces passing through passages in the longitudinal bars, and a transverse rod engaging said pieces and provided with means for locking it.

2. The combination in a shipping-box, with the box-body, of a sectional cover, one part of which is removable while the other parts are permanently attached to the body, said cover having reinforcing-bars thereon provided with passages, strips located in said passages for holding the removable section of the cover in position, and a locking-rod engaging said strips.

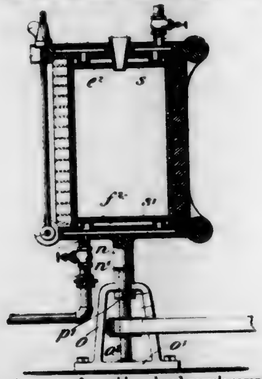
3. The combination with a box-body, of a cover made in sections, one of which is removable while the others are permanently attached to

the body, said cover having strengthening-bars thereon, and locking means for the removable portion of the cover consisting essentially of pieces situated in passages in the bars.



4. The combination with the body of the box, of a cover made in sections, one of which is removable while the others are permanently attached to said body, said cover having strengthening-bars provided with passages, locking means for securing the removable portion of the cover consisting of strips located in the passage in the bars, a transverse rod engaging said strips, and means for securing said rod against removal.

710,101. APPARATUS FOR THE MANUFACTURE OF CLOSED VESSELS FROM PULP. FRANK B. HOWARD, New York, N. Y., assignor to Laflin & Rand Powder Company, New York, N. Y., a Corporation of New York. Filed Jan. 16, 1902. Serial No. 90,027. (No model.)



Claim.—1. Apparatus for making closed vessels comprising a mold having its body portion perforated and its heads provided with vacuum-chambers in communication with the interior of the mold, means for placing the vacuum-chambers in communication with a vacuum appliance and means for rotating the mold, substantially as set forth.

2. The combination with a mold mounted to rotate and comprising a perforated body and heads each provided with a vacuum-chamber in communication with the interior of the mold, of means for connecting and disconnecting the said heads with a vacuum appliance, for holding previously-formed vessel-heads on the inner faces of the heads of the mold during the molding of the body portion, substantially as set forth.

3. The combination with a mold mounted to rotate and comprising a perforated body, and heads, each provided with a vacuum-chamber in communication with the interior of the mold of means for connecting and disconnecting the heads with a vacuum appliance, the said mold-heads being provided with inwardly-projecting bases to determine the height of chime and to receive previously-formed vessel-heads thereon during the molding of the body portion.

710,102. OPERATING-ROLL FOR LEATHER-WORKING MACHINES. ALBERT F JOHNS, Salem, Mass. Filed Jan. 9, 1902. Serial No. 89,016. (No model.)

Claim.—1. In a leather-working machine, an operating-roll having helically-arranged yielding ribs, each comprising a set of springs projecting from the roll and a "felt covering" therefor, substantially as described

2. In a leather-working machine, an operating-roll having helically-arranged yielding ribs, each comprising a set of springs seated in sockets in the roll and projecting therefrom, and a "felt covering" therefor, substantially as described.

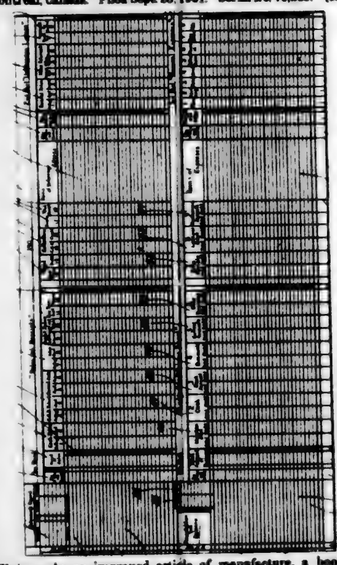
3. In a leather-working machine, an operating-roll having helically-arranged yielding ribs, each comprising a set of springs projecting from a roll, means for confining said springs and for holding them relatively disposed, and a "felt covering" therefor, substantially as described.

4. In a leather-working machine, an operating-roll having helically-arranged yielding ribs, each comprising a set of springs projecting from the roll, edge strips for said set of springs, and a "felt covering" inclosing said springs and edge strips, substantially as described.

5. In a leather-working machine, an operating-roll having helically-arranged ribs, each comprising a set of springs projecting therefrom and a "felt covering" therefor and means for detachably securing said "felt covering," substantially as described.

6. In a leather-working machine, an operating-roll having helically-arranged yielding ribs, each comprising a set of springs projecting from a roll, edge strips for said set of springs, a flexible strip superimposed on said springs and edge strips for confining said springs and holding them relatively disposed, and a "felt covering," substantially as described.

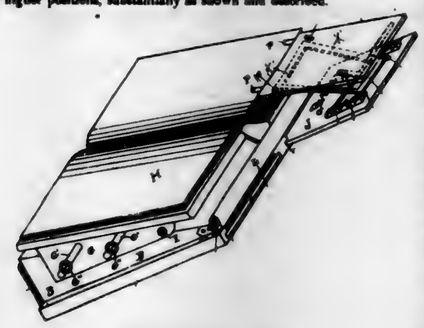
710,103. SYSTEM OF BOOKKEEPING. FREDERIC LAPOINTE, Montreal, Canada. Filed Sept. 23, 1901. Serial No. 76,235. (No model.)



Claim.—As an improved article of manufacture, a bookkeeping-sheet comprising in a single element four correlated sections or parts, the middle portion of said sheet being ruled to provide an intermediate space dividing the upper and lower portions, a reserved space at the left-hand edge thereof headed "Recapitulation and balance" for recapitulation in condensed form of the entries contained in the fourth section, and having a numbered column corresponding to the number of vertical columns in the said fourth section, said four sections being arranged in each of the four quarters of the sheet with the first and fourth and the second and third sections in vertical alinement, and the first and fourth sections of greater width than the second and third, each section having columns with appropriate headings relating to each section, and the fourth section having a total-business column, and each section and the recapitulation and balance space having corresponding columns for the number of folio, and all arranged for use, substantially as shown and described.

710,104. BOOK-SUPPORT AND ARM-REST. OLIVER G. LAW, Dayton, Ohio. Filed Apr. 6, 1901. Serial No. 54,701. (No model.)

Claim.—A book rest or support comprising a base-board A, a desk having a hinged connection to the front end of said base board, adjustable side pieces on said desk, the side pieces being of substantially triangular shape and having two inclined slots therein, pins projecting from the stationary sides of the desk and entering said inclined slots, by means of which said side pieces are slidingly supported in position to elevate the desk to desired positions, ratchet mechanism interposed between the rear ends of the base-board and the desk whereby said desk may also be elevated to suitable positions, and additional means for supporting the desk in higher positions, substantially as shown and described.



710,105. BRACELET. SIGMUND LIMBURG, Providence, R. I. Filed Apr. 17, 1902. Serial No. 103,289. (No model.)

Claim.—1. In a bracelet, the combination with yokes comprising a cross-bar and ears extending at right angles therefrom and provided with openings in their ears, of links passing through said openings, and an elastic core longitudinally traversing the bracelet.

2. In a bracelet, the combination with yokes comprising a cross-bar and ears extending at right angles therefrom and provided with openings in their ears and inwardly-directed guides, of links passing through said openings, and an elastic core longitudinally traversing the bracelet through said guides.

3. In a bracelet, the combination with a series of yokes comprising a cross-bar and ears extending at right angles therefrom and provided with openings in their ears, of a series of links lying in a plane parallel to the cross-bars of the yokes and passing through said openings, and an elastic core engaging said yokes and links.

4. In a bracelet, the combination with a series of yokes comprising a cross-bar and ears extending at right angles therefrom and provided with openings in their ears and inwardly-directed guides, of a series of links lying in a plane at right angles to the ears of the yokes, and passing through said openings, inwardly-directed guides upon the links, and an elastic core longitudinally traversing the bracelet through the guides.

5. In a bracelet, the combination with a series of yokes comprising a cross-bar and ears extending at right angles therefrom and provided with openings in their ears and inwardly-directed guides, of a series of links lying in a plane at right angles to the ears of the yokes, and passing through said openings, inwardly-directed guides upon the links of lesser diameter than the yoke-guides, and an elastic core longitudinally traversing the bracelet through the guides.

710,106. PROCESS OF PRODUCING NEGATIVE PLATES FOR BICHROMATED-GELATIN PROCESSES. AUGUST LUMIÈRE, Brooklyn, N. Y. Filed July 20, 1901. Serial No. 69,063. (No specimens.)

Claim.—1. The process hereinbefore described of producing a negative plate for bichromated-gelatin process, consisting in producing a photographic negative of the object to be reproduced, making a positive print therefrom and coloring features thereof with colors of different reflecting potency, photographing the colored print, and then developing and fixing the negative thus produced upon a transparent plate.

2. The process described of producing a negative plate for bichromated-gelatin process, consisting in producing a photographic negative of the object to be reproduced, making a positive print therefrom and coloring features thereof with colors of different reflecting potency, coloring the background of the picture with color of less reflecting potency than that used on the features of the picture, photographing the colored print, and then developing and fixing the negative thus produced upon a transparent plate.

3. The process described of producing a negative plate for bichromated-gelatin process consisting in producing a photographic negative of the object to be reproduced, making a positive print therefrom and coloring the most prominent features in the picture with a color of high reflecting potency and successively coloring the less prominent features with colors of correspondingly less reflecting potency, photographing the colored print, and developing and fixing the negative thus produced upon a transparent plate.

4. The process described of producing a negative plate for bichromated-gelatin process, consisting in producing a photographic negative of the object to be reproduced, making a positive print therefrom and coloring the prominent features in the picture with a color of high reflecting potency, retouching the receded parts with tints of less reflecting potency, photographing the print thus colored, and developing and fixing the negative thus produced upon a transparent plate.

5. The process described of producing a negative plate for bichromated-gelatin process, consisting in producing a photographic negative of the object, to be reproduced, making a positive print therefrom, and coloring the more prominent features thereof with a color of high reflecting potency and the less prominent features with colors of correspondingly less reflecting potency, retouching the receded parts in each group of features with darker tints of the colors applied to the features of each group, photographing the colored print, and developing and fixing the negative thus produced.

6. The process described of producing a negative-plate for bichromated-gelatin process consisting in producing a photographic negative of the object to be reproduced, making a positive print therefrom and coloring the more prominent features thereof with color of high reflecting potency and successively coloring the less prominent features with colors of correspondingly less reflecting potency, retouching the receded parts of the features of each successive group with darker tints of the color applied to the features in that group, coloring the background with a color of less reflecting potency than the color used upon more receded features of the object, photographing the colored print, and developing and fixing the negative thus produced.

7. The process described of producing a negative plate for bichromated-gelatin process, consisting in producing a photographic negative of the object to be reproduced, making a positive print therefrom and coloring the more prominent parts thereof with a color of high reflecting potency and the less prominent parts with colors of correspondingly less reflecting potency, retouching the receded parts of the features of each group with successively darker tints of the colors applied to the features in each group, coloring the background in a similar manner as the features of the picture with colors of correspondingly less reflecting potency than those used on the features of the more receded group, photographing the colored print, and developing and fixing the negative thus produced.

8. The process described of making a negative plate from a photograph, for purposes of reproduction, which consists in shading features of the photograph with colors of different reflecting potency as required, and producing a photographic negative plate of the picture thus prepared.

9. The process of producing a negative plate for bichromated-gelatin process from a pictorial representation, which consists in shading the features of the same with colors of different reflecting potency, as described, and producing a full-tone picture, and then producing a photographic negative plate from the picture thus prepared.

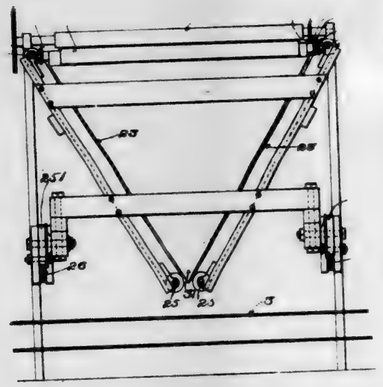
710,107. LAPPING-MACHINE. WILLARD I. LEWIS, Walpole, Mass. Filed Apr. 29, 1901. Serial No. 57,914. (No model.)

Claim.—1. In a lapping-machine, in combination, a fleece-supplying machine, a triangular doubler receiving the fleece from said machine and over the apex and sides of which the fleece passes and is doubled longitudinally, supporting-surfaces for the side portions of the fleece adjacent the sides of said doubler, and a lap-former on which the doubled fleece is received, substantially as described.

2. In a lapping-machine, in combination, a fleece-supplying machine, a triangular doubler over which the fleece from said machine passes and is doubled lengthwise of itself, endless aprons at opposite sides of the doubler supporting the side portions of the fleece, and a lap-former on which the doubled fleece is received, substantially as described.

3. In a lapping-machine, in combination, the fleece-supplying machine, the plurality of lap-formers arranged side by side, means for de-

livering the fleece from said machine to said lap-formers adjustable to deliver to either of said lap-formers as desired, substantially as described.



4. In a lapping-machine, in combination, the fleece-supplying machine, the plurality of lap-formers arranged side by side, and a doubler by which the fleece is doubled lengthwise upon itself, said doubler being adjustable to deliver to either of said lap-formers as desired, substantially as described.

5. In a lapping-machine, in combination, the plurality of lap-formers arranged side by side, the movable doubler-frame, and the doubler connected with said doubler-frame and adapted to be placed in operative position with relation to either of said lap-formers as desired, substantially as described.

6. In a lapping-machine, in combination, the plurality of lap-formers arranged side by side, the movable doubler-frame, the doubler, adapted to be placed in operative position with relation to either of said lap-formers as desired, the fleece-supplying machine and means for conveying the fleece therefrom to the doubler, and the transfer-apron to transfer the fleece from the said means to the doubler when the latter is in operative relations with the more remote lap-former, substantially as described.

7. In combination, means for supplying a fleece, the triangular doubler over which the fleece is doubled lengthwise upon itself, the clearer-roll at the receiving end of the face of the doubler, and the surfaces to support the sides of the fleece, at the sides of the doubler, substantially as described.

8. In combination, means for supplying a fleece, the triangular doubler over which the fleece is doubled lengthwise upon itself, the clearer-roll at the receiving end of the face of the doubler, and the endless aprons at the sides of the doubler to support the sides of the fleece, substantially as described.

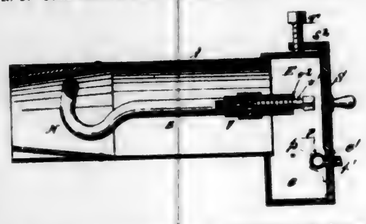
9. In combination, the fleece-conveying apron 4, the clearer-roll adjacent the delivery portion of the said apron serving to detach the fleece from said delivery portion, and the triangular doubler having its main face inclined with reference to the vertical and to which the fleece descends from the clearer-roll, substantially as described.

10. The combination, in devices for folding or doubling longitudinally a fleece of fibrous material, of a delivery-apron, an inclined triangular guide presenting a smooth surface throughout its superficial area and arranged to receive the fleece from the delivery-apron, and inclined aprons mounted upon rollers which are parallel to each other, traveling under the guide and toward each other whereby the fleece is folded or doubled longitudinally, substantially as described.

11. The combination, in devices for folding or doubling longitudinally a fleece of fibrous material, of a delivery-apron, two aprons arranged to travel at right angles to the travel of the delivery-apron, and arranged on an incline and spaced apart for the passage of the folded fleece, with an inclined triangular guide presenting a smooth surface throughout its superficial area, mounted in the space above the two aprons and arranged to receive the fleece from the delivery-apron, substantially as described.

12. The combination, in devices for folding or doubling longitudinally a fleece of fibrous material, of a frame, an inclined guide-surface thereon presenting a smooth surface throughout its superficial area, a set of rollers on each side of said guide, and a continuous apron on each set of said rollers whereby a fleece of fibrous material may be received from the guide-surface and folded or doubled longitudinally, substantially as described.

710,108. HYDROCARBON-HEATER. ABBOT A. LOW, Brooklyn, N. Y. Filed June 17, 1901. Serial No. 64,739. (No model.)



Claim.—1. The combination of the cylindrical shell, the vaporizing-tube, needle-valve, and hydrocarbon-supply pipe, the extension-box fitting on the end of the cylindrical shell, the starting-cup formed in the lower part of the extension-box, the compressed-air nozzle situated inside the extension-box and at the back of the starting-cup, means for supplying compressed air to said nozzle, and an adjustable gate-slide having a lug extending over the top of the box and a screw passed through said lug and engaging the top of the box for regulating the amount of air under atmospheric pressure admitted to the extension-box in proximity to the compressed-air nozzle, substantially as and for the purpose herein set forth.

2. The combination of the cylindrical shell, the vaporizing-pipe, needle-valve, and pipe for supplying hydrocarbon thereto, the extension-box fitting on the rear end of the cylindrical shell, the starting-cup formed in the lower part of the extension-box, the compressed-air nozzle situated below the rear edge of the starting-cup, a gate-slide situated at the rear side of the extension-box and having a horizontal lug extending over the top of the box, and means engaging said lug and the top of the box for adjusting said gate-slide with relation to the rear edge of the starting-cup for the purpose of regulating the admission of air under atmospheric pressure to the extension-box, substantially as described.

3. The combination of the cylindrical shell A, the vaporizing-tube B, the needle-valve V, the hydrocarbon supply-pipe *b*, the extension-box E, fitting the end of the cylindrical shell A, the starting-cup *e*, the compressed-air nozzle P, formed with the inclined passages *p*, means for supplying compressed air to the said nozzle P, the bodily-removable gate-slide S, and means for adjusting it with relation to the rear edge *e'*, of the starting-cup *e*, substantially in the manner and for the purpose set forth.

4. The combination with the cylindrical shell A, vaporizing-tube B extending lengthwise within said shell, needle-valve V in the end of said tube, supply-pipe *b*, the extension-box E, formed with the starting-cup, the compressed-air nozzle P disposed within said box and extending transversely along the edge thereof, and the supply-pipe connected therewith and formed with the funnel-shaped coupling p^3, for the reception of the nose of a hand-bellows, substantially in the manner and for the purpose described.

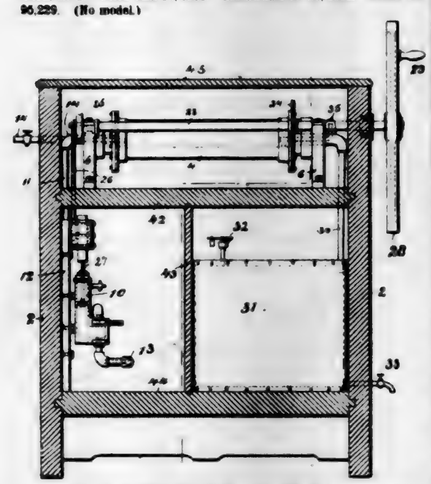
710,109. CUTTING DEVICE. ABBOT A. LOW, Horseshoe, N. Y. Filed Feb. 21, 1902. Serial No. 95,026. (No model.)

Claim.—1. In a cutting device of the character described, the combination with a stationary cutting-block, of a horizontally-reciprocatory cutting-blade having inclined upper face, guides for said blade, a spring acting on the blade to hold it normally away from said block, and a vertically-movable plunger movable in guides with its lower end resting on said inclined face of the blade.

2. In a cutting device of the character described, the combination with a stationary cutting-block, of a horizontally-reciprocatory cutting-blade, a vertically-movable plunger with its lower end resting upon the upper face of the said blade which is inclined, and means for forcing said plunger downward to cause the blade to move toward the said block, and means for retracting said blade when the plunger is moved upward.

3. The combination with a stationary cutting-block, of a horizontally-reciprocatory cutting-blade having inclined upper face at one end, a guide-block for said cutting-blade, a raceway in said block, a plunger disposed vertically with its lower end movable through said guide-block guides for said plunger, means for moving said plunger downward to force the blade endwise, and means for retracting said blade when the plunger is moved upward, all as set forth.

710,110. CARBONATING LIQUIDS. PETER E. MALMSTROM, New York, N. Y. Filed Jan. 17, 1901. Renewed Feb. 24, 1902. Serial No. 95,229. (No model.)



Claim.—1. In an apparatus of the class described, the combination with a revolving mixing-chamber, of hollow bearings, closed at their outer ends, supporting said mixing-chamber and communicating with the interior thereof, means for simultaneously injecting water and gas through one of said hollow bearings into said chamber, and means leading from said other hollow bearing for carrying off the commingled contents of said mixing-chamber, substantially as described.

2. In an apparatus of the class described, the combination of a hollow stationary shaft having closed ends, a revolable mixing-chamber mounted on said shaft, apertures in said shaft communicating with said chamber, means for injecting gas and water into said chamber through said hollow shaft, and means for drawing off the commingled contents of said chamber, substantially as described.

3. In an apparatus of the class described, the combination of a stationary shaft having counterbored ends, a revolable mixing-chamber mounted on said shaft, apertures in said shaft communicating with said chamber, means for injecting gas and water into said chamber through one of said counterbored ends and means for drawing off the commingled contents of said chamber through the other counterbored end, substantially as described.

4. In an apparatus of the class described, the combination with a rotatable cylinder, a stationary shaft provided with tubular bearing ends supporting said cylinder, means for simultaneously injecting liquid and gas through one of said tubular ends into said cylinder, a storage-receptacle, and communicating means between said storage-receptacle and the other of said tubular bearings, substantially as described.

5. In an apparatus of the class described, the combination with a revolving mixing-chamber, of hollow bearings, closed at their outer ends supporting said mixing-chamber and communicating with the interior thereof, means for simultaneously injecting water and gas through one of said hollow bearings into said chamber, means leading from said other hollow bearing for carrying off the commingled contents of said mixing-chamber, and a series of narrow continuous strips projecting radially within said mixing-chamber and disposed longitudinally substantially the length thereof, substantially as described.

6. In an apparatus of the character described, the combination with a revolving cylinder, of a stationary shaft having tubular ends supporting said cylinder and communicating with the interior thereof, a pump, connection between said pump and one of said tubular ends, means for drawing off the contents of said cylinder through the other said tubular end, a shaft mounted in proximity to said revolving cylinder, and means on said shaft for simultaneously operating said revolving cylinder and pump, substantially as described.

7. In apparatus of the character described, the combination with a revolving mixing chamber, a gas and water inlet for said chamber, an exit-pipe for said chamber, a force-pump connected with said water-inlet, a gear-wheel on said revolving chamber, a shaft mounted in proximity to said revolving chamber carrying a pinion meshing with said gear-wheel, means on said shaft for operating said force-pump, and means for revolving said shaft, substantially as described.

8. In an apparatus of the character described the combination with a revolving mixing-chamber mounted on hollow bearings opening into said chamber, a gas and water inlet opening into one of said hollow bearings, a storage or carbonating tank, connections between the other of said hollow bearings and said storage-tank, a force-pump controlling the supply of water to said water-inlet, a shaft mounted in proximity to said revolving chamber, connections between said shaft and said revolving chamber, connections between said shaft and said force-pump, and means for simultaneously operating said shaft, revolving chamber and force-pump, substantially as described.

9. In apparatus of the class described, the combination with a hollow cylinder having longitudinal ribs on the inside, a stationary shaft or axle on which said cylinder revolves, stuffing-boxes at the ends of the cylinder, one end of said shaft being counterbored, and opening into the cylinder, gas and liquid mains connected therewith, the other end of the shaft being also counterbored and opening inside the cylinder, this opening being extended down near the lower side of the cylinder, and a pipe leading away from said last-named counterbore.

10. In apparatus of the class described, the combination with a revolving mixing-chamber having a hollow stationary journal, a water gage or indicator communicating with the interior of said chamber through said hollow journal, and means for equalizing the pressure on top of the water in the chamber and in the gage.

11. In apparatus of the class described, the combination with a revolving mixing-chamber having a stationary hollow journal, a water-gage outside said chamber, and communicating with the interior thereof through said hollow journal, and a small pipe or tube also leading through said hollow journal, and ending above the water in both the mixing-chamber and the water-gage, whereby the gas-pressure in both are equalized.

12. In apparatus of the class described, the combination with a revolving cylinder having a gear-wheel secured thereto, a shaft parallel with said cylinder and carrying a pinion or gear-wheel meshing with said other gear-wheel, an eccentric also carried by said shaft, a force-pump connected with said cylinder, and having a connecting-rod secured to said eccentric, a balance-wheel and handle or crank on said shaft whereby upon applying power to the wheel or crank the cylinder is revolved and the force-pump operated to inject liquid into the cylinder.

13. The combination with a revolving cylinder having hollow stationary journals, a force-pump connected with one of the hollow journals to force water thereinto, a gas-pipe also connecting with said hollow journal, a storage or carbonating cylinder having a connection with the other hollow journal, and means to operate the cylinder and the pump.

14. In a carbonating apparatus, a box-like structure having an upper compartment closed by a lid or cover to the box, and two lower compartments closed by doors in the side of the box, a revolable commingling-chamber in the upper compartment, a force-pump in one of the lower compartments, a pipe leading from the main outside the box to the force-pump and to the said chamber, a gas-pipe also leading from outside the said chamber, a storage or carbonating cylinder or tank located in the other lower compartment into which the mingling-chamber discharges through a tube or pipe, the tank being provided with a safety-valve and dispensing-pipe, a water-gage for said chamber, and means projecting outside said box for operating said chamber and pump, the whole box and apparatus being adapted to be kept cool by ice placed in the upper compartment.

15. In an aerating apparatus, the combination of a mechanically-operated cylinder, longitudinal ribs projecting radially within said cylinder, fixed hollow cylindrical supports for the said cylinder, pipes connected to each end of the said cylinder through the said supports, packing-boxes fastened to the said cylinder, and conical packing-rings located in the said boxes.

710,111. PROPELLER. CARRY A. MANNER, Pearl, Ill. Filed June 28, 1901. Serial No. 66,417. (No model.)

Claim.—1. The combination with a ship, of a propeller composed of a series of slats attached to the ship by an unyielding connection, means for revolving said slats continuously, and means for temporarily retaining said slats at an angle whereby said propeller will both buoy and propel the boat, substantially as specified.

2. The combination of a rotating propeller composed of the frame A and the slats B pivoted to said frame A, a rotating skeleton frame C, C', C for supporting said frame A, a semicircular wheel E, a frame D, a drive-shaft K, cranks L and N, and the rod M connecting said cranks, substantially as specified.

3. In a propeller for boats, ships, &c., a frame, a series of slats carried thereby, means for temporarily retaining said slats at an angle and unyielding connections between the propeller and the boat for revolving

said frame and slats continuously to both raise and propel the boat or ship forwardly, substantially as specified.

4. In a propeller for boats, ships, &c., a frame, a series of slats carried thereby, means for moving said frame and slats to any desired angle, and means for revolving said propeller to buoy and propel the boat, substantially as specified.

5. A propeller, consisting of the frame A and the slats B pivotally carried upon the bearings U, and shoulders A' for holding said slats in alinement in combination with suitable means for revolving the frame and slats so that the boat will be both buoyed and propelled, substantially as specified.

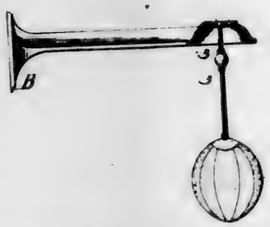
6. In a propeller of vehicles for water navigation, the combination of pivoted slats which close together in a frame and compose thereby an extended surface for action against the water, said slats under reverse action open apart, allowing the water to flow between them, and suitable devices for revolving the frame and slats so that they will both buoy and propel the vehicle.

7. In a propeller of vehicles for water navigation, closing and opening slatted plates attached to a revolving and interrevolving skeleton C, C', C by means of which, said plates are given a reciprocally chopping or plunging and revolving motion in combination with means for temporarily retaining said slatted plates at an angle, substantially as specified.

8. In a propeller for boats, ships, &c., a frame, a slat carried thereby, means and unyielding connections for moving said frame and slat to any desired angle, and means for revolving said propeller to both buoy and propel the boat, substantially as specified.

9. A propeller, consisting of an inclined plane attached to the ship by an unyielding connection and constructed to be forced downwardly to simultaneously lift the ship upwardly and propel it forwardly in any desired direction, in combination with means arranged to cause said plane to rise edgewise for the purpose of minimizing the resistance to the medium in which the ship is floating or riding, substantially as specified.

710,112. SUPPORTING DEVICE FOR PUNCHING-BAGS. GEORGE S. MAXWELL, Madison, N. J., assignor of one-half to Henry Durell Crippen, New York, N. Y. Filed May 14, 1901. Serial No. 60,160. (No model.)

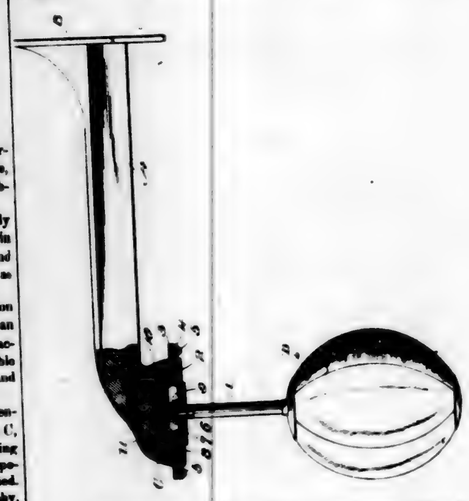


Claim.—1. In combination, in a device for supporting a punching-bag, a rod to which said bag is attached, said rod being of substantially uniform cross-section, a joint member carrying in its sides pivot-pins engaging directly with said rod and a bracket carrying pivot-pins for engaging the ends of said joint member substantially as and for the purpose specified.

2. In combination, in a device for supporting a punching-bag, a rod to which said bag is attached, said rod being of substantially uniform cross-section, an elongated rectangular joint member carrying in its sides pivot-pins engaging directly with said rod, and a bracket carrying pivot-pins for engaging the ends of said rectangular joint member, substantially as and for the purpose described.

710,113. PUNCHING-BAG SUPPORT. GEORGE S. MAXWELL, Jersey City, N. J., assignor of one-half to Henry D. Crippen, New York, N. Y. Filed June 12, 1902. Serial No. 111,340. (No model.)

Claim.—1. In a device of the class described, a bracket having a dome in the end thereof, a spring-disk closing the opening of said dome, a bag-supporting rod passing through an aperture in said disk, and a plate carried by said rod adjacent a face of the said disk whereby the swing of said rod will be regulated by the contact between said plate and disk.



2. In a device of the class described, a bracket having a dome in the end thereof, a spring-disk closing the opening of said dome, and a bag-supporting rod passing through an aperture in the center of said disk carrying clamping-plates one adjacent each face of said disk.

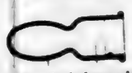
3. In combination, a bracket having a dome C in the end thereof, a disk 2 closing the opening of said dome and secured thereto, and a bag-supporting rod 1 flexibly suspended by said disk by means of clamping-plates 7 and 8 attached to said rod on each side of said disk.

4. In combination, a bracket, a dome in the end thereof, a flexible disk 2 closing the opening of said dome and secured thereto, a bag-supporting rod 1, passing through an aperture in said disk, a plate 8 secured to said rod adjacent the inner face of the said disk, and a buffer located within said dome in position to be engaged by said plate during the swing of said rod.

5. In combination, a bracket A, a dome C on the end thereof, a flexible disk 2 closing the opening of said dome and secured thereto, a bag-supporting rod 1 passing through an aperture in said disk, clamping-plates 7 and 8 secured to said rod one on each side of said disk, and a yielding buffer secured to the top of said dome in position to be engaged by the upper clamping-plate during the latter portion of the swing of the rod substantially as and for the purpose set forth.

6. In a device of the class described, a bracket having a dome in the end thereof, a spring member extending across said dome, a bag-supporting rod passing through an aperture in said spring member, and a plate carried by said rod adjacent a face of said spring member whereby the swing of said rod will be regulated by the contact between said plate and said spring member.

710,114. NIPPLE. EDWARD R. MEDDEN, New Haven, Conn., assignor to the Seamless Rubber Co., New Haven, Conn., a Corporation. Filed Apr. 17, 1902. Serial No. 103,207. (No model.)



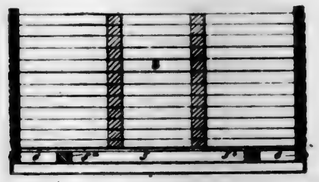
Claim.—A flexible rubber nipple for nursing-bottles having a smooth, auxiliary coating of rubber applied directly to its exterior surface, which is thereby given a smooth finish, substantially as described.

710,115. CRIB. HERMAN NEUMAN, Painesdale, Mich. Filed Mar. 24, 1902. Serial No. 99,669. (No model.)

Claim.—1. A crib having outstanding upwardly-presented ledges on its outer walls, substantially as shown and described.

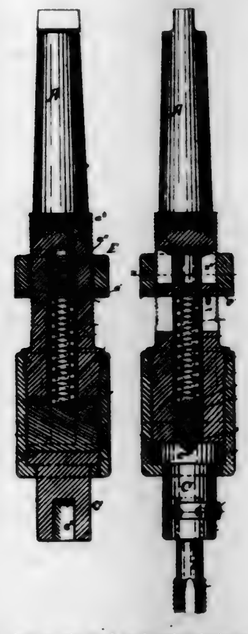
2. A crib comprising superposed frames having upwardly-presented horizontal ledges on the outside edges thereof, substantially as shown and described.

3. A crib comprising a series of superposed horizontal beams, the upper surface of each beam being of greater width than the lower surface of the adjoining upper beam, forming earth-engaging ledges on the outside of the crib.



4. A crib having outstanding upwardly-presented ledges on its outer walls, and a cutting edge at its base, substantially as shown and described.

710,116. TAPPING AND STUD-SETTING DEVICE. CARL G. OSTEMAN and CHARLES W. H. BLOOD, Boston, Mass.; said Osteman assignor to said Blood. Filed May 20, 1898. Serial No. 682,371. (No model.)



Claim.—1. In a tapping and stud-setting device, the combination of a main spindle, a tap-holder operatively attached to the end thereof, a yielding clutch-driver inserted in the end of said spindle forming operative connection between the spindle and the tap-holder, an adjustable nut on the outside of said spindle, and means for applying pressure with said nut upon said clutch-driver, substantially as described and for the purpose set forth.

2. In a tapping and stud-setting device, the combination of a main spindle, a tap-holder operatively attached to the end thereof, a transverse groove across the abutting end of said tap-holder, a yielding clutch-driver inserted in the end of said spindle and engaging with the groove in the tap-holder, an adjustable nut on the outside of said spindle, and means for applying pressure with said nut upon said clutch-driver, substantially as described and for the purpose set forth.

3. In a tapping and stud-setting device, the combination of a main spindle, a tap-holder operatively attached to the end thereof, a yielding clutch-driver inserted in the end of said spindle forming operative connection between the spindle and the tap-holder, an adjustable nut on the outside of said spindle, and means for applying a yielding pressure upon said nut with said clutch-driver for forcing the latter to release from engagement with the groove in the tap-holder, substantially as described and for the purpose set forth.

4. In a tapping and stud-setting device, the combination of a main spindle, a clutch-driver having an inclined edge inserted in a transverse slot across the end thereof, a tap-holder operatively attached to and abutting the end of said spindle, a transverse groove across the abutting end of said tap-holder and engaging with the inclined edge of said clutch-driver, and an adjustable nut on the outside of said spindle with means for engaging said nut with said clutch-driver for forcing the same into operative engagement with the tap-holder, substantially as specified and for the purpose set forth.

5. In a tapping and stud-setting device, the combination of a main spindle, a tap-holder operatively attached to the end thereof, a clutch-driver inserted in the end of said spindle, forming operative connection between the spindle and the tap-holder, a spring contained within a central bore in said spindle and bearing upon said clutch-driver and acting to force the same into operative engagement with the tap-holder, and a nut on the outside of said spindle and means for engaging the same with said spring, whereby the tension of the latter may be regulated, substantially as specified and set forth.

6. In a tapping and stud-setting device, the combination of a main spindle, a tap-holder held at one end thereof and operatively connected therewith by means of a self-acting clutch-driver, a central bore within said spindle forming a chamber for a spring, one end thereof bearing on said clutch-driver and the other end supported by means of a cross-bar passing transversely through the body of the spindle by means of suitable openings therein, the ends of said cross-bar extending beyond the sides of the spindle and engaging with, and adjustable by a nut thereon, substantially as and for the purpose specified.

7. In a tapping and stud-setting device, the combination of a main driving-spindle, an outwardly-flanged tap-holder abutting one end thereof, an inwardly-flanged thimble rigidly secured to said spindle, said inward flange on the thimble engaging with the outward flange of the tap-holder for holding the latter in operative position, and a clutch-driver of uniform cross-section inserted in a transverse slot across the end of said spindle and being positively driven thereby, and forming operative connection between said spindle and tap-holder, and adjustable means on the outside of said spindle for applying a yielding pressure upon said clutch-driver, substantially as specified and for the purpose set forth.

8. In a tapping and stud-setting device, the combination of a main driving-spindle, an outwardly-flanged tap-holder abutting one end thereof, an inwardly-flanged thimble rigidly secured to said spindle, said inward flange on the thimble engaging with the outward flange of the tap-holder for holding the latter in operative position, and a clutch-driver of uniform cross-section inserted in a transverse slot across the end of said spindle and retained in place laterally by the inner walls of said thimble, and adjustable means on the outside of said spindle for applying a yielding pressure upon said clutch-driver, substantially as specified and for the purpose set forth.

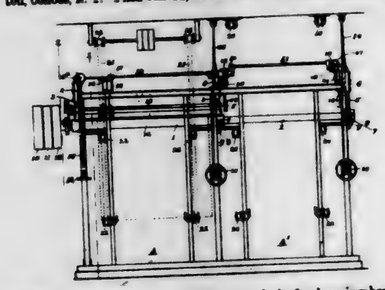
9. In a tapping and stud-setting device, the combination of a tap-holder or head and means for driving the same, a polygonal recess or socket in the end thereof, a bushing adapted to fit said socket, and a pin passing through the side of said socket and bushing and projecting to and into the tap-receiving hole in the latter and engaging with a tap therein, thereby holding the bushing and tap in position and enabling the latter to be removed without disturbing the former, substantially as specified and for the purpose set forth.

10. In a tapping and stud-setting device, the combination of a tap-holder or head and means for driving the same, a polygonal recess or socket in the end thereof, a bushing adapted to fit said socket, and a pin passing through the side of said socket and bushing and extending to and into the tap-receiving hole in the latter and adapted to engage with a tap therein, and a spring engaging with the outer end of said pin for forcing it into engagement with the tap, substantially as specified and for the purpose set forth.

11. In a tapping and stud-setting device, the combination of a tap-holder or head and means to drive the same, a socket in the end thereof, a bushing consisting of two or more wings or members capable of being spread apart or opened from each other, a threaded hole formed in the end between said adjoining members and adapted to engage the end of a threaded stud, said bushing when closed being adapted to fit in the tap-holder socket and prevented from opening thereby, substantially as specified and for the purpose set forth.

12. In a tapping and stud-setting device, the combination of a tap-holder or head and means for driving the same, a socket in the end thereof, a bushing consisting of two or more wings or members capable of being spread apart or opened from each other, a threaded hole formed in the end between said adjoining members and adapted to engage the end of a threaded stud, said bushing being adapted for attachment to the tap-holder or head for the purpose specified and set forth.

710,117. MACHINE FOR ROLLING SHEET-METAL CYLINDERS. MAJOR M. PARKER, Cohoes, N. Y., assignor to David S. Johnston, Cohoes, N. Y. Filed Jan. 31, 1901. Serial No. 45,594. (No model.)



Claim.—1. The combination with a mandrel of a hanging-bracket supporting the forward end thereof, hanging brackets provided with detachable caps supporting the central portion and rear of said mandrel, a carriage movable lengthwise of said mandrel and having a vertically-adjustable hanger provided with a planishing-disk, ways arranged parallel with said mandrel and on opposite sides thereof, threaded shafts arranged on opposite sides of said mandrel and parallel therewith, adapted to move said carriage, and mechanism for operating said threaded shafts, substantially as shown and described.

2. The combination with a mandrel, of a hanging bracket supporting the forward end thereof, detachable brackets supporting the central portion and rear end of said mandrel, ways extending parallel with said mandrel, a carriage mounted on said ways and provided with a vertically-adjustable bracket having a planishing-wheel pivoted thereto, threaded shafts engaging said carriage, mechanism connecting said threaded shafts adapted to turn said shafts in unison, an eccentric mounted on said mandrel, and adjustable mechanism connecting said eccentric and one of said threaded shafts, substantially as shown and described.

3. The combination with a mandrel, hangers supporting said mandrel, ways extending lengthwise of said mandrel on opposite sides thereof, threaded shafts arranged on opposite sides of said mandrel and parallel therewith, a carriage mounted on said threaded shafts and ways, an auxiliary roller, vertically-adjustable hangers provided with bearings for said roller, threaded shafts engaging said hangers each provided at its upper end with a beveled gear, a longitudinal shaft provided on each end with a beveled gear engaging the gears on said shafts, and means for operating said hangers, substantially as shown and described.

4. The combination with a mandrel, of a hanger supporting the forward end thereof, detachable hangers supporting the central portion and rear end of said mandrel, an auxiliary roller adapted to bear against the rear half of said mandrel, endless belts mounted upon pulleys and adapted to aid in supporting and rotating a cylinder of sheet metal placed upon said mandrel and operated upon by said roller, substantially as shown and described.

5. The combination with a main frame, of a mandrel, detachable hangers supporting the rear end and central portion of such mandrel, a roller adapted to bear against the rear half of said mandrel, transverse bars attached at their outer ends to said main frame and provided on their inner ends with rods extending parallel to said mandrel, substantially as shown and described.

6. The combination with a main frame, of a mandrel, endless belts adapted to bear against the lower half of a cylinder supported on said mandrel, pulleys attached to said main frame and to a counter-shaft adapted to support said pulleys, substantially as shown and described.

7. The combination with a main frame, of a mandrel, ways arranged on opposite sides of and parallel with said mandrel, threaded shafts extending parallel with said mandrel and ways, sprocket-wheels attached to the forward end of said shafts, an endless chain engaging said sprocket-wheels, an eccentric mounted upon each mandrel, a lever secured to one of said threaded shafts and adjustably connected with said eccentric, a ratchet-wheel mounted upon one of said threaded shafts, a pawl mounted upon said lever and adapted to engage with said ratchet-wheel and operate said threaded shafts, substantially as shown and described.

8. The combination with a mandrel, of ways arranged parallel with said mandrel and on opposite sides thereof, hangers supporting the central portion and ends of said mandrel, threaded shafts arranged on opposite sides of and parallel with said mandrel, a traveling carriage movable on said ways and having a threaded engagement with said shaft, and mechanism for operating said threaded shafts, substantially as shown and described.

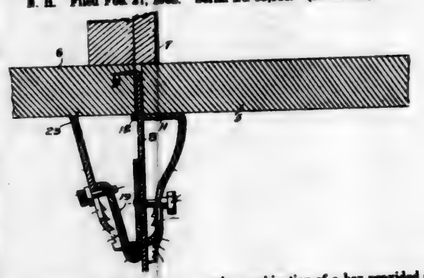
9. The combination with a mandrel, of ways arranged parallel with said mandrel and on opposite sides thereof, threaded shafts extending parallel with said ways, a carriage movable lengthwise of said ways and having a threaded connection with said shafts, a vertically-adjustable hanger mounted on said carriage, a shaft provided on its lower end with a threaded engagement with said bracket, and on its upper end with a beveled gear, a horizontal shaft provided with a feather, a beveled gear having a sliding engagement on said shaft, and mechanism for operating said horizontal shaft, substantially as shown and described.

10. The combination with a main frame, of a mandrel, vertical hangers supporting the central portion and ends of said mandrel, ways arranged parallel therewith and on the opposite sides of said mandrel, threaded shafts extending parallel with said ways, a traveling carriage movable along said ways and provided with a threaded engagement with said shafts, a vertically-adjustable hanger mounted on said carriage and provided on its lower end with a pivoted disk, substantially as shown and described.

11. The combination with a main frame, of a mandrel, ways extending parallel with said mandrel on opposite sides thereof, threaded shafts extending parallel with said ways, a carriage movable on said ways and provided with a threaded engagement with said shafts, a vertically-adjustable hanger mounted on said carriage, levers pivoted to the lower end of said hanger and provided on their outer ends with pivoted disks and adjustably secured at their upper ends to said hanger, substantially as shown and described.

12. The combination with a main frame, of a mandrel, ways extending lengthwise of said mandrel on both sides thereof and parallel therewith, threaded shafts arranged on both sides of and parallel with said mandrel, a traveling carriage movable on said ways and having a threaded engagement with said shafts, a vertically-adjustable hanger mounted on said carriage, a vertical shaft having a threaded engagement at its lower end with said hanger and provided on its upper end with a beveled gear journaled on a bracket secured to said carriage, a shaft provided with a feather engaging said journaled gear and mechanism adapted to operate said feathered shaft, substantially as shown and described.

710,118. DOOR-SECURER. HESTOR PRUD'HOMME, Manchester, N. H. Filed Feb. 27, 1902. Serial No. 96,920. (No model.)



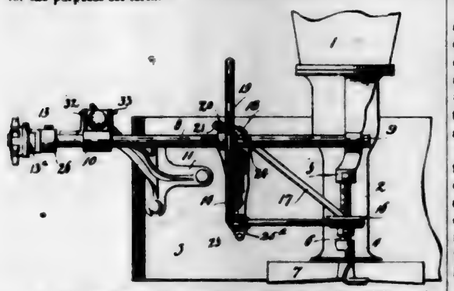
Claim.—1. In a door-securer, the combination of a bar provided at one end with laterally-extending teeth to engage a door-jamb and provided near its other end with oppositely-extending serrated ribs, a plate having a laterally-extending abutting portion provided with grooves in which said bar is slidingly mounted, the opposite end of said plate having a curved notched portion to engage said serrated ribs, a set-screw engaging a threaded perforation in the bar and extending through a slot in the plate whereby the latter may be held at the desired adjustment with relation to said bar, and an adjustable brace hingedly connected with said plate, substantially as set forth.

2. In a door-securer, the combination with a plate having notched ribs and provided with means whereby it has sliding engagement with an extension-bar, of the said extension-bar having teeth engaging said notched ribs and an intermediate portion engaging between said ribs to prevent lateral displacement, means for retaining said plate and extension-bar in contact with each other at the desired adjustment, and an adjustable brace hingedly connected with said plate, substantially as set forth.

3. In a door-securer, a bar having lateral spurs on one end, a plate disposed adjustably upon said bar, on one side, a plate hinged by one end to the opposite side of said bar and with spaced serrations at the other end, an extension-bar engaging said serrations by one end and with spurs upon the other end, and means whereby said extension-bar may be clamped adjustably to said hinged plate, substantially as described.

710,119. SEEDING-MACHINE. ROBERT L. REEA, Peoria, Ill. Filed May 31, 1900. Serial No. 109,795. (No model.)

Claim.—1. In a seeding-machine, and in combination substantially as described, a hopper and seeding devices supported on an end gate, a horizontally-arranged power-shaft having on one end a clutch part for throwing in and out power devices for actuating said shaft, a fan-shaft vertically arranged and a fan beneath the hopper, a sheave-wheel revoluble with the power-shaft and a sheave-wheel revoluble with the fan-shaft, a cable-drive traveling around the said wheels whereby the fan is rotated, and an idler journaled on a suitable support for guiding the cable from one wheel to the other and for taking up slack in the cable, for the purposes set forth.



2. In a seeding-machine, and in combination substantially as described, a hopper and seeding devices supported on an end gate, a distributing-shaft journaled on the seeder and a distributer mounted for rotation thereon and beneath the hopper, a driving-shaft suitably actuated, its outer end supported from the end gate and its inner end journaled in the seeder-frame, of a sheave-wheel on the driving-shaft and a sheave-pinion on the distributing-shaft, and a cable-drive connecting the sheave-wheels, for the purposes set forth.

3. In a seeding-machine, and in combination substantially as described, an end gate, a hopper and seeding devices supported thereby, a driving-shaft suitably actuated and a power-sheave revolvable therewith, a fan-shaft, and a fan mounted thereon and beneath the hopper, a sheave-wheel on the fan-shaft, a cable-drive connecting the drive and fan sheave wheels, and a device for taking up slack in the cable, for the purposes set forth.

4. The mechanism for actuating the fan-shaft and fan of an end-gate seeder, comprising a horizontal driving-shaft, and a vertically-arranged fan-shaft and fan rotatable therewith, sheave-wheels, one on the drive and one on the fan shaft, an endless cable connecting the wheels, two idlers disposed to the rear of said wheels and in front of the end gate, and arranged for directing the cable to and from the said wheels and one of said idlers arranged for taking up any slack in the cable, substantially as described.

5. In a seeding-machine, the combination with an end gate, of seeding devices supported thereby, a driving-shaft and a power-sheave revolvable therewith, a fan-shaft, and a fan mounted thereon, a sheave-wheel on the fan-shaft, a cable-drive connecting the drive and fan sheave wheels, and an adjustably-supported guiding device for the cable between the aforesaid sheave-wheels, for the purpose set forth.

6. In a seeding-machine, the combination with the seeding devices and end gate supporting the same, of the sheave-wheel 14, the shaft 8 supporting the same, the driven sheave 16 on the fan-shaft 6, the said shaft having on its lower end a seed-distributer, and an idler arranged for receiving the cable as it leaves the sheave 14 for guiding it to the fan-sheave and the same disposed between the end gate and the sheave 14, all substantially as and for the purposes set forth.

7. In combination with seeding devices and end gate supporting the same, a driving-shaft and a sheave-wheel 14 revolvable therewith, a fan-shaft and fan, and the sheave-wheel 16 mounted on said fan-shaft, a cable-drive engaging said wheels, an idler supported from the end gate journaled to swing on its support, around which the cable is directed as it leaves the sheave 14 and the same held under tension of a yielding device for taking up slack in the cable, substantially for the purposes set forth.

8. In combination with seeding devices, a fan-shaft, and a driving-shaft, means for actuating the driving-shaft, sheave-wheels, one on the fan-shaft and one on the driving-shaft, a cable for transmitting power from the driving-shaft to the fan-shaft, two idlers, one revolvable on a swinging frame, a spring for holding the frame for taking up slack in the cable, the other idler revolvable on a stationary frame for guiding the cable from the fan-sheave to the driving-sheave, substantially as described.

9. In combination with seeding devices, fan and driving shafts, clutch members of the driving-shaft, one loose and the other keyed to the shaft, clutch-shifting devices comprising a sliding member, a half-worm of said member and a swinging device carrying means engaging the said sliding device for controlling the movements of the clutch members, substantially as described.

10. In combination with seeding devices, fan and driving shafts, clutch members of the driving-shaft, one loose and the other keyed to the shaft, clutch-shifting devices comprising a swinging member, having a sectional worm-wheel, a sliding member having a clutch-shifting member and provided with means engaged by the sectional worm-wheel, arranged for controlling the movements of the clutch members, substantially as described.

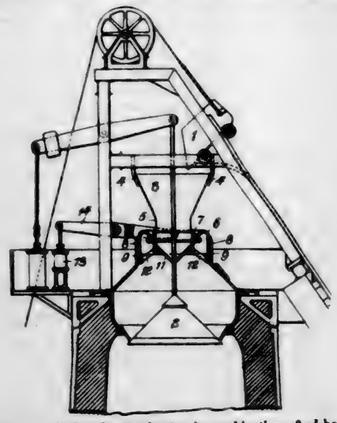
11. In a seeding-machine, the combination of fan and driving shafts, a sprocket-pinion actuated by suitable driving device and slidably arranged on the driving-shaft, a clutch member forming a part of said sprocket, a clutch member fixed to the shaft, means for shifting the clutch part of the aforesaid sprocket, comprising a slidable rod provided with a partial worm, a weighted lever having a segmental worm-wheel engaging the worm of the rod, and driving connections between the fan and driving shafts, as and for the purpose described.

12. The combination with a seeding-machine, comprising a hopper, fan-shaft and fan, and a driving-shaft, a sprocket-pinion loosely carried on the driving-shaft arranged to be continuously driven and provided with a clutch member, a clutch member fast to the shaft, a sliding rod having connection with the member of the sprocket, a segmental worm forming part of said rod, and a lever having engagement with said worm for the purpose of controlling the movements of the clutch parts, substantially as described.

13. The mechanism for actuating the fan-shaft and fan of an end-gate seeder, comprising a horizontal driving-shaft, and a vertically-arranged fan-shaft and fan revoluble therewith, sheave-wheels, one on the drive-shaft and one on the fan-shaft, an endless cable connecting the wheels, two idlers arranged for directing the cable toward and from the aforesaid sheave-wheel, one mounted on a stationary support, and the other adjustable on its support, for the purpose described.

14. In combination with seeding devices and end gate supporting the same, a driving-shaft, a fan-shaft and fan, a sheave-wheel mounted on the driving-shaft having a peripheral edge, of alternately-extended lips forming an annular groove, a cable-drive engaging said wheels, and an idler supported from the end gate shiftable on its support around which the cable is directed, as and for the purposes set forth.

710,120. BLAST-FURNACE. GIBBS C. SHACKLEFORD, Allegheny, Pa. Filed June 14, 1902. Serial No. 111,759. (No model.)

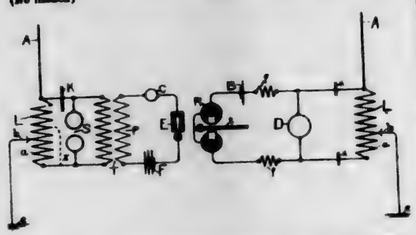


Claim.—1. A blast-furnace having in combination a feed-hopper, a bell-chamber, doors, arranged between the hopper and chamber, means for closing said doors, the closing means and the doors being carried by suitable independent supports movable relative one to the other to close the doors, substantially as set forth.

2. A blast-furnace, having in combination, a feed-hopper, a bell-chamber, doors arranged between the hopper and bell-chamber, a movable ring, means for closing the doors operative on the shifting of the ring, substantially as set forth.

3. A blast-furnace, having in combination, a feed-hopper, a bell-chamber, a movable ring, doors pivotally connected to said ring and adapted to close the feed-hopper, and links having their ends pivotally connected to the doors and the bell-chamber, substantially as set forth.

710,121. WIRELESS-TELEGRAPH SYSTEM. HARRY SHOEMAKER, Philadelphia, Pa., assignor to Gustavo P. Gehring, Philadelphia, Pa., and American Wireless Telephone & Telegraph Company, a Corporation of Arizona Territory. Filed Dec. 11, 1901. Serial No. 85,452. (No model.)



Claim.—1. In a wireless-telegraph system, a transformer; connections from the secondary of said transformer to an oscillator and to the terminals of a winding, a portion of said winding operating as the inductance element of a resonant radiating circuit.

2. A transmitter for wireless telegraphy, whom comprises means for generating high-frequency oscillations, and connections from said generator to the terminals of a winding, a portion of said winding operating as the inductance element of a resonant radiating circuit.

3. A transmitter for wireless signaling, which comprises a source of high-frequency oscillations; and connections from the terminals of said source to the terminals of an autotransformer, one winding of said transformer operating as the inductance element of a resonant radiating circuit.

4. In a signaling system, the combination with a source of high-frequency electrical oscillations, of connections through a condenser to the terminals of an autotransformer, one winding of said autotransformer comprising the inductance element of a resonant radiating system.

5. In a signaling system, a transmitter which comprises a source of high-frequency electrical oscillations; means for controlling said oscillations in accordance with the signal sent; and connections from said source of oscillations to the terminals of a winding, a portion of said winding comprising the inductance element of a resonant radiating system.

6. In a signaling system, a transmitter which comprises a source of high-frequency electrical oscillations; connections from said source to the terminals of an autotransformer; and a connection from earth to one terminal of said autotransformer, the portion of the winding so determined operating as the inductance element of a resonant radiating system.

7. In a wireless signaling system, the combination with the transmitter, of a receiver, which comprises an aerial conductor and an inductance, said inductance forming one winding of an autotransformer.

8. In a signaling system, a receiver which comprises a resonant circuit, the inductance element of said circuit forming one winding of an autotransformer.

9. A receiver, comprising an aerial circuit, a rider for adjusting said circuit to resonance, the inductance member of said resonant circuit forming one winding of an autotransformer; and connections from said autotransformer to a wave-responsive device.

10. A receiver, comprising an aerial circuit, a rider for adjusting said circuit to resonance, the inductance member of said resonant circuit forming one winding of an autotransformer; connections from the terminals of said autotransformer to a wave-responsive device; and a local circuit controlled by said wave-responsive device.

11. In a signaling system, a freely-oscillating circuit, a radiating circuit of the same natural period, and a frequency-determining element common to both circuits.

12. In a signaling system, a freely-oscillating circuit, a radiating circuit, and an inductance common to both circuits.

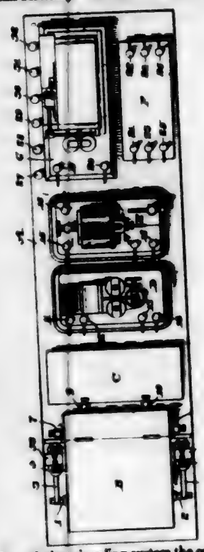
13. In a signaling system, an aerial circuit selective of the transmitted energy, an inductance element of said circuit forming a winding of an autotransformer, and a wave-responsive device subjected to the potential of said autotransformer.

14. In a signaling system, a receiver which comprises a selective circuit, an inductance element of said circuit forming a winding of an autotransformer.

15. In a signaling system, a receiver comprising a circuit selective of the transmitted energy, an inductance element of said circuit forming a winding of an autotransformer, a condenser in series with said inductance, a local circuit in shunt to said condenser, and a wave-responsive device influenced by said autotransformer and controlling said local circuit.

16. In a signaling system, a receiver comprising a circuit selective of the transmitted energy, an inductance element of said circuit forming a winding of an autotransformer, a condenser in series with said inductance approximate its middle, a local circuit in shunt to said condenser, and a wave-responsive device influenced by said autotransformer and controlling said local circuit.

710,122. WIRELESS-TELEGRAPH SYSTEM. HARRY SHOEMAKER, Philadelphia, Pa., assignor to Mario V. Gehring, Philadelphia, Pa., and American Wireless Telephone & Telegraph Company, a Corporation of Arizona Territory. Filed Jan. 11, 1902. Serial No. 89,349. (No model.)



Claim.—1. In a wireless signaling system the combination of a conductor for receiving the energy from the natural media, a wave-responsive device influenced by the received energy, a main polarized relay controlled by said wave-responsive device, a second sluggish relay controlled by the main polarized relay and a recording device controlled by the second relay.

2. In a wireless signaling system the combination of a conductor for receiving the energy from the natural media, a wave-responsive device in communication with said conductor, a main polarized relay controlled by said wave-responsive device, a second sluggish relay and tapping device controlled by said main polarized relay and a recording device controlled by the second relay.

3. In a wireless signaling system, the combination of a conductor for emitting energy into and receiving energy from the natural media, a switch-blade in communication with said conductor, solenoids operative to throw said switch-blade into communication with either the receiving or sending apparatus, an operator's switch, and a segment on said switch in series with a source of energy and said solenoids.

4. A switch for wireless signaling system comprising an insulating-plate, a rotary spindle mounted on said plate and carrying a switch-arm and a pinion in connection with said spindle, a connection from the receiving and transmitting conductor and contacts on said insulating-plate engaged alternately by said switch-blade in putting the conductor into communication with the transmitter or receiver.

5. A switch for wireless signaling system comprising an insulating-plate, a rotary spindle mounted on said plate and carrying a switch-arm, and a pinion in connection with said spindle, a connection from the receiving and transmitting conductor and contacts on said insulating-plate engaged alternately by said switch-blade in putting the conductor into communication with the transmitter or receiver, and solenoids and rack-bars coöperating with the pinion.

6. In a wireless signaling system, a receptacle for isolating a wave-responsive device and its tapper, electromagnetic means outside said receptacle and mounted on the walls thereof for entirely removing the wave-responsive device from the receiving-circuit.

7. In a wireless-telegraph system the combination with the walls of a receptacle of electromagnets mounted on said walls, armatures for said electromagnets, contacts in communication with the terminals of the wave-responsive device and means for causing at a predetermined time the attraction of said armatures to remove said wave-responsive device entirely from communication with the receiving-conductor.

8. An operator's switch for a wireless-telegraph system which comprises a base and switch-arm pivoted to said base, a plurality of segments mounted on said base and engaged successively by said switch-arm and a brush adapted to engage with said switch-arm in a predetermined position.

9. In a signaling system, a transmitting and receiving conductor, means for putting said conductor into communication with either the transmitter or receiver, said means comprising a switch, a pinion for operating said switch, rack-bars meshing with said pinion, solenoids operating the rack-bars, and means for energizing a solenoid when changing the character of the station.

10. In a signaling system, a transmitting and receiving conductor, means for putting said conductor into communication with either the transmitter or receiver, said means comprising a switch, a pinion for operating said switch, rack-bars meshing with said pinion, solenoids operating the rack-bars, and means for momentarily energizing a solenoid when changing the character of the station.

11. In a signaling system, a transmitter and a receiver, means for putting either into communication with the radiating and absorbing conductor, electromagnetic means for operating said means, and means for energizing the electromagnetic means momentarily when changing the character of the station.

12. In a wireless signaling system, a transmitter and receiver, and an operator's switch having a contact in the circuit of the wave-producing means, an interrupter, a motor for driving the same, and a contact in the circuit of the interrupter-motor.

13. In a wireless signaling system, a transmitter, a receiver, an operator's switch for bringing either into action, a wave-producing means, a contact of said switch in the circuit of said wave-producing means, an interrupter-motor for said wave-producing means, and a contact of said switch in the circuit of said interrupter-motor.

14. In a wireless signaling system, a conductor, a transmitter and receiver, circuits for bringing each into action, an operator's switch controlling said circuits, and having a segment in the circuit of the wave-producing device.

15. In a wireless signaling system, a conductor, a transmitter, a motor driving the interrupter, an operator's switch for putting the transmitter into operative relation with said conductor, and having a contact in the circuit of the wave-producing means and another in the circuit of the interrupter-motor.

16. In a wireless signaling system, a conductor, a transmitter, a motor driving the interrupter, an operator's switch for putting the transmitter into operative relation with said conductor, and having a contact in the circuit of the interrupter-motor and another in the circuit of means for putting the transmitter into communication with the radiator.

17. In a wireless signaling system, a transmitter, means for putting the transmitter into communication with the radiator, an operator's switch having a contact in the circuit of a wave-producing means and another in the circuit of the means for putting the transmitter into communication with the radiator.

18. In a wireless signaling system, a receiver, electroresponsive means for putting the receiver into communication with the aerial conductor, an operator's switch, and a contact of said switch in a circuit for energizing said electroresponsive means.

19. In a wireless signaling system, a receiver and an operator's switch having a contact in the circuit of means for isolating the wave-responsive device, and another contact in a separate circuit of means for removing the receiver from communication with the receiving-conductor.

20. In a wireless signaling system, a receiver, means for putting the receiver into communication with the receiving-conductor, an operator's switch having a contact in the circuit of means for isolating the wave-responsive device, and another contact in the circuit of said means for putting the receiver into communication with the receiving-conductor.

21. In a wireless signaling system, a transmitter in combination with electromagnetic means for removing the receiver from communication with the radiating-conductor, and an operator's switch having a contact in the circuit of said electromagnetic means.

22. In a wireless signaling system, a transmitter in combination with an operator's switch having a contact in the circuit of wave-producing means and another contact in a separate circuit of means for removing the receiver from communication with the radiating-conductor.

23. In a wireless signaling-system, a receiver in combination with electromagnetic means for removing the transmitter from communication with the radiating-conductor, and an operator's switch having a contact in the circuit for energizing said means.

24. In a wireless signaling system, a receiver in combination with means for isolating the wave-responsive device, means for removing the transmitter from communication with the radiating-conductor, and an operator's switch having contacts in the circuits of said means.

25. In a wireless signaling system, a receiver in combination with an operator's switch having a contact in the circuit of means for isolating the wave-responsive device and another contact in a separate circuit of means for putting the transmitter into communication with the radiating-conductor.

26. In a wireless signaling system, a transmitter comprising in part a transformer, an interrupter in the primary of said transformer comprising a reciprocating contact and a movable contact, and an operator's key controlling a circuit for bringing said movable contact into the path of the reciprocating contact.

27. In a wireless signaling system, a transmitting-transformer, a reciprocating contact in a winding thereof, a contact movable into the path of the reciprocating contact, an operator's key, and means controlled by said key for causing engagement of the contacts.

28. In a wireless signaling system, a transmitting-transformer, a reciprocating contact in a winding thereof, a contact movable into the path of said reciprocating contact, an operator's key, and electromagnetic means controlled by said key for bringing the contacts into engagement.

29. In a wireless signaling system, a key, a transmitter comprising in part a transformer, an interrupter in the primary of said transformer comprising a reciprocating and rotating contact, and a contact movable into the path of the reciprocating contact under the control of said key.

30. In a wireless signaling system, a key, a transmitting-transformer, a reciprocating and rotating contact in a winding thereof, a contact movable into the path of the reciprocating contact, and means controlled by said key for causing engagement of the contacts.

31. In a wireless signaling system, a key, a transmitting-transformer, a reciprocating and rotating contact in a winding thereof, a contact movable into the path of said reciprocating contact, and electromagnetic means controlled by said key for bringing the contacts into engagement.

32. In a wireless signaling system, a key, a transmitting-transformer, a reciprocating contact in the circuit of a winding thereof, a motor for driving said contact, a movable contact, means controlled by said key for bringing the movable contact into the path of a reciprocating contact, and an operator's switch having a contact in the circuit of said motor.

33. In a wireless signaling system, a key, a transmitting-transformer, a reciprocating contact in the circuit of a winding thereof, a motor for driving said contact, a movable contact, means controlled by said key for bringing the movable contact into the path of the reciprocating contact, means for putting the transmitter into communication with the radiating-conductor, and an operator's switch having a contact in the circuit of said motor and another in the circuit of said means for putting the transmitter into communication with the radiating-conductor.

34. In a wireless signaling system, a key, a transmitting-transformer, a reciprocating contact in the circuit of a winding thereof, a motor for driving said contact, a movable contact, means controlled by said key for bringing the movable contact into the path of the reciprocating contact, means for putting the transmitter into communication with the radiating-conductor, means for isolating the wave-responsive device, and an operator's switch having a contact in the circuit of said motor, another contact in the circuit of said means for putting the transmitter into communication with the radiating-conductor, and a third contact in the circuit of said means for isolating the wave-responsive device.

35. In a receiver, a wave-responsive device, a relay controlled thereby, a sluggish relay controlled by said relay, a circuit controlled by said sluggish relay and an electrolytic cell connected across the terminals of said circuit, for the purpose described.

36. In a receiver, a wave-responsive device, a relay controlled thereby, a sluggish relay controlled by said relay, a circuit controlled by said sluggish relay and an electrolytic cell connected across the break of each relay, and a resistance in shunt to the winding of each relay, for the purpose described.

37. In a receiver, a wave-responsive device, a relay controlled thereby, a second sluggish relay controlled by said relay, and a recorder controlled by the second relay, for the purpose described.

38. In a receiver, a wave-responsive device, a relay controlled thereby, a second sluggish relay controlled by said relay, and a recorder controlled by the second relay and electrolytic cells connected across the relay-breaks, for the purpose described.

39. In a receiver, a wave-responsive device, a relay controlled thereby, a second sluggish relay controlled by said relay, a recorder controlled by the second relay, and a resistance in shunt to each relay-winding.

40. In a receiver, a wave-responsive device, a relay controlled thereby, a second sluggish relay controlled by said relay, a recorder controlled by the second relay, electrolytic cells connected across the relay-breaks and a resistance in shunt to each relay-winding.

41. In a wireless signaling system, a key and switch juxtaposed, a generator, said key controlling said generator, electroresponsive means for removing the receiver from electrical communication with the radiating-conductor, and a contact on said switch for energizing said electroresponsive means.

42. In a wireless signaling system, an operator's table, a key and switch mounted thereon, a radiating and absorbing conductor, a transmitter, a receiver, electroresponsive means for removing the receiver from communication with said conductor, and a contact of said switch controlling the circuit for energizing said electroresponsive means.

43. In a wireless signaling system, an operator's table, a key and switch located thereon, a radiating and absorbing conductor, a transmitter, said key controlling said transmitter, electroresponsive means for disconnecting said transmitter from said conductor and placing the receiver in communication with said conductor, and a contact on said switch and controlling the circuit for energizing said electroresponsive means.

44. In a wireless signaling system, an operator's table, a key and switch juxtaposed thereon, a transmitter, a receiver, a radiating and absorbing conductor, electroresponsive means for placing the transmitter in operative relation with said conductor, electroresponsive means for isolating the receiver, and contacts on said switch controlling the circuits of said electroresponsive means.

45. In a wireless signaling system, an operator's switch, a source of radiant energy, an interrupter in a circuit of said source, a key for controlling said interrupter, a motor driving said interrupter, a source of energy, a connection from said source to a member of said switch, a segment of said switch momentarily engaged by the switch member and in the circuit of means for disconnecting the receiver and connecting the source of radiant energy to the radiating-conductor, a segment controlling the circuit including the interrupter, a contact in the circuit of said motor, and a segment in the circuit of means for isolating the wave-responsive device.

46. In a wireless signaling system, an interrupter, a motor for driving the same, an operator's switch comprising an arm and a plurality of contacts engageable thereby, a source of energy, a connection from said source to said switch-arm, a contact of said switch controlling the interrupter-motor, and a contact in the circuit of the interrupter.

47. In a wireless signaling system, a wave-responsive device, a receptacle inclosing the same, connections from said wave-responsive device to contacts located on the walls of said receptacle, a receiving-conductor, an earth-conductor, and electroresponsive means for removing said contact from electrical communication with said conductors.

48. In a signaling system, a wave-responsive device, a tapper therefor, a relay controlled by said wave-responsive device, a sluggish relay controlled by said relay, and an electrolytic cell in shunt to the break of said tapper and each of said relays.

49. In a wireless signaling system, a wave-responsive device, a tapper therefor, a relay controlled by said wave-responsive device, a sluggish relay controlled by said relay, and a resistance in shunt to the winding of said tapper and to the winding of each of said relays.

50. In a wireless signaling system, a wave-responsive device, a relay controlled thereby, a sluggish relay controlled by said relay, and a recorder controlled by said sluggish relay, for the purpose described.

51. In a wireless signaling system, a wave-responsive device, a relay controlled thereby, a sluggish relay controlled by said relay and energized by a source of energy, and a recorder controlled by said sluggish relay and operated by said source of energy.

52. In a wireless signaling system, a wave-responsive device, a polarized relay controlled thereby, a sluggish relay controlled by the polarized relay and a Morse register controlled by said sluggish relay.

710,123. PLACKET-FASTENER. THOMAS M. STEARE, Washington, D. C., assignor of one third to John Scrivener, Washington, D. C. Filed June 17, 1902. Serial No. 112,057. (No model.)

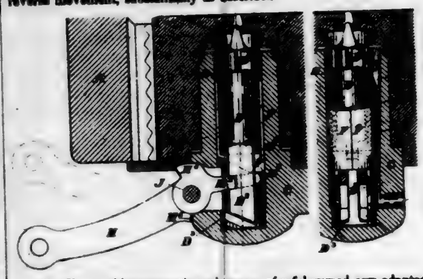
Claim.—1. In a placket-fastener the combination with the fastening 1, having securing-tangs formed integrally therewith at both ends thereof and rigidly formed thereon, the sides of said fastening being waved to form series of loops, and a fastening-stud adapted to be held in said loops, said tangs being adapted to be inserted in material and bent permanently to secure the fastening in position.

2. A placket-fastener having its sides waved to form a series of loops, the sides of said fastener being twisted together near each end, the free ends of said sides forming securing-tangs.

710,124. FIRING MECHANISM FOR GUNS. VERNON C. TASKER, Bridgeport, Conn. Filed Mar. 8, 1902. Serial No. 97,310. (No model.)

Claim.—1. The combination with a plunger; of a fulcrumed arm adapted to retract said plunger; and a spring actuating said arm to retract said plunger and reacting on said plunger, substantially as described.

2. The combination with a plunger; of a fulcrumed arm adapted to retract said plunger; and a spring actuating said arm to retract said plunger and reacting on said plunger, said arm energizing said spring on its reverse movement, substantially as described



3. The combination with a plunger; of a fulcrumed arm adapted to retract said plunger; a spring actuating said arm to retract said plunger and reacting on said plunger, said arm energizing said spring on its reverse movement; a detent for engaging said plunger in a retracted position; and means for disengaging said detent, substantially as described.

4. The combination with a plunger; of a fulcrumed arm adapted to retract said plunger; a spring actuating said arm to retract said plunger and reacting on said plunger; and a detent for engaging said plunger in a retracted position, said arm energizing said spring on its reverse movement and adapted to disengage said detent, substantially as described.

5. The combination with a plunger; of a fulcrumed arm adapted to retract said plunger; a shoe acting on said arm; a spring urging said shoe to act on said arm to retract said plunger and reacting on said plunger; a detent for engaging said plunger in a retracted position, said arm energizing said spring on its reverse movement and adapted to disengage said detent through said shoe, substantially as described.

6. The combination with a plunger; of a fulcrumed arm adapted to retract said plunger; an energized spring actuating said arm to retract said plunger; and means for applying the reactive force of said spring to said arm, with a different leverage, substantially as described.

7. The combination with a plunger; of a fulcrumed arm adapted to retract said plunger; an energized spring actuating said arm to retract said plunger, and guided in a path different from that of the arm; and means for applying the opposing forces of the spring to said arm in opposite directions, and with unequal leverage, substantially as described.

8. The combination with a fulcrumed arm; of a plunger guided in a path different from that of the arm and adapted to be retracted by said arm; an energized spring tending to actuate the plunger; and means for applying the opposing forces of the spring to said arm in opposite directions with differential leverage, substantially as described.

9. The combination with a fulcrumed arm; of a plunger guided in a path different from that of the arm and adapted to be retracted by said arm; and an energized spring acting upon said arm, with a suitable leverage, through the plunger, and reacting on the arm with a different leverage, substantially as described.

10. The combination with a fulcrumed arm; of a plunger guided in a path different from that of the arm, and bearing on said arm in one direction with a suitable leverage and adapted to be retracted thereby; and an energized spring urging said plunger to bear on said arm and reacting against said arm in the other direction with a greater leverage, substantially as described.

11. The combination with a fulcrumed arm; of an energized spring; a shoe transmitting the force of said spring to said arm at a suitable distance from its fulcrum; and a plunger normally transmitting the reactive force of said spring to said arm at a less distance from its fulcrum, substantially as described.

12. The combination with a fulcrumed arm; of an energized spring; a shoe transmitting the force of said spring to said arm at a suitable distance from its fulcrum; and a plunger normally transmitting the reactive force of said spring to said arm at a less distance from its fulcrum, said shoe and plunger being guided in a path divergent from that of said arm, substantially as described.

13. The combination with a fulcrumed arm; of a plunger having an engagement with said arm operative in one direction; a spring acting forwardly on said plunger and rearwardly on said arm and tending to maintain said engagement; a detent for detaining said plunger during the forward movement of said arm; means for releasing said plunger and means for retracting said plunger operated by said spring, substantially as described.

14. The combination with a firing-lever; of an independently-movable firing-pin; an engagement between said pin and lever acting forwardly on the lever with a suitable leverage; an energized mainspring acting rearwardly on said lever with a greater leverage, and acting forwardly on said firing-pin; a detent for detaining said firing-pin during the forward movement of the firing-lever; and means for releasing said firing-pin, substantially as described.

15. The combination with a firing-lever; of a firing-pin; an energized mainspring acting forwardly on the firing-pin and rearwardly on the lever; a detent for detaining the firing-pin when the lever is operated to compress the mainspring; means for releasing the firing-pin, and means for applying the unexpended energy of the mainspring to retract the firing-lever and firing-pin, substantially as described.

16. The combination with a firing-pin; of a firing-lever acting rearwardly on said pin at a suitable leverage to retract said pin; a mainspring acting rearwardly on said lever at a greater leverage and reacting forwardly on said pin, substantially as described.

17. The combination with a firing-pin; of a firing-lever; an engagement between said pin and lever acting rearwardly on said pin at a suitable leverage; a mainspring acting rearwardly on said lever at a greater leverage, and reacting forwardly on said pin; a detent for engaging said pin in a retracted position; and means operated by the forward movement of the lever for disengaging said detent, substantially as described.

18. The combination with an oscillatory firing-lever; of a firing-pin; an engagement between said lever and pin bearing forwardly on said lever at a suitable leverage; a shoe bearing rearwardly on said lever at a greater leverage; a mainspring acting forwardly on said pin and reacting rearwardly on said shoe; and a detent engaging said firing-pin in a retracted position, and means for disengaging said detent on the forward movement of the shoe, substantially as described.

19. The combination with a firing-lever; of a firing-pin; an energized spring acting on the lever and reacting on the pin; and an engagement between the lever and pin for retracting the pin by means of said spring, substantially as described.

20. The combination with a plunger; of a spring for actuating said plunger; means for energizing said spring and means for retracting said plunger to its armed position operated by said spring, substantially as described.

21. The combination with a plunger; of a spring for actuating said plunger; a fulcrumed arm adapted to energize said spring on its movement in one direction, and to retract said plunger on its reverse movement operated by said spring, substantially as described.

22. The combination with a plunger; of a detent for engaging said plunger in a retracted position; a spring adapted to actuate said plunger; means for retracting said plunger to its armed position operated by said spring, substantially as described.

710,125. METHOD OF CURING FOOD PRODUCTS. CHARLES B. TERRY, Portland, Oreg. Filed June 5, 1902. Serial No. 110,102. (No specimens.)

Claim.—1. In the curing of food matter, the method of preparing the preservative for objection therein, which consists in simultaneously drying and scrubbing it by and under refrigeration, and then bringing it to the temperature adapted to the particular article to be cured, substantially as described.

2. The method of curing food matter, which consists in simultaneously drying and scrubbing the preservative fluid, reheating the same, and subjecting the matter to be cured to the action of said fluid, substantially as described.

3. The method of curing food matter, which consists in simultaneously drying and scrubbing the preservative fluid, reheating the same, and subjecting the matter to be cured to the action of said fluid in an inclosed space, substantially as described.

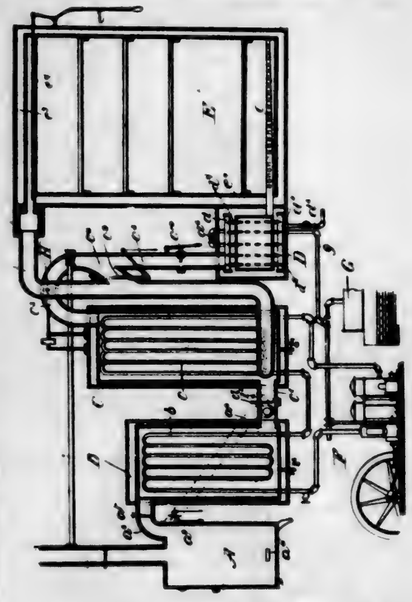
4. The method of curing food matter, which consists in simultaneously drying and scrubbing the preservative products of combustion, heating the same to a desired temperature, and subjecting the matter to be cured to the action of such preservative, substantially as described.

5. The method of curing food matter, which consists in simultaneously drying and scrubbing the preservative products of combustion, reheating the same, and then subjecting the matter to be cured to the action of such preservative in an inclosed space, substantially as described.

6. The method of curing food matter, which consists in simultaneously drying and scrubbing the preservative products of combustion, reheating the same to the degree best adapted to the kind of food matter under treatment, and subjecting said matter to the action of said preservative in an inclosed space, substantially as described.

7. The method of curing food matter, which consists in simultaneously drying and scrubbing the preservative fluid by bringing the same into contact with a refrigerating-surface, reheating the same, and subjecting the matter to be cured to the action of said fluid, substantially as described.

8. The method of curing food matter, which consists in simultaneously drying and scrubbing the preservative products of combustion by bringing the same into contact with a refrigerating-surface, heating the same to a desired temperature, and subjecting the matter to be cured to the action of such preservative, substantially as described.



9. In the curing of food matter, the hereinbefore-described method of preparing the preservative fluid for presentation to food matter, which consists in simultaneously drying and scrubbing, and then reheating the same, substantially as described.

10. In the curing of food matter, the hereinbefore-described method of preparing the preservative products of combustion for presentation to food matter, which consists in simultaneously drying the same and removing unconsumed carbon therefrom, and then reheating, substantially as described.

11. In the curing of food matter, the hereinbefore-described method of preparing the preservative products of combustion for presentation to food matter, which consists in simultaneously removing moisture and unconsumed carbon therefrom, and then reheating said preservative, substantially as described.

12. The method of curing food matter, which consists in simultaneously drying and scrubbing the preservative products of combustion, uniformly maintaining the same at the degree of temperature best adapted to the particular kind of food matter to be cured and causing a continuous circulation of the preservative about the matter to be treated, and permitting escape of a small portion of such preservative, to be replaced by fresh preservative, substantially as described.

13. The method of curing food matter, which consists in taking the preservative products of combustion and simultaneously drying and removing therefrom unconsumed carbon, then subjecting the preservative thus treated to a heating medium, then causing the preservative thus heated to circulate around and against the food matter placed in an inclosed space, then again causing such preservative to be subjected to simultaneous drying and scrubbing, and reheating and permitting a portion of the preservative to escape, to be replaced by fresh preservative, substantially as described.

710,126. SKEIN-HOLDER. LOTTA M. TREMBLY, Canton, Ohio. Filed June 17, 1901. Serial No. 64,944. (No model.)

Claim.—1. A skein-holder, comprising a card having arranged on the face thereof a row of vertically-projecting tongues, a row of horizontally-projecting tongues below the row of vertically-projecting tongues, said last-mentioned tongues being arranged in pairs, the tongues comprising each pair extending in opposite directions, and a binding-strip arranged beneath each of the said pairs, substantially as described.

2. A silk-skein holder, comprising a card provided with a row of longitudinally-projecting tongues arranged across the face thereof, said tongues being arranged in pairs, the tongues in each pair extending in opposite directions, and the last tongue in one pair touching the first tongue in the next pair, so as to form mutual guards to prevent the skein from being accidentally displaced from either of the abutting tongues, substantially as described and for the purpose set forth.

3. A silk-skein holder, comprising a card having secured to the face thereof a vertically-projecting tongue, a vertical row of horizontal tongues secured below said vertical tongue, said horizontal tongues being arranged in pairs and having the tongues constituting the respective pairs projecting in opposite directions, and a binding-strip secured below said row of horizontal tongues, substantially as described and for the purpose set forth.

710,127. WINDOW-SEAT. LOUIS WAGNER, Jacksonville, Fla. Filed Apr. 21, 1902. Serial No. 104,094. (No model.)

Claim.—1. In a window-seat, the combination with a platform, of a foldable back hinged thereto, side pieces hinged to the back, brace connections between the side pieces and the platform, and means carried by the back for engagement with the inner side of a wall to brace the device.

2. The combination with a window-seat, of an arm and a wall-engaging member hinged to the outer end of the arm, said member being foldable in a substantially horizontal direction against the outer side of the arm and limited in its movement.

3. The combination with a window-seat, of an arm having its outer end provided with a wall-engaging member which is hinged thereto and foldable in a substantially horizontal direction against the outer side of the arm, the movement of said member being limited substantially to a quarter-swing.

4. The combination with a window-seat having a back, of an arm carried by the back and projected inwardly across the seat, and means for engagement with the inner side of a window-frame, said means being hinged to the outer end of the arm and foldable against the outer side thereof, and also limited substantially to a quarter-swing outwardly from the arm.

5. The combination with a window-seat, of an arm, means for engaging the inner side of a window-frame hinged to the outer end of the arm and foldable against the outer side thereof, and a stop device carried by the frame-engaging means and adapted to engage the arm and support said means when disposed at substantially right angles with respect to the arm.

6. The combination with a window-seat, of an arm, means hinged to the outer end of the arm for engagement with the inner side of a window-frame and foldable against the outer side of the arm, and an angular stop carried by the inner end of the said means and embracing the inner side of the joint between the same and the arm.

7. The combination with a window-seat, of a back hinged thereto, arms carried by the opposite ends of the back and normally projected inwardly across the platform, and window-frame-engaging members hinged to the outer ends of the arms to lie across the inner sides of the window-frame, and provided with means to hold the same against pivotal movements when engaged with a window-frame.

8. In a window-seat, the combination with a platform, of a back thereafter, arms hinged to the opposite ends of the back and normally projected across the platform, window-frame-engaging members hinged to the free ends of the arms and foldable against the outer sides thereof, and means for limiting the pivotal movements of the window-frame-engaging members to substantially a quarter-swing outwardly from the arms.

9. In a window-seat, the combination with a platform, of a back hinged thereto, side pieces hinged to the back, detachable fastenings between the side pieces and the platform, arms hinged to the opposite ends of the back, window-frame-engaging devices hinged to the outer ends of the arms to bear across the inner sides of a window-frame and foldable against the outer sides of the arms, and means to limit the pivotal movements of said devices to substantially quarter-swings outwardly from the arms.

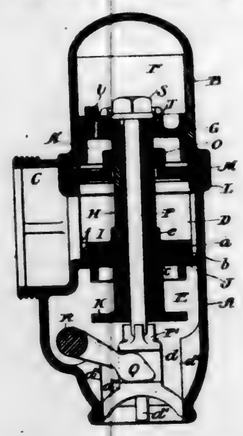
10. The combination with a window-seat, of a wall-engaging brace formed in hinged sections, the outer or free section being adapted to lie across the inner side of a window-frame to brace the device when in use, each of the brace-members consisting of a metal plate having its peripheral edge beaded and provided with a stiffening-wire, the end portion of one member being formed into a sleeve pivotally embracing the adjacent end portion of the stiffening-wire of the other member, and an angular stop carried by one of the members and disposed to engage the other member to limit the swing of the movable member.

11. The combination with a window-sill, of inner and outer strips secured longitudinally thereto, and a window-seat supported upon the inner strip and provided with longitudinal cleats bearing against the respective strips on the window-sill to prevent endwise displacement of the seat.

12. A window-seat having a transverse slot in the bottom thereof, a comparatively broad cleat applied to the under side of the bottom of the seat, a narrow cleat carried by the lower side of the first-mentioned cleat and at the outer edge thereof, and a fastening carried by said first-mentioned cleat and adjustable throughout the length of the slot in the seat.

13. In a window-seat, the combination of a platform having opposite transverse slots formed therein, a comparatively broad cleat applied to the under side of the bottom and provided with upstanding bolts adjustable in the slots of the seat, a narrow cleat secured to the under side of the wide cleat, a stationary back and opposite stationary side pieces for the platform, a foldable back hinged to the stationary back, foldable side pieces hinged to the opposite ends of the foldable back, eyes carried by the platform, swinging hooks carried by the foldable side pieces for detachable engagement with the eyes, opposite window-frame-engaging braces hinged to opposite ends of the foldable back, each brace embodying hinged sections, the outer section being of a length to bear across the inner side of a window-frame, angular stops carried by the inner ends of the outer sections of the braces and adapted to bear against the other sections to limit the movement of said outer sections, and pendent fastenings carried by the inner portion of the platform.

710,128. WATER-CLOSET VALVE. EARL G. WATROUS, Chicago, Ill. Filed Dec. 26, 1899. Serial No. 741,610. (No model.)



Claim.—1. In a water-closet valve, the combination of valve-controlling piston operating at the closing movement of the main valve against the resistance of a body of water confined in a chamber in front of the piston, and a check-valve independent of the piston for controlling communication between the water-supply and said chamber and operating to permit such communication during the opening movement of the main valve and to cut it off during the closing movement thereof, substantially as described.

2. In a water-closet valve, the combination of a valve-controlling piston, an inlet-chamber, a cushioning-chamber located above said inlet-chamber and between the latter and piston, and a check-valve independent of the piston controlling communication between the inlet and cushioning chambers, substantially as described.

3. In a water-closet valve, the combination of inlet, cushioning and retarding chambers, a valve-controlling piston separating the retarding-chamber from the cushioning and inlet chambers, and a check-valve controlling communication between the inlet and cushioning chambers, substantially as described.

4. In a water-closet valve, the combination of inlet, cushioning and retarding chambers, a valve-controlling piston separating the cushioning and retarding chambers and provided with a by-pass directly connecting said chambers, and a check-valve controlling communication between the inlet and cushioning chambers, substantially as described.

5. In a water-closet valve, the combination of inlet, cushioning and retarding chambers, a valve-controlling piston separating the cushioning and retarding chambers, and a check-valve independent of said piston for controlling communication between the inlet and cushioning chambers, substantially as described.

6. In a water-closet valve, the combination of inlet, cushioning and retarding chambers, a valve-controlling piston separating the cushioning and retarding chambers and provided with a by-pass directly connecting said chambers, and a check-valve independent of said piston for controlling communication between the inlet and cushioning chambers, substantially as described.

7. In a water-closet valve, the combination of inlet, cushioning and retarding chambers, a valve-controlling piston separating the retarding-chamber from the cushioning and inlet chambers and provided with a by-pass directly connecting the cushioning and retarding chambers, and a check-valve independent of said piston for controlling communication between the inlet and cushioning chambers and operating at the closing movement of the main valve to cut off such communication and confine the water in the cushioning-chamber in front of the piston, substantially as described.

8. In a water-closet valve, the combination of inlet, cushioning and retarding chambers, a valve-controlling piston separating the inlet and retarding chambers, a check-valve controlling a discharge-outlet from the retarding-chamber, and a second check-valve controlling communication between the inlet and cushioning chambers, substantially as and for the purpose described.

9. In a water-closet valve, the combination of inlet, cushioning and retarding chambers, a valve-controlling piston separating the retarding-chamber from the cushioning and inlet chambers and provided with a hollow stem furnishing communication between the retarding-chamber and the discharge end of the valve, a check-valve controlling such communication, and a second check-valve controlling communication between the inlet-chamber and cushioning-chamber, substantially as and for the purpose described.

10. In a water-closet valve, the combination of inlet, cushioning and retarding chambers, a valve-controlling piston separating the cushioning and retarding chambers and provided with a hollow stem extending through the cushioning and inlet chambers and furnishing communication between the retarding-chamber and the discharge end of the valve, a check-valve controlling such communication, and an annular check-valve surrounding and sliding upon the hollow piston-stem and controlling communication between the inlet and cushioning chambers, substantially as and for the purpose described.

11. In a water-closet valve, the combination of inlet, cushioning and retarding chambers, a piston separating the cushioning and retarding chambers and having a hollow stem furnishing communication between the retarding-chamber and the discharge end of the valve, a rod extending through the piston-stem and connected at one end with the operating device for opening the main valve and carrying at its opposite end a check-valve controlling communication between the retarding-chamber and discharge-outlet of the valve, said rod being capable of slight longitudinal movement independently of the main valve and piston, and an annular check-valve surrounding the piston-stem and controlling communication between the inlet and cushioning chambers, substantially as described.

12. In a water-closet valve, inlet, cushioning and retarding chambers normally in communication with the water-supply and filled with water under pressure, a valve-controlling piston separating the retarding-chamber from the cushioning and inlet chambers, a check-valve controlling communication between the retarding-chamber and the discharge-outlet of the valve, and a second check-valve controlling communication between the inlet-chamber and the cushioning-chamber, substantially as described.

13. A water-closet valve comprising inlet, discharge, cushioning and retarding chambers, a piston separating the cushioning and retarding chambers and a main valve moving with said piston and controlling communication between the inlet and discharge chambers, a check-valve controlling communication between the retarding and discharge chambers, operating devices for opening said check-valve and lifting the main valve from its seat, and a check-valve independent of the piston for controlling communication between the inlet and cushioning chambers, substantially as described.

14. A water-closet valve comprising inlet, discharge, cushioning and retarding chambers, a piston separating the cushioning and retarding chambers and having a hollow stem extending through the cushioning and inlet chambers and furnishing communication between the retarding and discharge chambers, a main valve carried by said piston-stem and controlling communication between the inlet and discharge chambers, a check-valve controlling communication of the retarding-chamber with the discharge-chamber through the hollow piston-stem, operating devices for lifting the main valve from its seat and opening said check-valve, and an annular check-valve surrounding the piston-stem and controlling communication between the inlet and cushioning chambers, substantially as described.

15. The herein-described water-closet valve, comprising the casing A B containing the chambers E, D, N, F, the piston G separating the chambers N and F and having the hollow stem H, the main valve I carried by said stem, the rod P extending through said stem and connected at its lower end with the lifting devices for the main valve and carrying at its upper end the check-valve S, and the annular check-valve surrounding the piston-stem and controlling communication between the chambers D and N, substantially as described.

16. The herein-described water-closet valve, comprising the casing A B containing the chambers E, D, N, F, the piston G separating the chambers N and F and having the hollow stem H, the main valve I carried by said stem and provided with the by-pass or slit *f*, the rod P extending through said stem and connected at its lower end with the lifting devices for the main valve and carrying at its upper end the check-valve S, and the annular check-valve O surrounding the piston-stem and controlling communication between the chambers D and N, substantially as described.

17. The herein-described water-closet valve, comprising the casing A B containing the chambers E, D, N, F, the piston G separating the chambers N and F and having the hollow stem H provided with the enlargement *e*, the main valve I and disk K carried by the piston-stem, the rod P extending through said stem and connected at its lower end with the lifting devices for the main valve and carrying at its upper end the check-valve S, the diaphragm M separating the chambers D and N and provided with the central circular opening adapted to receive the enlargement *e* of the piston-stem at the end of the upward movement of the main valve, and the annular check-valve O surrounding the piston-stem within the chamber N and seating upon the diaphragm M.

710,129. VALVE. EARL G. WATROUS, Chicago, Ill. Filed Nov. 18, 1901. Serial No. 82,913. (No model.)

Claim.—1. A pair of pipe-sections, and a coupling-nut for connecting them, in combination with a valve located within said nut, and means for opening and closing said valve by oscillation of said nut; substantially as described.

2. A pair of pipe-sections, and a coupling-nut connecting them, in combination with a valve having a threaded support in one of said sections whereby it will be moved toward or from its seat by turning it in one direction or the other, and means for turning said valve continuously in one direction by oscillation of the coupling-nut; substantially as described.

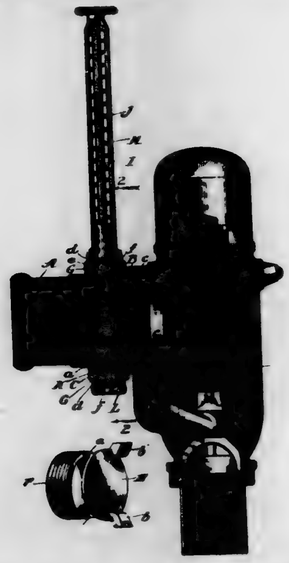
3. A pair of pipe-sections, in combination with a ring rotatable between said sections, and a valve having a threaded support in one of said sections and rotatable with the ring, whereby the valve may be moved toward and from its seat by turning the ring in one direction or the other; substantially as described.

4. A pair of pipe-sections, and a coupling-nut connecting them, in combination with a ring rotatable within said nut, and a valve within said nut movable toward and from its seat by rotation of said ring; substantially as described.

5. A pair of pipe-sections, and a coupling-nut connecting them, in combination with a ring rotatable between said pipe-sections within said nut, means for turning said ring continuously in one direction by oscillation of said nut, and a valve within said nut movable toward and from its seat by the rotation of said ring; substantially as described.

6. A pair of pipe-sections, and a coupling-nut connecting them, in

combination with a ring rotatable between said sections within said nut, means for turning said ring continuously in one direction by oscillation of said nut, a valve having a threaded support in one of said sections, and a connection between the valve and ring for causing the valve to turn with the ring while having it free to move toward and from its seat independently of the ring; substantially as described.



7. The pipe-sections A B, and coupling-nut C connecting them, in combination with the valve E having a threaded support in the section A and provided upon its opposite side with the ears *b*, and the rotatable ring G provided with the fingers *c* engaging said ears; substantially as described.

8. The pipe-sections A B, and coupling-nut C connecting them, in combination with the valve E provided with the ears *b*, the exteriorly-threaded sleeve F screwed into the section A and connected to the valve E by the lugs *a* leaving water-passages between the sleeve and valve, and the rotatable ring G provided with the fingers *c* engaging the ears *b* on the valve E; substantially as described.

9. The pipe-sections A B, in combination with the ring G rotatable between them, the packing-rings K between the ring G and the ends of the pipe-sections, and the valve E located within the ring G and movable toward and from its seat by rotation of said ring; substantially as described.

10. The pipe-sections A B, in combination with the ring G rotatable between them and provided with the fingers *c*, the packing-rings K between the ring G and ends of the pipe-sections, and the valve E having a threaded support in the section A and provided with the ears *b* engaging the fingers *c*; substantially as described.

11. The pipe-sections A B, and coupling-nut C connecting them, in combination with the valve E having a threaded support in the section A and provided upon its opposite side with the ears *b*, the rotatable ring G provided with the fingers *c* engaging said ears, and the packing-rings K between the ring G and ends of the pipe-sections; substantially as described.

12. A pair of pipe-sections, and a coupling-nut connecting them, in combination with a ring within said nut, a valve movable toward and from its seat by rotation of said ring, an operating-handle applicable to said nut for oscillating the same, and means intermediate said handle and the rotatable ring within the nut for turning said ring continuously in one direction by oscillating the nut; substantially as described.

13. A pair of pipe-sections, and a coupling-nut connecting them, in combination with a ring within said nut, a valve movable toward and from its seat by rotation of said ring, an operating-handle applicable to said nut for oscillating the same, and means intermediate said handle and the rotatable ring within the nut for turning said ring at will in either direction by oscillating the nut; substantially as described.

14. A pair of pipe-sections, and a coupling-nut connecting them, in combination with a rotatable ring located within said nut and having a notched periphery, a valve within said nut movable toward and from its seat by the rotation of said ring, an operating-handle applicable to said nut for oscillating the same, and a pawl-tooth carried by said handle and adapted to engage the periphery of the rotatable ring, to rotate the same continuously in one direction by oscillating said nut; substantially as described.

15. A pair of pipe-sections, and a coupling-nut connecting them, in combination with a rotatable ring located within said nut and having a notched periphery, a valve within said nut movable toward and from its seat by the rotation of said ring, an operating-handle applicable to said nut for oscillating the same, and a reversible pawl-tooth carried by said handle and adapted to engage the notched periphery of the rotatable ring, whereby said ring may be turned at will in either direction by oscillating said nut; substantially as described.

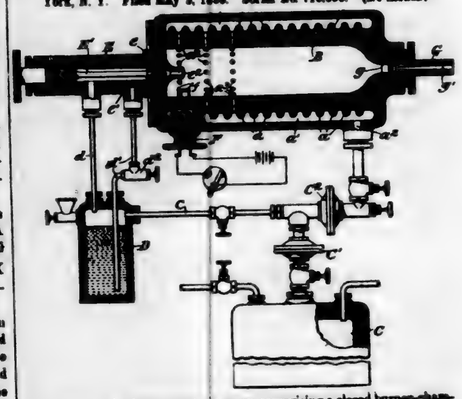
16. A pair of pipe-sections, and a coupling-nut connecting them, in combination with a rotatable ring located within said nut, a valve movable toward and from its seat by rotation of said nut, a tubular operating-handle applicable to said nut for oscillating the same, and a spring-pressed rod located within said handle and projecting at one end beyond the same and formed into a tooth adapted to engage the periphery of the notched ring within the coupling-nut; substantially as and for the purpose described.

17. A pair of pipe-sections and a coupling-nut connecting them, in combination with a rotatable ring located within said nut, a valve movable toward and from its seat by rotation of said nut, a tubular operating-handle applicable to said nut for oscillating the same, and a spring-pressed rod located within said handle and projecting at one end beyond the same and formed into a tooth adapted to engage the periphery of the notched ring within the coupling-nut, said spring-pressed rod being free to turn within the handle when disengaged from the coupling-nut and ring, to reverse the position of the toothed inner end; substantially as and for the purpose described.

18. A coupling-nut C provided with an opening *f* surrounded by the threaded boss *d*, in combination with the tubular handle H having the threaded end adapted to engage said boss, the rod I located within the handle H and having its end projecting beyond the threaded end of the handle H formed into a pawl-tooth *s* adapted to pass through the opening *f* in the nut C, the thumb-piece *g* secured to the opposite projecting end of said rod, and the coiled spring J surrounding the rod within the handle; substantially as and for the purpose described.

19. The combination of the tubular handle H, the rod I rotatable therein and projecting beyond the opposite ends thereof, formed into a pawl-tooth at one end and having the thumb-piece *g* secured to its opposite end, and the coiled spring J surrounding said rod within the handle H; substantially as and for the purpose described.

710,180. REGENERATOR-BURNER. CARL W. WEISS, New York, N. Y. Filed May 9, 1899. Serial No. 716,098. (No model.)



Claim.—1. A regenerator-burner, comprising a closed burner-chamber having an outlet-nozzle at one end, and air-inlets at its other end, means for supplying air to said inlets to support combustion, an injector also at said last-named end, an oil-reservoir, a pipe leading from below the oil-level up to one member of the injector, a second pipe leading from above the oil-level in said chamber to the other member of the injector, and a compressed-air pipe discharging air into the upper end of the oil-receptacle to force oil through one pipe and carbureted air through the other; substantially as described.

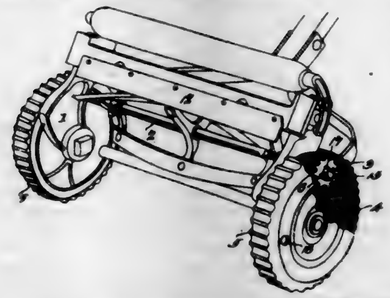
2. A regenerator-burner comprising a closed air-jacketed burner-chamber, having air-inlets at one end from said jacket and provided at its opposite end with a discharge-nozzle, an injector at the air-inlet end of the chamber, an oil-reservoir, a pipe leading from below the oil-level of said reservoir to one member of the injector, a second pipe leading from above the oil-level to the other member of said injector; a compressed-air reservoir, and pipe leading from said air-reservoir to the air-jacket and upper part of the oil-reservoir and provided with pressure-regulating valves to cause the pressure at the air-inlets of the burner-chamber to be less than the pressure at the injector; substantially as described.

3. The combination with an air-jacketed burner-chamber, having air-inlets from its jacketed space, an injector for the chamber, means for supplying oil to the injector, a compressed-air reservoir, piping connecting the reservoir with the injector and oil-reservoir, and piping leading from the air-reservoir to the air-space around the burner-chamber, of an engine or motor having an air-jacket incorporated in the piping leading to said burner-chamber, and a nozzle or pipe connecting the outlet end of the burner-chamber with the motor or engine; substantially as described.

4. The combination with the air-jacketed burner-chamber having air-inlets from its jacketed space, and an injector for combustible material, of a compressed-air reservoir, piping connecting the reservoir with the injector and the said air-jackets respectively, and pressure-reducers in said piping to cause the air from said reservoir to be of greater force at the injector than at the air-inlets of the berner-chamber; substantially as described.

5. A regenerator-burner, comprising the jacketed chamber A having a contracted outlet end, a lining fitting the chamber and also having a contracted outlet registering with that of the chamber, inlet-apertures from the jacketed space to the interior of the combustion-chamber, an annular plug screwed into the open end of the chamber and engaging that end of the lining to hold it in place, a blast-nozzle at the opposite end of the chamber, an air-nozzle screwed into said annular plug, an oil-nozzle screwed into the air-nozzle, an air and oil supply for said nozzle, and an air-supply for the chamber-jacket; substantially as described.

710,181. LAWN-MOWER. FRED L. ADAMS, Prophetstown, Ill. Filed Jan. 3, 1902. Serial No. 88,322. (No model.)



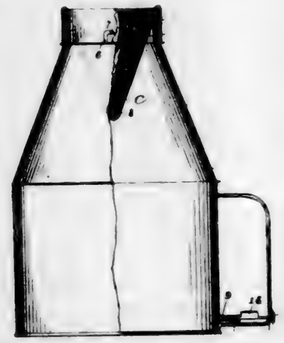
Claim.—1. A lawn-mower having as elements, a cutter-bar, a reel-shaft having a key-seat, a driving-wheel having an opening in alinement with said key-seat, a pinion having a key-seat and normally mounted loosely on the reel-shaft, a clutching mechanism for connecting the pinion to the reel-shaft in one direction of movement, and a key adapted to fit in the key-seat of the shaft and pinion to lock the two together when it is desired to sharpen the cutter-bar.

2. The combination of the reel shaft and its loosely-mounted pinion, each having a key-seat, mechanism for clutching the pinion to the shaft in one direction of movement, a driving-wheel having an opening which may be moved in alinement with the key-seat, and a key adapted to be inserted in said key-seat to offset the locking of the pinion to the shaft, substantially as specified.

710,182. COFFEE-MAKER. THOMAS K. BAKER, Minneapolis, Minn. Filed Nov. 11, 1901. Serial No. 81,816. (No model.)

Claim.—1. A device of the class described, consisting of a can tapering toward an open end for the purpose of fitting different-sized apertures in coffee-pots, a collar, and a conical strainer removably attached to the open end of the can by said collar, with its apex projecting into said end; whereby, when the can is inverted, the liquid coffee is strained through said opening.

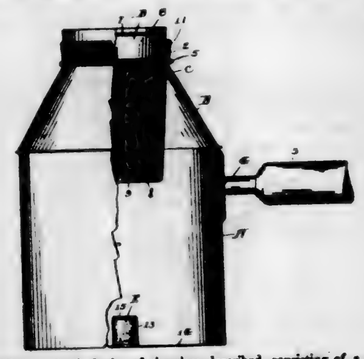
2. A device of the class described, consisting of a vessel having a tapering end for the purpose of fitting different-sized openings in coffee-pots, an opening in said tapering end, a strainer with a reverse taper in said opening, a collar by which the strainer is detachably fastened to said vessel, and a frame carried by said collar for holding said strainer in position when the vessel is tilted or inverted.



3. A device of the class set forth, consisting in combination of a vessel closed at one end and having a truncated funnel at the other for the purpose of fitting different-sized openings in coffee-pots, a flange around the mouth of said funnel, a tapering strainer reversed in said funnel with its outer edge overlapping said flange, a collar by which said overlapping edge is clamped to said flange, a tapering frame, carried by said collar adapted to support the apex end of said strainer in said vessel, and an air-valve near the bottom of the vessel.

4. A device of the class set forth, consisting in combination of a vessel A, tapering toward an open end B, a circular flange around said open end, a conical strainer C, a collar 5 by which said strainer is attached to said flange, a V-shaped frame 8 carried by said collar, by which one end of said strainer projects through said opening and into said vessel, and a valve near the bottom of the vessel.

710,183. COFFEE-MAKER. THOMAS K. BAKER, Minneapolis, Minn. Filed Jan. 30, 1902. Serial No. 91,840. (No model.)



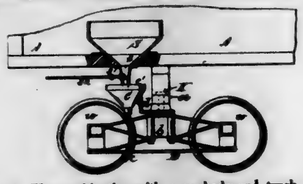
Claim.—1. A device of the class described, consisting of a vessel having one end tapering to an opening for the purpose of fitting different-sized apertures in coffee-pots, a flange around said open end, a strainer, and a holder for said strainer, said strainer being provided with an elastic open end, whereby it is adapted to enfold the outer surface of the flange for the purposes specified.

2. A device of the class set forth, consisting in combination of a vessel having an open end terminating in a flange, a strainer also having an open end framed in an elastic ring, adapted to enfold said flange, and means for holding said strainer in the mouth of the vessel.

3. A coffee-maker closed at one end and terminating in an opening at the other, a flange surrounding said opening, an automatic valve in said closed end, substantially as shown and described, a strainer surrounding a holder in said opening, an expansible ring at the open end of the strainer adapted to clasp the strainer and outer surface of said flange together.

4. A coffee-maker consisting of a vessel closed at one end and tapering at the other to an opening, a valve in the closed end of said vessel, a tapering strainer reversed in said opening, and means for attaching said strainer in said vessel, consisting of a skeleton holder within the strainer and split ring around the open end thereof.

710,184. SAND-DISTRIBUTER FOR RAILROADS. WATSON H. BELL, Brooklyn, N. Y. Filed May 7, 1902. Serial No. 106,362. (No model.)



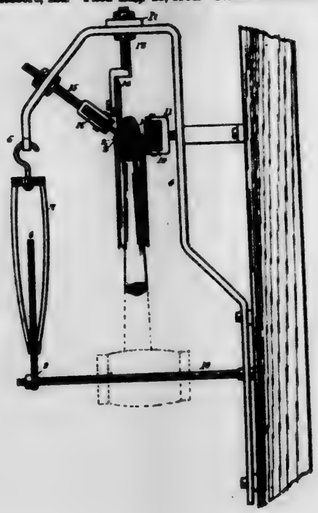
Claim.—1. The combination with a car-body and truck pivotally connected by means of a king-bolt, of a sand-distributing funnel rigidly secured to the truck and disposed angularly with relation to the line of travel of the same and arranged to conduct the sand to the track immediately adjoining the periphery of one of the wheels of said truck and a sand-hopper rigidly secured to the car-body in a prescribed relation to the said funnel and king-bolt, substantially as and for the purpose set forth.

2. The combination with a car-body and truck pivotally connected by means of a king-bolt, of a sand-distributing funnel rigidly secured to the truck and disposed angularly with relation to the line of travel of the same and formed with a mouth concentric with the said king-bolt, and a sand-hopper rigidly secured to the car-body in a prescribed relation to the sand-distributing funnel and king-bolt, substantially as and for the purpose set forth.

3. The combination of the sand-hopper S, rigidly secured to the car-body A, and provided with a suitable sand-releasing valve, the truck B, pivotally secured to the car-body by a king-bolt K, and the sand-distributing funnel C, rigidly secured to the said truck B and disposed angularly to the line of travel, the parts being relatively arranged and operating substantially in the manner and for the purpose herein set forth.

4. The combination of the car-body A, and truck B, pivotally connected by the king-bolt K, the sand-hopper S, rigidly secured to the car-body, and formed with the spout *s* and valve *s'*, and the distributing-funnel C, rigidly secured to the truck B and disposed angularly to the line of travel, and formed with the mouth *c'*, concentric with the king-bolt K, and with the discharge-spout *c*, the whole arranged and operating substantially in the manner and for the purpose described.

710,185. RUBBER-TIRE-SETTING MACHINE. JOHN C. BLAKE, Toledo, Ohio, assignor to The Indiana Rubber and Insulated Wire Company, Jonesboro, Ind. Filed Aug. 20, 1901. Serial No. 73,710. (No model.)

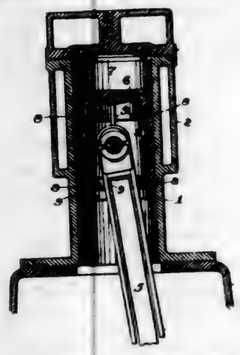


Claim.—1. An improved machine for placing rubber tires having fillets on opposite sides of the base, in metal tires having opposite grooves to receive and fit said fillets, which consists of means for revolubly supporting the wheel, a plano-convex roller to bear against the side of the rubber tire, and an adjacent narrow-edged roller to bear diagonally against the tire above the fillet, substantially as shown and described.

2. An improved machine for placing rubber tires having fillets on opposite sides of the base, in metal tires having opposite grooves to receive and fit said fillets, which consists of means for revolubly supporting the wheel, a plano-convex roller to bear against the side of the rubber tire, an adjacent narrow-edged roller to bear diagonally against the tire above the fillet, and an abutment-roller to bear against the metallic tire, substantially opposite the other rollers, substantially as shown and described.

3. An improved machine for placing rubber tires having fillets on opposite sides of the base, in metal tires having opposite grooves, which consists of a housing bearing an abutment-roller to support the wheel against side thrust, a plano-convex roller to bear against the side of the tire opposite said abutment-roller, an adjacent narrow-edged roller to bear diagonally against the tire above the fillet, said plano-convex and narrow-edged rollers being adjustable in said housing and adjustable means for supporting the wheel, substantially as shown and described.

710,186. ENGINE. WILLIAM A. BOLE, Pittsburg, Pa., assignor to the Westinghouse Machine Company, a Corporation of Pennsylvania. Filed Aug. 16, 1897. Serial No. 648,325. (No model.)



Claim.—1. The combination with a cylinder, of a piston adapted to work therein and provided with means for permitting the free escape of oil from the space between the cylinder and piston through the latter below its head in all of its positions, substantially as set forth.

2. The combination with a cylinder, of a piston having a groove or grooves and a passage or passages extending therefrom to the interior and below the piston-head for discharging oil from between the piston and cylinder and for preventing or hindering the passage of oil to the head of the piston or to the space between the piston and the cylinder-head, substantially as set forth.

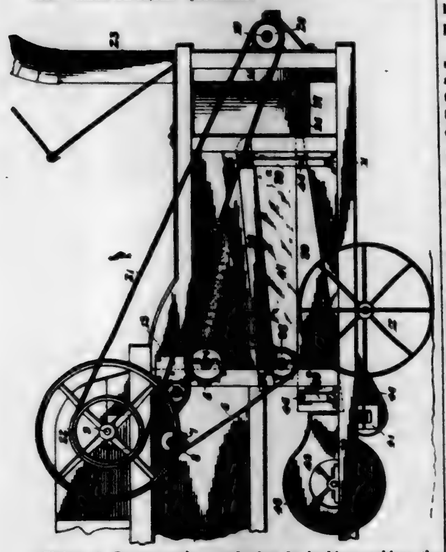
3. The combination with a cylinder and a crank-case, of a piston adapted to work in the cylinder, and having a free passage or passages extending inward from its periphery to the space below its head, through which oil may flow from the space between the piston and cylinder to the crank-case or to a space communicating therewith, substantially as set forth.

4. The combination with a crank-case, of a cylinder connected with and opening into the crank-case and a trunk-piston adapted to work in the cylinder, and having a circumferential groove and a free passage, or passages, leading from the groove into the interior of the piston below its head, whereby oil may pass freely from the space between the cylinder and piston to the interior of the crank-case, substantially as set forth.

5. In an engine, the combination with a closed crank-case and a cylinder, of a piston operating in said cylinder and provided with one or more external, circumferential grooves having a downwardly and inwardly inclined upper side and one or more passages leading from the inner edge of said groove to the interior of the piston.

6. In an engine, the combination with a closed crank-case and a cylinder, of a piston operating in said cylinder and provided with an external, circumferential groove having an inwardly and downwardly inclined upper side and a substantially horizontal lower side and one or more passages leading from said groove to the interior of the piston.

710,187. SEPARATING MECHANISM FOR CORN-HUSKING MACHINES. OLIVER BOYER, Lima, Ohio, assignor, by direct and mesne assignments, of one-half to William H. OTT, Lima, Ohio. Filed Apr. 11, 1901. Serial No. 55,362. (No model.)



Claim.—1. In a separating mechanism for husking-machines, the combination with a separating-rack designed to receive the husks and to permit the gravitation of the shelled corn, of a blower disposed to project a blast below the separating-rack to clean the corn as the latter is precipitated into the blast, a suction-fan located in a direct line with the blast from the blower, and means intermediate of the separating-rack and fan for sustaining the husks in a plane below the rack and in position to be fed to the fan by the blast from the blower.

2. In separating mechanism for husking-machines, the combination with a vibratory separating-rack designed to receive the husks, and a vibratory riddle-shoe disposed below the rack, of a blower disposed to project a blast endwise between the riddle-shoe and the rack to offset the cleaning of the corn as it drops into the shoe from the rack and to remove the husks as the latter are dropped into the direct range of the blast from the end of the rack opposite the blower.

3. In separating mechanism for husking-machines, the combination with a vibratory separating-rack and a vibratory riddle-shoe, of a husk-chamber located beyond one end of the rack with its bottom disposed in a plane below the rack, a blower disposed to project a blast endwise between the rack and shoe and through the husk-chamber, and a suction-fan located beyond the husk-chamber to receive the husks expelled therefrom by the blast from the blower.

4. In separating mechanism for husking-machines, the combination with a separator-casing and separating mechanism therein comprehending means for mechanically feeding the husks endwise of the casing, of a husk-chamber disposed beyond the separating mechanism and having its bottom disposed in a plane below said mechanical feeding means, a blower located at or adjacent to the front end of the casing likewise below said mechanical feeding means and disposed to direct a blast of air through the separating mechanism and husk-chamber, and a suction-fan located in the direct line of blast from the blower, and disposed at the rear side of the husk-chamber.

5. In separating mechanism for corn-husking machines, the combination with a vibratory separating-rack designed to receive the husks and to feed them toward the end of the rack, of a vibratory riddle-shoe located below the rack and having an inclined bottom disposed to facilitate the discharge of corn at the end of the riddle-shoe opposite the end of the rack at which the husks are discharged, a blower disposed at or adjacent to the discharge end of the riddle-shoe to direct a blast therethrough in opposition to the corn moving toward the discharge end of the chute, whereby the blast after performing its function as a cleaning agent for separating the corn, assists in removing the husks as the latter gravitate into the blast at the rear end of the rack and a suction-fan disposed beyond the rack to receive the husks blown back by the first-named blower.

6. In separating mechanism for corn-husking machines, the combination with a vibratory rack, and an upstanding swinging support for one end thereof, of a riddle-shoe disposed below the rack and having pivotal connection at one end with said upstanding swinging support, a swinging link supporting the opposite end of the riddle-shoe, and means for imparting motion to the rack.

7. In separating mechanism for corn-husking machines, the combination with a separator-casing, separating mechanism therein comprising a longitudinally-inclined separating-rack and a riddle-shoe disposed below the rack and having a longitudinally-inclined bottom wall and a horizontal screen constituting the top of the shoe, of means located below the discharge end of the riddle-shoe to receive the corn therefrom, a vertically-disposed suction-fan located beyond the separating mechanism to receive the husks, and a blower located to project a blast of air into the discharge end of the riddle-shoe and into the fan located thereboyond and means for sustaining the husks in a plane below the rack and in position to be fed to the fan by the blast from the blower.

8. In separating mechanism for corn-husking machines, the combination with a vibratory separating-rack, of a vibratory riddle-shoe disposed therebelow, flexible vertical side walls extending between the rack and shoe, and a blower located at one end of the riddle-shoe and disposed to project a blast of air through the space defined by the riddle-shoe, rack and flexible side walls.

9. In a separating mechanism for husking-machines, the combination with a separator-casing, of a suction-fan disposed directly across the rear end thereof, means for feeding the material to be separated into the casing at its front end, a separating-rack disposed longitudinally of the casing to convey the husks toward the rear end thereof, a husk-chamber located intermediate of the rack and suction-fan and having its bottom disposed in a horizontal plane below the rack, a riddle-shoe located below the rack and having its bottom wall inclined downwardly from the bottom of the husk-chamber to the front end of the separator-casing, and a blower located beyond the front end of the casing and disposed to direct a blast longitudinally between the separator and the bottom wall of the riddle-shoe and through the husk-chamber to the suction-fan.

10. In a separating attachment for corn-husking machines, the combination with a separator-casing, of a suction-fan disposed at one end of the casing, a blower located at the opposite end of the casing and projecting a blast directly into the suction-fan, and separating mechanism disposed above the blower and spaced from the suction-fan to permit the husks to drop from the rear end of the separating mechanism and into the blast of air projected from the blower to the suction-fan.

11. A separating-rack for corn-husking machines comprising an open frame, a series of separated transverse slats extending across the frame and fixed thereto, a series of longitudinally-disposed toothed rack-bars carried by the frame above the slats, and screen-bars disposed longitudinally of the frame and extending between the slats in the intervals between the toothed bars.

12. A separating-rack for corn-husking machines comprising an open frame, a series of separated transverse slats extending across the frame and fixed thereto, a series of longitudinally-disposed toothed bars carried by the frame above the slats, the teeth of said bars being directed toward the rear end of the rack, screen-bars disposed longitudinally of the frame and extending between the slats in the intervals between the toothed bars, said screen-bars having their front ends driven into a slat and their rear ends resting upon the next succeeding slat.

13. In separating mechanism for corn-husking machines, the combination with a separator-casing, and separating mechanism therein including a longitudinally-inclined open-work supporting-rack, and a riddle-shoe disposed below the rack and having a longitudinally-inclined bottom wall, and a horizontal screen constituting the top of the shoe and of a length at least equal to the length of the rack, of means for imparting vibratory movement to the rack and shoe, means located beyond the discharge end of the riddle-shoe to receive the corn therefrom, a blower located to project a blast of air into the discharge end of the riddle-shoe, through the screen thereof and rearwardly between the rack and shoe, and conveying means located beyond the rear end of the rack, said conveying means being so located that the husks delivered from the rear end of the rack will fall into the blast from the blower, whereby said blast will assist in the delivery of the husks to the conveying means.

14. In separating mechanism for corn-husking machines, the combination with a vibratory supporting-rack, of a vibratory riddle-shoe disposed therebelow, flexible side walls extending between the rack and shoe, a blower located at one end of the riddle-shoe and disposed to project a blast of air through the space defined by the riddle-shoe, rack and flexible walls, and conveying means located beyond the rack to offset the removal of the husks, said conveying means being so disposed that the delivery of the husks thereto will be assisted by the blast from the blower.

15. In separating mechanism for corn-husking machines, the combination with a separator-casing, of a blower, a conveyor located directly

in the blast from the blower, and separating mechanism located in a plane above the blower and having its discharge end spaced from the conveyer, to permit the husks to drop from the end of the separating mechanism into the blast and be blown back to the conveyer with the light particles previously separated from the falling corn by the blast.

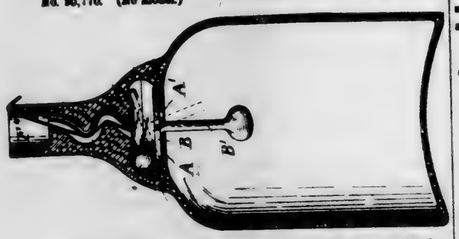
16. In a separating attachment for corn-husking machines, the combination with a separator-casing, of a conveyer located at one end of the casing, a blower located at the opposite end of the casing and projecting a blast directly to the conveyer, and separating mechanism disposed above the blower and spaced from the conveyer, to permit the husks to drop from the rear end of the separating mechanism into the blast of air projected from the blower to the conveyer.

17. In separating mechanism for corn-husking machines, the combination with a casing, of a blower, a conveyer located directly in the blast therefrom, and separating mechanism intermediate of the blower and conveyer, said separating mechanism comprising an inclined separating-rack disposed in a plane above the blower and having its discharge end spaced from the conveyer, to permit the husks to drop from the end of the rack into the blast, a riddle-shoe disposed below the rack and having its bottom wall downwardly inclined toward the blower, and a horizontal screen constituting the upper wall of the riddle-shoe and intersecting the line of the blast, whereby the blast from the blower serves first to clean the dropping corn and to blow the light particles back into the body of husks falling from the end of the rack and delivered by the blast to the conveyer.

710,138. CUP. JOHN BRÄUNLICH, Lorain, Ohio. Filed July 29, 1901. Serial No. 70,144. (No model.)

Claim.—A lamp heating-cup comprising a body having its lower end fluted, a bottom having radial corrugations registering with the flutes, and a centrally-disposed draft-flue carried by the bottom and extending above the rim of the body.

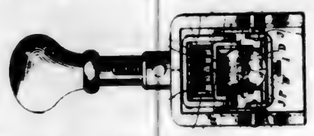
710,139. NON-REFILLABLE BOTTLE. HERMAN BREUHS and HENRY J. WALDEYER, New York, N. Y. Filed Feb. 26, 1902. Serial No. 96,770. (No model.)



Claim.—1. In a device of the character described, the combination of a diaphragm near the neck of the bottle, a disk seated thereon, a portion of said neck overhanging the disk, an arm projecting through the said diaphragm and a weight on the end of said arm, an annular groove in said neck and a ball within said groove, the diameter of which is greater than the distance from the disk to the overhanging portion of the neck.

2. In a device of the character described, the combination of a diaphragm in the upper part of the bottle, a central opening in said diaphragm, a neck joined to said bottle above the diaphragm, a disk seated on said diaphragm, notches in the vertical edge of said disk, an arm extending from the center of said disk through said opening, a weight on the inner end of said arm, and a ball between the upper surface of said disk and the neck.

710,140. NUMBERING-MACHINE. JOHN J. CRATTAWAY, Brooklyn, N. Y. Filed Oct. 20, 1900. Serial No. 33,733. (No model.)



Claim.—1. In a numbering-machine, the combination of the numbering-wheels and their ratchet-wheels, with a pawl-yoke, a pawl plate or block pivoted in said yoke, pawls secured to said plate and operatively engaging said ratchet-wheels when in normal position, and a part pivoted to the pawl plate or block and adjustable into position to engage a part of the framework of the machine and withdraw said pawls out of operative relation with said ratchet-wheels.

2. In a numbering-machine, the combination of the numbering-wheels, ratchet-wheels controlling the movements of said numbering-wheels, a pivoted pawl plate or block, and pawls secured to said plate or block and engaging said ratchet-wheels for consecutive numbering, with a part pivoted to said pawl plate or block and adjustable into relation with a part of the framework of the machine to turn said pawl plate or block in its pivot and thus withdraw said pawls from operative engagement with said ratchet-wheels for repeat numbering.

3. In a numbering-machine, the combination of numbering-wheels, ratchet-wheels controlling the movements of said numbering-wheels, a pivoted pawl plate or block, and pawls secured thereto and normally engaging said ratchet-wheels, an idler ratchet-wheel having alternate deep and shallow notches, an idler-pawl engaging said notches and a part pivoted to said pawl plate or block and adjustable into engagement with a part of the machine to withdraw the pawl plate or block and its sustained pawls out of engagement with the ratchet-wheels for repeat numbering, and also adjustable over the idler-pawl, whereby it will be engaged by said idler-pawl when in the shallow notches of the idler ratchet-wheel, for duplicate numbering.

4. In a numbering-machine, the combination of numbering-wheels, ratchet-wheels controlling the movements of said numbering-wheels, a pawl-yoke, a pawl plate or block pivoted to said yoke, and pawls secured thereto, with a disk pivoted to said pawl-plate and having a part adjustable into engagement with said yoke to raise the pawl plate or block and its sustained pawls out of operative relation with their ratchet-wheels, for repeat numbering.

5. In a numbering-machine, the combination of numbering-wheels, ratchet-wheels, controlling the movements of said numbering-wheels, a pawl-yoke, a pawl plate or block pivoted to said yoke, pawls secured thereto, an idler ratchet-wheel having alternate deep and shallow notches, and an idler-pawl engaging said notches, with a member pivoted to said pawl plate or block and having one part adjustable into the path of the idler-pawl when in the shallow notches of the idler ratchet-wheel, for duplicate numbering, and another part adjustable into engagement with said pawl-yoke whereby said pawl plate or block and its sustained pawls are withdrawn from their ratchet-wheels for repeat numbering.

710,141. SHOW-CASE OR SHOW-FRONT. JAMES L. CRANE, Cleveland, Ohio. Filed Nov. 18, 1901. Serial No. 82,730. (No model.)

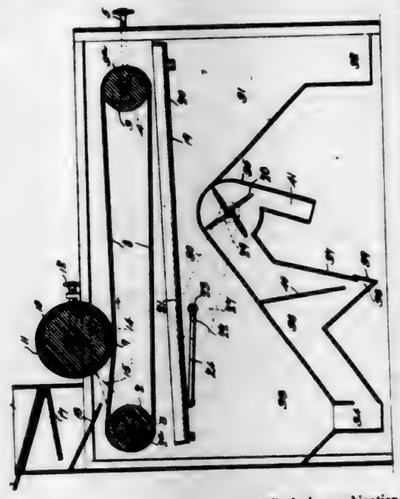
Claim.—1. In a show-case or show-front, the combination, with two glass plates arranged with a side edge of each plate adjacent a side edge of the other plate, which plates are separated the distance required to accommodate the interposition between them of the thickness of another plate and are provided with oppositely-arranged recesses in the aforesaid edges, of a plate interposed laterally between the said recessed edges, and means instrumental in fastening the first-mentioned plates to the intervening plate and comprising the following: two metal straps arranged at opposite sides respectively of the intervening plate and extending through the aforesaid recesses and having members overlapping the outer sides of the first-mentioned plates and comprising, also, members overlapping the inner sides of the first-mentioned plates, and means fastening the metal straps to the intermediate plate.

2. In a show-case or show-front, the combination, with two glass plates arranged with a side edge of each plate opposite a side edge of the other plate, which plates are separated the distance required to accommodate the interposition between them of the thickness of another plate and are provided with oppositely-arranged recesses in the aforesaid edges, of a plate interposed laterally between the said recessed edges, and means instrumental in fastening the first-mentioned plates to the intervening plate and comprising the following: two metal straps arranged at opposite sides, respectively, of the intervening plate and extending through the aforesaid recesses and having members overlapping the outer sides of the first-mentioned and recessed plates, other metal straps arranged at the outer sides of the first-mentioned and inner straps and having members overlapping the inner sides of the said recessed plates, a bolt extending through all of the said straps and through the intervening plate and arranged with its head at the outer side of one of the outer straps, and a nut upon the shank of the bolt at the outer side of the other outer strap, substantially as and for the purpose set forth.

3. In a show-case or show-front, the combination, with two glass plates arranged with a side edge of each plate adjacent a side edge of the other plate, which plates are recessed at the said edges, of a brace arranged adjacent and extending along the said edges, and means secured to the brace and instrumental in fastening the plates to the brace and comprising the following: metal straps extending through recesses of the aforesaid recessed plates and having portions overlapping the outer sides of the recessed plates, and other straps or members overlapping the inner sides of the said plates, and means fastening the metal straps to the aforesaid brace, substantially as and for the purpose set forth.

4. In a show-case or show-front, the combination, with two glass plates arranged with a side edge of each plate adjacent a side edge of the other plate; of a brace arranged adjacent and extending along the said edge, and means secured to the brace and instrumental in fastening the plates to the brace and comprising metal straps extending between the plates, and having portions overlapping the outer sides of the plates and other members overlapping the inner sides of the said plates, and means fastening the metal straps to the aforesaid brace.

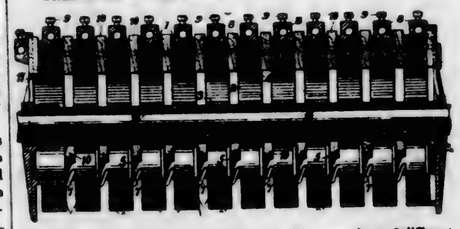
710,142. BEAN-CLEANING MACHINE. GEORGE R. DAVIDSON, Lenox, Mich. Filed Nov. 14, 1901. Serial No. 82,302. (No model.)



Claim.—1. In a machine of the class described, the combination of an endless traveling belt and a roller engaging and driven at a surface speed different from that of the belt, said roller having a resilient friction-surface, whereby the beans are prevented from adhering to the roller and their surfaces are subjected to attrition which pulverizes and dislodges the impurities from the surfaces of the beans, without breaking the latter, substantially as described.

2. The combination of an endless traveling belt, a roller engaging the belt, means to drive the belt and roller at different rates of speed, said roller having a resilient friction-surface, whereby the beans are prevented from adhering to the roller and their surfaces are subjected to attrition which pulverizes and dislodges the impurities from the surfaces of the beans without breaking the latter, a screen onto which the beans are discharged from the traveling belt, said screen having a section to sift the pulverized impurities from the beans and a section through which the beans drop, and means to winnow the beans, substantially as described.

710,143. RESISTANCE-COIL AND SUPPORT THEREFOR. HARRY P. DAVIS, Pittsburg, Pa., assignor to Westinghouse Electric & Manufacturing Co., a Corporation of Pennsylvania. Filed Dec. 26, 1901. Serial No. 87,305. (No model.)



Claim.—1. A resistance element comprising two rings of different diameters projecting in opposite directions from an open-work frame, a spiral coil of resistance material surrounding the smaller ring and a plurality of insulating-blocks mounted in the frame at one side of the coil.

2. A resistance element comprising two rings of different diameter located in parallel planes and connected by a plurality of parallel arms and insulating-blocks severally located between said pairs of arms.

3. A frame for a resistance-coil comprising two rings of different diameter and located in parallel planes and connected by a plurality of pairs of substantially parallel arms.

4. A resistance-column consisting of a set of superimposed frames each of which comprises two rings of different diameter located in different planes and connected by a plurality of pairs of arms, insulating-blocks between the several pairs of arms and resistance-coils concentrically disposed between the several rings of lesser diameter and the rings of larger diameter that pertain to the adjacent frames.

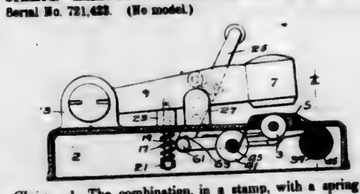
5. A resistance-column consisting of a set of superimposed annular frames each of which comprises two concentric rings in the same plane and a third ring in a different plane, a plurality of pairs of arms between the last-named ring and the outer ring in the other plane, insulating-blocks between the several pairs of arms and spiral resistance-coils interposed between the outer rings and the rings of lesser diameter pertaining to adjacent frames.

6. A resistance-element frame comprising two concentric rings in the same plane connected by radial arms, a third ring in a different plane and a plurality of pairs of arms between the third ring and the outer ring in the other plane.

7. A resistance element consisting of a frame comprising two concentric rings and connecting-arms, a third ring in a different plane and a plurality of pairs of arms between the same and the outer ring in the other plane and a spiral coil of interleaved, conducting and non-conducting strips wound upon one of said rings.

8. A resistance-column consisting of a rod and a set of resistance elements mounted thereon, each of which comprises a frame having two rings of different diameter located in parallel planes and connected by a plurality of pairs of arms, non-conducting blocks located between said arms and a spiral resistance-coil interposed between each ring of lesser diameter and the concentrically-disposed ring pertaining to the adjacent frame.

710,144. OPERATING DEVICE FOR DATING OR OTHER STAMPS. HARRY DE WALLACE, St. Paul, Minn. Filed June 22, 1899. Serial No. 721,422. (No model.)



Claim.—1. The combination, in a stamp, with a spring actuated plunger, of a pivoted lever, a cam or projection on said lever arranged to engage said plunger, whereby as said lever is moved on its pivot in either direction said plunger is raised against the tension of its actuating-spring and quickly released, for the purpose set forth.

2. The combination, in a stamp, with a spring-actuated plunger, of the pivoted lever 25, a cam or projection arranged upon said lever and adapted to engage said plunger and raise the same against the tension of its actuating-spring at each movement of said lever either in the forward or backward direction, for the purpose set forth.

3. The combination, in a stamp, with a spring-actuated plunger, of the pivoted lever 25, the pivoted cam 33 located on said lever and adapted to engage and operate said plunger at each stroke of said lever, for the purpose set forth.

4. The combination, in a stamp, with a plunger, type-wheels or dies and inking-ribbon, of an operating-lever, and means connected with said lever for feeding said ribbon one step in either direction with every other stroke of said lever, for the purpose set forth.

5. The combination, in a stamp, with a plunger, type-wheels or dies and inking-ribbon, and means for supporting said ribbon, of a pivoted operating-lever 25, a rod 53 connected with said lever and adapted to engage either of the ribbon-supporting wheels and feed the ribbon one step in either direction with every other stroke of said lever, and means for shifting the position of said rod, for the purpose set forth.

6. The combination, in a stamp, with a plunger, type-wheels or dies, an inking-ribbon and means for supporting said ribbon, of a pivoted operating-lever 25, a rod 53 connected with said lever and adapted to engage either of the ribbon-supporting wheels and feed the ribbon one step in either direction with every other stroke of said lever, and a slide 65 provided on said lever and adapted to shift the position of said rod, substantially as described.

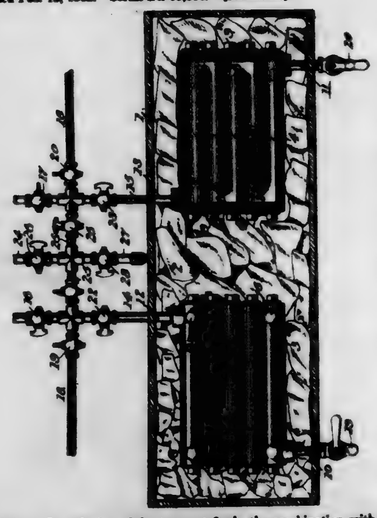
7. The combination, in a stamp, of a base with a plunger mounted thereon, a spring to actuate said plunger to perform the stamping movement, a lever pivoted on said base, a cam provided on said lever and adapted to engage and raise said plunger against the tension of said spring when said lever is operated in either direction, substantially as described.

8. The combination, in a stamp, with a plunger and type-wheels or dies and inking-ribbon, of a vertically-pivoted operating-lever provided with means at each stroke for operating said plunger, and means connected with said lever for feeding said ribbon in either direction, substantially as described.

9. The combination, in a stamp, with a plunger and type-wheels or dies and inking-ribbon, of a pivoted operating-lever provided with means with each stroke for operating said plunger, and means for feeding said ribbon in either direction, substantially as described.

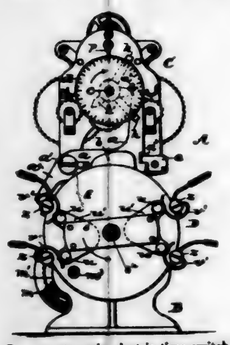
10. In a stamp, the combination, of a plunger and type-wheels or dies and inking-ribbon, with an operating-lever provided with means for moving said plunger from its seat with each stroke of said lever, and means for returning said plunger to its seat when each stroke of said lever is completed.

710,145. BEER-COOLER. JOHN M. DENTZELS, St. Louis, Mo. Filed Feb. 13, 1902. Serial No. 93,996. (No model.)



Claim.—In a device of the type set forth, the combination with an ice-box, of an integral body entirely inclosed by said ice-box and having a plurality of horizontal cylindrical passages formed therein, with ports located adjacent the ends of the body portion and establishing communication between said cylindrical passages, the said ports being located alternately at opposite ends of the cylindrical passages, threaded plugs engaging in each of the ends of each of said cylindrical passages, feet extending above and below the body on the ends of said body, an inlet on one end of the body with a pipe connected thereto and extending through the ice-box, an exit located at the other end of the body diagonally opposite to said inlet, with a pipe connected to the said exit and extending without the ice-box, substantially as described.

710,146. AUTOMATIC ELECTRIC TIME-SWITCH. HENRY E. GARDNER, Providence, R. I. Filed Feb. 5, 1902. Serial No. 92,619. (No model.)



Claim.—1. In an automatic electric time-switch, the combination with a motor-actuated or mechanically-movable switch member and clock or time mechanism, detached or disconnected from said switch, of a suitably-graduated time-dial adjustably mounted on and adapted to revolve in unison with the center or time spindle of said clock, time-tripper members adjustably secured to and revolving with the said time-dial, and normally stationary releasing mechanism connected with said switch having a member thereof arranged in the path of and adapted to be engaged by said moving time-trippers at predetermined intervals of time, substantially as hereinbefore described and for the purpose set forth.

2. In an electric time-switch, provided with clock mechanism and a motor-actuated switch having a movable member, an escapement device comprising a spring-pressed initial lever *a* having stop pins or lugs, a locking-lever *b* having its upper portion provided with lugs adapted to engage those of said lever *a*, and an escapement-wheel F, arranged to revolve in unison with the movable member of said switch, having pins arranged to coact with lugs formed on lever *b* and located in the path of said pins, substantially as described and for the purpose set forth.

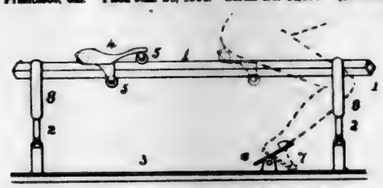
3. In an electric time-switch, time mechanism provided with suitable tripping members, and a revolvable motor-actuated member *a* of an electric switch, in combination with interlocking escapement-levers *a b*, arranged with respect to said tripping members, and an escapement-wheel F revolving in unison with said switch member provided with means for controlling the angular movements of said lever *b*, whereby upon actuating the escapement-lever *a* the combined action of said members, *b* and F, allows the said switch member *a* to revolve to open or close the electric circuit, substantially as described.

4. In an automatic electric time-switch, the combination with a revolvable time-dial having tripping-fingers connected therewith, and a motor-actuated intermittingly-revolvable switch or contact member *a*, of an escapement-wheel working in unison with said contact member, a lever *b* having its angular movements controlled by said wheel, and a lever *a* in normal engagement with said lever *b* arranged in the path of and adapted to be actuated by said tripping-fingers, substantially as described.

5. In an automatic electric time-switch, the combination of a suitably notched or graduated dial, adjustable tripping-fingers arranged with respect to said dial, clock mechanism for continuously rotating the dial and fingers, stationary contact points or poles, an intermittently-revolvable motor-actuated member *a* arranged to engage said points thereby closing the electric circuit, a spring-pressed lever *a* arranged to be engaged and actuated by said tripping-fingers, a lever *b* normally locked to said lever *a*, and an escapement-wheel revolving in unison with said member *a* provided with means for controlling the angular movements of said lever *b*, substantially as hereinbefore described and for the purpose set forth.

6. In an automatic electric time-switch having independent clock and switch-actuating mechanisms, an escapement device consisting of a revolvable pin-carrying escapement-wheel F adapted to be actuated by said switch mechanism, a movable lever *b* provided with stops or pins arranged with respect to and adapted to engage the pins of said wheel, a movable spring-pressed initial lever *a* having pins arranged to engage and interlock with fellow pins of the lever *b*, a stop for limiting the angular movement of lever *a*, and revolving tripping means actuated by said clock mechanism arranged to engage with and actuate said lever *a*, thereby for the instant releasing the lever *b* and permitting the wheel to revolve a certain angular distance, substantially as described and for the purpose hereinbefore set forth.

710,147. ROWING APPLIANCE. WILLIAM B. GOODWIN, San Francisco, Cal. Filed Jan. 31, 1901. Serial No. 44,132. (No model.)



Claim.—1. In combination with the hull of a boat, a seat for an oarsman and a knee-rest suitably placed to receive the thrust of his knees when pulling on the oars.

2. In combination with the hull of a boat, a slidable seat for an oarsman and a knee-rest suitably placed to receive the thrust of his knees when pulling on the oars.

3. In combination with the hull of a boat, a straddle or saddle seat for an oarsman and a knee-rest suitably placed to receive the thrust of his knees when pulling on the oars.

4. In combination with the hull of a boat, a straddle slidable seat for an oarsman and a knee-rest suitably placed to receive the thrust of his knees when pulling on the oars.

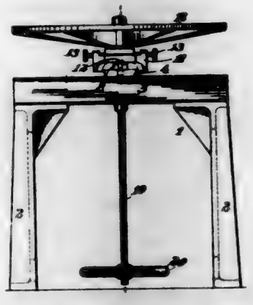
5. A boat provided with a longitudinal bar suitably secured therein and a saddle-seat slidable thereon, said boat being provided with a transversely-pivoted foot-rest and a knee-rest suitably placed to receive the thrust of the oarsman's knees when pulling on the oars.

6. A boat provided with a longitudinal bar vertically adjustable, suitably secured therein and a saddle-seat slidable thereon.

7. A boat provided with a longitudinal bar vertically adjustable, suitably secured therein and a saddle-seat slidable thereon and a foot-rest transversely pivoted in said boat.

8. A boat provided with a longitudinal bar vertically adjustable, secured therein and a saddle-seat slidable thereon, said boat provided with a transversely-pivoted foot-rest and a knee-rest suitably placed to receive the thrust of the oarsman's knees when pulling on the oars.

710,148. BALANCING-MACHINE. FRANCIS HODGKINSON, Wilkinsburg, Pa., assignor to the Westinghouse Machine Company, a Corporation of Pennsylvania. Filed Mar. 1, 1900. Serial No. 6,967. (No model.)



Claim.—1. The combination with a frame provided with knife-edge bearings, of a beam supported on said bearings, and a turn-table supported by said beam and adjustable laterally with reference to said knife-edge bearings.

2. The combination with a frame provided with knife-edge bearings, of a beam supported on said bearings, a turn-table mounted on said beam, means for adjusting the turn-table on the beam transversely with reference to the knife-edge bearings, and means for adjusting the center of gravity of the combined apparatus that is supported on the knife-edge bearings.

3. The combination with a frame provided with knife-edge bearings, of a beam supported on said bearings, a block adjustably mounted on said beam and having a vertical spindle and a turn-table mounted on said spindle.

4. In a balancing-machine, a turn-table, a support therefor mounted upon knife-edge bearings and means for adjusting the turn-table on its support transversely with reference to the knife-edge bearings.

5. In a balancing-machine, a turn-table and a support therefor mounted upon knife-edge bearings, in combination with means for vertically adjusting the center of gravity of the parts which are supported upon the knife-edge bearings.

6. A block having a knife-edge in its upper face and a pin projecting from its lower face, said lower face being spherically curved, in combination with a support having a spherically-curved seat and an aperture for said pin.

7. A block having a knife-edge projecting from its upper face and a pin projecting from its lower face, said lower face being spherically curved, in combination with a support having a spherically-curved seat and an aperture for the pin, said aperture being wider than the pin in the direction of the knife-edge.

8. A block having a knife-edge in its upper face and a pin projecting from its lower face, said lower face being spherically curved, in combination with a support having a spherically-curved seat and an oblong aperture for said pin, the smaller diameter of which is substantially the same as that of the pin.

9. A block having a knife-edge projecting from its upper face and a pin projecting from its lower face, said lower face being spherically curved, in combination with a support having a spherically-curved seat and an aperture for the pin, said aperture being wider than the pin in the direction of the knife-edge and of substantially the same diameter as the pin at right angles to the knife-edge.

10. In a balancing-machine, the combination with a suitable frame, having self-aligning knife-edge bearings, of a beam supported on said bearings, and a turn-table adjustably mounted on said beam.

11. In a balancing-machine, the combination with a suitable frame having self-aligning knife-edge bearings, of a beam supported on said bearings, a turn-table supported on said beam and adjustable laterally with reference to said bearings and a vertically-adjustable weight suspended from the turn table.

12. In a balancing-machine, the combination with a suitable frame having self-aligning knife-edge bearings, of a beam supported on said bearings, a block adjustably mounted on said beam, a turn-table supported upon said block, and a vertically-adjustable weight suspended from said block.

710,149. BUTTONHOLE-SEWING MACHINE. JAMES T. HOGAN, Jersey City, N. J., assignor to the National Machine Company, a Corporation of New York. Filed Mar. 13, 1899. Serial No. 708,891. (No model.)

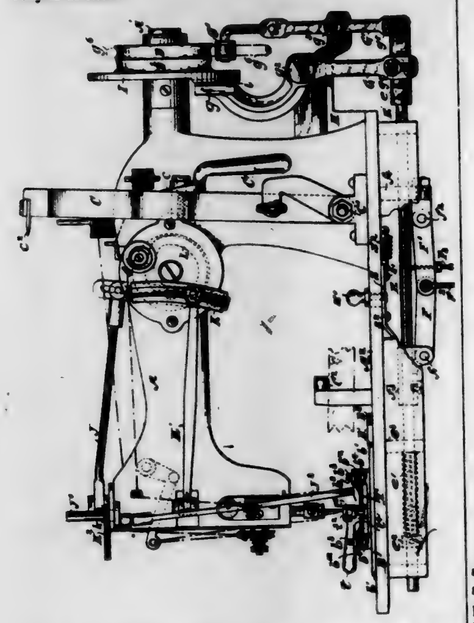
Claim.—1. In a buttonhole-sewing machine the combination with stitch-forming mechanism, of a work-support comprising a substantially rectangular plate having racks on a portion of two of its edges and notches in the two other edges, a pinion to engage said racks, a finger to engage said notches, and means to actuate said pinion and finger substantially as described.

2. In a buttonhole-sewing machine adapted to sew side stitches and barring-stitches, the combination with stitch-forming mechanism of a work-support comprising a substantially rectangular plate having racks on a portion of two of its edges, a pinion to engage said racks, a finger to engage suitable notches in the two other edges of the work-support, a cam and ratchet-wheel to actuate said plate, and means to throw said ratchet-wheel into operative position when the work-support is adjusted to sew barring-stitches.

3. In a buttonhole-sewing machine adapted to sew side stitches and barring-stitches, the combination with stitch-forming mechanism of a work-support comprising a substantially rectangular plate having racks on two of its edges, a pinion to engage said racks, means to rotate said pinion, a plate having a finger to engage notches in the two other edges of the work-support, a ratchet-wheel and cam to actuate said plate, said wheel being so constructed as to be inoperative during the formation of side stitches, and means to throw it into operative position when barring-stitches are to be formed.

4. In a buttonhole-sewing machine the combination of a work-carrier plate, a driving-shaft, a cam on said shaft, a lever oscillated by said cam, a link connected to said lever, a pawl-carrier plate connected to said link, a pawl on said plate, a ratchet-wheel engaged by said pawl, a cam connected with said ratchet-wheel, an arm actuated by said cam, and engaging the work-carrier plate, substantially as described.

5. In a buttonhole-sewing machine the combination with stitch-forming mechanism, of a work-support comprising a substantially rectangular plate having racks on a portion of two of its edges, a pinion to engage said racks, a driving-shaft, and adjustable levers actuated by said shaft and connected by intermediate mechanism to said pinion whereby the number of stitches to a given length of feed may be varied, substantially as described.



6. In a buttonhole-sewing machine the combination with stitch-forming mechanism, of a work-support comprising a substantially rectangular plate having racks on a portion of two of its edges, a pinion to engage said racks, a ratchet-wheel to actuate said pinion, a driving-shaft and adjustable levers intermediate said shaft and ratchet-wheel to drive the latter, substantially as described.

7. In a work-carrier plate for sewing-machines, the combination of a lower plate, an upper clamping-plate, supported by studs on the face of the former plate, and a spring surrounding each of said studs, and bearing against the under side of the upper plate, to normally hold it out of contact with the lower plate, substantially as described.

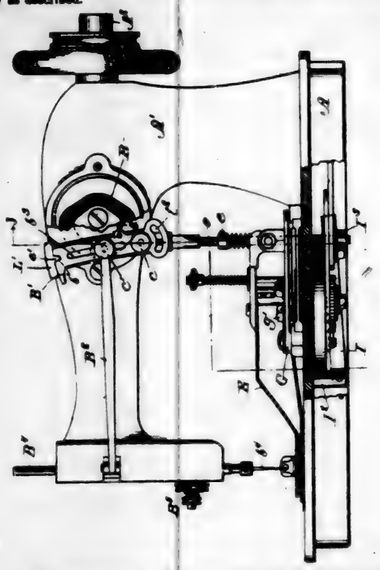
8. In a work-carrier plate for sewing-machines, the combination of a lower plate, an upper clamping-plate supported by studs on the face of the former plate, a spring surrounding each of said studs, and bearing against the under side of the upper plate to normally hold it out of contact with the lower plate, and means to tilt the free end of the clamp, substantially as described.

710,150. SEWING-MACHINE. JAMES T. HOGAN, Jersey City, N. J., assignor to the National Machine Company, New York, N. Y., a Corporation of New York. Filed Oct. 23, 1900. Serial No. 34,094. (No model.)

Claim.—1. In a sewing-machine the combination with stitch-forming mechanism comprising a vertical reciprocating needle, of a work-support, means to feed said support, a rock-lever and means to actuate the same, a pitman connecting said lever and the needle-bar frame, and means to simultaneously suspend the movements of said lever and the feed of the work-support at the end of the sewing of a cycle of stitches while the vertical reciprocating movement of the needle continues, to permit the sewing of tying-stitches, substantially as described.

2. In a sewing-machine the combination with stitch-forming mechanism, of a work-support, means for simultaneously vibrating the needle and work-support and means to automatically and periodically suspend the vibratory movement of both of said devices at the same time to permit tying-stitches to be sewed, substantially as described.

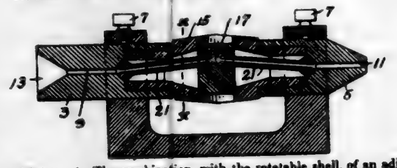
3. In a sewing machine the combination with stitch-forming mechanism, of a work-support, a cam for imparting to the work-support a vibratory movement, means for imparting to the needle a vibratory movement in a direction at right angles to the plane of movement of the work-support, a lever actuated by said cam to suspend the vibratory movement of the needle, said cam being so constructed as to cause the suspension at the same time of the vibratory movement of the work-support, substantially as described.



4. In a sewing-machine the combination with stitch-forming mechanism, of a work-support, a rock-shaft, a lever rigidly secured to said shaft and engaging a cam, a main rock-lever loosely mounted on said shaft, a pitman connecting said last-named lever to the needle-bar, a latch connection between said levers, a cam and suitable connections to impart to the work-support a vibratory movement, levers between the said last-named cam and said latch mechanism, said cam being so constructed as to simultaneously suspend the vibratory movement of the work-support and to release said latch to permit the sewing of tying-stitches, substantially as described.

5. In a sewing-machine the combination with stitch-forming mechanism comprising a vertically-reciprocating needle, of a work-support, means to vibrate said work-support in a given path relatively to the needle and means to automatically suspend said vibratory movement while the vertically-reciprocating movement of the needle continues, to permit the sewing of tying-stitches, substantially as described.

710,151. WIRE-STRAIGHTENER. JOHN G. IVERSON, Minneapolis, Minn., assignor to Charles E. Cottrell, Minneapolis, Minn. Filed May 23, 1902. Serial No. 108,613. (No model.)



Claim.—1. The combination, with the rotatable shell, of an adjustable block arranged therein, and tubes each having one end supported in said adjustable block and its opposite end carried by a suitable support, substantially as described.

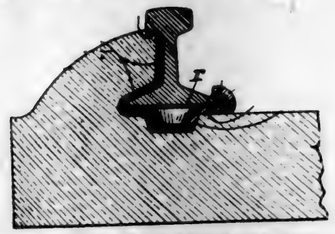
2. The combination, with the rotatable shell, of an adjustable block arranged therein, and tubes each having one end supported in said adjustable block and its opposite end carried by a fixed support, substantially as described.

3. The combination, with the rotatable shell, of the adjustable block arranged therein, and tubes, each having one end supported in said block and its opposite end carried by a fixed support, each of said tubes being free to rotate upon its own axis, substantially as described.

4. The combination, with the stationary bearing-pieces, of the rotatable shell supported in said bearing-pieces, the adjustable block mounted in said shell, and the tubes, each having one end mounted in said block and its opposite end mounted in one of said bearing-pieces, and each of said tubes being free to rotate upon its own axis.

5. The combination, with the base 2 provided with suitable standards, of the bearing-pieces 3 and 5 adjustably supported in said standards, and provided with central openings 9 and 11, the rotatable shell mounted in said bearing-pieces and provided with the adjustable block 17, the tubes 21 each having one end mounted in said adjustable block and its opposite end mounted in one of said bearing-pieces, and each of said tubes being free to rotate upon its own axis, substantially as described.

710,152. RAIL-SUPPORT. WILLIAM E. JAQUES, Grand Rapids, Mich., assignor to Alfred O. Crozier, Grand Rapids, Mich. Filed Jan. 24, 1902. Serial No. 91,061. (No model.)



Claim.—1. The combination, with the rail, and the tie arranged below and transversely of the rail, of means for bracing the outer side of the rail; a plate interposed between the base of the rail and the tie and provided, at one side of the rail, with a flange which is arranged opposite the side edge of the rail-base at the said side of the rail, which plate is provided, at the opposite side of the rail, with an upwardly-projecting flange, and a wedge interposed between the inner side of the last-mentioned flange and the rail-base.

2. The combination, with the rail, and the tie arranged below and transversely of the rail, of a plate interposed between the base of the rail and the tie and provided, at the outer side of the rail, with an upwardly-projecting flange extending along the rail-base at the said outer side of the rail, which plate is provided, at the inner side of the rail, with an upwardly-projecting flange, and a wedge interposed between the inner side of the last-mentioned flange and the rail-base.

3. The combination, with the rail, and the tie arranged below and transversely of the rail and provided with a recess below the rail, of a plate interposed between the under side of the rail-base and the tie and provided, below the rail, with a depressed portion snugly engaging the aforesaid recess, means for holding the rail down upon the plate, and means for preventing upward displacement of the rail and the plate.

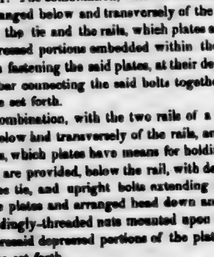
4. The combination, with the rail, and the tie arranged below and transversely of the rail and having a lug arranged to brace the outer side of the rail, of a plate interposed between the rail-base and the tie and having a portion or member extending into the tie, which plate is provided, at the outer side of the rail, with a flange which overhangs and extends upwardly between the aforesaid lug and the rail, and means for preventing lateral displacement of the rail inwardly from the aforesaid lug.

5. The combination, with the rail, and a tie arranged below and transversely of the rail and having a lug overhanging the base of the rail at the outer side of the rail and bracing the said side of the rail, of a plate interposed between the under side of the rail-base and the tie, which plate is provided, at the outer side of the rail, with a flange which overhangs the rail-base and extends upwardly between the outer side of the web of the rail and the aforesaid lug, and means for preventing lateral displacement of the rail inwardly from the aforesaid lug.

710,153. RAIL-SUPPORT. WILLIAM E. JAQUES, Grand Rapids, Mich., assignor to Alfred O. Crozier, Grand Rapids, Mich. Filed Jan 27, 1902. Serial No. 91,443. (No model.)

Claim.—1. The combination, with the rail, and the tie arranged below and transversely of the rail, a plate interposed between the under side of the rail-base and the tie and having a recess below the rail-base, and means holding the rail down upon the said plate, of a fastening device arranged to hold the plate down and having a member engaging the aforesaid recess under the rail-base and comprising another member embedded in the tie below the aforesaid plate.

2. The combination, with the rail, and the tie arranged below and transversely of the rail, a plate interposed between the under side of the rail-base and the tie and having a recess below the rail, and means holding the rail down upon the said plate, of an upright bolt having its head within the said recess and arranged to hold the plate down and having its shank extending downwardly into the tie, and a nut embedded in the tie and engaging the said shank.

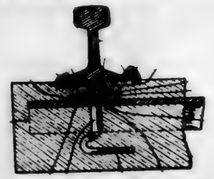


3. The combination, with the rail, and the tie arranged below and transversely of the rail, a plate interposed between the under side of the rail-base and the tie and having a recess below the rail, and means instrumental in holding the rail down upon the plate, of an upright bolt having its head within the said recess and arranged to hold the plate down and having a slot or recess, a nut embedded in the tie and engaging the shank of the bolt, and a key engaging the slot or recess in the bolt-head and extending into the aforesaid plate, substantially as and for the purpose set forth.

4. The combination, with the rail, and the tie arranged below and transversely of the rail, a plate interposed between the under side of the rail-base and the tie and provided, below the rail, with a depressed or depending upwardly-flaring annular portion or member, of an upright bolt having its head snugly engaging the recess formed within the said flaring member and having its shank extending downwardly into the tie, and a nut embedded in the tie and engaging the shank of the bolt, substantially as and for the purpose set forth.

5. The combination, with the rail, and the tie arranged below and transversely of the rail, a plate interposed between the under side of the rail-base and the tie and having a bolt-head-receiving recess below the rail and two depressions or recesses arranged in line at opposite sides, respectively, of and connecting with the first-mentioned recess, and means instrumental in holding the rail down upon the plate, of an upright bolt arranged shank down and having its head engaging the aforesaid bolt-head-receiving recess and provided with a transversely-extending slot or recess; a key extending through the slot or recess in the bolt-head into the aforesaid alined depressions or recesses, and a nut engaging the bolt-shank and embedded in the tie, substantially as and for the purpose set forth.

710,154. RAIL SUPPORT. WILLIAM E. JAQUES, Grand Rapids, Mich., assignor to Alfred O. Crozier, Grand Rapids, Mich. Filed Feb. 6, 1902. Serial No. 92,815. (No model.)



Claim.—1. The combination, with the two rails of a railway-track, and the tie arranged below and transversely of the rails, and plates interposed between the tie and the rails, which plates are provided, below the rails, with depressed portions embedded within the tie, of bolts and nuts instrumental in fastening the said plates, at their depressed portions, to the tie, and a tie-bar connecting the said bolts together, substantially as and for the purpose set forth.

2. The combination, with the two rails of a railway-track, and the tie arranged below and transversely of the rails, and plates interposed between the rails, which plates have means for holding the rails down upon the plates and are provided, below the rail, with depressed portions which depend into the tie, and upright bolts extending through the depressed portions of the plates and arranged head down and embedded in the tie, and correspondingly-threaded nuts mounted upon the shanks of the bolts within the aforesaid depressed portions of the plates, substantially as and for the purpose set forth.

3. The combination, with a rail and the tie arranged below and

transversely of the rail, and a plate interposed between the under side of the base of the rail and the tie and having means instrumental in holding the rail down upon the plate, which plate is provided, below the rail, with a depressed portion which is embedded within the tie and forms a chamber 4 which is arranged next under the base of the rail and has a bottom provided with a bolt-hole 5, of an upright bolt extending through the said bolt-hole and arranged head down with the head embedded in the tie, and a nut mounted upon the bolt-shank within the aforesaid chamber, substantially as and for the purpose set forth.

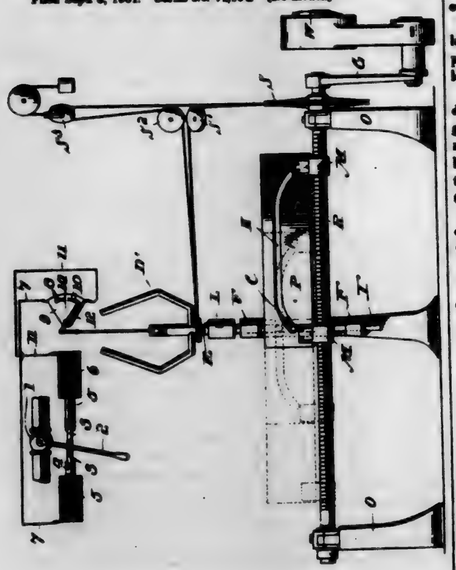
4. The combination, with the two rails of a railway-track, and the tie arranged below and transversely of the rails and plates interposed between the rails and the tie and having means instrumental in holding the rails down upon the plates, which plates are provided, below the rails, with depressed or depending portions, of upright bolts extending through the said depending portions of the plates, nuts mounted upon the bolt-shanks and arranged to hold the aforesaid plates down, and an angle-bar embedded in the tie next below the aforesaid plates and tying the aforesaid bolts together.

5. The combination, with the two rails of a railway-track, and the tie arranged below and transversely of the rails, and plates interposed between the rails and the tie and having means instrumental in holding the rails down upon the plates, which plates are provided, below the rails, with depressed or depending portions, of upright bolts extending through the said depending portions of the plates, nuts mounted upon the bolt-shanks and arranged to hold the aforesaid plates down, and a tie-bar extending longitudinally of the tie below the aforesaid plates and tying the aforesaid bolts together and having lugs or flanges bracing apart the said plates.

6. The combination, with the two rails of a railway-track, and the tie arranged below and transversely of the rails and plates interposed between the rails and the tie and having means instrumental in holding the rails down upon the plates, which plates are provided, below the rails, with depressed or depending portions, of means securing the said plates, at their depending portions, to the tie, and a bar embedded in the tie next below the aforesaid plates and arranged longitudinally of the tie and having upwardly-projecting lugs or flanges arranged to prevent displacement of the aforesaid plates longitudinally of the tie.

7. The combination, with the two rails of a railway-track and a tie arranged below and transversely of the rails, of plates interposed between the rails and the tie and provided, below the rails, with depressed or depending portions; means instrumental in holding the rails down upon the plates, and a bar embedded in and arranged longitudinally of the tie and connected with the depending portions of the aforesaid plates.

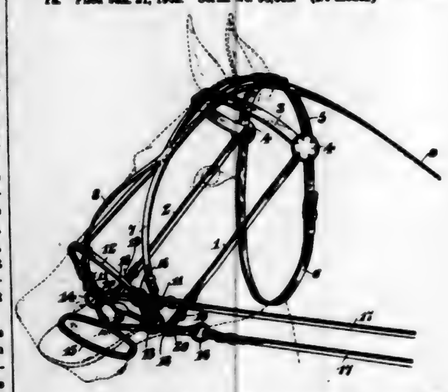
710,155. **SAFETY APPLIANCE FOR ENGINES.** JAROSLAV KARLIK, Gottenberg, and HARRIS WITTE, Waldenburg, Germany. Filed Sept. 3, 1901. Serial No. 74,194. (No model.)



Claim.—1. In a safety appliance for engines, a screw-threaded shaft or rod connected to the crank thereof, a plate having a detent form therein mounted on said rod, and a vertically-movable shaft carrying means engaging in said detent, and a three-branched mercurial tube at its upper end, means connected to said rod or shaft for actuating said vertical rod, and means operating in the middle of said three-branched mercurial tube for establishing an electrical current, substantially as described.

2. In a safety appliance for engines, a screw-threaded rod connected to the crank thereof, a plate having a detent formed therein and carrying nuts engaging said screw-threaded rod, a vertically-movable shaft carrying a bolt operating in said detent, a mercurial three-branched tube carried at the upper extremity of said shaft, a pulley carried by said shaft, a pulley carried by the said screw-threaded rod and connected to said first-named pulley, and a float operating in the middle of said three-branched mercurial tube and suitably connected in an electrical contact.

710,156. **BRIDLE AND BIT.** BENJAMIN W. KINDIG, Jr., York Pa. Filed Jan. 21, 1902. Serial No. 90,662. (No model.)



Claim.—1. The combination with an overdraw-bit provided with guides, of a flexible loop-bit designed to encircle the lower jaw of a horse and having its ends passed through said guides.

2. The combination with an overdraw-bit provided with guides, of a flexible loop-bit designed to encircle the lower jaw of a horse and having its ends passed through said guides, and means for supporting the ends of the bit beyond the guides.

3. The combination with an overdraw-bit provided with guides, of a loop-bit designed to encircle the lower jaw of a horse and having its ends passed through the guides, and cheek-straps secured to the ends of the loop-bit beyond the guides to support said ends.

4. The combination with a bridle including cheek-straps, an overdraw and a nose-strap, of an overdraw-bit connected to the overdraw, guide-rings encircling the overdraw-bit and connected to the ends of the nose-strap, a flexible loop-bit designed to encircle the lower jaw of a horse and having its ends passed through the guide-rings and connected to the lower ends of the cheek-straps, and means for attaching the lines to the ends of the loop-bit.

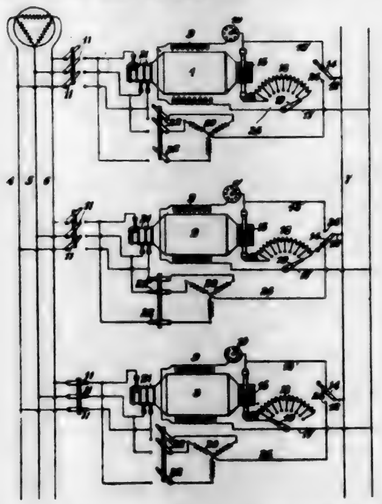
5. A flexible loop-bit designed to be looped around the lower jaw of an animal and crossed in the mouth, and provided at its opposite ends with means for the direct attachment of the lines.

710,157. **AXLE.** LEWIS W. KYES, Hammond, Wis. Filed July 11, 1901. Serial No. 67,340. (No model.)

Claim.—1. A device of the class described, consisting in combination of a wheel-hub journaled on a shank, a stationary sleeve between said shank and hub, a shoulder on the inner end of said sleeve, a nut threaded on said shank and impinging against the outer end of said sleeve, and a second nut locked against the first nut; said second nut having an annular shoulder projecting against the outer end of said hub.

2. A device of the class set forth, consisting in combination with a wheel-hub and a shank, of an antifriction-sleeve between said shank and hub, a shoulder between the inner end of said sleeve and shank for preventing longitudinal movement of said sleeve, a nut threaded on said shank and impinging against the outer end of said sleeve, and a second nut locked against said first nut; said second nut having an annular shoulder adapted to impinge against the outer end of said hub.

710,158. **SYSTEM OF ELECTRICAL DISTRIBUTION.** BENJAMIN G. LAMME, Pittsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 14, 1901. Serial No. 78,563. (No model.)



Claim.—1. The combination with a rotary converter and a source of direct-current electromotive force, of a plurality of "star-connected" balancing-coils, means for making and breaking connection between the outer terminals of said coils and the alternating-current end of the rotary converter and means for making and breaking connection between the common terminal of said coils and one side of the source of direct current.

2. The combination with a rotary converter and a source of direct-current electromotive force, of a variable resistance between the rotary-converter armature and one side of said source, a plurality of "star-connected" balancing-coils, means for making and breaking connections between the outer terminals of said coils and the alternating-current end of the rotary converter and means for making and breaking connection between one side of the source of direct current and one of the rotary-converter brushes and between said source and the common terminal of the balancing-coils.

3. The combination with a rotary converter and a source of direct-current electromotive force, of a plurality of "star-connected" balancing-coils, a variable resistance and means for making half-voltage connections between the armature-winding of the rotary converter and the source of direct-current electromotive force, through the balancing-coils and the variable resistance, to bring the rotary converter to synchronous speed and voltage.

4. The combination with a rotary converter and a source of approximately constant direct-current electromotive force, of a plurality of "star-connected" balancing-coils, a variable resistance, means for making and breaking connection between the outer terminals of the balancing-coils and the alternating-current end of the rotary converter and means for making and breaking connection between the common terminal of the balancing-coils and the source of direct-current electromotive force.

5. In a system of electrical distribution, the combination of an alternating-current-supply circuit and a direct-current-distributing circuit, of a plurality of rotary converters for transferring energy from the alternating-current circuit to the direct-current circuit and means for utilizing an electromotive force from the direct-current circuit that is less than the normal voltage of the rotary converters for bringing them to synchronous speed and voltage.

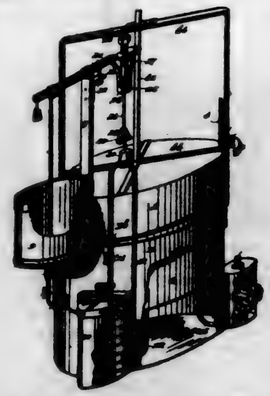
6. In a system of electrical distribution, the combination with an alternating-current-supply circuit and a direct-current-distributing circuit, of a plurality of rotary converters for transferring energy from the alternating-current circuit to the direct-current circuit, a balancing device and a variable resistance for each rotary converter and means for connecting each rotary converter to the direct-current circuit through the balancing device so as to raise the converter to synchronous speed and voltage by direct-current voltage that is approximately one-half the normal voltage of the rotary converter.

7. In a system of electrical distribution, the combination with an alternating-current-supply circuit and a direct-current-distributing circuit, of a plurality of rotary converters for transferring energy from the alternating-current to the direct-current circuit, means for making and breaking connection between the alternating-current circuit and each of the rotary converters and means for supplying, to each rotary converter, direct-current electromotive force of approximately one-half the value of its normal electromotive force to raise the rotary converter to synchronous speed and voltage.

8. A rotary converter for converting alternating-current energy into direct-current energy, in combination with means for supplying direct-current energy to the commutator of said converter at less than the normal voltage of the latter and a balancing device having "star" connections with the alternating-current end of the converter and having a common terminal connection with the direct-current-supply circuit.

9. A rotary converter for converting alternating-current energy into direct-current energy, in combination with means for supplying direct-current energy to the commutator of the converter at less than the normal voltage of the converter, a variable resistance in said direct-current-supply circuit and a balancing device having "star" connections with the alternating-current end of the converter and having its common terminal connected to the direct-current-supply circuit.

710,159. **ACETYLENE-GAS GENERATOR.** JÉRÔME LEDEU, Basècles, Hainaut, Belgium. Filed Apr. 9, 1902. Serial No. 102,080. (No model.)

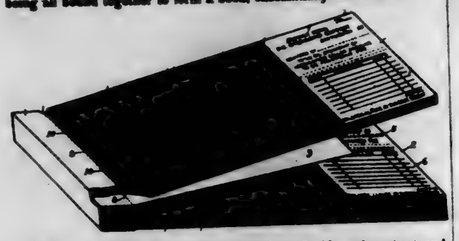


Claim.—In an acetylene-gas generator, the combination with the gas-tank and bell, of a carbid-chamber in communication with the tank, a water-tank arranged above the carbid-chamber, a pipe leading from the water-tank into the carbid-chamber and provided with a valve-seat, a vertical support secured to the gas-tank, a lever pivotally mounted in the upper end of the said lever and having its lower end extending through said water-tank into the valve-seat of the said pipe, a pair of depending spring-arms secured to the inner end of the said lever, a spindle having an enlarged screw-threaded upper end loosely mounted in an opening in the inner end of the said lever, and arranged between the said spring-arms, a nut on the upper end of the said spindle, and a weight on the lower end thereof, said weight being arranged directly above the bell, substantially as described.

710,160. **MANIFOLD-BOOK AND CARBON THEREFOR.** ALEXANDER LEVINSE, San Francisco, Cal. Filed Feb. 19, 1902. Serial No. 94,618. (No model.)

Claim.—1. A manifold-book composed of sections, each section comprising in order a sheet carbonized on both sides, a plurality of recording-sheets, and a cardboard backing, the recording-sheet being divided into three substantially equal parts by weakened lines parallel to the line

of binding, the carbon-sheets extending the width of two of said parts, and the cardboard backing extending the width of two of said parts, said recording-sheets and backing, having stubs to which they are attached along lines of perforations, said stubs and the edges of the carbon-sheets being all bound together to form a book, substantially as described.



2. A manifold-book comprising in order a double carbon-sheet, and a plurality of recording-sheets, each of said sheets outside the stubs being divided into a plurality of separable parts by weakened lines parallel to the line of binding, the carbon-sheet extending the width of said parts except the outermost, said recording-sheets having stubs to which they are attached along lines of perforations, said stubs and one side of the carbon-sheets being all bound together to form a book, said book having in its upper edge in line with the perforations between the recording-sheets and the stubs, a semicircular notch to start the tearing off of the recording-sheets, substantially as described.

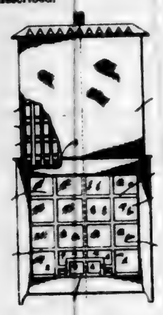
710,161. **BRUSH.** FRED H. LOVELESS, Lafayette, Ind., assignor of one-half to Charles L. Daniels, Tiffin, Ohio. Filed Apr. 4, 1902. Serial No. 101,343. (No model.)

Claim.—1. A brush-head having holes to receive the bunches and bunches secured in each of said holes, each bunch comprising a core, a layer of bristles surrounding the core and wired at its middle thereto and a layer of fiber surrounding the bristles and wired thereto after which both fiber and bristle layers are bent back upon themselves to form a bunch wherein said fiber is in an annular body between a center body of bristles and an outside layer of bristles.

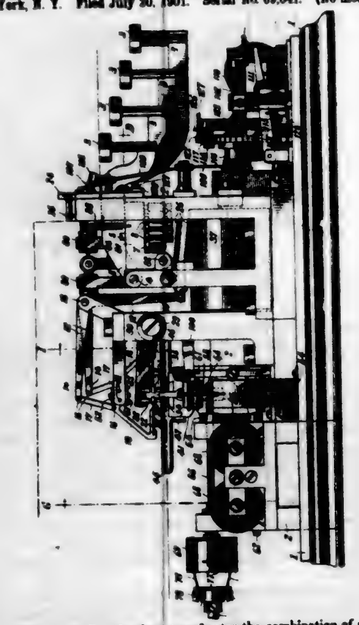
2. In a brush, a brush-head having a series of holes to receive the bunches and bunches secured in each of said holes said bunches comprising a wooden core kerfed transversely, a wire laid in said kerf with a projecting end bent toward the end of the core and held by wrapping the wire over it; a layer of bristles evenly distributed around the core and held thereto by a wrapping of wire; a layer of fiber around the bristles held by a further wrapping of the same wire and a tank driven into the core to which the remaining loose end of the wire is fastened, said wire wrappings of bristles and fiber being at approximately their middles and the fiber and bristles being doubled at the wrappings to form a bunch in which an annular layer of fiber is between a central body of bristles and an outside layer of bristles.

710,162. **GAS HEATING-STOVE.** GEORGE B. HOOK, Columbus, Ohio. Filed Jan. 28, 1902. Serial No. 91,605. (No model.)

Claim.—The gas heating-stove herein described comprising an upright casing having an opening in its bottom and its front bulged and formed of open lattice-work with hinged door and transparent panels, an inclined burner-plate in the lower portion of said casing with its upper end terminating in line with the inner line of said bulge, a burner adjacent the lower end of said burner-plate, a supply-pipe leading into the casing beneath said burner over said opening in the bottom of the casing, a transverse flue at the end of said casing and a series of vertically-arranged and parallel flue-pipes having their lower ends communicating with the lower portion of the casing upon one side of the burner-plate and their upper ends communicating with said transverse flue, the said pipes being of sinuous form and the whole arranged to serve substantially as herein shown and described.



710,163. **KEYBOARD-PERFORATOR.** DONALD MURRAY, New York, N. Y. Filed July 30, 1901. Serial No. 69,041. (No model.)



Claim.—1. In a keyboard-perforator the combination of a series of independent keys, a series of independent punches arranged to perforate a tape or strip, an operating or striking device common to all said punches, a series of independently-movable mechanical devices arranged to make and break the mechanical connection between said punches and striking device, means for operating said striking device by the depression of a key, and means for changing the position of one or more of said mechanical connecting devices during the movement of a key-lever and prior to the operation of the striking device.

2. In a keyboard-perforator the combination of a series of independent keys, a series of independent punches arranged to perforate a tape or strip, an operating or striking device common to all said punches, a series of movable mechanical connections normally in position to connect said punches and striking device, an electromagnet to operate said striking device, a circuit therefor, a circuit-closer operated upon the depression of a key and means whereby one or more of said mechanical connections is removed during the depression of a key and prior to closing the circuit.

3. In a keyboard-perforator the combination of a series of independent key-levers, a series of separately-movable punches arranged in two parallel, equidistant and coextensive rows to perforate a tape or strip, a striking device to simultaneously actuate said punches and means for dividing said punches into two groups and subjecting one group to the action of said striking device consisting of a series of separately-movable sections or blocks, one for each punch, each section being supported upon a hinged or pivoted arm and a separately-movable mechanical connection between each block and said key-levers.

4. In a keyboard-perforator the combination of a series of independent key-levers, a series of separate, uniform punches arranged in two parallel, equidistant and coextensive rows, a striking device for said punches, a series of sections or blocks, one for each punch, each block supported upon the free end of a hinged or pivoted lever and movable in the arc of a circle and means for shifting the position of one or more of said blocks to subject one or more punches of each row to the action of the striking device.

5. In a keyboard-perforator the combination of a series of independent key-levers, a series of separate, uniform punches arranged in two parallel, equidistant and coextensive rows, a striking device for actuating said punches, a series of blocks, one for each punch, each supported upon a hinged or pivoted arm, and movable into and out of line with said punches, respectively, a mechanical connection between each block and said key-levers, and means for feeding a tape or strip a uniform distance upon each complete operation of the striking device.

6. In a keyboard-perforator the combination of a series of independent key-levers, a series of separate, uniform punches arranged in two parallel, equidistant and coextensive rows, a striking device for actuating said punches, a series of blocks, one for each punch, supported upon a hinged or pivoted arm, and movable into and out of line with its punch, a mechanical connection between each of said arms and said key-levers, means for feeding a tape or strip a uniform distance upon each complete operation of the striking device, an electromagnet to operate the striking device, an electromagnet to operate the spacing device, electric circuits and connections therefor, and a circuit-controlling device operated by the movement of the key-levers.

7. In a keyboard-perforator, a series of independently-movable, uniform punches arranged in two parallel, equidistant and coextensive rows to perforate a tape or strip in parallel lines, a universal striker-bar for said punches, a series of independently-movable key-levers, means for subjecting one or more of said punches to the action of the striker-bar upon the depression of a key-lever, an electromagnet to operate the striker-bar, an electric circuit therefor, and a circuit-closer operated by the key-levers.

8. In a keyboard-perforator a series of independently-movable punches arranged in two parallel, equidistant and coextensive rows to perforate a tape or strip in parallel lines, a striker-bar for said punches, a series of independently movable key-levers, means for subjecting one or more of said punches to the action of the striker-bar upon the depression of a key-lever, a motor-driven sprocket-wheel and an escapement therefor to advance the tape or strip a series of successive uniform steps upon each operation of the striker-bar, an electromagnet to operate said bar, an electromagnet to operate said escapement, an electric circuit therefor, and a circuit-closer controlled by the key-levers.

9. In a keyboard-perforator a series of independently-movable punches arranged in two parallel, equidistant and coextensive rows to perforate a tape or strip, a universal striking device for the punches, a series of independently-movable key-levers, means for subjecting one or more of the said punches to the action of the striker-bar upon the depression of a key-lever, a motor-driven sprocket-wheel having an escapement arranged to advance the tape or strip, step by step, a uniform step or distance at each operation of the striker-bar, an electromagnet to operate the striker-bar, an electromagnet to operate the escapement, an electric circuit for said magnet, a normally open branch of said circuit including the coils of the striker-bar magnet, a normally closed branch of said circuit containing the coils of the escapement-magnet and a circuit-closer operating break-points in said branch circuits alternately, under control of said key-levers.

10. In a keyboard-perforator the combination of a series of separately-movable punches arranged to perforate a tape or strip, a universal striking device for said punches, an electromagnet with its circuit and circuit-closer to operate said striking device and means to advance the tape or strip a uniform distance upon each complete operation of said striking device, said means including an electromagnet, an electric circuit and circuit-closers controlled by the key-levers, so arranged that the depression and release of a key first operates the escapement-magnet, second the punching-magnet, and third, the escapement-magnet, in the order named, to produce sectional advance movements of a single uniform step or letter-space of the paper-feed.

11. In a keyboard-perforator the combination of a series of independent key-levers, a series of separate punches, a universal striking device for said punches, a movable block for each punch, carried upon a pivoted lever, a hinged mechanical connection between each lever and a series of pivoted block-selecting devices, means for actuating one or more of said selecting devices upon the depression of a key-lever, an electromagnet for operating said striking device, an electric circuit therefor, and a circuit-closer operated by the key-levers.

12. In a perforator a series of independently-movable punches in combination with means for actuating one or more of said punches, consisting of a universal striking device, a movable block for each punch, a series of pivoted levers or "kickers" in number corresponding to the number of punches, a separable mechanical connection between said levers or "kickers" and said blocks, respectively; and means for actuating one or more of said levers consisting of a series of independently-movable key-levers characteristically slotted and a series of hinged strips or "fiddle-bows."

13. In a perforator a series of independently-movable punches in combination with a universal striking device, a movable block for each punch supported upon a pivoted lever, a series of pivoted levers or "kickers" in number corresponding to the number of punches, a mechanical connection between said levers or "kickers" and the levers supporting said blocks, respectively, and means for actuating one or more of said levers or "kickers" consisting of a series of independently-movable key-levers characteristically slotted upon their contact-surfaces and a series of hinged strips or "fiddle-bows" in position to engage with said levers or "kickers."

14. In a perforator an electromagnetic punching device and an electromagnetic spacing device, an electric circuit for the electromagnets having two branches, a punching-magnet in one branch, a spacing-magnet in the other branch, a series of independent key-levers, a normally closed circuit-breaker in the escapement-magnet branch, a normally open circuit-closer in the punching-magnet branch, and means whereby the depression of a key operates said circuit-breaker.

15. In a perforator the combination of a paper-punching device and a paper-feeding device, a motor driven sprocket-wheel over which the paper strip is passed, a constantly-operating motor-driven shaft, a friction-clutch and a helical spring connecting the sprocket-wheel shaft with the motor-driven shaft and an electromagnetic escapement for said sprocket-wheel.

16. In a keyboard-perforator the combination of a series of separately-movable punches, means for selecting and operating one or more of said punches and means for advancing a paper strip step by step consisting of a constantly-operating motor-driven shaft, a sprocket-wheel and its shaft, a friction-clutch connected to said motor-shaft, a helical spring uniting said sprocket-wheel shaft to said clutch, an electromagnetic escapement for said shaft, an electric circuit in which the escapement-magnet is located and a circuit-breaker in said circuit controlled by the punching device.

17. In a perforator an electromagnetic punching device combined with an electromagnetic paper-feeding device and means for advancing the paper strip a uniform and equal step or space for each character perforated consisting of an electric circuit including said electromagnet and a circuit-closer controlled by the depression of a key to operate the escapement-magnet, the punching-magnet, and the escapement-magnet in the order named whereby said space or step is produced by sectional advance movements.

18. In a perforator the combination of a series of independently-movable punches, a punching-magnet, a spacing-magnet, an electric circuit for said magnet, a series of independent key-levers, separable mechanical connections between the key-levers and the punches including a series of pivoted spring-retracted levers or fiddle-bows, a circuit-closer in said circuit and means for operating said circuit-closer by the depression of a key-lever consisting of a spring-retracted lever or fiddle-bow on an independent support arranged parallel with the said series of fiddle-bows and an operating connection between said fiddle-bow and the movable element of said circuit-closer.

19. In a perforator the combination of a punching device, a spacing device, a series of independent key-levers and means for blocking the movement of said key-levers at a predetermined point consisting of a locking-bolt normally out of engagement with said levers, a traveling actuator therefor, a pawl and ratchet mechanically connected to said actuator, an electromagnet to operate said pawl, an electric circuit therefor and a circuit-closer in said circuit operated by the spacing device.

20. In a perforator the combination of a punching device, a spacing device, a series of independent key-levers, and means for blocking the movement of said key-levers at a predetermined point consisting of a toothed strip normally out of engagement with said levers, an actuator therefor advanced step by step to move said strip, a retracting device for said strip, a pawl and ratchet to operate said actuator and means for operating said pawl upon the operation of the spacing device.

21. In a perforator the combination of a punching device, a spacing device, a series of independent key-levers to control the punching and spacing devices and means for blocking the movement of said key-levers

at a predetermined point in the operation of perforating consisting of a spring-retracted toothed strip, an actuator therefor, a pawl and ratchet to advance said actuator step by step and an operating connection between said pawl and the said key-levers.

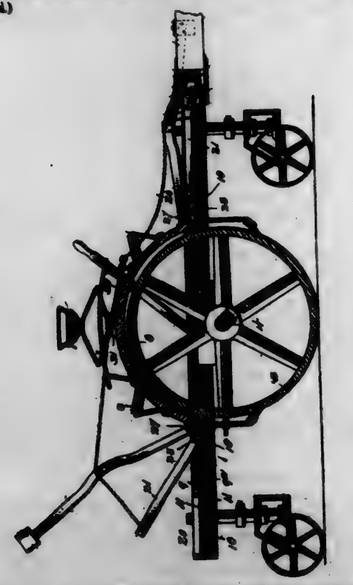
22. In a perforator the combination of a punching device, a spacing device, a series of independent key-levers, a locking device for said key-levers, an actuator for said locking device, a pawl and ratchet to advance said actuator step by step, a retracting device for said actuator, a retracting device for said locking-bolt and means for releasing the actuator-retracting device.

23. In a perforator the combination of a punching device, a spacing device, a series of independent key-levers, a locking device for said key-levers, an actuator for said locking device, a pawl and ratchet to advance said actuator step by step, an electromagnet to operate the pawl, an electric circuit therefor, and a circuit-closer in said circuit operated by the depression of a key-lever.

710,164. WRENCH. MAURICE H. MURRAY, Baxter, Cal. Filed Feb. 7, 1902. Serial No. 93,861. (No model.)

Claim.—A vehicle-wrench consisting of a square body portion with a square central opening therein with three lugs radiating from and at obtuse angles to the body portion, of auxiliary blocks, adapted to fit in the opening in the body portion, each provided with central openings therein of various diameters, all substantially as shown and described.

710,165. ROAD-ROLLER. LEWIS S. MCALPINE, Marathon, N.Y., assignor to Climax Road Machine Company, Marathon, N. Y., a Corporation of New York. Filed Jan. 16, 1902. Serial No. 90,095. (No model.)



Claim.—1. In a machine of the class described, the carrying-frame having a continuous runway, and a draft appliance shiftable to any position on the frame.

2. In a machine of the class described, the carrying-frame having a continuous runway, and a draft appliance having a permanent shiftable engagement with the runway to permit the appliance to be shifted to any position and disposed at any angle with reference to the said frame.

3. In a machine of the class described, the combination with the roller, of a continuous carrying-frame horizontally encircling the roller, and a draft appliance having a traveling trolley connection with the frame and shiftable to any position thereon.

4. In a machine of the class described, the combination with the roller, of a carrying-frame horizontally encircling the roller and having a continuous runway, and a shiftable draft appliance having a trolley connection with the runway.

5. In a machine of the class described, the combination with the roller, of a carrying-frame horizontally encircling the roller and providing a continuous runway, and a shiftable draft appliance carrying a trolley having a traveling engagement with the frame.

6. In a machine of the class described, the combination with the roller, of a carrying-frame horizontally encircling the roller and providing a continuous runway, and a shiftable draft appliance carrying a trolley having interior and exterior rollers coöperating with the frame.

7. In a machine of the class described, the combination of the roller, of a carrying-frame encircling the roller and having separate upper and lower track portions, and a shiftable draft appliance carrying a trolley having separate guide-rollers engaging the separate track portions of the frame.

8. In a machine of the class described, the combination with the roller, of a continuous carrying-frame encircling the roller, and a draft appliance having a trolley provided with interior guide-rollers working inside of the frame and with an exterior guard-roller working on the outside of the frame.

9. In a machine of the class described, the combination with the roller, of a continuous carrying-frame encircling the roller, and a draft appliance having a trolley provided with interior guide-rollers working inside of the frame and with a yieldably-supported exterior guard-roller working on the outside of the frame.

10. In a machine of the class described, the combination with the roller, of a carrying-frame horizontally encircling the roller and having upper and lower members provided with inwardly-projecting guiding-flanges, and a draft appliance having a trolley provided with interior guide-rollers engaging the separate flanged portions of the frame, and an exterior spring-supported guard-roller working upon the exterior of the frame.

11. In a machine of the class described, the combination with the roller, of a carrying-frame encircling the roller, a shiftable draft appliance having a traveling engagement with the frame, and a latch comprising means for holding the draft appliance to a fixed position and also constituting a pivot-bearing therefor.

12. In a machine of the class described, the combination with the roller, of a carrying-frame horizontally encircling the roller, a shiftable draft appliance carrying a trolley engaging the frame and provided with an interior roller, and a latch having a bearing-keeper adapted to engage said trolley-roller.

13. In a machine of the class described, the combination with the roller, of a carrying-frame horizontally encircling the roller, a shiftable draft appliance having a trolley connection with the frame, and a pair of latches arranged at each end of the frame and adapted to engage respectively with said trolley connection and with the draft appliance or pole beyond the frame.

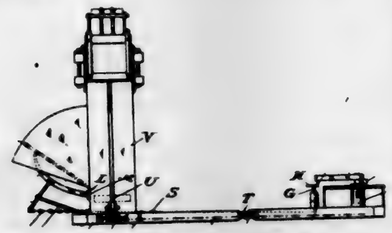
14. In a machine of the class described, the combination with the roller, of a carrying-frame horizontally encircling the roller, a shiftable draft appliance having a trolley connection with the frame, and a pair of vertically-swinging latches arranged at each end of the frame and adapted to engage respectively with said trolley connection and with the draft appliance beyond the frame.

15. In a machine of the class described, the combination with the roller, of a carrying-frame horizontally encircling the roller, a shiftable pole having a trolley connection with the frame, a pair of vertically-swinging latches pivotally supported at each end of the frame, one of said latches having a bearing-keeper for engagement with the trolley, and the other of said latches having a locking-cuff adapted to engage astride the pole beyond the frame, and a lifting device having operative connections with the said latches.

16. In a machine of the class described, the combination with the roller, of a carrying-frame horizontally encircling the roller, a shiftable pole having a trolley connection with the frame, a trolley and a pole-latch pivotally supported at each end of the frame, and a lifting device mounted upon the machine and including a pull arm having flexible connections with both sets of latches.

710,166. DOOR-CLOSER FOR HAY-PRESSES. PHILIP H. HOVIAR, Livermore, Cal. Filed Aug. 26, 1901. Serial No. 73,201. (No model.)

Claim.—1. In combination with a baling-chamber, a plunger reciprocating therein, a hinged door opening to said chamber, a suitable sweep connected to said plunger, a series of toggle-arms connected to said chamber and said door, an arm in the path of and adapted to be operated by said sweep, a projection on said toggle-arms inclining away from said chamber, and a chain connecting said projection with said arm and adapted to draw said projection toward said chamber, said chain passing under said plunger, said arms extending below the path of said plunger, for the purpose set forth.



2. In combination with a baling-chamber, a plunger therein, a hinged door opening to said chamber, a suitable sweep connected to said plunger, a horizontal shaft beneath said door and formed with a plurality of projecting arms, a bar pivoted to each of said arms and connected to the body of the press by means of a pivoted link, a shaft operated by the revolution of said sweep, and an arm projecting from said shaft and connected to said bars by means of a suitable chain, said former arms being independent of but bearing against said door, all arranged substantially as set forth and for the purpose described.

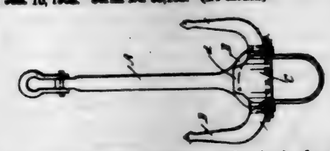
3. In combination with a baling-chamber, a plunger reciprocating therein, a hinged door opening to said chamber, a suitable sweep connected to said plunger, a series of arms connected to said chamber and said door, a vertical shaft below said sweep, two crank-arms on said shaft, one of said crank-arms being in the path of said sweep and adapted to be operated thereby, while the other crank-arm is connected with said first-mentioned arms for the purpose set forth.

4. In combination with a baling-chamber, a plunger reciprocating therein, a hinged door opening to said chamber, a suitable sweep connected to said plunger, a series of toggle-arms connected to said chamber and said door, a secondary sweep at an angle to and secured to said former sweep, an arm in the path of and adapted to be operated by said secondary sweep, and a chain passing beneath said chamber and connected with said toggle-arms and said latter arm substantially as set forth.

5. In combination with a baling-chamber, a plunger reciprocating therein, a hinged door opening to said chamber, a suitable sweep connected to said plunger, a series of toggle-arms connected to said chamber and said door, a crank-arm in the path of and adapted to be operated by said sweep, a singletree interposed between said toggle-arms and said crank-arm and a connection between said singletree and said toggle-arms and said crank-arm for the purpose set forth.

6. In combination with a baling-chamber, a plunger therein, a hinged door opening to said chamber, a suitable sweep connected to said plunger, a horizontal shaft beneath said door and formed with a plurality of projecting arms, a bar pivoted to each of said arms and connected to the body of the press by means of a pivoted link, a shaft formed with a projecting arm and operated by a projection on said sweep, and a secondary arm projecting from said shaft and connected to said bars by means of a suitable chain, all substantially as described and for the purpose set forth.

710,167. ANCHOR. JAMES A. PETTIS, Grand Manan, Canada. Filed Jan. 10, 1902. Serial No. 89,182. (No model.)

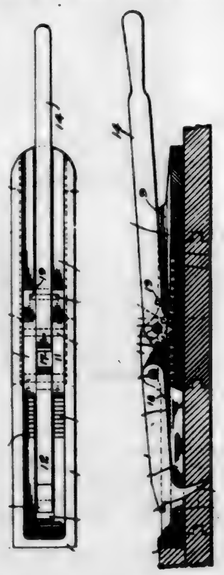


Claim.—In an anchor, the combination, with a shank, of a ring pivoted to the lower end of the shank and having scoop-shaped projections on its upper edge, and flukes having curved lower portions which project laterally from the sides of the said ring between the scoop-shaped projections, said flukes being arranged at a greater distance from the shank than the said projections and terminating in barbed points, substantially as described and shown.

710,168. STOVEPIPE-THIMBLE. ALEXANDER SPARR, Fort Wayne, Ind. Filed June 3, 1901. Serial No. 62,532. (No model.)

Claim.—A stovepipe-thimble comprising a thimble-head; an annular shoulder on said thimble-head; a cylinder with its end ranging around said shoulder and seated upon said thimble-head; and the long-shanked hooks, their heads engaged in said thimble-head, their shanks ranging vertically and parallel with the sides of the said cylinder, and their ends passing through the sides thereof and clenched practically flush therewith.

710,169. FLOOR CLAMP OR JACK. ADOLPH TREISNER, Milltown, Wis. Filed Apr. 12, 1902. Serial No. 102,516. (No model.)



Claim.—1. A floor-clamp, comprising a base-plate having an end to engage the edge of the board to be clamped, and provided with a rack-bar and ratchet-teeth near said bar, of sliding bars mounted on said plate and having teeth to engage said ratchet-teeth, a dog pivoted on said sliding bars having a point to pass into the floor or wall beneath, and a lever pivoted on said sliding bars and having teeth to engage said rack-bar and adapted when reciprocated to advance said plate and force it forward against the edge of the board.

2. A floor-clamp, comprising a base-plate having an end to engage the edge of the board to be clamped and provided with a longitudinal slot and with a rack-bar along its central line and also having ratchet-teeth near said rack-bar, of bars mounted on said plate and having teeth to engage said ratchet-teeth, a dog pivoted on said bars and having a point to pass through said slot into the floor or wall beneath, and a lever having teeth to engage said rack-bar and adapted when reciprocated to advance said plate and force in forward and against the edge of a board, substantially as described.

3. A floor-clamp, comprising a base-plate adapted to engage the edge of a board to be clamped and provided with a longitudinal slot and with a rack-bar and with suitable ratchet-teeth, of a member slidable in guides on said plate and having teeth to engage said ratchet, a dog, a lever having teeth to engage said rack, a pin loosely mounted in slots in said member and carrying said lever and permitting the teeth of the same to be disengaged from said rack-bar to release the clamp.

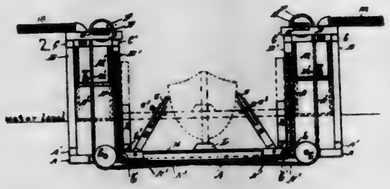
4. A floor-clamp, comprising a base-plate adapted to engage the edge of the board to be clamped and provided with a rack-bar and suitable ratchet-teeth, of a member slidable in guides on said plate and having teeth to engage said ratchet, a dog carried by said member to engage

tee floor or stud whereon the clamp is placed, a lever having teeth to engage said rack, a pin loosely mounted in slots in said member and carrying said lever and permitting the teeth of the same to be disengaged from said rack-bar to release the clamp.

5. The combination, with a base-plate having a face to engage the edge of the board to be clamped and provided with a longitudinal groove, of a member slidable in said groove, a dog pivoted on said member and operable through the bottom of said plate to enter the floor or wall, a rack and ratchet bar provided in said groove, said member having teeth to engage said ratchet-bar, a lever loosely pivoted on said member and having teeth to engage said rack-bar, and a pin carried by said lever and adapted when said lever is depressed to elevate its toothed end out of engagement with said rack-bar and disengage the teeth of said member from said ratchet.

6. The combination, with a base-plate having a face to engage the edge of the board to be clamped and provided with a longitudinal trough having grooves in its side walls, of a member having pins to enter said grooves and slidable therein, a dog pivoted on said member and operable through a slot in the bottom of said plate to enter the floor or walls, a rack and ratchet bar provided in the bottom of said trough beneath said member, said member having teeth to engage said ratchet-bar, a lever loosely pivoted on said member and having teeth to engage said rack-bar, and a pin provided on said lever and adapted when said lever is depressed to elevate its toothed end out of engagement with said rack-bar and disengage the teeth of said member from said ratchet-teeth, substantially as described.

710,170. MARINE DOCK. DIED F. WENDORF, Erie, Pa. Filed May 8, 1902. Serial No. 106,607. (No model.)



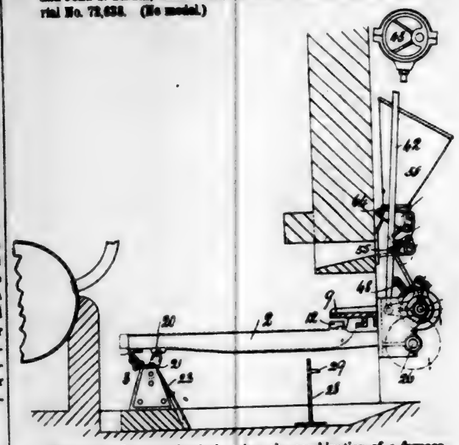
Claim.—1. The combination in a marine dock, of a base-frame, upright frames on each side thereof, a vertically-movable keel-block platform between said upright frames, vertically-movable counterbalance-tanks in the upright frames, sheaves on the tops of the upright frames, and chains passing around said sheaves and connecting the counterbalance-tanks with the keel-block platform, substantially as and for the purpose set forth.

2. The combination in a marine dock, of a base-frame, upright frames on each side thereof, a vertically-movable keel-block platform between said upright frames, vertically-movable counterbalance-tanks in the upright frames, longitudinal shafts mounted on the upper parts of the upright frames, chain-sheaves secured to said shafts so as to rotate in unison, chain-sheaves mounted in the bases of said upright frames, chains leading from said tanks over the shaft-sheaves and down to the sides of the keel-block platform, and chains from the bottoms of each tank passing under chain-sheaves at the bottom of the upright frames and connecting at the opposite ends thereof with the keel-block platform, substantially as and for the purpose set forth.

3. The combination in a marine dock, of a base-frame A, upright frames B B' on each side thereof, a keel-block platform H, trusses K on each side thereof, shafts E mounted in bearings on the top of the upright frames B B', chain-sheaves F secured to said shafts, chain-sheaves G G' mounted in the base-frames A at the bottoms of the upright frames B B', vertically-movable counterbalance-tanks M M' in the upright frames B B', means *m m'* for filling and emptying said counterbalance-tanks, chains N' leading from the tanks M and M' up over the chain-sheaves F and down to the ends A and A' of the keel-block platform H, chains N' leading from the bottom of the tank M under the chain-sheaves G below said tank and thence under the sheaves G' at the side A of the keel-block platform H to which the chain N' is there attached, and other chains N' leading from the bottom of the tank M' under the chain-sheaves G below said tank, and thence under the sheaves G' at the side A' of the keel-block platform H to which the chain is there attached, substantially as and for the purpose set forth.

4. In a marine dock, a base-frame A, and vertical side frames B B' thereon, a keel-block platform H having side trusses K thereon and adapted to move up and down between said side frames, and adjustable braces O on said keel-block platform, substantially as and for the purpose set forth.

710,171. MECHANICAL STOKER. NICOL S. ARTHUR, Glasgow, and JOHN S. BURNET, Kilmalcolm, Scotland. Filed Aug. 20, 1901. Serial No. 73,633. (No model.)



Claim.—1. In a mechanical stoker the combination of a furnace-grate consisting of movable bars each made with a longitudinal depending web, side pops and overhanging pusher, and being interealated with fixed bars, said movable bars being connected to a bearer at their front ends and working on a toggle-bar carried by the bridge at their rear ends, cams arranged in connection with said bearer and adapted to give it and the movable fire-bars a combined vertical and horizontal movement, a cam-shaft, ratchet-gear for driving the cam-shaft, means for operating the ratchet-gear, and means for feeding the coal upon said grate, substantially as hereinbefore described.

2. In a mechanical stoker the combination of a furnace-grate consisting of movable bars each made with a longitudinal depending web, side pops and overhanging pusher, and being interealated with fixed bars, said movable bars being connected to a bearer at their front ends and working on a toggle-bar carried by the bridge at their rear ends, cams arranged in connection with said bearer and adapted to give it and the movable fire-bars a combined vertical and horizontal movement, a cam-shaft, ratchet-gear for driving the shaft, a bell-crank and driving-pawl for operating the ratchet-gear, a connecting-rod and eccentric for operating the bell-crank, means for operating the eccentric, and means for feeding the coal upon said grate, substantially as hereinbefore described.

3. In a mechanical stoker the combination of a furnace-grate consisting of movable bars each made with a longitudinal depending web, side pops and overhanging pusher, and being interealated with fixed bars, said movable bars being connected to a bearer at their front ends and working on a toggle-bar carried by the bridge at their rear ends, cams arranged in connection with said bearer and adapted to give it and the movable fire-bars a combined vertical and horizontal movement, a cam-shaft, ratchet-gear for driving the shaft, a bell-crank and driving-pawl for operating the ratchet-gear, a regulating-lever for controlling the action of the driving-pawl, means for locking said regulating-lever in position, means for operating the bell-crank, and means for feeding the coal upon said grate, substantially as hereinbefore described.

4. In a mechanical stoker the combination of a furnace-grate consisting of movable bars each made with a longitudinal web, side pops and overhanging pusher, and being interealated with fixed bars, said movable bars being connected to a bearer at their front ends, cams arranged in connection with said bearer and adapted to give it and the movable fire-bars a combined vertical and horizontal movement, a cam-shaft, a spur-wheel on the shaft, a second shaft, a pinion on this shaft gearing with the spur-wheel, a ratchet-wheel on the second shaft, a bell-crank mounted on the hub of the ratchet-wheel, a driving-pawl on the bell-crank adapted to gear with the ratchet-wheel, means for operating the bell-crank, means for controlling the driving-pawl, and means for feeding the coal upon the grate while the latter is being operated, substantially as described.

5. In a mechanical stoker the combination of a furnace-grate consisting of movable bars interealated with fixed bars said movable bars being connected to a bearer at their front ends, cams arranged in connection with said bearer and adapted to give it and the movable fire-bars a combined vertical and horizontal movement, a cam-shaft, a second shaft, means for driving the cam-shaft from the second shaft, means for driving the second shaft, a ratchet-wheel fitted loosely on the second shaft, a bell-crank mounted on the hub of the ratchet-wheel, a driving-pawl on the bell-crank adapted to gear with the ratchet-wheel, means for operating the bell-crank, means for feeding fuel to the grate, and means for operating said fuel-feeding means from the ratchet-wheel, substantially as hereinbefore described.

6. In a mechanical stoker the combination of a furnace-grate consisting of movable bars interealated with fixed bars said movable bars being connected to a bearer at their front ends, cams arranged in connection with said bearer and adapted to give it and the movable fire-bars a combined vertical and horizontal movement, a cam-shaft, a second shaft, means for driving the cam-shaft from the second shaft, means for driving the second shaft, a ratchet-wheel fixed on the second shaft, a ratchet-wheel mounted loosely on the second shaft, a bell-crank mounted on the hubs of the ratchet-wheels, driving-pawls on the bell-crank, means for operating the bell-crank, means for controlling the action of the pawls, means for feeding fuel to the grate, and means for operating said fuel-feeding means from the loose ratchet-wheel, substantially as hereinbefore described.

7. In a mechanical stoker the combination of a furnace-grate consisting of movable bars interealated with fixed bars, said movable bars being connected to a bearer at their front ends, cams arranged in connection with said bearer and adapted to give it and the movable fire-bars a combined vertical and horizontal movement, a cam-shaft, a spur-wheel on the shaft, a second shaft, a pinion on this shaft and gearing with the spur-wheel, a ratchet-wheel fitted loosely on the second shaft, a bell-crank mounted on the hub of the ratchet-wheel, a driving-pawl on the bell-crank adapted to gear with the ratchet-wheel, means for operating the bell-crank, means for controlling the driving-pawl, a disk on the hub of the ratchet-wheel, a crank-pin in said disk, a rod connecting the pin with a wiper on a rock-shaft, and means for feeding fuel to the grate, substantially as described.

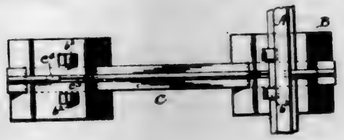
8. In a mechanical stoker the combination of a furnace-grate consisting of movable bars interealated with fixed bars, said movable bars being connected to a bearer at their front ends, cams arranged in connection with said bearer and adapted to give it and the movable fire-bars a combined vertical and horizontal movement, a cam-shaft, a spur-wheel on the shaft, a second shaft, a pinion on this shaft gearing with the spur-wheel, a ratchet-wheel fixed on the second shaft, a ratchet-wheel mounted loose on the second shaft, a bell-crank mounted on the hubs of the ratchet-wheels, driving-pawls on the bell-crank, means for operating the bell-crank, means for controlling the action of the pawls, check-pawls for the ratchet-wheels, a disk on the hub of the loose ratchet-wheel, a crank-pin in said disk, a rod connecting the pin with a wiper on a rock-shaft, and fuel-feeding means operated by said rock-shaft, substantially as described.

9. In a mechanical stoker provided with means for automatically feeding the coal upon the grate-surface and means for simultaneously operating the movable bars of the grate, the combination with said movable bars of fixed bars, as 1, each made with a longitudinal depending web, side cheeks, a raised catch at the front end and a lug at the rear end, substantially as and for the purposes set forth.

10. In a mechanical stoker provided with means for automatically feeding the coal upon the grate-surface and means for simultaneously moving the movable fire-bars, the combination with the fixed bars of the movable bars each made with a longitudinal depending web, side pops, and overhanging pusher, a hook, as 14, at the front end, and a recess, as 13, at the other end, the whole being arranged for combined operation substantially in the manner and for the purposes set forth.

11. In a mechanical stoker having means for automatically feeding the coal upon the grate-surface and means for simultaneously operating the movable bars of the grate, the combination with the fixed grate-bars of the said movable bars each of which is provided with a hook at one end and a recess at the other, a bearer having a recess for the reception of the hooks, a toggle-bar adapted to work in the recesses of the movable fire-bars, and a cross-bar and hook-bolts for connecting the movable fire-bars to the bearer, the parts being arranged for operation substantially in the manner and for the purposes set forth.

710,172. METALLIC RAILWAY TIE. HENRY W. AVERY, Cleveland, Ohio, assignor to the Avery Stamping Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 3, 1902. Serial No. 97,238. (No model.)

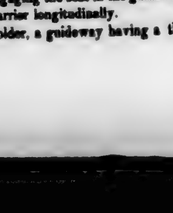


Claim.—1. A metallic tie formed of a sheet-metal plate bent on its medial longitudinal line and flanged outwardly near its edges and having a recess through the bent web to receive the base of a rail, said recess being undercut to provide a double hook in the outer side of the rail combined with a foot-plate having a slot for receiving said tie-beam, and lugs for receiving the other flange of the rail, substantially as described.

2. A metallic foot-plate in the form of an inverted channel having aligned T-shaped slots formed in its sides and a connecting-slot formed through its top, combined with a sheet-metal tie-beam formed of a plate bent on itself along the medial line and flanged outwardly near its edges, there being formed a bipennated hole through said plate at the medial line to provide a hook to engage the flange of the rail, substantially as described.

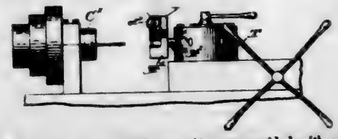
3. A sheet-metal T-shaped tie-beam made from a plate having bipennated openings punched in it and doubled on its medial longitudinal line and flanged outwardly near its edges, substantially as described.

710,178. REFRIGERATOR. HENRY AYLMER, Shortbroke, Canada. Filed June 22, 1901. Serial No. 65,637. (No model.)



Claim.—In combination, in a refrigerator, an outer casing, an axle therein, an inner frame supported upon said axle, means for revolving the axle, an uncovered ice-receptacle supported upon the top of the inner frame, an uncovered water-receptacle supported upon the inner frame below the ice-receptacle, said ice-receptacle having an upwardly-projecting tube surrounding the said axle, substantially as described.

710,174. TOOL-HOLDER. ARTHUR H. BEDWORTH and JOHN A. BEDWORTH, Boston, Mass., assignors of one-third to F. S. Webster Company, Boston, Mass., New York, N. Y., Chicago, Ill., and London, England, a Corporation of Maine. Filed May 16, 1901. Serial No. 60,477. (No model.)



Claim.—1. In a tool-holder, a guideway provided with a threaded seat, a longitudinally-movable tool-carrier, a feed-screw in engagement with the seat, micrometer mechanism to rotate the feed-screw, the latter and said mechanism being mounted on the tool-carrier, and means to provide for rough adjustment of the tool-carrier independently of the micrometer mechanism.

2. In a tool-holder, a guideway provided with a threaded seat, a longitudinally-movable tool-carrier, a feed-screw in engagement with the seat, micrometer mechanism to rotate the feed-screw, the latter and said mechanism being mounted on the tool-carrier, and means to lock the tool-carrier on the guideway, with the feed-screw in engagement with the threaded seat, release of said means permitting the feed-screw to be disengaged from the seat and reseated thereon, to roughly adjust the tool-carrier.

3. In a tool-holder, a guideway provided with a threaded seat, a longitudinally-movable tool-carrier, a feed-screw mounted thereon and in engagement with the seat in the guideway, an actuating-worm and worm-gear for the feed-screw, a graduated dial mounted on the worm, and adapted to coöperate with a pointer on the tool-carrier, and means to lock the dial on and to rotate the worm.

4. In a tool-holder, an undercut, longitudinal guideway having a threaded seat, a tool-carrier having a recess therein to engage the guideway, a removable gib adapted to be interposed between one side of the recess and guideway, to prevent removal of the tool-carrier, and a feed screw and micrometer-actuating mechanism therefor, mounted on the tool-carrier the screw engaging the seat in the guideway, rotation of the screw adjusting the tool-carrier longitudinally.

5. In a tool-holder, a guideway having a threaded seat, combined

with a tool-carrier longitudinally movable on the guideway, a longitudinal shaft mounted in bearings on the tool-carrier and having a feed-screw and a worm-gear fast upon it, a transverse worm also mounted in the tool-carrier and in mesh with the worm-gear, and a setting-dial on the worm, the feed-screw normally engaging the threaded seat, whereby rotation of the screw will effect longitudinal movement of the tool-carrier to adjust the same.

6. In a tool-holder, a guideway provided with a threaded seat, a longitudinally-movable tool-carrier, a feed-screw mounted thereon, and in engagement with the seat in the guideway, and micrometer mechanism to rotate the feed-screw, said mechanism including a worm-gear and actuating-worm, and a graduated dial rotatable with the worm.

710,175. GONDOLA CAR. ARTHUR B. BELLOWS, Pittsburg, Pa. Filed Dec. 21, 1901. Serial No. 86,782. (No model.)

Claim.—1. A gondola-car side having an upper angular flange, an intermediate angular flange, and a lower angular flange, all said flanges extending longitudinally of the car-body; substantially as described.

2. A gondola-car side having upper, lower and intermediate angular flanges, and a floor secured to the intermediate flange; substantially as described.

3. A gondola-car side having a cover-angle riveted along its top with one flange inside the side plate of the car, a similar angle secured along the lower edge of the car side, and an intermediate longitudinal angle riveted along the car side intermediate of its height; substantially as described.

4. A gondola-car side having rolled angles secured along its top and bottom edges, an intermediate angle secured to the interior of the car side, and a floor secured to said intermediate angle; substantially as described.

5. A gondola-car side having an intermediate longitudinal angular flange, and cross-sills and floor-plates secured to said flange; substantially as described.

6. A gondola-car side having rolled angles secured along its top and bottom edges with their vertical flanges on the inner side of the side plates; substantially as described.

7. A steel gondola car having a load-inclosing superstructure, said car having a floor-plate partly within the load-inclosing structure and forming a part of the load-carrying floor, said plate extending to the end of the car beyond the superstructure, and a depending end plate secured to the end of said floor-plate by a flanged member attached to both; substantially as described.

8. A steel gondola car having a load-inclosing superstructure, said car having a floor-plate partly within the load-inclosing structure, and forming a part of the load-carrying floor, said floor-plate extending beyond the load-inclosing structure to the end of the car, a depending end plate secured to the end of said floor-plate by a flanged shape, and a flanged shape secured to the lower end of the said depending plate; substantially as described.

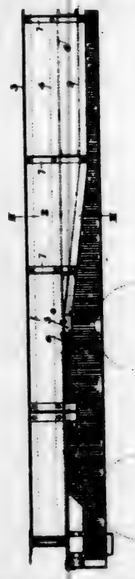
9. A steel gondola car having a floor-plate secured to the end of the car-body and extending beyond it and a depending end plate secured to the end of the floor-plate and having upper and lower angles secured thereto to form an end sill; substantially as described.

10. A steel car having a cover-plate extending transversely over the floor-plates above the bolster and secured to the flying transoms of the bolster on both sides of the center sill; substantially as described.

11. A steel gondola car having a floor-plate extending to the end of the car beyond the superstructure, and a depending end plate secured to the end of said floor-plate by an outer inclosing flanged shape to form a portion of the end sill; substantially as described.

12. A gondola-car side having a flanged shape riveted along its top and arranged to cover the edge of the side, said side having an intermediate angular flange, and a lower angular flange, all of said flanges extending longitudinally of the car-body; substantially as described.

710,176. GONDOLA CAR. ARTHUR B. BELLOWS, Pittsburg, Pa. Filed Dec. 21, 1901. Serial No. 86,784. (No model.)



Claim.—1. A gondola car having the sides terminating at substantially the floor-line in the end portions of the car, plate extensions of said sides extending below the floor-line in the central portion of the car, and an angular flange extending along the lower edge of the truss extension; substantially as described.

2. A gondola car having side plates terminating at the floor-line in the end portions of the car, said car sides having upper and lower parallel angular flanges, the floor being secured to the lower of said flanges, plate extensions for the sides in the central part of the car, and an angular flange on each extension; substantially as described.

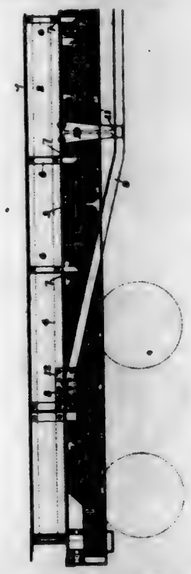
3. A gondola car having an angle secured along the top of the side, an angle secured to the interior of the side at the floor-line, plate extensions for the side in the intermediate part of the car, and angles riveted along the lower edge portions of the truss extensions; substantially as described.

4. A steel car having depending side extensions consisting of flanged-down floor-plates, and plate sides secured to the edge portions of said flanged-down floor-plates; substantially as described.

5. A gondola car having floor-plates provided with depending side flanges in the planes of the car side; substantially as described.

710,177. STEEL GONDOLA CAR. ARTHUR B. BELLOWS, Pittsburg, Pa. Filed Dec. 21, 1901. Serial No. 86,785. (No model.)

Claim.—1. A gondola car having plate sides terminating at the floor-line and provided with vertical strengthening members, and a truss member extending downwardly from the floor-line below the side and longitudinally of the car; substantially as described.



2. A gondola car having plate sides extending to the floor-line and having vertical strengthening members, and truss members extending from the floor-line near the bolster-points downwardly and longitudinally of the car-body; substantially as described.

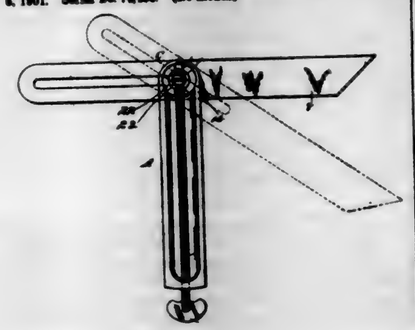
3. A gondola car having the side terminating at the floor-line, a depending plate secured to the side, and a truss member having its end portion secured to the depending plate and to the car-floor; substantially as described.

4. A gondola-car side having an upper longitudinal angle and a lower longitudinal angle secured thereto and a truss member secured to the lower angle; substantially as described.

5. A gondola-car side having an upper cover-angle riveted along its top, an inner angle riveted along the lower edge portion, floor-plate secured to the lower angle, and a truss member secured to said lower angle at its ends; substantially as described.

6. A gondola car having its sides terminating at the floor-line, truss members secured substantially at the floor-line and extending downwardly and longitudinally of the car-body, said members consisting of rolled angles with horizontally-extending flanges, and struts between said angles and the car-body; substantially as described.

710,178. BEVEL. CHRISTIAN BECKER, New Britain, Conn., assignor of one-half to James A. Trant, New Britain, Conn. Filed Sept. 6, 1901. Serial No. 74,492. (No model.)



Claim.—1. In a bevel, the combination of a stock kerfed for a distance and provided at one end with a pivot-seat; a pivot occupying said seat; an adjustable blade located in said kerf and on said pivot; and means entering said stock at the end opposite said pivot-seat, traversing said pivot and engaging the stock beyond the pivot-seat and effective to thereby clamp said blade in its adjusted position relatively to the stock.

2. In a bevel, the combination of a stock; an adjustable blade carried thereby; a pivot for said blade carried by said stock; and means passing through said pivot and engaging said stock beyond the pivot and effective to clamp the stock and the blade in their adjusted positions relatively to each other.

3. In a bevel, the combination of a bifurcated stock; a pivot provided with a screw-threaded hole in adjustable engagement with one side of said bifurcated stock and freely traversing the other side thereof; an adjustable blade mounted on said pivot; and screw-threaded means traversing said hole in said pivot and engaging one side of said stock beyond said pivot and effective to clamp said sides upon the blade.

4. In a bevel, the combination of a stock kerfed for a distance, and at one end having one of its sides provided with a tapped boss constituting a pivot-seat, and the other of said sides provided with a plain pivot-seat; a pivot having a tapped opening provided with a screw adapted to enter said tapped boss, and with a plain portion adapted to traverse said plain pivot-seat; clamping means entering said stock at its end opposite said pivot and having a screw-threaded portion traversing the hole in said pivot and projecting thereboyond and engaging a face upon said stock.

5. In a bevel, the combination of a stock kerfed for a distance, and at one end having one of its sides provided with a tapped boss constituting a pivot-seat, and the other of said sides provided with a plain pivot-seat; a pivot having a tapped opening provided with a screw adapted to enter said tapped boss, and with a plain portion adapted to traverse said plain pivot-seat; a beveled face upon the side of the stock; a clamping-rod entering said stock at its end opposite said pivot and having a screw-threaded portion traversing the hole in said pivot and projecting thereboyond and engaging the beveled face upon said stock.

6. In a bevel, the combination of a stock kerfed for a distance, and at one end having one of its sides provided with a tapped boss constituting a pivot-seat, and the other of said sides provided with a plain pivot-seat; a pivot having a tapped opening provided with a screw adapted to enter said tapped pivot-seat; a clamping-rod entering said stock at its end opposite said pivot and having a screw-threaded portion traversing the hole in said pivot and projecting thereboyond, and having a conical end, and engaging a face upon said stock.

7. In a bevel, the combination of a stock kerfed for a distance, and at one end having one of its sides provided with a tapped boss constituting a pivot-seat, and the other of said sides provided with a plain pivot-seat; a pivot having a tapped hole provided with a screw adapted to enter said tapped boss, and with a plain portion adapted to traverse said plain pivot-seat; a beveled face upon the side of the stock; a clamping-rod entering said stock at its end opposite said pivot and having a screw-threaded portion traversing the hole in said pivot and projecting thereboyond, and having a conical end, and engaging the beveled face upon said stock.

8. In a bevel, the combination of a stock made from a single piece and having straight working faces and reduced central portions; a central web; a kerf cut through said working faces in a plane parallel to the plane of said web, the internal edges of the stock at each kerf being substantially transverse thereto; a tapped boss in one side of said stock comprising a pivot-seat and a plain pivot-seat in the other side of said stock; a pivot provided with a tapped hole, and having screw-threaded engagement with said tapped boss and adapted to traverse said plain pivot-seat, a beveled engaging face in line with the hole of the pivot; and a rod entering said stock from the end opposite the pivot and thereof and passing through said pivot, and having a conical end projecting therethrough, and effective to slide up on said beveled face and clamp the sides of the stock upon the blade.

9. A bevel comprising a stock constructed with a longitudinal recess and having a kerf and a blade adjustable therein, said stock being formed on one side of the kerf with a threaded bore or opening and on the other side thereof with a smooth bore, a connection engaging said threaded bore and working in said smooth bore, and means operatively engaging said connection and cooperating with a portion of the stock to clamp the blade in position, said means being seated in said recess and having a bearing in the end of the stock most remote from said bores.

10. A bevel comprising a stock having a kerf and a blade adjustable therein, said stock being formed on one side of the kerf with a threaded bore, and on the other side thereof with a smooth bore, and having an inclined surface beyond each bore, a threaded screw adjustably engaging said threaded bore, and having enlarged head formed with a threaded transverse opening, said head working freely in the smooth bore, and an operating-rod having a threaded portion working in the opening in the

pivot-head and formed with a conical portion cooperating with said inclined surface to clamp the blade in position.

11. A bevel comprising a stock having a recess in its outer surface substantially the full length thereof, and formed with a kerf and an adjustable blade therein, said stock having a threaded bore on one side of the kerf and a smooth bore on the other, and provided with an inclined surface beyond such bores, a threaded pivot adjustably engaging the threaded bore and having an enlarged head working freely in the smooth bore and provided with a threaded transverse opening, and an operating-rod having a threaded portion working in the opening in the pivot-head and made conical at the end to engage said inclined surface, said rod being housed in the recess of the stock below the general or working surface of the latter.

12. A bevel comprising a stock having a recess in its outer surface substantially the full length thereof, an adjustable blade on the stock, and means securing the blade in different positions including an operating-rod housed within said recess below the general or working surface of the stock.

13. A bevel comprising a stock having a recess in its outer surface substantially the full length thereof, an adjustable blade on the stock, and means securing the blade in different positions including an inclined surface, a rivet having an enlarged head provided with a transverse hole, and an operating-rod having a conical or beveled end passing through the rivet-hole and engaging said inclined surface, said rod being housed within the recess of the stock below the general or working surface of the latter.

14. A bevel comprising a stock formed with side flanges or working faces and an integral substantially continuous and relatively thin connecting-web, said stock being also formed with a kerf for a blade cut in the said side flanges in a plane outside of and adjacent to and parallel with the surface of said connecting-web.

710,179. WRENCH. JAMES T. BURR, Cleveland, Ohio. Filed May 19, 1902. Serial No. 107,930. (No model.)

Claim.—1. In a wrench, a combined handle and body formed from two pieces of sheet-steel of different temper and thickness, the said handle being hollow and welded to the body, and the body formed with parallel sides and edges terminating at said weld, substantially as described.

2. The wrench having a pair of substantially hook-shaped jaw-supports at its gripping end integral with its body and projecting above the same at an inclined angle, and a jaw set between said supports and across the front thereof, the said body having parallel toothed edges, in combination with gripping-wheels opposite said jaw and pinions connected with said wheels engaging said toothed edges, substantially as described.

3. The combined handle and body of the wrench having a set of integral shouldered hook-shaped jaw-supports and a jaw having its body clamped between said supports and provided with a transversely-serrated face overlapping the front edges thereon, in combination with a rotatable gripping-jaw and mechanism engaged on the body of the wrench carrying said gripping-jaw, both said jaws being above the plane of the body of the wrench, substantially as described.

4. The combined body and handle of the wrench having a pair of hook-shaped jaw-supports 3 and internal flanges 5 in the neck thereof forming an abutment for a jaw, in combination with a jaw clamped between said supports and seated against said flanges, and a rotatable jaw supported on the body of the wrench, and comprising a set of wheels and a separate pinion for each wheel, substantially as described.

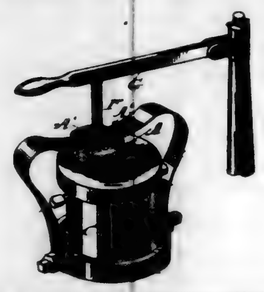
5. In a wrench, a set of separate gripping-wheels side by side and a pinion detachably interlocked with each wheel, and a single shaft for said wheels and pinions, a slidable carrier engaged around the body of the wrench and supporting said shaft, whereby new pinions and wheels may be substituted, and a fixed jaw opposite said wheels, substantially as described.

6. In a pipe-wrench, a suitable body and handle, a wheel-carrier slidable thereon and consisting of a main portion engaged above the side of said body and an auxiliary portion across the top of the wrench and having ears at its sides interlocked with corresponding ears on said main portion, and separate screws at the sides uniting said auxiliary portion with the main portion of the carrier, whereby the carrier can be taken apart, substantially as described.

7. The wrench comprising a set of rotatable gripping-wheels, a carrier in which said wheels are mounted comprising a body 6 having outwardly-projecting ears 7 at its rear, and a top cross part 9 having inwardly-projecting ears 8 engaging the ears 7 and screws connecting said parts together, substantially as described.

8. The wrench-body and handle thereon having a rounded outer extremity, and a gripping-wheel carrier on said body having a downwardly-projecting tongue 10, in combination with means to hold said carrier in working position comprising a spiral spring and a rod supporting the same, and a guide-tube for said rod within the wrench-handle and centered in said rounded extremity, substantially as described.

710,180. MACHINE FOR GRINDING LENSES. JOHN F. BYINGTON, Hillsdale, Mich., assignor to F. A. Hardy & Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 30, 1901. Serial No. 87,687. (No model.)



Claim.—1: In a lens-grinding machine, the combination with two cooperating grinding-tools and means for rotating one of them, of means for preventing the tools from revolving about their respective axes, independently of each other, said means including a yoke engaging one of said tools and a pivotal support for the yoke, permitting it to oscillate relatively to the other tool, substantially as described.

2. In a lens-grinding machine, the combination with two cooperating grinding-tools and means for rotating one of them, of means for preventing the tools from revolving about their respective axes, independently of each other, said means including a spring-yoke engaging one of the tools and a pivotal support for the yoke, permitting it to oscillate relatively to the other tool, substantially as described.

3. In a lens-grinding machine, the combination with the block and lap and means for rotating one of them, of means for preventing them from revolving about their respective axes, independently of each other, said means including a yoke engaging the block, a gimbal-ring carrying the yoke, and a pivotal support for the gimbal-ring, whereby the yoke is permitted to oscillate relatively to the lap, substantially as described.

4. In a lens-grinding machine, the combination with the block and lap and a revolvable chuck carrying the lap, of means for preventing the block and the lap from revolving about their respective axes, independently of each other, said means including a yoke engaging the block, said yoke being pivotally supported by the chuck whereby it may oscillate relatively to the lap, substantially as described.

5. In a lens-grinding machine, the combination with the block and lap and a revolvable chuck carrying the lap, of means for preventing the block and the lap from revolving about their respective axes, independently of each other, said means including a spring-yoke engaging the block and extending downward upon opposite sides of the lap, said yoke being pivotally supported by the chuck whereby it is permitted to oscillate relatively to the lap, substantially as described.

6. In a lens-grinding machine, the combination with the block and the lap and a revolvable chuck carrying the lap, of means for preventing the block and the lap from revolving about their respective axes, independently of each other, said means including a spring-yoke engaging the block and extending downward upon opposite sides of the lap, and a gimbal-ring supporting the yoke, said gimbal-ring being, in turn, pivotally supported by the chuck whereby the yoke is permitted to oscillate relatively to the lap, substantially as described.

710,181. BOLT AND NUT CUTTER. WILLIAM B. CARSLOW, Sterling, Ill. Filed May 19, 1902. Serial No. 108,049. (No model.)

Claim.—1. In an implement of the character described, a cutter-frame comprising suitably-spaced sheet-metal side plates connected at one end, and sheet-metal connection joining said side plates rigidly together and forming therewith a box open at one end, for the purpose set forth.

2. In an implement of the character described, a cutter-frame comprising suitably-spaced sheet-metal side plates connected at one end, and sheet-metal connection joining said side plates rigidly together and forming therewith a box open at one end, said first-named plates having pivot-perforations at their rear extremities, for the purpose set forth.

3. In an implement of the character described, a frame comprising a U-shaped sheet-metal member with integrally-formed sides and end web, and separately-formed connecting means joining said sides firmly together, for the purpose set forth.

4. In an implement of the character described, a frame comprising top and bottom side plates and a U-shaped sheet-metal strip secured between said plates, for the purpose set forth.

5. In an implement of the character described, a frame comprising top and bottom side plates, and suitably-spaced sheet-metal members having lugs formed integrally therewith and passing through perforations in said side plates and riveted in place, for the purpose set forth.

6. In an implement of the character described, a frame comprising a U-shaped sheet-metal member with integrally-formed side plates and end web, and suitably-spaced sheet-metal plates having lugs at their lateral edges secured in perforations in said first-named member, for the purpose set forth.

7. In an implement of the character described, a frame comprising a U-shaped sheet-metal member with integrally-formed side plates and end web, and a U-shaped connecting member with integrally-formed sides and connecting end web, said last-named member forming a box with said first-named member, for the purpose set forth.

8. The combination with a stationary blade, a reciprocable blade, and a pair of levers, of a frame, comprising a U-shaped sheet-metal member having integrally-formed side plates and connecting end web, said last-named member having lever-connecting means at the rear extremities of its side plates, and connecting means joining said side plates rigidly together, for the purpose set forth.

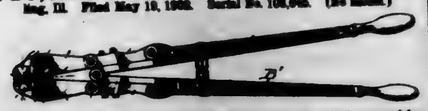
9. In an implement of the character described, a frame comprising a U-shaped sheet-metal member with integrally-formed side plates and end web, a U-shaped connecting member with integrally-formed sides and connecting end web, said last-named member forming a box with said first-named member, and having lugs on its lateral edges connected with the side plates of said first-named member, for the purpose set forth.

10. In an implement of the character described, the combination with a frame, a fixed blade, and a pair of levers, of a reciprocable block connected with said levers and having a forward extension of reduced cross-section with shoulders at its base, and blades secured to said block and having abutting shoulders, for the purpose set forth.

11. In an implement of the character described, the combination with a frame, a fixed blade, and a pair of levers, of a reciprocable block connected with said levers and having a forward extension of reduced cross-section with shoulders at its base, a nut-cutting blade with an extension abutting against a shoulder at the base of said first-named extension and a shoulder abutting against the end of said first-named extension, a second blade abutting at its base against the remaining shoulder at the base of said first-named extension, and a connecting-screw, for the purpose set forth.

12. In an implement of the character described, the combination with a frame, a fixed blade, and a pair of levers, of a reciprocable block connected with said levers and having a forward extension of reduced cross-section with shoulders at its base, a nut-cutting blade with an extension abutting against a shoulder at the base of said first-named extension and a shoulder abutting against the end of said first-named extension, a second blade abutting at its base against the remaining shoulder at the base of said first-named extension and a connecting-screw, said last-named blade being adjustable, for the purpose set forth.

710,182. BOLT AND NUT CUTTER. WILLIAM B. CARSLOW, Sterling, Ill. Filed May 19, 1902. Serial No. 108,045. (No model.)



Claim.—1. An implement of the character described, comprising pivoted blades with cutter edges lying in one plane and blades carried by said first-named blades and having edges substantially perpendicular to those of the first-named blades and separated by a space in the closed position, for the purpose set forth.

2. An implement of the character described, comprising pivoted blades having beveled surfaces on one side and blades at substantially right angles to said first-named blades and lying on the beveled side thereof and separated by a space in the closed position of the implement, for the purpose set forth.

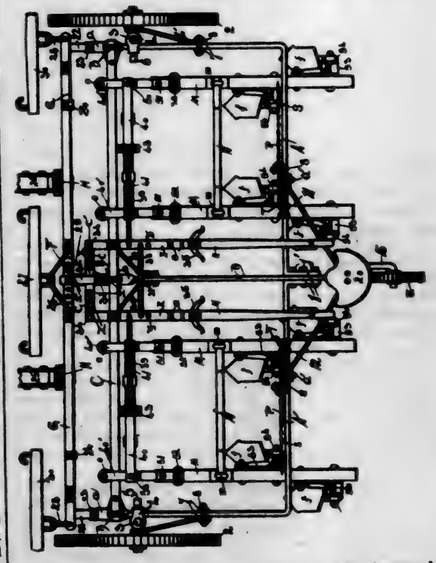
3. An implement of the character described, comprising pivoted blades having beveled surfaces on one side and blades at substantially right angles to said first-named blades and lying on the beveled side thereof and projecting over said beveled surfaces for the purpose set forth.

4. An implement of the character described, comprising pivoted bolt-cutting blades and nut-cutting blades formed integrally therewith and having cutting edges at substantially right angles thereto and separated by a space in the closed position of the implement, for the purpose set forth.

5. An implement of the character described, comprising pivoted blades swinging in a given plane and bearing nut-cutting edges substantially perpendicular to said plane, said edges being separated by a space in the closed position of the implement, for the purpose set forth.

6. An implement of the character described, comprising pivotally-joined blades swinging in a given plane and bearing nut-cutting edges substantially perpendicular to said plane and separated by a space in the closed position of the implement, and operating-levers pivotally joined together and to the base ends of said blades, for the purpose set forth.

710,183. TWO-ROW CULTIVATOR. JACOB CLAUSEN, Council Bluffs, Iowa. Filed Sept. 13, 1901. Serial No. 75,238. (No model.)



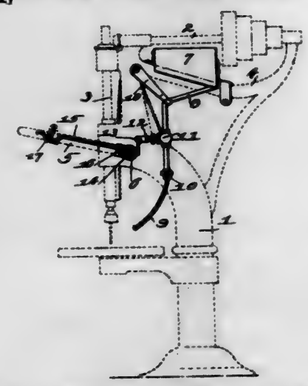
Claim.—1. The combination in an implement of the character described, of two wheel-supported axle-beams, of a four-sided frame vertically adjustably secured to said axle-beams a center-wheel vertically adjustably secured to said frame, a draft-bar laterally adjustably secured to said frame, four cultivator-beams movably secured to said frame at the side adjacent said draft-bar, arched bars adjustably connecting said cultivator-beams in sets of twos, adjustably-secured bars secured to said cultivator-beams, two shifting-levers adjustably-supported rods connecting said shifting-levers, connecting-bars extending from said levers to said cultivator-beams to provide each set of cultivator-beams with a lateral shifting mechanism, adjustable levers secured to said frame, and chains extending from said cultivator-beams and adjustably secured to said last-mentioned levers, to provide a means to vertically adjust said sets of cultivator-beams.

2. In an implement of the character described, the combination with a skeleton frame, of a transverse bar, of cultivator-beams shiftably secured to said transverse bar, adjustably-secured bars sliding one upon the other

having their ends secured to said cultivator-beams, shifting-levers pivotally secured to said frame, and a rod connecting said shifting-levers to said bars, as and for the purpose set forth.

3. The combination with a supporting-frame, of holders adjustable in a horizontal plane secured to said supporting-frame, axle-stems secured to said adjustably-secured holders and adjustable in a vertical plane, wheels secured to said axle-stems, a center-wheel adjustably secured to said supporting-frame, so that the whole supporting-frame may be raised and lowered, a transverse bar, a plurality of cultivator-bars slidably secured to said bar shifting-levers secured to said cultivator-bars, and adjusting-levers secured to said cultivator-bars, so that said bars may be vertically adjusted, as set forth.

710,184. LUBRICATOR AND LIQUID-DISPENSER. CHARLES F. CLEMENS, Peoria, Ill. Filed Mar. 11, 1901. Serial No. 50,750. (No model.)



Claim.—1. In a lubricator or liquid-dispenser, a reservoir suitably supported, a shaft, a suitable dust leading from the supply to a drilling-tool, a spring-valve in said dust, a shiftable collar adapted to be mounted on said shaft and connected with said valve, a lever adapted intermittingly to engage said shiftable collar and means for turning said shaft, substantially for the purposes set forth.

2. In a lubricator a reservoir suitably supported, a dust or tube leading therefrom and to a tool operatively mounted on a drill-machine, a suitable spring-valve in said tube, a shiftable collar having connection with said spring-valve and adapted to be mounted on a shaft and connections between said collar and the operating mechanism of the tool whereby intermittent friction-pressure may be applied to said collar to open the valve substantially as described and shown.

3. In a lubricator or liquid-dispenser a reservoir suitably supported, a dust or tube leading therefrom and to a drilling-tool operatively mounted in a drilling-machine, the said dust or tube being formed in two sections, the lower section being swiveled to the upper section, a suitable spring-valve in the dust or tube and means connected with the pressure-lever of the drilling-machine having suitable connection with said valve adapted to intermittingly open and close the valve

4. A lubricator for drilling-machines, comprising a reservoir suitably mounted thereon, a tube or dust leading therefrom and to the drill-tool, said tube being formed in two sections, the lower one swiveled to the upper section, a spring-valve in the tube or dust, a shiftable collar connected with said valve and a lever arranged to engage said collar frictionally and thereby operate said valve, substantially as described.

5. A lubricator for drilling-machines, comprising a reservoir, the dust 8 having the lower swiveled section 9 attached thereto and provided with the valve 11 therein, the collar 14 shiftably mounted on shaft 6 and connected with the valve by means of arm 13 thereon and the link 12, the friction-lever 15, pivoted to the lever of the machine and provided with the clutch-finger 16, the said lever being held normally from engagement with the collar by means of spring 17, all substantially as described and shown.

6. In a lubricator or liquid-dispenser, a fluid-supply pipe or dust leading to a drilling-tool, a spring-valve in said dust, a shiftable collar suitably connected with said valve, a shiftable lever adapted to frictionally engage said shiftable collar and means for turning the collar.

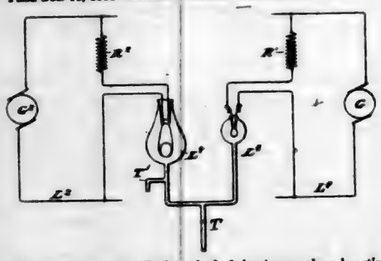
7. In a lubricator or liquid-dispenser, a suitable dust leading from a source of supply to a drilling-tool, a valve in said dust, a shaft, a shiftable collar mounted on said shaft and connected with said valve, a shiftable lever supported from said shaft and adapted intermittingly to frictionally engage said shiftable collar, and means for turning said shaft, substantially as and for the purposes set forth.

710,185. RATCHET-WRENCH. JAMES R. DORIN, Gillespie, Ill. Filed Feb. 24, 1902. Serial No. 95,344. (No model.)

Claim.—1. A ratchet-wrench comprising a ratchet-plate having oppositely-disposed annular ratchets lying one within the inclosure of the other and a central stud, a handle rotatably mounted upon the stud and provided with a longitudinal slot, a reciprocatory pin slidably mounted in the slot for movement radially of the ratchet-plate into cooperative relation with the ratchets interchangably said pin having a slotted head, and a spring attached to the handle and engaged loosely in the slot of the head of the pin to permit of movement of the pin from one ratchet to the other and to hold the pin yieldably in engaging position.

2. A ratchet-wrench comprising a ratchet-disk having annular ratchets on one face and provided with a central stud projecting at opposite sides thereof, a handle rotatably mounted upon the stud and having a pawl for engagement with the ratchets interchangably, said ratchet-disk having radial grooves in its opposite face, a disk mounted upon the stud at the opposite side of the ratchet-plate from the handle and having cam-slots therein, and jaws having stems and adjacent shoulders, the stems of the jaws being passed through the slots of the cam-disk and into the slots of the ratchet-plate with the shoulders of the jaws against the outer face of the cam-disk to hold the latter upon the stud.

710,186. METHOD OF EXHAUSTING INCANDESCENT ELECTRIC LAMPS. SAMUEL R. DRAKE, Marlboro, Mass., assignor to the Bryan-Marsh Company, New York, N. Y., a Corporation of New York. Filed Dec. 10, 1900. Serial No. 39,249. (No model.)



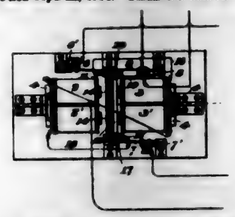
Claim.—1. The described method of simultaneously exhausting incandescent electric lamps of different voltage, consisting in first, producing a partial vacuum by withdrawing the air therefrom through a tube or outlet common to both; second, forcing a vapor or gas into both lamps for the purpose of further perfecting the vacuum, and third, simultaneously passing a current of high voltage through the filament of the high-voltage lamp and a current of low voltage through the filament of the low-voltage lamp until they are both sufficiently heated to dissipate the gases which surround the filaments.

2. The described method of exhausting an incandescent electric lamp of relatively low voltage, consisting in first, simultaneously exhausting the air from it and a companion lamp or chamber connected thereto and inclosing an electrical conductor of relatively high resistance; second, forcing a vapor or gas into the lamp and companion chamber and finally heating both the lamp and the conductor by currents of low and high voltage respectively, until the gases are dissipated.

710,187. ADJUSTABLE ICE-CREEPER. JOHN H. DOWNER, Allenport, Pa. Filed Oct. 8, 1901. Serial No. 78,080. (No model.)

Claim.—An ice-creeper comprising two interlocking members having upturned end portions, and downturned serrated side portions forming gripping edges, one of said members having an elongated longitudinally-arranged slot adjacent its inner end, a tongue formed integral with the inner end of said member and terminally curved downwardly, said second member having a transverse slot in its upturned end, the upper portion of said end bent outwardly at right angles thereto, an extension on the lower edge of said upturned end and projecting outwardly therefrom in a plane parallel to the extension on the upper end thereof, a cam member pivotally secured between the lug and the outwardly-bent portion of the second-named member and adapted to project through the said transverse slot, said second-named member formed on its inner end with a T-shaped extension, and provided adjacent thereto for a portion of its length with a series of transverse slots spaced apart, said T-shaped extension adapted to project through the said slot of the first-named member and bear upon its upper face, and said tongue adapted to lie upon the second-named member and have its downwardly-curved end fit in the said transverse arranged slots.

710,188. ELECTRIC SWITCH. BARTHOLOMEW J. FOLEY, Pittsburg, Pa. Filed Sept. 22, 1900. Serial No. 30,647. (No model.)



Claim.—1. An electric switch comprising a pair of electromagnets, an armature in position to be attracted by either electromagnet alternately, a pair of contacts carried by said armature, a second pair of contacts in position to cooperate with the movable contacts, connections from each contact of one pair to a source of current and from each contact of the other pair to one electromagnet, connections from the other ends of the electromagnet-windings to said source of current, and a contact make and break for an independent circuit, controlled by said armature, substantially as described.

2. An electric switch comprising a pair of electromagnets, an armature movably arranged between said electromagnets, a pair of contacts carried by said armature, a second pair of contacts in position to cooperate with the movable contacts, connections from each contact of one pair to a source of current and from each contact of the other pair to one electromagnet, connections from the other ends of the electromagnet-windings to said source of current, and a contact make and break for an independent circuit, controlled by said armature, substantially as described.

3. An electric switch comprising a pair of electromagnets, an armature arranged to oscillate between said electromagnets, a pair of contacts carried by said armature, a second pair of contacts in position to cooperate with the movable contacts, connections from each contact of one pair to a source of current and from each contact of the other pair to one electromagnet, connections from the other ends of the electromagnet-windings to said source of current, and a contact make and break for an independent circuit, controlled by said armature, substantially as described.

710,189. SASH-LOCK. DUNBAR FORBES, Newark, N. J. Filed May 28, 1902. Serial No. 109,209. (No model.)

Claim.—1. The combination with the upper and lower sash members and a bolt for fastening the said parts together, of a casing adapted to be secured over the said members, and locked thereto substantially as set forth.

2. The combination with the upper and lower sash members, one of the said members having a keyway or means for controlling the movements of the key and a lock-bolt having recesses to receive the bit of the key, said lock-bolt being adapted to move from one member into locking relation with the other member and thence into locking relation with the casing, of said casing adapted to be secured by said lock-bolt over said lock members, substantially as set forth.

3. The combination with the sash members, and a lock-bolt slidable on one member into locking engagement with the other, of a casing adapted to inclose both of said members and to be locked by said bolt and key for operating the bolt and locking all said parts together, substantially as set forth.

4. The combination with the sash members having loops and ways for a locking-bolt, and a casing of said locking-bolt, having separate recesses *f*, *f*, to receive the bit of the key and a key for moving said bolt from the loop on one member into the loop of the other, the said bit when first rotating with the key being adapted to enter one recess and throw the bolt to lock the sash members together and, on the second turning, to enter the next recess in order and threw the bolt into locking engagement with the casing, substantially as set forth.

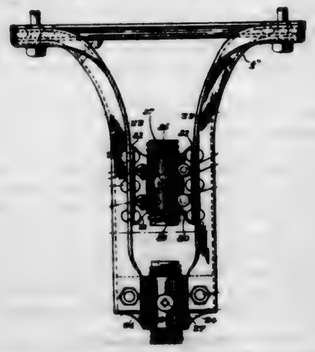
5. The combination with the sash members having loops and slideways and one of said members having a keyway, a bolt arranged and adapted to be moved on said slideways and in said loops to lock said members together and a casing inclosing said members and having projections to engage one of said members and said bolt and be locked upon said members substantially as set forth.

710,190. PROCESS OF EXTRACTING VEGETABLE ALBUMEN. FREDERICK W. GAERTNER, Saginaw, Mich. Filed Jan. 27, 1902. Serial No. 91,234. (No specimens.)

Claim.—1. The process of extracting vegetable albumen from vegetable matter, which consists in subjecting the vegetable matter reduced to powdered form to water at a temperature below that which would coagulate the albumen, rendering the dissolved albumen insoluble by adding alcohol and separating the precipitated albumen from the liquid by centrifugal action.

2. The process of extracting vegetable albumen from vegetable matter, which consists in subjecting the vegetable matter reduced to powdered form to water at a temperature below that which would coagulate the albumen, rendering the dissolved albumen insoluble by adding alcohol to the mixture, extracting the albumen from the liquid in a centrifugal machine, and drying the same in the same centrifugal machine.

710,191. HANGER. HOWARD T. HALLOWELL, Davisgrove, Pa. Filed Apr. 8, 1901. Serial No. 54,836. (No model.)

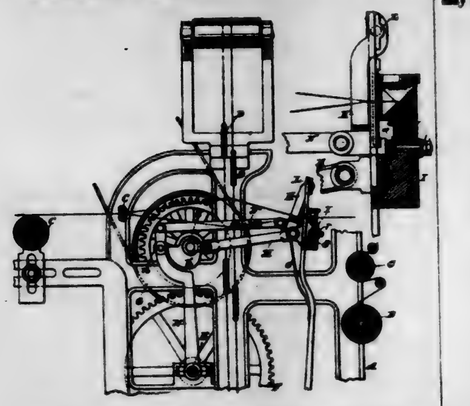


Claim.—1. A hanger comprising a plate, having a longitudinally-extending rib, a plurality of legs provided with feet attached to said plate, said legs having longitudinally-extending ribs which terminate laterally in flanges, said flanges being deflected downwardly and outwardly in proximity to said feet, a brace located at the intermediate portions of said legs and secured to said flanges by suitable fastening devices, a clamp located at the lower portion of said legs and secured to the flanges thereof, and upper and lower adjusting devices located in said brace and lower clamp respectively.

2. A hanger, comprising a plate, a plurality of legs having hollow longitudinally-extending strengthening-ribs provided with feet attached to said plate, said legs having flanges on their outer portions, said outer portions of said legs being deflected outwardly and downwardly thereby forming stiffening-flanges which extend longitudinally on the outer edges of said legs and feet, said legs terminating in a plurality of U-shaped contours at their lower extremities, a brace located at the intermediate portions of said legs and secured to said legs by suitable fastening devices, a

clamp located at the lower portion of said legs and secured thereto by suitable fastening devices, and upper and lower adjusting devices located in said brace and lower clamp respectively.

710,192. LOOSE-REED MOTION FOR LOOMS. EDWARD HERBST, Union Hill, N. J. Filed Feb. 21, 1901. Serial No. 48,262. (No model.)



Claim.—1. In a loom, the combination of a batten, a reed carried by the batten and movable with respect thereto, means for imparting an auxiliary beat-up motion to the reed, a yielding check interposed between reed and batten, and means for adjusting the said check both laterally and longitudinally of the batten.

2. In a loom, the combination of a batten, a reed carried by the batten and movable with respect thereto, means for imparting an auxiliary beat-up motion to the reed, and an adjustable yielding check device of a general wedge shape interposed between the reed and batten.

3. In a loom, the combination of a batten, a reed carried by the batten and movable with respect thereto, and means for moving the reed, the meeting faces of the reed and batten being substantially parallel, and a yielding check of a general wedge shape adjustably secured to the batten, the said batten being cut away on a line inclined to its plane, and being provided with a wedge *r*, whereby the check may be adjusted laterally, and at the same time maintain its parallelism with the face of the reed.

4. In a loom, the combination of a batten, a reed movably carried by the batten, a check for limiting the movement of the reed relatively to the batten, said check being adjustable transversely of the movement of the reed, and means for operating the reed and the batten.

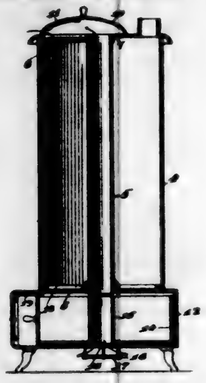
5. In a loom, the combination of a batten, a reed movable relatively to the batten, one of said parts having an inclined surface on the side facing the other part, a substantially wedge-shaped check adjustable on said inclined surface, and means for operating the reed and batten.

6. In a loom, the combination of a batten, a reed movable relatively to the batten, one of said parts having an inclined surface on the side facing the other part, a substantially wedge-shaped check adjustable on said inclined surface, a wedge engaging the opposite surface of the part having the inclined surface, and a securing connection from the check to the wedge.

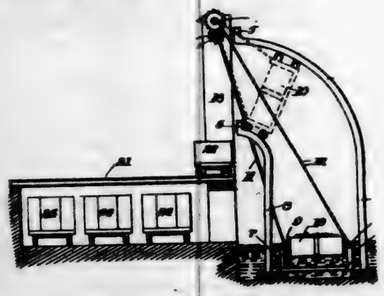
710,193. STOVE. ERNST ERNSTL, St. Louis, Mo. Filed Mar. 9, 1898. Serial No. 673,627. (No model.)

Claim.—1. A stove comprising a suitable body forming a fire-box; a hot-air flue mounted in the fire-box; a framework connecting the lower end of the hot-air flue to the lower end of the fire-box; a top connecting the upper end of the hot-air flue to the upper end of the fire-box and having a fuel-opening; a grate mounted upon the framework around the lower end of the hot-air flue; an ash-pan box mounted under the fire-box; an ash-pan removably mounted in the ash-pan box; and an air-flue mounted in the ash-pan in vertical alinement with the first-mentioned hot-air flue, there being an opening through the ash-pan box in vertical alinement with said flues; substantially as specified.

2. A stove comprising a suitable body forming a fire-box; a hot-air flue mounted in the fire-box; a framework connecting the lower end of the hot-air flue to the lower end of the fire-box; a top connecting the upper end of the hot-air flue to the upper end of the fire-box and having a fuel-opening; a grate mounted upon the framework around the lower end of the hot-air flue; an ash-pan box mounted under the fire-box; an ash-pan removably mounted in the ash-pan box; an air-flue mounted in the ash-pan in vertical alinement with the first-mentioned hot-air flue, there being an opening through the ash-pan box in vertical alinement with said flues; a framework extending downwardly from the bottom of the ash-pan box around said opening; and a pan mounted in said framework in vertical alinement with said flues to catch any fire and ashes that may fall down the flues; substantially as specified.



710,194. DEVICE FOR UNLOADING COAL-FLATS OR THE LIKE. HARRY H. ESSERS, Duquesne, Pa. Filed May 28, 1902. Serial No. 109,610. (No model.)



Claim.—1. In an unloading device, the combination of suitably mounted and spaced standards having their upper portions curved, a carriage operating between said standards, and revolvable means movable in unison and having differential speeds suitably connected to the carriage whereby the latter may be simultaneously raised and tilted.

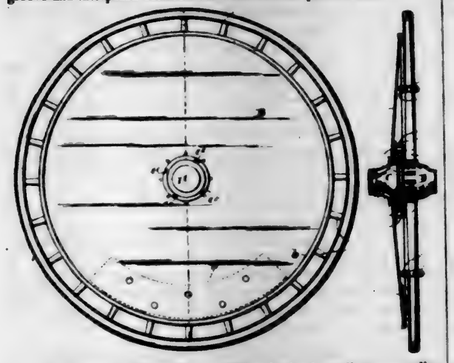
2. In an unloading device, the combination of standards suitably spaced and secured in the bed of the river, or the like, the upper portions of the standards being curved and having their ends extending in substantially vertical alinement with the shore, a carriage operating between said standards, and actuating means on the shore connected to said carriage whereby the latter may be raised and simultaneously tilted.

3. In an unloading device, the combination of standards anchored in the river-bed having their upper ends curved, a carriage operating between said standards, a barge secured above said carriage, and means whereby said carriage and barge may be raised, lowered and tilted, substantially as described.

4. In an unloading device, the combination of standards anchored upon the shore, shafts secured thereto, cog-wheels secured upon said shafts, means to rotate said shafts, standards anchored in the river-bed having their upper ends curved, a carriage operating between said standards, a barge secured above said carriage, lifting-cables operating over said shafts and secured to said carriage, and shiftable connections between said barge and said carriage, all parts being arranged and operating substantially as described.

710,195. ADVERTISING DISPLAY DEVICE. DORA JONES, Chicago, Ill. Filed Dec. 19, 1901. Serial No. 86,493. (No model.)

Claim.—1. The combination with a vehicle-wheel, of a collar surrounding the hub and fitting closely thereon, means for attaching the collar to the spokes of the wheel, said collar being provided with an annular groove, a plate or disk supported on said collar, means preventing rotation of the same with the wheel, and antifriction-rollers located in said groove and interposed between the collar and the plate or disk.



2. The combination with a vehicle-wheel, of a collar surrounding the hub and fitting closely thereon, and provided in its outer surface with an annular groove, means for attaching the inner end of the collar to the spokes of the wheel, means for clamping the outer end of the collar on the hub, a plate or disk supported on the collar, means for preventing rotation thereof with the wheel, and antifriction-rollers interposed between said plate or disk and the groove of said collar.

3. The combination with a vehicle-wheel, of a collar surrounding the outer end of the hub and provided with an annular groove, clips surrounding the spokes and attached to the inner end of the said collar, clamping means for clamping the outer end of the collar to the hub, a plate or disk, and rollers between said plate or disk and said groove in the collar.

4. The combination with a vehicle-wheel, a collar surrounding the outer end of the hub and provided on its outer surface with an annular groove, and means for attaching the collar to the spokes of the wheel, of a plate or disk having a central opening through which the end of the wheel-hub extends, a ring attached to said plate or disk and surrounding said opening and antifriction-rollers interposed between said ring and the groove of said collar.

5. The combination with a vehicle-wheel and a collar surrounding the outer end of the wheel-hub and provided on its outer surface with an annular groove, of a plate or disk having a central opening through which the outer end of the wheel-hub extends, a ring attached to the inner face of said plate or disk and surrounding said opening, a plurality of studs projecting inwardly from said ring, and rollers on said studs which rest and roll in said groove of the collar.

6. The combination with a vehicle-wheel, of a plate or disk provided with a central opening through which the end of the wheel-hubs extends, rollers on said plate or disk which rest and roll on the hub of said wheel, pins attached to the spokes of said wheel and projecting laterally therefrom, and antifriction-rollers journaled in the ends of said pins and adapted to bear against said plate or disk.

7. The combination with a vehicle-wheel, of a plate or disk provided with a central opening through which the outer end of the hub extends, rollers on said plate or disk which rest and roll on said hub, a casing extending inwardly from the said plate and inclosing said rollers, and a removable casing attached to the outer face of said plate and inclosing the outer end of the hub.

710,196. PNEUMATIC TOOL. JOSEPH KELLER, Philadelphia, Pa., assignor to Philadelphia Pneumatic Tool Company, a Corporation of New Jersey. Filed Sept. 30, 1901. Serial No. 76,704. (No model.)

Claim.—1. In a pneumatic riveter or other tool, the combination of a nozzlepiece adapted to have the shank of a working tool inserted therein, and a retaining device contained within said nozzlepiece and adapted to engage said shank, in combination with a distribution-valve, means for controlling said valve and mechanism intermediate said retaining device and said means for controlling said valve, whereby the latter is operated.

2. In a pneumatic riveter or other tool, the combination of a nozzlepiece and a combined retaining device within said nozzlepiece adapted to engage the shank of the working tool, in combination with a distribution-valve, means for controlling said valve and mechanism intermediate said retaining device and said means for controlling said valve, whereby the latter is operated.

3. In a pneumatic riveter or other tool, the combination of a nozzlepiece, and means within said nozzlepiece for encircling and engaging the shank of the working tool, whereby the latter is normally retained within said nozzlepiece, in combination with a distribution-valve, a stop-valve and mechanism intermediate said means and stop-valve.

4. In a pneumatic riveter or other tool, the combination of a nozzlepiece adapted to have the shank of the working tool inserted therein, and a clamping device contained within said nozzlepiece for retaining said shank therein, in combination with a distribution-valve, means for controlling said valve and mechanism intermediate said retaining device and said means for controlling said valve, whereby the latter is operated.

5. The combination of the nozzlepiece of a pneumatic tool, the shank of a working tool, a stop-valve ring contained within said nozzlepiece, and a retaining device carried by said stop-valve ring and adapted to engage the shank of said working tool.

6. The combination of a nozzlepiece of a pneumatic tool, the shank of a working tool, a stop-valve ring contained within said nozzlepiece, a retaining device carried by said stop-valve ring and adapted to engage the shank of said working tool, and tension devices for said stop-valve ring.

7. The combination of the nozzlepiece of a pneumatic tool, retaining devices for the shank of the working tool contained within said nozzlepiece and adapted to engage said shank, and means contained within the cylinder of the pneumatic tool for effecting the starting of the latter operated by suitable intermediate means when the shank of said working tool is pressed inwardly.

8. In a pneumatic riveter or other tool, the combination of a nozzlepiece, a retaining device for the shank of a working tool retained therein, a manually-operated throttle-valve controlling the initial admission of motive fluid to the tool, a piston, a distribution-valve therefor, and a stop-valve operated by suitable means actuated by the act of pressing the tool to its work for controlling the operation of the tool after motive fluid has been admitted thereto by the opening of the manually-operated valve.

9. In a pneumatic riveter or other tool, a nozzlepiece, a combined retaining device within said nozzlepiece adapted to engage the shank of a working tool, a manually-operated throttle-valve controlling the initial admission of motive fluid to the tool, a stop-valve operated by suitable means actuated by the act of pressing the tool to its work and controlling the admission of the motive fluid to the working parts of the tool and operating mechanism intermediate said throttle-valve and the working tool.

10. In a pneumatic riveter, a nozzlepiece, means within said nozzlepiece for encircling and engaging the shank of a working tool, whereby the latter is normally retained within said nozzlepiece, a manually-operated

throttle-valve controlling the initial admission of motive fluid to the tool, a piston, a distribution-valve therefor and a stop-valve operated by suitable means actuated by the act of pressing the tool to its work and controlling the operation of the tool after the admission of the motive fluid to the working parts of the tool.

11. In a pneumatic riveter or other tool, the combination of a nosepiece, adapted to have the shank of a working tool inserted therein, a clamping device contained within said nosepiece for retaining said shank therein, a manually-operated throttle-valve controlling the initial admission of motive fluid to the tool, a stop-valve controlling the admission of the motive fluid to the working parts of the tool, and connecting mechanism intermediate the shank of the working tool and said stop-valve

12. The combination of a nosepiece of a pneumatic tool, the shank of a working tool, a stop-valve ring retained within said nosepiece, a retaining device carried by said valve-ring and adapted to engage the shank of said working tool, tension devices for said stop-valve ring, a stop-valve, mechanism intermediate the latter and said stop-valve ring, and a manually-operated throttle-valve controlling the initial admission of motive fluid to the tool.

13. The combination of a nosepiece of a pneumatic tool adapted to have the shank of a working tool inserted therein, a shoulder on said shank, and a retaining device contained within said nosepiece and adapted to encircle said shank and be engaged by said shoulder, in combination with means for effecting the starting of the pneumatic tool when the shank of the working tool is pressed inwardly.

14. In a pneumatic riveter or other tool, the combination of a nosepiece, a shank for the working tool having a shoulder thereon and a combined retaining device within said nosepiece adapted to engage said shank and to contact with said shoulder, in combination with means for effecting the starting of the pneumatic tool when the shank of the working tool is pressed inwardly.

15. The combination with a nosepiece of a pneumatic tool, of a combined retaining device contained within said nosepiece and adapted to encircle and engage the shank of a working tool, a shoulder on said shank against which said retaining device is adapted to abut, and means actuated by intermediate means when said retaining device is pressed inwardly for effecting the reciprocation of the piston of the tool.

16. In a pneumatic tool, a cylinder, a nosepiece secured thereto and adapted to have the shank of a working tool inserted therein, a retaining device within said nosepiece, and adapted to engage said shank, a grasping-handle, a valve-box retained between said handle and cylinder, a distribution-valve and a stop-valve contained in said valve-box, and operating mechanism intermediate said retaining device and stop-valve.

17. In a pneumatic tool, a cylinder, a nosepiece secured thereto, and adapted to have the shank of a working tool inserted therein, a retaining device within said nosepiece and adapted to engage said shank, a stop-valve ring, a piston, a distribution-valve therefor, and means intermediate said valve and stop-valve ring for the operation of said valve, when the working tool is pressed to its work.

18. In a pneumatic tool, a cylinder, a nosepiece secured thereto and adapted to have the shank of a working tool inserted therein, a retaining device within said nosepiece and adapted to engage said shank, a shoulder on the latter, a stop-valve ring, a piston in said cylinder, a distribution-valve therefor and means intermediate said valve and stop-valve ring for the operation of said valve when the working tool is pressed to its work.

19. In a pneumatic tool, a cylinder, a nosepiece secured thereto and adapted to have the shank of a working tool inserted therein, a retaining device within said nosepiece and adapted to engage said shank, a stop-valve ring adjacent to said retaining device, a combining device for said stop-valve ring, a piston in said cylinder, a distribution-valve therefor and means intermediate said valve and stop-valve ring for the operation of said valve when the working tool is pressed to its work.

20. In a pneumatic tool, a cylinder, a nosepiece secured thereto and adapted to have the shank of a working tool inserted therein, a retaining device within said nosepiece and adapted to engage said shank, a grasping-handle, a valve-box retained between said handle and cylinder, a distribution-valve in said valve-box, and means intermediate said valve and retaining device for the operation of said valve when the working tool is pressed to its work.

21. In a pneumatic tool, a cylinder, a nosepiece secured thereto and adapted to have the shank of a working tool inserted therein, a retaining device within said nosepiece and adapted to engage said shank and be actuated thereby, a stop-valve ring, a piston in said cylinder, a hollow differential distribution-valve therefor and means intermediate said valve and stop-valve ring for the operation of said valve when the working tool is pressed to its work.

22. In a pneumatic tool, a cylinder, a nosepiece secured thereto and adapted to have the shank of a working tool inserted therein, a retaining device within said nosepiece and adapted to engage said shank, a piston in said cylinder, a distribution-valve therefor and a stop-valve operated by suitable means actuated by the act of pressing the tool to its work and controlling the operation of the tool after the admission of the motive fluid to the working parts of the tool, a passage leading from said port to the larger area of said distribution-valve, said passage being controlled by said stop-valve and connections intermediate said stop-valve and retaining device whereby said stop-valve is operated when the working tool is pressed to its work.

23. In a pneumatic tool, the combination of a nosepiece, a retaining device for the shank of the working tool within said nosepiece and adapted to engage said shank, a piston in the cylinder of said tool and means for effecting the starting of said piston when the shank of said working tool is pressed inwardly, said means being operated in one direction mechanically and in the opposite direction by fluid-pressure.

24. In a pneumatic tool, a handle, an inlet-passage for the motive fluid in said handle, a manually-operated throttle-valve controlling the initial admission of motive fluid to said handle, a cylinder to which said handle is attached, a piston in said cylinder, a distribution-valve for said piston, a stop-valve for controlling the movement of said distribution-valve, a nosepiece attached to said cylinder, retaining devices for the shank of the working tool contained within said nosepiece and adapted to engage said shank, mechanism intermediate said retaining devices and stop-valve for operating the latter in one direction and a port for conducting live motive fluid to the opposite end of said stop-valve, whereby the latter is operated in the opposite direction.

25. In a pneumatic tool, a cylinder, a nosepiece attached thereto, a retaining device for the shank of the working tool contained within said nosepiece and adapted to engage said shank, a stop-valve ring, a spring therefor, a stop-valve, a piston in said cylinder, a distribution-valve for said piston, a rod leading from said stop-valve ring to said stop-valve for operating the latter in one direction and means for operating said stop-valve in the opposite direction.

26. In a pneumatic tool, a cylinder, a nosepiece therefor, a retaining device for the shank of the working tool contained within said nosepiece and adapted to engage said shank, a piston in said cylinder, a distribution-valve for said piston, a stop-valve, a port uncovered by said piston in its forward stroke, passages leading from said port to a large pressure area of said distribution-valve, said passages being controlled by said stop-valve, means intermediate said retaining device and stop-valve for actuating the latter in one direction, and means for operating said stop-valve in the opposite direction.

27. In a pneumatic tool, a handle, a cylinder, a valve-box retained between said handle and cylinder, a piston in said cylinder, a differential distribution-valve in said valve-box, a nosepiece attached to said cylinder, a retaining device for the shank of the working tool contained within said nosepiece and adapted to engage said shank, a port adapted to be uncovered by the piston during its forward stroke, passages 36, 37, 38 and 39 leading from said port to the larger area of said distribution-valve, a stop-valve for controlling the flow of fluid to actuate said distribution-valve and means for operating said stop-valve in either direction.

28. In a pneumatic tool, a cylinder, a nosepiece attached thereto, a retaining device for the shank of the working tool contained within said nosepiece and adapted to engage said shank, a normally closed valve located within the body of the tool and means intermediate of said valve and working tool for opening said valve by the act of pressing the tool to its work.

29. In a pneumatic tool, the combination of a manually-operated throttle-valve controlling the initial admission of motive fluid to the tool, a cylinder, a nosepiece attached to said cylinder, a retaining device for the shank of the working tool contained within said nosepiece and adapted to engage said shank, and means intermediate said retaining device and stop-valve for controlling the operation of the tool after motive fluid has been admitted thereto by the opening of the manually-operated valve.

30. In a pneumatic tool, a cylinder, a nosepiece therefor, a retaining device for the shank of the working tool contained within said nosepiece and adapted to engage said shank, a manually-operated throttle-valve controlling the initial admission of motive fluid to the tool, and mechanism intermediate said stop-valve and retaining device, said mechanism being operated by the act of pressing the tool to its work and controlling the admission of the motive fluid to the working parts of the tool.

31. In a pneumatic tool, a cylinder, a nosepiece therefor, a retaining device for the shank of the working tool contained within said nosepiece and adapted to engage said shank, a manually-operated throttle-valve controlling the initial admission of motive fluid to the tool, a stop-valve intermediate said throttle-valve and the working parts of the tool, means interposed between said stop-valve and retaining device for opening said stop-valve by the act of pressing the tool to its work, and a port for leading live motive fluid to said valve to actuate the same in an opposite direction.

32. In a pneumatic tool, a cylinder, a grasping-handle at the rear end thereof, a manually-operated throttle-valve located in said handle for controlling the initial admission of motive fluid to the tool, a stop-valve located within the body of the tool, a nosepiece attached to a cylinder of the tool, a retaining device for the shank of the working tool contained within said nosepiece and adapted to engage said shank and mechanism intermediate said retaining device and stop-valve whereby the latter is opened by the act of pressing the tool to its work, so as to admit the motive fluid to the working parts of the tool.

33. In a pneumatic tool, a cylinder, a nosepiece therefor, a retaining device for the shank of the working tool contained within said nosepiece and adapted to engage said shank, a stop-valve ring adapted to be moved in one direction by its contact with said retaining device, means for moving said stop-valve ring in the opposite direction, a stop-valve located in the rear portion of the cylinder or body of the tool, and a rod extending longitudinally through said cylinder from said valve to said stop-valve ring at the front end of the tool, whereby said stop-valve will be moved rearwardly to permit the operation of the tool when the latter is pressed against the work.

34. In a pneumatic tool, a cylinder, a stop-valve located within the body of the tool near its rear end and normally pressed forward into position to obstruct the circulation of the motive fluid necessary to the operation of the tool, a nosepiece for said cylinder, a retaining device within said nosepiece for the shank of the working tool and adapted to engage said shank, a stop-valve ring adjacent to said retaining device, a shoulder on the shank of the working tool adapted to engage said retaining device and an actuating-rod extending longitudinally to the cylinder of the tool between said stop-valve and said valve-ring.

35. In a pneumatic tool, a cylinder, a nosepiece therefor, a retaining device for the shank of the working tool contained within said nosepiece and adapted to engage said shank, a piston in said cylinder, a distribution-valve therefor, ports intermediate of said piston and valve, means for controlling said ports, mechanical devices for operating said means in one direction and mechanism for directing fluid-pressure upon said means in an opposite direction.

36. In a pneumatic tool, a cylinder, a nosepiece therefor, a retaining device for the shank of the working tool contained within said nosepiece and adapted to engage said shank, a valve-box, a differential valve therein and a stop-valve in said valve-box for controlling said differential valve, said stop-valve being operated in one direction when the working tool is placed against the work and in the opposite direction when the working tool is removed from the work.

37. In a pneumatic tool, a cylinder, a nosepiece therefor, a retaining device for the shank of the working tool contained within said nosepiece and adapted to engage said shank, a piston in said cylinder, a differential valve therefor, a valve-box, and a stop-valve in said valve-box, said stop-valve consisting of heads joined by a neck and adapted to control the movement of said valve, said stop-valve being operated in one direction mechanically and in the opposite direction by fluid-pressure.

38. In a pneumatic tool, a cylinder, a nosepiece therefor, a retaining device for the shank of the working tool contained within said nosepiece and adapted to engage said shank, a rod extending longitudinally of said cylinder, a distribution-valve, a stop-valve for controlling the latter, means for actuating said rod when the tool is placed against the work, and means for operating said stop-valve in an opposite direction.

39. In a pneumatic tool, a cylinder, a nosepiece therefor, a retaining device for the shank of the working tool contained within said nosepiece and adapted to engage said shank, a rod extending longitudinally of said cylinder, a differential distribution-valve, a stop-valve for controlling the latter, means for mechanically actuating said rod and stop-valve in one direction and means for actuating said stop-valve in an opposite direction.

40. In a pneumatic tool, a cylinder, a nosepiece therefor, a retaining device for the shank of the working tool contained within said nosepiece and adapted to engage said shank, a piston in said cylinder, a valve for controlling ports common thereto and to said piston, said valve consisting of a hollow shell, or cylinder the interior surface thereof being always open to fluid-pressure and a stop-valve for controlling the movement of said valve while live-fluid pressure is thereon, said stop-valve being operated in one direction mechanically and in the opposite direction by fluid-pressure.

41. In a pneumatic tool, a cylinder, a nosepiece therefor, a retaining device for the shank of the working tool contained within said nosepiece and adapted to engage said shank, a piston in said cylinder, a valve controlling ports common thereto and to said piston, said valve consisting of a hollow shell or cylinder, the interior surface thereof being always open to fluid-pressure, said valve being located exterior to said hammer in alinement therewith and adapted to move in the same direction as said hammer and a stop-valve for controlling the movement of said valve while live-fluid pressure is thereon.

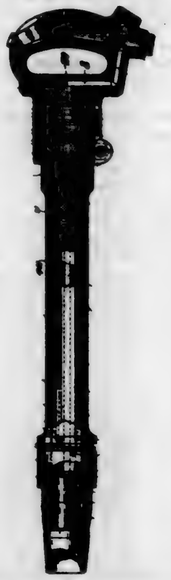
42. In a pneumatic tool, a cylinder, a nosepiece therefor, a retaining device for the shank of the working tool contained within said nosepiece and adapted to engage said shank, a piston in said cylinder, a valve adapted to move in the same direction as said piston, said valve consisting of a cylindrical shell having its interior surface always open to fluid-pressure and located out of the path of said piston, the movement of the latter terminating exterior to said valve and said valve being provided with opposing pressure areas against which the motive fluid acts to shift the valve in opposite directions, and means for controlling the movement of said valve while live-fluid pressure is thereon, said means being operated in one direction mechanically and in the opposite direction by fluid-pressure.

43. The combination of a nosepiece of a pneumatic tool, the shank of a working tool, a stop-valve ring contained within said nosepiece, a retaining device carried by said stop-valve ring and adapted to engage the shank of said working tool, and devices for controlling said stop-valve ring.

44. The combination of a nosepiece of a pneumatic tool, the shank of a working tool, a stop-valve ring retained within said nosepiece, a retaining device carried by said valve-ring and adapted to engage the shank of said working tool, devices for controlling said stop-valve ring, a stop-valve, mechanism intermediate the latter and said stop-valve ring, and a manually-operated throttle-valve controlling the initial admission of motive fluid to the tool.

45. In a pneumatic riveter or other tool, the combination of a nosepiece, a shank for the working tool having a shoulder thereon and a retaining device within said nosepiece adapted to engage said shank and to contact with said shoulder, in combination with means for effecting the starting of the pneumatic tool when the shank of the working tool is pressed inwardly.

710,197. **PNEUMATIC RIVETER.** JULIUS KELLER, Philadelphia, Pa., assignor to Philadelphia Pneumatic Tool Company, a Corporation of New Jersey. Filed Mar. 28, 1902. Serial No. 99,480. (No model.)



Claim.—1. In a pneumatic riveter, a cylinder, a handle, an extension or sleeve on said handle in threaded engagement with said cylinder, a valve-box within said extension, a distribution-valve and a stop-valve contained within said valve-box, lugs projecting from said extension, a slot between said lugs, and a threaded bolt passing freely through one of said lugs and being in threaded engagement with the other of said lugs, said bolt having a jam-nut thereon.

2. In a pneumatic riveter, a cylinder, a handle, an extension or sleeve on said handle in threaded engagement with said cylinder, lugs projecting from said extension, a slot between said lugs, and a threaded bolt passing freely through one of said lugs and being in threaded engagement with the other of said lugs, said bolt having a jam-nut thereon, in combina-

tion with a valve-box containing a distribution and a stop valve located within said extension, a plate intermediate said valve-box and cylinder, said plate, valve-box and extension being held in position by the tightening of said bolt.

3. In a pneumatic riveter, the combination of a cylinder, a handle, an extension or sleeve on said handle, said extension being in engagement with said cylinder, a valve-box containing a distribution-valve and a stop-valve located in said extension, lugs projecting from said extension and a threaded bolt engaging said lugs and having a nut thereon.

4. In a pneumatic riveter, the combination of a cylinder, a handle, an extension or sleeve on said handle, said extension being in threaded engagement with said cylinder, a valve-box containing a distribution-valve and a stop-valve located in said extension, lugs projecting from said extension and a threaded bolt engaging said lugs and having a nut thereon.

5. In a pneumatic riveter, the combination of a cylinder, a nosepiece in engagement therewith, and a band or lock-spring located in juxtaposition to said nosepiece and cylinder, said spring having deflected terminals and recesses in said cylinder and nosepiece respectively adapted to be engaged by said terminals.

6. In a pneumatic riveter, the combination of a cylinder, a nosepiece in threaded engagement therewith, and a band or spring located in juxtaposition to said nosepiece and cylinder and surrounding the same, said spring having deflected terminals and recesses in said cylinder and nosepiece respectively adapted to be engaged by said terminals.

7. In a pneumatic riveter the combination of a cylinder, a nosepiece in threaded engagement therewith, a groove located in the juxtaposed walls of said cylinder and nosepiece, a band or spring located in said groove and having deflected terminals, and recesses in said cylinder and nosepiece respectively, said terminals being adapted to engage said recesses.

8. In a pneumatic riveter, the combination of a cylinder, a nosepiece therefor, an annular groove common to said cylinder and nosepiece, a spring located in said groove and means whereby the ends of said spring engage said cylinder and nosepiece respectively.

9. In a pneumatic riveter, the combination of a cylinder, a valve-box, means for holding said cylinder and valve-box in assembled position, a distribution-valve in said valve-box, a stop-valve in said valve-box, ports intermediate said valves and cylinder, means for normally holding said stop-valve in closed or seated position, and means for unseating said stop-valve when the tool is pressed against the work.

10. In a pneumatic riveter, a cylinder, a distributing-valve, a stop-valve located exteriorly of said cylinder and in proximity to said distributing-valve, which latter is adapted to be operated when the said stop-valve is unseated, means for normally holding said stop-valve in closed or seated position, and means for unseating said stop-valve when the tool is brought in contact with the work.

11. In a pneumatic riveter, a cylinder, a stop-valve for controlling the admission of the motive fluid behind the piston, a distribution-valve adapted to be operated when said stop-valve is unseated, a spring normally pressing said stop-valve forwardly and holding it in closed or seated position, a stop-valve ring, a clamp adapted to engage the shank of the working tool, and to be in contact with said stop-valve ring, when the working tool is pressed to the work, and devices intermediate said stop-valve ring and stop-valve whereby the latter is actuated by the act of pressing the tool to its work.

12. In a pneumatic riveter, the combination of a cylinder, a valve-box therefor, a cylindrical stop-valve within said valve-box, a spring normally pressing said valve forward whereby the same is normally seated, a clamp adapted to engage the shank of a working tool, said shank having a shoulder thereon in contact with said clamp, a stop-valve ring adapted to contact with said clamp, and devices intermediate said stop-valve ring and stop-valve for actuating the latter against the pressure of said spring.

13. In a pneumatic riveter, a cylinder, a valve-box separable therefrom, a cylindrical stop-valve for controlling the admission of motive fluid to the rear end of said cylinder, a spring normally pressing said stop-valve forward, a working tool carried by the front end of the cylinder, a shoulder on the shank of said working tool, a clamp engaging said shoulder, a stop-valve ring, and rods extending longitudinally through the cylinder between said stop-valve ring and stop-valve, whereby the latter is actuated by the act of pressing the tool to the work.

14. In a pneumatic riveter, the combination of a manually-operated throttle-valve, controlling the initial admission of the motive fluid to the tool, a stop-valve for controlling the admission of the motive fluid to the rear end of the cylinder, a spring normally pressing said stop-valve forward, a working tool carried by the front end of the cylinder, a clamp engaging the shank of said working tool, a stop-valve ring adapted to contact with said clamp and rods extending longitudinally through the cylinder between said stop-valve ring and stop-valve, whereby the latter is actuated by the act of pressing the tool to the work.

15. In a pneumatic riveter, the combination of a manually-operated throttle-valve controlling the initial admission of motive fluid to the tool, a cylinder, a piston therein, a distribution-valve, a valve-box intermediate said throttle-valve and cylinder, a stop-valve located in said valve-box, a spring normally pressing said stop-valve to its seat, a working tool carried by the front end of the cylinder, a clamp engaging the shank of said working tool, a stop-valve ring adapted to contact with said clamp, and rods extending longitudinally through the cylinder between said stop-valve ring and stop-valve whereby the latter is actuated by the act of pressing the tool to the work.

16. In a pneumatic riveter, the combination of a cylinder, a manually-operated throttle-valve controlling the initial admission of motive fluid to said cylinder, a stop-valve intermediate said first-mentioned valve and the working parts of the tool, a spring normally holding said stop-valve closed and cutting off the motive fluid from said cylinder, a working tool having its shank engaged by a clamp, a stop-valve ring adapted to contact with said clamp, and rods extending longitudinally of said cylinder between said stop-valve ring and stop-valve, whereby the latter is opened by the act of pressing the tool to its work.

17. In a pneumatic riveter having a grasping-handle secured to its rear end, the combination of a manually-operated throttle-valve located in said handle for controlling the initial admission of motive fluid to the tool, a stop-valve located intermediate of said first-mentioned valve and the working parts of the tool and within said handle, a spring normally holding said stop-valve closed and cutting off the motive fluid behind the piston, a clamp engaging a shank of the working tool, a stop-valve ring, and rods intermediate said stop-valve ring and stop-valve whereby the latter is opened by the act of pressing the tool to its work.

18. In a pneumatic riveter, the combination of a cylinder, a piston therein, a distribution-valve, ports intermediate of said piston and valve, a nosepiece in threaded engagement with said cylinder, a spring having its ends interlocked with said nosepiece and cylinder, a clamp contained within said nosepiece and adapted to engage the shank of the working tool, a stop-valve ring adapted to contact with said clamp, a stop-valve and rods intermediate said stop-valve ring and said stop-valve.

19. In a pneumatic riveter, a cylinder, a piston therein, a distribution-valve therefor, ports serving as inlet and exhaust ports, controlled by said distribution-valve and leading to the rear end of said cylinder, a stop-valve controlling said ports only, a spring for normally holding said stop-valve to its seat, and means for unseating said stop-valve when the working tool is pressed to its work.

20. In a pneumatic riveter, a cylinder, a piston therein, a distribution-valve controlling the inlet of the motive fluid to both ends of said cylinder, a stop-valve, a spring for keeping said stop-valve normally against its seat, and means for unseating said stop-valve when the working tool is pressed to its work.

21. In a pneumatic riveter, a cylinder, a piston therein, a differential valve therefor, said valve controlling the inlet to both ends of said cylinder, a stop-valve controlling said inlet and exhaust ports for one end of said cylinder only, and means for unseating said stop-valve and effecting the reciprocation of said piston when the working tool is pressed to its work.

22. In a pneumatic riveter, a cylinder, a piston therein, a hollow differential distribution-valve for said cylinder, said valve being located exteriorly to said piston, in alinement therewith, and adapted to move in the same direction as the latter, inlet-ports controlled by said valve and leading to both ends of the cylinder, and exhaust-ports located at the forward end of said cylinder and uncontrolled by said distribution-valve.

23. In a pneumatic riveter, a cylinder, a piston therein, a hollow differential distribution-valve for said cylinder, said valve being located exteriorly to said piston, in alinement therewith, and adapted to move in the same direction as the latter, inlet-ports controlled by said valve and leading to both ends of the cylinder, and exhaust-ports located at the forward end of said cylinder and uncontrolled by said distribution-valve, in combination with a stop-valve adapted to control the inlet-ports at the rear end of said cylinder.

24. In a pneumatic riveter, a cylinder, a piston therein, a distribution-valve having differential pressure areas, said valve having an opening therethrough and being constantly subjected to live-air pressure, a series of ports controlled by the forward end of said valve leading to the rear end of said cylinder, said ports serving as both inlet and exhaust ports and the exhaust from the rear end of said cylinder being controlled by said valve, a series of inlet-ports controlled by said valve and leading to the forward end of said cylinder, a port controlled by said piston for intermittently admitting live-air pressure to the large area of said distribution-valve, exhaust-ports in the front end of said cylinder always open to the atmosphere and means for permitting the exhaust from the large pressure area of said valve.

25. In a pneumatic riveter, a cylinder, a piston therein, a hollow differential distribution-valve, a series of ports leading into said cylinder at the rear end thereof, said ports serving respectively for the inlet and exhaust of the motive fluid, a series of inlet-ports leading to the forward end of said cylinder, and controlled by said valve, a series of exhaust-ports located at the forward end of said cylinder leading to the atmosphere and uncontrolled by said distribution-valve, a passage controlled by the piston for intermittently admitting live-air pressure to the larger differential area of said valve, and a passage also controlled by said piston for permitting the exhaust from the larger area of said valve to the atmosphere.

26. In a pneumatic riveter, a cylinder, a piston therein, a hollow differential distribution-valve, ports leading to the rear end of said cylinder and controlled by the forward end of said distribution-valve, said ports serving for the inlet and exhaust of the motive fluid to said rear end of said cylinder and said valve controlling said exhaust from said rear end, inlet-ports controlled by the rear end of said valve and leading to the forward end of said cylinder, and exhaust-ports controlled by the piston for permitting the exhaust from the larger area of said valve to escape through the forward extremity of said cylinder.

27. In a pneumatic riveter, a cylinder, a piston therein, a distribution-valve, a valve-box therefor, a stop-valve in said valve-box, ports intermediate said valves and cylinder, a spring for holding said stop-valve against its seat, and means for unseating said stop-valve when the tool is pressed against its work.

28. In a pneumatic riveter, a cylinder, a piston therein, a distribution-valve, a valve-box therefor, a stop-valve in said valve-box, ports intermediate said valves and cylinder, a spring for holding said stop-valve against its seat, and means for unseating said stop-valve when the tool is pressed against its work, in combination with a grasping-handle, having an air-supply duct therethrough leading to said valve-box and a manually-operated throttle-valve in said handle for controlling said duct.

29. In a pneumatic riveter, a cylinder, a piston therein, a distribution-valve, a valve-box therefor, a stop-valve in said valve-box, ports intermediate said valves and cylinder, a spring for holding said stop-valve against its seat, and means for unseating said stop-valve when the tool is pressed against its work, in combination with a grasping-handle, having an air-supply duct therethrough leading to said valve-box, a manually operated valve in said handle for controlling said duct, and an extension on said handle in engagement with said cylinder for inclosing said valve-box.

30. The combination in a pneumatic riveter, of a cylinder, a valve-box, a grasping-handle having an extension engaging said cylinder and inclosing said valve-box, a distribution-valve in said valve-box, a stop-valve in said valve-box, a spring for normally seating said stop-valve and means for unseating said stop-valve when the riveter is pressed to the work.

31. The combination in a pneumatic riveter of a cylinder, a valve-box, a grasping-handle having an extension engaging said cylinder and inclosing said valve-box, a distribution-valve in said valve-box, a stop-valve in said valve-box, a spring for normally seating said stop-valve, and means for unseating said stop when the riveter is pressed to its work.

32. In a pneumatic riveter, a cylinder, a piston therein, a valve-box, a distribution-valve, a stop-valve in said valve-box, a spring for holding said stop-valve in seated position, and means for unseating said stop-valve, operated by the act of pressing the tool to its work.

33. In a pneumatic riveter, a cylinder, a piston therein, a valve-box, a distribution-valve, a stop-valve located wholly exterior to said cylinder, a spring for holding said stop-valve in seated position, and means for unseating said stop-valve, operated by the act of pressing the tool to its work.

34. In a pneumatic riveter, a cylinder, a piston therein, a distribution-valve located wholly exterior to said cylinder, a stop-valve also located wholly exterior to said cylinder, a spring for holding said stop-valve in seated position, and means for unseating said stop-valve operated by the act of pressing the tool to its work.

35. In a pneumatic riveter, a cylinder, a piston therein, a distribution-valve located wholly exterior to said cylinder, a stop-valve also located wholly exterior to said cylinder, a spring for holding said stop-valve in seated position, and means for unseating said stop-valve operated by the act of pressing the tool to its work, in combination with a grasping-handle having a manually-operated throttle-valve therein, said handle having an extension inclosing said valves and in engagement with said cylinder.

36. In a pneumatic riveter, a cylinder, a piston therein, a stop-valve located exteriorly to said cylinder, a spring for keeping said stop-valve normally seated, means for unseating said stop-valve by the act of pressing the tool to the work, and devices coacting with said stop-valve for effecting the reciprocation of said piston after said stop-valve is unseated.

710,198. MANUFACTURE OF PLAYING-BALLS. ELIAKIM KNIGHTHALL, Boston, Mass. Filed June 23, 1902. Serial No. 113,096. (No model.)

Claim.—1. A process in producing a playing-ball, consisting in inclosing a collapsible sphere of soft, resilient material between segments of plastic material, and welding said segments together by means of heat and compression; the compression being carried to an extent to reduce said rubber sphere in bulk.

2. A process in producing a playing-ball, consisting in inclosing a collapsible sphere of soft rubber between segments of plastic material, and applying heat and compression to said segments so as to cause them to soften and weld and also to reduce said rubber sphere in bulk; the compression being maintained while the shell cools and hardens.

3. A process in producing a playing-ball, consisting in surrounding a collapsible sphere of soft rubber by heated plastic material and subjecting the whole to compression to an extent to reduce the bulk of said rubber sphere.

4. A process in producing a playing-ball, consisting in inclosing a collapsible sphere of soft rubber in plastic material which is rendered soft by heat, subjecting the whole to compression to an extent to reduce said sphere in bulk, and maintaining the compression while said plastic material hardens.

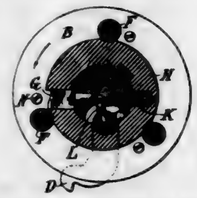
5. A process in producing a playing-ball, consisting in forming a rubber sphere with a cavity, inclosing said sphere in plastic material which is rendered soft by heat, subjecting the whole to compression to an extent to substantially close said cavity, and maintaining the compression while said plastic material hardens.

6. A process in producing a playing-ball, consisting in inclosing a collapsible sphere of soft rubber between heated segments of gutta-percha, and applying compression to said segments so as to reduce said sphere in bulk and also cause the segments to weld.

7. A process in producing a playing-ball, consisting in inclosing a sphere of soft rubber having a central cavity between segments of gutta-percha, applying heat and compression to said segments so as to cause them to soften and weld and also to substantially close said cavity, and maintaining the compression while the shell cools and hardens.

8. A process of producing a playing-ball, consisting in inclosing a collapsible sphere of soft rubber in heated gutta-percha and subjecting the whole to compression to an extent to cause said sphere to collapse, and maintaining the compression while said plastic material hardens.

710,199. CLUTCH FOR POWER-PRESSES. WILLIAM KLOSER, Brooklyn, N. Y., assignor to E. W. Bliss Company, New York, N. Y., a Corporation of West Virginia. Filed Mar. 12, 1902. Serial No. 97,916. (No model.)



Claim.—1. The combination with a shaft, of a hub surrounding the same, a clutch adapted to connect said shaft and hub whereby one is driven by the other, a holdback adapted to prevent the driven part from moving forward relatively to the driving part, and means whereby the movement of the clutch to the clutching position brings said holdback into operation.

2. The combination with a shaft, of a hub surrounding the same, a clutch adapted to connect said shaft and hub whereby one is driven by the other, a holdback adapted to prevent the driven part from moving forward relatively to the driving part, a spring tending to move said holdback to an operative position, and means for restraining said spring, in the unclutching position of the clutch, and for releasing said spring in the clutching position thereof.

3. The combination with a shaft, of a hub surrounding the same, a

clutch-key journaled in said shaft, means for turning said key to clutch said shaft and hub whereby one may be driven by the other, a holdback adapted to prevent the driven part moving forward relatively to the driving part, and means between said holdback and said key whereby turning said key to the clutching position brings said holdback into operation.

4. The combination with a shaft, of a hub surrounding the same, a clutch-key journaled in said shaft, means for turning said key to clutch said shaft and hub whereby one may be driven by the other, a holdback adapted to prevent the driven part moving forward relatively to the driving part, a spring tending to bring said holdback into operation, and means between said holdback and said key for restraining said spring in the unclutching position of the key, and for releasing the same in the clutching position of the key.

5. The combination with a shaft of a hub journaled thereon, a clutch-key journaled in said shaft, means for turning said key to clutch said shaft and hub whereby one may be driven by the other, a fixed stop on said hub, a shouldered bolt carried by said shaft, a spring pressing said bolt in a direction to engage said fixed stop to prevent the driven part from moving forward relatively to the driving part, a pin on said key engaging the shoulder on said bolt for restraining said bolt in the unclutching position of the key, said pin being out of engagement with said shoulder to release the bolt in the clutching position of the key.

6. The combination with a shaft, of a hub surrounding the same, a clutch adapted to connect said shaft and hub whereby one is driven by the other, a fixed stop on one of said parts, a movable stop on the other of said parts, and means for bringing said stops into engagement with each other to prevent the driven part from moving forward relatively to the driving part, said fixed stop being removable at will to permit such relative forward movement of the driven part when the movable stop is in operative position.

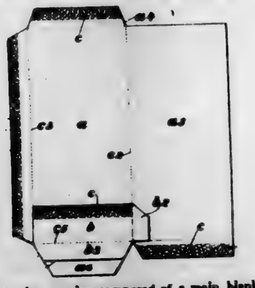
7. The combination with a rotary shaft, of a clutch-operating arm carried thereby, a member normally in the path of said arm for moving it backward to the unclutching position, a yielding support for said member permitting it to be displaced by said arm, and means for adjusting the normal distance of projection of said member into said path.

8. The combination with a rotary shaft, of a clutch-operating arm carried thereby, a pivoted member normally in the path of said arm for moving it backward to the unclutching position, a yielding abutment for supporting said member, and means for adjusting the position of said abutment toward or away from said shaft.

9. The combination with a rotary shaft, of clutch-operating mechanism carried thereby comprising a clutch-operating arm, a spring pressing it in a forward direction toward a clutching position and a stop limiting its backward movement, a member normally in the path of said arm adapted to move said arm backward against its stop, and a yielding support for said member permitting it to yield in a direction away from said shaft.

10. The combination with a rotary shaft, of clutch-operating mechanism carried thereby comprising a clutch-operating arm, a spring pressing it in a forward direction toward a clutching position and a stop limiting its backward movement, a member normally in the path of said arm adapted to move said arm backward against its stop, a yielding support for said member, and means for adjusting the position of said abutment toward or from said shaft.

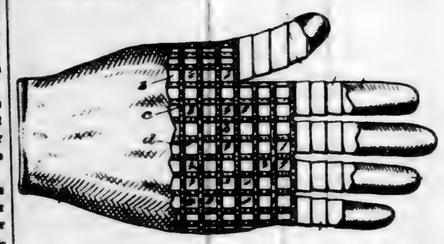
710,200. MAILING-ENVELOP. WILLIAM T. LEE, Altoona, Pa. Filed Jan. 14, 1902. Serial No. 89,841. (No model.)



Claim.—1. An envelop composed of a main blank and a sealing-strip, the body portion of the main blank being provided at its opposite side with folding flaps or members, and at one end with a folding flap or member and said sealing-strip being sealed or secured at one end thereof to the end of the main blank opposite the last-named folding flap or member, the end of the body portion of the main blank with which the sealing-strip is connected being also provided with a flap which is adapted to be folded transversely and centrally thereof and also at the end of said body portion of the main blank, and said sealing-strip being also provided with a flap which is adapted to be folded at the end of the body portion of the main blank and which is adapted to overlap part of the last-named flap of the body of the main blank, substantially as shown and described.

2. An envelop composed of a main blank and a sealing-strip, the body portion of the main blank being provided at its opposite side with folding flaps or members and at one end with a folding flap or member and said sealing-strip being sealed or secured at one end thereof to the end of the main blank opposite the last-named folding flap or member, the end of the body portion of the main blank with which the sealing-strip is connected being also provided with a flap which is adapted to be folded transversely and centrally thereof and also at the end of said body portion of the main blank, and said sealing-strip being also provided with a flap which is adapted to be folded at the end of the body portion of the main blank and which is adapted to overlap part of the last-named flap of the body of the main blank, the folding flaps or members at the opposite sides of the main blank being also provided at the ends thereof adjacent to the sealing-strip with flaps, substantially as shown and described.

710,201. MEANS FOR PREVENTING INJURY IN USING X-RAYS. LUDDEY T. LOWDER, Bloomington, Ind. Filed Nov. 23, 1901. Serial No. 83,396. (No model.)



Claim.—1. Means for preventing injury incidental to the use of X-rays to parts of the human form while permitting the rays to penetrate parts designed to be operated upon, the same comprising armor substance that is impervious to the X-rays conforming to the parts of the human form about or surrounding the part designed to be operated upon, and a supporting substance for the armor substance also conforming to the parts of the human form about the parts to be operated upon.

2. Means for preventing injury incidental to the use of X-rays to parts of the human form while permitting the rays to penetrate parts designed to be operated upon, the same comprising an armor substance that is impervious to the X-rays conforming to the parts of the human form about or surrounding the part operated upon by the rays, the armor substance being changeable or alterable for admitting the rays to the parts operated upon, and a supporting substance for the armor substance also conforming to the parts of the human form about the parts operated upon.

3. Means for preventing injury incidental to the use of X-rays to parts of the human form, the same comprising an armor substance that is impervious to the X-rays formed into small thin plates slightly flexible in themselves, a form extending against the said armor substance conforming thereto, and means securing the said substance to the form.

4. Means for preventing injury incidental to the use of X-rays comprising an armor substance that is impervious to the X-rays conforming to the back parts of the human hand, and a form extending against the said armor substance conforming thereto and also extending therefrom and conforming to the inner parts of the human hand, the said armor substance being attached to the said form, substantially as set forth.

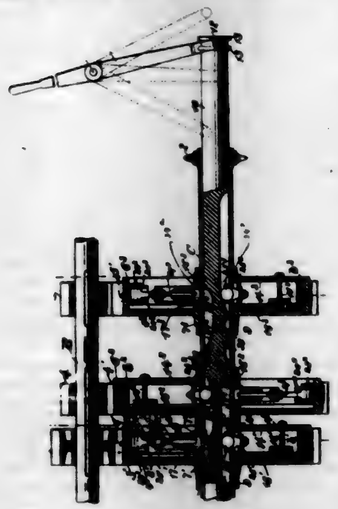
5. In a hand-covering, the combination with the glove composed of flexible material, of the armor-plates composed of small perforated sections of material impervious to X-rays extending over the back parts of the glove with the edges abutting, the welt-strips extending over the abutting edges of the plates, the securing devices extending through the perforations and into the glove structure, and the outer covering extending over the plates and the welt-strips, substantially as and for the purposes set forth.

6. In a means for preventing injury by X-rays, the combination of the hand-glove, the rectangular plates that are impervious to the X-rays and having perforations therein and extending over the back parts of said glove, the semibands impervious to the X-rays extending over the backs of the glove-fingers and having the pivotal fasteners, the fastening devices extending through said perforations and into the structure of the glove, and the outer covering extending over the said plates and said semibands and secured to said glove, substantially as and for the purposes set forth.

7. In a means for protecting the hand from the X-rays, the combination of the glove having the thin small plates that are impervious to X-rays and having the perforations near the edges thereof and extending with the abutting edges over the back of said glove, the securing devices extending through said perforations, the long welt-strips extending over abutting edges of the plates in one direction, the short welt-strips extending over abutting edges in a transverse direction and between said long strips, said strips being impervious to the X-rays, and the outer covering extending over the said plates and said strips, substantially as and for the purposes set forth.

8. In means for preventing injury incidental to the use of X-rays, the combination of the supporting form, an armor substance that is impervious to the X-rays comprising extremely thin frail plates attached to the supporting form, the welt-pieces also composed of substance that is impervious to the X-rays and covering the joints of said plates, and the covering for the said armor substance, for the purposes set forth.

710,202. VARIABLE-MOVEMENT-CONTROLLING MECHANISM. HUGH D. MEHR, Brooklyn, N. Y. Filed July 22, 1901. Serial No. 69,269. (No model.)



Claim.—1. The combination with a driving member and a driven member, of a shaft upon which one of the members is loosely mounted; a friction-ring adapted to engage said loosely-mounted member and thereby operatively connect the same with the shaft; a slidable wedge for actuating said ring and causing its engagement with its associated member; means for shifting said wedge to and fro axially of said shaft; and an intermediate connector extending between said wedge and said ring for transmitting motion from the former to the latter, said connector embodying an interposed resilient member whose resilient action is independent of that which said ring may possess whereby the actuation of the ring occurs independently of the wear of the wedge and other parts.

2. The combination with a driving member and a driven member, of a shaft upon which one of the members is loosely mounted; a friction-ring adapted to engage said loosely-mounted member and thereby operatively connect the same with the shaft; a slidable wedge for actuating said ring and causing its engagement with its associated member; means for shifting the wedge to and fro axially of said shaft; a toggle device for expanding the ring; and an intermediate connector extending between said wedge and said toggle device for transmitting motion from the former to the latter, said connector embodying an interposed resilient member whose resilient action is independent of that which said ring may possess whereby the actuation of the ring occurs independently of the wear of the wedge and other parts.

3. The combination with a driving member and a driven member, of a shaft upon which one of the members is loosely mounted; a friction-ring adapted to engage said loosely-mounted member and thereby operatively connect the same with the shaft; a slidable wedge for actuating said ring and causing its engagement with its associated member; means for shifting said wedge to and fro axially of said shaft; and an intermediate connector extending between said wedge and said ring for transmitting motion from the former to the latter, said connector embodying an interposed resilient member whose resilient action is independent of that which said ring may possess whereby the actuation of the ring occurs independently of the wear of the wedge and other parts.

4. The combination with a driving member and a driven member, of a shaft upon which one of the members is loosely mounted; a friction-ring adapted to engage said loosely-mounted member and thereby operatively connect the same with the shaft; a slidable wedge for actuating said ring and causing its engagement with its associated member; means for shifting the wedge to and fro axially of said shaft; a toggle device for expanding the ring; means for guiding the toggle device; and an intermediate connector extending between said wedge and said toggle device for transmitting motion from the former to the latter, said connector embodying an interposed resilient member whose resilient action is independent of that which said ring may possess whereby the actuation of the ring occurs independently of the wear of the wedge and other parts.

5. The combination with a driving member and a driven member, of a tubular shaft upon which one of the members is loosely mounted; a friction-ring adapted to engage said loosely-mounted member and thereby operatively connect the same with the tubular shaft; a rod extending through said tubular shaft and provided with an inclined surface; means for shifting the rod axially; a toggle device for expanding said ring; and an intermediate connector extending between said inclined surface and said toggle device for transmitting motion from the former to the latter, said connector embodying an interposed resilient member whose resilient action is independent of that which said ring may possess whereby the actuation of the ring occurs independently of the wear of the inclined surface and the other parts.

6. The combination with a driving member and a driven member, of a tubular shaft upon which one of the members is loosely mounted; a friction-ring adapted to engage said loosely-mounted member and thereby operatively connect the same with the tubular shaft; a rod extending through said tubular shaft and provided with an inclined surface; means for shifting the rod axially; a toggle device for expanding said ring; an intermediate connector extending between said inclined surface and said toggle device for transmitting motion from the former to the latter, said connector embodying an interposed resilient member whose resilient action is independent of that which said ring may possess whereby the actuation of the ring occurs independently of the wear of the inclined surface and the other parts; and means for locking said connector temporarily in position after the ring has been actuated.

7. The combination with a driving member and a driven member, of a tubular shaft upon which one of the members is loosely mounted; a friction-ring adapted to engage said loosely-mounted member and thereby operatively connect the same with the tubular shaft; a rod extending through said tubular shaft and provided with an inclined surface; means for shifting the rod axially; a toggle device for expanding said ring; an intermediate connector extending between said inclined surface and said toggle device for transmitting motion from the former to the latter, said connector embodying an interposed resilient member whose resilient action is independent of that which said ring may possess whereby the actuation of the ring occurs independently of the wear of the inclined surface and the other parts; and means for locking said connector temporarily in position after the ring has been actuated; embodying a depression adjacent to the upper end of the inclined surface and in which said connector may rest itself.

8. The combination with a driving member and a driven member, of a tubular shaft upon which one of said members is loosely mounted; a friction-ring adapted to engage said loosely-mounted member and thereby operatively connect the same with the tubular shaft; a rod extending through said tubular shaft and provided with a slot having an inclined end; a circular spring encircling said shaft; means engaging with the slot in said rod and which is mounted on said spring; a toggle device for expanding said ring; and a guided rod disposed on the opposite side of the shaft to the said means and jointed to the toggle device and connected to said spring.

9. The combination with a driving member and a driven member, of a tubular shaft upon which one of said members is loosely mounted, a friction-ring adapted to engage said loosely-mounted member and thereby operatively connect the same with the tubular shaft; a rod extending through said tubular shaft and provided with a slot having an inclined end, adjacent to which is a detent depression; a circular spring encircling said shaft; means engaging with the slot in said rod and which is mounted on said spring; a toggle device for expanding said ring; and a guided rod disposed on the opposite side of the shaft to the said means and jointed to the toggle device and connected to said spring.

10. The combination with a plurality of driving-pinions and driven gears of a tubular shaft upon which the driven gears are loosely mounted;

friction-rings adapted to expand against the respective driven gears and operatively connect the same, one at a time, with the tubular shaft; a rod extending through the tubular shaft and provided with slots at different points circumferentially of the rod and which end in inclined surfaces; means for shifting said rod axially and thereby rendering the said inclined surfaces operative, one at a time; and intermediate connectors for transmitting motion from each inclined surface to each respective friction-ring, each connector embodying an interposed resilient member whose resilient action is independent of that which the ring may possess whereby the actuation of each respective ring occurs independently of the wear of the inclined surface and the other parts.

11. The combination with a driving-pinion and a driven gear, of a tubular shaft upon which the driven gear is loosely mounted; a friction-ring adapted to expand against said driven gear and thereby operatively connect the same with the tubular shaft; a rod extending through said tubular shaft and provided with an inclined surface; means for shifting said rod axially; toggle-links connected to the opposed ends of said friction-ring; a spring operatively connected to said links, and a friction-roller carried by said spring and adapted to move lengthwise of said inclined surface when said rod is shifted and thereby actuate the spring and expand said friction-ring.

12. The combination with a driving-pinion and a driven gear, of a tubular shaft upon which the driven gear is loosely mounted; a friction-ring adapted to expand outwardly against the inner wall of said driven gear and operatively connect the same with the tubular shaft; a rod extending through said tubular shaft and provided with an inclined surface; means for shifting said rod axially; toggle-links connected to the opposed ends of said friction-ring; a spring operatively connected to said links; a friction-roller adapted to bear against and move up the inclined surface when said rod is moved axially; and a socket secured to said spring in which said roller is seated.

13. The combination with a plurality of driving-pinions and driven gears of different diameters, of a tubular shaft upon which the driven gears are loosely mounted; friction-rings adapted to expand against the respective driven gears and operatively connect the same, one at a time, with the tubular shaft; a rod extending through said tubular shaft and provided with a series of inclined surfaces and adjacent slots and detent depressions; means for shifting said rod axially; toggle-links connecting together the opposed ends of each of said friction-rings; springs operatively connected one to each set of links, and friction-rollers carried by the respective springs and adapted to each move lengthwise of its respective inclined surface on said rod when the rod is shifted and thereby actuate the associated spring and expand its associated friction-ring.

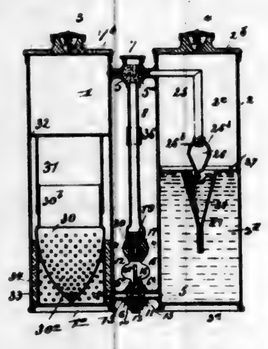
14. The combination with a plurality of driving-pinions and driven gears of different diameters, of a tubular shaft upon which the driven gears are loosely mounted; friction-rings adapted to expand against the respective driven gears and operatively connect the same, one at a time, with the tubular shaft; a rod extending through said tubular shaft and provided with a series of inclined surfaces and adjacent slots and detent depressions; means for shifting said rod axially; toggle-links connecting together the opposed ends of each of said friction-rings; means for guiding said toggle-links in their movement; springs operatively connected one to each set of links; a bearing supported on each spring; and a friction-roller mounted in each bearing and extending through the tubular shaft and adapted to each move lengthwise of its slot in said tubular shaft and up its corresponding inclined surface on said rod when the rod is shifted, the detent depressions being effective to lock a roller in place upon a further movement of said rod.

15. The combination with a driving member and a driven member, of a shaft upon which one of the members is loosely mounted; a friction-ring adapted to engage said loosely-mounted member and thereby operatively connect the same with the shaft; a slidable wedge for actuating said ring and causing its engagement with its associated member; and an intermediate connector extending between said wedge and said ring for transmitting motion from the former to the latter and comprising a friction-roller adapted to bear against and move up the wedge when the latter is operated.

16. The combination with a driving member and a driven member, of a shaft upon which one of the members is loosely mounted; a friction-ring adapted to engage said loosely-mounted member and thereby operatively connect the same with the shaft; and means for actuating said ring to cause its engagement with its associated member, said means comprising an interposed resilient member whose resilient action is independent of that which the said ring may possess whereby the actuation of the ring occurs independently of the wear of the parts.

17. The combination with a driving member and a driven member, of a shaft upon which one of the members is loosely mounted; a friction-ring adapted to engage said loosely-mounted member and thereby operatively connect the same with the shaft; and means for actuating said ring to cause its engagement with its associated member, said means comprising an interposed toggle and a resilient member whose resilient action is independent of that which the said ring may possess whereby the actuation of the ring occurs independently of the wear of the parts.

710,208. ACETYLENE-GAS LAMP. ARTHUR K. MILLER, New York, N. Y. Filed Oct. 26, 1900. Serial No. 034,526. (No model.)



Claim.—1. A lamp comprising two vertically-disposed receptacles placed side by side, interposed connections securing said receptacles together, one connection having a bore, a tube connected with and depending from said bore to conduct gas, and a burner connected with said tube, a cock to control the passage of gas from said tube to said burner, the other connection leading to said receptacles having a cock to control the passage of water through said connection, substantially as described.

2. A lamp comprising two receptacles, a casting or tube connecting said receptacles near one end, a cock to control said casting or tube, a casting or tube secured to said receptacles near the opposite ends and communicating with the gas-generating receptacle, a tube depending from said casting or tube, a casting 17 connected with said tube, a burner connected with the casting 17, a cock to control the passage of gas to said burner, and means for operating said cocks simultaneously, substantially as described.

3. A lamp comprising a pair of receptacles, a casting or tube connecting said receptacles and having a chamber and narrow slits in the wall of said chamber for the passage of liquid, a stem located in said chamber and having tapering recesses in its sides communicating through the stem, a passage-way connecting said receptacles near the opposite end, a tube connected with said passage-way, a chamber connected with said tube and having a slit in its wall, a burner communicating with said slit, and a stem in said chamber having a bore and a tapering recess in its side communicating with said bore to coact with said slit in controlling the passage of gas to said burner, substantially as described.

4. In a lamp the combination of two receptacles placed side by side and connected together so as to provide an air-space between them, said receptacles being in communication at their lower ends, a tube communicating with one of said receptacles near its upper end to receive gas therefrom, a burner connected with said tube, and cocks comprising a stem having one portion provided with an aperture adapted to control the passage of liquid between the lower ends of the receptacles, and the other portion having an aperture adapted to control the passage of gas through said tube, substantially as described.

5. In a lamp the combination of two receptacles placed side by side and connected together by interposed castings located near opposite ends thereof, one casting having a bore communicating with both receptacles near their lower ends and also having a chamber, the other casting communicating with the gas-generating receptacle, a tube connected with said casting, another casting connected with said tube and provided with a chamber, a burner connected with said chamber, and cocks comprising a stem having a portion located in the chamber of the lower casting and having an aperture therein, another portion of said stem being located in the chamber of the third-mentioned casting and having an aperture, whereby said cocks may simultaneously control the passage of liquid and gas, substantially as described.

6. The combination of a pair of receptacles connected together by castings near opposite ends and spaced apart to provide an air-space between them, the lower casting having a passage-way and a cock to regulate the same, the upper casting communicating with the gas-generating receptacle, a tube connected with said casting, a burner connected with said tube, a cock to control the passage of gas through said tube, a reflector to which the burner leads, and a support for the reflector connected to said tube, substantially as described.

7. The combination of two receptacles placed side by side and connected together by castings located near opposite ends, the lower casting having a passage-way connected with said receptacles and a cock to control said passage-way, the upper casting communicating with the gas-generating receptacle, a tube connected with said casting, a casting connected with said tube and having a chamber, a burner connected with said chamber, and a cock having a bore leading into the same axially and leading through the side wall at an angle to the axis thereof to communicate with said burner, substantially as described.

8. In a lamp the combination of two receptacles connected together by a passage-way, means to control the passage of water through said passage-way, a burner connected with one of said receptacles, a carbid-holder provided with a flange and comprising two shells one adapted to receive the other, one shell having perforations, a space being formed between the walls of the receptacle and the carbid-holder, and a circular absorbent or fibrous material surrounding the perforations of said shell, substantially as described.

9. In a lamp the combination of two receptacles connected together by a passage-way, means to control the passage of liquid through said passage-way, a burner connected with one of said receptacles, and a carbid-holder comprising a perforated shell and a shell detachably connected therewith and having a flange adapted to fit within one of said receptacles, to provide a space between the walls of the receptacle and the carbid-holder, and an absorbent or fibrous material surrounding the perforations of said shell, substantially as described.

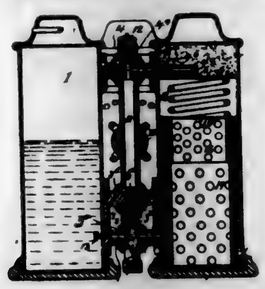
10. A carbid-holder comprising a shell perforated near one end, and a cap connected to the opposite end, said cap having a flange to fit within a receptacle to provide a space around the carbid-holder, and an absorbent or fibrous material surrounding the perforated shell, in combination with a receptacle to receive said carbid-holder, substantially as described.

11. A lamp comprising two receptacles placed side by side, interposed connections securing said receptacles together, one connection leading to said receptacles and having a cock to control the passage of water through said connection, a burner, and a tube communicating with the other of said connections and depending therefrom outside of the receptacle to communicate with the burner, the gas in the carbid-receptacle having access to the delivery end of the water-passage, substantially as described.

12. A lamp comprising two receptacles secured together side by side, a water-passage connecting said receptacles to permit water to feed from one to carbid in the other, a carbid-holder, a burner communicating with the carbid-receptacle, the delivery end of the water-passage in the carbid-receptacle being open to the action of the gas in said receptacle, an absorbent material in the carbid-receptacle opposed to the delivery end of the water-passage, and means to control the passage of water to the carbid, substantially as described.

13. A lamp comprising two receptacles secured together side by side, a water-passage connecting said receptacles to permit water to feed from one to carbid in the other, a burner communicating with the carbid-receptacle, a carbid-holder provided with means to establish within the carbid-receptacle a gas-space in communication with the delivery end of the water-receptacle, and an absorbent material interposed between the carbid-holder and the delivery end of the water-passage, substantially as described.

710,204. ACETYLENE-GAS LAMP. ARTHUR K. MILLER, Waterbury, Conn. Filed Jan. 13, 1900. Serial No. 1,263. (No model.)



Claim.—1. A lamp comprising a pair of receptacles, braces secured to said receptacles near opposite ends, one brace having a bore communicating with both receptacles near their lower ends, the upper brace having a bore communicating with one receptacle, a tube extending between said braces and communicating with said upper bore, a burner connected with a bore in the lower brace, said tube communicating with the last-mentioned bore, and means to control the passage of water between the receptacles, substantially as described.

2. A lamp comprising a pair of receptacles, braces interposed between said receptacles near opposite ends and secured thereto, the lower brace having a bore communicating with said receptacles and a bore communicating with a burner, a key to control said bores, and a tube interposed between said braces and communicating with the upper bore in the lower brace and with a bore in the upper brace that communicates with one of said receptacles, substantially as described.

3. A lamp comprising a pair of receptacles, braces interposed between said receptacles near opposite ends and secured thereto, the lower brace having a bore communicating with said receptacles and a bore for the passage of gas and also having a centrally-disposed opening located between key-seats communicating respectively with said bores, a key, a spring to hold said key to its seats, and a tube interposed between said braces and communicating with the gas-bore in the lower brace and with a bore in the upper brace, the latter bore communicating with one of said receptacles, substantially as described.

4. A lamp comprising a pair of receptacles, braces interposed between said receptacles and secured thereto, the lower brace having a bore communicating with said receptacles, means to control said bore, the upper brace having a bore and a tubular extension passing into one receptacle, a burner connected with said bore, a cap in said receptacle receiving said extension, and means for retaining carbid in said receptacle, substantially as described.

5. A lamp comprising a pair of receptacles having a passage through which they communicate, a burner connected with one of said receptacles, and a key to control said passage, said key being interposed in the path of the gas to the burner to be operated by excess gas-pressure exerted directly upon the key to let off excess gas-pressure, substantially as described.

6. A lamp comprising a pair of receptacles, braces connecting said receptacles, one brace having a bore and key to control the passage of water, the other brace having a bore, a tube, a burner connected therewith, a fire-chamber to receive said burner, a support for the fire-chamber connected with said tube, and a bracket connected with said support, substantially as described.

7. A carbid-holder comprising a perforated shell having a flange, a perforated cap to fit said shell and having a corresponding flange, and an absorbent material surrounding said shell between said flanges, substantially as described.

8. A pair of water and gas receptacles secured together side by side and connected by a passage-way, a key to control said passage-way and fitted to have longitudinal movement, a spring to hold the key to its seat, a tube connecting the gas-receptacle with said key to lead gas thereto to unseat the key, and a burner communicating with the gas-receptacle, substantially as described.

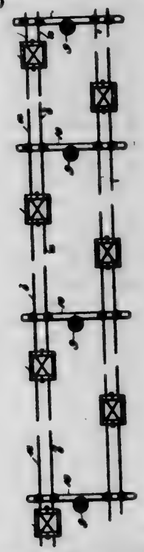
9. The combination of a receptacle and means to supply it with water, with a carbid-holder adapted to fit within said receptacle, an absorbent material around said holder, and flanges to maintain the holder within the receptacle to provide a gas-space between the latter and the absorbent material, substantially as described.

10. The combination of a pair of receptacles secured together side by side and communicating through a passage-way, a carbid-holder to fit in one receptacle, an absorbent material around the holder, and flanges to maintain the holder in the receptacle to provide a gas-space between the latter and the absorbent material in communication with the water-delivery end of said passage-way, the absorbent material being opposed to the delivery end of the passage-way, substantially as described.

710,205. CLOTHES-LINE HOLDER. GEORGE W. McDONALD, Jersey City, N. J., assignor of one-half to Henry McDonald, Jersey City, N. J. Filed Nov. 16, 1901. Serial No. 82,514. (Model.)

Claim.—A device of the class described comprising a bracket or frame having parallel side members and adapted at one end to be connected with a suitable support and provided at the opposite end with a transverse member having guides near the opposite side of said frame which project in opposite directions, and a spool mounted in said frame and adapted to receive a line which is passed through said guides and around said spool, said guides being adapted to prevent the line from crossing in its movement around the spool, substantially as shown and described.

710,206. APPARATUS FOR TRANSPOSING ELECTRIC-CIRCUIT WIRES SO AS TO EQUALIZE INDUCTION. JAMES O'BRIEN and JOHN MATTIMORE, Staten Island, N. Y. Filed Aug. 12, 1901. Serial No. 71,573. (No model.)



Claim.—1. The herein-described means for equalizing induction in telephone and other circuit wires, comprising a base or frame mounted on and adjustable on a plurality of said wires, and within which said wires are crossed, substantially as shown and described.

2. The herein-described means for equalizing induction in telephone or other circuit wires comprising a device mounted on a plurality of said wires and adjustable longitudinally thereon and within which the wires are crossed, said devices being provided with insulators, by means of which connection thereof with said wires is made, substantially as shown and described.

3. A device for equalizing induction in telephone and other circuit wires, said devices being adapted to be connected with a plurality of circuit-wires and to be adjustable longitudinally thereon and being also provided with insulators, by means of which connection thereof with said wires is made, substantially as shown and described.

4. The herein-described transposing devices for use in connection with electric-circuit wires and for equalizing induction, comprising a frame having insulating devices at its opposite corners and with which the circuit-wires are adapted to be connected, said circuit-wires being crossed within said frame, substantially as shown and described.

5. The herein-described transposing devices for use in connection with electric-circuit wires and for equalizing induction, comprising a frame having insulating devices at its opposite corners and with which the circuit-wires are adapted to be connected, said circuit-wires being crossed within said frame, and means for separating the circuit-wires where they cross within the frame, substantially as shown and described.

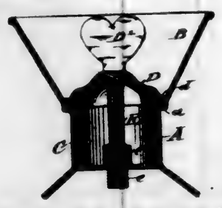
6. The herein-described device for equalizing induction in electric-circuit wires, comprising a frame mounted on said wires and longitudinally adjustable thereon and within which said wires are crossed, said frame being provided with insulating devices for said wires, substantially as shown and described.

7. A transposer for telephone-lines, comprising a pair of wires permanently crossed, means for insulating said wires, and a casing for protecting said wires.

710,207. STOPPER FOR WATER-BOTTLES. BRIL PHILLIPSON, Brooklyn, N. Y., assignor to Anton C. Eggers, trustee, Brooklyn, N. Y. Filed May 15, 1902. Serial No. 107,379. (No model.)

Claim.—1. The combination, with the neck of a water-bottle, of a bushing secured therein, said bushing having a suitable screw-threaded portion, a stopper having a thumb-piece, a gasket fitted on said stopper, and a screw-threaded shank on said stopper adapted to engage said threaded portion of the bushing, substantially as set forth.

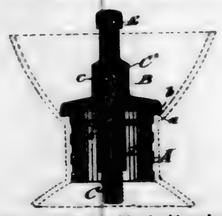
2. The combination, with the neck of a water-bottle, of a bushing secured in the same, said bushing being provided with a perforated bottom having a central screw-threaded portion, a stopper provided with a thumb-piece, a gasket fitted on the head of the same, and a shank provided with a threaded portion adapted to engage the threaded portion of the bushing, substantially as set forth.



3. The combination, with the neck of a water-bottle, of a bushing secured therein, said bushing having a suitable screw-threaded portion, a stopper having a thumb-piece, a gasket fitted on said stopper, a screw-threaded shank on said stopper adapted to engage said threaded portion of the bushing, means for preventing the accidental detachment of the stopper from said bushing, and means for permitting the detachment of the same, substantially as set forth.

4. The combination, with the neck of a water-bottle, of a bushing secured in said neck, an interiorly-threaded socket supported by said bushing, a stopper provided with a shank having a threaded portion engaging said socket, and a stop device between the socket and shank for arresting the motion of the stopper, substantially as set forth.

710,208. STOPPER FOR WATER-BOTTLES. BRIL PHILLIPSON, Brooklyn, N. Y., assignor to Anton C. Eggers, trustee, Brooklyn, N. Y. Filed May 15, 1902. Serial No. 107,380. (No model.)



Claim.—1. The combination, with a bushing adapted to be secured in the neck of a water-bottle, of an adjustable stopper provided with an elastic gasket, a tubular member connecting said stopper with the bushing, and a screw-cap for the end of said stopper-head, substantially as set forth.

2. The combination, with a bushing secured in the neck of a water-bottle, of a socket supported in said bushing, a stopper provided with a tubular shank secured therein, a bore in the head of said stopper, said stopper being adapted to be adjusted relatively to the bushing, a screw-cap at the end of the stopper, and a swivel connection between the screw-cap and the stopper for retaining it in position on the same, substantially as set forth.

710,209. SEWER-TRAP. JOSEPH PRATT, McKeesport, Pa. Filed May 12, 1902. Serial No. 106,903. (No model.)

Claim.—1. In a sewer trap and flush, the combination with a box or casing in communication with the house connection, a tilting trap mounted in said box or casing, a hinged door carried by said trap, and means for limiting the tilting movement of the trap, substantially as described.

2. In a sewer trap and flush, a box or casing having the base provided with a gutter, and with a discharge-chute in communication with the sewer, a tilting trap mounted in the box or casing, a hinged door carried by said trap, a partition in the box or casing, and a hinged door carried by said partition, substantially as described.

3. In a sewer trap and flush, a box or casing in communication with the house connection, a tilting trap mounted in said box or casing, deflector-plates carried by the box or casing for discharging the material into the trap, a hinged door carried by said trap, and means for limiting the tilting movement of the trap, substantially as described.

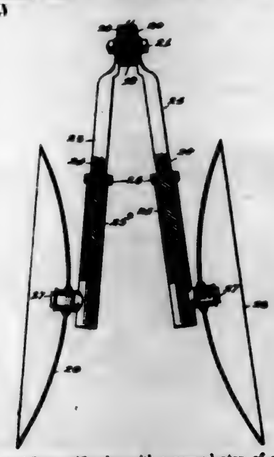
4. In a sewer trap and flush, a box or casing in communication with the house connection, a water-supply pipe communicating with the box or casing, a tilting trap mounted in the box or casing, a partition in said box or casing, and a hinged door carried by said partition, substantially as described.

5. In a sewer-trap, a box or casing having the base provided with a gutter and an inclined discharge-chute, combined with a tilting trap mounted in the box or casing, a partition in the box or casing, and a hinged door carried by said partition lying above the gutter, substantially as described.

710,210. LACING-HOOK. BERNHARD L. PEPER, East Orange, N. J., assignor to the Agatine Shoe Hook & Eyelet Company, Newark, N. J., a Corporation of New York. Filed Apr. 2, 1902. Serial No. 101,087. (No model.)

Claim.—In an open lacing-hook permitting the passage of a lace between the bill and body of the hook, an attaching member having an opening in its upper face, and a head overhanging and secured to the attaching member and provided with a downwardly-extending bill, the complete extremity of which enters the opening of the attaching member, substantially as described.

710,211. DISK CUTTER ATTACHMENT FOR CORN-PLANTERS. HENRY REUTER, Boone, Mo. Filed June 3, 1902. Serial No. 110,102. (No model.)

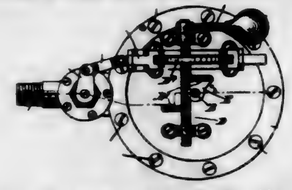


Claim.—1. The combination with a corn-planter, of a supporting-bar, two supporting-posts 23 fixed to and extending downwardly from said supporting-bar, tubes 25 revolubly mounted upon said posts, disks carried by said tubes, and means whereby the latter may be adjusted at various angles upon the said posts, substantially as specified.

2. The combination with a corn-planter; of an adjustable supporting-bar; the central portion of which is wedge-shaped in cross-section, and narrower at the top than at the bottom; clamping-plates adjustably mounted upon the supporting-bar; posts extending downwardly from the clamping-plates; and disks adjustably mounted upon the posts; substantially as specified.

3. The combination with a corn-planter, of a supporting-bar, two supporting-posts 23 fixed to and extending downwardly from said supporting-bar, and provided with screw-threads, tubes 25 provided with internal screw-threads and revolubly mounted upon said posts, locking-nuts 26 for securing said tubes against rotation upon said posts, and disks carried by the said tubes, substantially as described.

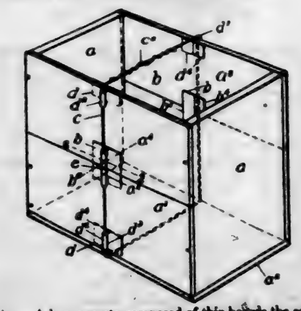
710,212. FLUID-METER. WILLIS H. REYNOLDS, Chicago, Ill., assignor to Michael J. Doherty and Thomas Gahan, Chicago, Ill. Filed Dec. 2, 1901. Serial No. 84,312. (No model.)



Claim.—1. In a fluid-meter, in combination with a chamber; a shaft at the axis of the chamber; a radial diaphragm in the chamber extending to the shaft; a diaphragm fixed on the shaft and oscillating therewith from one side to the other of the radial diaphragm; a shaft mounted on the chamber extending transverse and proximate to the axial shaft, said axial shaft having two tappets or radial fingers at opposite sides respectively of the plane of the transverse shaft, the latter having abutments projecting in the path of said tappets respectively; whereby the oscillation of the diaphragm rocks the transverse shaft; and connections by which the rocking of the latter shaft operates the valve.

2. In a fluid-meter, in combination with a chamber; an oscillating diaphragm therein; inlets and outlets for each chamber; an exterior shaft, and means by which the diaphragm rocks said exterior shaft; a tumble-bob connected to the exterior shaft; a cam operated by the tumble-bob; a slide-bar operated by the cam; and means by which the slide-bar operates the valve.

710,213. BOX OR CRATE. WILLIAM H. ROGERS, New York, N. Y. Filed Mar. 26, 1902. Serial No. 99,845. (No model.)



Claim.—A box or crate composed of thin boards the edges of which are slitted transversely, fastening devices for securing the adjacent edges of said boards together consisting of sheets of metal folded centrally to form a tubular member, and the ends of which are passed through said slits and spread outwardly on the inner side of said boards whereby the adjacent edges of said boards are connected and strengthened, and a wire or other flexible device passed around said box or crate and through said tubes and the ends of which are connected, substantially as shown and described.

710,214. DUMPING-WAGON. EDWARD H. SAXBY, Baton, Colo. Filed July 21, 1902. Serial No. 116,416. (No model.)

Claim.—1. In a dumping-wagon, the combination of a body having sides which are hinged thereto at their lower edges; catches which are secured to the sides; flexible connections attached to the ends of the body, which engage the said catches so as to hold the sides closed, or to support them when they are lowered; ways secured to the under side of the body; a frame having revolvable supports, upon which said ways rest; means which operate in connection with the revolvable supports, for shifting the body laterally in either direction so as to tilt the same, and means for limiting both the lateral and tilting movement of the body, substantially as shown.

2. In a dumping-wagon, the combination of a body having hinged sides with catches secured thereto; chains attached to the ends of the body which engage said catches to hold the sides closed, or to support them when they are lowered; racks secured to the under side of the body; a frame for supporting the body, having flanged pinions mounted thereon, which engage the said racks; rods which extend lengthwise of the frame and through the pinion for turning the same, so as to shift the body lat-

orally in either direction, in order to tilt the same, and flexible connections secured to the rods and to the body, which limit both the lateral and tilting movement of said body, substantially as shown.

2. In a dumping-wagon, the combination of a supporting-frame which is mounted upon wheels; bearings secured upon each side of the said frame; sleeves journaled in said bearings; flanged pinions keyed to said sleeves; rods which extend through the said sleeves, and means for locking the rods and sleeves, so that they may turn either in unison or independently; a body having racks secured upon its under side, which lie upon the said pinions, between the flanges thereof, and are engaged thereby, so that the said body may be moved laterally in either direction in order to tilt the same; flexible connections secured at one end to the rods and at the other end to the body, which limit both the lateral and tilting movement of the body, the said body being provided with hinged sides, and with means for holding the sides closed and for supporting them when they are open, substantially as shown.

4. In a dumping-wagon, the combination of a supporting-frame which is mounted upon wheels; bearings secured upon each side of said frame; sleeves journaled in said bearings having a clutch-face formed upon one of their ends; flanged pinions keyed to the sleeves; rods, one of which is passed through the sleeve on one side of the frame, while the other is passed through the sleeve on the opposite side of the frame; collars having clutch-faces, one of said collars being secured upon the forward end of each rod, in proximity to the clutch-face of the forward sleeves; a crank-handle which is adapted to be slipped upon the rear end of either of the rods, the hub of said handle being formed with a clutch-face which engages the corresponding face of the rear sleeve, said rod and sleeves being adapted to turn independently or in unison; a body having racks secured to its under side, which lie upon the said pinions, between the flanges thereof, and are engaged thereby, so that the body may be moved laterally in either direction in order to tilt the same; flexible connections, as chains, secured at one end to the rods, and at the other end to the body, which limit both the lateral and tilting movement of the body, the said body being provided with hinged sides, and with means for holding the sides closed and for supporting them when lowered, substantially as shown.

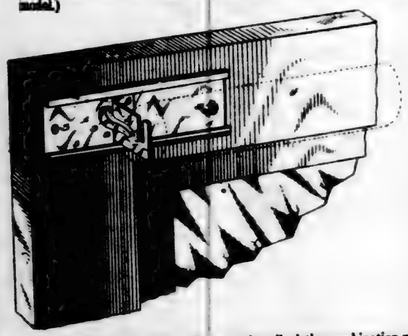
5. In a dumping-wagon, the combination of a supporting-frame which is mounted upon wheels; bearings secured upon each side of said frame; sleeves journaled in said bearings and pinions keyed to said sleeves, the said pinions being flanged, and having an annular tread portion adjoining each flange between which the teeth are formed; rods which pass loosely through the sleeves, and means for locking the rods and sleeves together, so that they may turn independently or in unison; a body having racks secured upon its under side which lie upon the pinions, between the flanges thereof, and are engaged thereby, so that the said body may be moved laterally in either direction in order to be tilted, said racks having a smooth surface or track on each side of its teeth, which ride on the annular tread portion of the pinion, and prevent the weight of the body from coming upon the teeth thereof; flexible connections which are secured to the rods and to the body which limit the lateral and tilting movements; sides in hinged engagement with the body, and flexible attachments for holding the said sides closed, and supporting them when open, substantially as shown.

6. In a dumping-wagon, the combination with a frame having pinions mounted thereon, and a body having hinged sides and racks secured upon its under side which are engaged by the said pinions, and means for turning the pinions so as to shift the body laterally, and for limiting its movement; of a combined fastening and supporting device for the said hinged sides, consisting of metal strips secured to the sides so as to extend above the upper edges thereof, the extended portion being formed into an eye which has a slot extending downward from the lower side of its periphery; and of a chain secured to the end of the body and passed through the eye of the said metal strip, said chain having at its lower end a ring of greater diameter than the aforesaid eye; a link of the chain being passed edgewise into the said slot when it is desired to hold the sides closed, and the ring contacting with the eye when the side is lowered, so as to support the weight of the side upon the said chain, substantially as shown.

7. In a dumping-wagon, the combination with a frame having pinions mounted thereon which are flanged and provided with annular tread portions adjoining the inner sides of the flanges; and of a body having hinged sides; of racks secured upon the under side of said body, said racks having a smooth way or track on each side of their teeth, which, when the racks are in position upon the pinions, will ride upon the annular tread portions of said pinions; and means for turning the pinions so as to convey movement to the racks, substantially as shown.

8. In a dumping-wagon, the combination of a body having hinged sides, and flexible connections which hold said sides closed and support them when they are opened; racks secured to the under side of the body; a frame having pinions mounted thereon which engage the said racks; means for revolving the pinions so as to shift the body laterally in either direction, in order to tilt the same; means for limiting both the lateral and tilting movement of the body, and means as chains, which are secured to the sides of the frame and have a hooked engagement with the body of the wagon, for holding said body in its normal position, substantially as shown.

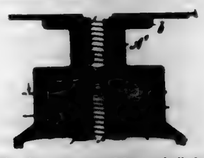
710,215. ADJUSTABLE WINDOW-SHADE BRACKET. WILLIAM H. SATTELBERG, Washington, Pa., assignor of one-half to Andrew J. Smith, Pittsburg, Pa. Filed Sept. 14, 1901. Serial No. 75,385. (No model.)



Claim.—1. In a device of the character described, the combination with the bracket, comprising a plate provided at one of its ends with an approximately rectangular flat portion of less width than the said plate and being bent at right angles thereto, said bent portion being provided with an aperture, of a flat base having only its long edges bent over to form guides in which the said plate is received, a cam-lever pivotally secured to the bent portion of the said bracket, and adapted to contact with the said base-plate between the guides thereof, and means for securing the said base-plate in position.

710,216. INSULATING-HANGER. JOHN M. SHEEHY, Elkhorn W. Va. Filed June 12, 1902. Serial No. 111,875. (No model.)

Claim.—1. An insulating-hanger, comprising a shell, having an inwardly-deflected serrated flange; a thimble, having an outwardly-projecting serrated flange, loosely fitted into the shell, the conformation of the flange of the thimble corresponding reversely with the serrated flange of the shell, an insulating-filling between the thimble and the shell, and means for securing to the shell and to the thimble of the auxiliary devices substantially as herein shown and described, for affixing the hanger in place and for connecting thereto of wires.



2. An insulating-hanger, comprising a shell, having outwardly the form of a screw-nut, and provided with a screw-threaded bore; an insulating-filling contained in the shell, a thimble provided with a screw-threaded bore, embedded in the insulating-filling contained in the shell.

3. The combination with an insulating-hanger, comprising a shell having a neck extending from the body of the shell, a flange surrounding the terminus of the neck, and a screw-threaded bore in the neck; an insulating-filling contained in the shell, a thimble provided with a screw-threaded bore and interlocking flanges, embedded in the insulating-filling, with a screw-threaded bore, of a screw-threaded stud fitted into the screw-threaded bore of the hanger, for affixing the hanger in place or for connecting thereto of devices for supporting a wire thereon.

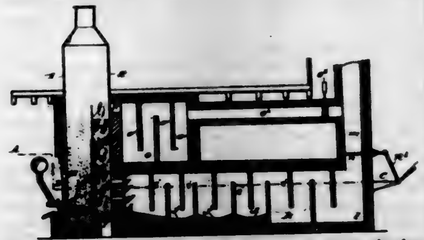
4. The combination with an insulating-hanger provided with a screw-threaded bore and with a device for affixing the hanger fitted into the screw-threaded bore, of a centrally-perforated disk fitted upon the device for affixing the hanger and set thereon.

5. The combination with an insulating-hanger, provided with a screw-threaded bore, of a device for suspending the hanger from a span-wire comprising a slotted bolt fitted into the screw-threaded bore, provided in the hanger and a filling for the slot of the bolt, substantially as herein shown and described.

6. The combination with an insulating-hanger provided with a screw-threaded bore, of a device for supporting a wire comprising a hook adapted to receive the feed-wire and having its shank perforated, and a screw-bolt fitted into the perforation of the shank of the hook and into the screw-threaded bore of the hanger.

7. The combination with an insulating-hanger having a screw-threaded bore, of a bracket perforated approximately midway between the ends thereof, and having one end formed to hold a feeder-wire and provided with means for connecting to it the ear or lug carrying the trolley-wire on the other end; and of a screw-threaded bolt, fitted into the perforation of the bracket and into the screw-threaded recess of the hanger.

710,217. FURNACE FOR SEPARATING ZINC FROM ORES. ARMAND M. G. SEBILLOT, Paris, France. Filed Feb. 19, 1900. Serial No. 5,762. (No model.)



Claim.—In a furnace for extracting zinc from ores, a combustion-chamber divided into front and rear compartments adapted to hold the ores to be treated, and charcoal, respectively, air-blast pipes communicating with the front compartment, said compartments connected by openings in their division-wall, and condensing-chambers connected by suitable openings with the upper and lower portions of said rear compartment of the furnace, substantially as set forth.

710,218. HOBBY-HORSE. JAMES SIMS, Allegheny, Pa. Filed July 7, 1902. Serial No. 114,564. (No model.)

Claim.—A hobby-horse mounted within a suitable framework, said framework carrying an auxiliary frame, a link mounted within said frame and connecting to the girth of the horse, a crank connected to the opposite end of said link, said crank having its other end pivotally secured to a shaft carried by the main framework, a bar connected to said shaft, the other end of said bar being pivotally connected to the forward end of the horse, a pulley carried by last-named shaft and connecting to a shaft carried by the auxiliary framework, said shaft carrying cranks on its outer end, a pulley mounted upon the last-named shaft, said pulley connecting to the first-named pulley by a suitable belting, substantially as described and for the purpose set forth.

710,219. BOTTLE-STOPPER. ARTHUR E. SNOW, Syracuse, N. Y. Filed Apr. 10, 1902. Serial No. 103,315. (No model.)

Claim.—1. A stopper for bottles consisting of a paper disk having the central portion of its body partially detached and depressed within the margin of the disk.

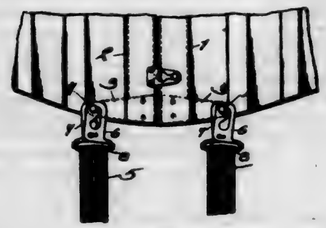
2. A bottle-stopper consisting of a flat circular plate of suitable material having a portion of its body cut concentric with its periphery and partially detached for the purpose set forth.

3. A bottle-stopper comprising a circular flat body of paper or equivalent material having the intermediate portion cut or stamped through a portion of its thickness in a line concentric with its periphery for the purpose described.

4. A bottle stopper consisting of a body of suitable material having a part of its intermediate portion depressed for the purpose set forth.

5. A bottle-stopper consisting of a flat circular disk having a central flap depressed to form a central opening to receive the finger as described.

710,220. CORSET. CHARLES W. STIMSON, New York, N. Y. Filed June 26, 1902. Serial No. 113,611. (No model.)



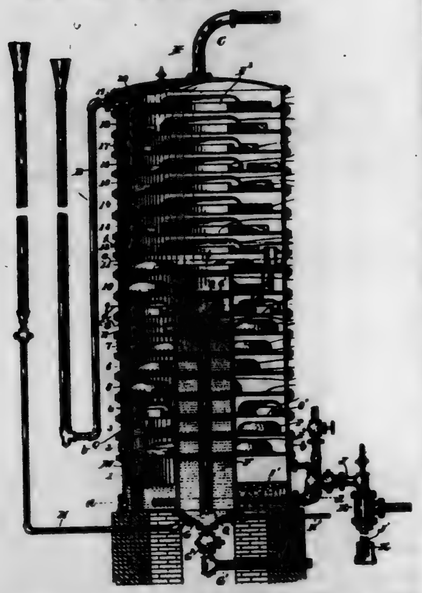
Claim.—1. As an article of manufacture, a corset-steel adapted for use at the front of a corset or similar garment and having a laterally-projecting portion provided with means for attaching a stocking-supporter thereto.

2. As an article of manufacture, a corset-steel adapted for use at the front of a corset and having at its lower end a laterally-projecting portion shaped to conform to the lower edge of a corset and provided with means for attaching a stocking-supporter thereto.

3. Corset-steels adapted for use at the front of a corset and each having a laterally-projecting portion provided with means for attaching a stocking-supporter thereto, in combination with the other parts of a corset or similar garment.

4. Corset-steels adapted for use at the front of a corset or similar garment and each provided at its lower end with a laterally-projecting portion provided with means for attaching stocking-supporters thereto, and shaped to conform to the lower edge of the corset, in combination with the other parts of a corset or similar garment.

710,221. **AMMONIA-STILL.** GEORGE STROH, Detroit, Mich., assignor of one-half to George Osius, Detroit, Mich. Filed Feb. 24, 1902. Serial No. 95,152. (No model.)



Claim.—1. In a still-column, the combination with an upper series of superimposed pans for the volatilization of the free ammonia contained in the crude liquors; of a lower series of superimposed pans provided with inner and outer walls forming an outer chamber in each pan and a well extending upward from the bottom of the column, said well being closed at its top by the lower pan of the upper series and provided with openings in its sides for the overflow of the liquor therein into said outer chambers, a pipe to conduct the residue of liquor from the pans of the upper series into said well, a pipe to supply milk of lime to said well and means for heating said column.

2. In a still-column, the combination with the upper portion thereof adapted to receive the crude liquors and volatilize the free ammonia therein contained; of a lower portion provided with a central vertical well having overflow-openings near its top, a conical casting to close the bottom of said well, a blow-off pipe connected to said casting, a pipe extending downward within the well to conduct the residue of the liquor from the portion of the column above to the bottom of the well, a supply-pipe connected to the bottom of the well to supply milk of lime thereto, and a steam-pipe to supply a jet of steam for agitating the liquor within said well.

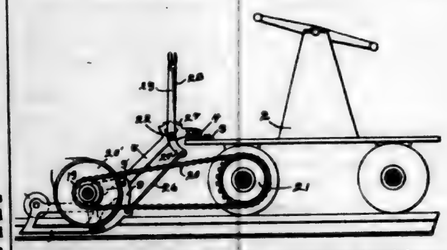
3. In combination with a still-column having an inner vertical well within its lower portion dividing the same into an inner lining chamber or well and an outer volatilizing-chamber, a base having an inner chamber forming the lower end of said well and an outer chamber to receive the spent liquor from the column above, a steam-pipe within said outer chamber to supply steam thereto and maintain a pressure therein, a discharge-pipe provided with branches which are connected to said outer chamber, one near its top and the other near its bottom, a water seal into which the discharge-pipe extends, and an overflow-pipe connected to the top of said water seal.

4. In a still-column, in combination, an upper series of superimposed pans each having a central opening to form a passage for the ascending gases, a lower series of superimposed pans each provided with a central opening surrounded by a wall to engage the pan above and form a vertical well, and a pan having a bottom to close the upper end of the well and provided with openings in its bottom outside of the wall for the passage of the gases from the lower to the upper series of pans.

5. In a still-column, a series of superimposed pans each provided with an outer wall, a bottom and a central opening in said bottom having an upwardly-extending flange or wall, a wall in each pan extending outward from said flange to the outer wall, a pipe to supply liquor to the pan located at one side of said outwardly-extending wall and an overflow-pipe at the opposite side of the same, walls extending radially outward from said flange to near the outer wall, and walls located intermediately of the radial walls and extending inward from the outer wall to near the said flange.

6. In a still-column, the combination with an upper series of superimposed pans to the upper pan of which series the crude liquor is supplied and from which the gaseous vapors are drawn off, said pans being provided with central openings for the passage of the ascending gases, overflow-pipes for the descending liquor, and means for causing the liquor in each pan to be alternately cooled and heated; of a lower series of superimposed pans each having a central opening surrounded by a wall to form a well within the axis of the lower series of pans, said pans being also provided with openings for the passage of the ascending gases and overflow-pipes for the downward passage of the liquor, a pan having a bottom to close the upper end of said well and also provided with openings for the passage of the gases and an overflow-pipe, a pan having openings for the passage of the gases and also a nozzle extending into the well from its inner wall for the escape of the liquor into said well, a pan provided with openings in its inner wall through which the liquor in said well overflows into said pan, said pan being also provided with openings for the passage of the gases and an overflow-pipe for the escape of the liquor into the series of pans, a steam-pipe in the lower pan of the lower series, a discharge-pipe leading from said lower pan, and means for maintaining the liquor at a certain height in the lower pan.

710,222. **GRASS-CUTTING MACHINE.** JOHN SWANSON, Wadena, Minn. Filed Jan. 20, 1902. Serial No. 90,266. (No model.)



Claim.—1. The combination, with a car, of bars 5 pivoted thereon, rolls provided at the forward ends of said bars and adapted to rest upon the track-rails, curved shoes also carried by said bars and depending upon opposite sides of the rails to press the grass away from the same into the path of the knives, quadrants 9 pivoted on said bars and having long bearings or hubs 10, a shaft mounted in said bearings, a rotary knife provided on said shaft, means for driving said shaft from the car-axle, a fixed knife provided between said quadrants and adapted to coöperate with said rotary knife to cut the grass between the rails, and means for oscillating said quadrants on their pivots to swing said knives clear of any obstruction between the rails, substantially as described.

2. The combination, with a car, of bars pivoted thereon, rolls mounted in said bars and adapted to rest upon the track-rails, a frame pivoted on said bars, a shaft mounted in bearings in said frame, means for driving said shaft from the car-axle, a rotary knife mounted on said shaft between the rails, a stationary knife mounted in adjustable bearings on said frame and adapted to coöperate with said revolving knife to cut the grass between the rails, and means for oscillating said frame, for the purpose specified.

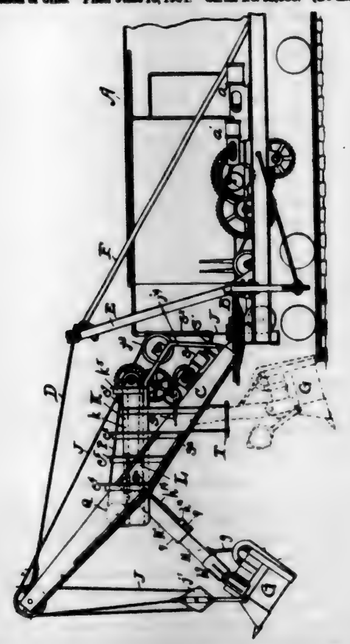
3. The combination, with a car, of a frame pivoted thereon, rolls carried by said frame and adapted to bear upon the track-rails, quadrants 9 pivoted on said bars between the track-rails, hubs 10 mounted on said quadrants and extending laterally therefrom, quadrants 11 provided on said hubs outside the track-rails, a shaft mounted in said hubs and operatively connected with the car-axle, rotary knives provided on said shaft near the middle and the ends thereof, stationary knives 12 and 15 provided on said quadrants 11 and 9 respectively and coöperating with said rotary knives to cut the grass between and outside the rails, hangers 18 provided on the ends of said shaft and supporting the outer ends of said fixed knives 12, and means for oscillating said quadrants 9 on their pivots to raise or lower said knives, substantially as described.

4. The combination, with a car, of the bars 5 pivoted thereon, the rolls carried by said bars and adapted to rest upon the track-rails, quadrants 9 pivoted on said bars and having long bearings or hubs, a shaft mounted in said bearings and driven from the car-axle, a stationary knife 15 supported between said quadrants 9, stationary knives 12 supported by said hubs, hangers connecting the outer ends of said knives 12 and said shaft, rotary knives mounted on said shaft and adapted to coöperate with said knives 12 and 15 to cut the grass outside and between the rails, and means for tilting said quadrants 9 on their pivots to swing said knives away from or toward the ground, for the purpose specified.

5. The combination, with a car, of bars pivoted thereon and supported at their forward ends upon the track-rails, a frame pivoted on said bars, a shaft mounted in bearings in said frame, means for driving said shaft from the car-axle, a rotary knife mounted on said shaft between the rails, a stationary knife carried by said frame and adapted to coöperate with said revolving knife to cut the grass between the rails, and means for oscillating said frame to swing said knives into or out of their working position.

6. The combination, with a car, of bars pivoted thereon, rolls carried by said bars and adapted to rest upon the track-rails, curved shoes provided on said bars and depending beside the rails to push the grass away from the same into the path of the knives, a frame pivoted on said bars, a shaft mounted in bearings in said frame, means for driving said shaft from the car-axle, a rotary knife mounted on said shaft between the rails, a stationary knife carried by said frame and adapted to coöperate with said revolving knife to cut the grass between the rails, and means for oscillating said frame to swing said knives to an operative or inoperative position.

710,223. **POWER-SHOVEL.** RICHARD THEW, Lorain, Ohio, assignor to the Thew Automatic Shovel Company, Lorain, Ohio, a Corporation of Ohio. Filed June 10, 1901. Serial No. 63,980. (No model.)



Claim.—1. In a machine of the general character described, the combination of a diagonal swinging boom, a trackway secured at its forward end directly to the boom and at its rear end by brackets or braces rising from the boom, a trolley movable along said trackway, and a dipper-arm carried by said trolley, substantially as described.

2. In a machine of the general character described, in combination, a diagonal swinging boom having a pair of separated side plates, a trackway carried by said boom intercepting it and extending rearward therefrom at an angle thereto, said trackway being secured forwardly to the side plates of said boom and supported at its rear by a bracket or brace, a trolley slidable in said trackway, a dipper-arm pivoted to said trolley, and a bucket or scoop on said dipper-arm, substantially as described.

3. In a machine of the general character described, in combination, a diagonal swinging boom, a trackway supported thereby at an angle thereto, a dipper-arm whose upper end is guided by said trackway, an engine carried by said boom, and suitable connections between the same and the upper end of the dipper-arm for racking the same in or out, substantially as described.

4. In a machine of the general character described, a diagonal swinging boom having a pair of parallel separated side plates, a horizontal trackway having also a pair of side plates passing between those of the boom and there riveted, said trackway projecting rearward of the boom on the upper side thereof, braces secured to the boom and the trackway at the rear portion of the latter, a trolley movable in said trackway, a driving-motor supported by said boom, and a racking connection between said motor and trolley, substantially as described.

5. In a machine of the general character described, in combination, a diagonal swinging boom, an intercepting trackway supported thereby at an angle thereto, a trolley guided in said trackway, a dipper-arm pivoted to said trolley, a rotatable drum, and flexible connection between the same and said trolley whereby the rotation of the drum may rack the trolley in or out, and a driving-motor carried by said boom and suitably connected to said drum, substantially as described.

6. In a machine of the general character described, in combination, a metallic boom having a pair of parallel separated side plates, a metallic trackway intercepting the boom at an angle thereto and having side plates riveted to the side plates of the boom, substantially as described.

7. In a machine of the general character described, in combination, a metallic boom having a pair of parallel separated side plates, a metallic trackway intercepting the boom at an angle thereto and having side plates riveted to the side plates of the boom, and brackets or braces connected to said boom and to the trackway for supporting its extending portion, substantially as described.

8. In a machine of the general character described, in combination, a diagonal boom having a pair of separated parallel side plates, a trackway also having a pair of separated parallel side plates, the side plates of the trackway passing between those of the boom and being riveted thereto, and angle-strips riveted to the inner side of the side plates of the trackway to form a trolley-track, substantially as described.

9. In a machine of the general character described, in combination, a metallic boom having a pair of parallel separated side plates, a metallic trackway intercepting the boom at an angle thereto and having side plates riveted to the side plates of the boom, and an arched brace passing over the trackway and secured to the sides thereof and to the sides of the boom, substantially as described.

10. In a machine of the general character described, in combination, a metallic boom having a pair of parallel separated side plates, a metallic trackway intercepting the boom at an angle thereto and having side plates riveted to the side plates of the boom and guide-strips on the inner side of the trackway-plates, a trolley slidable upon said strips, and a bucket-arm carried by said trolley, substantially as described.

11. In a machine of the general character described, in combination, a metallic boom having a pair of parallel separated side plates, a metallic trackway intercepting the boom at an angle thereto and having side plates riveted to the side plates of the boom and guide-strips on the inner side of the trackway-plates, a trolley slidable upon said strips, a bucket-arm secured to said trolley, a rotatable drum carried by said trackway, a flexible connection leading from the same in one direction to the trolley, and a flexible connection leading from the drum around a guide-sheave in the opposite direction to the trolley, and means for rotating said drum to move the trolley in or out, substantially as described.

12. In a machine of the general character described, in combination, a diagonal boom, an intercepting-trackway carried thereby at an angle thereto, a trolley in said trackway, a rotatable drum carried at the rear of said trackway, a flexible cable leading from said drum directly to the trolley, and a cable leading from said drum around a sheave at the forward end of the trackway and connected to the trolley, and means for rotating said drum, substantially as described.

13. In a machine of the general character described, in combination, a diagonal boom, an intercepting-trackway carried thereby at an angle thereto, a trolley in said trackway, a rotatable drum carried at the rear of said trackway, a flexible cable leading from said drum directly to the trolley, and a cable leading from said drum around a sheave at the forward end of the trackway and connected to the trolley, said drum being rigid in operation but being composed of relatively adjustable parts, one cable being secured to one part and one to the other, and means for locking together the two parts of the drum, and means for rotating the drum, substantially as described.

14. In a machine of the general character described, the combination of a diagonal boom having a pair of parallel separated side plates, said boom being open on its under side, a trackway intercepting said boom, a trolley in said trackway, a bucket-arm pivoted to said trolley, and in-

wardly-projecting bars along the lower edge of the boom which form braces for the boom and guides for said arm, substantially as described.

15. In a machine of the general character described, in combination, a trackway having a pair of parallel side plates, angle-strips riveted to the inner side of the side plates to form a trolley-track, a trolley slidable in said trackway and consisting of a pair of blocks and a connecting-axle, removable rub-plates secured to said blocks, and an arm journaled on said axle, substantially as described.

16. In a machine of the general character described, in combination, a diagonal boom having a pair of separated parallel side plates, a trackway also having a pair of separated parallel side plates, the side plates of the trackway passing between those of the boom and being riveted thereto, angle-strips riveted to the inner side of the side plates of the trackway to form a trolley-track, a trolley slidable in said trackway, a bucket-arm pivoted to said trolley, said trolley consisting of a pair of blocks connected by an axle on which the bucket-arm is journaled and having removable rub-plates on the upper and lower surfaces, substantially as described.

17. In a machine of the general character described, the combination of a boom, a trackway carried thereby, a trolley in said trackway, a dipper-arm secured thereto, driving mechanism, a connection between the same and said trolley to rack the trolley in or out, and an automatic stop engaged at the extreme position of the trolley and connected to shut off the driving mechanism, substantially as described.

18. In a machine of the general character described, the combination of a trackway, a trolley in the same, a driving-motor, a connection between the same and the trolley to rack it in or out, a pair of stops adapted to be engaged by the trolley at opposite ends of its movement, a reversing device for the motor, a connection between the said stops and said reversing device whereby the forward stop is thrown into position to be engaged by the trolley when said device is moved to rack the trolley forward and the rearward stop when said device is moved to rack the trolley rearward, substantially as described.

19. In a machine of the general character described, the combination of a boom, a trackway carried thereby, a trolley in said trackway, a driving-motor, a connection between the same and said trolley to rack the trolley in or out, a reversing device for said motor, a longitudinally-movable bar carrying a pair of shoulders and connected to said device in such manner that the bar is shifted rearward when the device is moved to rack the trolley forward and vice versa, said shoulders being adapted to be engaged by said trolley and moved thereby to bring the reversing device to the off position, substantially as described.

20. In a machine of the general character described, the combination of a trackway, a trolley slidable along the same, a bucket-arm having a pair of telescoping members, the upper member being pivoted to said trolley, a lock for said members to hold them rigid, and means carried by the trolley and connected to throw said lock, substantially as described.

21. In a machine of the general character described, in combination, a trackway, a trolley therein having a cross-axle, a bucket-arm pivoted on said axle, a telescoping arm adapted to slide within said pivoted arm, a rack on said telescoping arm, a movable pawl carried by the pivoted arm, and a link carried by the pivoted arm for throwing said pawl, substantially as described.

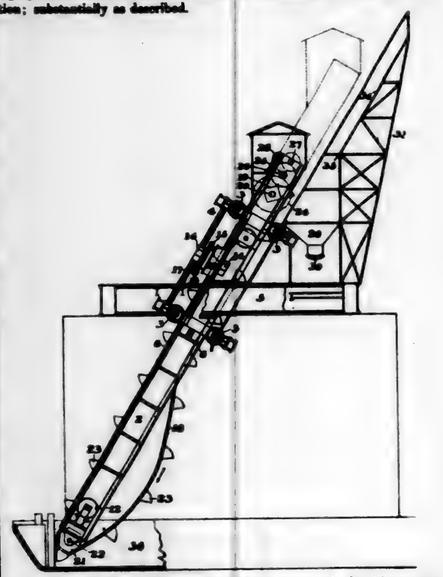
22. In a machine of the general character described, in combination, a diagonal boom having side plates and open on its under side, a trackway intercepting said boom and having side plates secured to the side plates of the boom, a trolley traveling on the inner side of the trackway, said trolley comprising a pair of blocks and a cross-axle, a hollow bucket-arm journaled on said axle, a telescoping arm within said hollow arm, a bucket carried by said telescoping arm, a lock for locking together the two parts of the bucket-arm, mechanism for operating said lock irrespective of the position of the arm, and mechanism for racking the trolley in or out, substantially as described.

710,224. UNLOADING APPARATUS. FRANCIS H. TREAT, Pittsburg, Pa. Filed Mar. 14, 1902. Serial No. 98,260. (No model.)

Claim.—1. In unloading apparatus an outwardly-extending bridge arranged to receive a boat or receptacle beneath it, an inclined leg mounted upon and extending laterally from the bridge, and means for adjusting the leg up and down in the plane of its inclination; substantially as described.

2. In unloading apparatus, a cantaliver, a supporting-cage thereon, an adjustable leg supported in inclined position in the cage and projecting sidewise from the cantaliver, said leg carrying hoisting mechanism, and means for adjusting the leg up and down in the plane of its inclination; substantially as described.

3. In unloading apparatus an outwardly-projecting bridge arranged to receive a boat or receptacle beneath it, a stationary cage mounted on the bridge and having guides, an inclined leg projecting sidewise from the bridge, said leg being supported and held by the guides, scooping and hoisting mechanism mounted on the leg, and mechanism for adjusting the leg up and down in its inclined plane and for holding it in adjusted position; substantially as described.



4. In unloading apparatus a projecting bridge, an inclined leg mounted thereon, mechanism for adjusting the leg up and down in its inclined plane, and a stationary inclined apron extending parallel with the leg and arranged to receive the material directly therefrom; substantially as described.

5. In unloading apparatus, an inclined leg supported between guides, mechanism for adjusting the leg up and down in its plane, conveyer mechanism on the leg, a hopper arranged to receive the material directly from the conveyer when the leg is in its lower position, and an inclined apron parallel with the leg and arranged to receive the material when the leg is adjusted to a higher position; substantially as described.

6. In unloading apparatus, an overhung cantaliver a vertically-adjustable inclined leg supported on the cantaliver and arranged in a plane transverse to the cantaliver, conveyer mechanism on the leg, and connections for adjusting the leg up and down in its inclined plane and holding it in adjusted position; substantially as described.

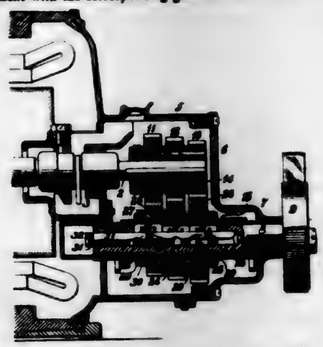
7. In unloading apparatus, a cage having upper and lower guides, an inclined leg supported between the guides and having conveyer mechanism, winding-drums on the cage having cables connected to the leg, and mechanism for actuating the drums to adjust the leg; substantially as described.

710,225. SPEED-CHANGING DEVICE. CHARLES G. TYLER, Pittsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed May 8, 1901. Serial No. 59,332. (No model.)

Claim.—1. The combination with a rotatable shaft having a plurality of gear-wheels keyed thereon, of a supplemental shaft having a plurality of gear-wheels loosely mounted thereon in position to mesh with the wheels mounted on the first-named shaft, a plurality of keys mounted in the second shaft, springs tending to force said keys outward to lock the gear-wheels to the shaft and a cam-plunger for withdrawing all or all but one of said keys from locking position.

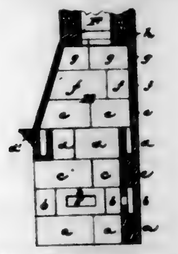
2. The combination with a shaft having a plurality of gear-wheels of different diameters keyed thereon, of a supplemental shaft having gear-wheels of different diameters loosely mounted thereon in position to mesh with the gear-wheels on the first-named shaft, a plurality of keys provided with lateral projections and movably mounted in the supplemental shaft, springs for moving said keys into engagement with the corresponding gear-wheels and a cam-plunger for engaging said projections to withdraw the keys from the corresponding gear-wheels.

3. The combination with a driving-shaft having a plurality of gear-wheels of different diameters keyed thereon, a second shaft having a corresponding number of gear-wheels of different diameters arranged to mesh with the first-named gear-wheels, keys corresponding in number and position to the gear-wheels on the second shaft and provided with lateral projections, springs tending to force said keys outward and means for engaging the projections on all but one of said keys to hold said keys out of engagement with the corresponding gear-wheels.



4. The combination with a driving-shaft having a plurality of gear-wheels of different diameters keyed thereon, of a second shaft having a corresponding number of gear-wheels of different diameters loosely mounted on the shaft in position to mesh with the first-named wheels, spring-actuated keys mounted in the second shaft and provided with lateral projections, a cam-plunger located in said shaft and means for shifting said plunger longitudinally to engage the projections on the keys and move them inwardly in opposition to their springs.

710,226. FIREPLACE. GEORGE VIVIT, Montclair, N. J. Filed May 19, 1902. Serial No. 107,941. (No model.)



Claim.—1. The improved fireplace comprising courses of hollow tile having vent-openings for ventilating the room, the upper course of hollow tile having a shelf integral with the forward section thereof, tiles *e*, *f*, *g*, with inclined outer surfaces, a plate A, seated, on the upper course *g*, *g*, of the last tiles on which the chimney may be built, substantially as set forth.

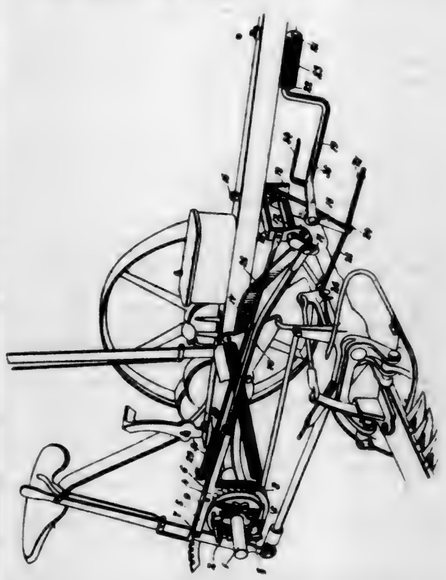
2. The improved fireplace comprising courses of tile, the lower courses of which are of hollow tile open to the room, and the upper courses of which have inclined outer faces converging at the top to receive a single top plate, said top plate having a flue-hole therethrough, substantially as set forth.

3. The improved fireplace herein described comprising lower courses of hollow tile, the chambers in the plurality of courses of which coincide to form a passage or flue and the upper course of said lower courses forming a shelf, the passage or flue opening into the lower part of the fireplace and through the shelf course into the fireplace-chamber E, and upper courses above said shelf course forming said chamber E, said chamber having at the top a plate having a hole therethrough and adapted to support the chimney, whereby an exit is provided for both the smoke and the vitiated air of the room issuing up from said flue or passage, substantially as set forth.

710,227. GUARD FOR EYEGLASSES. ALBERT S. WEAVER, Providence, R. I., assignor of one-half to Peter Oehs, Providence, R. I. Filed July 13, 1901. Serial No. 68,094. (No model.)

Claim.—In eyeglasses, the combination with a post, of a guard comprising a shank fastened at its outer end to said post, a semicircular nosk integral at a point intermediate of its ends with said shank, each portion of which nosk beyond its junction with the shank has two differently-directed transverse curves, and two separate blades extending angularly from the ends of said nosk, respectively, which are disposed in different planes with respect to each other, substantially as specified.

710,228. MOWING-MACHINE. BOOKER C. WHITE and THOMAS J. JONES, Catlin, Ill.; said Jones assignor to said White. Filed Oct. 16, 1901. Serial No. 78,816. (No model.)



Claim.—1. In a mowing-machine, the combination of the axle, the ratchet-wheel fixed thereto, the pawl and yoke, and means for reciprocating said yoke, comprising a longitudinally-movable rod, a draft appliance attached to the latter, and a spring, whereby the rod may be drawn forward and held by draft applied thereto and may be returned to its original position by the elasticity of the spring when the draft ceases.

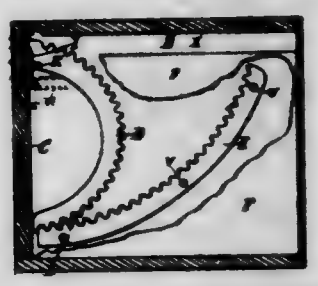
2. In a mowing-machine, the combination of the axle, the ratchet-wheel fixed thereto, the pawl and yoke, and means for reciprocating said yoke, comprising a longitudinally-movable rod, a draft appliance attached to the latter, a spring, and means for limiting the forward movement of said rod, whereby the rod may be drawn forward and held by draft applied thereto and may be returned to its original position by the elasticity of the spring when the draft ceases.

710,229. MECHANISM FOR OPERATING DOORS. ELI WELLS, Grand Rapids, Mich., assignor to the Shaw-Walker Company, Muskegon, Mich., a Corporation. Filed June 26, 1900. Serial No. 21,456. (No model.)

Claim.—1. The combination of a case, a door adapted to turn from vertical to horizontal, rockers pivotally attached to the door, and ways traversed by the rockers, whereby the upper side of the door is carried horizontally inward within the case when the door is opened, substantially as described.

2. The combination of a case, a door, rockers pivoted to the door at their upper ends, ways traversed by the rockers and stop-pins to support the door when open and to stop the front of the door when the door is closed, substantially as described.

3. The combination of a case, a door, rockers having convex sides and pivotally attached to the door and having teeth on their convex sides and curved ways having concave sides and attached to the case and having teeth on their concave sides engaging the teeth in the rockers, whereby the door is carried horizontally inward in a right line, substantially as described.



4. The combination of a case, a door, toothed ways attached to the ends of the case, a rod journaled on the door, and toothed rockers fixed on the respective ends of the rod and engaging the ways attached to the case, substantially as described.

5. The combination of a case, a door, toothed ways attached to the case, a rod journaled on the door, toothed rockers attached to the rod, and engaging the ways attached to the case, and stop-pins to engage the rockers on the door, substantially as described.

6. In combination with a case and a door adapted to turn to a horizontal plane and run back into the same, a spring having one end attached to the back of the case, and extending horizontally, and thence vertically, and thence again horizontally, a link connecting the free end of the spring and the upper part of the door, and a staple engaging the vertical portion of the spring, substantially as described.

7. The combination of a case, a door, toothed ways fixed on the ends of the case, toothed rockers pivotally connected at their upper ends to the door and engaging the ways on the case, and springs attached to the back of the case near the bottom thereof, and thence extended vertically, and thence horizontally, in opposite directions, and links pivotally connecting the free ends of the springs with the upper part of the door, substantially as described.

8. The combination of a case, a door, toothed ways attached to the ends of the case, a rod journaled on the door, toothed rockers rigidly attached to the respective ends of the rod and engaging the ways on the case, stop-pins in the case to engage the rockers on the door, springs attached to the back of the case near the bottom thereof and extending vertically and thence horizontally, a staple slidably engaging the vertical portions of the springs, and links connecting the free end of the springs with the upper part of the door, substantially as described.

9. In a bookcase, the combination of a suitable section made up of end pieces with suitable top and bottom; a door to the front side of the same and hinge-rod secured to the upper back side of said door; plates rigidly secured to said rod and at right angles thereto extending within the ends of said section to serve as guides to the door and suitable guides for the plates to guide them back within the section when the door is swung to the horizontal position; and means for withdrawing the door automatically within the section, for the purpose specified.

10. In a bookcase, the combination of a suitable section made up of end pieces with suitable top and bottom; a door to the front side of the same and hinge-rod secured to the upper back side of said door; plates rigidly secured to said rod and at right angles thereto extending within the ends of said section to serve as guides to the door and suitable guides for the plates to guide them back within the section when the door is swung to the horizontal position, for the purpose specified.

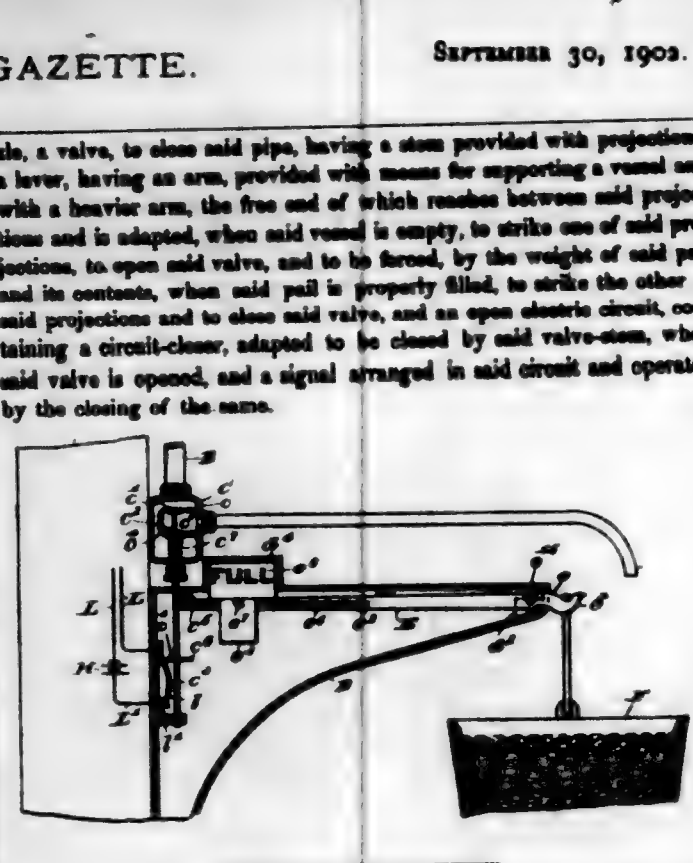
11. In a bookcase, the combination of a suitable section made up of end pieces with suitable top and bottom; a door to the front side of the same; hinge-rod secured to the upper back side of said door; plates rigidly secured to said rod and at right angles thereto extending within the ends of said section to serve as guides to the door, for the purpose specified.

12. In a bookcase having two ends and a suitable top and bottom, a sliding door at the front of the case, a rod attached to said door, and links rigidly attached to said rod and extending at right angles thereto within the case to form guides when the door is pushed into the case.

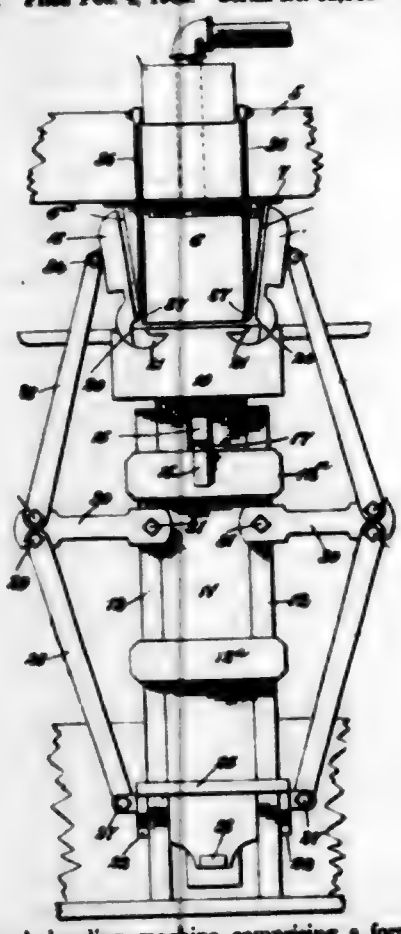
13. In a bookcase having two ends and a suitable top and bottom, a slidable door at the front of the case, a rod connected thereto, a pair of links rigidly secured together by said rod, said links having supports and being adapted to move longitudinally as the door is slid into and moved out of the case.

710,230. PAIL-FILLING AND INDICATING DEVICE. JAMES H. WILSON, Lowell, Mass. Filed Nov. 14, 1898. Serial No. 696,336. (No model.)

Claim.—The combination of a supply-pipe, having a suitable nozzle, a valve, to close said pipe, having a stem provided with projections, a lever, having an arm, provided with means for supporting a vessel and with a heavier arm, the free end of which reaches between said projections and is adapted, when said vessel is empty, to strike one of said projections, to open said valve, and to be forced, by the weight of said pail and its contents, when said pail is properly filled, to strike the other of said projections and to close said valve, and an open electric circuit, containing a circuit-closer, adapted to be closed by said valve-stem, when said valve is opened, and a signal arranged in said circuit and operated by the closing of the same.



710,231. VENEER-BENDING MACHINE. EDGAR ASHE, Jacksonville, Tex. Filed Feb. 4, 1902. Serial No. 92,512. (No model.)



Claim.—1. A bending-machine comprising a form, a flat platen movable toward and from said form, flat bending-leaves hinged to said platen and arranged to fold outwardly into flush relation therewith, levers having means for urging said leaves and the platen independently of each other toward said form, and an operating device related to said levers to first move the leaves flush with the platen and thereafter withdraw the leaves and the platen away from said form.

2. A bending-machine, comprising a bending-form having means for heating the same, a platen movable relatively thereto, bending-leaves having means for normally urging them toward said form, and moistening devices adjacent to the form and disposed in the path of feed of the work to the platen, said moistening devices adapted to apply moisture to the work along the lines of the crease or fold on the introduction of the work between the form and the platen.

3. A bending-machine, comprising a heatable form, a platen having means for normally urging the same toward said form, bending-leaves hinged to said platen, and independent means for normally urging the bending-leaves toward the form.

4. A bending-machine, comprising a suspended heatable form, a platen disposed below said form and having means for urging the same

toward the form, leaves having hinges located below the active face of the platen, said leaves arranged to lie flush with said platen, and independent means for urging the members normally toward said form.

5. A bending-machine, comprising a heatable form, a platen normally urged toward said form, bending-leaves movable relative to the platen and the form, and moistening devices having brushes disposed at the sides of the form and in the path of feed of the work to said platen.

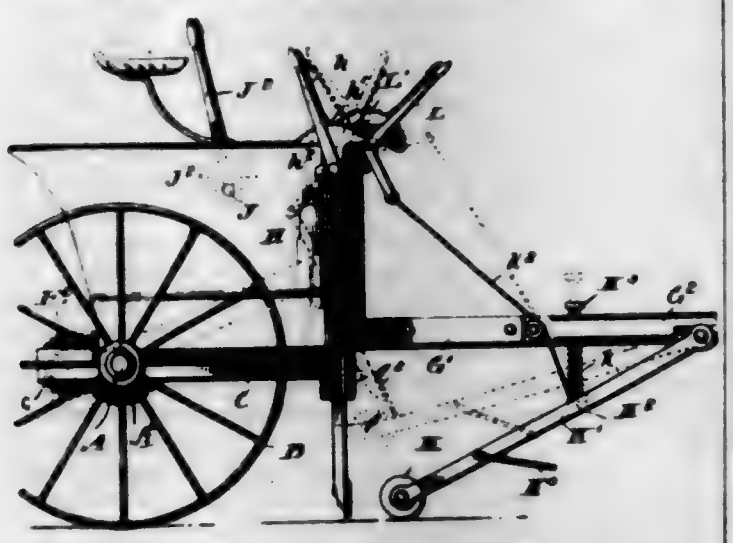
6. A bending-machine comprising a form, a slidable post carrying a platen and movable with relation to said form, means for normally urging said post and the platen toward said form, bending-leaves hinged to the platen, levers having tension devices for normally urging said leaves toward the form and independently of the movement of the platen, and means for withdrawing the platen subsequent to the retraction of the bending-leaves from the form.

7. A bending-machine comprising a form, a platen coöperating therewith, a tension-controlled lever for normally urging said platen toward the form, bending-leaves movable relative to said platen and said form, tension-controlled levers having a train of operative connections with said leaves and normally urging the latter toward the form independently of the platen, and means for depressing the leaves flush with the platen and subsequently withdrawing the platen and the leaves from the form.

8. A bending-machine, comprising a form, a platen movable relative thereto, bending-leaves in coöperative relation to the form, an elevated fountain or reservoir, and moistening-brushes disposed at the sides of the form and having operative connection with said fountain or reservoir.

9. A bending-machine, comprising a form, a platen disposed in coöperative relation to the form and provided in its active face with undercut recesses, bending-leaves having projections slidably fitted in said recesses and hinging the leaves to said platen so as to fold flush therewith, the downward movement of said leaves being limited by the projections abutting the closed ends of said recesses, and means for actuating said platen and said leaves.

710,282. STALK-CHOPPER. WILLIAM L. ADAMSON, Weston, Tex., assignor of one-half to Curren Adamson, Weston, Tex. Filed July 8, 1902. Serial No. 114,792. (No model.)



Claim.—1. The combination of the rotatable axle, the wheels, the frame swiveled on the axle, the shaft journaled in said frame, gearing for rotating said shaft from the axle, a crank on the forward end of the shaft, a reciprocating bar, a pitman connecting said crank to said bar, and a cutter on the lower end of said bar, substantially as described.

2. The combination of the axle, the wheels thereon, clutches for locking said wheels to the axle, the frame swiveled on the axle, the forwardly-extending shaft journaled in said frame, gearing for rotating said shaft from the axle, a crank on the forward end of the shaft, a reciprocating bar, a pitman connecting said crank to said bar, and a chopping-blade on the lower end of said bar, substantially as described.

3. The combination of the rotatable axle, the wheels, the frame swiveled on the axle, the shaft journaled in said frame, gearing for rotating said shaft from the axle, a crank on the forward end of the shaft a reciprocating bar, a pitman connecting said crank to said bar, and a cutter on the lower end of said bar; with means for raising and lowering the cutter end of the frame, and means for engaging or disengaging the axle from the wheels, substantially as described.

4. The combination of the axle, the wheels thereon, clutches for locking said wheels to the axle, the frame swiveled on the axle, the forwardly-extending shaft journaled in said frame, gearing for rotating said shaft from the axle, a crank on the forward end of the shaft, a reciprocating bar, a pitman connecting said crank to said bar, and a chopping-blade on the lower end of said bar; with means for raising and lowering the cutter end of the frame, and means for engaging or disengaging the axle-clutches from the wheels, substantially as described.

5. The combination of the axle, its supporting-wheels, clutches for locking the wheels to the axle, a frame swiveled to the axle, a rotating shaft journaled in said frame and reciprocating chopping mechanism actuated by said shaft, a roller in front of the chopper, bars connecting said roller to the shaft, a spring for depressing the roller, and means for raising it, substantially as described.

6. The combination of the axle, its supporting-wheels, clutches for locking the wheels to the axle, a frame swiveled to the axle, a rotating shaft journaled in said frame and reciprocating chopping mechanism actuated by said shaft, a roller in front of the chopper, bars connecting said roller to the shaft, a spring for depressing the roller, and means for raising it; with means for throwing the clutches into or out of operation, and means for raising and lowering the cutting-frame, substantially as described.

7. In a chopping-machine, the combination of the axle, the wheels thereon, clutches for locking the wheels to the axle, a swinging frame hung on the axle, a shaft journaled in said frame, amplifying gearing between the shaft and axle, a vertically-reciprocating bar guided in the front of the frame, a chopper on the lower end of said bar, and means for reciprocating the chopper from said shaft; with a roller hung in front of the chopping mechanism, and means for throwing the wheel-clutches into and out of operation, substantially as described.

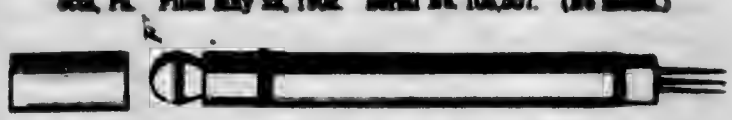
8. In a chopping-machine, the combination of the axle, the wheels thereon clutches for locking the wheels to the axle, a swinging frame hung on the axle, a shaft journaled in said frame, amplifying gearing between the shaft and axle, a vertically-reciprocating bar guided in the front of the frame, a chopper on the lower end of said bar, a crank on said shaft, and a pitman connection between said crank and bar; with means for raising and lowering the frame, a roller hung in front of the chopping mechanism, means for raising and lowering the roller, and means for throwing the wheel-clutches into and out of operation, all substantially as described.

710,283. PRINTING COLOR FOR LITHOGRAPHIC OR METALLOGRAPHIC PRINTING. JOHANN ADELSBERGER and HUGO FEIERABEND, Vienna, Austria-Hungary, assignors to Simon Wechsler, Vienna, Austria-Hungary. Filed July 5, 1901. Serial No. 67,185. (No specimens.)

Claim.—1. A composition of matter consisting of varnish, glycerin, a salt of the alkalies, tartar and a volatile resinous oil, for the purpose set forth.

2. A composition of matter consisting of varnish, glycerin, a salt of the alkalies, tartar, a volatile resinous oil and a pigment, for the purpose set forth.

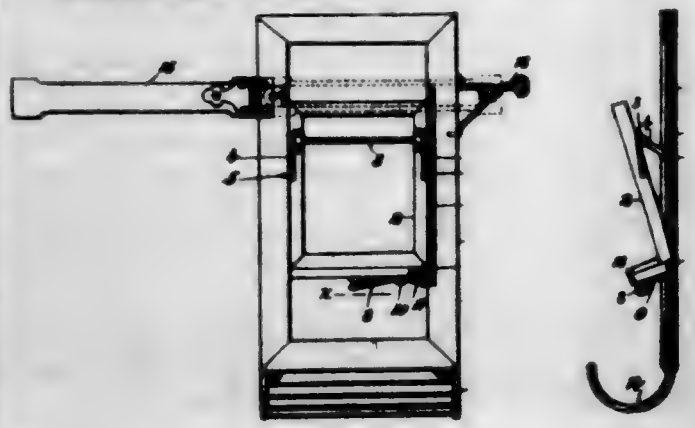
710,284. VACCINE-CONTAINER. HAMILL M. ALEXANDER, Hartsville, Pa. Filed May 12, 1902. Serial No. 106,507. (No model.)



Claim.—1. A hollow case adapted to receive vaccine-containing capillary tubes, having one end open and provided with an inturned bead-like edge, in combination with a bulb, F, fitted into the said open end of the case, substantially as set forth.

2. A hollow case adapted to receive vaccine matter open at both ends, a reversible plug fitted into one end of the case, scarifying-needles carried by the said plug, a bulb fitted into the other end of the case, and a cap arranged to fit over the said bulb, substantially as set forth.

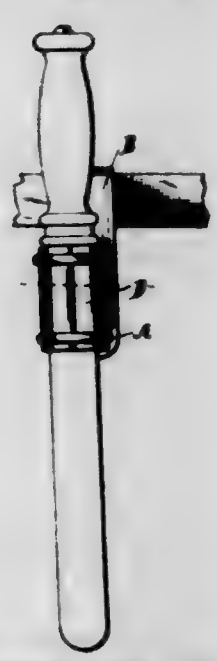
710,285. MIRROR-HANGING. JAMES G. ALLEN, Ubly, Mich., assignor of one-half to Jacob C. Balauf, Ubly, Mich. Filed Apr. 8, 1902. Serial No. 101,864. (No model.)



Claim.—1. A mirror-hanging comprising a main frame, the opposite side members of which are provided with slots at the inner sides, a mirror-frame, pins extended from said mirror-frame at the lower end into said slots, a rock-shaft mounted on the back of the mirror-frame and having crank portions extended into said slots, and a locking device carried by the mirror-frame, substantially as specified.

2. A mirror-hanging comprising a main frame, the opposite side members of which are slotted at the inner sides, a mirror-frame, pins extended from the lower portions of the mirror-frame into said slots, a rock-shaft mounted on the back of the mirror-frame near its top, the said shaft having its ends turned downward and then outward, the said outward portions engaging in said slots, and a locking-lever mounted to swing on the lower end of the mirror-frame and adapted for frictional engagement with a member of the main frame, substantially as specified.

710,286. HOLDER FOR POLICEMEN'S CLUBS. FRANCIS H. AUDLEY, New York, N. Y. Filed Sept. 14, 1901. Serial No. 75,338. (No model.)



Claim.—1. The combination with a belt of a support suspended from said belt, and a ring or socket carried by said support, said ring or socket comprising a section pivoted at one end, the pivot of said section being located at the circumference of and at the rear of said ring, and the opposite end of said section being located at the front of said ring, and a spring for normally holding said section in a closed position.

2. A holder for policemen's clubs, said holder consisting of an attachment provided with a loop through which the belt is adapted to be passed, and a holder which is secured to said attachment, and which consists of two segmental spring-jaws, the free edges of which are normally held together by spring-power, said jaws being covered by leather or similar material inside and outside, and the abutting edges thereof being turned outwardly, and said jaws being hinged to a circular plate which is secured to said attachment, and provided with springs, which are connected with said hinges, and which bear upon the free edges of said jaws, and on the outer sides thereof.

3. A holder for policemen's clubs, comprising a support, a curved plate secured to said support, and curved, spring-actuated arms jointed at their inner ends to the outer ends of said plate and with their outer ends separable, the said plate and arm forming in conjunction with each other a circular band.

4. A holder for policemen's clubs, comprising a support, a curved plate secured to said support, curved arms jointed at their inner ends to the outer ends of said plate, and springs between said plate and arms for closing the free ends thereof, said plate and arms forming in conjunction with each other a circular band.

5. A holder for policemen's clubs, comprising a support, a curved plate secured to said support, curved arms jointed at their inner ends to the outer ends of said plate, springs between said plate and arms for closing the free ends thereof, said plate and arms forming in conjunction with each other a circular band, and a locking device for connecting the separable ends of said jaws.

6. In a holder for policemen's clubs the combination with a belt of a support suspended from said belt and a divided ring carried by said support, the said ring having a pair of spring-actuated vertical jaws at the division in said ring, said jaws normally abutting to close said ring and a latch for locking said ring closed, whereby when said latch is released the club may be removed either vertically or laterally, and when said latch is fastened the club may be removed vertically only.

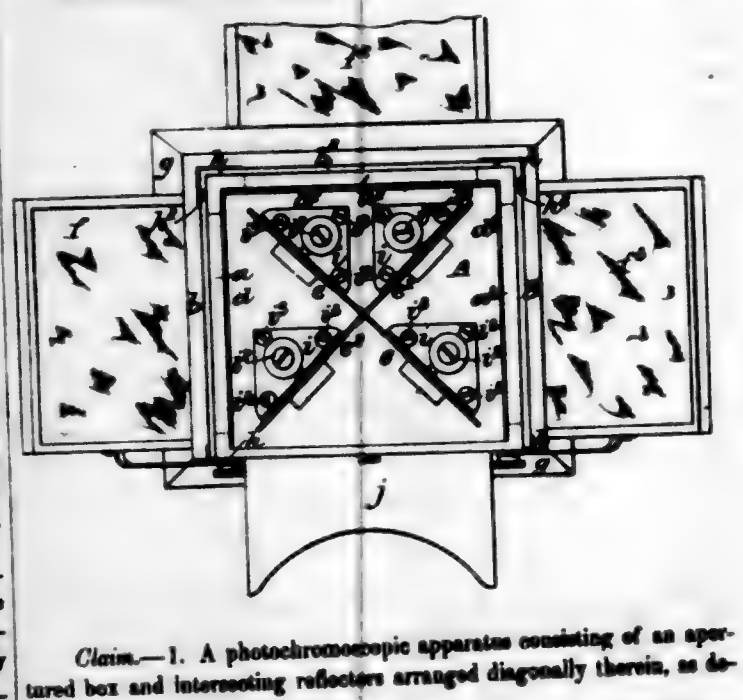
7. In a holder for policemen's clubs the combination with a belt, of a support suspended from said belt, and a divided ring carried by said support, the said ring having a pair of spring-actuated vertical jaws at the division in said ring, said jaws normally abutting to close said ring, whereby a socket of definite form size and circular contour is maintained in order to hold the club uniformly and constantly with exactly the desired freedom of vertical removal while permitting its immediate lateral removal through the division in the ring.

8. In a holder for policemen's clubs the combination with a support adapted to be suspended from a belt, of a divided ring carried by said support, the said ring having a pair of spring-actuated vertical jaws at the division on said ring, said jaws normally abutting to close said ring, the division of the ring and its abutting jaws being at the front of the ring or socket whereby the club is removed by a forward movement of its handle and will in any attempted rearward movement be seated in the undivided portion of the ring or socket.

9. A policeman's-club holder consisting of a ring or socket formed of a main fulcrum-section and two sections pivoted thereto and having their ends normally and resiliently directed toward one another.

10. A policeman's-club holder consisting of a ring or socket formed of a main fulcrum-section and two sections pivoted thereto, and having their ends normally and resiliently directed toward one another, one of the sections being longer than the other.

710,287. PHOTOCHROMOSCOPIC APPARATUS. THOMAS K. BARNARD, Hammersmith, London, England. Filed June 16, 1902. Serial No. 111,930. (No model.)



Claim.—1. A photochromoscopic apparatus consisting of an apertured box and intersecting reflectors arranged diagonally therein, as described.

2. A photochromoscopic apparatus consisting of a rectangular apertured box, intersecting reflectors therein and chromograms perpendicular to the base of the box, as described.

3. A photochromoscopic apparatus consisting of a rectangular apertured box with two intersecting, diagonally-arranged, reflectors perpendicular to the base, substantially as described.

4. A photochromoscopic apparatus, consisting of a box having the back and two sides open, the openings being adapted to contain transparencies of substantially the same length as the sides and the back, substantially as described.

5. A photochromoscopic apparatus, having a base and a covered top, means in the front for viewing chromograms, the two sides and the back being open, except at the corners, and adapted to contain chromograms, and reflectors within the box arranged diagonally, substantially as described.

6. A photochromoscopic apparatus, comprising an apertured box, chromograms in the sides and back and a viewing means in the front and intersecting reflectors arranged diagonally within the box, substantially as described.

7. A photochromoscopic apparatus, comprising an apertured box having a closed top and base, lenses in the front, openings of substantially the same area of the back and sides in said back and sides, diagonally-arranged reflectors within the box, and hinged mirrors at the sides and back, substantially as described.

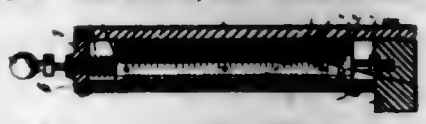
8. A photochromoscopic apparatus, having diagonally-arranged intersecting reflectors mounted in an apertured box and adapted to be individually adjusted, substantially as described.

9. A photochromoscopic apparatus, comprising an apertured box and reflectors therein, each reflector being mounted in a tripod-adjusting means.

10. A photochromoscopic apparatus, comprising an apertured box and four reflectors mounted therein, all meeting centrally and extending away from the center to form substantial diagonals, as described.

11. A photochromoscopic apparatus, comprising an apertured box and four reflectors mounted therein, each reflector having an individual adjusting means, all the reflectors meeting centrally and extending away from the center to form substantial diagonals, as described.

710,288. INDICATOR FOR SAWMILL-KNEES. JOHN D. BEATTY, Klondike, N. C. Filed June 22, 1901. Serial No. 65,644. (No model.)



Claim.—An indicator, comprising a slideway, a frame provided with a slot and slidably mounted upon the same, a needle mounted adjacent to said frame and free to travel relatively thereto, means for actuating said needle, a cylinder mounted within said frame and adjacent to said slot, said cylinder being provided with a graduated scale and with a toothed disk, a toothed disk mounted upon said frame and mating said first-mentioned toothed disk, and means controllable at will for adjusting the positions of said disks in the general longitudinal direction of said cylinder.

710,289. BOX-TOE. HARRY H. BUCKWITH, Quincy, Mass. Filed Nov. 22, 1901. Serial No. 84,076. (No model.)

Claim.—1. As an article of manufacture, a moldable box-toe blank comprising a layer of cork skived at its margin, and a confining layer of fabric secured to the outer surface of the cork layer, whereby when the blank is molded on the toe portion of a last, the outer portion of the cork layer is prevented from cracking and its inner portion is compressed to close the crevices in the cork layer and increase its resilience, so that the molded box-toe is rendered impervious to water and is adapted to spring outwardly after receiving an indenting pressure.

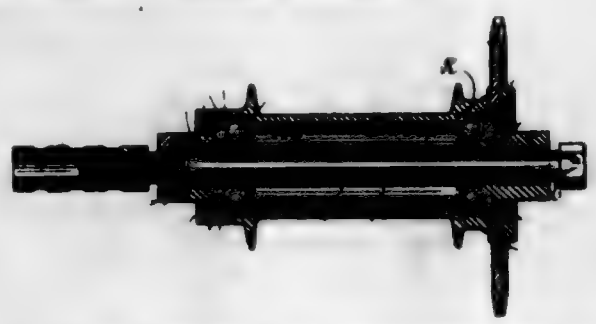
2. A moldable box-toe blank comprising a layer of cork and a confining layer of fabric saturated with a sizing composition and secured to the outer surface of the cork layer, the cloth layer being adapted to prevent the outer portion of the cork layer from cracking and to cause the compression of the inner portion of the cork layer, while the sizing composition enables the molded box-toe as a whole to permanently retain the shape of the toe portion of a last.

710,240. LOCK-NUT FOR VEHICLE-AXLES. WILLIAM BELFIELD, ROBERT SHEARER, JOHN PERRAY, and GABALIM BELFIELD, Minooka, Ill., assignors of one-fifth to George Gleason, Minooka, Ill. Filed Feb. 24, 1902. Serial No. 95,371. (No model.)

Claim.—In a lock-nut for vehicles, the combination with a vehicle-spindle, the outer end of which is provided with a longitudinally-grooved and laterally-recessed tip, of a nut the inner end of the bore of which is provided with inwardly-projecting lugs adapted to slide within the grooves, and to be moved laterally into the recesses, a ring at the outer end of the nut the inner face of which is provided with inwardly-projecting lugs fitted to slide longitudinally within the grooves of the tip, and means whereby the nut and the ring may be engaged at one relative position and be disengaged at another, for the purpose stated.

710,241. HUB. JOHN W. BLANCHETT, Chicago, Ill. Filed May 24, 1902. Serial No. 107,826. (No model.)

Claim.—1. In a device of the class described, the combination with the hub having the cups in the ends thereof and the balls in the cups, of the tubular axle, the cones on said axle, one of which is movable longitudinally to regulate the distance between said cones to adjust the bearings formed by the cups, balls and cones, and means coöperating with said cones to secure them in the desired position of adjustment, the tubular axle being of such a length relative to the length of the hub that the outer end of one of said cones is beyond the end of the tubular axle in all positions of adjustment; substantially as described.



2. In a device of the class described the combination with the hub, the cups in its ends and the balls in the cups, of the tubular axle, the cones on the ends of said axle adjustable longitudinally thereon relative to each other to regulate the distance between them to adjust the bearings formed by the cups, balls and cones, and means coöperating with said cones to secure them in the desired position of adjustment, the tubular axle being so short that in all positions of adjustment the outer ends of the cones are necessarily beyond the adjacent ends of the axle for the purpose described.

3. In a device of the class described, the combination with the hub, the cups in its ends and the balls in the cups, of the tubular axle, the cones on the ends of said axle, one of which is movable longitudinally thereon to regulate the distance between said cones to adjust the bearings formed by the cups, balls and cones, the rod adapted to pass through the tubular axle and having an abutment at one end and screw-threaded at the other end, and the nut on the end of the rod whereby the cones and tubular axle can be clamped between said abutment and nut, the tubular axle being so short that in all positions of adjustment the outer end of one of the cones is necessarily beyond the coöperating end of the axle for the purpose described.

4. In a device of the class described, the combination with the hub, the cups in its ends and the balls in the cups, of the tubular axle, the cones on said axle having their outer ends extending beyond the ends of said axle in all positions of adjustment of the cones longitudinally thereon to regulate the distance between said cones to adjust the bearings formed by the cups, balls and cones, the rod adapted to pass through the tubular axle and having the abutment at one end and screw-threaded at the other end, and the nut coöperating therewith so that the cones can be clamped on the tubular axle between said abutment and nut.

5. In a device of the class described, the combination with the hub, the cups in its ends and the balls in the cups, of the tubular axle screw-threaded on one end and having a longitudinal groove in the same end, the cones on the ends of said axle, one of which is movable longitudinally thereon and is prevented from turning, a key on the interior thereof sliding in the groove in the axle, the adjusting-nut controlling the position of the adjacent cone and adapted to be secured on the end of the tubular axle, and means coöperating with said cones and adjusting-nut to secure them in the desired position of adjustment, the tubular axle being so short that in all positions of adjustment the outer end of the adjusting-nut is necessarily beyond the coöperating end of the axle for the purpose described.

6. In a hub, the combination, with balls, ball-cups and a tubular axle having screw-threads at one end, of bearing-cones fitted to and pressed upon said axle, one of such cones having a movement longitudinal of the axle, an adjusting-nut on the screw-threaded end of the axle, one end of such axle being within one cone and the other end within the adjusting-nut, and a clinching stud or bolt securing the hub to a frame whereby the pressure is against the cones and not against the ends of the axle.

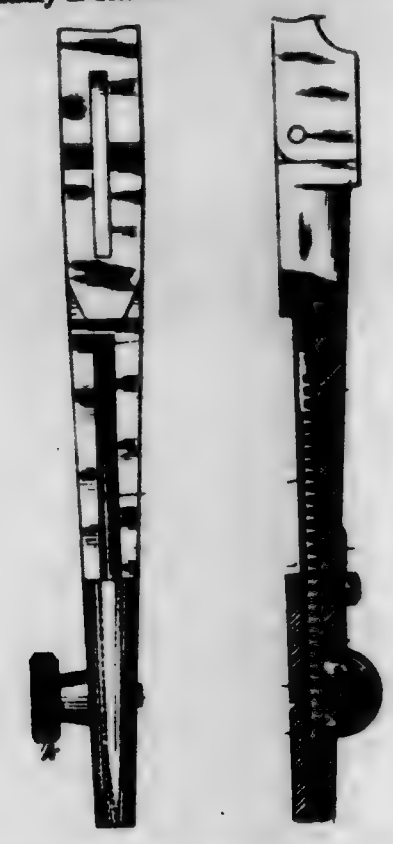
7. In a hub, the combination, with balls, ball-cups and a hub-casing, of a bearing-cone having two substantially parallel annular flanges extending circumferentially thereof and in close proximity to the sides or walls of the barrel of the hub-casing.

8. In a hub, the combination, with balls, ball-cups and a hub-casing, of a bearing-cone having two substantially parallel annular circumferential flanges extending into close proximity to the barrel of the hub-casing, and an annular ring fitting said barrel and depending into the space between said flanges.

710,242. NEEDLE-COMPASSES. JOHANN BOMART-BÄCHLI, Suhr, Switzerland. Filed Mar. 12, 1902. Serial No. 97,943. (No model.)

Claim.—1. A compass-leg, a suitably-guided point therein, a rack

on the point, a pinion engaging the rack, and a spring to frictionally hold the pinion, substantially as described



2. A compass-leg, a suitably-guided point mounted therein, a rack on the point, a pinion engaging the rack and a spring bearing on and partly encompassing the pinion, for the purpose set forth.

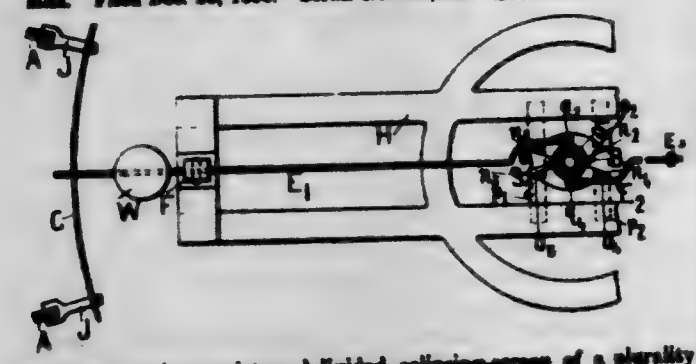
3. A compass-leg, a suitably-guided point mounted therein, a rack on the point, a pinion engaging the rack and a spring secured to the compass-leg to bear on the pinion to frictionally hold it, and means to regulate the friction on the pinion, for the purpose specified.

4. A compass-leg, a suitably-guided point mounted therein, a rack on the point, a pinion engaging the rack, and a spring having a curved end to bear on the pinion, and a screw to secure said spring to the leg and to regulate the amount of friction on the pinion, for the purpose specified.

5. A longitudinally-bored compass-leg, a needle mounted in said bore, a rack formed on the needle, a pinion adapted to engage the rack and a spring to frictionally hold the pinion in engagement with the rack, and means for regulating the amount of friction, for the purpose specified.

6. A longitudinally-bored compass leg, a reversible needle adapted to be drawn entirely within the bore and having its points eccentric to the axis thereof, said points when within the bore adapted to contact with the wall thereof, a rack on the needle, slotted lugs mounted on both sides of a slot formed in one wall of the bore, a toothed wheel mounted in the slots of said lugs and in engagement with the rack, and a spring adapted to bear on the wheel, for the purpose specified.

710,243. ECLIPSING-SCREEN FOR REVOLVING GROUP FLASHING LIGHTHOUSE-LIGHTS, &c. ALAN BREMNER, London, England. Filed Dec. 28, 1899. Serial No. 741,641. (No model.)



Claim.—1. A complete subdivided eclipsing-screen of a plurality of subdivisions, which can be opened or closed independently of one another in combination with a burner and with a revolving optical apparatus composed of two or more panels, each panel permitting to pass one beam of light and having one subdivision of the said eclipsing-screen adapted to affect it and it alone, and means for opening and closing the subdivisions of the eclipsing-screen, substantially as set forth and for the production of group-flashing lights.

2. In combination with a burner and with a revolving optical apparatus of two or more single beam panels, a complete subdivided eclipsing-screen of two or more subdivisions, each subdivision of screen corresponding to one single-beam panel of the said optical apparatus and being provided with extended borders, and means for opening and closing the subdivisions of the eclipsing-screen, substantially as set forth and for the production of group-flashing lights.

3. A complete subdivided eclipsing-screen of two or more subdivisions combined with a burner and a revolving optical apparatus of two or more corresponding single-beam panels, a lever connected to each of the subdivisions of the screen, and carried by the revolving optical apparatus, and a stationary guide-cylinder having slits in which said levers travel.

4. A complete subdivided eclipsing-screen of two or more subdivisions of unequal horizontal angle in combination with a burner and with a revolving optical apparatus of two or more corresponding single-beam panels of unequal horizontal angle for the production of group-flashing lights containing flashes of different color.

5. A complete subdivided eclipsing-screen of two or more subdivisions of unequal horizontal angle in combination with a burner and with a revolving optical apparatus of two or more corresponding single-beam panels of unequal horizontal angle for the production of group-flashing lights containing flashes of different duration.

6. A revolving optical apparatus of a plurality of panels consisting in part of a complete subdivided eclipsing-screen, one subdivision of the said eclipsing-screen corresponding to each panel of the said optical apparatus, with the necessary operative means therefor and with a burner, for the production of group-flashing lights.

7. Sets of complete subdivided eclipsing-screens of a plurality of subdivisions combined with burners and with sets of revolving optical apparatus of two or more corresponding single-beam panels, for the production of light-signals of a code of signals in which each signal can be represented by a group of flashes.

8. In a device of the character described, a revolving optical apparatus comprising a burner, a number of single-beam panels, and a complete eclipsing-screen composed of subdivisions, one subdivision for each panel, a lever attached to each subdivision of the screen and carried by the revolving optical apparatus, and a stationary guide-cylinder having two horizontal slits in which the levers are adapted to ride, a pair of crossed slits connecting the horizontal slits, and a switch mechanism arranged to control said levers, substantially as described.

9. In a device of the character described, a revolving optical apparatus comprising a burner, a number of single-beam panels, and a complete eclipsing-screen composed of subdivisions, one subdivision for each panel, a lever attached to each subdivision of the screen and carried by the revolving optical apparatus, a stationary guide-cylinder having two horizontal slits in which the levers are adapted to ride and a pair of crossed slits connecting the horizontal slits, and locking means located at the junction of the slits, substantially as described.

10. In combination, a source of light, a plurality of groups of lenses or projectors arranged about said source, means for rotating said groups of lenses or projectors, and means for cutting off the light from said source to each of said groups of lenses or projectors in rotation whereby the light emanating from the said source is by successive stages in rotation entirely obscured from and in the same manner allowed to again fall upon the said lenses or projectors.

11. In combination, a source of light, a plurality of groups of lenses arranged about said source, means for rotating said groups of lenses, and means for cutting off the light from said source to each of said groups of lenses, consisting of adjustable tubular shields, each of said shields cutting off the light from one of said groups of lenses.

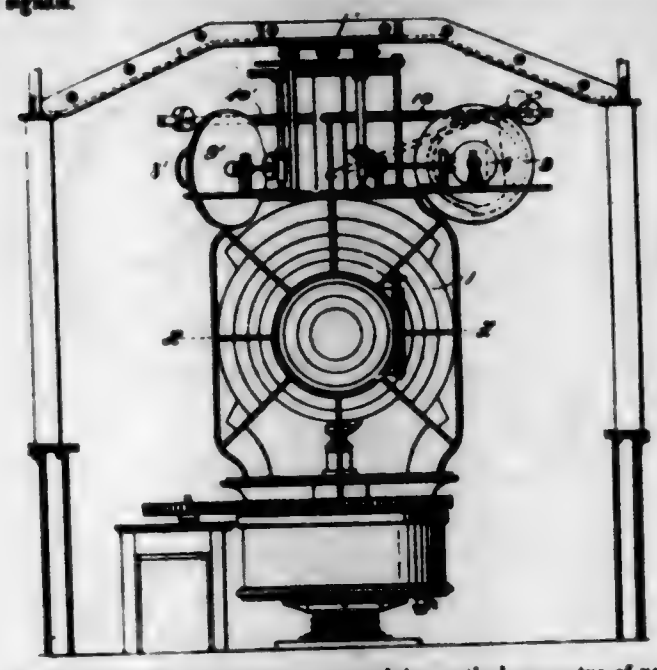
12. In combination, a source of light, a plurality of groups of lenses arranged about said source, means for rotating said groups of lenses, and means for vertically cutting off the light from said source to each of said groups of lenses, consisting of adjustable tubular shields, each of said shields cutting off the light from one of said groups of lenses.

710,244. REVOLVING GROUP-FLASHING APPARATUS. ALAN BREMNER, London, England. Filed Apr. 9, 1902. Serial No. 102,042. (No model.)

Claim.—1. A revolving optical apparatus of not less than three sides together with screens fitted to two only of these sides, with mechanism for opening and closing the screens and with a central luminary, substantially as set forth and for the production of certain group-flash signals.

2. In a device of the character described a central luminary, a revolving optical apparatus of not less than three sides, a screen attached to each of two only of these sides and capable of intercepting all light from the luminary falling on each of these two sides, a lever connected to each screen and carrying a pin and roller, a cam-grooved wheel causing each screen to open and remain open for a certain time and to close and

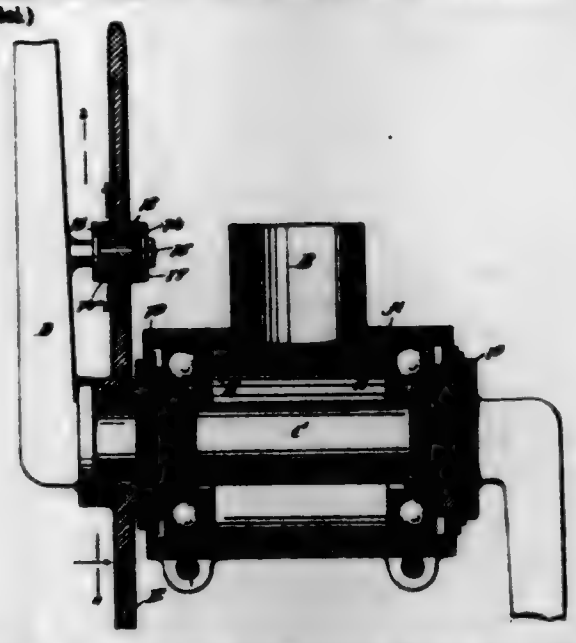
remain closed for a certain time, and gearing-wheels revolving with each screen-provided side of revolving optical apparatus and kept in motion relatively to the optical apparatus by a toothed ring fixed to the stationary lantern, substantially as set forth and for the production of group-flash signals.



3. In combination, a luminary, a revolving optical apparatus of not less than three sides, a two-part partial screen and the necessary mechanism for operating the said two-part partial screen, substantially as set forth and for the production of group-flash signals in lighthouses or elsewhere.

4. In the combination of continuously-revolving optical apparatus and screens for producing group-flashing characteristics, a continuously-revolving cam-grooved wheel by means of which said screens are operated and kept constantly under control, substantially as described.

710,245. DRIVING MECHANISM FOR BICYCLES. KARNELL BROOKS, New York, N. Y. Filed Mar. 7, 1901. Serial No. 50,208. (No model.)



Claim.—1. In a driving mechanism for bicycles and similar machines, a pedal-shaft and its crank-arms one of the crank-arms being provided with a lateral projection, a driving-wheel loosely mounted on the said pedal-shaft, and a cushion connection between the said driving-wheel and the projection of the crank-arm of the pedal-shaft, as set forth.

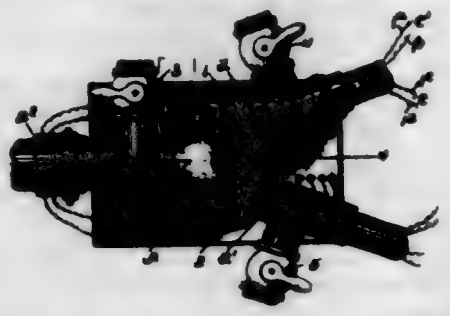
2. In a driving mechanism for bicycles and similar machines, a crank or pedal shaft and its crank or pedal arms, a front sprocket-wheel loosely mounted on the pedal or drive shaft adjacent to one of the said arms of the crank or pedal shaft and provided with an opening, and a lateral projection on one of said arms of said crank or pedal shaft, which projection is yieldingly held in the opening of the front sprocket-wheel, as set forth.

3. In a driving mechanism for bicycles and similar machines, a pedal or crank shaft, crank or pedal arms carried by the shaft, a bearing for said crank or pedal shaft, a forward sprocket-wheel loosely mounted on said shaft between its bearings and one of its crank or pedal arms, the said wheel being provided with an opening therein, a cushion located within said opening, a pin extending through the said cushion from the crank-arm adjacent to the forward sprocket-wheel, and means for holding said pin in position in said forward sprocket-wheel, as set forth.

4. In a driving mechanism for bicycles and like machines, the combination with the drive or pedal shaft and its crank or pedal arms, of a forward sprocket-wheel loosely mounted on said shaft, said wheel being provided with an opening therein and a sleeve secured in said opening, a tubular cushion located within said sleeve, and a pin secured to one of the crank or pedal arms and passed through the said cushion, and means for retaining the pin in position in the sprocket-wheel, as set forth.

5. In a driving mechanism for bicycles and like machines, the combination with a drive or pedal shaft, and its crank or pedal arm, of a sprocket-wheel loosely mounted on the said shaft and provided with an opening and an annular flange surrounding the opening on each face of the wheel, a cushion in said opening, a pin secured to the pedal-arm and passing through the said cushion and provided with a nut on its end, and washers on the pin and bearing against the flanges around the opening in the wheel, as set forth.

710,246. TELEGRAPH FIRE-HOSE. JAMES BOOTH, Portland, Oreg. Filed Dec. 16, 1901. Serial No. 86,094. (No model.)



Claim.—1. In a telegraph-hose under the control of the pipeman which has means of signaling to a station; the combination of a supply-pipe, a plurality of offtakes, a connection at the station for joining said supply-pipe and offtakes, and valved flood-gates for said offtakes, for the purposes described.

2. In a telegraph-hose under the control of the pipeman, and having means for signaling to a station; the combination of a Y connection at the station, comprising a supply-pipe and a plurality of flood-sections, flood-gates in said flood-sections, one for each section, said gates including valved discharges, and a hydraulic signaling mechanism cooperatively joined with the flood-pipe sections and the connection therefor, as specified and for the purposes described.

3. The combination with a plurality of ordinary hose-sections, terminating at a common station and having telegraphic communication, whereby the hosemen may communicate therewith; of a Y-shaped connection for uniting said hose-sections to one common source of supply, said Y-shaped section consisting of a supply-pipe, offtake-sections, a connection joining the supply-pipe and said offtakes; a valved flood-gate for each of said offtakes, affording independent means for communicating with each of the hosemen; and a valved flood-gate 3, whereby all of the hosemen may be simultaneously given the same signal by a single operation, for the purposes set forth.

4. The combination with a plurality of ordinary hose-sections terminating at a common station and having telegraphic communication therewith; of a Y-shaped connection for uniting said hose-sections to a common source of supply, said Y-shaped connection having means for varying the water-supply, whereby the station-man may communicate with the hosemen, as described and for the purposes set forth.

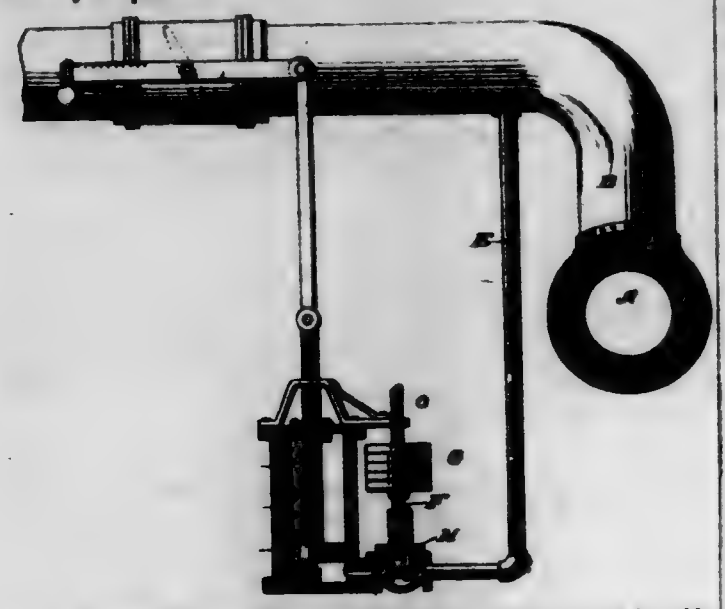
710,247. BLAST-REGULATOR FOR FURNACES. JOHN W. CABOT, Johnstown, Pa., and SAMUEL W. VANDEVER, Lorain, Ohio. Filed Mar. 3, 1902. Serial No. 96,414. (No model.)

Claim.—1. In the smelting of ores with hot blast, an apparatus for automatically mixing hot blast and cold blast together, consisting of a hot-blast pipe, a cold-blast pipe, a branch pipe connecting the two, a valve situated in said branch pipe, and means for opening such valve upon increase of back pressure in the furnace, substantially as specified.

2. The combination with a blast-furnace, of a hot-blast main, a cold-blast-supply pipe, a branch pipe of said main connected to the cold-blast-supply pipe, a cold-blast-admission valve, a cylinder, the piston in said cylinder, and having an operating connection with said valve, a pipe for conveying furnace-blast pressure to said cylinder, and a balanced valve in said pipe, substantially as specified.

3. The combination with a blast-furnace, of a hot-blast main, a cold-blast-supply pipe, a branch pipe of said main connected to said cold-blast-supply pipe, a cold-blast-admission valve, a cylinder, and an operating-piston for said valve therein, and having means in connection therewith

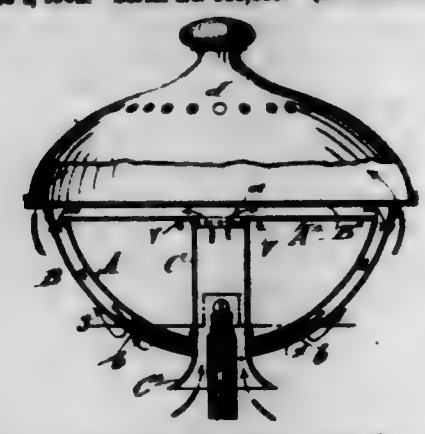
for closing the valve upon decrease of back pressure in the furnace, substantially as specified.



4. The combination with a blast-furnace, of a hot-blast main, its cold-blast-supply pipe, a branch pipe of said main connected to the cold-blast-supply pipe, a pivoted cold-blast valve, a lever connected to the pivot of such valve, a cylinder having a piston therein connected with said lever, a pipe for conveying the furnace-blast pressure to said cylinder, and a balanced valve in said pipe, substantially as specified.

5. The combination with a blast-furnace, of a hot-blast main, its cold-blast-supply pipe, a branch pipe of said main connected to the cold-blast-supply pipe, a cold-blast valve, a cylinder having a piston for operating said valve, a pipe for conveying furnace-blast pressure to said cylinder, and a balanced valve in said pipe having a hollow valve-stem for exhausting said cylinder, substantially as specified.

710,248. GAS-HEATER. JOHN W. CARTER, Rutherford, N. J., assignor to Wesley S. Hook, Brooklyn, N. Y. Filed July 20, 1900. Renewed June 4, 1902. Serial No. 110,188. (No model.)



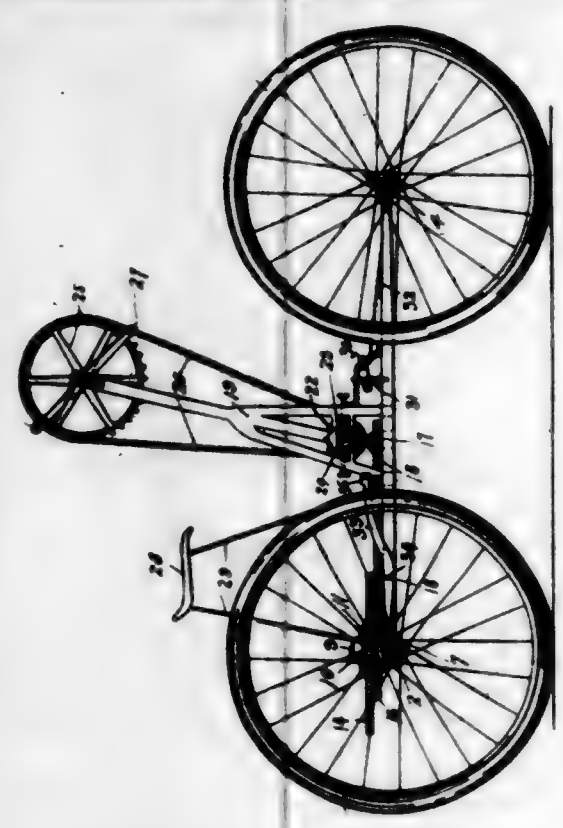
Claim.—1. A gas-heater, composed of an interior and an exterior shell, said exterior shell being provided with outlet-slots in the lower part, a central tube passing through the bottom of the interior and exterior shells to and communicating with the space above the top part of the interior shell, and an outwardly-flaring mouthpiece at the lower end of the central tube, substantially as set forth.

2. A gas-heater, composed of interior and exterior shells, said exterior shell being provided with outlet-slots in the lower part, the top part of said shells being flat, a central tube passing through the bottom part of the shells to and communicating with the space above the top part of the interior shell, said interior shell forming a heating-space with the exterior shell, and an outwardly-flaring mouthpiece at the lower end of the central tube, substantially as set forth.

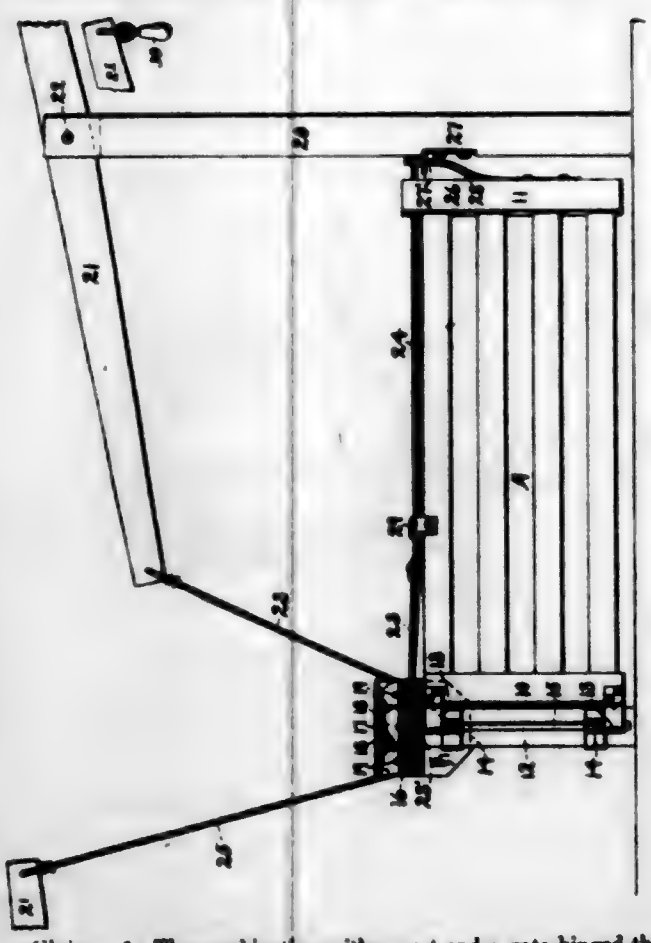
3. A gas-heater, composed of an interior and an exterior shell, said exterior shell being provided with outlet-slots, a central tube connected with said shells, and terminating at the top of the interior shell and communicating with the space between the shells and a cover of larger diameter than the exterior shell and supported on lugs of the exterior shell, said cover being provided with discharge-openings at its upper part, substantially as set forth.

710,249. ROAD-VEHICLE. PEER CHRISTIANSEN, Scriven, Minn. Filed Nov. 30, 1901. Serial No. 84,165. (No model.)

Claim.—In a machine of the character described, the combination with a traction-wheel having a gear 7, of a drive therefor involving the gear 14, the vertically-movable gears 8 and 11, the former engaging the gear 7, and the latter said gear 14 and operating as described, of the foot-operated lever 33 pivoted at 34 and acting on said gears 8 and 11 to throw the former into and out of engagement with the coöperating gear 7 and means for driving said traction-wheels involving cranks located in position to be engaged by the rider's hands, substantially as described.



710,250. GATE. JOHN CLIFTON, Livingston, Mont., assignor to Thomas D. Millen, John D. Millen, and Michael J. Carroll, Springfield, Mass. Filed Jan. 9, 1902. Serial No. 88,965. (No model.)

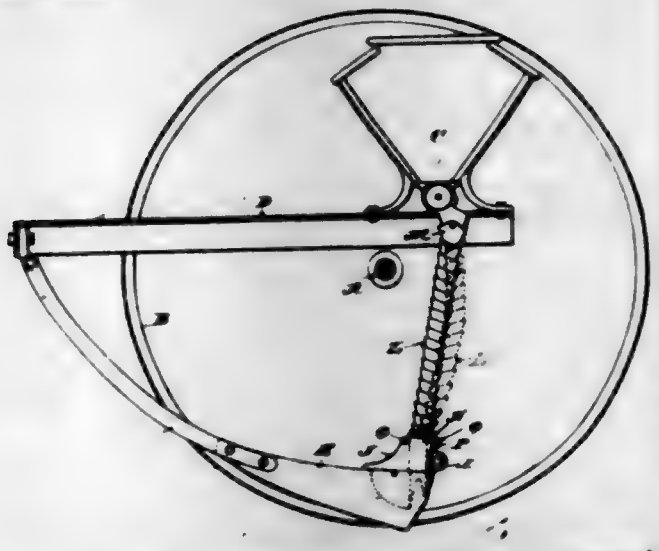


Claim.—1. The combination with a post and a gate hinged thereto, of a rotary member at the rear of said gate, a spring-latch on the front of the gate, a post having a catch interposed in the path of travel of said gate-latch which is adapted to be engaged by and disengaged from said catch, a reciprocating rod attached at one end to the latch, cords fastened to the other end of said rod and at opposite points on said rotary member, idlers bracketed to the first-mentioned gate-post, under which said

cords pass, and operating-levers to which the cords are attached, substantially as herein shown and described.

2. The combination with a post and a gate connected therewith by hinges and a rod, of a rotary member fast on said rod, a spring-latch on the front of said gate, a post having a catch interposed in the path of travel of said gate-latch which is adapted to be engaged by and disengaged from said catch, a reciprocating rod attached at one end to the latch, cords fastened to the other end of said rod and at opposite points on said rotary member, idlers bracketed to the first-mentioned gate-post, under which said cords pass, and operating-levers to which said cords are attached, substantially as herein shown and described.

710,251. SEEDING-MACHINE. FREDERICK S. COLLEY, Macedon, N. Y., assignor to Bickford and Huffman Company, Macedon, N. Y., a Corporation of New York. Filed June 21, 1902. Serial No. 113,703. (No model.)



Claim.—1. In a seeding-machine, the combination of a grain-delivery mechanism and a shoe, with a flexible telescopic tube connected at one end to the grain-delivery mechanism and positively connected at the other end to the shoe, the flexible and telescopic construction of the tube permitting it to yield both laterally and longitudinally.

2. In a seeding-machine, the combination of a grain-delivery mechanism and a shoe, the shoe being provided with a short boot, with a flexible telescopic tube connected at one end to the grain-delivery mechanism and positively connected at the other end to the boot, the flexible and telescopic construction of the tube permitting it to yield both laterally and longitudinally.

3. In a seeding-machine, the combination of a grain-delivery mechanism and a shoe, with a flexible telescopic tube connected at one end to the grain-delivery mechanism and detachably connected at the other end to the shoe, the flexible and telescopic construction of the tube permitting it to yield both laterally and longitudinally.

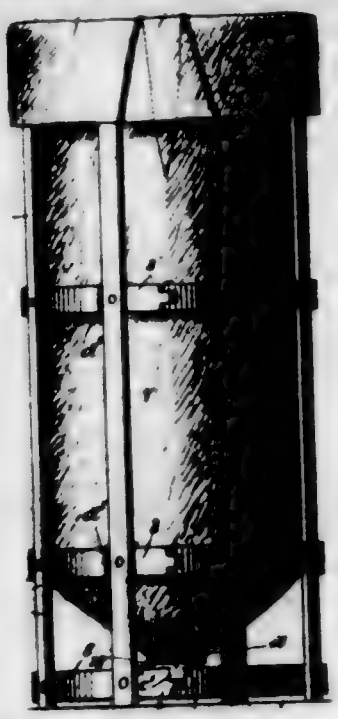
4. In a seeding-machine, the combination of a grain-delivery mechanism and a shoe, with a flexible telescopic tube connected at one end to the grain-delivery mechanism and detachably connected at the other end to the shoe, the said detachable connection comprising two projecting lugs on the tube, a pin formed upon the shoe for engagement with one of the lugs, and a second pin to detachably connect the other lug to the shoe.

5. In a seeding-machine, and in combination with a shoe and a grain-delivery tube, a detachable connection therefor comprising two projecting lugs upon the tube, a pin formed upon the shoe to engage one of the lugs, the shoe being also formed with a recess to embrace the other lug, and a pin to hold the lug in the recess.

710,252. KNOCKDOWN BANANA-SHIPPING CRATE. JACOB CONRAD, Chicago, Ill. Filed Jan. 8, 1902. Serial No. 88,231. (No model.)

Claim.—1. A shipping-crate of the class described, comprising the complemental members connected together for folding compactly one on the other and adapted to be set up to form an open-ended rigid supporting framework, means for locking the members of said framework rigidly in their active positions, and a bag attached to and disposed within said members and collapsible or expansible with the framework.

2. A shipping-crate of the class described, comprising complemental members each having slats and yieldable band or hoop sections, said members having the band or hoop sections thereof connected together to permit the members to be folded compactly or to be assembled to form a rigid framework, means for locking said band or hoop sections to retain the members in their active positions, and a bag collapsible or expansible with the framework formed by the members.



3. A shipping-crate of the class described, comprising a collapsible framework having complemental members each formed by a series of slats and a series of band or hoop sections, means for pivotally connecting the hoop or band sections of said members, means for locking said band or hoop sections in place on the adjustment of the complemental members in their active positions, and a bag collapsible or expansible with the framework formed by the sections.

4. A shipping-crate of the class described, comprising an open-ended surrounding framework, a bag attached to said framework and provided in its open end with an inserted gusset adapted to form an expanded or enlarged mouth, said expanded mouth portion of the bag adapted to extend beyond the framework, and means adapted to extend across the end portions of the framework and the bag when the latter is closed, said means adapted to partly sustain the load in the bag.

5. A knockdown shipping-crate, comprising a surrounding framework, and a bag arranged within and attached to said framework, said bag having a closed end terminating within the framework, and an expanded end which is formed by an inserted gusset.

6. A knockdown shipping-crate, comprising a surrounding framework, a bag arranged within and attached to said framework, and load-take-up chains or cables attached to the framework and across the closed ends of the bag.

7. A knockdown shipping-crate, comprising foldable sections having attached hoop members, means for connecting said hoop members together, and clamps arranged to straddle the joints between the hoop members and to maintain the hoops in non-collapsible order and to hold the foldable sections in rigid operative condition.

8. A knockdown shipping-crate, comprising foldable members having attached hoop-sections, means for detachably connecting the hoop members together, and clamps straddling the hoop members and spanning the joints between the same, said clamps holding the hoops and the foldable members in operative condition.

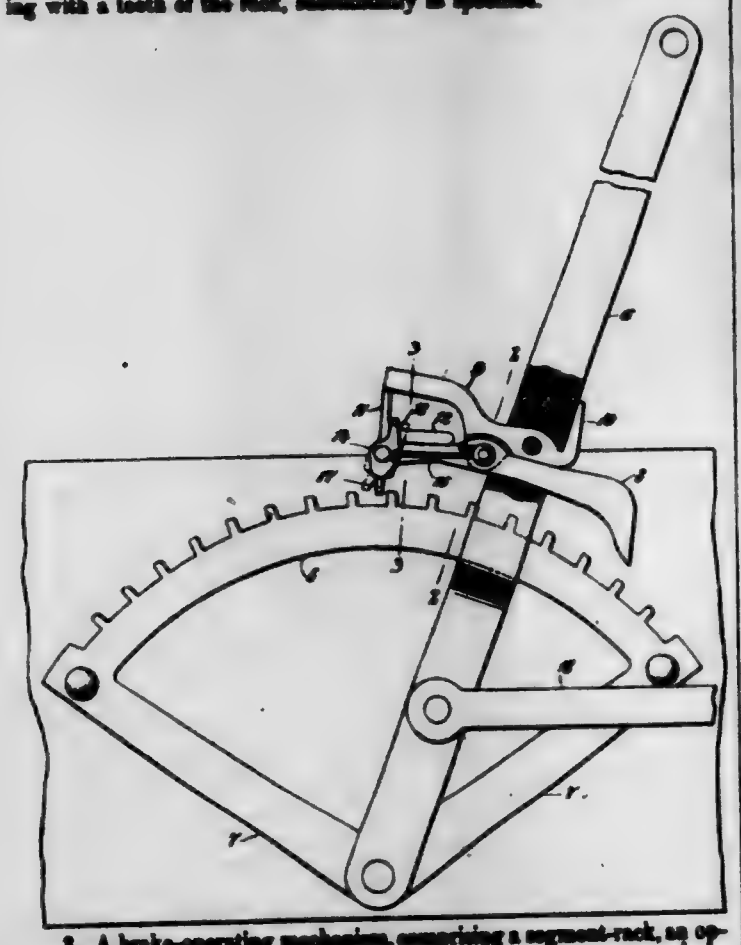
9. A shipping-crate of the class described, comprising a framework, a bag supported within the framework, and load-sustaining means disposed across end portions of the bag when the same are closed, said means being attached to the framework and adapted to be readily displaced to permit access to an end portion of the bag.

710,258. BRAKE MECHANISM. HARRY W. OOLEY, Lost Valley, Oreg., assignor of one-half to Herbert Halstead, Lost Valley, Oreg. Filed Feb. 24, 1902. Serial No. 96,271. (No model.)

Claim.—1. A brake-operating mechanism comprising a segment-rack, a lever adapted for connection with a brake, a weight-lever pivoted to the first-named lever, a dog having swinging connection with the weight-lever, a latch pivoted to the forward end of the dog and adapted for engagement with the weight-lever, and a tripping device for moving said latch out of engagement with the weight-lever, substantially as specified.

2. A brake-operating mechanism comprising a segment-rack, an operating-lever, a weight-lever pivoted to the operating-lever, a dog having swinging connection with the weight-lever, a latch pivoted to the forward end of the dog and having an upwardly-extended portion designed to en-

gage with the forward end of the weight-lever, a tripping device pivoted to the forward end of the dog and having a portion for engaging the upper side of the latch, and a projection on said tripping device for engaging with a tooth of the rack, substantially as specified.



3. A brake-operating mechanism, comprising a segment-rack, an operating-lever, a weight-lever having swinging connection with the operating-lever, a dog having swinging connection with the weight-lever, a latch pivoted to the forward end of the dog and having an upwardly-extended portion for engaging underneath the forward end of the weight-lever and a rearwardly-extended portion for engaging on the upper surface of the dog, a tripping device pivoted to the forward end of the dog and having a portion for engaging with the upper side of the rearwardly-extended part of the latch, a spring for holding the tripping device in normal position, and a downward projection on said tripping device for engaging with a tooth of the rack, substantially as specified.

4. A brake-operating mechanism comprising a segment-rack, an operating-lever, a weight-lever having swinging connection therewith and having a rear portion adapted for engagement with the rear side of the operating-lever, a dog pivoted to the weight-lever, a latch pivoted to the forward end of the dog and having an upwardly-extended portion for engaging underneath the forward end of the weight-lever and a horizontally-disposed portion for engaging on the upper side of the dog, a cam projection at the junction of said two portions, a tripping device pivoted to the forward end of the dog and having portions extended along the sides of the latch and portions for engaging on the upper side thereof, and a projection on said tripping device for engaging with a tooth of the rack, substantially as specified.

710,254. VEHICLE-AXLE. JOHN H. COOPER, Madera, Cal., assignor of one-half to Levi Wilcox, Merced, Cal. Filed May 31, 1902. Serial No. 109,982. (No model.)

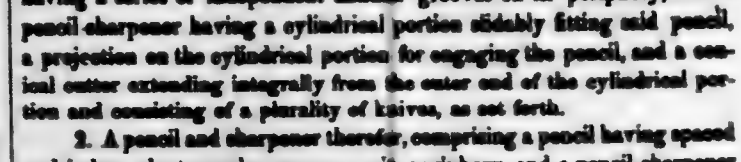
Claim.—1. The combination with an axle, of stubs having cylindrical extensions with screw-threads at the inner portions, and a tubular spindle fitting over each of the said extensions and having substantially square extensions at the inner end corresponding approximately in shape with the axle, said square extensions being internally threaded to engage the threads at the inner end of the tubular extension of the stub.

2. The combination with an axle, of a stub having a cylindrical extension provided, at the inner end, with screw-threads; a tubular sleeve extending the length of, and fitting over, the cylindrical extension, and having a square extension at the inner end fitting over the threaded portion of the cylindrical extension and internally threaded to engage the latter, means for clamping said extension of the sleeve and the stub to a main portion of the axle, and a nut upon the outer end of the cylindrical extension for retaining the wheel in place.

3. The combination in a wheel-axle of the stub having a cylindrical extension, a sleeve or spindle fitting said extension forming a bearing upon which the wheel-hub box turns, said cylindrical extension having a threaded portion at its inner end and said sleeve having a square extension at its inner end internally threaded to engage the threads of the cylindrical extension, and means clamping the squared end of the sleeve extension to a main part of the axle, said cylindrical extension having threads upon its outer end, and a chambered nut fitting upon said threads adapted to contain washers whereby compensation for wear is effected.

4. The combination in a vehicle-axle of a stub having a cylindrical screw-threaded extension, a tubular sleeve or spindle fitting over said extension having the inner end screw-threaded to fit corresponding threads of the stub whereby the two parts are united with the rectangular portions of the axle coincident, a clip-plate extending across beneath the joint of the two having lugs at each end, and clips fitting over the two parts of the axle adjacent to the joint whereby the latter is locked and strengthened.

710,255. PENCIL AND SHARPENER THEREFOR. ROBERT Y. CORNACK, Jamaica, N. Y. Filed Dec. 5, 1901. Serial No. 84,719. (No model.)



Claim.—1. A pencil and sharpener therefor, comprising a pencil having a series of independent annular grooves on its periphery, and a pencil-sharpener having a cylindrical portion slidably fitting said pencil, a projection on the cylindrical portion for engaging the pencil, and a conical cutter extending integrally from the outer end of the cylindrical portion and consisting of a plurality of knives, as set forth.

2. A pencil and sharpener therefor, comprising a pencil having spaced and independent annular grooves on its periphery, and a pencil-sharpener having a cylindrical portion slidably fitting said pencil, a projection on the cylindrical portion for engaging the pencil, and a conical cutter extending integrally from the outer end of the cylindrical portion, said conical cutter being formed of a plurality of spaced knife-blades, each blade having one edge turned inward to form a cutting edge, and the other edge of the blade having a portion bent inward to form a roughening edge, as set forth.

3. A pencil and a sharpener therefor, comprising a pencil having peripheral grooves, and a pencil-sharpener having a cylindrical portion slidably fitting said pencil, a projection on the cylindrical portion for engaging the pencil, a conical cutter extending integrally from the outer end of the cylindrical portion and consisting of a plurality of knives, and a manually-controlled spring-arm extending integrally from the inner edge of the cylindrical portion, said arm having a bend engaging one of the grooves in the pencil, as set forth.

4. A pencil and a sharpener therefor, comprising a pencil having peripheral grooves, and a pencil-sharpener having a cylindrical portion slidably fitting said pencil, a projection on the cylindrical portion for engaging the pencil, a conical cutter extending integrally from the outer end of the cylindrical portion and consisting of a plurality of knives, and a manually-controlled spring-arm extending integrally from the inner edge of the cylindrical portion, said arm having a bend engaging one of the grooves in the pencil, said bend and the projection being so arranged that when one engages a groove, the other extends on the peripheral face of the pencil between adjacent grooves, as set forth.

5. A pencil and sharpener therefor, comprising a pencil having peripheral grooves, and a pencil-sharpener having a cylindrical portion slidably fitting said pencil, a projection on the cylindrical portion for engaging the pencil, and a conical cutter extending integrally from the outer end of the cylindrical portion and consisting of a plurality of knives, each cutter having near its outer end a cut-out portion to render the point of the cutter flexible, as set forth.

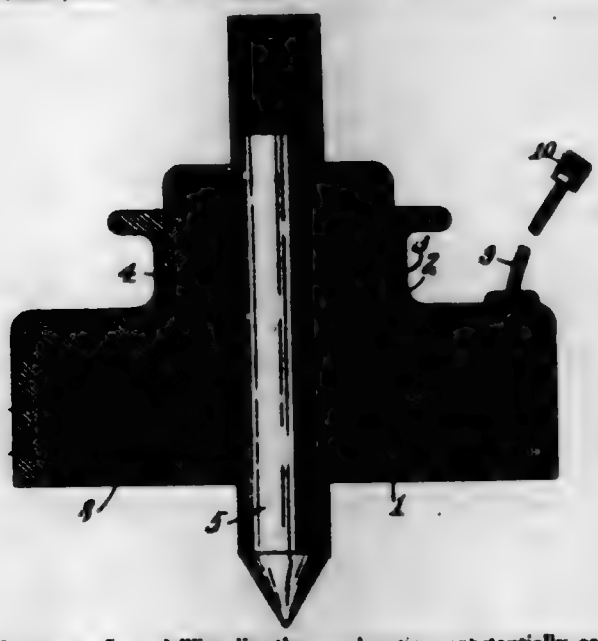
6. A pencil and a sharpener therefor, comprising a pencil having a series of independent annular grooves on its periphery, and a pencil-sharpener consisting of a cylindrical portion and a conical cutter projecting from one end thereof the said cylindrical portion slidably mounted on the pencil and provided with means for preventing it from turning and sliding on the pencil; as set forth.

710,256. CAR-COUPLING. DAVID J. DAVIS, Vanlear, Pa. Filed Dec. 19, 1901. Serial No. 86,542. (No model.)

Claim.—In a car-coupling, the combination with the boxing attached having its rear end closed, and a partition extending across the boxing, of a draw-bar mounted to slide in said boxing in advance of said partition, a stem connected to the rear end of said draw-bar and project-

ing through the partition and through the rear end of said boring, a coiled spring about said stem, a stop secured to the stem in advance of the partition and between which and the draw-bar the coiled spring is confined, and a second stop secured to the end of the stem, and, when the stem and draw-bar are in normal position and not under the stress of the spring, adapted to abut against the forward end of the draw-bar and relieve the partition of undue pressure caused by shock or jar in the coupling of cars, substantially as set forth.

710,257. MAGNETIC DRILLING-JIG. ADOLPH L. DE LEEUW, Hamilton, Ohio. Filed Mar. 24, 1902. Serial No. 99,624. (No model.)



Claim.—1. In a drilling-jig, the combination, substantially as set forth, of an electromagnet having a polar face adapted for contact with the surface of the work to be drilled and provided with a cylindrical guideway having its axis at right angles to the plane of said polar face and terminating at or near the plane of said polar face, and a concentric guiding-bushing separably disposed within said guideway and adapted to engage the body of the drill near the cutting-lips thereof.

2. In a drilling-jig, the combination, substantially as set forth, of an electromagnet having a polar face adapted for contact with the surface of the work to be drilled and provided with a cylindrical guideway having its axis at right angles to the plane of said polar face and terminating at or near the plane of said polar face and adapted to engage the body of a drill, and a conically-pointed center plug concentrically disposed within said guideway and mounted for endwise movement therein and removable therefrom.

3. In a drilling-jig, the combination, substantially as set forth, of an electromagnet having a polar face adapted for contact with the surface of the work to be drilled and provided with a cylindrical guideway having its axis at right angles to the plane of said polar face and terminating at or near the plane of said polar face, a bushing of non-magnetic material fixed within said guideway, and a drill-guiding bushing separably disposed within said first-mentioned bushing and adapted to engage the body of the drill.

4. In a drilling-jig, the combination, substantially as set forth, of an electromagnet having a polar face adapted for contact with the surface of the work to be drilled and provided with a cylindrical guideway having its axis at right angles to the plane of said polar face and terminating at or near the plane of said polar face, a concentric bushing separably disposed within said guideway and adapted to engage the body of the drill, and a conically-pointed center plug separably disposed within said bushing.

5. In a drilling-jig, the combination, substantially as set forth, of an electromagnet having a polar face adapted for contact with the surface of the work to be drilled and provided with a cylindrical guideway having its axis at right angles to the plane of said polar face and terminating at or near the plane of said polar face, a bushing of non-magnetic material fixed within said guideway, a concentric bushing separably disposed within said first-mentioned bushing and adapted to engage the body of the drill, and a conically-pointed center plug separably disposed within said separable bushing.

6. In a drilling-jig, the combination, substantially as set forth, of a disk formed of magnetic material and having its lower face concentrically grooved and having a central bore, an energizing-coil disposed within said groove, and a center plug concentrically and separably disposed within said central bore.

7. In a drilling-jig, the combination, substantially as set forth, of a disk formed of magnetic material and having its lower face concentrically grooved and having a central bore, an energizing-coil disposed within said groove, a lining-bushing of non-magnetic material fixed in said central bore, a concentric bushing separably disposed within said lining-bushing, and a conically-pointed center plug disposed within said separable bushing.

8. In a drilling-jig, the combination, substantially as set forth, of a disk formed of magnetic material and having its lower face concentrically grooved and having a central bore, an energizing-coil disposed within said groove, a retaining-ring of non-magnetic material secured to said disk and forming a floor to said concentric groove, a concentric bushing separably disposed within said bore, and a conically-pointed center plug concentrically and separably disposed within said bore.

9. In a drilling-jig, the combination, substantially as set forth, of a guide having a cylindrical drill-guiding bore whose inner end terminates in substantial juxtaposition with the face of the work when the jig is in position on the work whereby it is adapted to engage the body of the drill at the surface of the work to be operated upon, and an electromagnet connected therewith and adapted to adjustably fix said guide in relation to the work to be drilled.

10. The improved centering and drilling jig comprising a guideway transversely adjustable upon the face of the work to be drilled and adapted to engage the body of the drill to be employed and adapted to alternatively engage a center plug, an electromagnet connected with said guideway and serving to hold it to the face of the work after adjustment, and a cylindrically-bodied conically-pointed center plug adapted to fit said guideway and serve in positioning the guideway concentric with a center-mark engaged by the point of the center plug, combined substantially as and for the purpose set forth.

11. The improved centering and drilling jig comprising a jig-body having a guideway whose inner end terminates in substantial juxtaposition with the face of the work when the jig is in position on the work whereby it is adapted to fit the body of a drill and having a contact-surface at right angles thereto to engage the flat surface of the work to be drilled, and means for sticking said contact-surface to the flat surface of the work independent of the margins of the surface of the work, substantially as and for the purpose set forth.

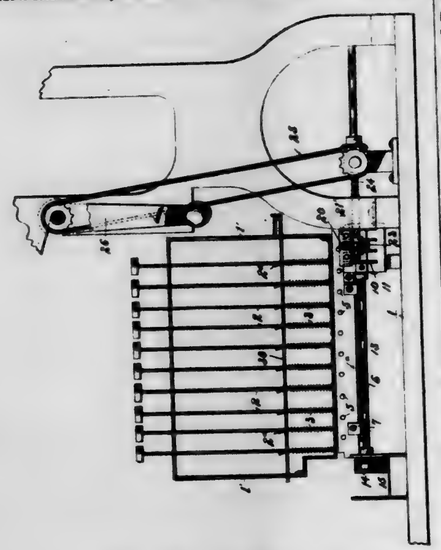
12. The improved device for aiding in the production of drilled holes concentric with a center-punch mark established in the surface of the work, said device consisting of a jig-body having a guideway whose inner end terminates in substantial juxtaposition with the face of the work when the jig is in position on the work whereby it is adapted to engage the body of the drill and be shifted over the surface of the work till it is concentric with the established center-punch mark, means for sticking said guideway to the surface of the work after it has been adjusted, and a concentric-pointed center plug slidably and removably mounted in the guideway of the jig and serving to position the jig while the point of the center plug is in the established center-punch mark, substantially as and for the purpose set forth.

13. The improved device for aiding in the production of drilled holes concentric with a center-punch mark established with the surface of the work, said device consisting of a cylindrical plug with a pointed end adapted to be set in said center-punch mark, a jig-body having a guideway in which said plug slidably and removably fits and having a contact-surface at right angles to the axis of said guideway, and means for sticking said contact-surface to the surface of the work while the guideway engages the body of the plug and the point of the plug engages the established center-punch mark, substantially as and for the purpose set forth.

710,258. KEYBOARD MECHANISM FOR CASH-REGISTERS. ISAAC S. DENNEY, East Orange, N. J., and PETER J. HILL, Brooklyn, N. Y., assignors, by mesne assignments, to American Mechanical Cashier Company, a Corporation of New Jersey. Filed Sept. 23, 1901. Serial No. 76,048. (No model.)

Claim.—1. A keyboard mechanism for cash registers and recorders, comprising a plurality of groups of keys, a plurality of groups of coöperating slides operated by said keys and a plurality of controller-slides pro-

vided with actuating means and adapted to engage the selector-slides and to be limited in their movement by such engagement, each controller-slide being movable to carry its engaging portion in a path adjacent and parallel to the stop portions of the selecting-slides, which are arranged in a line transverse to the movement of said selecting-slides so that the same portion of the controller-slide engages with any one of the selecting-slides that has been projected, and the movement of the controller-slide is determined by the transverse distance between the selecting-slides.



2. In combination with the controller-slides for a cash register or recorder, and means for actuating said controller-slides, of a plurality of selecting-slides arranged parallel to one another and transversely to the controller-slides, said selecting-slides being arranged in groups one group for each controller-slide, and each of the controlling-slides being adapted to be engaged and stopped by any one of the corresponding groups of selecting-slides, and keys for operating said selecting-slides, each controller-slide being movable to carry its engaging portion in a path adjacent and parallel to the stop portions of the selecting-slides, which are arranged in a line transverse to the movement of said selecting-slides so that the same portion of the controller-slide engages with any one of the selecting-slides that has been projected, and the movement of the controller-slide is determined by the transverse distance between the selecting-slides.

3. In combination with the controller-slides for a cash register or recorder and means for actuating said controller-slides, of pawls engaging the respective controller-slides, selecting-slides arranged in groups engaging the respective pawls to release the pawls from the controller-slides on the operation of any selecting-slide of the group, said selecting-slides also engaging the controller-slides when so released to stop same in selective position, and keys for operating said selecting-slides, each controller-slide being movable to carry its engaging portion in a path adjacent and parallel to the stop portions of the selecting-slides, which are arranged in a line transverse to the movement of said selecting-slides so that the same portion of the controller-slide engages with any one of the selecting-slides that has been projected, and the movement of the controller-slide is determined by the transverse distance between the selecting-slides.

4. In a keyboard mechanism for the purposes described, the combination of the selectors controlling the extent of movement of a register or recorder and the tumblers engaging therewith to operate same, and to lock the unoperated selectors.

5. The combination with the keys and the selectors, of tumblers operated by the keys and operating the selectors and locking the unoperated selectors and also the unoperated keys.

6. In a keyboard mechanism, the combination with the digit and zero keys, and the selectors, of tumblers for the digit-keys and tumblers for the zero-keys, the latter having means for automatically restoring same to normal position, and the selectors having means adapted to be engaged by all the tumblers to lock the same, and also having means adapted to be engaged by the digit-tumblers only, to operate the selectors.

7. In a keyboard mechanism, the combination with the digit and zero keys, and the selectors, of tumblers for the digit-keys and tumblers for the zero-keys, the latter having counterpoise means for automatically restoring same to normal position, and the selectors having means adapted to be engaged by all the tumblers to lock the same, and also having means adapted to be engaged by the digit-tumblers only, to operate the selectors.

8. In a keyboard mechanism for the purpose described, the combination with the plurality of keys and the plurality of selecting-slides, of the plurality of pivoted tumblers engaged by the respective keys and engaging with the selecting-slides to operate a slide on the operation of the corresponding key and to lock the other slides.

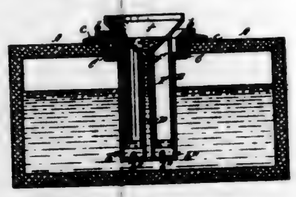
9. In a keyboard mechanism for the purpose described, the combination with the plurality of groups of keys and the corresponding groups of selecting-slides, of groups of pivoted tumblers arranged between said keys and slides, each tumbler being engaged by a corresponding key and engaging a corresponding slide, to operate the latter, and also engaging all the other selector-slides of the same group to lock the same from movement.

10. The combination of the sliding-keys, the selecting-slides moving transversely to the keys, the pivoted tumblers interposed between said slides and keys, each tumbler serving to operate one slide and lock other slides, and controlling mechanism for the purpose set forth, whose movement is controlled by said selecting-slides.

11. The combination with the sliding-keys, and the pivoted tumblers; of the selecting-slides, each having a lug engaged by one of said tumblers to operate the slide, and lugs cooperating with all the other tumblers when operated to prevent operation of the slide after said other tumblers are operated.

12. The combination with a plurality of selecting devices moving in parallelism, of a controller-slide serving to control apparatus of the character described and movable transversely to the selecting devices, actuating means for said controller-slide, and a pawl engaging with a stop part of said controller-slide to normally arrest said slide, said pawl being of sufficient width to be engaged by all of said selecting devices, so that on operation of any selecting device the pawl will be released from the controller-slide and the latter will move under the influence of its actuating means until it engages the operated selecting device.

710,259. INK-WELL. JAMES D. DENSON, New Brighton, N. Y. Filed June 2, 1902. Serial No. 109,861. (No model.)



Claim.—1. The combination of an ink-well, a sealing-tube connected with said well by means of an air-tight joint and extending downward approximately to the bottom of the ink-well with which it communicates at its lower extremity, a float within said sealing-tube formed with an ink-tube and dipping-cup, and a stationary tube engaging telescopically with the ink-tube of said float, and communicating at its lower extremity with the ink-well, for the purpose and substantially in the manner set forth.

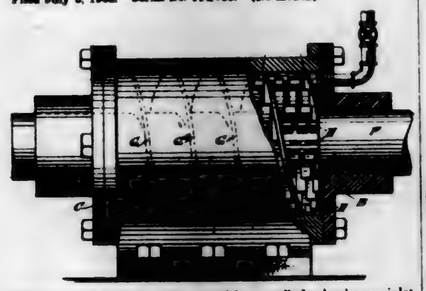
2. The combination with an ink-well of a sealing-tube connected with said ink-well by means of an air-tight joint, said sealing-tube extending downward approximately to the bottom of the well, its lower extremity being closed and it being formed with lateral openings above said closed end for communication with the ink-well, a float within said sealing-tube formed with an ink-tube and dipping-cup, and a stand-tube engaging telescopically the ink-tube on the float and opening into the ink-well below the closed lower end of the sealing-tube, for the purpose described.

710,260. SUPPORT FOR SPRING STRUCTURES. WILLIAM G. RUSH, Baldwin, N. D. Filed Nov. 22, 1901. Serial No. 83,208. (No model.)

Claim.—A support for a spring structure comprising a socket and a rod vertically movable in the said socket and provided with a head at the upper extremity formed of malleable metal and provided with an outer reinforced enlargement, the said head having bendable jaws leading to an elongated bore in the plane at right angles to the rod.

710,260.

710,261. ROTARY ENGINE. WILLIAM F. EVANS, Chicago, Ill. Filed July 8, 1902. Serial No. 114,769. (No model.)



Claim.—1. A rotary engine comprising a cylinder having an inlet at one end and an outlet at the other end, a piston mounted to turn in the said cylinder, comprising a shaft extending centrally in the cylinder, spirals on the shaft extending to the inner surface of the cylinder, and blades on the shaft, between adjacent spirals and extending to the inner surface of the cylinder, as set forth.

2. A rotary engine comprising a cylinder having an inlet at one end and an outlet at the other end, a piston mounted to turn in the said cylinder, comprising a shaft extending centrally in the cylinder, spirals on the shaft extending to the inner surface of the cylinder, and blades on the shaft, between adjacent spirals and extending to the inner surface of the cylinder, the said blades being arranged in longitudinal rows and the blades of adjacent rows breaking joints, as set forth.

3. A rotary engine comprising a cylinder having an inlet at one end and an outlet at the other end, a piston mounted to turn in the said cylinder and having a shaft extending centrally in the cylinder, opened spirals on the shaft, extending to the inner surface of the cylinder, and blades extending radially on the shaft between adjacent spirals and reaching to the inner surface of the cylinder, the blades being arranged in longitudinal rows, the blades of adjacent rows breaking joints, as set forth.

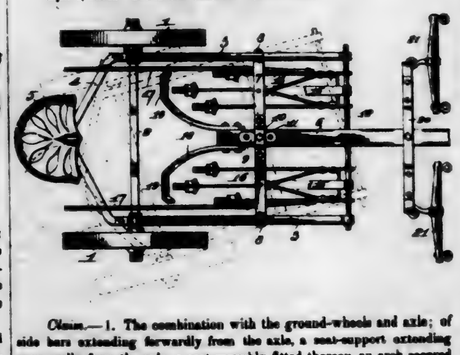
710,262. SHEET-METAL PIPE. FRANK L. FILSON, Point Pleasant, W. Va. Filed June 6, 1902. Serial No. 110,470. (No model.)

Claim.—1. A sheet-metal pipe having a double fold upon itself at one edge, the fold members being opened apart forming an opening at the edge, a hole being provided at the bend of the folded members, and a wire on the opposite edge adapted to pass between the fold members and having a portion for passing through said hole, substantially as specified.

2. A sheet-metal pipe having a double fold upon itself at one edge, the fold members being opened apart forming an opening at the edge, a hole being provided at the bend of the folded members, a wire at the opposite edge, said opposite edge being lapped over the wire, and an outwardly-extended loop formed in said wire for passing through said hole, substantially as specified.

3. A sheet-metal pipe having a double fold upon itself at one edge, the fold members being opened apart forming an opening at the edge, a hole being provided at the bend of the folded members, and a wire secured in a lapped portion of the opposite edge and having a looped portion for passing through said hole, the ends of the wire being extended beyond the pipe length whereby the ends of wires of connected lengths or joints may be twisted together, substantially as specified.

710,268. CULTIVATOR. JOSHUA FRANKLIN, Moseley, Ala. Filed Apr. 4, 1902. Serial No. 101,954. (No model.)



Claim.—1. The combination with the ground-wheels and axle; of side bars extending forwardly from the axle, a seat-support extending rearwardly from the axle, a seat movably fitted thereon, an arch secured to the side bars intermediate their ends, a tongue pivotally mounted upon the arch, push-arms attached to the rear ends of the tongue, an arch-hanger forming a forward rest for the tongue, having its ends turned outwardly, and seated in the forward ends of the side bars, plows having a vertical movement upon outwardly-turned end of the arch-hanger, and lift-lever extending from the plows rearwardly to a point adjacent to the seat.

2. The combination with the ground-wheel and axle; of side bars extending forwardly from the axle, an arch secured to the side bars intermediate their ends, a tongue pivotally mounted upon the arch, push-arms attached to the rear ends of the tongue, an arch-hanger forming a forward rest for the tongue, having its ends turned outwardly, and seated in the forward ends of the side bars, and plows having a vertical movement upon outwardly-turned end of the arch-hanger.

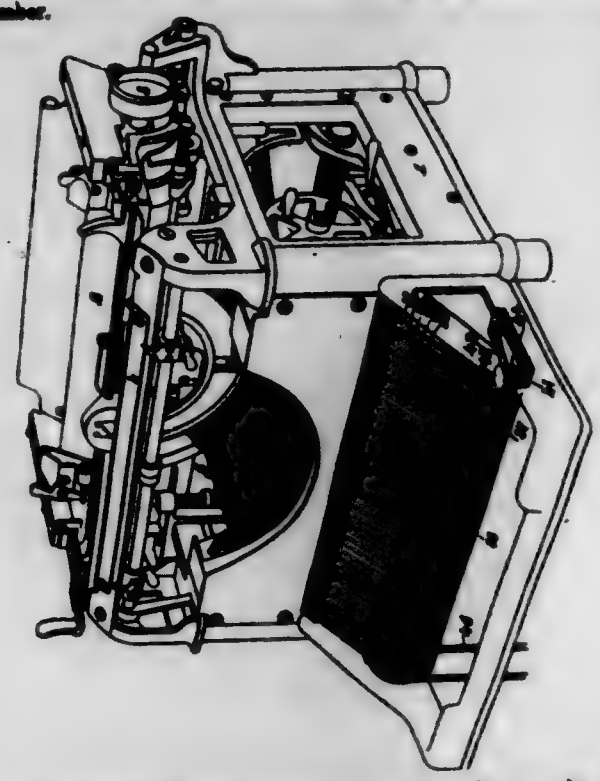
3. The combination with the ground-wheels and axle, of a rectangular frame extending forwardly from the axle, plows pivoted to the front of the frame to swing vertically only and operating in advance of the axle, an arch secured to the side bars of the frame intermediate their ends, a tongue having pivotal connection with the arch, and means carried by said tongue adapted to receive pressure to produce a lateral swing of the plows simultaneously with the frame, axle and wheels.

710,264. ELECTRICAL TYPE-WRITER. CHARLES GIBBS, New York, N. Y. Filed Apr. 18, 1902. Serial No. 103,581. (No model.)

Claim.—1. An electric type-writer, comprising a mechanical type-writer provided with levers, a plurality of magnetic members connected individually with said levers for operating the same, a battery for energizing said magnetic members, a plurality of brushes connected separately with said magnetic members and provided with contact-surfaces, a revolvable member provided with contact-surfaces for engaging said brushes, means for actuating said revolvable member, and a manually-operated key connected with said cylinder and with said battery for the purpose of closing the circuit thereof.

2. An electric type-writer, comprising a mechanical type-writer provided with levers, a plurality of magnetic members connected individually with said levers for operating the same, a battery for energizing said magnetic members, brushes connected to said battery and provided with contact-surfaces, a member of conducting material, means for intermit-

tingly making and breaking contact between said brushes and said members, and a manually-operated key connected with said battery and with said member.



3. An electric type-writer comprising a mechanical type-writer provided with levers, a plurality of magnetic members connected individually with said levers for operating the same, a battery for energizing said magnetic members, brushes provided with contact-surfaces, a revoluble cylinder of conducting material, means for rotating the same, a jacket of insulating material provided with apertures and mounted upon said cylinder, said apertures being in alinement with said brushes, and a manually-operated key connected with said cylinder of conducting material and with said battery.

4. An electric type-writer, comprising a mechanical type-writer provided with levers, a plurality of magnetic members connected individually with said levers for operating the same, a battery for energizing said magnetic members, a series of separable contacts, means for automatically opening and closing said contacts in a predetermined relative order, and manually-operated mechanism provided with contacts free to open and close independently of said first-mentioned contact.

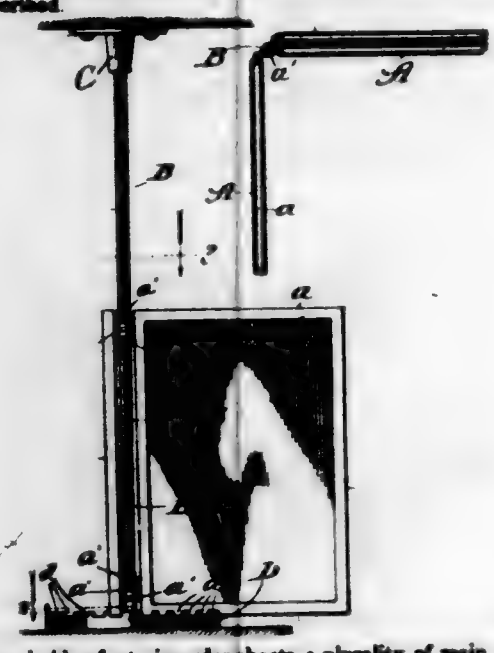
5. An electric type-writer, comprising a mechanical type-writer provided with levers, a plurality of magnetic members connected individually with said levers for operating the same, a source of electrical supply for energizing said magnetic members, a plurality of conductors connecting said source of electrical supply and said magnetic members together in parallel, a plurality of brush-contacts connected individually with said conductors, a revoluble member provided with a series of contact-surfaces to be engaged individually by said brush-contacts, means for causing said brush-contacts to engage said contact-surfaces periodically and in a predetermined order, and a single electric key connected with said member and with said source of electrical supply for opening and closing the circuits thereof at will.

6. An electric type-writer, comprising a mechanical type-writer provided with levers, a plurality of magnetic members connected individually with said levers for operating the same, a battery for energizing said magnetic members, a plurality of brushes connected in parallel with said battery and said magnetic members, a cylinder of conducting material, an insulating-jacket mounted thereon and provided with holes disposed in parallel spiral rows, said holes being in alinement with said brushes, and a single key electrically connected with said cylinder and said battery.

710,265. HOLDER FOR TRAIN-ORDERS. Louis C. Guss, Leslie, Mich. Filed July 10, 1902. Renewed Mar. 8, 1902. Serial No. 97,262. (No model.)

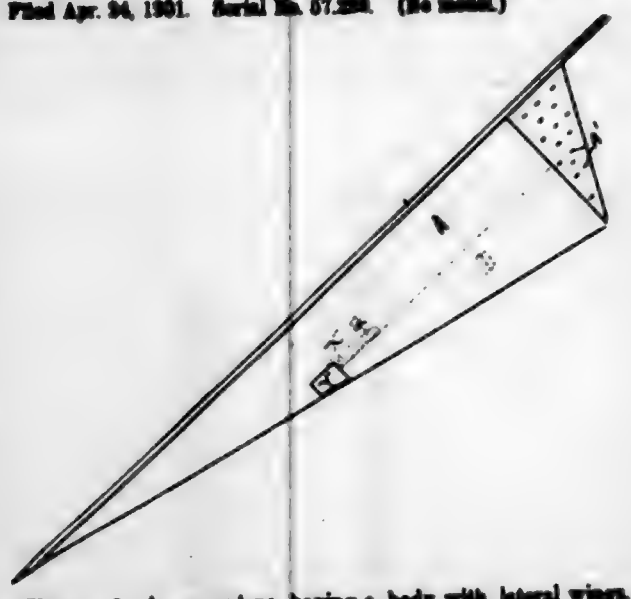
Claim.—1. In a holder for train-order sheets, a main or carrying frame composed of a closed bottom, an open top, and side pieces, each side piece having a channel or groove on its inner face, a slide consisting of two transparent plates and a binding or protecting strip inclosing each plate and furnishing a separation for the plates to form a receptacle between them, protected when the slide is inserted in the main frame, to receive and retain a train-order for the order to be visible and readable through the transparent plates, and means for pivotally supporting, locking and retaining the main or carrying frame in the position for reading the order, substantially as described.

2. In a holder for train-orders, a main or carrying frame composed of a closed bottom, an open top, and side pieces, each side piece having a channel or groove on its inner face, two transparent plates, each having side and end binding-pieces or protecting-strips, separating the plates when placed side by side and inserted in the channel or groove of the main-frame side pieces, for the transparent plates to have a space between them, for receiving and retaining train-orders therein, for the orders to be visible and readable through the transparent plates, and means for pivotally securing and holding the main frame in position for the orders to be readable when held in position between the transparent plates, substantially as described.



3. In a holder for train-order sheets, a plurality of main or carrying frames, each composed of a closed bottom, an open top, and side pieces, each side piece having a channel or groove on its inner face, two transparent protecting-plates, each plate having a binding strip or piece on each side edge, separating the plates and leaving a space between them when placed side by side and entered into the grooves or channels of the main frame, for the space to form a receptacle for the insertion and retention of train-orders, for such orders to be readable through the plates, a supporting-bracket, a vertical post on the supporting-bracket having the main or carrying frame pivotally directed thereto, and fixed notches in the supporting-brackets receiving the lower edges of the main or carrying frames and holding such frames in position for reading the orders, substantially as described.

710,266. AEROPLANE. Theodore Sinor, Clarksville, Texas. Filed Apr. 24, 1901. Serial No. 57,228. (No model.)



Claim.—1. An aeroplane having a body with lateral wings, said wings having openings for the discharge of motive fluid to operate by reaction.

2. An aeroplane, having a body with lateral wings, a motive-fluid supply, and pipes leading therefrom to discharge-outlets in different sections of the aeroplane, and valves in the pipes to control the discharge of motive fluid from the different sections, as and for the purpose described.

3. An aeroplane, having a body with lateral wings, discharge-outlets in sections, in the wings, a motive-fluid supply and valved pipes leading from the latter to the different sections of discharge, as and for the purpose described.

710,267. APPARATUS FOR TRAINING HORSES. ALOIS GRAF, Stuttgart, Germany. Filed Feb. 15, 1902. Serial No. 94,579. (No model.)

Claim.—1. In a training apparatus for horses, the combination with a saddle-like frame carrying large and small winding-rollers for the bridle and training reins, a bridle-bit and snaffle connected to the bridle-reins by means of straps and rollers, substantially as and for the purposes as described.

2. In a training apparatus for horses, the combination with the driving and bridle reins of a frame 17 carrying a bridge 19 and winding-rollers 21, 22, small rollers 23, 24, arranged in same line as the large rollers, horizontal guide-rollers 25, 26, the whole for guiding the bridle and training reins, substantially and for the purpose as set forth.

3. In a training apparatus for horses the combination with bridle-reins 14, 16, snaffle 3, and bridle-bit 2, the bridle-reins being connected to the snaffle and bridle bit, and a connection 9 connecting the lower ends of the side arms of the bridle-bit, for the purpose substantially as described.

4. The combination with the bridle, its curb and snaffle bits and a saddle-like support, of a strap extending from the upper end of the curb-bit at one side around to the snaffle at the opposite side, a second strap extending from the lower end of the curb-bit around to the other side of the snaffle, and bridle-reins secured at one end to said support and in running connection between their ends with the said straps; substantially as described.

5. A training apparatus, comprising a bridle having curb and snaffle bits, a saddle-like support provided with a pair of differential winding-pulleys, a strap extending from the upper end of the curb-bit at the off side, around to the snaffle at the near side, a second strap extending from the lower end of the curb-bit around to the off side of the snaffle, bridle-reins extending from the smaller pulleys forward to a running connection with the said two straps and thence rearwardly to the said support to which they are fixed and driving-reins wound on the larger pulleys.

6. The combination with the bridle and a saddle-like support, provided with a pair of differential pulleys, of the bridle-reins wound at one end on the smaller pulleys and the driving-reins wound on the larger pulleys; substantially as described.

7. In a training apparatus, the combination with the bridle and driving reins of the saddle-like support, comprising a horizontal bar, a pair of vertically-disposed differential pulleys thereon for the driving and bridle reins, supporting-rods for the pulleys having eyes at their upper ends, and spring arms or pins secured to the middle of the bar with their outer ends passing through said eyes; substantially as described.

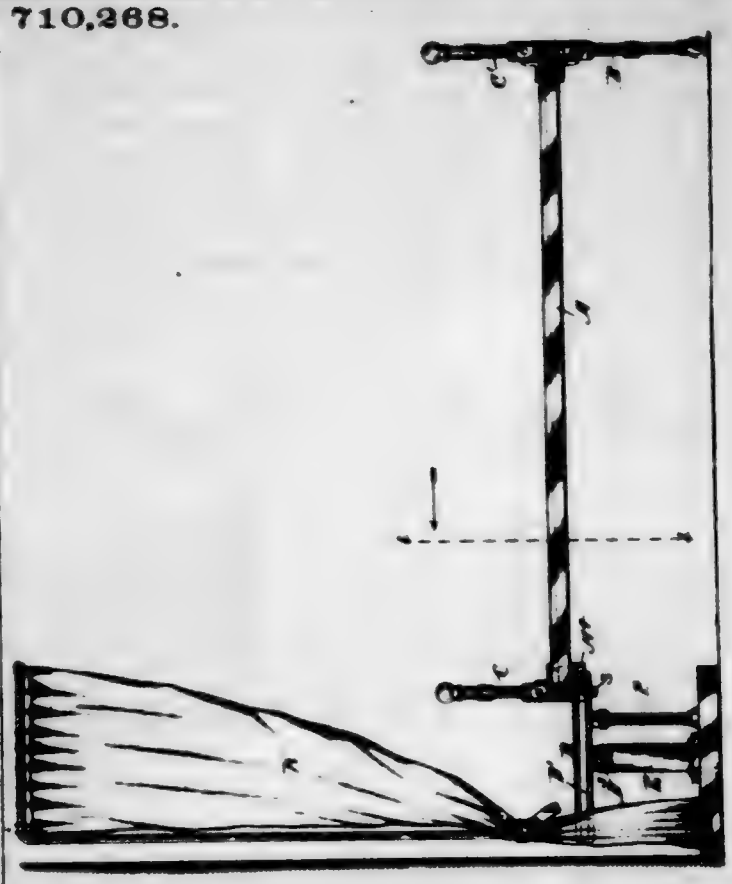
8. In a training apparatus, the combination with the bridle and driving reins of the saddle-like support, comprising the horizontal bar, the vertically-disposed pair of differential pulleys thereon for the bridle and driving reins, and a frame secured to the said bar and curved around the driving-rein pulleys to hold the reins from displacement; substantially as described.

9. In a training apparatus, the combination with the bridle and driving reins of the saddle-like frame having a horizontal bar provided with recesses at opposite sides of its middle, a pair of differential winding-pulleys mounted thereon for the driving and bridle reins, and guide-rollers in advance of the lower smaller winding-pulleys; substantially as described.

710,268. FOLDING BED. CLAYTON M. HAMILTON, Boston, Mass., assignor to William H. Davis, Boston, Mass. Filed Nov. 15, 1901. Serial No. 82,488. (No model.)

Claim.—A bed having its wall end weighted and provided with lateral projections adapted to support said wall end; a framework attached to a fixed base and supporting slotted bars pivoted at or near their centers, and adapted to receive the said lateral projections, whereby the bed may be moved forth and back so as to place its weight at either side of the supporting-framework, and the said slotted bars, substantially as and for the purpose set forth.

710,268.



710,269. FOUNTAIN-COMB. JULIAN R. HARRISON, Barnwell, S. C., assignor of one-half to John M. Easterling and James R. Easterling, Barnwell, S. C. Filed Mar. 10, 1902. Serial No. 97,471. (No model.)

Claim.—1. A fountain-comb, comprising a chambered body, a normally open vent in communication with the chamber of said body, a number of hollow teeth communicating with said chamber of the body and each provided near its lower end with an internal valve-seat, hollow plugs secured in the upper part of the teeth and allowing liquid to pass freely from said chamber of the body to the teeth, valves arranged in the lower parts of the hollow teeth to fit said seats therein and having stems extending through said seats and beyond the ends of the teeth, and springs seated against the plugs and the valves.

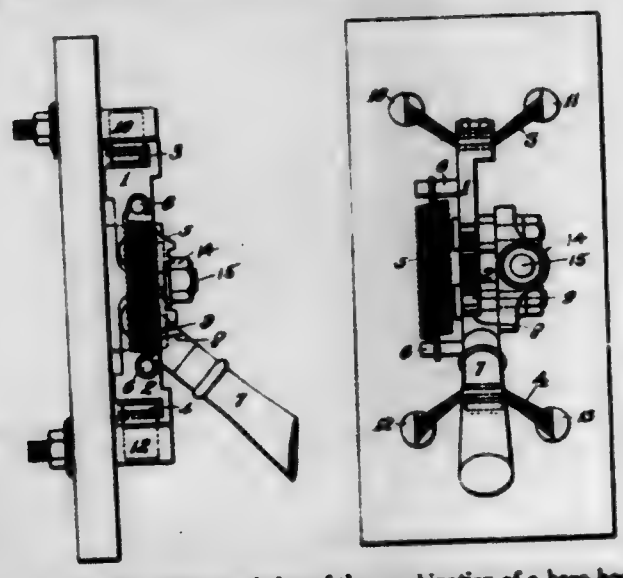
2. A fountain-comb, comprising a chambered body, a normally open vent in communication with the chamber of said body, a number of hollow teeth extending therefrom, hollow plugs screwed adjustably in said teeth and each having a solid contracted portion depending below the hollow body of the plug, springs fitted to said contracted portions of the plugs and held in place thereby without interrupting the flow of liquid from the chambered body to the teeth, and valves normally held to their seats by the springs and provided with projecting pins or stems.

3. A fountain-comb, comprising a chambered body having on its under side a rib formed with threaded apertures, a normally open vent in communication with the chamber of said body, a number of hollow teeth each having an interiorly and exteriorly threaded nipple which is screwed into one of the apertures of said rib, valve-seats near the lower ends of the teeth, hollow plugs screwed adjustably into the nipples of the teeth and located at the upper ends thereof, valves having stems and adapted to said seats, and springs arranged between and engaging with the valves and the plugs.

710,270. ELECTRIC SWITCH. FREDERICK H. KEARSLEY, St. Austell, England. Filed Jan. 21, 1901. Serial No. 44,184. (No model.)

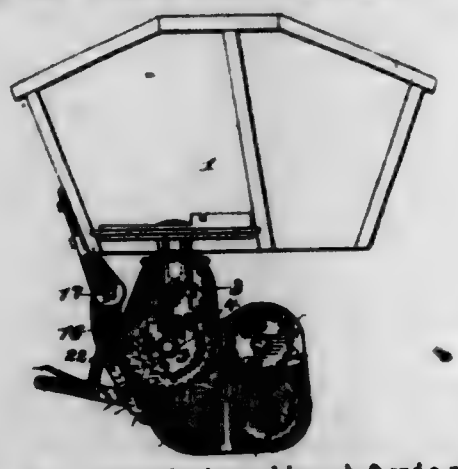
Claim.—1. An electric switch consisting of the combination of a base-board, four circuit-terminals arranged thereon, two pivots mounted thereon, two levers pivoted on said two pivots, one arm of each lever being in the form of a toothed segment which is adapted to engage with the toothed segment on the other lever, connecting bridge-pieces carried by and insulated from the other arms of the levers, said connecting bridge-

pieces being adapted to make and break contact with the four circuit-terminals, a handle loosely mounted on one of the pivots of one of the pivoted levers and provided with abutments which when the handle is operated engage with said pivoted lever, lost motion between the handle and said pivoted lever being able to occur, and a spring attached at its two ends to the two pivoted levers in such a way that when the switch is closed the spring is inoperative, being on a dead-center, but when the switch is being opened by means of the handle the spring actuates the levers and produces quick breaks at the circuit-terminals and finally maintains the pivoted levers in their open position, substantially as described.



2. An electric switch consisting of the combination of a base-board, four circuit-terminals arranged thereon, two pivots mounted thereon, two levers pivoted on said two pivots, one arm of each lever being in the form of a toothed segment which is adapted to engage with the toothed segment on the other lever, connecting bridge-pieces carried by and insulated from the other arms of the levers, said connecting bridge-pieces being adapted to make and break contact with the four circuit-terminals, a handle loosely mounted on one of the pivots of one of the pivoted levers and provided with abutments which when the handle is operated engage with said pivoted lever, lost motion between the handle and said pivoted lever being able to occur, a spring attached at its two ends to the two pivoted levers in such a way that when the switch is closed the spring is inoperative, being on a dead-center, but when the switch is being opened by means of the handle the spring actuates the levers and produces quick breaks at the circuit-terminals and finally maintains the pivoted levers in their open position, and a releasing-nut and a bolt coacting therewith by the removal of which all the purely mechanical parts can be readily detached from the base-plate, substantially as described.

710,271. SPEED MECHANISM. JAMES S. HEATH, LAWRENCE HEATH, and ERNEST BAKEMAN, Macedon, N. Y., assignors to Bickford and Huffman Company, Macedon, N. Y., a Corporation of New York. Filed June 21, 1902. Serial No. 112,668. (No model.)



Claim.—1. In a speed mechanism, a driven shaft and a gear thereon, a frame or case supported on the driven shaft and gearing therein connected to the gear on the driven shaft, combined with a driving-shaft, a second frame or case pivotally mounted thereon, a double gear within the case and fast upon the driving-shaft, other gears within the case gearing into the double gear, and gears on the outside of the case connected to the driving-gears therein, and means for moving the case so that any one of the outside gears may be engaged with the gearing in the first-mentioned frame or case.

2. In a speed mechanism, a driven shaft and a gear thereon, a frame or case supported on the shaft and gearing therein which meshes into the gear on the driven shaft, combined with a driving-shaft, a frame or case pivotally mounted thereon, a double gear fast upon the driving-shaft within the case, and other gears located within the case and meshing into the double gear and provided with studs projecting through the case, outside gears upon the studs, and means for moving the frame or case so that any one of the outside gears may be engaged with the gearing in the first-mentioned frame or case.

3. In a speed mechanism, a driven shaft and a gear thereon, a frame or case supported upon the shaft and gearing therein which meshes into the gear on the driven shaft, combined with a driving-shaft, a second case or frame pivotally mounted thereon, a double gear upon the driving-shaft and within the case, other gears within the case meshing into the double gear, gears on the outside of the case connected to the driven gears within, and means for adjusting the case so that any one of the outside gears may be engaged with the gearing in the first-mentioned frame or case, and further means for locking the second frame or case in its adjusted position.

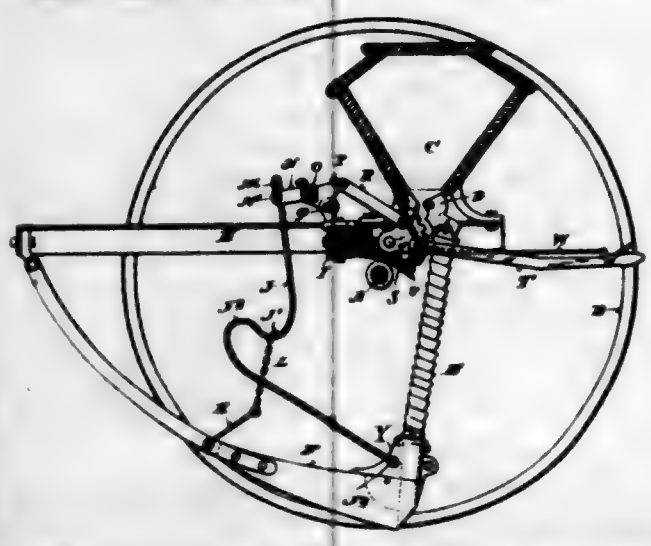
4. In a speed mechanism, a driven shaft and a gear thereon, a frame or case pivotally mounted on said shaft and gearing therein which meshes into the gear on the driven shaft, combined with a driving-shaft, a second case or frame pivotally mounted thereon, a double gear upon the driving-shaft and within the case, other gears within the case gearing into the double gear, gears on the outside of the case connected to the driven gears within, means for adjusting the case so that any one of the outside gears may be engaged with the gearing in the first-mentioned frame or case, and suitably-actuated means whereby the first-mentioned frame or case may be moved from its operative position.

5. In a speed mechanism, a driven shaft and gearing connected therewith, combined with a driving-shaft and a movable case or frame thereon, gearing actuated by the driving-shaft and carried by the case, a pawl pivoted to the frame to lock the case in its operative and inoperative positions, and means connected to the case controlling the pawl.

6. In a speed mechanism, a driven shaft and suitable gearing connected thereto, combined with a driving-shaft, a movable case or frame thereon, and gears connected to the driving-shaft and mounted in the case, a pawl pivoted to the frame to lock the case in its operative and inoperative positions, a handle connected to the case whereby the latter may be shifted, and a pivoted lever attached to the handle and acting to control the movements of the pawl.

7. In a speed mechanism, a driven shaft and suitable gearing connected thereto, combined with a driving-shaft, a movable case or frame thereon, gears connected to the driving-shaft and mounted in the case, the case being formed with three notches, and a spring-actuated pawl pivoted to the frame to engage the several notches whereby the case may be held in two operative and one inoperative positions, a handle attached to the case to permit of its adjustment, and a pivoted lever attached to the handle to control the movements of the pawl.

710,272. SEEDING-MACHINE. JAMES S. HEATH and ERNEST BAKEMAN, Macedon, N. Y., assignors to Bickford and Huffman Company, Macedon, N. Y., a Corporation of New York. Filed June 21, 1902. Serial No. 112,667. (No model.)



Claim.—1. In a seeding-machine, the combination of a shoe with a spring for applying pressure to the shoe, means for operating the spring, a chain attached to the spring, and a link connecting the chain and shoe, so that when the pressure of the spring upon the shoe is relieved, the spring, chain and link form a lifting connection to elevate the shoe.

2. In a seeding-machine, the combination of a shoe with a spring for applying pressure to the shoe, means for operating the spring, a chain

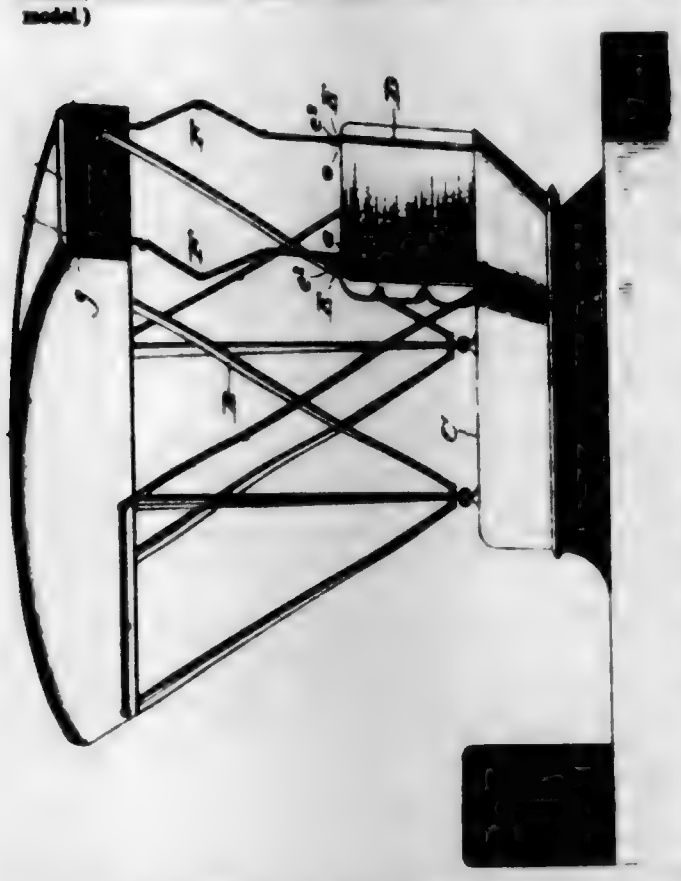
attached to the spring, and a link connecting the chain and the shoe, the spring being formed with a loop or eye by which it is attached to the operating means in such manner as to effect a loose connection therewith.

3. In a seeding-machine, the combination of a shoe with a spring for applying pressure to the shoe, the spring being formed with a downwardly-extending portion, a portion which curves upward and forward, and a portion which recurves downward and rearward to the point of attachment with the shoe, a connection from the vertical part of the spring to the shoe, and means for operating the spring located over its downwardly-extending portion.

4. In a seeding-machine, the combination of a shoe with a spring for applying pressure to the shoe, the spring being formed with a downwardly-extending portion, a portion which curves upward and forward, and a portion which recurves downward and rearward to the point of attachment to the shoe, and a connection from the downwardly-extending portion of the spring to the shoe, and means located above the downwardly-extending portion of the spring for operating the spring, which means are attached to the spring by means of an eye formed therein in such manner as to permit of a loose connection therewith.

5. In a seeding-machine, the combination of a shoe with a spring for applying pressure to the shoe, the said spring being formed with a downwardly-extending portion, a portion which curves upward and forward, and a portion which recurves downward and rearward to the point of connection to the shoe, a chain attached to the downwardly-extending portion of the spring, and a link attached to the chain and to the shoe, together with means for operating the spring located directly above the downwardly-extending portion.

710,273. LOCKING-BRACE FOR BUGGY-TOPS. THOMAS F. HOEER, Denver, Colo. Filed Feb. 20, 1902. Serial No. 94,965. (No model.)

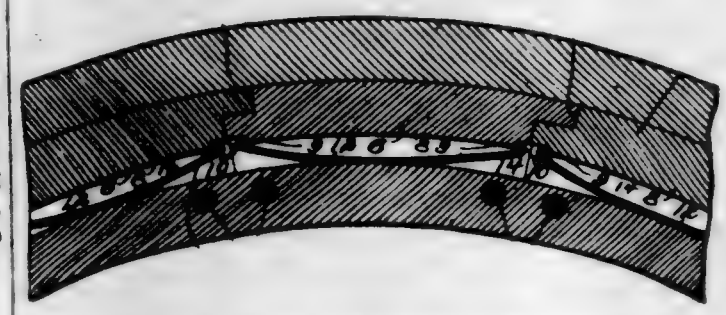


Claim.—1. The combination with the seat-back and rear bow of a buggy of clips secured to the same, jointed rods connecting the said clips and pivotally engaging the same, the said rods operating to hold the buggy-top in its lowered position and prevent jolting of the same during the movement of the said buggy, and springs carried by the clips which contact with the lowered end of the brace-rods, and assist in holding them in this braced position, substantially as shown.

2. In a buggy, the combination with the rear bow and seat-back of clips secured to the same; rods pivotally secured at their ends to the said clips so as to connect them, the said rods being made up of sections which are connected by hinge-joints which break in opposite directions the object of the rods being to hold the buggy-top in its lowered position and prevent jolting of the same during the movement of the said buggy, and springs secured in recesses formed in the clips which are attached to the seat-back, the said spring contacting with the lower ends of the said brace-rods, so as to assist in holding them in their braced position, substantially as shown.

3. In a buggy, the combination with the seat-back and rear bow, of clips secured thereto; rods pivotally attached at one end, to the clip secured to the seat-back and at their other end to the corresponding clip, attached to the bow; the said rods being made in sections which are connected by lock or knuckle joints which break in opposite directions, the length of said rods when extended being greater than the distance between the seat-back and rear bow when the top is raised, but substantially equal to the distance between these points, when the top is lowered, the said rods when locked in their extended positions serving to hold the buggy-top lowered and prevent any upward jolting or sidewise movements of the same during the movement of the buggy, and springs secured in recesses formed in the upper end of the seat-strap clip, which bear upon the lower ends of the brace-rods, and assist in holding them in their braced position, substantially as shown.

710,274. TIRE FOR WHEELS. EVERETT HORTON, Bristol, Conn. Filed May 28, 1902. Serial No. 109,313. (No model.)



Claim.—1. In a resilient tire for wheels, the combination, with an inner rim, of a segmental rim composed of segments having longitudinal ribs and grooves on their sides; springs interposed between said rims; and plates carried by the inner rim, and having flanges fitting over the ribs formed upon the segmental rim and entering the longitudinal grooves thereof.

2. In a tire or rim for wheels, the combination with an outer rim, composed of segments having grooves and ribs on their sides, of an inner rim; springs between said rims; plates carried by the inner rim and having flanges which fit over the ribs of the outer rim and enter the grooves thereof, and a tire placed over the outer rim.

3. In a tire or rim for wheels, the combination, with a segmental rim having longitudinal grooves in the side of each segment thereof, of an inner rim; plates secured to said inner rim and having flanges which enter said grooves and are limited in movement by the walls thereof; and springs secured to the segments and located between the segmental rim and the inner rim.

4. In a tire or rim for wheels, the combination, with a series of longitudinally-grooved segments united by overlapping joints, of springs carried by each of said segments; an inner rim against which said springs bear; and plates secured to the inner rim and having flanges entering the grooves of the segments and limited in their movement by the walls of said grooves.

5. In a wheel, the combination, with a felly, of flanged plates secured to said felly; a series of segments having end projections and longitudinal grooves; springs carried by said segments and bearing against the felly; and a resilient tire surrounding the segments.

6. In a wheel, the combination, with the felly thereof, of plates having inwardly-projecting flanges, interlocking segments having grooves to receive said flanges; bow-springs carried by said plates, and bearing against the felly; and a tire surrounding said segments.

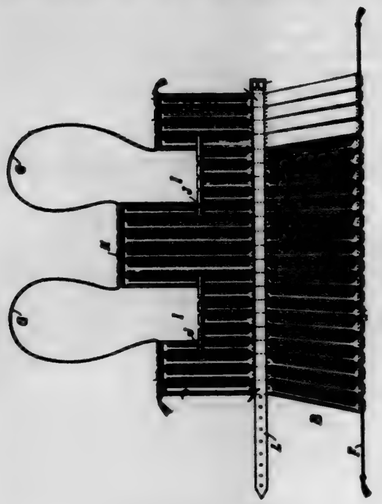
7. In a wheel, the combination, with the felly thereof; of plates having inwardly-projecting flanges secured to said felley; longitudinally-grooved, interlocking segments having undercut projections; bow-springs having flanges engaging said projections; and a tire surrounding said segments.

710,275. LIFE-PRESERVER. CHARLES HUEY, Belfast, Ireland. Filed Nov. 15, 1901. Serial No. 82,264. (No model.)

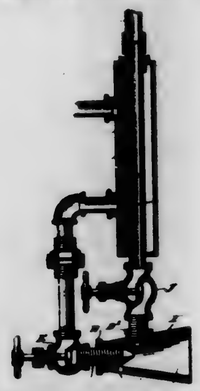
Claim.—1. In a life-preserver, the combination of a plurality of rubber tubes packed with granulated cork, means for hermetically closing said tubes, a canvas sheath for each rubber tube, a waist-belt above and below which said sheathed tubes are attached in rows, loops upon the lower extremities of the lower row of said canvas-sheathed tubes, a cord passing through said loops and adapted to be tied together at its ends to bind the said tubes around the wearer, loops on the upper extremities of the front and back members of said upper sheathed tubes, and a cord adapted to pass through said loops and over the shoulders of the wearer, whereby said tubes may be bound around the chest and sides of the wearer; substantially as described.

2. In a life-preserver, the combination of a plurality of rubber tubes

packed with granulated cork, means for hermetically closing said tubes, a separate canvas sheath for each rubber tube, a waist-belt to which said canvas-covered tubes are attached separately in two rows, one row above and one row below said belt, and releasable means for binding the ends of said tubes around the body of the wearer; substantially as described.



710,276. BURNER. JOHN L. JONES, Jr., Dallas, Tex. Filed Mar. 14, 1902. Serial No. 98,181. (No model.)



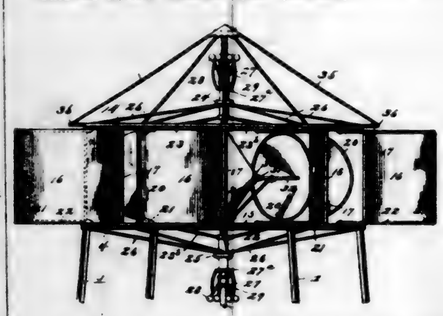
Claim.—1. A hydrocarbon-burner, comprising a conical shell having its large end open and provided with an air-inlet near its small end, said shell being arranged in front of and adjacent to an opening in the combustion-chamber of a boiler, a drum arranged above the shell, a pipe leading from the drum to the steam-compartment of the boiler, an oil-pipe extending through the drum and having a downwardly-inclined opening therein, a valve connected with the lower end of the oil-pipe, an adjustable oil-nozzle secured to the valve-casing and projecting into the conical shell through one side thereof, an adjustable steam-nozzle projecting into the shell through the small end of said shell and beyond the air-inlet of the same, a valve, to the casing of which the steam-nozzle is secured, and a pipe leading from the valve-casing to the lower portion of the drum, substantially as herein shown and described.

2. A hydrocarbon-burner, comprising a conical shell having its large end open and provided with an air-opening in one side near its small end, a steam-drum, an oil-pipe extending through the drum and provided with an opening within the drum for the entrance of steam, a valve secured to the lower end of the oil-pipe, an oil-nozzle secured to the valve-casing and projecting into the shell through one side thereof, a steam-nozzle projecting through the small end of the shell and extending into the same beyond the air-opening thereof and to within a short distance of oil-nozzle, a valve, to the casing of which the outer end of the steam-nozzle is secured, and a pipe leading from the valve-casing to the lower part of the steam-drum, as set forth.

3. A hydrocarbon-burner, comprising a shell having an air-inlet, a steam-nozzle projecting into the shell beyond the air-inlet, an oil-nozzle also projecting into the shell and standing at an angle to the steam-nozzle, a heater having a drum connected with a steam-supply and with the said steam-nozzle, and an oil-tube extending through the said drum and connected at one end with an oil-supply and at the other end with the said oil-nozzle, the said oil-tube having a steam-inlet within the said drum and opposite the steam-entrance thereto, to allow steam to pass from the latter into the oil-tube, as set forth.

4. A hydrocarbon-burner, comprising a shell having an air-inlet, a steam-nozzle projecting into the shell beyond the air-inlet, an oil-nozzle also projecting into the shell and standing at an angle to the steam-nozzle, a heater having a drum connected with a steam-supply and with the said steam-nozzle, and an oil-tube extending through the said drum, connected at one end with an oil-supply and at the other end with the said oil-nozzle, the said oil-tube having a steam-inlet within the said drum, to allow steam to pass from the latter into the oil-tube, the said inlet being inclined in an inward and downward direction, as set forth.

710,277. WIND-TURBINE. JOSEPH KAISER, Columbus, Ohio. Filed July 13, 1901. Serial No. 68,220. (No model.)



Claim.—1. A wind-turbine comprising a supporting stand or tower, a frame including a ring mounted thereon, cup-shaped blades mounted and spaced apart upon the said ring, a vertical shaft upon which the said ring is mounted, and hinged gathering-wings carried by the turbine-frame and adapted to extend outward therefrom so as to direct the air-currents to the blades.

2. A wind-turbine comprising a supporting stand or tower, a cylindrical rotary frame mounted thereon, blades mounted within said frame, hinged gathering-wings carried by the turbine-frame, and adapted to extend outward therefrom, an oscillatory ring, links interposed between said ring and the gathering-wings, a governor connected with the said turbine, and operative connections between the said governor and ring for automatically controlling the gathering-wings.

3. A wind-turbine comprising a suitable stand or tower, a turbine-frame rotatably mounted thereon, a vertical shaft on which said turbine-frame is fastened, a series of blades mounted within the turbine-frame, gathering-wings hinged to the frame and adapted to project outward therefrom, an oscillatory ring, links interposed between said ring and gathering-wings, pivoted governor-arms mounted on said shaft, and means for rotating the said ring through the medium of the said governor-arms.

4. A wind-turbine comprising a suitable stand or tower, a rotatable turbine-frame mounted thereon, a vertical rotary shaft on which the turbine-frame is fastened, blades within the turbine-frame, gathering-wings hinged to the frame, an oscillatory ring, links connecting the gathering-wings with said ring, governor-arms mounted on the shaft, runners on the shaft, links connecting said runners with the governor-arms, means for preventing rotary movement of said runners, and connecting-rods interposed between said runners and oscillatory ring.

5. A wind-turbine comprising a suitable stand or tower, a rotary turbine-frame mounted thereon, curved gathering-wings hinged to said frame and projecting outward therefrom, cup-shaped blades mounted within the turbine-frame, cuffs extending from the apex of the blades, an annular brace and spacing-ring adapted to pass through each cuff of the several blades, and means for folding the gathering-wings.

6. A wind-turbine comprising a supporting stand or tower, a cylindrical turbine-frame rotatably mounted thereon, a vertical shaft on which the turbine-frame is fastened, cup-shaped blades mounted within the frame, gathering-wings hinged to the frame, and adapted to project outward therefrom, a pair of oscillatory rings mounted above and below the said cup-shaped blades, link connections between the said rings and gathering-wings, governor-arms fixed to the said shaft above and below the turbine and operative connections between the said governor-arms and oscillatory rings for automatically opening and closing the gathering-wings.

7. A wind-turbine comprising a supporting stand or tower, a cylindrical turbine-frame rotatably mounted thereon, cup-shaped blades mounted within the frame, curved gathering-wings hinged to the frame and adapted to project outward therefrom, said wings being described on the same arc of a circle as the outer portion of the turbine-frame, an oscillatory ring, links interposed between said ring and the gathering-wings, and means controlled by the wind for oscillating said ring.

8. A wind-turbine comprising a suitable stand or tower, a rotatable turbine-frame mounted thereon, a vertical rotary shaft on which the turbine-frame is fastened, a series of cup-shaped blades within the turbine-frame, a corresponding series of gathering-wings hinged to the frame, an oscillatory ring, links connecting the gathering-wings with said ring, governor-arms mounted on the shaft, runners on the shaft operated by the governor-arms, and connecting-rods interposed between said runners and oscillatory ring.

9. A wind-turbine comprising a stand or tower, a turbine-frame rotatably mounted thereon, gathering-wings hinged to the turbine-frame, means for automatically swinging said wings, hollow conical blades rigidly mounted within the turbine-frame and arranged approximately in radial alinement with the inner ends of the gathering-wings, cuffs applied to the vertices of said blades, and an annular brace and spacing-ring passing through the cuffs of the several blades.

710,278. ELECTRIC BATTERY. TEREE H. ELLIKER, Jr., and RICHARD GABRIELSKY, Jersey City, N. J. Filed Apr. 5, 1902. Serial No. 101,605. (No model.)

Claim.—1. In an electric battery the combination of an inclosure, a positive electrode having upwardly-projecting tubular members rising from a bottom thereof, a chambered negative electrode suspended in the center between the upwardly-projecting members of the positive electrode, and an exciting-filling in contact with the said electrodes.

2. In a battery, the combination of an inclosure, a positive electrode having upwardly-projecting members provided with conduits accessible from the exterior, a negative electrode having a chamber with lower outlets and an upper inlet, and an exciting-filling engaging the said electrodes.

3. In a battery, the combination of an inclosure, a positive electrode disposed therein and having opposite side members projecting above the top of the inclosure and provided with conduits open at the bottom and normally closed at their upper ends, a negative electrode having a chamber therein with an upper inlet and lower outlet at different elevations, the said negative electrode being suspended between the opposite portions of the positive electrode, and an exciting-filling engaging the said electrodes.

710,279. BILLIARD-CUE. WILLIAM H. LAMB, Ithaca, N. Y. Filed Feb. 24, 1902. Serial No. 95,328. (No model.)

Claim.—1. A cue having one end formed with a lengthwise groove, a sleeve fitting said end of the cue and having a groove alined with the former groove, a tip, and prongs secured to the tip and inserted in the alined grooves for locking the sleeve and tip to the body of the cue.

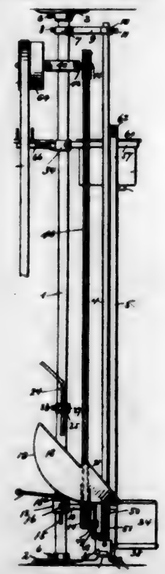
2. A cue having a reduced end provided with lengthwise grooves in its periphery, a sleeve fitting the reduced end and having lengthwise grooves on its inner face alined with the former grooves, a tip and prongs secured to the tip and inserted in the grooves for the purpose described.

3. A cue having one end reduced in diameter and formed with lengthwise grooves, a sleeve having a socket in one end and its other end closed, the walls of the socket being formed with lengthwise grooves alined with the former grooves and the closed end of the sleeve having apertures alined with the latter grooves, a tip and prongs secured to the tip and inserted in the apertures and grooves for the purpose described.

4. A cue comprising a main body having a reduced end provided with lengthwise grooves in its periphery, a sleeve or cap having one end formed with a socket and its other end closed the walls of the socket having lengthwise grooves alined with the former grooves, and the closed end being provided with apertures alined with the latter grooves, a tip having sockets with lateral offsets extending inwardly from its inner face, prongs having lateral shoulders inserted in said sockets and lateral offsets, a washer having apertures for receiving the prongs, said prongs being inserted in the apertures of the sleeve and also in the grooves of the sleeve and said reduced portion of the cue for the purpose described.

5. A billiard-cue comprising a main body having a reduced end for forming an abutting face, said reduced end being provided with lengthwise grooves in its periphery, a sleeve or cap having one end closed and its other end provided with a socket of substantially the same length as said reduced portion whereby the end face of the sleeve abuts against said abutting face and the end wall of the socket abuts against the end of said reduced portion, the walls of the socket being provided with lengthwise grooves alined with the former grooves and the closed end of the sleeve or cap being formed with apertures alined with said grooves, prongs inserted in the grooves and a tip secured to the prongs for the purpose described.

710,280. CREAM-ELEVATOR. ANDERS P. LAURSEN, Centerpoint, S. D. Filed Apr. 2, 1902. Serial No. 101,081. (No model.)



Claim.—1. The combination of a column or upright, a sleeve mounted upon the same near its lower end, a rod vertically adjustable in said sleeve and having a laterally-extending arm, a tank mounted tiltingly upon said arm and having excess of weight in its receiving end, and means for supporting the said tank normally in an approximately horizontal position, substantially as set forth.

2. The combination with the supporting-arm extending laterally from a vertically-adjustable rod, of the receiving-tank, a tubular bearing secured transversely across the bottom of said tank whereby it is mounted tiltingly upon the supporting-arm, and means secured to the vertically-

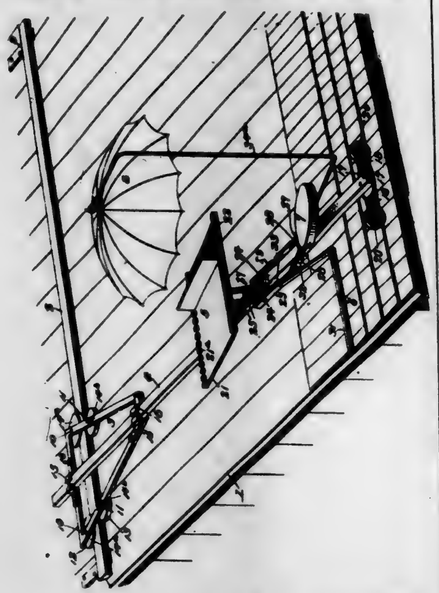
adjustable rod for supporting the tank normally in approximately horizontal position, substantially as set forth.

3. The tilting receiving-tank having on its rear side a pair of parallel horizontal flanges, the lower extending beyond the upper of said flanges, in combination with the vertically-reciprocating carrier, a bracket attached to said carrier, a roller journaled to said bracket and adapted to engage the flanges of the tilting tank, means for supporting the tank and carrier, and means for imparting to the latter a vertically-reciprocating motion, substantially as set forth.

4. The combination of the tilting receiving-tank, the vertically-reciprocating carrier, means attached to the latter for operating the receiving-tank, an arm extending laterally from the carrier, the elevator-bucket mounted tiltingly upon the said arm, the discharge-tank located near the upper limit of the movement of the carrier, the guide-rod terminating at its upper end in a gooseneck connected rigidly with the support of the discharge-tank, and suitable supporting and operating means, substantially as set forth.

5. The combination of the vertically-reciprocating carrier, an arm extending laterally from the same, the elevator-bucket mounted tiltingly upon said arm and having excess of weight in its receiving end, the rollers journaled upon pins extending laterally from said bucket, one below and in rear of the other, the vertical guide-rod engaging between said rollers and terminating in a gooseneck at its upper end, the tilting receiving-tank, the discharge-tank, a supporting-hoop for the latter, a rigid connection between said supporting-hoop and the gooseneck at the upper end of the guide-rod, and suitable supporting and operating means, substantially as and for the purpose set forth.

710,281. SHINGLING CARRIAGE AND GAGE. FRANK C. LEEK, Surrey, Ind. Filed Feb. 26, 1902. Serial No. 96,721. (No model.)



Claim.—1. The combination with a rail, of a carriage mounted thereon, an arm adjustably secured to the carriage, a supporting-bracket adjustably secured to the arm and carrying a shingle-bracket and a seat, and a gage.

2. The combination with a rail, of a carriage mounted thereon, pivoted and rigid jaws upon the carriage, an arm adjustably secured to the carriage through the medium of the jaws, a supporting-bracket adjustably mounted upon the arm and carrying a shingle-bracket and a seat, and a gage adjustably secured to the bracket.

3. The combination with a rail, of a carriage mounted thereon, an arm adjustably mounted upon the carriage, a supporting-bracket carrying upon one end a shingle-bracket, and on the opposite end a bolt, a U-shaped bracket fulcrumed upon the bolt placing the connecting-bar thereof upon the under side of the arm, a seat carried by the free ends of the last-mentioned bracket, causing the bolt and connecting-bar to bind the arm adjustably securing the seat and shingle-bracket thereon, and a gage adjustably secured upon the carrying-bracket.

4. The combination with a rail, of a carriage mounted thereon, rigid and pivoted jaws on the carriage, an arm adjustably mounted upon the carriage through the medium of the jaws, a trunk secured to the lower end of the arm, a supporting-bracket provided with a plurality of slots, and a gage having a shank with oppositely-disposed flanges and adapted to fit in one of said slots.

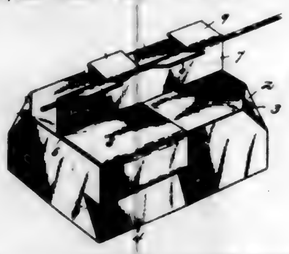
5. The combination with a rail having one edge thereof inclined and means for securing the rail in applied position, of a carriage having depending from the under side thereof pintles, rollers journaled upon the pintles, some of which are conical in form and provided with guards, of an arm adjustably secured to the carriage, and a supporting-bracket adjustably secured to the arm and carrying a shingle-bracket and a seat.

6. The combination with an arm, of a supporting-bracket carrying a shingle-bracket and seat, and adjustably secured to the arm, and a gage adjustably secured to the supporting-bracket and movable therewith.

7. In a shingling device, the combination of a supporting-rail having a beveled edge, and a carriage for adjustably holding parts of the device provided with depending rollers, a part of the latter being beveled correspondingly to the rail edge and having guards.

8. In a shingling device, the combination with an adjustable arm, of a bracket and seat adjustably mounted in the arm, and an angle-gage adjustably mounted in the bracket.

710,282. INSULATOR. EDWIN LEFEVER, Climax, Ohio. Filed Mar. 29, 1902. Serial No. 100,801. (No model.)



Claim.—1. In a device of the class set forth, the combination of a body, and a support fastened to the body and having an upstanding member provided with tongues adapted to be bent in reverse direction over a feeder or conducting wire.

2. In a device of the class set forth, the combination of a body having recesses in opposite sides, and a support provided with securing-flanges at opposite extremities projecting in reverse directions and having portions engaging the said recesses, the support also having wire-holding means.

3. In a device of the class set forth, the combination of a body, and a support secured on the body and provided with an upstanding member having tongues adapted to alternately bend in reverse direction to hold a feeder or conducting wire.

4. A device of the class set forth having a wire, fastening means comprising an upstanding member with tongues adapted to be alternately bent in reverse directions to hold a feeder or conducting wire.

710,288. CAR-COUPLING. WATSON S. LEMMON, Tucson, Ariz. Filed May 8, 1902. Serial No. 106,394. (No model.)

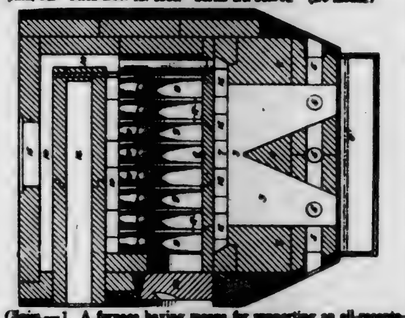
Claim.—1. A car-coupling of the character described, comprising in combination, a draw-head, a pivoted knuckle, detachably mounted on the draw-head, a gravity-drop supported and endwise movable on the draw-head and normally in position to automatically drop in front of the knuckle, when the latter is swung into a closed position to its limit, said knuckle having a locking-seat to receive the gravity-drop and arrest its downward movement, when the knuckle is swung partially back, when

on curves; and detachably-mounted means for limiting the outward swing of the knuckle, all being arranged substantially as shown and described.

2. In a car-coupling of the character described, the combination with a draw-head, having a pair of projecting ears to receive the pivotal portion of the knuckle, said ears having each a segmental shoulder about the axial point, whose terminals are cut in planes at right angles to each other; of a knuckle having slotways in its upper and lower faces, whereby the knuckle, when adjusted to its open position, can be slipped between the projecting ears, said slotways having semicircular bearings to coöperate with the aforesaid segmental shoulders, substantially as shown and described.

3. In a car-coupling of the character described, the combination with a draw-head, having a pair of projecting ears to receive the pivotal portion of the knuckle, said ears having each a segmental shoulder about the axial point, whose terminals are cut in planes at right angles to each other; of a knuckle having slotways in its upper and lower faces, whereby the knuckle, when adjusted to its open position, can be slipped between the projecting ears, said slotways having semicircular bearings to coöperate with the aforesaid segmental shoulders, and means for limiting the outward swing of the knuckle detachably mounted on the draw-head, all being arranged substantially as shown and for the purposes described.

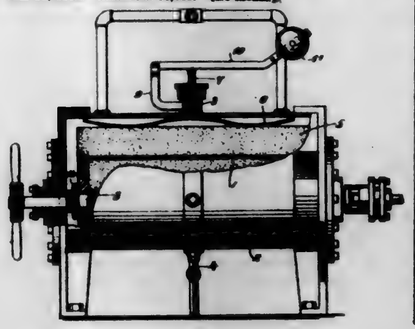
710,284. OVEN OR FURNACE. JOHN W. LEWELLEN, Philadelphia, Pa. Filed Nov. 12, 1900. Serial No. 36,344. (No model.)



Claim.—1. A furnace having means for supporting an oil-receptacle and provided with a combustion-chamber above said supporting means, a wedge-shaped partition within said combustion-chamber, the walls of said combustion-chamber having within their lower portions lateral openings in communication with the atmosphere through which a free flow of air by natural draft is permitted into the flame as it passes outwardly through the flaring combustion-chamber, substantially as described.

2. A furnace having means for supporting an oil-receptacle and provided with a combustion-chamber above said supporting means, said chamber having openings in its bottom whereby flame from the receptacle is admitted into said chamber, a wedge-shaped partition within the combustion-chamber, said partition and also the walls of the chamber having within their lower portions lateral openings in communication with the atmosphere through which a free flow of air by a natural draft is permitted into the flame as it passes upwardly through the flaring combustion-chamber, substantially as described.

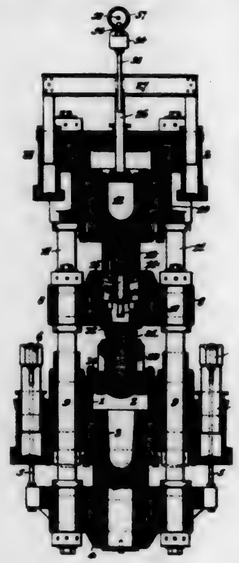
710,285. FILTER. THEODORE LEMEK, New York, N. Y. Filed Jan. 31, 1902. Serial No. 92,662. (No model.)



Claim.—1. In a filter comprising a filter-stone and a cleaner-stone, a pin movable in a wall of the filter-casing for pressing on said cleaner-stone, a lever engaging with the pin, and a weight on said lever, substantially as specified.

2. In a filter comprising a filter-stone, a cleaner-stone and a casing in which the stones are located, a tube attached to the outer wall of said casing, a pin movable through said tube, a plate mounted on the cleaner-stone and with which said pin engages, an arm extended from said tube, a lever pivoted to said arm, and a weight on the free end of said lever, substantially as specified.

710,286. HYDRAULIC FORGING-PRESS. HENRIK V. LOSS, Philadelphia, Pa. Filed Mar. 7, 1902. Serial No. 97,197. (No model.)



Claim.—1. A hydraulic press, having a stationary bed-plate and cylinder, a die-holder fixed to said cylinder, a plunger arranged within said cylinder, a cross-head supporting the plunger, rams to return the said cross-head and plunger, and a second cross-head arranged above said cylinder and rigidly connected to said first cross-head and moving with it, combined with a punch working in said second cross-head, and independent actuating mechanism for said punch.

2. A hydraulic forging-press, comprising essentially a stationary bed-plate and cylinder, a plunger arranged in said cylinder, a cross-head arranged below the bed-plate and carrying the plunger, means to return said cross-head, a second cross-head arranged above the bed-plate, connecting-rods having bearings in the bed-plate and uniting the cross-heads to cause them to move in unison, a die-holder arranged upon the cylinder and containing a die, and a die applied to the upper cross-head, combined with a punch working in said second cross-head and independent actuating mechanism for said punch.

3. A hydraulic forging-press, comprising essentially a stationary bed-plate and cylinder, a plunger arranged in said cylinder, a cross-head arranged below the bed-plate and carrying said plunger, means to return said cross-head, a second cross-head arranged above the bed-plate, connecting-rods having bearings in the bed-plate and uniting the cross-heads to cause them to move in unison, a die-holder fixed to the cylinder and containing a die, and a die applied to the upper cross-head, combined with a punch-plunger and a cylinder therefor arranged above the upper cross-head, a punch-holder carried by the punch-plunger and working within the upper cross-head and carrying a punch, and means to retract the punch mechanism independently of the die mechanism.

4. In a forging apparatus, a punch-stem and means to move it, combined with a punch-holder, a detachable punch end, latches pivotally suspended from said punch-holder to engage said detachable punch end, and a counterweight grooved to receive said latches, which latches have eccentric supports for said counterweight, and the counterweight serving

to hold the latches in engagement with the punch end and automatically movable to permit the said latches to free themselves from said punch end.

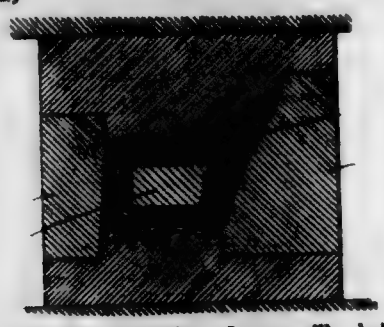
5. In a forging apparatus, a movable bottom die, combined with a stripping and discharging device, comprising a gated passage-way having a lateral discharge-chute, and a ram for coöperative with said gated passage-way to strip the blank from the die.

6. In a die forging apparatus, a movable bottom die, combined with a stripping and discharging device including a gated passage-way having a lateral discharge-chute, a ram coöperating with said passage-way to strip the blank from the die, and means to move the said die into coöperative relation with the said stripping and discharging device.

7. In a die forging and punching apparatus, having a detachable punch end, a crane for handling the punch end, having an arm provided with a spring-supported cup for carrying the punch end into position and applying it to its holder.

8. In a die forging and punching machine, a punch-plunger and means to adjust the same, comprising a cross-head to which the plunger is connected, an adjusting-screw secured to said cross-head, a nut in which the screw is arranged, a beam to receive said nut, gearing for actuating said screw, and a manual controlling device for said gearing.

710,287. PRODUCTION OF PLASTIC ARTICLES. ERNEST LOTTIER, West Hoboken, N. J. Filed Mar. 24, 1902. Serial No. 99,684. (No specimens.)



Claim.—1. An article, consisting of waste silk, shellac, and alcohol mixed together in about the proportions specified and pressed into form while subjected to heat, as set forth.

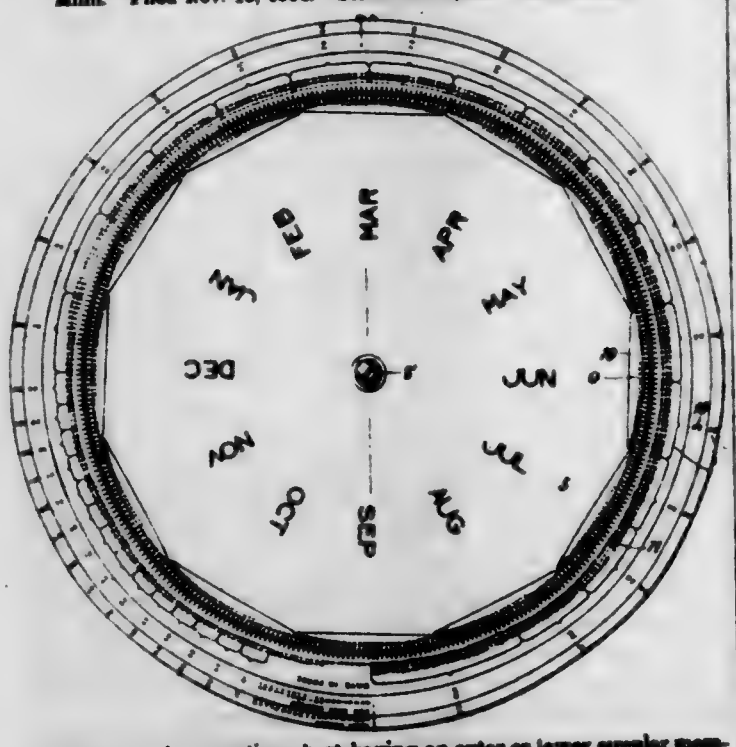
2. As a new article of manufacture, a boot or shoe heel formed of silk fiber and dissolved shellac, molded into form, as set forth.

3. As a new article of manufacture, a boot or shoe heel formed of silk fiber, shellac and alcohol in about the proportions specified, molded into form while subjected to heat, as set forth.

4. As a new article of manufacture, a boot or shoe heel formed of silk fiber and dissolved shellac, molded into form around a central wooden core, as set forth

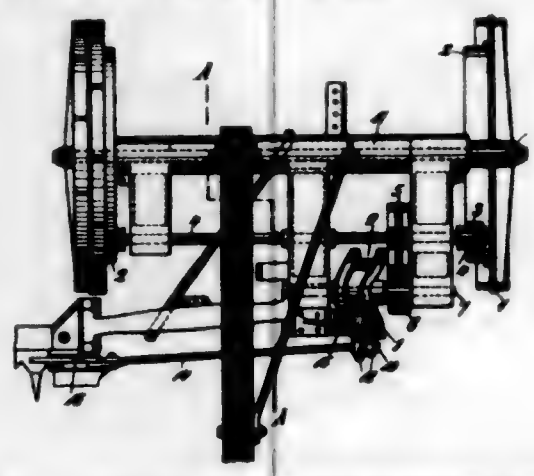
---

710,288. COMPUTING-CHART. LEITON B. MARLEY, Duluth, Minn. Filed Nov. 19, 1901. Serial No. 82,855. (No model.)



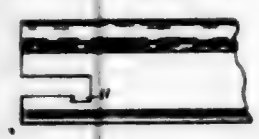
Claim.—A computing-chart having an outer or lower circular member and an upper or inner circular member movable one relatively to the other, one of said members having indicia indicating months and dates thereof and the other member having a series of consecutively-arranged numbers, a central supporting-base, a post secured on said base, a sleeve secured to the outer or lower member and mounted to turn on said post, the said sleeve extending loosely through the upper or inner member, a washer on the upper end of the sleeve and engaging a recess in the upper face of the inner member, and a headed bolt screwing into the upper end of the post, substantially as specified.

710,289. MOWER. ADOLF MAYER, Stuttgart, Germany. Filed Jan. 2, 1902. Serial No. 88,204. (No model.)



Claim.—A mowing machine comprising the horizontal frame 11, the main axle mounted in said frame and provided with the ground-wheels 1, 1, having internally-toothed gears 2, 2, on their inner sides, the shaft 4 mounted in bearings in the frame in front of the axle and provided at its ends with pinions 3, 3, meshing with the gears 2, 2, a short shaft 7, mounted in the frame in front of the shaft 4, gears 5, 6, connecting the shafts 4, 7, the bearings for all three shafts being formed by longitudinal bores through the frame, a disk on shaft 7 having a peripheral cam-groove, an arm 15 extending up from the frame, a laterally-vibrating lever pivoted at its upper end to the arm and having an antifriction-wheel between its ends working in the said cam-groove, and a connecting-rod pivotally connected at one end to the lower end of the vibrating lever and adapted at its opposite end for connection with a knife-bar; substantially as described.

710,290. RAIL-JOINT. HARRY MINCK and HENRY L. DROSTE, Richmond, Ind. Filed Feb. 7, 1902. Serial No. 92,996. (No model.)



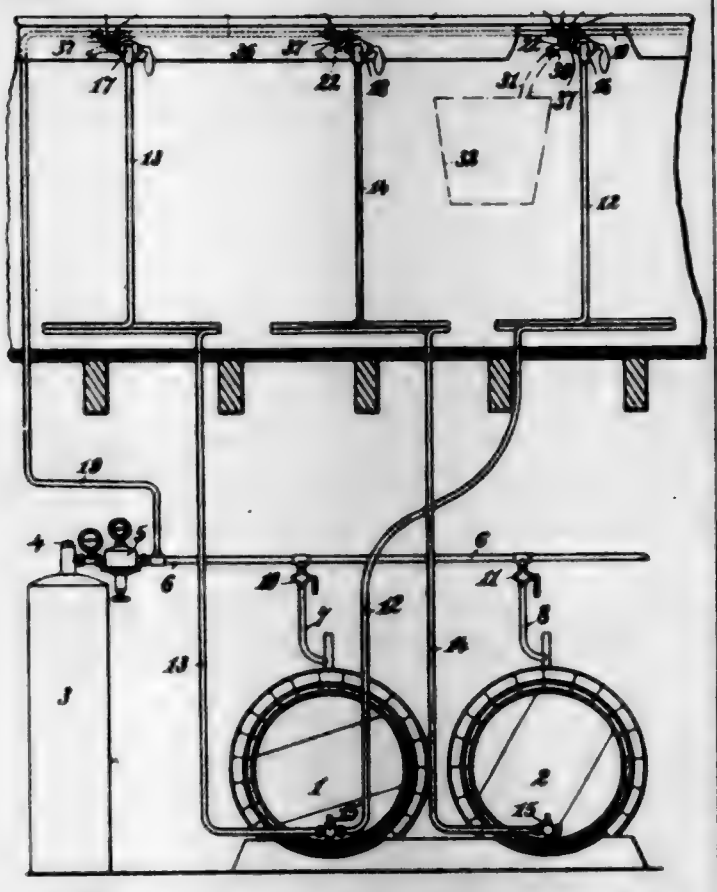
Claim.—In a rail-joint, the combination-sections A and B each provided with a slot extending inward therefrom and terminating in enlarged inclave portions, the slot in each end of each rail being adapted to receive one half of the connecting-bar 12, the other half of the connecting-bar being adapted to enter a similar slot in the opposite rail, of the connecting-bar 12 with downwardly-projecting portions 13 and 14, adapted to be inclosed by a slot in the abutting ends of two rails in combination with the rail-chair, all substantially as shown and described and for the purposes set forth.

710,291. DISPENSING APPARATUS FOR LIQUIDS. STEPHEN W. MORAN, Boston, Mass., assignor of one-half to Samuel H. Hollen, Wakefield, Mass. Filed Feb. 13, 1902. Serial No. 93,927. (No model.)

Claim.—1. In a dispensing apparatus for liquids, a receptacle containing the liquid, a source of pneumatic pressure, a main pressure-pipe from said source of pressure communicating with said receptacle above the liquid therein, a discharge-pipe from said receptacle, a discharge-faucet on said discharge-pipe, a supplemental pressure-pipe under uniform pressure with that in the main pressure-pipe, said supplemental pressure-pipe located in part above the discharge-pipe near the discharge-faucet thereon and connected to the discharge-pipe at that place from above said discharge-pipe, and a stop-cock above the discharge-pipe and within the supplemental pipe near its connection with the discharge-pipe, whereby the liquid in the discharge-pipe may be allowed to return by gravity to said receptacle by the operating of said stop-cock and the liquid be prevented from leaking into the supplemental pressure-pipe from the discharge-pipe.

2. In a dispensing apparatus for liquids, a receptacle containing the liquid, a source of pneumatic pressure, a main pressure-pipe from said source of pressure communicating with said receptacle above the liquid therein, a discharge-pipe from said receptacle, a discharge-faucet on said discharge-pipe, a supplemental pressure-pipe under uniform pressure at all

times with that in the main pressure-pipe, said supplemental pressure-pipe located in part above the discharge-pipe near the discharge-faucet thereon and connected to the discharge-pipe at that place from above said discharge-pipe, a stop-cock within the supplemental pressure-pipe near its connection with the discharge-pipe leaving a vertically-arranged passage between said stop-cock and discharge-pipe, whereby the liquid in the discharge-pipe may be allowed to return by gravity alone to the receptacle by opening said stop-cock and whereby a cushion of air will remain within said vertically-arranged passage and prevent the liquid from the discharge-pipe from connecting with said stop-cock when the stop-cock is closed.



3. In a dispensing apparatus for liquids, a receptacle containing the liquid, a source of pneumatic pressure, a main pressure-pipe from said source of pressure communicating with said receptacle above the liquid therein, a discharge-pipe from said receptacle, a discharge-faucet on said discharge-pipe, a supplemental pipe under uniform pressure at all times with that in the main pressure-pipe and connected to the discharge-pipe near the discharge-faucet thereon, and a stop-cock having a contracted passage through it when opened located within the supplemental pressure-pipe near its connection with the discharge-pipe, whereby the liquid in the discharge-pipe may be allowed to return by gravity alone to said receptacle when said stop-cock is opened and its returning movement be retarded as desired by the contracted passage through said stop-cock.

4. In a dispensing apparatus for liquids, a plurality of receptacles each containing liquid, a source of pneumatic pressure, a main pressure-pipe from said source of pressure communicating with each of said receptacles above the liquid therein, discharge-pipes from receptacles, a discharge-faucet on each discharge-pipe, a supplemental pressure-pipe under uniform pressure with that in the main pressure-pipe connected to each discharge-pipe near the discharge-faucet thereon from above the highest part of said discharge-pipe, and a stop-cock in each connection between the supplemental pressure-pipe, and the discharge-pipes, whereby the liquid in each of the discharge-pipes may be allowed to return by gravity alone to its respective receptacle, independent of the liquids in the other discharge-pipes when its respective stop-cock is opened.

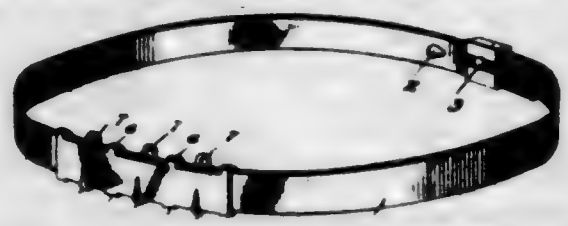
5. In a dispensing apparatus for liquids of the class described having a receptacle for liquid, a discharge-pipe therefrom with discharge-faucet thereon, a source of pneumatic pressure, a main pressure-pipe connected to said receptacle, and a supplemental pressure-pipe leading to the discharge-pipe near the discharge-faucet thereon; an integral casing having a tubular portion with couplings thereon to form a portion of the supplemental pressure-pipe, a tubular portion with couplings thereon to form a portion of the discharge-pipe, a duct through said casing connecting both of said tubular portions, and a stop-cock within said duct controlling said duct, said casing forming a connection between said supplemental pressure pipe and the discharge-pipe near the discharge-faucet thereon and said stop-cock allowing the liquid in the discharge-pipe of the apparatus to return by gravity to its receptacle when said stop-cock is opened.

6. In a dispensing apparatus for liquids of the class described having a receptacle for liquid, a discharge-pipe therefrom with discharge-faucet thereon, a source of pneumatic pressure, a main pressure-pipe connected to said receptacle, and a supplemental pressure-pipe leading to the discharge-pipe near the discharge-faucet thereon; an integral casing having a tubular portion with couplings thereon to form a portion of the supplemental pressure-pipe, a tubular portion with couplings thereon to form a portion of the discharge-pipe, a duct through said casing connecting both of said tubular portions, a stop-cock in said duct controlling said duct, a second duct in said casing, communicating with the first duct between the stop-cock and the tubular portion of the casing which forms a portion of the discharge-pipe, and a removable cap covering the entrance to said second duct and allowing the attachment of a hand-hose to said second duct, said casing forming a connection between said supplemental pressure-pipe and the discharge-pipe near the discharge-faucet thereon, said stop-cock allowing the liquid in the discharge-pipe of the apparatus to return by gravity to its receptacle when said stop-cock is opened, and said second duct in the casing affording means for cleansing the discharge-pipe of the apparatus.

7. In a dispensing apparatus for liquids, a receptacle for liquid, a discharge-pipe from said receptacle, a discharge-faucet on said discharge-pipe, means to force the liquid from said receptacle to said discharge-faucet, an entrance to said discharge-pipe near said discharge-faucet, a removable cap covering said entrance, means to attach a hose to said entrance, through which liquid may be admitted to said discharge-pipe to cleanse said pipe, a pressure-pipe communicating with the passage between said entrance and the discharge-pipe, and a stop-cock controlling the admission of pressure from the pressure-pipe to said passage to be used in forcing the liquid from the hose through the discharge-pipe to cleanse said pipe.

8. In a dispensing apparatus for liquids, a receptacle for liquid, a discharge-pipe from said receptacle, a discharge-faucet on said discharge-pipe, means to force the liquid from said receptacle to said discharge-faucet, an entrance to said discharge-pipe near said discharge-faucet, a removable cap covering said entrance, means to attach a hose to said entrance, through which liquid may be admitted to said discharge-pipe to cleanse said pipe, a pressure-pipe communicating with the passage between said entrance and the discharge-pipe, a stop-cock controlling the admission of pressure from the pressure-pipe to said passage, and an injector-nozzle introduced into said passage from said entrance to cause liquid to be drawn through said hose and forced through the discharge-pipe to cleanse said discharge-pipe.

710,292. GARMENT-SUPPORTER. ALMIRA A. HUDD, St. Louis, Mo. Filed Oct. 19, 1901. Serial No. 79,281. (No model.)



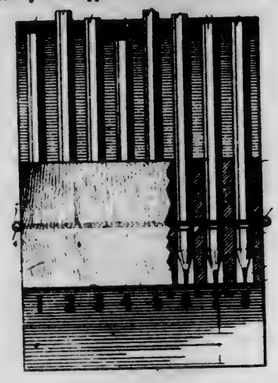
Claim.—In a garment-supporter, the combination with a metallic belt, of an imperforate metallic plate having lugs on its upper and lower edges which are bent inwardly over the upper and lower edges of the belt, and wedge-shaped prongs formed on the upper and lower edges of the plate which decrease in size as they extend outwardly from the plate so as to terminate in tapering pointed ends, the prongs on the upper edge of the plate being made longer than those on the lower edge, and said prongs bent on opposite sides of the plate to points midway the width of the same to form hooks of different sizes, the curved bend of the upper larger hooks being arranged to extend above the upper edge portion of the plate whereby to more readily facilitate the connection of said larger hooks with the waistband of a body of a garment, substantially as specified.

710,293. PEN OR PENCIL HOLDER. JAMES S. MCCLURE, Pueblo, Colo. Filed Nov. 18, 1901. Serial No. 82,864. (No model.)

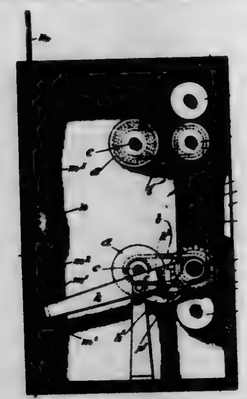
Claim.—1. A holder for pens or pencils, comprising a tray-board, spaced parallel walls arranged on the tray-board, forming intermediate channels, said walls having alined transverse slots therein, intermediately of their ends, and an endless resilient band, having both runs held taut in the slots, so as to present two edges of the band toward inserted pens or pencils, and press upon the pen-stocks or pencils that may vary in thickness.

2. A holder for pens or pencils, comprising a flat tray-board, a plurality of spaced division-walls arranged parallel with each other on the tray-board, forming intermediate channels, said walls having alined transverse slots therein intermediately of their ends, an endless gum band held

in the slots by pins at the looped ends thereof and engaging the tray-board, a cap-piece covering all the channels, and designating characters placed on the tray-board opposite an end of each channel.



710,294. INDICATOR. THOMAS F. MCCLELLAND, Memphis, Tenn. Filed Jan. 27, 1902. Serial No. 91,412. (No model.)



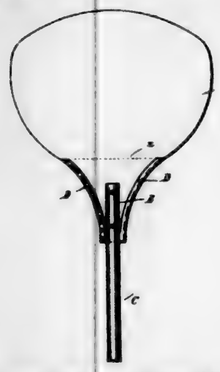
Claim.—1. In an indicator substantially as described, the combination with the apron and the drive-rollers therefor, of a ratchet-wheel in connection with one of said rollers, a lever having a pawl engaging the said ratchet-wheel, a tubular shaft fitting around the axle of the roller which carries the ratchet-wheel, and provided at its outer end with means whereby the said tubular shaft can be turned, and an arm on said shaft provided with means for disengaging the pawl from the ratchet-wheel, substantially as set forth.

2. The combination of the roller or drum having a ratchet-wheel, and the apron for operation by said roller or drum, the axle or shaft of said drum, the tubular shaft controlling said axle and provided at its outer end with a handle and at its inner end with an arm extending adjacent to the ratchet-wheel and provided with a pin for releasing the operating-pawl, and the lever having a pawl arranged to engage the ratchet-wheel and to be released therefrom by the pin on the projecting arm of the tubular-shaft, substantially as set forth.

3. The combination of the casing, the drum therefor, having a series of projecting pins and having axles at its ends, the apron having a series of openings receiving the pins of the drum, the tubular shaft fitting around the axle of the drum and provided at its outer end with a handle and at its inner end with a projecting arm having a pin or stud for releasing the operating-pawl, the ratchet-wheel on the drum, and the lever having a pawl engaging said ratchet-wheel, and arranged to be released therefrom by the arm of the tubular shaft, substantially as and for the purposes set forth.

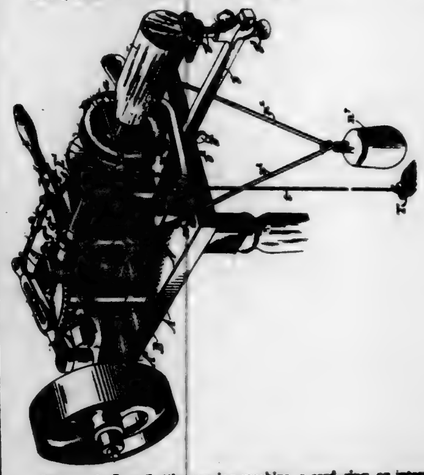
710,295. FAN. WILLIAM MCFARLANE, Boston, Mass. Filed Mar. 19, 1902. Serial No. 98,998. (No model.)

Claim.—1. A fan formed of a thin sheet of resilient material and provided with stiffening portions or beads at its lower side portions which constrain the fan to bend at a predetermined line when used violently, substantially as set forth.



2. A fan formed of a thin sheet of metal and having a shank which is formed integral with its blade and provided with stiffening flanges or beads which constrain the fan-blade to bend when used violently on a line above the top of the shank, substantially as set forth.

710,296. MACHINE FOR CAPPING BOTTLES. GERRIT HORTON, New York, N. Y., assignor to Martha M. Horton, New York, N. Y. Filed Dec. 4, 1901. Serial No. 84,654. (No model.)



Claim.—1. In a bottle-capping machine, a cord-ring, an interior ring secured within the same, means for attaching capping-cords at diametrically opposite points to said cord-ring, and a guard-ring supported on the interior ring, substantially as set forth.

2. In a machine for capping bottles, the combination, with a winding device, of a rotatable shaft, a longitudinally-slotted tubular shaft mounted to slide longitudinally on said rotatable shaft and to rotate therewith, a gear-wheel splined adjacent one end of said tubular shaft, a collar provided on the opposite end thereof, a toothed segment meshing with said gear-wheel, and reciprocating means for engaging said collar and actuating said toothed segment, substantially as set forth.

3. In a machine for capping bottles, the combination of a rotatable shaft, a tubular shaft slidably mounted thereon and rotatable therewith, a collar provided on said tubular shaft, a lever provided with lugs for engaging said collar, a toothed segment connected with said lever for rotating said shafts, and means for reciprocating said lever and said toothed segment, substantially as set forth.

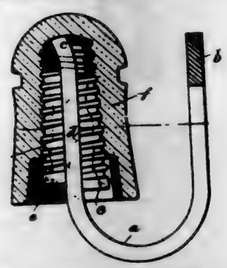
4. In a machine for capping bottles, the combination of a rotatable shaft, a tubular shaft slidably mounted thereon, said shafts being adapted to rotate together, a collar provided on said tubular shaft, a lever for engaging said collar, a toothed segment connected with said lever for rotating said shafts, means for reciprocating said lever and toothed segment, and means for automatically stopping said reciprocating means, substantially as set forth.

5. In a machine for capping bottles, the combination of a rotatable shaft, a tubular shaft slidably keyed thereto with, a collar provided on said tubular shaft, a reciprocating lever for engaging said collar, a toothed segment connected with said lever for rotating said shafts, a power-transmitting shaft, a bevel-gear provided at one end thereof, a suitably-supported toothed disk meshing therewith, a slotted lever having its slotted end pinned to said toothed disk, and an adjustable means connecting said reciprocating lever with said slotted lever, substantially as set forth.

6. In a machine for capping bottles, the combination of a rotatable shaft, a tubular shaft, a reciprocating lever for imparting longitudinal motion to said tubular shaft, a toothed segment connected with said lever for rotating said shafts, a power-transmitting shaft, a bevel-gear provided at one end thereof, a suitably-supported toothed disk meshing therewith, a slotted lever having its slotted end pinned to said toothed disk, a rod adjustably connecting said reciprocating lever and said slotted lever, a pulley-wheel loosely mounted on said power-transmitting shaft, and a spring-actuated clutch on said power-shaft for engaging said pulley-wheel, substantially as set forth.

7. In a power-transmitting mechanism for a bottle-capping machine, the combination of a power-transmitting shaft, a bevel-gear at one end thereof, a toothed disk meshing therewith, a pulley loosely mounted on said power-transmitting shaft, a spring-actuated clutch for engaging said pulley-wheel, a pin projecting from said clutch, a slide-plate having an inclined surface for engaging said pin, a lever for actuating said plate, means on said toothed disk for actuating said lever, and a treadle-actuating device connected with said lever, substantially as set forth.

710,297. INSULATOR. RALPH S. PERRIN, Chicago, Ill. Filed Feb. 10, 1902. Serial No. 93,277. (No model.)



Claim.—1. The combination of an insulator having a screw-threaded bore therein, a metal strip projecting within said bore, and a pair of wooden blocks placed against the opposed sides of said metal strip and formed with exterior screw-threads for engagement with the threads of the insulator-bore.

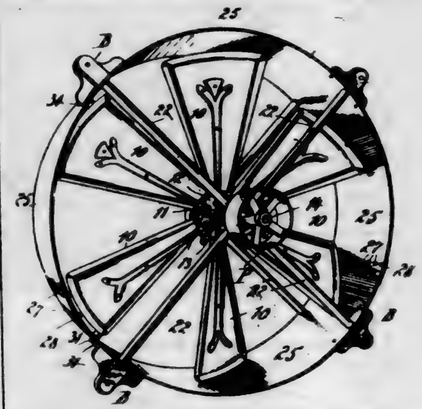
2. The combination of an insulator having a tapered screw-threaded bore therein, a metal strip projecting within said bore, and a pair of wooden wedge-blocks placed against the opposed sides of said metal strip, and projecting beyond the edges thereof, said wedge-blocks having a screw-threaded exterior surface for engagement with the threads of the insulator-bore.

3. The combination of an insulator having a tapered screw-threaded bore therein, a metal strip projecting within said bore, and having a bent or outturned upper end, and a pair of wooden wedge-blocks placed against the opposed sides of said metal strip, below the said upper end thereof, said wedge-blocks having a screw-threaded exterior surface for engagement with the threads of the insulator-bore.

4. The combination of an insulator having a tapered screw-threaded bore therein, a metal strip projecting within said bore, and having a bent or outturned upper end, and a pair of wooden wedge-blocks placed against the opposed sides of said metal strip, below the said upper end thereof, one of the said blocks being held with its upper end at a lower plane than the upper end of the other, and said blocks having a screw-threaded exterior surface for engagement with the threads of the insulator-bore.

710,298. DISSOLUBLE FAN. JOHN L. PERKINS, Holyoke, Mass. Filed Apr. 30, 1902. Serial No. 105,321. (No model.)

Claim.—1. In a dissoluble fan, the combination, with a rotatable shaft; and fan-blades detachably mounted on said shaft; of bearings for supporting said shaft; a substantially circular casing comprising a plurality of separately-formed sections; and brace-rods radially disposed for positioning said bearings and the casing relatively to each other, and having detachable connections with the bearings and said casing-sections.



2. In a dissoluble fan, the combination, with a rotatable shaft; a central member detachably secured thereon; a series of fan-blades; and means for positioning said blades detachably on said member; of bearings disposed at opposite sides of, and adjacent said central fan-carrying member; a circular casing comprising a plurality of separately-formed and detachably-united sections; brace-rods radially disposed around said shaft for positioning said bearings and the casing relatively to each other having detachable connections with the bearings, and said casing-sections, and detachably-applied means for aligning said bearings with each other.

3. In a dissoluble fan, the combination, with a rotatable shaft; a central member detachably secured thereon; a series of fan-blades; and means for positioning and detachably securing said blades on said member; of bearings disposed at opposite sides of, and adjacent said central fan-carrying member; a circular casing comprising a plurality of separately-formed detachably-united sections; brace-rods radially disposed around said shaft and for positioning said bearings and the casing relatively to each other and detachably connected with the bearings and the casing-sections; means for aligning said bearings with each other; and a thrust-collar between one of said bearings and said central member.

4. In a dissoluble fan, the combination, with a rotatable shaft; and detachable bearings therefor; of a casing comprising a plurality of separately-formed sheet-metal sections; means for uniting said sections into a unitary circular structure; and fan-blades detachably mounted for rotation with said shaft.

5. In a dissoluble fan, the combination, with a rotatable shaft; and detachable bearings therefor; of a casing comprising a plurality of separately-formed sections; removably-applied bearing-frames for adjustably receiving said bearings; and brace-rods removably secured to said bearing-frames and said casing-sections.

6. A dissoluble portable fan comprising a circular casing made in sections; detachable means for uniting said sections into a unitary structure; a shaft; a central member removably secured on said shaft; a plurality of fan-blades; removable bearings for said shaft; removable frames for adjustably receiving said bearings; and brace-rods removably secured to said bearing-frames and to said casing-sections, substantially as described.

7. In a dissoluble portable fan, in combination, a shaft; the central member 12 detachably secured thereon, and having the radial screw-threaded bobs 13; the separately-formed fan-blades 10, having the screw-threaded inner end stems 11; and the set-screws 13; the bearing members 15, 15, detachably encircling the shaft, and having positions at the opposite sides of the central member 12; the frames 16, detachably embracing the bearings 15, having the opposite faces 17 of their apertures vertical and parallel, having the penetrating adjustment-screws 18 and 19 centrally at their top and bottom, and having the radial screw-threaded bobs 20; the sheet-metal casing-sections 25 separately formed and constructed with the perforations 30, and with the perforations 26, 26; the tie-plates 28 and the uniting-bolts 27; the brace-rods 22 having screw-stems at their inner ends detachably engaging in said bobs 20, and having their outer end portions constructed with screw-threaded sockets; and headed bolts 31, having their threaded shanks passed through the perforations 30 in the casing-sections, and with a screw engagement into the threaded sock-

ets in the brace-rods; and operating by their heads to clamp the said casing-sections in position against the ends of the brace-rods.

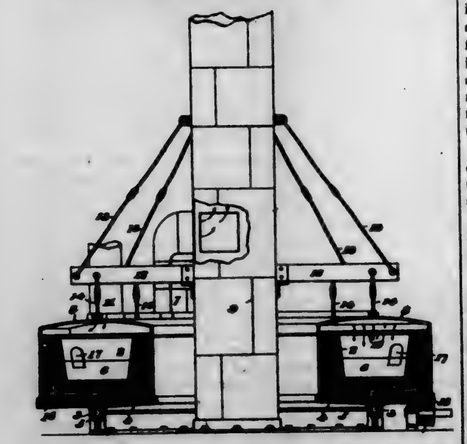
8. In a dismountable portable fan, in combination, a shaft; the central member 12 detachably secured thereon, said having the radial screw-socketed hubs 13; the separately-formed fan-blades 10, having the screw-threaded inner end stems 11; and the set-screws 13; the bearing-members 15, 15, detachably encircling the shaft, and having positions at the opposite sides of the central member 12; the frames 16, detachably embracing the bearings 15, having the opposite faces 17 of their apertures vertical and parallel, having the penetrating adjustment-screws 18 and 19 centrally at their top and bottom, and having the radial socketed hubs 20; the sheet-metal casing-sections 25 separately formed and constructed with the perforations 30 and with the perforations 26, 26; the tie-plates 28 and the uniting-bolts 27; the brace-rods 22 having screw-stems at their inner ends detachably engaging in said hubs 20, and having their outer end portions constructed with screw-threaded sockets; the brackets B having flanges 34 conforming to the contour of the casing, and each provided with an aperture 33; and two sets of headed bolts 31, one set having their threaded shanks passed through the perforations 33 and 30 of the bracket-flanges and casing-sections, and the other set passing through the perforations 30 of the casing-sections, and all with a screw-thread engagement into the socketed ends of the brace-rods, for the purposes set forth.

710,299. METHOD OF PRODUCING SOUND-RECORDS IN CELLULOID. ADDISON N. PETTY, Newark, N. J., assignor to the International Phonograph and Indestructible Record Company, Limited, Liverpool, England. Filed July 30, 1900. Serial No. 25,201. (No model.)

Claim.—1. The method herein specified of forming phonograph-records of celluloid, consisting in coating or otherwise treating the surface of the celluloid cylinder with a liquid material absorbed or taken up by the celluloid and so rendering the same temporarily soft and plastic, cutting the sound-record in the surface of the celluloid cylinder and allowing the said material to evaporate and the surface to dry and harden before use, substantially as set forth.

2. The method of producing sound-records in celluloid, which consists in first softening the celluloid, then permitting it to stand until it assumes a crisp consistency, and while in that condition cutting or engraving therein a record of sound, substantially as described.

710,300. METHOD OF TREATING MATTER. JOHN A. POTTER and WILLIAM C. HARVIE, Monterey, Mexico. Filed Sept. 1, 1900. Serial No. 28,288. (No specimens.)



Claim.—1. The method of treating matter, consisting in exposing the surface of a bath of liquid matter to the action of an air-blast, breaking up the crust which forms on the surface of the bath, and bringing fresh portions of the bath into position to be acted upon by the air; substantially as described.

2. The method of treating matter, consisting in exposing the surface of a bath of liquid matter to the action of air-jets, and at the same time rubbing the surface anew, thereby breaking up the crust which forms on the surface of the bath and bringing fresh portions of the bath into position to be acted upon by the air; substantially as described.

3. The method of treating matter, consisting in subjecting the surface of a bath of liquid matter to the action of a blast of air, agitating the bath, and then boiling the pasty mass; substantially as described.

4. The method of treating matter, consisting in exposing the surface of a bath of liquid matter to the action of an air-blast, breaking up the crust which forms on the surface of the bath and bringing fresh portions of the bath into position to be acted upon by the air, subjecting a second bath of molten matter to a similar operation, and supplying heat from the second bath to the first bath while the latter is in a later stage of desulfurization; substantially as described.

5. The method of treating matter, consisting in introducing a bath of liquid matter into a chamber, agitating the bath and subjecting its surface to the action of a blast of air, moving the chamber to a different point, supplying fresh matter to another chamber, agitating and supplying air to the fresh matter, and supplying heat from the fresh matter to the matter in a later stage of desulfurization in the first chamber; substantially as described.

710,301. MEANS FOR REGULATING THE TEMPERATURE OF HEATING SYSTEMS. WILLIAM P. POWERS, Chicago, Ill. Filed Dec. 26, 1898. Serial No. 617,121. (No model.)

Claim.—1. In a heat-controlling device the combination of a source of fluid-pressure supply with a chamber having a movable wall and an inlet-port and an outlet-port, a thermostatically-actuated valve for one of said ports, a second chamber having an inlet and an outlet port, a valve for the inlet-port, a principal valve, a motor for said valve communicating with the outlet-port of the second chamber, the inlet-valve of said second chamber being so connected with the movable wall of the first-named chamber as to be moved thereby, and the two chambers being so related that the pressure in the second chamber will act in opposition to the pressure in the first-named chamber.

2. In a heat-controlling device, the combination with an expansible chamber, having an inlet and an outlet for fluid-pressure, one of which is thermostatically controlled; of a pressure-chamber having a fluid-pressure supply; a valve controlling said supply, said valve being adapted to be opened by the movable wall of the expansible chamber, whereby to admit the pressure fluid to act on said movable wall in opposition to the pressure thermostatically produced in the expansible chamber.

3. In a heat-controlling device, the combination of a source of fluid-pressure, a chamber having an inlet-port and an outlet-port communicating with the source of fluid-pressure, a thermostatically-actuated valve for one of said ports, a second chamber having an inlet-port and an outlet-port, a source of fluid-pressure therefor, a valve for the inlet-port, a movable wall forming one side of each chamber, a principal valve, a motor for said valve communicating with the outlet-port of the second chamber, the inlet-valve of the second chamber being actuated by the movable wall, and the pressures in the two chambers acting in opposition to each other, substantially as described.

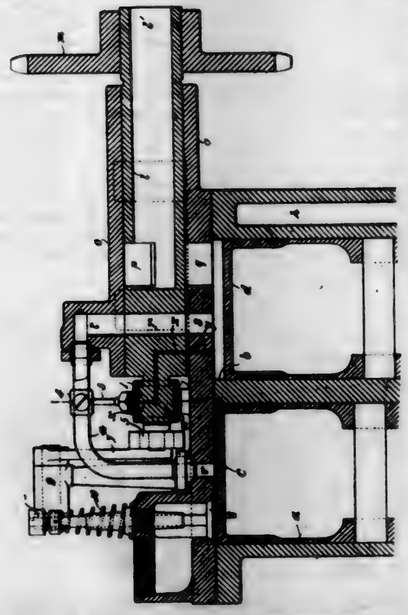
4. In a heat-controlling device, the combination of a source of fluid-pressure, a chamber having an inlet-port and an outlet-port communicating therewith, a thermostatically-actuated valve for one of said ports, a second chamber having an inlet-port and an outlet-port, a valve for the inlet-port, a source of fluid-pressure for the second chamber, a movable wall forming one side of each chamber, the sides of the wall which are exposed to pressure being of unequal areas, a principal valve, a motor therefor communicating with the outlet-port of the second chamber, the inlet-valve of the second chamber being actuated by the movable wall, and the pressures in the two chambers acting in opposition to each other, substantially as described.

5. In a heat-controlling device, the combination of a source of fluid-pressure, a chamber having an inlet-port and an outlet-port communicating therewith, a thermostatically-actuated valve for one of said ports, a second chamber having an inlet-port and an outlet-port, a source of fluid-pressure for said second chamber, a valve for the inlet-port, a flexible diaphragm forming one side of each chamber, a principal valve, a motor for said valve communicating with the outlet-port of the second chamber, a waste-port in the second chamber, the inlet-valve for the second chamber adapted to be actuated by the movable wall, and the pressures in the two chambers acting in opposition to each other, substantially as described.

6. In heat-regulating apparatus, the combination with a fluid-pressure supply, a heat-controlling valve or damper and a fluid-pressure motor for operating the same, of valve mechanism for controlling the supply and release of the fluid-pressure medium to and from said motor, a secondary fluid-pressure motor for operating said valve mechanism, two fluid-pressure-supply connections arranged to admit the fluid-pressure to opposite sides of the movable part of said motor, whereby to act in opposite directions upon said movable part, one of said connections being controlled by said valve mechanism, and a thermostat controlling the relative supply and waste of the pressure fluid admitted through the other connection, the source of fluid-pressure supply being independent of the thermostat.

7. In a heat-controlling device, the combination of a source of fluid-pressure, a chamber having an inlet-port and an outlet-port communicating with the source of pressure, a thermostatically-actuated valve for one of said ports, a second chamber having an inlet-port and an outlet-port, a source of fluid-pressure for the second chamber, a movable wall forming one side of each of said chambers having an orifice forming communication between the second chamber and the external atmosphere, a valve governing the inlet-port of the second chamber, a valve-stem attached to the valve of the second chamber, another valve on the opposite end of this stem adapted to control the orifice through the movable wall, a principal valve, a motor for said valve communicating with the outlet-port of the second chamber, the inlet-valve for the second chamber being actuated by the movable wall, substantially as described.

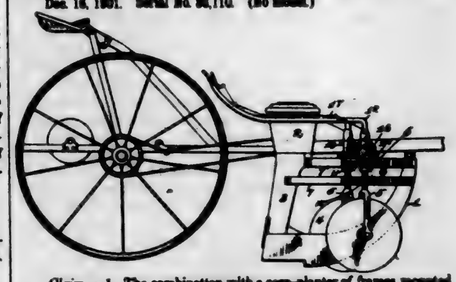
710,302. INTERNAL-COMBUSTION ENGINE. JOHN A. PRENTICE, Tottenham, England. Filed Apr. 29, 1902. Serial No. 105,165. (No model.)



Claim.—1. The improvements in internal-combustion engines comprising the combination of a compression-cylinder, a working cylinder, a piston in the compression-cylinder, a piston in the working cylinder moving in advance of the piston in the compression-cylinder, a rotary valve, an air-admission port in said valve coinciding at the proper time with an admission-port in the compression-cylinder, a discharge-port in said rotary valve coinciding at the proper time with a discharge-port from the compression-cylinder, and a compressed-air-admission port to the working cylinder, an oil-supply valve formed by an extension of said rotary valve, an oil-charging port in said valve, a corresponding oil-supply port in the valve-casing, a compressed-air-inlet port in the path of travel of one end of said oil-port and leading to the compression-cylinder, an oil-discharging port in the valve-casing at the other end of the oil-passage, connections between said port and the compressed-air channel between the cylinders, an exhaust-valve in the working cylinder, a means for actuating said exhaust-valve by the rotation of the main valve, means for rotating the valve from the crank-shaft of the engine, all substantially as and for the purpose set forth.

2. The improvements in internal-combustion engines, comprising the combination with two cylinders and pistons arranged respectively for compressing and exploding the charge, of a rotary spindle forming the inlet and outlet valve to the compression-cylinder and the oil measuring and discharging device, and also having means for operating the exhaust-valve of the working cylinder and means for rotating said spindle-valve at the proper speed from the crank-shaft of the engine, substantially as and for the purpose set forth.

710,303. CORN-PLANTER. HENRY RENTSCH, Bacon, Ala. Filed Dec. 16, 1901. Serial No. 86,110. (No model.)



Claim.—1. The combination with a corn-planter of frames mounted adjacent to each runner, a bearing-block mounted on each of said frames, means for holding said blocks stationary, and standards projecting through each of said bearing-blocks, and disks carried by said standards, a gear-rack rigid with each of the bearing-blocks, a lever connected to each said standard for rotating the same, a pawl carried by each of said levers for engaging with the said rack and suitable connections adjacent to the side of the planter for releasing the pawls, so that the standards may be turned, substantially as described.

2. The combination with a corn-planter having a runner or furrow-opener; of frames mounted one on each side of said runner; bearing-blocks mounted one in each of said frames, and adapted to be adjusted back and forth; disk-holding standards mounted in said bearing-blocks; disks carried by said standards; a rack rigid with each of said bearing-blocks; a lever connected to each of said standards for rotating the same; and a pawl carried by each of said levers for engaging said racks and holding said standards in a desired position, substantially as specified.

3. The combination with a corn-planter having a runner or furrow-opener; of frames mounted one on each side of said runner; bearing-blocks mounted one in each of said frames; disk-holding standards mounted in said bearing-blocks, and adapted to be adjusted up and down; disks carried by said standards; a gear-rack rigid with each of said bearing-blocks; a lever connected to each of said standards; and a pawl carried by each of said levers for engaging said racks, substantially as specified.

710,304. BED-BOTTOM. EDWARD ROSS and ISAAC ISBELL, Chattanooga, Tenn. Filed Dec. 26, 1901. Serial No. 87,266. (No model.)

Claim.—1. The combination with a bedstead having supporting-rails, of a bed-bottom supported in the bedstead, a roller for tightening the bed-bottom, connections between the roller and the bed-bottom and bearings in which the roller is mounted, the bearings being supported upon and laterally adjustable along one of the bedstead-rails, substantially as set forth.

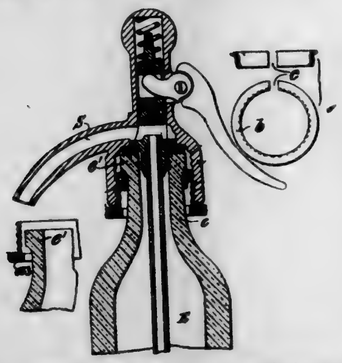
2. The combination with a bedstead having a supporting-rail, of a bed-bottom mounted in the bedstead, a roller for adjusting the tension for the bed-bottom, connecting means between the roller and the bed-bottom and bearings in which the roller is mounted, provided with hooks adapted to engage with the bedstead-rail, substantially as set forth.

3. The combination with a bedstead having a supporting-rail, of a bed-bottom mounted in the bedstead, a roller for adjusting the tension of the bed-bottom, bearings in which the roller is mounted, ratchet-wheels carried by the roller and pawls for engaging with the ratchet-wheels, supported by and laterally adjustable along the end rail of the bedstead, substantially as set forth.

4. The combination with a bedstead having a supporting-rail, of a bed-bottom mounted in the bedstead, a roller for adjusting the tension of the bed-bottom, a ratchet-wheel carried by the roller, and a pawl for engaging with the ratchet-wheel, provided with a hook adapted to engage with and partly encircle the bedstead-rail by which it is supported, substantially as set forth.

5. A bed-bottom comprising a fabric provided at its opposite ends with binding-strips, one of the strips being perforated and the other provided with a series of straps, detachable hooks for engaging with the perforated strip and uniting the fabric with a bedstead, a tension-adjusting roller to which the straps are secured, a ratchet-wheel on the said roller, bearings for the said roller arranged to detachably engage with and be supported by a rail of the bedstead, and a pawl for the said ratchet-wheel arranged to detachably engage with and be supported by a rail of the bedstead, substantially as set forth.

710,805. SIPHON-BOTTLE. BRUNO SCHREIER and EMIL KNYATSEK, Vienna, Austria-Hungary. Filed July 20, 1901. Serial No. 69,114. (No model.)



Claim.—1. The combination with a siphon-bottle having an annular shoulder below its mouth and an externally-threaded sleeve adapted to be slipped over said shoulder onto the neck of the bottle; of a flanged lock-ring fitting said neck below the shoulder and adapted to be inserted into the threaded sleeve after it has been slipped over said shoulder whereby the flange on the lock-ring will project over one end of said sleeve and abut against said shoulder, for the purpose set forth.

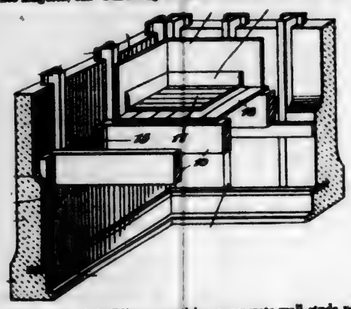
2. The combination with a siphon-bottle having an annular shoulder below its mouth and an externally-threaded sleeve adapted to be slipped over the shoulder onto the neck of the bottle; of a sectional flanged lock-ring adapted to be inserted into the sleeve after it has been slipped over the shoulder, whereby the flange on the ring sections will project over the end of the sleeve and abut against said shoulder, for the purpose set forth.

710,806. RUBBER-DAM HOLDER. GEORGE W. TODD, Elmwood, Nebr., assignor of one-third to HANS PETER JENSEN, Omaha, Nebr. Filed June 16, 1902. Serial No. 111,903. (No model.)

Claim.—1. The combination with a suitable frame provided with two transverse bars, of a plurality of tooth-clamps extending from said frame and pivotally secured thereto and working over said transverse bars.

2. The combination with a suitable spring-frame provided with two transverse bars at opposite ends, of a plurality of tooth-clamps pivotally secured to said frame and working over said transverse bars, each tooth-clamp being provided with an upwardly-extending lip and an opening adjacent said lip.

710,807. FIREPROOF FRAME BUILDING. GEORGE B VOELKER, Los Angeles, Cal. Filed July 14, 1902. Serial No. 115,548. (No model.)



Claim.—1. A building comprising a concrete wall, studs partly embedded in the inner face of the wall and boards secured to the outer faces of the studs and completely embedded in the wall, the inner faces of the studs being exposed for attachment of laths thereto.

2. A building comprising a concrete wall, studs partly embedded in the inner face of the wall and boards secured to the outer faces of the studs and completely embedded in the wall, the inner faces of the studs being exposed for attachment of laths thereto, the upper portions of the studs projecting inwardly beyond the inner face of the wall to provide air-spaces between the studs, the wall and the lathing.

3. A building comprising a concrete wall, having its lower portion of greater thickness than the upper portion and having a wall-plate embedded in the inner face of the thickened portion, studs each having a board secured to its outer face and projecting beyond the side faces of the stud, said studs being disposed upon the wall-plate with the boards and adjacent portions of the studs embedded in the wall, said studs extending inwardly from the inner face of the upper thinner portion of the wall, seats formed in the wall, joists engaged in the seats and against the studs, an inner wall portion secured to the studs above the joists and separated from the outer wall portion by interspaces between the studs, and grates secured between the joists and extending from the upper faces of the latter to the thicker portion of the wall.

710,808. FIREPROOF FLOOR CONSTRUCTION. MERRILL WATSON, New York, N. Y. Filed May 14, 1902. Serial No. 107,230. (No model.)

Claim.—1. In concrete and metal construction a monolithically-embedded bar having sloping incisions and outstanding barbs at opposite sides and with the incisions in adjacent sides out of line.

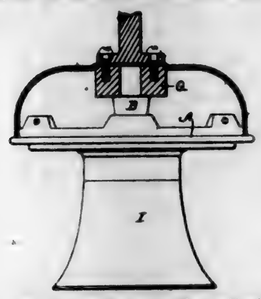
2. In concrete and metal construction, an embedded bar having a sloping-inclined and barbed surface to form a bond between the metal and concrete.

3. In concrete and metal construction, a monolithically-embedded bar having a barbed surface and with the barbs extending transverse of the bar and having their points barred or rolled backward.

4. In concrete and metal construction, a monolithically-embedded bar having a combined inclined and barbed surface, the incisions whereof extend obliquely into the bar and the barbs project beyond the plane of the outer sides of said bar.

5. In concrete and metal construction, a bar having sloping incisions in its surfaces and with the incisions in two adjacent surfaces out of line and made in reverse order, the walls of the corrugations forming barbs which project beyond the plane of the surfaces.

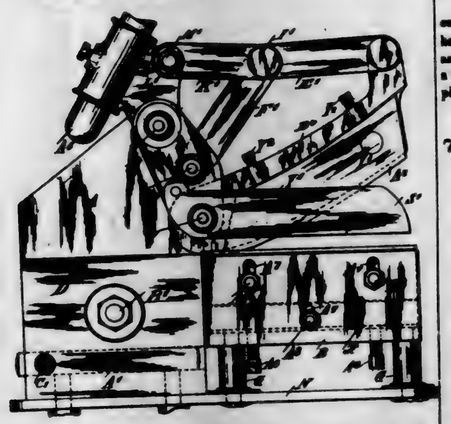
710,809. TELEPHONE-TRANSMITTER. MATHIAS WEBBER, Milwaukee, Wis. Filed Jan. 11, 1902. Serial No. 89,262. (No model.)



Claim.—1. In a telephone-transmitter, the combination comprising a supporting-arm; a spider or bracket rigidly affixed to said arm; a front or body portion rigidly supported from said bracket or spider; and a metallic shell centrally supported between the hub of said bracket or spider and the bearings of said supporting-arms, as set forth.

2. In a telephone-transmitter, a supporting-arm; a spider or bracket; a front or body portion; and a mouthpiece rigidly secured together, in combination with an inclosing shell clamped at its center between the hub of said spider or bracket and the bearings of said supporting-arm, and adapted to bear at its front edge against the rear surface of the front of the transmitter, all substantially as and for the purpose specified.

710,810. FRAME FOR METAL-SHEARING MACHINES. BRUNO WHEELHAHN, Gross Lichterfelde, Germany. Filed May 31, 1902. Serial No. 109,696. (No model.)



Claim.—1. A frame for metal-shears having the carrier for the stationary cutter made separate from the body of the frame and detachably secured thereto, and a support for the said carrier independent of the body of the frame as set forth.

2. A frame for metal-shears comprising a main body portion, a carrier for the stationary cutter, a bolt or pin connecting one end of the said carrier with the said body portion, and means for adjustably supporting the other end of the carrier, as set forth.

3. A frame for metal-shears, comprising a body portion, a carrier for the stationary cutter a bolt or pin connecting one end of the said carrier with the said body portion, a support for the said end of the carrier, and an adjustable support for the free end of the carrier, as set forth.

4. A frame for metal-shears, comprising a body, a carrier for the stationary cutter, detachably secured to the body, a bed-plate, means for adjustably supporting one end of the carrier on the bed-plate, and an adjusting device between the other end of the carrier and the body, as set forth.

5. A frame for metal-shears, comprising a body, a carrier for the stationary cutter detachably secured to the body, a bed-plate, adjusting-heads between one end of the carrier and the bed-plate, and a wedge interposed between the other end of the carrier and a portion of the body, as set forth.

6. A frame for metal-shears, comprising a body having a downwardly-projecting portion provided with a ledge at its lower end, a carrier for the stationary cutter, detachably secured to the said projecting portion, a bed-plate, adjusting devices between one end of the carrier and bed-plate, and a wedge between the other end of the carrier and the said ledge, as set forth.

7. In a frame for metal-shears, a body provided with a ledge having a curved upper surface, a carrier for the stationary cutter, detachably secured to the body and resting upon the ledge thereof, a support, and means for adjustably supporting one end of the carrier, as set forth.

8. In a frame, for metal-shears, a body, a carrier for the stationary cutter, detachably secured to the body, a bed-plate, means for detachably connecting the bed-plate with the body, adjusting device between one end of the carrier and the bed-plate, and an adjusting device between the other end of the carrier and the body, as set forth.

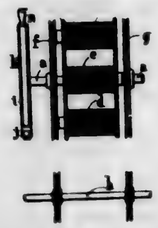
9. A frame for shearing machinery, comprising a pair of brackets for carrying fixed and movable cutters respectively, said brackets being so disposed upon said frame as to bear distinct and independent strains, and means for flexibly connecting said brackets together so as to allow a slight movement between the same when actuated by strains of opposite direction.

10. A frame for shearing machinery, comprising a bed-plate, a bracket mounted thereon for supporting a stationary cutter, means for adjusting said cutter relatively to said bracket, and a bracket detachably mounted upon said bed-plate and provided with mechanism for supporting a movable cutter, said brackets being so disposed as to bear distinct strains having opposite directions.

11. A frame for shearing machinery, comprising a bed-plate, a bracket mounted thereon for supporting a stationary cutter, means for adjusting said cutter relatively to said bracket, a bracket mounted upon said bed-plate and provided with mechanism for supporting a movable cutter, said brackets being so disposed as to bear distinct strains, and means for flexibly connecting said brackets together, so as to allow slight relative movements due to said strains.

12. In a metal-shearing machine, the combination with a body, a cutter-carrier detachably secured to the body, and a bed-plate, of a head having one end reduced and fitting in an aperture of the cutter-carrier, and its other end fitting in an aperture of the bed-plate and provided with a threaded end projecting through the bed-plate, and a nut on the bed-plate and with which the threaded end of the head engages, as set forth.

710,811. ELECTROMAGNETIC DEVICE FOR CONTROLLING THE ROTATION OF SHAFTS. PAUL V. AVRIL, Paris, France, assignor to himself and LA SOCIÉTÉ MARINIER, HAVET ET JOUANNE, Paris, France. Filed Apr. 23, 1901. Serial No. 56,054. (No model.)



Claim.—1. The combination with a shaft adapted to be operatively connected to a prime mover, and an electromagnetic device carried by the shaft and adapted when energized to connect the shaft with the prime mover to cause the operation of said shaft, of a disk mounted upon said shaft, contact-strips carried thereby, means engaging the said strips for making and breaking an electrical circuit for energizing and deenergizing

said magnetic device to control the movement of the said shaft, and electrical connections between said means, magnetic device and source of electrical energy.

2. The combination with a shaft adapted to be operatively connected to a prime mover, and an electromagnetic device carried by the shaft and adapted when energized to connect the shaft with the prime mover to cause the operation of said shaft, of a disk mounted upon said shaft, contact-strips carried thereby, a movable contact engaging the said strips for making and breaking an electrical circuit for energizing and deënergizing said magnetic device to control the movement of the said shaft, and electrical connections between said movable contact, magnetic device and a source of electrical energy.

3. The combination with a shaft adapted to be operatively connected to a prime mover, of an electrical magnetic device carried by the shaft and adapted when energized to connect the shaft with the prime mover to cause its operation, a disk mounted upon said shaft, contact-strips secured to the periphery of said disk a suitable distance apart, means engaging the said strips for making and breaking an electrical circuit for energizing and deënergizing said magnetic device to control the movement of said shaft, and electrical connections between said means, magnetic device and a source of electrical energy.

4. The combination with a shaft adapted to be operatively connected to a prime mover, of an electromagnetic device supported by said shaft and comprising in its construction a disk loosely mounted upon the shaft, said disk suitably connected to a prime-mover and forming the armature of the magnetic device, a disk fixed to said shaft, contact-strips carried thereby, means engaging with said strips for making and breaking an electrical circuit for energizing and deënergizing said magnetic device to control the movement of said shaft and to connect said shaft with the said prime mover to cause the operation of the shaft, and electrical connections between said means, magnetic device and a source of electrical energy.

5. The combination with a shaft adapted to be operatively connected to a prime mover, of an electromagnetic device supported by said shaft and comprising in its construction a disk loosely mounted upon the shaft, said disk suitably connected to a prime mover and forming the armature of the magnetic device, a disk fixed to said shaft, contact-strips carried thereby, a movable contact engaging with said strips for making and breaking an electrical circuit for energizing and deënergizing said magnetic device to control the movement of said shaft and to connect said shaft with the said prime mover to cause the operation of the shaft, and electrical connections between said movable contact, magnetic device and a source of electrical energy.

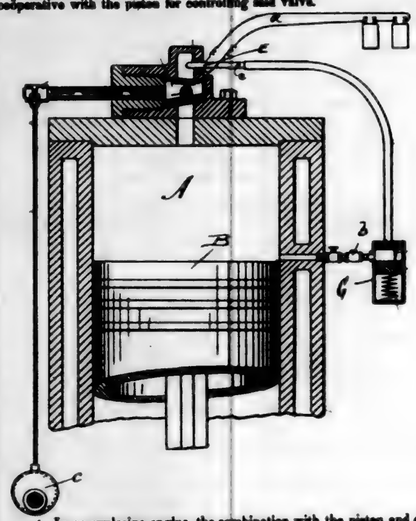
6. The combination with a shaft adapted to be operatively connected to a prime mover, of an electromagnetic device supported by said shaft and comprising in its construction a disk loosely mounted upon the shaft, said disk suitably connected to a prime mover and forming the armature of the magnetic device, a disk fixed to said shaft, contact-strips secured to the periphery of said disk a suitable distance apart, means engaging with said strips for making and breaking an electrical circuit for energizing and deënergizing said magnetic device to control the movement of said shaft and to connect said shaft with the said prime mover to cause the operation of the shaft, and electrical connections between said means, magnetic device and a source of electrical energy.

710,812. IGNITER FOR EXPLOSIVE-ENGINES. EDWARD R. BARLOW, Providence, R. I., assignor of one-half to Louis H. Schneider, Boston, Mass. Filed July 25, 1901. Serial No. 69,650. (No model.)

Claim.—1. In an explosive-engine, the combination with the piston and cylinder, of a chamber communicating with the compression end of the cylinder, an ignition device located in the chamber, a pressure device, a passage connecting the pressure device with the cylinder and so disposed as to be covered by the piston at the latter part of its compression-stroke, and a pipe connecting the pressure device with the ignition-chamber.

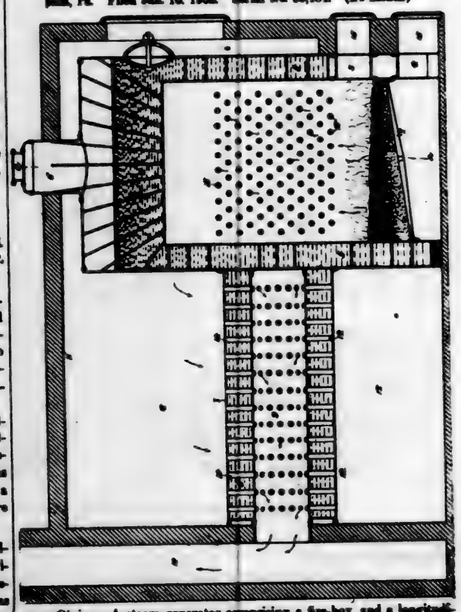
2. In an explosive-engine, the combination with the piston and cylinder, of a chamber communicating with the compression end of the cylinder, an ignition device located in the chamber, a pressure device, a passage connecting the pressure device with the cylinder and so disposed as to be covered by the piston at the latter part of its compression-stroke, a check-valve located in said passage, and a pipe connecting the pressure device with the ignition-chamber.

3. In an explosive-engine, the combination with the piston and cylinder, of a chamber communicating with the compression end of the cylinder, an ignition device located in the chamber, a pressure device; a passage connecting the pressure device with the cylinder and so disposed as to be covered by the piston at the latter part of its compression-stroke, a pipe connecting the pressure device with the ignition chamber, a valve in the passage between the cylinder and the ignition-chamber, and means cooperative with the piston for controlling said valve.



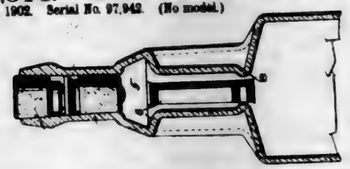
4. In an explosive-engine, the combination with the piston and cylinder, of a chamber communicating with the compression end of the cylinder, an ignition device located in the chamber, an equalizing-chamber, a piston reciprocating in the latter cylinder, a compression-spring between the latter piston and one end of its cylinder, a pipe connecting the other end of this latter cylinder with the ignition-chamber, and a pipe connected to the equalizing-chamber in proximity to this last-mentioned end and connected to the engine-cylinder at a place so disposed as to be covered by the piston at the latter part of the compression-stroke.

710,818. STEAM-GENERATOR. ROBERT J. BARTON, Philadelphia, Pa. Filed Jan. 10, 1902. Serial No. 88,131. (No model.)



Claim.—A steam-generator comprising a fire-box and a longitudinal flue, a casing inclosing said fire-box and having a cylindrical barrel inclosing the flue so as to provide a water-chamber containing said fire-box and flue, and transverse tubes extending between the fire-box and its inclosing casing and between the cylindrical barrel and flue, in combination with an outer casing containing a combustion-chamber which communicates through said tubes with the fire-box and flue, substantially as specified.

710,814. BOTTLE. VICTOR BARTCAVITS, Chicago, Ill. Filed Mar. 12, 1902. Serial No. 97,942. (No model.)



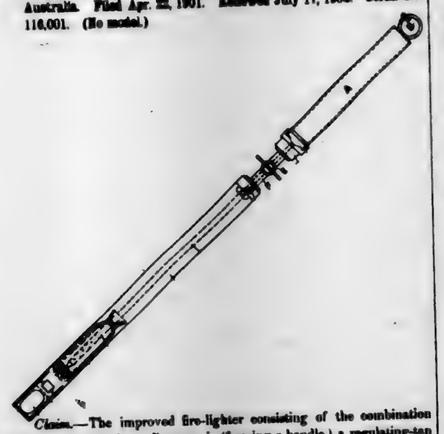
Claim.—1. A device of the class described, comprising a neck having an upper stopper-receiving portion and provided with a lower stopper-receiving portion provided with passages, and a stopper arranged within the upper stopper-receiving portion of the neck and adapted to be forced inward into the lower portion of the neck, said stopper being provided with means for preventing its return into the upper portion of the neck, substantially as and for the purpose described.

2. A device of the class described, comprising a neck having an upper stopper-receiving portion and provided at its lower portion with a series of longitudinal ribs, a stopper located within the upper portion of the neck and adapted to be forced inward into the lower portion, and means for preventing the return of the stopper into the upper portion of the neck, substantially as and for the purpose described.

3. A device of the class described, comprising a neck having an upper stopper-receiving portion and provided at its lower portion with a series of ribs forming a stopper-receiving portion and providing grooves or passages, said ribs being spaced from the upper stopper-receiving portion and the neck being provided between the ribs and the upper portion with an enlarged portion forming an intermediate chamber, a stopper arranged within the upper portion of the neck and adapted to be forced inward into the lower portion, and an expansible device carried by the stopper and arranged to engage the intermediate chamber for locking the stopper to prevent the return of the same into the upper portion of the neck, substantially as and for the purpose described.

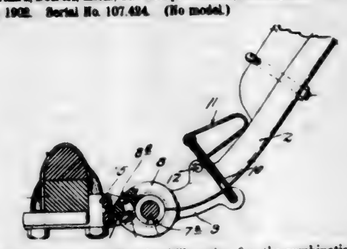
4. A device of the class described, comprising a neck having an upper stopper-receiving portion and provided with a lower portion having a longitudinal passage, said neck being also provided with an intermediate chamber of greater diameter than the upper stopper-receiving portion, a stopper arranged within the upper portion of the neck and adapted to be forced into the lower portion of the same and an expansible device carried by the stopper and arranged to engage the intermediate chamber to prevent the return of the stopper into the upper portion of the neck, substantially as and for the purpose described.

710,815. FIRE-LIGHTER. HENRY BRADY, Ayr, Queensland, Australia. Filed Apr. 22, 1901. Renewed July 17, 1902. Serial No. 116,001. (No model.)



Claim.—The improved fire-lighter consisting of the combination and arrangement of an oil-reservoir (forming a handle,) a regulating-tap between the said reservoir and a perforated distributing-pipe, the end of the said pipe being enveloped in an asbestos or other suitable wick, and a sheath for the reception of the pipe when not in use substantially as hereinbefore described and explained and as illustrated in the drawings.

710,816. THILL-COUPLING. JOHN M. BRYANT, Minneapolis, Minn., assignor of three-fourths to Ebenezer J. Hewell and Percy A. Barnard, Detroit, Mich., and Joseph L. Henry, Chicago, Ill. Filed May 16, 1902. Serial No. 107,494. (No model.)

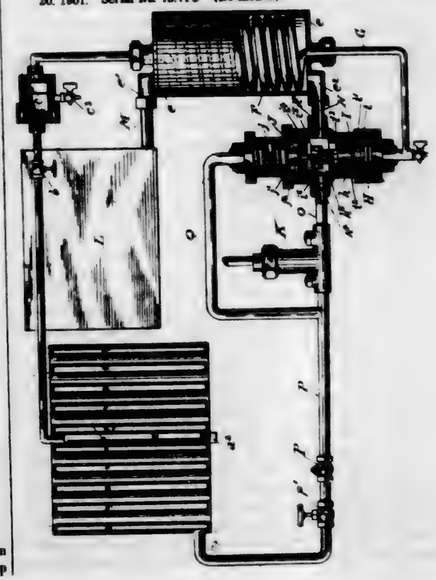


Claim.—1. In a coupling for thills, poles, &c., the combination with a pair of coupling-jaws having, at their rear ends, interlocking parts forming a separable joint adapted to be connected and disconnected by angular movements of one of said jaws with respect to the other, of a clamping device applied to the forward ends of said clamping-jaws for holding the same in working position, substantially as described.

2. In a coupling for thills, poles, &c., the combination with a pair of separable jaws connected at their rear ends by a cooperating hook and hook-seat, one on each of said jaws, of a link pivoted to one of said jaws, and a spring-lever pivoted to the other of said jaws and to said link, and movable from one side to the other of a dead-center, to lock and release the said movable jaw, substantially as described.

3. In a coupling for thills, poles, &c., the combination with the jaws 8 and 9 having, respectively, the hook-seat 8* and hook 9*, detachably engageable as described, of the link 10 pivoted to the outer end of said jaw 9, and the U-shaped spring-lever 11 pivoted to said link 10 and pivoted to said jaw 8, which spring-lever 11 is movable rearward of its dead-center, to release said jaw 9, and is movable forward of its dead-center to lock the said jaw 9, substantially as described.

710,817. AUTOMATIC BOILER-FEEDER. CHARLES CUMMINGS, San Francisco, Cal., assignor to Automatic Boiler Feed-Water Regulator Co., San Francisco, Cal., a Corporation of California. Filed Sept. 20, 1901. Serial No. 75,714. (No model.)



Claim.—1. In an automatic boiler-feed, the combination of controllable means for supplying water to the boiler, an outlet from the boiler, in the horizontal plane of the predetermined water-level therein, said outlet having a passage, to convey water or steam from the boiler, according to whether said predetermined water-level is exceeded or not, a condenser in said passage, for condensing the steam passing therethrough, and differentiating its pressure from that of the water, and a device differentially controlled by said differentiated pressures, for controlling the water supplied to the boiler.

2. In an automatic boiler-feed, the combination of controllable means for supplying water to the boiler, an outlet from the boiler, in the horizontal plane of the predetermined water-level therein, said outlet having a passage, to convey water or steam from the boiler, according to whether said predetermined water-level is exceeded or not, a condenser-coil let into said passage for condensing the steam passing therethrough, and differentiating its pressure from that of the water, a device differentially controlled by said differentiated pressures for controlling the water supplied to the boiler, and a passage for the feed-water from the source of supply to the boiler, said passage surrounding the condenser-coil, whereby the latter is rendered operative.

3. In an automatic boiler-feed, the combination of controllable means for supplying water to the boiler, an outlet from the boiler, in the horizontal plane of the predetermined water-level therein, said outlet having a passage, to convey water or steam from the boiler, according to whether said predetermined water-level is exceeded or not, means, in said passage, for differentiating the pressures between the water and steam flowing therethrough, a passage from the source of feed-water supply to the boiler, a return by-pass in said passage, and a valve differentially controlled by said differentiated pressures, for controlling both the passage and the by-pass, whereby the feed-water is directed alternately through either.

4. In an automatic boiler-feed, the combination of controllable means for supplying water to the boiler, an outlet from the boiler, in the horizontal plane of the predetermined water-level therein, said outlet having a passage, to convey water or steam from the boiler, according to whether said predetermined water-level is exceeded or not, a condenser in said passage, for condensing the steam passing therethrough and differentiating its pressure from that of the water, a passage from the source of feed-water supply to the boiler, a return by-pass in said passage, and a valve differentially controlled by said differentiated pressures, for controlling both the passage and the by-pass, whereby the feed-water is directed alternately through either.

5. In an automatic boiler-feed, the combination of controllable means for supplying water to the boiler, an outlet from the boiler, in the horizontal plane of the predetermined water-level therein, said outlet having a passage, to convey water or steam from the boiler, according to whether said predetermined water-level is exceeded or not, a condenser-coil let into said passage for condensing the steam passing therethrough and differentiating its pressure from that of the water, a passage for the feed-water from the source of supply to the boiler, said passage surrounding the condenser-coil, a return by-pass in said passage, and a valve differentially controlled by said differentiated pressures, for controlling both the passage and the by-pass whereby the feed-water is directed alternately through either.

6. In an automatic boiler-feed, the combination of a continuously-driven pump, having a communication with the water-supply tank and with the boiler, a return by-pass in said communication, a valve adapted to control alternately said communication and by-pass, an outlet from the boiler in the horizontal plane of the predetermined water-level therein, a passage from said outlet connecting it with the valve, and a means in said passage for differentiating the pressures between the water and steam flowing therethrough, whereby the valve is differentially controlled, to control the main communication or the by-pass alternately.

7. In an automatic boiler-feed, the combination of a continuously-driven pump, having a communication with the water-supply tank and with the boiler, a return by-pass in said communication, a valve adapted to control alternately said communication and by-pass, an outlet from the boiler in the horizontal plane of the predetermined water-level therein, a passage from said outlet connecting it with the valve, and a condenser-coil let into said passage and surrounded by the main water-feed communication, to condense the steam, and differentiate its pressure from that of the water, whereby the valve is differentially controlled, to control the main communication or the by-pass alternately.

8. In an automatic boiler-feed, the combination of controllable means for supplying water to the boiler, an outlet from the boiler, in the horizontal plane of the predetermined water-level therein, said outlet having a passage to convey water or steam from the boiler, according to whether said predetermined water-level is exceeded or not, means in said passage, for differentiating the pressures between the water and steam flowing therethrough, a fluid-pressure reducer in said passage, and a device differentially controlled by said differentiated pressures for controlling the water supplied to the boiler.

9. In an automatic boiler-feed, the combination of controllable means for supplying water to the boiler, an outlet from the boiler, in the horizontal plane of the predetermined water-level therein, said outlet having a passage to convey water or steam from the boiler, according to whether said predetermined water-level is exceeded or not, a condenser in said passage, for differentiating the pressures between the water and steam flowing therethrough, a fluid-pressure reducer in said passage consisting of plates or disks each with an aperture smaller than the interior diameter of said passage, and a device differentially controlled by said differentiated pressures for controlling the water supplied to the boiler.

10. In an automatic boiler-feed, the combination of controllable means for supplying water to the boiler, an outlet from the boiler, in the horizontal plane of the predetermined water-level therein, said outlet having a passage, to convey water or steam from the boiler, according to whether said predetermined water-level is exceeded or not, a condenser in said passage, for condensing the steam passing therethrough and differentiating its pressure from that of the water, plates or disks in said passage, in advance of and behind said condenser, said plates or disks, each having apertures smaller than the diameter of the passage, whereby the fluid-pressure in the passage is reduced, and a device differentially controlled by said differentiated pressures for controlling the water supplied to the boiler.

11. In an automatic boiler-feed, the combination of a continuously-driven pump, having a communication with the water-supply tank and with the boiler, a return by-pass in said communication, a valve adapted to control alternately said communication and by-pass, an outlet from the boiler in the horizontal plane of the predetermined water-level therein, a passage from said outlet connecting it with the valve, a condenser-coil let into said passage and surrounded by the main water-feed communication, to condense the steam, and differentiate its pressure from that of the water, whereby the valve is differentially controlled, to control the main communication or the by-pass alternately, and disks or plates in said steam and water passage in advance of and behind said condenser-coil and having apertures smaller than the diameter of the passage, whereby the fluid-pressure in the passage is reduced.

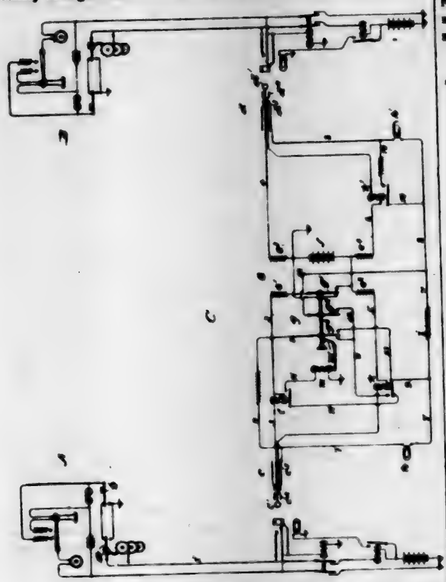
12. In an automatic boiler-feed dependent for operation upon the water or steam passing from the boiler according to whether a predetermined water-level in the boiler is exceeded or not, the means for obtaining an outlet for said water or steam from the boiler, consisting of a tube in the boiler having one end closed, and the other end communicating with the connections to the operative parts of the automatic feed, and a hole in said tube in the horizontal plane of the predetermined water-level, to permit water or steam to enter said tube, according to whether said level is exceeded or not.

710,318. TOLL APPARATUS FOR TELEPHONE EXCHANGES. WILLIAM W. DEAN, Chicago, Ill., assignor to Western Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 14, 1902. Serial No. 89,657. (No model.)

Claim.—1. The combination with a telephone-line extending from a substation to a central office, of a blocking-switch at the central office, a magnet connected with the line at the central office, mechanism controlled by said magnet for restoring the blocking-switch, a toll device at the substation and means controlled in the operation of the toll device for determining the flow of current through said magnet independent of the blocking-switch.

2. The combination with a telephone-line extending from a substation to a central office, of a transmitting-telephone at the substation of the line, a source of current connected with the line at the central office, adapted to supply current to said transmitting-telephone, means at the central office for making connection between said telephone-line and another line, a blocking-switch at the central office adapted when set to interrupt the flow of current from said battery through the subscriber's transmitter, a toll device at the substation to be actuated by the subscriber, and means controlled in the operation of said toll device for restoring said blocking-switch to reëstablish the flow of current through said transmitter, substantially as set forth.

3. The combination with a telephone-line extending in two limbs from a substation to a central office, of a transmitting-telephone connected in circuit between the limbs of the line at the substation, a source of current normally included in a bridge of the line at the central office, for supplying current to said transmitting-telephone, a blocking-switch at the central office adapted when set to disconnect one limb of the line from its normal battery connection, whereby the flow of current through the transmitting-telephone is interrupted, means controlled by the flow of current in the other limb of the line for releasing said blocking-switch and thereby restoring the normal circuit connections of the battery with the line, and a switch at the substation for completing the circuit from the aforesaid battery through said last-mentioned limb of the line.



4. The combination with a telephone-line extending from a substation to a central office, of a transmitting-telephone in a bridge of the line at the substation, a source of current in a bridge of the line at the central office, adapted to supply current to said transmitting-telephone, a blocking-switch adapted to be set at the central office, for interrupting the flow of current from said battery through the transmitter, a magnet connected with the line and mechanism controlled thereby for restoring said blocking-switch, and means at the substation of the line, for determining the flow of current through said magnet independent of said blocking-switch, substantially as described.

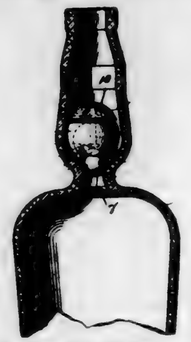
5. The combination with a signal-circuit including serially a source of current *f*, a resistance *i* and a signal *h*, of a shunt 9 about said signal, a relay *k* controlling said shunt, a switch *g* adapted when set to open said shunt 9, and to close a second shunt 9, 13, about said signal independent of said relay, and a shunt 12 about the resistance *i* brought under the control of the relay when said switch is set, substantially as described.

6. The combination with two united telephone-lines having transmitting and receiving telephones in bridges at the respective substations thereof, of a source of current normally connected in a bridge of the united lines for supplying current to the substation-transmitters, an induction device, a switch at the central office adapted to block one of said lines by disconnecting one limb thereof from its normal connection with said source of current, said source being left connected between the blocked line and a return-conductor, the lines being telephonically united through said induction device, but the transmitter of the blocked line being deprived of current for its operation, a toll device for the blocked line, adapted for actuation by the subscriber, a switch actuated in the operation of the toll device for controlling the circuit of said source of current through the blocked line and the aforesaid return-conductor, and a responsive device at the central office in the last-mentioned circuit.

7. The combination with two line-conductors, of a source of current, one pole whereof is connected to a return-conductor, relays one in each of said line-conductors, a signal controlled by one of said relays, a local circuit controlled by both of said relays jointly, closed in the normal switch-contacts of one relay and the alternate contacts of the other, a responsive device in said local circuit, and switches for independently completing the circuit of either line-conductor.

8. The combination with a telephone-line extending in two limbs from a substation to a central office, of a source of current normally connected in a bridge of the line at the central office for supplying current to the substation, one pole of said source being connected to a return-conductor, a blocking-switch adapted to be set to connect both limbs of the line with the free pole of said source, magnets, one in the path of current to each line-conductor, a toll device at the substation, a switch actuated in the operation of said toll device for opening the circuit of one limb of the line and connecting the other to the return-conductor, and a restoring device for said blocking-switch, controlled jointly by said magnets and brought into operation by the simultaneous excitement of one magnet and inert condition of the other.

710,819. NON-REFILLABLE BOTTLE. JOHN W. EDWARDS, Cleveland, Ohio. Filed Mar. 12, 1902. Serial No. 98,202. (No model.)



Claim.—1. A non-refillable bottle having a contracted neck portion, an enlargement above the contracted portion, a valve in the enlarged portion, means for holding the valve in an unseated position for the filling operation and for preventing the valve from returning to its original position, substantially as described.

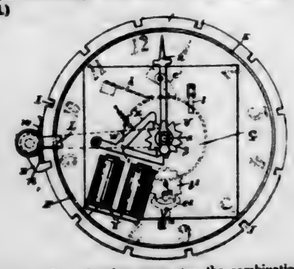
2. A non-refillable bottle having within its enlarged neck portion a valve, means for yieldingly suspending the valve above its seat prior to filling the bottle, and means for forcing the valve to its seat and for preventing its return to its original position after the bottle has been filled, substantially as described.

3. A non-refillable bottle comprising a shell within the neck of the bottle, yielding supports connected to the shell, a ball suspended by the supports prior to filling the bottle, and means for pushing the ball beyond the yielding supports after the bottle has been filled, substantially as described.

4. A non-refillable bottle consisting of a bottle having a contracted neck portion, a hollow shell within the enlargement, yielding supports connected to the shell, a ball within the shell and resting upon the supports, a stem extending through the shell and bearing upon the ball, and a cap connected to the opposite end of the stem, substantially as described.

5. A non-refillable bottle having a contracted neck forming an interior seat for a ball-valve, an enlargement above the seat, a shell within the enlargement, said shell having an open lower end, holes in the top, and yielding supports attached thereto, a stem passing through the shell and resting upon the ball, and a perforated cap attached to the opposite end of the stem, substantially as described.

710,820. SIGNALING APPARATUS. HOWARD A. FREDERICK, Detroit, Mich., assignor to Detroit Electric Signal Company, Detroit, Mich., a Partnership. Filed Sept. 6, 1901. Serial No. 74,579. (No model.)



Claim.—1. In a signaling apparatus, the combination with a signal-circuit including a signal adapted to operate progressively, of a circuit breaker and closer included in said circuit, an adjustable operating device for the circuit breaker and closer, and connecting instrumentalities between said operating device and said circuit breaker and closer permitting

an initial movement of the operating device to the desired extent of its adjustment and a relatively reluctant corresponding movement of the circuit breaker and closer, substantially as described.

2. In a signaling apparatus, the combination with a signal-circuit including a signal adapted to operate progressively, of a circuit breaker and closer included in said circuit, an adjustable operating device for the circuit breaker and closer, connecting instrumentalities between said operating device and said circuit breaker and closer permitting an initial movement of the operating device to the desired extent of its adjustment and a relatively reluctant corresponding movement of the circuit breaker and closer, and means for retarding the operation of the circuit breaker and closer after its actuation has been effected, substantially as described.

3. In a signaling apparatus, the combination with a signal-circuit including a signal adapted to operate progressively, of a circuit breaker and closer included within said circuit, a signal-operating device mounted for movement into different positions of adjustment and adapted to be locked in each of its adjusted positions, a yielding operative connection between said operating device and the circuit closer and breaker and means for retarding the operation of said circuit closer and breaker after its actuation has been effected.

4. In a signaling apparatus, the combination with a signal-circuit including a signal adapted to operate progressively, of a rotatable circuit breaker and closer included within said circuit, a revolable operating-arm adapted to actuate and control the operation of the circuit breaker and closer, a spring forming a yielding connection between the arm and said circuit breaker and closer, and a lock for retaining the arm in each of its different positions of adjustment.

5. In a signaling apparatus, the combination with a supporting-frame, of a shaft journaled therein, an operating-arm for rotating the shaft in one direction and adapted to move independently of the shaft when turned in the opposite direction, a rotatable circuit breaker and closer loosely sleeved upon the shaft and having a yielding connection with the latter, a progressively-operating signal, and a circuit including the signal and the circuit breaker and closer.

6. In a signaling apparatus, the combination with a supporting-frame, of a shaft journaled therein, an operating device for rotating the shaft in one direction, a rotatable circuit breaker and closer sleeved upon the shaft, a spring connection connecting said circuit breaker and closer with the shaft, a signal adapted to be operated progressively, and a signal-circuit including the signal and the circuit breaker and closer.

7. A signal and return-signal system, including a combined receiving and transmitting instrument provided with a dial, a shaft, an operating device in engagement with the shaft, a signal located at a point remote from said instrument, an operating device for said signal in operative communication with said shaft, an index operable independently of said shaft, and means independent of said signal-operating device for actuating said index, substantially as described.

8. A signal and return-signal system including a combined receiving and transmitting instrument provided with a dial, a shaft, an operating device in engagement with the shaft, a signal located at a point remote from said instrument, an operating device for said signal in operative communication with said shaft, an index operable independently of said shaft, and magnetic devices for actuating said index, substantially as described.

710,821. FOOT-REST FOR CHAIRS. WALLACE D. GROSJEAN, Canastota, N. Y., assignor to Charles A. Lee, Canastota, N. Y. Filed Mar. 23, 1901. Serial No. 52,501. (No model.)

Claim.—1. In combination with the body of a chair or the like; a bar or rod supported thereby; a frame slidably connected to said bar and suspended at one end therefrom; a folding foot-rest pivotally connected to said frame; and means carried by the rest and adapted to be brought into operative relation to the rod for maintaining the rest and frame in an elevated position when they are moved back beneath the body.

2. In combination with the body of a chair or the like, a frame; a pivotal sliding connection between one end of said frame and the under side of the body; legs pivoted to the forward end of said frame; stops to maintain the legs in an upright position; and a foot-rest carried by the legs, whereby the frame may be withdrawn from beneath the body, and swung to any desired position in front of the chair, substantially as described.

3. In combination with the body of a chair or the like, a bar or rod carried thereby; a frame slidably mounted on said bar and pivotally suspended therefrom; legs pivoted to the forward end of the frame; stops to maintain the legs in an upright position; and a foot-rest carried by the legs.

4. In combination with the body of a chair or the like, a bar or rod carried thereby; a frame; a hanger connected to said frame; a sliding connection intermediate said rod and hanger; legs pivoted to the forward end of the frame; stops to maintain the legs in an upright position; and a foot-rest hinged to the upper ends of the legs.

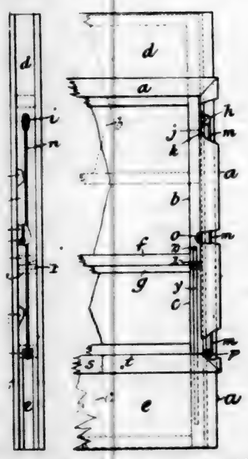
5. In combination with the body of a chair or the like, a bar or rod carried thereby; a frame; a hanger extending upwardly from the rear portion of the frame and provided with an eye encircling the rod; legs pivotally connected to the forward end of the frame; stops acting to maintain the legs in an upright position; and a foot-rest hinged to the upper ends of the legs.

6. In combination with the body of a chair or the like, a bar or rod carried thereby; a frame comprising side bars F, F and cross-bar G; a hanger extending upwardly from said cross-bar and having an eye encircling the rod; a pair of legs pivotally connected to the inner faces of the bars F, F; a foot-rest hinged to the upper forward faces of the legs; stops carried by the legs; and a hook also connected to the legs.

7. In combination with the body of a chair, a bar or rod carried thereby; a frame slidably connected to the bar and suspended therefrom; a foot-rest pivotally connected to the forward end of the frame; and means carried by the rest to engage the bar when the rest is folded down upon the frame and the whole moved back beneath the body.

8. In combination with the body of a chair or the like, a rod or bar M removably mounted therein; a folding foot-rest; a pivotal, suspending connection intermediate said rest and the rod; and means carried by the rest engaging the bar and maintaining the folded rest in an elevated position beneath the body.

710,822. SLIDING WINDOW. WILLIAM E. HARDEMAN, Carlton, Victoria, Australia. Filed Dec. 3, 1901. Serial No. 84,572. (No model.)



Claim.—1. In a sliding window, the combination with the window-frame, the upper and lower sashes, and a pulley located in the upper part of each side of said frame, of a cord connected to one side of the upper sash, passing upward over one of said pulleys, then downward and across said lower sash, in supporting engagement therewith, then upward over the other of said pulleys, and connected to the other side of said upper sash.

2. In a sliding window, the combination with the window-frame, the upper and lower sashes, and a pulley located in the upper part of each side of said frame, of a cord connected to one side of the upper sash, passing upward over one of said pulleys, then downward and across said lower sash, in supporting engagement therewith, then upward over the other of said pulleys, and connected to the other side of said upper sash, and means for adjusting said cord.

3. In a sliding window, the combination with the window-frame, the upper and lower sashes, and a pulley located in the upper part of each side of said frame, of a cord connected to one side of the upper sash, passing upward over one of said pulleys, then downward and across said lower sash, in supporting engagement therewith, then upward over the other of said pulleys, and connected to the other side of said upper sash, means for adjusting said cord, and means for determining the meeting-point of said sashes when they are in closed position.

4. In a sliding window the combination with the window-frame, the upper and lower sashes, upper and lower walls for said sashes, and a pulley located in the upper part of each side of said frame, of a cord connected to one side of the upper sash, passing upward over one of said pulleys, then downward and across said lower sash, in supporting engagement therewith, then upward over the other of said pulleys, and connected to the other side of said upper sash, means for adjusting said cord, means for determining the meeting-point of said sashes when they are in closed position, means located between said sashes for excluding dust, rain, and the like, a pivoted shutter located at the upper part of said lower well, for excluding dust, rain and the like therefrom, said shutter being adapted to be tilted out of the path of said lower sash when it is lowered in opening the window, and means on said lower sash for restoring said tilted shutter to normal position when said lower sash is raised in closing the window.

5. In a sliding window, the combination with the window-frame and a pulley located in the upper part of each side of said frame, of a groove in each side of said frame, a lower sash fitted into said grooves, an upper sash superimposed above said lower sash in said grooves, and a cord connected to one side of said upper sash, passing upward over one of said pulleys, then downward and across said lower sash, in supporting engagement therewith, then upward over the other of said pulleys and connected to the other side of said upper sash.

6. In a sliding window, the combination with the window-frame, and a pulley located in the upper part of each side of said frame, of a groove in each side of said frame, a lower sash fitted into said grooves, an upper sash superimposed above said lower sash in said grooves, means for determining the meeting-point of said sashes when they are in closed position, a cord connected to one side of said upper sash, passing upward over one of said pulleys, then downward and across said lower sash, in supporting engagement therewith, then upward over the other of said pulleys and connected to the other side of said upper sash, and means for adjusting said cord.

710,823. TORPEDO-SHELL PROTECTOR. JOSEPH M. HAVILES, Corning, Ohio. Filed Feb. 6, 1902. Serial No. 92,857. (No model.)

Claim.—1. An oil-well-torpedo shell provided at its opposite ends with a guard or guide composed of salt rubber and consisting of the cylindrical body expanded over the shell and the ribs or lugs extending longitudinally on the outer side of the cylindrical body from end to end thereof and slightly rounded at their ends, substantially as and for the purposes set forth.

2. A guide or guard for an oil-well-torpedo shell consisting of the cylindrical body, and the ribs or lugs projecting from the outer side thereof, substantially as set forth.

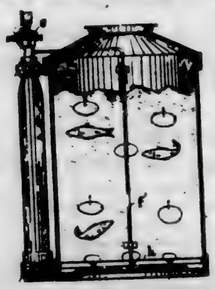
3. A guide or guard for torpedo-shells, consisting of a soft-rubber cylinder to be expanded over the shell and longitudinal ribs or lugs on the outer side of the said cylinder, substantially as set forth.

4. An oil-well-torpedo shell provided with the spaced-apart soft-leaning guides or guards composed of the cylindrical bodies expanded over the shell and the ribs or flanges on the outer side of said cylindrical bodies, substantially as and for the purposes set forth.

710,824. BANDOLEER OR CARTRIDGE-BELT. JOHN HYLAND, St. Kilda, Victoria, Australia, assignor to Frederic Godfrey Hughes, Melbourne, Victoria, Australia. Filed Oct. 29, 1900. Serial No. 34,333. (No model.)

Claim.—A belt having secured thereto throughout its length, a series of cartridge-containers, each of said containers consisting of a plate forming a rear wall and having its upper edge extending downwardly at an inclination and a portion of its lower edge at each end extending inwardly and upwardly at an inclination, said upwardly and inwardly inclined portions of the lower edge terminating in the remaining portion of the lower edge which extends at an inclination, said plate having a portion at one end bent upon itself to form a flat side wall and a flat front wall, the edge of said front wall extending at an inclination toward each other, the lower portion of said front wall slitted to form a spring-clip adjacent to the lower portion of the flat side wall, said plate further bent upon itself at its other end to form a curvilinear side wall and a flat front wall, means integral with the top of the said front wall, curvilinear side wall and said plate for closing the space formed at the top of the front wall, curvilinear side wall and plate, the lower portion of said last-mentioned front wall slitted to form a spring-clip adjacent to the lower portion of the curvilinear side wall, said front walls arranged a suitable distance from and disengaging each other, substantially as herein shown and described.

710,825. APPARATUS FOR TRANSPORTING LIVE AQUATIC ANIMALS. MAX KERR, St. Gall, and ALFRED WIDEY, Zurich, Switzerland. Filed Feb. 6, 1901. Serial No. 46,248. (No model.)



Claim.—The combination with a receptacle for the transportation and storage of live fish and the like, of a pressure-bottle removably mounted thereon, an exhaust-valve in the top of said bottle, means for operating said valve, a pipe connected to the pressure-bottle, a gage for measuring the pressure therein, a pressure-reducing valve mounted on said pipe, a gage for measuring the pressure of the reducing-valve, an air-pipe detachably connected to the aforesaid pipe extending into the receptacle and terminating in a perforated coil near the bottom thereof, and a foraminous plate mounted above said coil in close proximity thereto, substantially as and for the purpose specified.

710,826. KRAUT-CUTTER. GUSTAV H. KIESAU and LOUIS MAUER, Berlin, Ill. Filed Apr. 22, 1902. Serial No. 104,101. (No model.)

Claim.—1. A kraut-cutter comprising a plurality of sections, one of said sections being provided with oppositely-rotating drawing and cutting

knives, one or more sections provided with oppositely-rotating circular cutting knives, and means for rotating said knives.

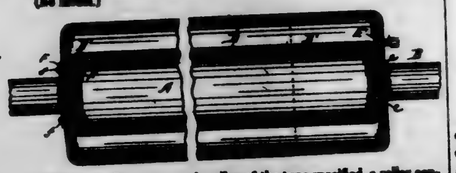
2. A kraut-cutter comprising a frame provided with a hopper, a series of oppositely-rotating hook-shaped drawing and cutting knives, a series of circular cutting-knives arranged below the said drawing-knives and means for simultaneously rotating both series of knives.

3. A kraut-cutter comprising a frame consisting of a plurality of hinged sections, one of said sections supporting a pair of removable shafts carrying a series of hook shaped drawing-knives, one or more of said sections below the drawing-knife section supporting a pair of removable shafts carrying a series of circular cutting-knives, clearing fingers or bars secured to the ends of the said sections, and projecting between the series of knives of each section, and means for imparting a rotary motion to the respective shafts.

4. A kraut-cutter comprising a frame consisting of a plurality of hinged sections, one of said sections carrying a hopper, a second section below said hopper-section carrying a pair of oppositely-rotating shafts provided with a series of oppositely-arranged hook-shaped drawing-knives, a section below said drawing-knife section, carrying a pair of oppositely-rotating shafts provided with a series of circular cutting-knives, each of said knife-carrying sections being provided with clearing fingers or bars projecting between the series of knives, a horizontally-projecting bar secured to the lower section, and provided with a central opening, and means for simultaneously rotating each pair of shafts in the knife-carrying sections toward each other.

5. A kraut-cutter comprising a frame consisting of a plurality of sections, one section carrying a pair of shafts provided with a series of overlapping hook-shaped drawing and cutting knives having their working edges reversely curved, a section below said drawing-knife section, carrying a pair of shafts provided with a series of overlapping circular cutting-knives, the circular knives being set on the shafts in closer relation than the series of drawing-knives, and means for rotating each pair of shafts toward each other simultaneously.

710,827. LITHOGRAPHING OR PRINTING PRESS ROLLER. ALOYS W. KLEIN, Dayton, Ohio. Filed July 31, 1902. Serial No. 117,754. (No model.)

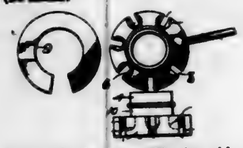


Claim.—1. In a pneumatic roller of the type specified, a roller consisting of an enlarged body or core terminating in journals, an outer elastic casing inclosing the sides and ends of said roller-body, one end of said outer casing having an annular wire band which surrounds a journal of the roller, and the other end of said outer casing being secured between washers which surround the other journal of said roller, an inner tubing having its ends extending around the ends of the body of said roller and confined within the ends of the outer casing, the chamber within said inner tubing extending around the ends of the core or body of the roller, and an air-valve located adjacent to one of said journals, substantially as specified.

2. In a pneumatic roller of the type specified, the combination of a roller having an enlarged body terminating in journals, an outer elastic casing inclosing the circumference of the ends of said body, an annular metallic band inclosed in one end of said outer casing, said band surrounding one of the journals of the roller, the other end of said outer casing terminating in a series of tongues with perforations therein, said tongues being adapted to fit around the other end of the body of said roller, washers inclosing said end and surrounding the other journal of the roller, screws penetrating said washers and the openings in the end of the outer casing whereby that end of the outer casing is secured in position, an inner pneumatic tube or casing extending around the ends of the body of the roller, and providing an extended chamber which lies around the ends of said body and approaches the journals of the roller, and an air-valve located in proximity to one of said journals, substantially as set forth.

3. In a roller of the type specified, a roller having an enlarged body terminating in journals, an elastic casing having its ends carried around the ends of said body, washers inclosing the ends of said elastic casing and serving to prevent liquids from coming in contact with said casing, an outer leather casing inclosing said elastic casing and said washers, and an inner pneumatic casing the ends of which extend around the ends of the body of the roller, said inner pneumatic casing providing an air-chamber which extends on each end of the body of the roller in proximity to the journals of the roller, and an air-valve arranged adjacent to said roller-journal, substantially as specified.

710,828. UMBRELLA RIB AND STRETCHER-JOINT. CLYDE MACMILLAN, Williamsport, Pa., assignor of two-thirds to Lewis J. Bilger and A. S. Mahaffey, Williamsport, Pa. Filed Dec. 17, 1901. Serial No. 86,322. (No model.)

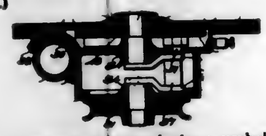


Claim.—1. In an umbrella, the combination with a notch having sockets therein and ribs having enlarged heads, of an expansible split ring having an aperture normally narrower than a rib-head.

2. In an umbrella, the combination with a sleeve or ferrule, an annular flange thereon having a series of sockets, ribs having heads to enter said sockets, said flange also having slots for the passage of said ribs or braces, the sleeve or ferrule having a groove adjacent to said flange, and an expansible split ring disposed in said groove and having an aperture normally narrower than a rib-head.

3. In an umbrella, the combination with a sleeve, and an annular flange on said sleeve, said flange having a series of independent sockets and having slots communicating with said sockets, of a series of ribs or braces having heads mounted independently in said sockets, and an expansible split ring, said ring mounted on the sleeve and normally inclosing the heads of the ribs or braces in the sockets in said flange and having an aperture normally narrower than a rib-head.

710,829. EXPLOSIVE-ENGINE FOR MOTOR-VEHICLES. ROY C. MARES, San Diego, Cal. Filed Sept. 7, 1901. Serial No. 74,654. (No model.)



Claim.—1. A gas-operated motor having a crank-shaft, a crank-casing, a recessed fly-wheel into which said casing extends to form a closed chamber, valve-operating mechanism contained within said chamber, and gearing connecting said valve-operating mechanism to the crank-shaft.

2. A gas-operated motor having a crank-casing, an annular flange on said casing, and a fly-wheel having a recess for the reception of the flange of the crank-casing, the whole forming a closed chamber for the protection of the valve-operating mechanism.

3. The combination in a motor, of a crank-shaft, a casing therefor, a fly-wheel on said crank-shaft, a pinion carried thereby, gears having journals on the crank-shaft casing and intermeshing with said pinion, spark-timing and valve-operating cams carried by said gears, and a protective casing for said gears, said casing being formed partly by the fly-wheel and partly by said crank-casing.

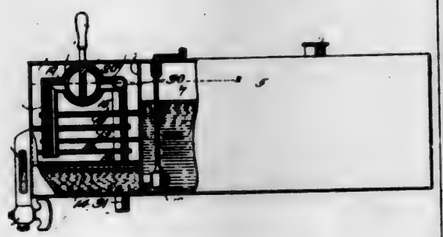
4. The combination in a motor, of a crank-shaft, a crank, a crank-casing, a recessed fly-wheel mounted on the crank-shaft at a point outside the casing, and a valve-gear casing formed partly by the outer portion of said crank-casing and partly by said fly-wheel.

5. The combination in a motor, of a crank-shaft, a toothed and flanged hub secured thereto, pins carried by the flange, a recessed fly-wheel having in its central web openings for the reception of said pins, a securing-nut adapted to threads on the hub, and valve-operating gearing intermeshing with the teeth of said hub.

6. The combination in a motor, of a crank-shaft, a hub secured thereto and having gear-teeth, a recessed fly-wheel secured to said hub, a crank-casing having an annular flange adapted to fit within the recess

of the wheel, gear-wheels mounted on studs carried by the crank-casing and intermeshing with the teeth of the hub, a spark-timing cam operatively connected to one of said gear-wheels, a contact-breaker adapted to be operated by said cam, a valve operating cam operatively connected to the second gear-wheel, and mechanism connecting said cam to the exhaust-valve of the motor.

710,880. CARBURETER FOR EXPLOSIVE-ENGINES. ROY C. MARES, San Francisco, Cal. Filed Jan. 3, 1902. Serial No. 88,836. (No model.)



Claim.—1. The combination in a carbureter, of an oil tank or reservoir having at one end a carbureting-chamber, a valve for controlling the flow of hydrocarbon from the reservoir to the chamber, a gage-glass arranged on one side of said chamber, a series of superposed shelves in the carbureting-chamber, absorbent material on said shelves, side wicks for conveying hydrocarbon from the lower portion of the chamber to the absorbent material, and a ported air-valve arranged in the upper portion of said carbureting-chamber.

2. In a device of the class specified, a tank or reservoir having at one end a carbureting-chamber, a valve for controlling the flow of hydrocarbon from the tank to the chamber, a horizontally-disposed partition extending across the lower portion of the chamber at a point above the liquid-level, a series of superposed shelves arranged within said chamber, absorbent material disposed on said shelves and at the sides of the chamber, and a valve situated in the upper portion of said chamber for controlling the supply of air to the carbureter.

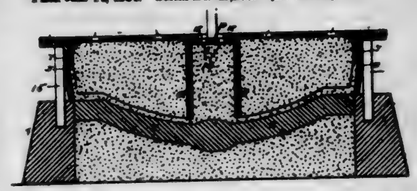
3. In a device of the class specified, a tank or reservoir having a vertical partition dividing the same into two compartments one of which forms a reservoir, and the other a carbureting-chamber, a valve for controlling the flow of hydrocarbon from the reservoir to the chamber, a horizontally-disposed partition extending across the lower portion of the chamber at a point above the liquid-level, a gage-glass communicating with said chamber and having a discharge-cock, a series of superposed shelves arranged within said chamber, absorbent material disposed on said shelves and at the sides of the chamber, and a ported valve arranged in the upper portion of the chamber for controlling the supply of air to the carbureter.

4. The combination in a carbureter, of the chamber having a horizontally-disposed partition situated above the liquid-level and adapted to prevent the splashing of the liquid into the upper portion of the chamber, a series of superposed shelves arranged within said chamber, absorbent material carried by the shelves and disposed on opposite sides of the chamber, and a valve arranged in the upper portion of said chamber for controlling the supply of air thereto.

5. The combination in a carbureter, of the casing forming a carbureting-chamber and provided with absorbent material for effecting the saturation of the air, a valve-casing disposed within the chamber and having two pairs of alining ports or passages, a valve-body having its central portion divided into three chambers and ports or passages arranged in the valve and movable into alinement with the ports of the casing to govern the admittance of air to be carbureted and the admittance of pure air for admixture with the gas, substantially as specified.

6. The combination in a carbureter, of a casing forming a carbureting-chamber and provided with absorbent material for effecting the saturation of the air, a valve-casing disposed within the chamber and having ports or passages 19, 20, 21 and 23, a condensing-pipe leading from the port 19 to the lower portion of the carbureting-chamber, a pipe or passage 30 extending between the ports 20 and 22, a discharge-pipe 31 leading from said pipe 30, a hollow valve having chambers 23, 24 and 25, elongated ports 21' and 22' in alinement with the ports 21 and 22, and ports 19' and 20' disposed at an angle to each other and movable into alinement with the casing-ports 19 and 20 to govern the supply of air to be carbureted and the admittance of air to be admixed and discharged with the gas, substantially as specified.

710,881. MOLDING-FLASK. JAMES MILLS, Wilmington, Del. Filed Jan. 14, 1901. Serial No. 43,208. (No model.)



Claim.—1. A molding-flask cope comprising an outer portion with straight upper part and inwardly-inclined lower part, and an inner portion capable of sliding within said straight upper part of the outer portion of the cope, said sliding inner portion having a top plate and transverse ribs below the same, said ribs compressing the sand beneath them and the top plate compressing the sand between the ribs, substantially as specified.

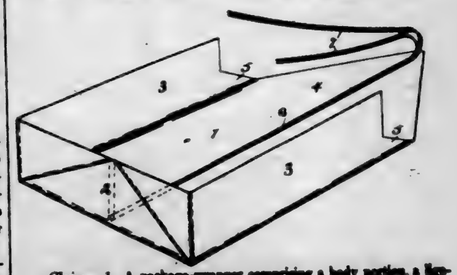
2. A molding-flask cope having a top plate provided with an opening and with depending ribs separated by spaces which extend up to the top plate, said ribs terminating at their inner ends near the center of the plate and forming a central passage communicating with the opening in the plate, whereby when the top plate is pressed upon the sand in the cope, said ribs will be thrust into the sand and the latter will be compressed by the top plate within the central passage and in the spaces between the ribs, substantially as specified.

3. A molding-flask cope having a top plate with depending ribs separated by spaces which extend up to the top plate, and a depending tubular portion, whereby, when the top plate is pressed upon the sand in the cope, said ribs and the depending tube will be thrust into the sand and the latter will be compressed by the top plate within the tube and in the spaces between the ribs, substantially as specified.

4. A molding-flask cope having a top plate with depending ribs separated by spaces which extend up to the top plate, and a depending tube having a detachable stopper-plate at its upper end, substantially as specified.

5. A molding-flask cope having a top plate with depending outer flange, depending central tube and depending ribs extending between said outer flange and tube, and separated by spaces which extend up to the top plate, substantially as specified.

710,882. PACKAGE-WRAPPER. LULA S. MILLER, Bluebell Oaks. Filed Dec. 5, 1901. Serial No. 84,735. (No model.)



Claim.—1. A package-wrapper comprising a body portion, a ligament longitudinally arranged in respect thereto, and connected to the inner side throughout its entire length, one end of said ligament extending beyond the body portion, and a second ligament connected to the first adjacent the end of the body portion, substantially as described.

2. A package-wrapper comprising a body portion having one end and two side walls at right angles to the body portion, said side walls and end wall permanently connected, and a ligament extending longitudinally the body portion and connected thereto, and one end of said ligament extending beyond the body portion, and said portion beyond the body portion being divided longitudinally, substantially as described.

3. An improved package-wrapper comprising a body portion having an end and two side walls extending at right angles thereto, the end and side walls being connected, the opposite end of the body portion having a lip projecting in a plane therewith, and a ligament extending longitudinal the package with an end projecting beyond the end of the said projecting lip, substantially as described.

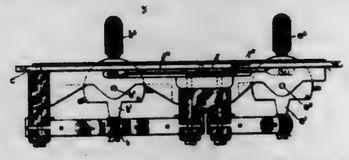
4. A package-wrapper comprising a body portion having a lip projecting in a plane therewith, a ligament extending longitudinally the said

body portion and lip and connected thereto, through its entire length, one end of said ligament extending beyond the body portion, and a second ligament connected to the first adjacent the end of said lip, substantially as described.

5. A package-wrapper comprising a body portion having an end and two side walls, extending at right angles thereto, the end and side walls being connected, the opposite end of the body portion having a lip projecting in a plane therewith, a ligament extending longitudinal the package with an end projecting beyond the end of the said projecting lip, and a second ligament connected to the first adjacent the end of said lip, substantially as described.

6. A package-wrapper comprising a body portion having one end wall and two side walls extending at right angles to the body portion, said end wall and side walls permanently connected, thereby forming a receptacle for the article to be wrapped, a ligament extending from the outer edge of the end of the body portion and connected thereto, said ligament extending beyond the body portion, and a second ligament connected to the first adjacent the end of the body portion, substantially as described.

710,883. SELECTIVE CALLING APPLIANCE FOR TELEPHONE-LINES. FRANK B. MCBERTY, Evanston, Ill., assignor to the Western Electric Company, Chicago, Ill., a Corporation of Illinois. Filed May 21, 1898. Renewed May 24, 1902. Serial No. 718,107. (No model.)



Claim.—1. The combination with two ringing-keys and pivoted switch-levers thereof, of a pivoted arm, a target or indicator carried thereon, and links between the said switch-levers and the said target-lever, whereby the target is set in a different position in the movement of each of the keys, as described.

2. The combination with two calling-keys in a telephone-switch-board, and the actuating-levers thereof movable in the same direction to call, of a centrally-pivoted lever and an indicator carried thereby, a link connecting one of the actuating-levers with one extremity of the said target-lever and a link connecting the other actuating-lever with the other extremity of the target-lever, whereby the target is moved in different directions in the use of the different keys, as described.

3. The combination with two telephone calling-keys and the pivoted actuating-levers thereof, of a pivoted target-lever and an indicator carried thereby, and links connecting each of the actuating-levers of the keys with the target-lever, each of said links having play to permit movement of the target by one link without moving the other link, as described.

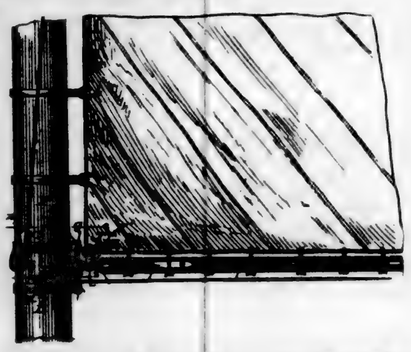
4. The combination with two selective calling-keys having pivoted switch-levers movable in the same direction to send different calls, of a centrally-pivoted target-lever and an indicator carried thereby, a link connecting one of said levers with one extremity of the target-lever, and another link connecting the other actuating-lever with the other end of the target-lever, each of said links having play to permit the movement of the target by the other link, as described.

5. The combination with a combination listening and calling key, and a pivoted actuating-lever therefor adapted for movement in opposite directions to actuate the listening or the calling key, and an independent special calling-key having a pivoted lever, of a target-lever, and mechanism connecting each of the actuating-levers with the target-lever, said mechanism being adapted to permit the actuation of the listening-key without moving the target, as described.

6. The combination with the listening and calling key and the pivoted actuating-lever b' therefor, the special calling-key and the pivoted actuating-lever d therefor, of the target-lever f and the indicator carried thereon, the links f^3 f^4 engaging pins on the target-lever at opposite sides of the pivotal point thereof, link f^3 having play to permit the actuation of the listening-key without moving the target-lever, and each of the links f^3 and f^4 having play to permit free movement of the target by the other lever, as described.

710,884. BOOM-RIGGING. FREDERICK V. HUELSER, San Francisco, Cal. Filed Mar. 13, 1902. Serial No. 98,720. (No model.)

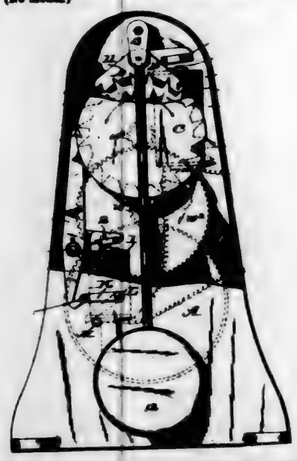
Claim.—1. The combination substantially as herein described of the mast, the collars thereon, the rod extending between and supported by said collars and spaced away from the mast, the boom-carrier sliding on said rod and provided with a projecting lug, the boom, the boom-clasp, a bolt by which the inner end of the boom-clasp is pivoted in connection with the lug of the boom-carrier, the clue-line ring, the bolt securing said ring and the opposite plates fitted at their upper ends on opposite sides of the clue-line ring and secured at their lower ends by the pivot bolt of the boom substantially as set forth.



2. In a boom-rigging substantially as described the combination with the mast and the boom, of the upper and lower collars, and guide-rod extending between the said collars, a carrier for the boom supported on said rod, and rings on the lower collar for the deck-load lashing, substantially as set forth.

3. The combination with the upright guide-rod and means for securing the same to the mast, of the carrier sliding on said rod and provided with a lug, the boom, the boom-clasp provided at its inner end with lugs fitting on opposite sides of the lug of the carrier, the clue-ring, the plates fitting at their upper ends alongside the ring and provided with a bolt for securing said ring and fitting at their lower ends along the outer sides of the opposite lugs of the boom-clasp, and the bolt passed through said plates and the lapped lugs of the boom clasp and carrier, substantially as and for the purposes set forth.

710,885. SELECTIVE CALL FOR TELEGRAPH OR TELEPHONE LINES. WILLIAM PALMER, Jr., Rincon, N. Mex., assignor of one-half to Charles H. Dasponah, El Paso, Tex. Filed Dec. 11, 1901. Serial No. 85,444. (No model.)



Claim.—1. A selective-call device consisting of a pendulum under the control of an electromagnet arranged to be set in motion from a remote point, a notched disk and mechanism for rotating it, and a tripping device for an alarm-circuit arranged to be set into action by the notched disk and tripping mechanism substantially as described.

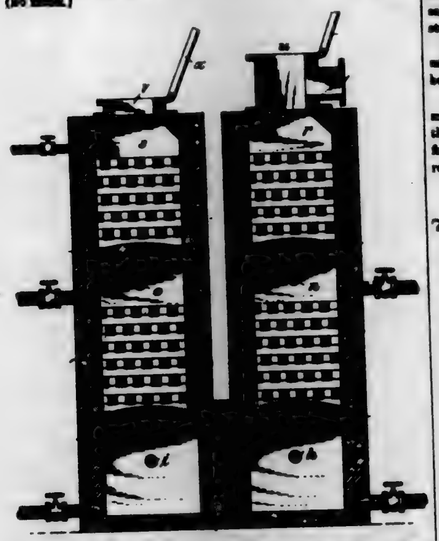
2. A selective-call system, comprising for each station a pendulum vibrating synchronously with the pendulums of other stations, electromagnets for starting said pendulums by electric impulses from a distance, a notched disk with a vibrating mechanism for each instrument, a tripping mechanism set into action by the notched disk, and a switch with local circuit and bell arranged to be closed by the said tripping mechanism substantially as described.

3. A selective-call device comprising a pendulum-escapement, an electromagnet for starting the pendulum into action through electric impulses, and a tripping device for closing a local alarm-circuit consisting of an escapement-wheel and a rigidly-attached notched disk with locking-hook arranged to be released by the initial backward movement of the escapement substantially as described.

4. A selective-call device comprising a pendulum-escapement, an electromagnet for starting the pendulum into action, a notched disk operated by said escapement, a locking-lever arranged to engage the notched disk, a spring for throwing the lever out of engagement with the notched disk, an electromagnet for throwing said lever against the tension of said spring, and a switch arranged to be closed by the movement of the lever in response to its electromagnet, and a bell-circuit arranged to be closed by said switch substantially as described.

5. In a device of the kind described, a pendulum-escapement, an electromagnet for starting the pendulum-escapement, and an armature acted upon by said electromagnet and having a loose connection with the pendulum to start the latter to swinging by a tappet or impact action without obstructing its swing substantially as described.

710,886. APPARATUS FOR MANUFACTURING GAS. HILMAR M. PAPST, San Francisco, Cal. Filed Dec. 17, 1901. Serial No. 86,336. (No model.)



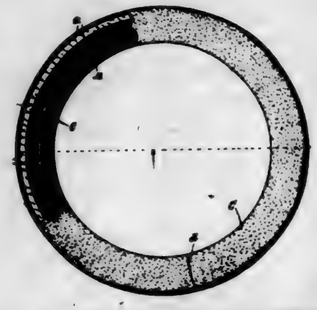
Claim.—1. In an apparatus for manufacturing gas, the combination of a base divided into two chambers connected by a passage in said base, whereby a continuous combustion-chamber is formed, and regenerative or fixing devices supported on said base.

2. In an apparatus for manufacturing gas, the combination of a base, having a wall extending partly through said base, forming two chambers united together, whereby a continuous combustion-chamber is formed, regenerative devices, located over each of said chambers, and inlet-pipes for steam, air and oil, leading into said combustion-chambers and regenerative devices.

3. In an apparatus for manufacturing gas, the combination of a base, a wall passing partly through said base, forming two chambers united together at the rear, whereby a continuous combustion-chamber is formed, a cupola-like structure located over each of said chambers, each of said structures being divided into two parts, each having checker-work therein, inlet-pipes for air and oil leading into each of said chambers in said base, inlet-pipes for steam, air and oil, leading into each of said regenerative or fixing structures and outlet-pipes for the product of said apparatus.

710,887. ROD-PACKING. ALBERT S. PRATT, Boston, Mass. Filed Apr. 26, 1902. Serial No. 104,093. (No model.)

Claim.—1. A body of rod-packing consisting of a ring comprising a fibrous body, and a metallic body combined with the fibrous body, and a wrapper for the combined fibrous body and the metallic body, the latter consisting of two strips or bars of metal wedge shape or triangular in cross-section, placed side by side with the thin edge of one strip or bar next the thick edge of the other, substantially as and for the purpose set forth.

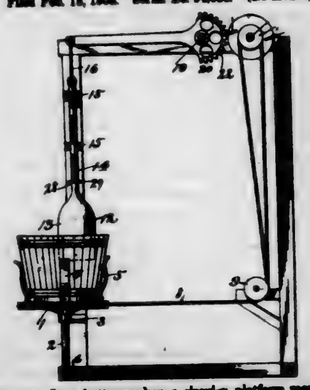


2. A body of rod-packing consisting of a body of fibrous material, and a body of metal in two parts placed longitudinally of the fibrous body, a metallic wrapper for the metallic body, and a fibrous wrapper to inclose said fibrous body and the metallic body with the metallic wrapper, substantially as and for the purpose set forth.

3. A ring of packing for piston-rods, consisting of a body of fibrous material, a metallic body of wedge-shaped leaden strips with a lubricant between them, and an envelop of fibrous material enveloping the whole.

4. A ring of packing for piston-rods consisting of a fibrous body, a metallic body of wedge-shaped triangular strips with a lubricant between them and adhesive fabric enveloping said strips and bearing against the face of the fibrous body, and a fibrous wrapper enveloping the whole and retaining it in compact form.

710,888. BUTTER-PACKER. FREDERICK PRENTON, Deerwood, Minn. Filed Feb. 18, 1902. Serial No. 94,689. (No model.)



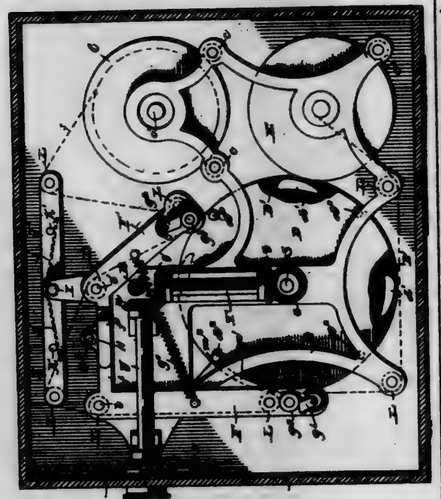
Claim.—1. In a butter-packer, a circular platform mounted to revolve and having a groove in its periphery, a belt engaging said groove, means for driving said belt, a pounder and means for reciprocating said pounder, said belt being arranged to slip while said pounder is in contact with the butter in the tub, substantially as described.

2. In a butter-packer, a circular platform mounted to revolve and having a groove in its periphery, means for securing a tub to said platform, a pounder mounted to be reciprocated, a lever bearing a circular rack, a shaft bearing a pinion located to mesh with said rack, a pulley mounted on said shaft, and a belt passing around said pulley and said platform, substantially as described.

3. In a butter-packer, a circular platform mounted to revolve and having a groove in its periphery, means for securing a tub to said platform, a slidingly-mounted pounder, means for reciprocating said pounder, a pulley, a belt passing around said pulley and fitting the groove in said platform, said belt being arranged to slip when said pounder is in contact with the butter in the tub, substantially as described.

4. In a butter-packer, a platform mounted to revolve, means for securing a tub to said platform, a pounder, means for reciprocating said pounder, and means for driving said platform, which means is arranged to yield when said pounder is in contact with the butter in the tub, substantially as described.

710,889. APPARATUS FOR ANIMATED PHOTOGRAPHY. HENRY M. REICHENBACH, Dobbs Ferry, N. Y. Filed July 27, 1901. Serial No. 69,362. (No model.)



Claim.—1. In an apparatus for animated photography, the combination with a lens, a dispensing and a receiving film-reel, of means interposed between said reels, alternately engaging and advancing portions of the film on opposite sides of the lens, said means when engaging the film on one side of the lens being out of engagement with the film on the opposite side of the lens.

2. In an apparatus for animated photography, the combination with a lens, a dispensing and a receiving film-reel, of means interposed between said reels, alternately engaging and advancing portions of the film on opposite sides of the lens, said means when engaging the film on one side of the lens being out of engagement with the film on the opposite side of the lens, and means for regulating the period of engagement between said interposed means said film on opposite sides of the lens, for controlling the advancement of the film in predetermined lengths.

3. In an apparatus for animated photography, the combination with a lens, a dispensing and a receiving film-reel, of a rotatable disk interposed between said reels, and means on said disk alternately engaging and advancing at different intervals, portions of the film on opposite sides of the lens in predetermined lengths.

4. In an apparatus for animated photography, the combination with a lens, a dispensing and a receiving film-reel, of a rotatable disk interposed between said reels and provided with projections around the periphery thereof alternately engaging and advancing portions of the film on opposite sides of the lens, and means for regulating the engagement between said projections and film for controlling the advancement of said film.

5. In an apparatus for animated photography, the combination with a lens, a dispensing and a receiving film-reel, of a rotatable disk interposed between said reels alternately engaging and advancing portions of the film on opposite sides of the lens, a lever mounted in proximity to said disk provided with a feed-roller adapted to press the film against said disk, and means for limiting the contact between said film and disk for controlling the advancement of said film.

6. In an apparatus for animated photography, the combination with a lens, a dispensing and a receiving film-reel, of a rotatable disk interposed between said reels alternately engaging and advancing portions of the film on opposite sides of the lens, a bell-crank lever mounted in proximity to said disk provided with a feed-roller adapted to press the film against said disk, and a cam operating on one of the arms of said bell-crank lever for limiting the inward movement of said feed-roller.

7. In an apparatus for animated photography, the combination with a lens, a dispensing and a receiving film-reel, of a rotatable disk interposed between said reels provided with a plurality of projections around the periphery thereof alternately engaging and advancing portions of the film on opposite sides of the lens, a lever mounted in proximity to said disk provided with a feed-roller adapted to press the film against said projections, and means for limiting the contact between said film and projections for controlling the advancement of said film.

8. In an apparatus for animated photography, the combination with a dispensing and a receiving film-reel, of a rotatable disk interposed between said reels provided with a plurality of peripherally-tapering projections, a pair of rollers adapted to engage said projections, pivotally mounted in proximity to said drum, means for holding said rollers in frictional contact with said projections, and means for limiting the inward movement of said rollers.

9. In an apparatus for animated photography, the combination with a dispensing and a receiving film-reel, of a rotatable drum interposed between said reels, provided with a plurality of rounded projections around the periphery thereof, a pair of frames carrying rollers engaging said projections pivotally mounted in proximity to said drum, a spring connection between said pivoted frames, and a cam engaging said frames for limiting their inward movement.

10. In an apparatus for animated photography, the combination with a dispensing and a receiving film-reel, of a rotatable drum interposed between said reels, provided with a plurality of rounded projections around the periphery thereof, a pair of bell-crank levers mounted in proximity to said drum, feed-rollers mounted in one set of arms of said levers, adapted to engage said projections, dogs limiting the backward movement of said rollers, and a cam operating on the other arms of said levers for limiting the inward movement of said rollers.

11. In an apparatus for animated photography, the combination with a dispensing and a receiving film-reel and means for advancing the film, of an equalizing device for taking up the slack in said film, comprising a pair of pivoted arms carrying rollers in their free ends over which the film passes and a spring in engagement with said arms for operating one of said arms when the other is moved from its normal position.

12. In an apparatus for animated photography, the combination with a dispensing and a receiving reel and means for advancing the film, of an equalizing device comprising a pair of oppositely-disposed pivoted frames having rollers journaled in their free ends over which the film passes, and a spring in engagement with said frames for operating the opposite frame when one of said frames is moved out of its normal position.

13. In an apparatus for animated photography, the combination with a lens, a dispensing and a receiving film-reel and means interposed between said reels for alternately engaging and advancing portions of the film on opposite sides of the lens in predetermined lengths, of means for equalizing the tension on said film during its advancement before exposure, comprising a pair of oppositely-disposed spring-operated pivoted frames having rollers in their free ends over which the film passes.

14. In an apparatus for animated photography, the combination with a lens, a dispensing and a receiving film-reel, of a rotatable disk interposed between said reels adapted to engage and advance portions of the film on opposite sides of the lens, means for regulating the engagement between said disk and film permitting longer or shorter portions of the film to be advanced, and means for equalizing the tension on said film comprising a pair of spring-operated pivoted frames provided with rollers over which the film passes.

15. In an apparatus for animated photography, the combination with a lens, a dispensing and a receiving film-reel, of a rotatable drum interposed between said reels, levers mounted in proximity to said drum provided with feed-rollers adapted to alternately press the film in engagement with said drum on opposite sides of the lens, means for limiting the engagement of said film and drum for controlling the advancement of said film, and a pair of spring-operated arms provided with rollers engaging said film for regulating the tension on said film during its advancement.

16. In an apparatus for animated photography, the combination with a dispensing and a receiving film-reel, of a rotatable drum interposed between said reels, provided with a plurality of projections around the periphery thereof, a lever mounted in proximity to said drum provided with a feed-roller adapted to press the film against said projections, means for limiting the engagement between said film and projections for controlling the advancement of said film, and a pair of spring-operated arms provided with rollers engaging said film for regulating the tension on said film during its advancement.

17. In an apparatus for animated photography, the combination with a lens, a dispensing and a receiving film-reel, of a rotatable drum interposed between said reels provided with a plurality of projections around the periphery thereof for alternately engaging and advancing portions of the film on opposite sides of the lens, a pair of bell-crank levers carrying rollers in one of their arms adapted to press the film against said projections, a cam operating on the other arms of said bell-crank levers limiting the inward movement of said rollers for controlling the advancement of said film, and a pair of spring-operated pivoted arms for regulating the tension on said film during its advancement.

18. In an apparatus for animated photography, the combination with a lens, a dispensing and receiving film-reel, of a rotatable drum interposed between said reels, means on said drum for alternately engaging and advancing at different intervals portions of the film on opposite sides of the lens in predetermined lengths, a film-trap adapted to engage and clamp the film before the lens when open, and means on said drum for opening said film-trap after exposure.

19. In an apparatus for animated photography, the combination with a lens, a dispensing and a receiving film-wheel, of a rotatable drum interposed between said reels, means on said drum for alternately engaging and advancing at different intervals portions of the film on opposite sides of the lens, means for equalizing the tension on said film during its advancement, a film-trap located in proximity to said drum, for clamping said film during its advancement, and means for opening said film when clamped.

20. In an apparatus for animated photography, the combination with a lens, a dispensing and a receiving film-wheel, of a rotatable drum interposed between said reels, means on said drum for alternately engaging and advancing at different intervals portions of the film on opposite sides of the lens in predetermined lengths, means for equalizing the tension on said film during its advancement, comprising a pair of spring-operated frames over which the film passes, a film-trap adapted to engage and clamp the film before the lens when open, and means on said drum for opening said film-trap after exposure.

21. In an apparatus for animated photography, the combination with a lens, a dispensing and a receiving film-reel, of a drum interposed between said reels provided with projections around the periphery thereof adapted to engage and advance portions of the film on opposite sides of the lens, means regulating the engagement between said projections and film for controlling the advancement of said film, means for equalizing the tension on said film during its advancement, and a film-trap for clamping said film before the lens during each successive advancement.

22. In an apparatus for animated photography, the combination with a dispensing and a receiving film-reel, of a film-advancing drum provided with a plurality of rounded projections around the periphery thereof, a pair of rollers adapted to press the film in engagement with said projections pivotally mounted in proximity to said drum, means for controlling the advancement of said film between said rollers and said rounded projections, means for equalizing the tension on said film during its advancement, a film-trap comprising two sections for clamping said film before the exposure-opening when open, and means on said drum engaging one section of said film-trap for opening the same against a spring tension, substantially as described.

23. In an apparatus for animated photography, the combination with the box or casing, the lens, and the film and film-advancing means, of a mirror pivotally supported behind said film, a door in said casing, and a connection between said door and mirror for simultaneously adjusting said mirror behind the lens and admitting of the projection of light on the mirror.

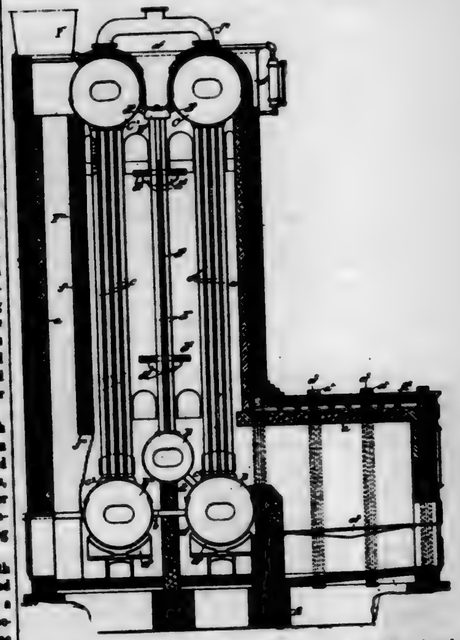
24. In an apparatus for animated photography, the combination with a lens, a dispensing and a receiving film-reel, a drum alternately engaging and advancing portions of the film on opposite sides of the lens in predetermined lengths, a film-trap adapted to engage and clamp the film before the lens when open, means on said drum for opening said film-trap after exposure, and a mirror behind said film-trap for projecting light through the film when the lens is open.

710,840. WATER-TUBE BOILER. EDWIN S. RUSE, Pueblo, Colo. Filed May 20, 1902. Serial No. 108,582. (No model.)

Claim.—1. The combination in a water-tube boiler, of a plurality of main drums having water-tubes extending between them, an auxiliary drum, a plurality of relatively small headers connected thereto by comparatively long substantially perpendicular tubes and to certain of the main drums by comparatively short and inclined tubes, and water-tubes connecting said auxiliary drum to the main drum or drums, substantially as described.

2. The combination in a water-tube boiler, of a plurality of main drums having water-tubes extending between them, an auxiliary drum adjacent to certain of said drums, a plurality of relatively small headers adjacent to others of the drums, water-tubes connecting said headers with the adjacent main drum or drums, and tubes connecting the auxiliary drum with its adjacent main drums, substantially as described.

3. In a water-tube boiler, the combination of a plurality of pairs of main drums having water-tubes extending between them an auxiliary drum adjacent to and between two of the main drums substantially parallel to the same, a series of relatively small headers adjacent to others of the main drums, tubes connecting the auxiliary drum and the headers, and other tubes connecting the headers and the auxiliary drum with their adjacent main drums respectively, substantially as described.



4. In a water-tube boiler, the combination of a plurality of main drums having water-tubes connecting them, an auxiliary drum having series of water-tubes, headers connected to said tubes, a baffle-wall extending between said series of tubes, brackets supported by said wall and projecting therefrom between certain of the tubes and deflecting-walls carried by said brackets, substantially as described.

5. In a water-tube boiler, the combination of a plurality of main drums having water-tubes connecting them in pairs, an auxiliary drum between two of the main drums and parallel to the same, headers having series of water-tubes connecting them to the said auxiliary drum, a baffle-wall between the said series of tubes, brackets projecting substantially at right angles to the wall and supported thereby, and deflecting-walls carried by said brackets, substantially as described.

6. In a water-tube boiler, having upper and lower main drums connected by water-tubes, an auxiliary drum parallel to and above the lower drums, a series of headers adjacent to the upper drums and each connected to the auxiliary drum by a tube or tubes, with tubes connecting the said auxiliary drum and the headers to their respective adjacent main drums, substantially as described.

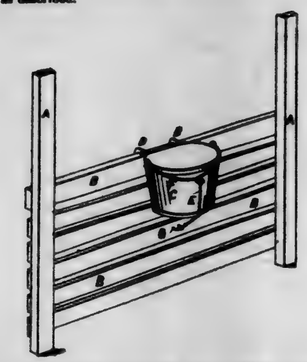
7. A plurality of upper and lower main drums, an auxiliary drum adjacent and connected to certain of the same, a series of independent headers adjacent to others of said drums, a tube or tubes connecting each header with the auxiliary drum and other tubes connecting each header with the adjacent main drums, substantially as described.

8. In a water-tube boiler, the combination with substantially cylindrical main drums of a series of independent headers of relatively small capacity placed adjacent to certain of said drums and having a curbed or surface substantially parallel to the surface of the main drums, an auxiliary drum having its long axis substantially parallel to certain of the axes of the main drums, tubes connecting said auxiliary drum with the main drums, other tubes connecting it with the headers and tubes extending between the adjacent surfaces of the drums and headers, substantially as described.

710,841. FUSEE OR MAINSPR. WILLIAM H. RYDER, Liverpool, England. Filed Aug. 16, 1900. Serial No. 26,955. (No model.)

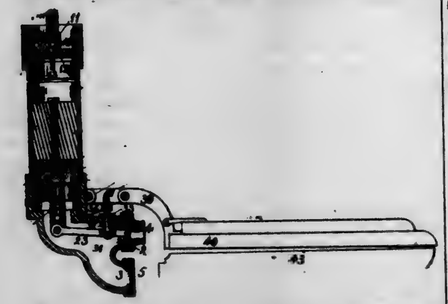
Claim.—1. A combined basket and mainspr, comprising a vessel provided with a swinging bail, a hook secured to the upper edge of the basket between the bail-pivots to engage a bar or support, and a flexible connection or chain secured to the middle of the bail and of a length to extend from the bail, when the latter is folded, downwardly under the

vessel and provided at its free end with means to fasten or secure it to a lower fixed support and prevent the vessel from rising or tilting; substantially as described.



2. A combined bucket and manger, comprising a vessel provided with a swinging bail and hooks projecting outwardly from the upper edge of the vessel between the bail-pivots to hook over a suitable support, said hooks being pivoted to swing downwardly with their free ends against the side of the bucket in nesting the latter, and a flexible connection or chain secured to the middle of the bail, and of a length to extend downwardly and inwardly under the vessel, and provided at its free end with means for connecting it to a lower fixed support; substantially as described.

710,842. WATER-CLOSET. DAVID S. SCHUERMAN, Rockford, Ill. Filed Dec. 17, 1901. Serial No. 86,263. (No model.)



Claim.—1. In a water-closet, the combination of a vertically-arranged stand-pipe, a movable weight located within the stand-pipe, a stationary water-supply pipe located within the stand-pipe, a double-ended valve guided by the water-pipe, a seat, and a connection between the seat and valve, the valve adapted to press against the weight when the weight is down.

2. In a water-closet, the combination of a vertically-arranged stand-pipe, a movable weight located within the stand-pipe, a stationary water-supply pipe located within the stand-pipe, a double-ended valve guided by the water-pipe, a seat, a connection between the seat and valve, the valve adapted to press against the weight when the weight is down, and a valve located at the upper end of the stand-pipe and operated by the weight.

3. In a water-closet, the combination of a stand-pipe, a weight located within the stand-pipe, a double-ended valve located within the stand-pipe, a lever, a plunger connected with the lever, a spring operating on the plunger, and a seat operating upon the plunger.

4. In a water-closet, the combination of a vertically-arranged stand-pipe, a water-supply pipe extending from near the upper end of the stand-pipe and communicating with the lower portion of the stand-pipe, a valve within the water-supply pipe and located at the upper end of the stand-pipe, and a movable weight within the stand-pipe adapted to move the valve in one direction.

710,843. GUARD FOR HEEL-TRIMMING AND EDGE-TRIMMING MACHINES. BOURNE STRATTON and FREDERIC A. OSLE, New York, N. Y. Filed Apr. 24, 1901. Serial No. 57,101. (No model.)

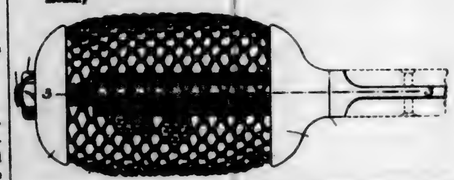
Claim.—1. In a guard attachment for edge-trimming machines, the revolvable eccentric guard carried by the cutter-head, and having a spur-gear upon the hub thereof, the casing carried by said guard, and carrying a pinion in mesh with said spur-gear, means for turning said pinion, and the bracket carried by the main frame of the machine, said casing having an arm engaging a slot of such bracket, and means for securing said guard in adjusted position, substantially as specified.

2. In a guard attachment for edge-trimming machines, the revolvable guard eccentrically mounted upon a laterally-projecting hub portion of the cutter-head, and having also a laterally-projecting hub portion carrying a spur-gear, the casing mounted upon the hub of the guard, and carrying a pinion in mesh with said gear, and provided with means for turning the same, said casing having a laterally-projecting arm, and the bracket carried by the main frame of the machine, and having a slotted head for engagement with such arm, and a set-screw carried by said holder and engaging the hub of said guard to hold it stationary as adjusted, substantially as specified.

3. In a guard attachment for edge-trimming machines, the revolvable eccentric guard carried by the cutter-head, and having a spur-gear upon the hub thereof, the casing carried by said guard, and having a pinion in mesh with said gear, means for turning said pinion, the bracket carried by the main frame of the machine, said casing having an arm engaging said bracket, means for securing the guard as adjusted, a nut upon the cutter-shaft, and a spring located between said nut and the hub of the guard, substantially as specified.

4. In a guard attachment for edge-trimming machines, the revolvable eccentric guard carried by the cutter-head, and having a spur-gear upon the hub thereof, the casing carried by said guard, and carrying a pinion in mesh with said spur-gear, means for turning said pinion, means for securing the casing against rotation, and means for securing the guard as adjusted, substantially as specified.

710,844. FLUE-SCRAPER. HENRY K. SWINBURNE and ROBERT J. MCCARTY, Clinton, Mass. Filed Oct. 11, 1901. Serial No. 78,343. (No model.)



Claim.—1. A flue-scraper comprising an open-ended tube of flexible woven-wire fabric, and a holder having heads detachably engaging the ends of said tube to support it and impart relative rigidity thereto.

2. A flue-scraper comprising an open-ended tube of flexible woven-wire fabric, and a holder having heads detachably engaging the ends of said tube to support it and impart relative rigidity thereto, said heads being formed to overlap the end portions of the outer surface of the tube, and to furnish bearings or abutments for the ends of the tube.

3. A flue-scraper comprising an open-ended tube of flexible woven-wire fabric, and a holder having heads detachably engaging the ends of said tube to support it and impart relative rigidity thereto, and means for varying the distance between said heads to vary the diameter of the tube.

4. A flue-scraper comprising an open-ended tube of flexible woven-wire fabric, and means for confining and holding the ends of said tube and imparting relative rigidity to it.

5. A flue-scraper comprising an open-ended tube of flexible, expansible woven-wire fabric, and a holder therefor having means for longitudinally compressing the tube to increase its diameter.

6. A flue-scraper comprising an open-ended tube of flexible, expansible woven-wire fabric, and a holder therefor having means for longitudinally compressing the tube to increase its diameter, and means for limiting the longitudinal compression of the tube.

7. A flue-scraper comprising an open-ended tube of flexible woven-wire fabric, the wire members of said tube being formed to present alternating helical ridges and depressions, a tube-holder having heads engaged with the ends of said tube, said heads being formed to overlap the ends of the tube, and auxiliary helical scraping members contained in said helical depressions and extending at their ends under the overlapping portions of said heads.

8. As an article of manufacture, a scraper member consisting essentially of a tube having its greatest diameter between its ends, said tube being composed of flexible woven-wire fabric susceptible of presenting, under longitudinal compression, a resilient outer surface.

9. As an article of manufacture, a tubular woven-wire scraper member composed of helical wires extending longitudinally of the tube, and having their convolutions interlocked at their ends to form selvages, and at intermediate points to form helical scraping-ribs and open communications between said ribs, said tube being adapted to be made resilient by longitudinal compression.

10. A flue-scraper having helical scraping edges, each composed of a series of wire members assembled and interlocked to form a corrugated scraping edge, and adapted to be made resilient.

11. A flue-scraper having helical scraping edges, each adapted to be made resilient and composed of a series of interlocked wire members each bearing against and supported by the adjacent member.

710,845. WAGON-BRAKE. THOMAS J. SWINEHE, VICTOR A. A. BUSSEE, and EDWARD BUSSEE, Kokomo, Ind. Filed June 30, 1902. Serial No. 113,534. (No model.)

Claim.—1. In a device of the class described, the combination with a running-gear having a sliding tongue, of a transverse rock-shaft mounted on the rear portion of the running-gear and designed to be connected with a brake bar or beam, and an adjustable connection extending from the rock-shaft to the tongue and composed of telescoping sections, one of the sections being tubular and the other consisting of a rod, and a clamp composed of adjustable members having grooved inner faces, the grooves being of different diameters and receiving and engaging the rod and the tubular section of the connection, substantially as described.

2. In a device of the class described, the combination with a running-gear having a sliding tongue, of an adjustable connection extending rearward from the tongue and composed of a rod, and a tube receiving the rod, a clamp composed of two sections or members provided at their inner faces with grooves of different diameters receiving the rod and the tube and engaging the same, and means for connecting the tube with brake-shoes, substantially as described.

3. In a device of the class described, the combination with a running-gear having a sliding tongue, of a brake-beam having brake-shoes, a rock-shaft journaled on the rear portion of the running-gear and provided at its ends with arms connected with the brake-beam, said rock-shaft being also provided with a central loop, a tube or pipe secured to the loop, a rod telescoping in the tube or pipe, a clamp composed of sections or members having grooves of different diameters to receive the rod and the pipe or tube, a rod or bolt depending from the tongue and receiving the front end of the rod, a brace supporting the depending rod or bolt, and means carried by the tongue for engaging the front bounds to lock the brake out of operation, substantially as described.

710,846. ELECTROMETALLURGIC TREATMENT OF ORES OF COPPER OR OTHER METALS. OSSIAKEITH J. TOMMASI, Paris, France. Filed Aug. 6, 1901. Serial No. 71,104. (No specimens.)

Claim.—1. The process of treating electrolytically the impure and ferruginous solutions of sulfate of copper obtainable by the solution of copper ores in sulfuric acid, in order to recover the copper electrolytically without special preparation, by proceeding with the electrolytic treatment at a voltage between about two-tenths and eight-tenths of a volt with insoluble anodes maintained in contact with sulfurous acid, substantially as described.

2. In the electrolytic decomposition of the impure solutions obtained by roasting sulfid ores and dissolving the products of such roasting, the process of recovering a metal from said solution without preliminary treatment to remove another metal or other metals present therein, consisting in introducing sulfurous acid from the said roasting operation into the electrolytic bath, while at the same time adjusting the voltage in such manner as to effect the decomposition of the salts of the metal to be recovered and not of the other metals present in said solution, substantially as described.

710,847. CLOSURE FOR JARS OR BOTTLES. FRANK TYRE, Philadelphia, Pa., assignor to John A. Higgins, Newark, N. J. Filed Apr. 21, 1902. Serial No. 103,263. (No model.)

Claim.—1. A jar or bottle closure consisting of a disk having one or more slits extending inwardly from the edge of the disk at one side of the same, and a compressible cord passing through the slitted portion of the disk and having its bearing on the under side of the same at the inner end of the slit or slits and adjacent to the edge of the disk, substantially as specified.

2. A jar or bottle closure consisting of a disk having two slits extending inwardly from the edge of the disk at one side of the same, and a compressible looped cord passing through said slits, the bight of the cord bearing on the under side of the disk at the inner end of the tongue formed by the slits and adjacent to the edge of the disk, substantially as specified.

3. A jar or bottle closure consisting of a disk having two slits extending inwardly from the edge of the disk at one side of the same and converging from the edge of the disk so as to form a tongue narrowing toward its base, and a looped cord passing through said slits, the bight of the cord bearing on the under side of the disk at the inner end of the tongue formed by the slits and adjacent to the edge of the disk, substantially as specified.

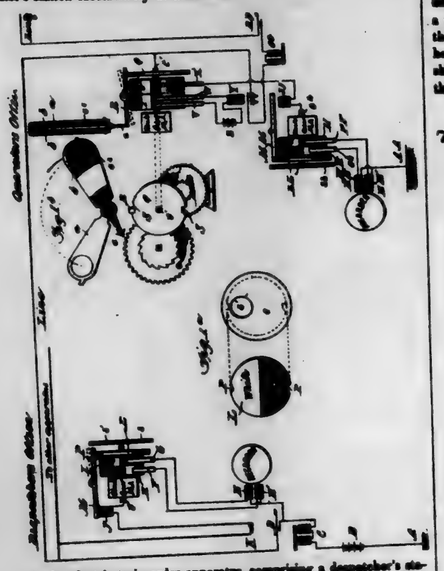
4. A jar or bottle closure consisting of a disk having one or more slits extending inwardly from the edge of the same, and beveled so that one wall of the slit overlaps the other, and a cord passing through the slit and having on the under side of the disk a bearing upon the underlapping portion of the same, substantially as specified.

710,848. ELECTRICAL SYSTEM OF RECORDING AND CHECKING AS APPLIED TO RAILWAY SIGNALING. WILLIAM H. H. WEAVER, Macon, Ga., assignor of one-half to Robert J. Spatz, Macon, Ga. Filed June 1, 1901. Serial No. 62,703. (No model.)

Claim.—1. An electric train-order apparatus, comprising a despatcher's station, and any number of train-signal-adjusting operators' stations both the despatcher's and operators' stations being provided with check-signal devices connected electrically with and contemporaneously, automatically, and positively actuated by the movement of the semaphore-arm or train-signal at the operator's station said signal being differentiated in kind to show whether it be for danger or safety substantially as described.

2. An electric train-order apparatus, comprising a despatcher's station, and any number of train-signal-adjusting operators' stations, both the despatcher's and operators' stations being provided with a time-recorder connected electrically with and contemporaneously, automatically, and positively actuated by the movement of the semaphore-arm or train-signal at the operator's station said time-recorder being constructed and arranged as described to record permanently the kind of signal set, as to danger or safety substantially as described.

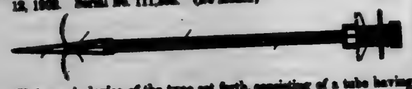
3. An electric train-order apparatus, comprising a despatcher's station, and any number of train-signal-adjusting operators' stations, both the despatcher's and operators' stations being provided with a differentiating time recorder for recording the time of setting a train-signal and also the kind of signal set that is to say, whether a danger-signal, or a line-free signal, said differentiating recorders at both places being electrically connected with and contemporaneously, automatically, and positively actuated by the movement of the semaphore-arm or train-signal at the operator's station substantially as described.



4. An electric train-order apparatus, comprising a despatcher's station, and any number of train-signal-adjusting operators' stations, both the despatcher's and operators' stations having check-signal devices connected electrically with, and contemporaneously, automatically, and positively actuated by the movement of the semaphore-arm or train-signal at the operator's station, said signal devices being constructed and arranged to report the kind of signal, as to danger or safety, an automatic cut-out device at the operator's station for breaking the continuity of the main line and grounding the same, and a push-button or circuit-closer at the despatcher's office for grounding that end of the line around the open Morse key and through the automatic signal-receiving devices substantially as described.

5. In an apparatus of the kind described, an electrical time-recorder having duplicated and differentiating record-markings for indicating the kind of the signal as well as its time of receipt, separate electromagnets controlling separate marking devices for the differentiated record, and commutator devices with actuating mechanism for completing the circuit through one or the other of said electromagnets according to the character of signal to be recorded substantially as described.

710,849. HAT-PIN. JOHN WEBER, Braddock, Pa. Filed June 13, 1902. Serial No. 111,262. (No model.)

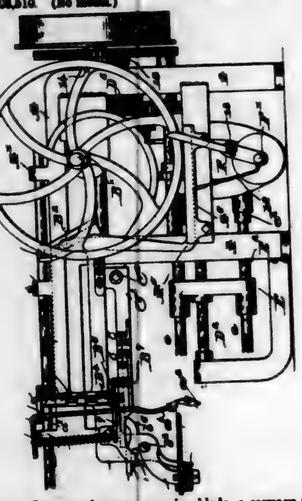


Claim.—A device of the type set forth, consisting of a tube having a hollow conical-shaped portion threaded to its lower end with oppositely-arranged elongated slots arranged therein, a rod having arc-shaped forks pivoted to its ends, said forks having their ends engaging the end walls formed by the said slots, the opposite end of said tube being flared, a head member threaded within said flared end and having oppositely-arranged slots therein, a head on the rod engaging in said head member of the tube, oppositely-disposed guides carried by said head of the rod extending through said last-named slots, a cap threaded onto said head member of the tube, and a spring on the interior of the head member of the tube bearing against said cap and the said head of the rod, substantially as described.

710,850. VENTILATOR. JAMES R. WILD, Cambridge, Mass. Filed Apr. 12, 1902. Serial No. 102,855. (No model.)

Claim.—A ventilating device, comprising a main pipe, oppositely-disposed hemispherical shells secured to the upper end of the pipe with a vertical space between them, a short air-pipe of greater diameter than the main pipe and having its upper end secured to the lower side of the hemispherical shells and opening into the space between them, and a shield standing free from and surrounding the hemispherical shells over the space between them.

710,851. APPLE-PARER. MYRON B. BROOKS, Nashville, Mich., assignor to Goodell Company, Antrim, N. H. Filed May 22, 1902. Serial No. 108,510. (No model.)



Claim.—1. In an apple-parer, a paring-blade, a carriage to sustain said blade, means to move said carriage, a plurality of fork-spindles each provided with a core-discharger, a stop-plate having an open space, said plate arresting the core-dischargers in the position where left by the application of an apple to a fork, a lever, and means to move said lever that its free end may pass through said space and meet and move forward each core-discharger independently to thereby discharge the cores from each fork in succession.

2. In an apple-parer, a shaft, bearings for each end of said shaft, a plurality of spiders adjustably secured to said shaft at a distance apart between said shaft-bearings, each spider having a plurality of bearings, a plurality of fork-carrying spindles contained in the bearings of said spiders, means to rotate the spider-carrying shaft intermittingly at a varying speed, said means comprising a continuously-rotatable pinion, a gear having a cam-surface and a star-wheel having curved faces, and means to rotate said fork-spindles one after the other while said shaft is at rest and while the paring mechanism is acting to pare an apple.

3. In an apple-parer, a shaft having a connected notched wheel provided with a plurality of projections, each notch having an acting surface, combined with a continuously-rotating wheel having an outwardly-projecting flange, a slot at the end of said flange, and a convexed working surface at a distance from said slot, said working surface in the rotation of the wheel acting first upon one or the other of the faces of the notched wheel starting the shaft slowly, the slot finally embracing a projection of said wheel and completing the movement of the shaft, the projection thereafter being acted upon by the faces of the flange whereby the shaft carrying the fork-spindles may be rotated intermittingly and started slowly to thus avoid shock and strain of the machine.

710,852. CURTAIN-POLE AND SHADE-FIXTURE. ELIAS H. GALLEN, Lynchburg, Pa. Filed Feb. 11, 1902. Serial No. 93,551. (No model.)

Claim.—In a combined curtain-pole and shade-fixture comprising a pole 3 having mounted thereon adjustable shade-brackets, an arm carrying a rod secured to one end of the pole, and a bracket carrying a rack secured to the other end of the pole, the latter being adapted to receive the end of said rod, all parts being arranged substantially as shown and described.

710,853. BANANA-CRATE. CHARLES A. DOUD and CHARLES B. BROWN, La Crosse, Wis., assignors to Western Banana Crate Manufacturing Company, La Crosse, Wis. Filed May 28, 1902. Serial No. 108,662. (No model.)

Claim.—1. In a fruit-crate, the upper and lower hoops, and the flexible lining secured to said hoops at its upper and lower portions, tightly stretched and tapering from above and below toward the center, substantially as specified.

2. In a fruit-crate, the innerment and the double tapering lining secured at top and bottom to said innerment, and tightly stretched to escape the sides of the innerment, substantially as specified.

3. In a fruit-crate, the circular-hoop innerment, having the upper and lower interior hoops, a flexible exteriorly-concave lining secured at its upper and lower portions to said hoops, and stretched tightly therebetween to escape the sides of the innerment, substantially as specified.

4. In a fruit-crate, the innerment having upper and lower hoops, and the flexible lining having upper and lower portions wrapped around said hoops, and extending beyond the same to form a cover and bottom of one piece of material with the lining proper, substantially as specified.

5. In a fruit-crate, the innerment having upper and lower hoops, and the flexible lining having upper and lower portions wrapped around said hoops, and extending beyond the same to form an open cover adapted in closing to be gathered and tied, and an open bottom adapted in closing to be gathered exteriorly of the lining and tied, substantially as specified.

710,854. WIRELESS-TELEGRAPH SYSTEM. CORNELIUS D. ELLERY, Washington, D. C., assignor, by direct and mesne assignments to American Wireless Telephone and Telegraph Company, a Corporation of Arizona Territory, and the Consolidated Wireless Telegraph and Telephone Company, a Corporation of Arizona Territory. Filed Dec. 3, 1901. Serial No. 84,514. (No model.)

Claim.—1. The method of transmitting intelligence, which consists in producing electrical waves; modifying such waves in accordance with the signal sent; receiving such waves upon an aerial circuit resonant with the transmitted waves; and subjecting a wave-responsive device to the excessive potential difference at the terminals of a frequency-determining element of said resonant circuit.

2. The method of transmitting intelligence, which consists in producing electrical waves; modifying such waves in accordance with the signal sent; receiving such waves upon an aerial circuit resonant with the transmitted waves; subjecting a wave-responsive device to the excessive potential difference at the terminals of the inductance of said resonant circuit; and controlling a translating device by change of condition of said wave-responsive device.

3. The method of transmitting intelligence, which consists in producing electrical waves; modifying such waves in accordance with the signal sent; receiving such waves upon an aerial circuit resonant with the transmitted waves; subjecting a wave-responsive device to the excessive potential difference at the terminals of the inductance of said resonant circuit; and utilizing the change of condition of said wave-responsive device to produce the signal.

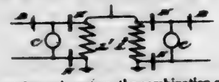
4. The method of receiving intelligence transmitted as electroradiant energy through the natural media, which consists in transforming the received electroradiant energy into the energy of electric currents in an aerial circuit resonant with the transmitted energy, and subjecting a wave-responsive device to the potential difference at the terminals of a frequency-determining element of the resonant aerial circuit.

5. The method of receiving intelligence transmitted as electroradiant energy through the natural media, which consists in transforming the received electroradiant energy into the energy of electric currents in an aerial circuit resonant with the transmitted energy, and subjecting a wave-responsive device through a condenser to the potential difference at the terminals of a frequency-determining element of the resonant aerial circuit.

6. The method of receiving intelligence transmitted as electroradiant energy through the natural media, which consists in transforming the received electroradiant energy into the energy of electric currents in an aerial circuit resonant with the transmitted energy, and subjecting a wave-responsive device to the excessive potential difference existing at the terminals of the inductance of the resonant aerial circuit.

7. The method of receiving a plurality of messages, simultaneously or independently, transmitted as electroradiant energies of different frequencies, which consists in transforming said energies into the energies of electric currents of different frequencies in a plurality of aerial circuits, each resonant with a transmitted energy and having a common frequency-determining element, and subjecting a wave-responsive device to the potential difference at the terminals of a frequency-determining element of each resonant aerial circuit.

710,855. WIRELESS-TELEGRAPH SYSTEM. CORNELIUS D. ELLERY, Rosemont, Pa., assignor to Consolidated Wireless Telegraph and Telephone Company, a Corporation of Arizona Territory. Original application filed Dec. 3, 1901, Serial No. 84,514. Divided and this application filed May 20, 1902. Serial No. 108,494. (No model.)



Claim.—1. In a telegraph system, the combination of means for generating electrical waves; means for modifying such waves in accordance with the signal sent; an aerial receiving-circuit resonant with the transmitted waves; and a wave-responsive device connected to the terminals of an element of the resonant aerial circuit.

2. In a telegraph system, the combination of means for generating electrical waves; means for modifying such waves in accordance with the signal sent; an aerial receiving-circuit resonant with the transmitted waves; and a wave-responsive device connected to the terminals of the inductance of the resonant aerial circuit.

3. In a telegraph system, the combination of an aerial circuit resonant with the transmitted waves; means influenced by the resonant rise of potential across the terminals of the inductance of said resonant circuit; and recording means controlled by said aforementioned means.

4. In a signaling system, the combination of a receiving-conductor, an inductance in series with said conductor and an earth connection, and forming a circuit resonant with the transmitted energy, and a wave-responsive device subjected to the excessive potential at the terminals of said inductance.

5. In a signaling system, the combination of a receiving-circuit resonant with the transmitted energy, a wave-responsive device subjected to the excessive potential difference existing at the terminals of the inductance element of the resonant circuit, and a condenser between the wave-responsive device and said element.

6. In a signaling system, the combination of an aerial receiving-circuit resonant with the transmitted energy, a wave-responsive device subjected to the excessive potential difference at the terminals of the inductance element of the resonant circuit, and a condenser between the wave-responsive device and said element.

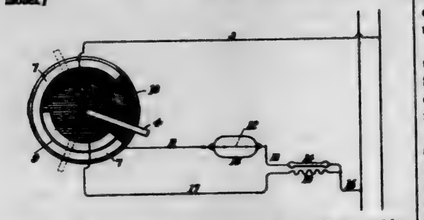
7. In a signaling system, a receiving-circuit resonant with the transmitted energy, a wave-responsive device in shunt to the inductance element of said circuit, and condensers between the terminals of said wave-responsive device and the terminals of the inductance element of said resonant circuit.

8. In a signaling system, a plurality of receiving-circuits, each selective of energy of a predetermined frequency, a frequency-determining element common to all the circuits, and a wave-responding device in shunt to each of the remaining elements of the selective circuits.

9. In a signaling system, a plurality of resonant receiving-circuits, an aerial conductor common to all said circuits, and a wave-responsive device in shunt to the inductance element in each resonant circuit.

10. In a signaling system, a plurality of receiving-circuits, each selective of a transmitted energy, a frequency-determining element common to all the circuits, and a wave-responsive device in shunt to a frequency-determining element in each selective circuit, whereby a plurality of independent messages represented by energies of different frequencies may be simultaneously or independently recorded.

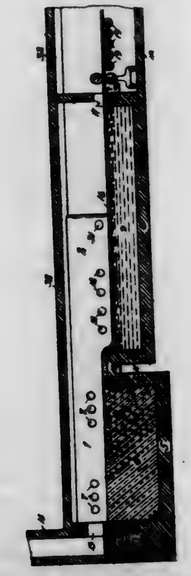
710,356. CIRCUIT-BREAKER FOR ELECTRIC-LAMP GLOWERS. FREDERICK M. GODDARD, Pittsburg, Pa., assignor to George Westinghouse, Pittsburg, Pa. Filed July 20, 1899. Serial No. 724,453. (No model.)



Claim.—1. In an electric-lighting system, the combination with a supply-circuit, a series-connected glower and ballast device and a heater connected to one side of said supply-circuit, of a controlling-switch having a member connected to the other side of the supply-circuit and a relatively movable member comprising a short contact-terminal connected to the heater and a long contact-terminal connected to the ballast device, whereby the movement of one of said members relatively to the other serves to connect the glower, ballast device and heater in circuit simultaneously and to maintain the glower and ballast device in circuit after the heater is cut out.

2. The combination with a glower of the type described, a ballast device in series therewith, and an electric heater in a shunt to the said glower and ballast device, of a hand-operated switch-arm permanently connected to one of the main conductors, two contact-plates in the path of the said switch-arm, connected respectively to the opposite mains through the glower and the heater circuits, the said contact-plate for the heater-circuit being shorter than the contact-plate for the glower-circuit.

710,357. MANUFACTURE OF WINDOW AND PLATE GLASS. WILLIAM H. HEAL, Marion, Ind., assignor of one-half to John H. Forrest, Marion, Ind. Filed Jan. 25, 1902. Serial No. 91,192. (No specimens.)



Claim.—1. The method of forming glass into sheets, or plates, by melting the glass and flowing and floating it, in its melted state, over the surface of melted metal, substantially as described.

2. The method of forming glass into sheets, or plates, consisting in melting the glass and flowing and floating it over the surface of melted metal, substantially as described.

3. The method of forming glass into sheets and plates, consisting in melting the glass and flowing and floating it over the surface of melted metal, and removing the sheet or plate, as formed, from said surface, substantially as described.

4. The method of forming glass into continuous sheets, by melting the glass and producing a regular flow of the melted glass into a sheet over the surface of melted metal, and, with corresponding regularity, removing the sheet, as formed, from said surface, substantially as described.

5. The method of forming glass into continuous sheets, consisting in melting the glass, and producing, by the application of heat, a regular flow of the glass into a sheet over the surface of melted metal, and, with corresponding regularity, removing the sheet, as formed, from said surface, substantially as described.

6. The herein-described process of manufacturing sheet-glass, consisting in melting glass in a suitable tank, and flowing the melted glass from such tank to and over the surface of melted metal contained in a suitable tank, and floating the melted glass on said surface until the same forms, by gravitation, into a sheet of uniform thickness, and then removing the sheet from said surface, as and for the purposes specified.

7. The method of manufacturing glass into continuous sheets, by the use of a pair of tanks, consisting in melting the glass in one of said tanks and maintaining in the other a supply of melted metal, and gradually flowing the melted glass from the tank wherein melted to and over the surface of the melted contents of the other tank, and flowing and floating the melted glass into a sheet upon said surface, and gradually removing said sheet as formed from said surface, substantially as described, and as and for the purposes specified.

8. The method herein described, of manufacturing glass into sheet form, consisting in melting the glass in a suitable tank and flowing the melted glass from such tank to and over the surface of the melted contents of a corresponding tank adapted to receive such flow of glass, and support and float the same, and permit it to spread into a sheet over said surface; and when said sheet is so formed, removing the same, as and for the purposes specified.

9. The method of manufacturing glass into sheets and plates, consisting in melting the glass in a suitable tank, and flowing the melted glass therefrom to and over the surface of melted metal contained in a suitable receptacle, and floating the melted glass on said surface until the same forms, by gravitation and the application of heat, into a sheet of uniform thickness, and then removing the sheet from said surface, substantially as described.

10. The method of manufacturing glass in continuous sheets, consisting in melting the glass in a suitable tank, and flowing the melted glass gradually to and over the surface of the melted contents of a corresponding tank, and floating and spreading said melted glass into a sheet over said surface, and removing the sheet gradually, as formed from said surface, substantially as described, and as and for the purposes specified.

11. The method herein described of forming glass into sheets and plates, consisting in melting the glass in a suitable tank and flowing the melted glass therefrom to and over the melted contents of a corresponding tank, said melted contents being of greater specific gravity than glass, and floating and spreading said melted glass, by the combined action of gravitation and heat, into a sheet over and upon the surface of said melted contents, and removing the sheet thus formed, as and for the purposes specified.

12. The method of manufacturing sheet-glass by one continuous operation, consisting in melting the glass in a suitable tank and flowing the melted glass, under continuous heat, from said tank into a corresponding tank and over the surface of melted metal therein contained, flowing and floating the glass into a sheet over said surface, drawing and forming the sheet of glass, and cooling the sheet in said drawing and forming operation, substantially as described, and for the purposes specified.

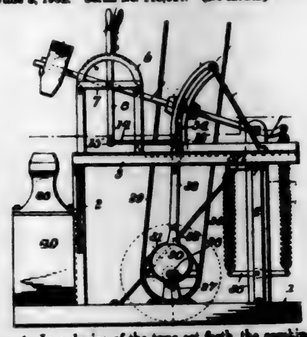
13. The herein-described method of manufacturing annealed sheet-glass by one continuous operation, consisting in melting the glass in a suitable tank, flowing the melted glass therefrom to and over the surface of melted metal contained in a suitable receptacle, floating the melted glass and spreading it into a sheet on said surface, and subjecting it to continuous heat for regulating the softness of the glass, and keeping said metal melted, drawing and forming the sheet of glass, cooling the glass in said drawing and forming operation, and annealing the sheet of glass, as and for the purposes specified.

14. The method of manufacturing glass into a continuous sheet, consisting in feeding the glass into a suitable melting-tank, melting the glass therein, flowing the melted glass therefrom into a suitable receptacle containing melted metal, floating and spreading the glass in a sheet over the surface of said metal by the simultaneous action of heat and gravitation, forming and drawing the sheet of glass, and cooling the sheet in the forming and drawing operation, substantially as described, and as and for the purposes specified.

15. The method of manufacturing annealed glass in a continuous sheet, consisting in melting the glass in a suitable tank, flowing the glass as melted into a suitable receptacle containing melted metal, floating and spreading the melted glass over the surface of the melted contents of said receptacle by the simultaneous action of heat and gravitation, drawing and forming the sheet of glass, cooling the sheet in the forming and drawing operation, and annealing the sheet of glass substantially as described, and as and for the purposes specified.

16. The method of manufacturing glass in a continuous sheet, which consists in melting the glass in a suitable tank, flowing the melted glass therefrom into a suitable receptacle containing melted metal of greater specific gravity than glass, spreading and floating the melted glass, by the combined action of heat and gravitation, over the surface of said melted metal, cooling the glass to a proper consistency and tenacity for drawing, and applying tractive force thereto to form and draw the sheet from said surface, cooling the sheet in said drawing and forming operation, substantially as described, and as and for the purposes specified.

710,358. POWER-HAMMER. THEBE HOLMSTROM, Starbuck, Minn., assignor of one-half to Louis Thorstenson, Starbuck, Minn. Filed June 3, 1902. Serial No. 110,017. (No model.)

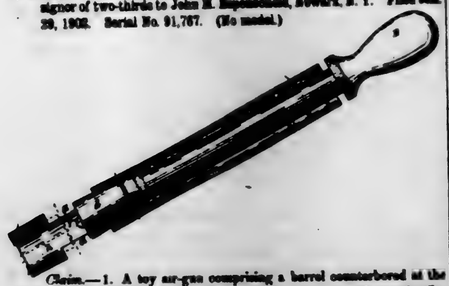


Claim.—1. In a device of the type set forth, the combination with the base and the standard carried thereby, of a table carried by the base, a carriage slidingly mounted on the table, an arm pivoted to the standard, and carrying a hammer on its forward end, a sleeve on said arm, a segmental plate carried by the carriage, with means carried by the sleeve operating through said segmental plate, means for actuating the arm in a vertical plane, means secured to the rear end of the arm for returning the same to its normal position, and means for moving the carriage in a horizontal plane.

2. A device of the type set forth, comprising a pivoted arm carrying a hammer on its one end, and means on its other end for returning the arm to its normal position, a movable carriage with a guide-plate thereon, means freely movable on the arm and movably connected to the guide-plate, and means connected to said last-named means for actuating the arm.

3. In a device of the type set forth the combination with the base and the table, of a carriage movably mounted on the table, an arm pivotally carried by the base, with a hammer on the arm, a means for actuating the arm, a slotted segmental plate carried by the carriage, with a sleeve freely movable on the arm carrying a bolt engaging through said slotted plate, a means on the table for moving the carriage in a horizontal plane, and means carried by the carriage and engaging said last-named means, for forming a connection between the carriage and the last-named means.

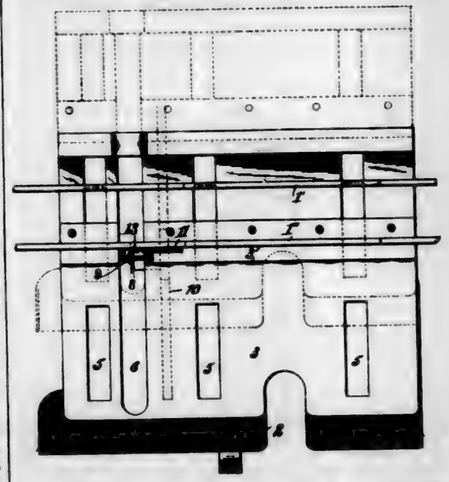
710,359. TOY AIR-GUN. PETER D. HOEVEN, Newark, N. Y., assignor of two-thirds to John M. Bannenheid, Newark, N. Y. Filed Jan. 29, 1902. Serial No. 91,767. (No model.)



Claim.—1. A toy air-gun comprising a barrel counterbored at the forward end, and having enlarged chamber at the other end, a projectile-stopper to close the end of the barrel back of the counterbore, a cap for the forward end of the barrel, and a piston for the barrel, substantially as set forth.

2. A toy air-gun comprising a hollow barrel having a chamber at either end, that at its rear end being enlarged, a stopper for the barrel in one chamber, a perforated cap for the barrel over the stopper, and a piston for the barrel, substantially as shown and described.

710,360. CHECK-SEVERING DEVICE. FOSTER J. HILL, Brooklyn, N. Y., assignor, by mesne assignments, to American Mechanical Cashier Company, a Corporation of New Jersey. Filed Sept. 20, 1901. Serial No. 76,007. (No model.)



Claim.—1. The combination with a movable slip-carrier, of a slip-severing device connected to and operated by the movement of said carrier.

2. In a machine of the character described, the combination with a movable carrier for supporting a removable slip and inserting it within the machine, of a severing device operated by the movement of the carrier to sever the slip.

3. In a machine of the character described, the combination of a sliding support movable and guided in said machine and adapted to receive a slip and insert same in the machine, of a severing device located in fixed relation to the machine and having operating connections with the carrier whereby movement of the carrier operates the severing device to sever the slip.

4. The combination with a slip-carrier and a severing device consisting of engaging rotary knives, one of which is operatively connected with said carrier.

5. The combination with a slip-carrier and a severing device consisting of engaging rotary knives, both of which are operatively connected with said carrier.

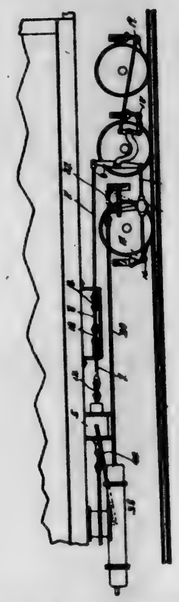
6. The severing device comprising two rotary knives engaging by the peripheral portions of their sides, and means for yieldingly drawing one of said knives into engagement with the other.

7. The combination with the movable slip-carrier of the two rotary slip-severing knives, a gear connected to one of said knives, and a rack connected to the slip-carrier and operating said gear to turn the knives.

710,361. SLACK-ADJUSTER. WILLIAM J. KEVILLE and JAMES P. CAREY, Denver, Colo. Filed Apr. 7, 1902. Serial No. 101,867. (No model.)

Claim.—1. In a slack-adjuster, the combination with suitable air-brake mechanism, of a divided brake-rod so located as to take up slack when shortened, the adjacent rod extremities being threaded, an interiorly-threaded gear mounted on the threaded extremity of each rod, a third gear meshing with the two gears of the rod, a shaft upon which the third gear is mounted and made fast, a ratchet also fast on the shaft, a support for holding the gears in operative relation, a lever-arm loose on the shaft, a spring-held dog connected with the lever-arm and engaging the ratchet, an air-cylinder, a spring-held piston located therein, a rod connecting the piston-stem with the said lever-arm, and a conduit leading

from the brake-cylinder to the air-cylinder, substantially as shown and described.



2. In a slack-adjuster, the combination with air-brake mechanism, of a divided brake-rod located to take up slack when shortened, the adjacent extremities of said rod being threaded, an interiorly-threaded gear mounted on the threaded portion of each rod, a third gear meshing with the rod-gears, a shaft upon which the third gear is made fast, a housing inclosing the gears and in which the shaft is journaled, a ratchet-wheel also fast on the shaft, a lever-arm loose on the shaft, a spring-held dog connected with the lever-arm and engaging the ratchet, an air-cylinder, a piston therein, an operative connection between the piston-stem and the said lever, a coil-spring located between the piston and the cylinder-head, and means for introducing air from the brake-cylinder to the air-cylinder, the arrangement being such that the air-cylinder piston is actuated to compress the spring, when the brake-cylinder has traveled beyond its normal limit, substantially as described.

3. The combination with fluid-actuated brake mechanism, of a fluid-cylinder two pistons therein, a spring located between each piston and the head of the cylinder, means for introducing air from the brake-cylinder to the air-cylinder between the pistons when the brake-cylinder has traveled beyond a predetermined limit, means for taking up slack, and a suitable operative connection between said means and the pistons of the air-cylinder, substantially as described.

4. The combination with fluid-actuated brake mechanism, of a fluid-cylinder, two pistons therein, a coil-spring located between each piston and the head of the cylinder, and surrounding the piston-stem, means to limit the inward travel of the pistons, whereby a space is left between them for the introduction of fluid, means for introducing fluid from the brake-cylinder to the air-cylinder between the pistons, when the brake-cylinder pistons has traveled beyond its normal limit, means for taking up slack, suitably located in the brake-rigging, and a suitable operative connection between said means and the pistons of the air-cylinder, substantially as described.

5. The combination with fluid-brake mechanism, of a divided brake-rod suitably located in the brake-rigging to take up slack as described, the adjacent extremities of the rod being threaded, an interiorly-threaded gear mounted on the threaded portion of each rod, a third gear interposed between the two first-named gears and meshing with both, a support for holding the three gears in operative relation, a shaft on which the third gear is made fast, a ratchet-wheel also fast on said shaft, a lever-arm loose on the shaft, a dog carried by the lever-arm and engaging the ratchet whereby the lever may be moved in one direction without turning the shaft, and suitable means connected with said lever and operated by fluid from the brake-cylinder, for actuating the lever to take up slack, substantially as described.

6. The combination with fluid-brake mechanism, of an air-cylinder, two pistons located therein, means to limit the normal travel of the pistons whereby a central space is left between them, the heads of the cylinder being provided with inward projections having an annular space between them and the outer walls of the cylinder-heads, said projections forming stops to limit the outward movement of the pistons, springs located between the pistons and the cylinder-head extremities, means for introducing fluid from the brake-cylinder, to the central space of the air-cylinder when the brake-cylinder has traveled beyond a predetermined limit, slack-adjusting devices, and means for connecting the pistons of the air-cylinder in operative position with said devices, substantially as described.

710,862. RAILROAD-TORPEDO. EMANUEL S. LAFFERTY, Galesburg, Ill., assignor to Julius G. Dahl, Peoria, Ill. Filed May 5, 1902. Serial No. 106,054. (No model.)

Claim.—1. A railroad-torpedo having its bottom provided with orifices, in combination with a clip having tongues to project through the orifices and to be bent against the bottom.

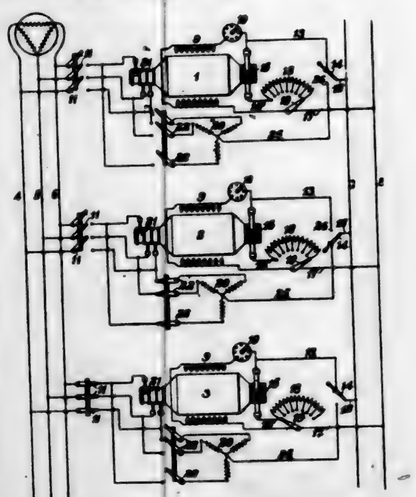
2. A railroad-torpedo having its bottom provided with orifices, in combination with a clip provided with tongues to project through the orifices and to be bent against the bottom and with flanges projecting beyond the bottom, and a clasp associated with the bottom by the flanges.

3. A railroad-torpedo having its bottom provided with downward-projecting ears, in combination with a clasp-engaging clip having tongues to project through the bottom, the ears being adapted to be bent around the clip.

4. A railroad-torpedo having its bottom provided with orifices, in combination with a clip provided with tongues to project through the orifices and to be bent against the bottom and with depending flanges, and a resilient clasp associated with the bottom by the flanges and being of a form closely to embrace the tread of the rail

---

710,868. METHOD OF STARTING ROTARY CONVERTERS. BENJAMIN G. LAMME, Pittsburg, Pa. Original application filed Oct. 14, 1901, Serial No. 78,568. Divided and this application filed Feb. 1, 1902. Serial No. 92,310. (No model.)



Claim.—1. The method of starting rotary converters which consists in first supplying a direct-current electromotive force of more than half but less than the full, normal, rotary converter voltage to the armature-winding through a resistance and then supplying such voltage to the armature-winding through said resistance and a balancing device.

2. The method of starting rotary converters employed for converting alternating-current energy into direct-current energy which consists in first supplying direct-current voltage of more than half but less than the full normal voltage of the rotary converter to its armature-winding through a resistance, then supplying said electromotive force to the armature-winding through said resistance and "star-connected" balancing-coils and then gradually cutting out the resistance to bring the converter to synchronous speed and voltage.

3. The method of starting rotary converters which consists in supplying direct-current electromotive force of more than half but less than the full normal electromotive force of the rotary converter to its armature-winding through a resistance, then supplying said electromotive force to the armature-winding through said resistance and "star-connected" balancing-coils, then progressively cutting out the resistance until the rotary converter reaches synchronous speed and voltage and finally cutting out the balancing-coils and connecting the rotary converter to the alternating-current-supply circuit.

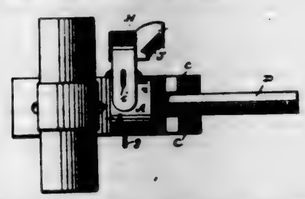
710,864. LETTER-FILE. WILLIAM F. MALONEY, Chicago, Ill. Filed Dec. 7, 1900. Serial No. 39,691. (No model.)

Claim.—1. In a file for holding loose sheets, the combination of a solid back having a flat inner face, sides hinged to the side edges of said back and adapted to swing outward into the horizontal plane of the back, prongs carried by said sides to receive and hold the sheets, and a locking device carried by the back and comprising laterally-extending jaws arranged to engage and lock the sides in position at right angles to the back.

2. In a file for holding loose sheets, the combination of a back and sides hinged thereto, and a locking device located between the sides and above the back comprising spring-pressed jaws arranged to enter openings in the sides to engage therewith and to lock the sides in position at right angles to the back.

3. In a file for holding loose sheets, the combination of a back, sides hinged thereto, and a locking device comprising a pair of spring-pressed plates arranged side by side, jaws carried by said plates and adapted to enter openings in the sides to engage therewith and lock the sides in position at right angles to the back, and thumb-pieces on said plates.

710,865. THILL-COUPLING. ALBERT HEPPENSTALL, Oskaloosa, Iowa, assignor of one-half to Byron V. Beevers, Oskaloosa, Iowa. Filed Feb. 7, 1902. Serial No. 93,003. (No model.)

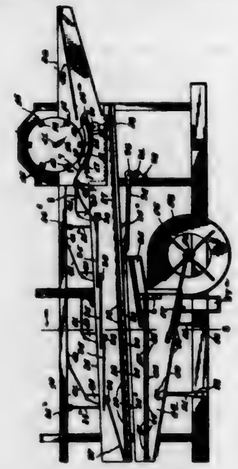


Claim.—1. In a thill-coupling, a base-piece, adapted to be fixed to the axle of a vehicle, turned upward at its front end to engage a thill-iron and provided with a vertical projection to engage a hinged block and a laterally-projecting striker to engage a spring-latch, a block fitted on top of the base and a spring-latch fixed to the block and hinged to the base and its free end adapted to engage the fixed striker, arranged and combined to operate in the manner set forth for the purposes stated.

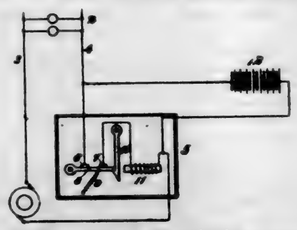
2. A thill-coupling comprising a base-piece adapted to be fixed to the axle of a vehicle and hook-shaped at its front end, a vertical projection at the rear end of the enlarged portion and a fixed striker for a latch at one of its edges, a block fitted on top of said base, a cushion fitted in the block to engage the thill-iron, a spring-latch fixed to the block and hinged to the base and its free end adapted to engage said striker and a thill-iron pivotally connected with the hook-shaped end of the base, all arranged and combined to operate in the manner set forth for the purposes stated.

710,866. PEA-THRESHER. JAMES A. PAIRE, EDGAR R. STEELMAN, and JOSEPH L. HAVERFIELD, Cedar, Tenn., assignors of one-half to Mayfield Manufacturing Company, Mayfield, Ky. Filed May 10, 1902. Serial No. 106,977. (No model.)

Claim.—In a machine for threshing peas, the combination of a frame, a vibrating shoe suspended therefrom and adapted to catch the threshed peas as the same fall, said shoe having a riddle in the bottom thereof, a series of shaking and ejecting screen-rakes pivoted in the shoe above the riddle and disposed in successively lower planes, said rakes being adapted to strike one upon another and to overlap when in horizontal position, rock-arms attached to the rakes and connections between the rock-arms and the frame, a threshing-cylinder and a vertically-movable concave, the latter being arranged in a higher plane than the uppermost shaking screen-rake, and a shoulder between the concave and shaker comprising a relatively fixed pivoted delivery-plate disposed in rear of the concave and inclining downward and having its free end bearing on the uppermost of a series of screen-rakes, the latter sliding back and forth under the delivery-plate whereby the latter is effective in feeding the bales rearward on the series of screen-rakes, and an upwardly-inclined bridge-plate pivoted to the rear of the concave and at its free end bearing on and projecting over the pivoted edge of the delivery-plate, whereby the shoulder intercepts the back movement of the bales, substantially as described.



710,867. CIRCUIT-BREAKER. CHARLES J. REED, Philadelphia, Pa. Filed Feb. 17, 1899. Serial No. 705,843. (No model.)



Claim.—1. The combination with an electric generator and a main circuit therefor, of a normally locked device for opening said circuit which is released by the action of an excessive current to automatically open the circuit and a neutral electrolytic cell or a series of such cells connected in shunt to said circuit-opening device, said cell or cells being short-circuited when the device is closed and being connected in the main circuit, in series with the generator, when the device is open.

2. The combination with an electric generator and main circuit therefor, of a device for opening both sides of said main circuit, which is normally locked in closed position and is automatically released by an excessive current in the circuit, and a neutral electrolytic cell or a series of such cells connected around each break in the circuit, said cells being short-circuited when the breaks are closed and connected in series with the generator when the breaks are open.

3. In a direct-current electric circuit, the combination with separable terminals and means for effecting the separation of said terminals upon the occurrence of an excessive current in the circuit, of a neutral electro-

lytic cell or series of cells permanently connected in shunt to said terminals, whereby said cell or series of cells receives the entire current of the circuit when the terminals are separated.

710,868. MANUFACTURE OF PLAYING-BALLS. FRANCIS H. RICHARDS, Hartford, Conn., assignor to The Kempshall Manufacturing Company, a Corporation of New Jersey. Filed June 20, 1902. Serial No. 113,073. (No model.)

Claim.—1. A process in producing a playing-ball, consisting in inclosing a center piece of hard material within a sphere or layer of soft, resilient material in which pockets or crevices are provided; surrounding said soft sphere by softened plastic material; subjecting the whole to compression to an extent to at least partially close said pockets or crevices and reduce the bulk or diameter of said soft sphere; and maintaining the compression while the plastic material hardens.

2. A process in producing a playing-ball, consisting in inclosing a center piece of hard material within a sphere or layer of soft rubber in which pockets or crevices are provided; surrounding said soft rubber by heated plastic material; subjecting the whole to compression to an extent to at least partially close said pockets or crevices and reduce the bulk or diameter of said soft-rubber sphere; and maintaining the compression until said plastic material hardens, so that it may hold said soft-rubber sphere permanently reduced in bulk or diameter.

3. A process in producing a playing-ball, consisting in inclosing a center piece of hard material within a sphere or layer of soft, resilient material in which pockets or crevices are provided; surrounding said soft sphere by heated gutta-percha; and subjecting the whole to compression to an extent to close said pockets or crevices and solidify said soft sphere.

4. A process in producing a playing-ball, consisting in forming a hard center piece, applying thereto collapsible spherical segments of soft rubber, inclosing said soft rubber in softened plastic material, subjecting the whole to compression to an extent to cause said soft-rubber sphere to collapse, and maintaining the compression while the plastic material hardens.

5. A process in producing a playing-ball, consisting in forming a hard center piece, applying thereto segments of soft rubber each provided at its inner surface with pockets, inclosing said soft rubber between heated segments of gutta-percha, applying compression to said segments so as to at least partially close said pockets and reduce said rubber sphere in bulk and also cause the segments to weld; and maintaining the compression while the gutta-percha cools and hardens.

6. A process in producing a playing-ball, consisting in inclosing a hard center piece in a sphere or layer of solid soft rubber; providing one of said center-piece and sphere elements with openings; compressing upon said sphere a shell of softened plastic material; the compression being carried to an extent to at least partially close said openings; and maintaining the compression while the shell hardens, so that said soft-rubber sphere is held permanently reduced in diameter by the shell.

710,869. ELECTRIC-LAMP GLOWER AND METHOD OF ATTACHING TERMINAL WIRES THERETO. ELIJAH R. ROBERTS, Bellevue, Pa. Filed Apr. 10, 1902. Serial No. 102,313. (No model.)

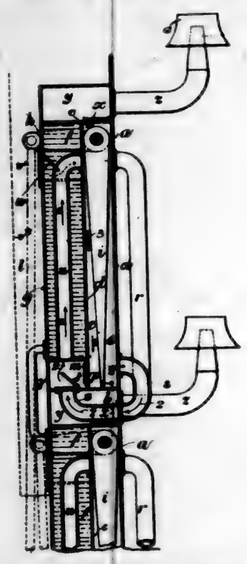
Claim.—1. The method of attaching terminal wires to a tubular glower-blank, which consists in inserting the ends of the wires into the ends of the glower-blank and fastening the same in position by means of paste and then applying a body of cement to each end of the glower and the contiguous portion of the terminal wire.

2. The method of attaching terminal wires to a tubular glower-blank, which consists in inserting the ends of the wires into the ends of the glower-blank and fastening the same in position by means of paste and then applying a globular body of cement to each end of the glower and the contiguous portion of the wire.

3. A tubular glower for electric lamps having terminal wires cemented into the ends thereof and having bodies of cement surrounding the contiguous portions of the glower-body and wires.

4. A tubular glower having terminal wires inserted and cemented into the ends thereof and globular bodies of cement surrounding the contiguous ends of the glower-body and the wires.

710,870. METHOD OF PRODUCING DRAFT. CHARLES SCOTT-SKELL, Saltash, England. Filed Oct. 26, 1901. Serial No. 80,265. (No model.)



Claim.—1. Process for producing draft in boilers and the like, consisting in heating an inclosed volume of elastic fluid, thereby raising its pressure so that a quantity of the elastic fluid is expelled, then producing a blast, then cooling the remaining hot elastic fluid, so that a reduction in its pressure takes place whereby a fresh supply of elastic fluid is drawn in to make up the original volume, substantially as set forth.

2. Process for producing draft in boilers and the like consisting in displacing an inclosed volume of air from contact with a cooled surface into contact with a heated surface thereby raising its pressure and discharging a quantity of this compressed air as an air-blast, the residue of heated air being then brought into contact with the cooled surface whereby its pressure is diminished causing fresh air to be drawn in to make up the original volume of air, substantially as set forth.

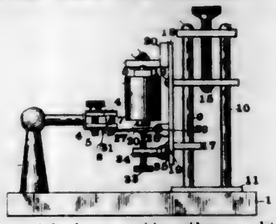
3. Process for producing draft in boilers and the like, consisting in displacing an inclosed volume of air from contact with a water-cooled surface into contact with a surface heated by the waste gases from the boiler-furnace whereby the pressure of the air is raised and the quantity of air discharged into the boiler-uptake thus producing a draft, then displacing the residue of heated air into contact again with the water-cooled surface to diminish its volume and form a partial vacuum, whereby a portion of fresh air occurs to make up the original volume of air, substantially as set forth.

710,871. RAIL-FASTENER FOR METALLIC TIES. CHARLES S. SHALLENBERGER, Milwaukee, Wis., assignor of one-half to Edward S. Marshall, St. Louis, Mo. Original application filed Aug. 19, 1901, Serial No. 72,537. Divided and this application filed Feb. 13, 1902. Serial No. 94,056. (No model.)

Claim.—1. The improved rail-fastener 8, provided with a bolt-opening 9, and an integral central tongue 10 formed at one end by bending downwardly the central portion of the metal and thereby having two fingers 11 one at each side of said tongue aligned with the body of the fastener, substantially as specified.

2. The combination with the sheet-metal tie 1, having the two tongues 2 near each end, and having bolt-holes 3 adjacent to said tongues, and having slots 4 leading from said bolt-holes, and having the lugs 5 produced by bending the metal downwardly adjacent the slots 4 to lock the bolt-heads against turning, and having the wooden rail-seats 7 upon the tongues 2; of metallic fasteners 8 provided with the bolt-openings 9, and having the integral tongues 10 formed by bending the central portions downwardly, thereby leaving the fingers 11 to engage the flanges of the rail, said tongues 10 being inserted into the openings formed by bending down the lugs 5; bolts inserted through said bolt-holes 3 in the tie, and slid into the slots 4, and inserted through the bolt-openings 9 in the fasteners; and nuts upon said bolts; substantially as specified.

710,872. DECOHERER. HARRY SHOEMAKER, Philadelphia, Pa., assignor to Marie V. Oehring and the Consolidated Wireless Telegraph and Telephone Company, Philadelphia, Pa. Original application filed Jan. 11, 1902, Serial No. 89,962. Divided and this application filed June 12, 1902. Serial No. 111,303. (No model.)



Claim.—1. A decoherer comprising guideways, a plate movable parallel to said guideways, an electromagnet mounted on said plate, a hammer pivoted to said plate and in operative relation with said magnet.

2. A decoherer comprising guide-rods, a plurality of members embracing said guide-rods and supporting a plate, an electromagnet secured to and insulated from said plate, an armature and hammer pivoted to said plate and in operative relation with said magnet.

3. The combination of a member, clamping-jaws supported thereby, linings for said jaws, and a non-self-restoring wave-responsive device held by said jaws between said linings.

4. A decoherer comprising a member, jaws supported by said member, a wave-responsive device clamped between said jaws, and a tapper mechanism adjustable with respect to said wave-responsive device.

5. A wave-responsive device, means for clamping the same in fixed position, a hammer for delivering a blow to said wave-responsive device, means for operating said hammer, and an adjustable support for said hammer and its operating means.

6. A decoherer which comprises vertical guideways, a plate movable parallel to said guideways, an electromagnet mounted on said plate, and an armature and hammer pivoted to said plate and in operative relation with said magnet.

7. A decoherer which comprises vertical guide-rods, a plurality of members embracing said rods and supporting a plate, an electromagnet secured to and insulated from said plate, and an armature and hammer pivoted to said plate in operative relation with said magnet.

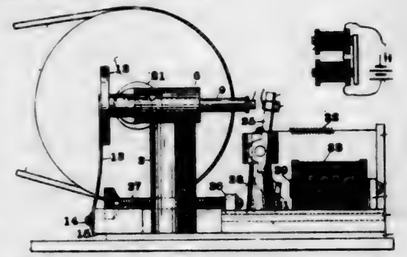
8. In a wireless telegraph-receiver, a vertical standard, a bracket extending horizontally from said standard, linings for said bracket, a wave-responsive device between said linings, an armature and hammer adjustably secured with respect to said wave-response device, an electromagnet coöperating with said armature, a vertical plate carrying said magnet and armature, and a plurality of members secured to said plate and movable over vertical guideways.

9. In a wireless telegraph-receiver, a wave-responsive device carried by a support, an electromagnetic tapper mounted on guides, and means for adjusting said tapper along said guides and with respect to said wave-responsive device.

710,873. INTERRUPTER FOR ELECTRIC APPARATUS. HARRY SHOEMAKER, Philadelphia, Pa., assignor to Marie V. Oehring and the Consolidated Wireless Telegraph and Telephone Company, Philadelphia, Pa. Original application filed Jan. 11, 1902, Serial No. 89,963. Divided and this application filed June 12, 1902. Serial No. 111,448. (No model.)

Claim.—1. An interrupter comprising an eccentric, a reciprocating member engaged by said eccentric, a terminal of the interrupter on said reciprocating member, a pivoted member, a leaf-spring secured to said member, and supporting the second contact of the interrupter, and means for rotating the eccentric.

2. An interrupter comprising an eccentric, a reciprocating member engaged by said eccentric, a terminal of the interrupter on said reciprocating member, a pivoted member, a leaf-spring secured to said member and supporting the second contact of the interrupter, means for rotating the eccentric and means for bringing the second contact into the path of travel of the reciprocating member.



3. An interrupter comprising a continuously-reciprocating rod carrying a contact, and means for bringing the second contact of the interrupter into the path of travel of the reciprocating contact at predetermined intervals.

4. An interrupter comprising a reciprocating contact and means for bringing the second contact of the interrupter into the path of travel of the reciprocating contact.

5. An interrupter comprising a reciprocating and rotating contact, a second contact, and means for bringing said second contact into the path of travel of the reciprocating and rotating contact.

6. An interrupter comprising an eccentric, a contact reciprocated and rotated by said eccentric, a second contact, and means for bringing said contact into the path of travel of the reciprocating and rotating contact.

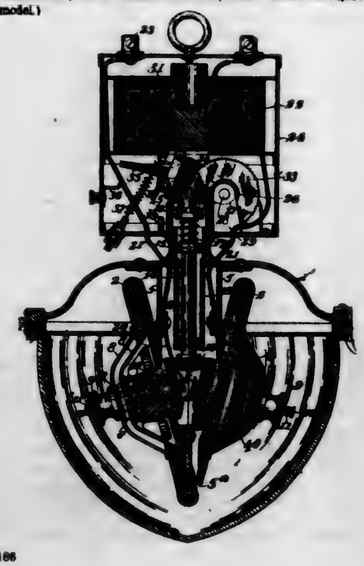
7. In an interrupter, a spring, a contact mounted on said spring, said spring mounted on a rock-shaft and means for rocking said shaft at desired intervals.

8. In an interrupter a leaf-spring, a contact mounted thereon, a rock-shaft, said spring mounted on said shaft, and electromagnetic means for rocking said shaft.

9. In an interrupter a leaf-spring, a contact mounted thereon, a rock-shaft carrying said leaf-spring, an armature secured to said rock-shaft, and an electromagnet coöperating with said armature.

10. An interrupter comprising a reciprocating and rotating contact, a second contact, and means for moving said contact into the path of travel of the reciprocating and rotating contact, said second contact mounted upon a member, and means for adjusting the position of said member.

710,874. ELECTRIC-ARC LAMP. ALBERT F. SHORE, New York, N. Y., assignor of two-thirds to Daniel M. Hurlburt, New York, N. Y. Filed Nov. 9, 1899. Renewed Feb. 15, 1902. Serial No. 94,217. (No model.)



Claim.—1. In an arc-striking mechanism for arc-lamps, the combination of a shaft movable longitudinally in its bearings, a rack on said shaft meshing with gearing regulating the movement of the arc-carbons, a lever turning freely on said shaft, and controlled by the current flowing in the circuit, and means on said shaft and its bearings for producing a longitudinally-directed motion of the shaft, substantially as set forth.

2. In an arc-feeding mechanism, the combination of a solenoid, a plunger-core, a lever attached to said core, and provided with a cam, a shaft, longitudinally movable in its bearings, a fixed cam adapted to engage with the lever-cam, and means for transforming the longitudinal movement of the lever-shaft into a rotary motion of the arc-carbons, substantially as described.

3. In an arc-feeding mechanism, the combination of a solenoid, a plunger-core, a lever attached to and moving with said plunger, a longitudinally-movable shaft attached to said lever, a toothed wheel attached to the shaft, a second lever adapted to be engaged by the lever attached to the plunger, and provided with a pawl engaging with the toothed wheel for controlling the feeding mechanism, a retractile spring and stop for limiting the movement of the second lever, and means for transmitting the motion of the feeding mechanism to the light-giving carbons, substantially as described.

4. In an arc-lamp, the combination of a pair of carbon rings set at an angle to each other, frames for holding said carbons rotatably mounted on shafts arranged to transmit the current to the carbons, bevel-wheels on said carbon-supporting shafts, a main rotating shaft having a bevel-wheel for engaging with and transmitting motion to the bevels on the carbon-supporting shafts, means for maintaining firm and constant contact between the bevel-wheel on the main shaft and the bevels on the carbon-supporting shafts, and means for causing the said main shaft to rotate in order to compensate varying lengths of the arc, substantially as set forth.

5. In an arc-lamp, the combination of a pair of carbon disks or rings, forming an angle with each other and rotatably mounted on axes supported by the body of the lamp, means for transmitting the current to the rotary carbons; bevel-wheels on the carbon-supporting axes engaging with a bevel-wheel attached to the main rotating shaft, means for maintaining the frictional contact between the bevels on the carbon-supporting axes and the bevel on the main shaft, a toothed wheel mounted on the top of the main shaft, a worm engaging with said toothed wheel and mounted on an axis capable of rotary and longitudinal motion, a notched wheel attached to said axis and actuated by a pawl attached to a lever whose movements are controlled by a retractile spring and by a lever attached to the worm-shaft, a plunger connected with this latter lever, and a solenoid, all cooperating to bring about the feeding action of the lamp, substantially as set forth.

6. In arc-feeding mechanism, the combination of a pair of circular carbon-holders, a main rotating shaft, cooperating bevel-wheels on the carbon-holders and on the main shaft, and a spring controlling the pressure between the bevel-wheels on the carbon-holders and on the main shaft, substantially as set forth.

7. In arc-feeding mechanism, the combination of a pair of circular carbon-holders, a main rotating shaft, cooperating bevel-wheels on the carbon-holders and on the main shaft, and means for maintaining constant and firm contact between the bevel-wheels on the carbon-holders and on the main shaft, substantially as described.

8. In arc-feeding mechanism, the combination of a pair of bevel-wheels for revolving the carbons, a bevel-wheel on the main shaft, a fixed collar attached to the main shaft, a collar movable along said shaft, bearings for said movable collar, and a spring for maintaining a firm pressure between the bevel-wheel on the main shaft and the carbon-revolving bevel-wheels, substantially as set forth.

9. In arc-feeding mechanism, the combination of a carbon-holding frame, a hollow shaft for said frame, a conducting-pin insulated from and revolving with said hollow shaft adapted for conducting the current to the carbon-holding frame, substantially as described.

710,875. WHEEL. EDWARD S. SCHUYLER, Harrisburg, Pa. Filed Aug. 5, 1902. Serial No. 118,893. (No model.)

Claim.—1. A wheel comprising a pair of disks connected together at or near their peripheries, a hub centrally arranged between said disks, said hub having spokes projecting therefrom between the disks and cross-arms upon said spokes, and means for attaching the disks to the ends of said arms.

2. A wheel comprising a pair of disks connected together at or near their peripheries, a hub centrally arranged between said disks, said hub having spokes projecting therefrom between the disks and cross-arms upon said spokes, said arms having enlarged ends, and means for attaching the disks to the ends of said arms.

3. A wheel comprising a pair of disks connected together at or near their peripheries, a hub centrally arranged between said disks, said hub having spokes projecting therefrom between the disks and tubular cross-arms or thimbles transversely arranged upon said spokes, and bolts passing through said disks and cross-arms and securing the disks to the cross-arms.

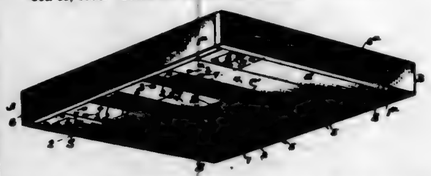
4. A wheel comprising a pair of disks connected together at or near their peripheries, a hub centrally arranged between said disks, said hub having spokes projecting therefrom between the disks and tubular cross-arms or thimbles transversely arranged upon said spokes and having enlarged ends, and bolts passing through said disks and cross-arms and securing the disks to the cross-arms.

5. A wheel comprising a hub having exteriorly-threaded ends, flanges near said ends, spokes radiating from the hub and cross-arms upon said spokes, in combination with a pair of disks connected together at or near their peripheries and having central openings fitting over the ends of the hubs, devices upon the threaded ends of the hub for clamping the disks against the flanges, and means for clamping the disks against the ends of the cross-arms.

6. A wheel comprising a hub having exteriorly-threaded ends, flanges near said ends, spokes radiating from the hub and cross-arms upon said spokes, in combination with a pair of disks connected together at or near their peripheries and having central openings fitting over the ends of the hub, threaded washers upon the ends of the hub for clamping the disks against the flanges, bolts passing through said washers, disks and flanges, and means for clamping the disks against the ends of the cross-arms.

7. A wheel comprising a pair of disks connected together at or near their peripheries, a hub centrally arranged between said disks, said hub having spokes projecting therefrom between the disks and cross-arms upon said spokes, clamping-rings upon the outer sides of the disks and means for securing said rings to the cross-arms.

710,876. EXTENSION-TABLE. CHRIS H. SMITH, Elgin, Ill. Filed Oct. 15, 1901. Serial No. 78,712. (No model.)

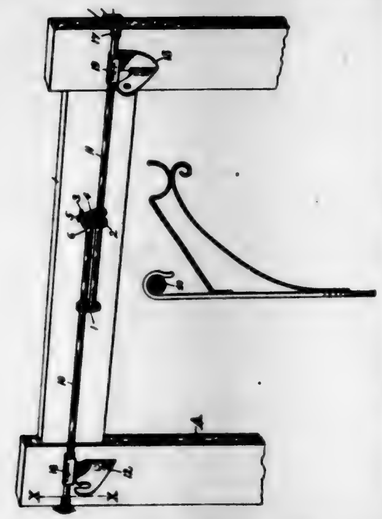


Claim.—1. An extension-table, comprising a solid square top section, having pendent sides, fixedly-held cross-bars, disposed in a plane with the lower edges of the sides, guide-bars extended longitudinally of the table, and disposed between the outer ends of the top section and the cross-bars, an extensible section at each end having pendent and cross-bars, adapted to form continuations of the pendent sides aforesaid, said extensible sections having slide-bars to engage the guide-bars, and leaf top sections, adapted to be detachably held lengthwise under the top and on the cross-bars, said sections filling the space between the guide-bars, the top and cross-bars, when folded thereon, substantially as shown and for the purposes described.

2. In an extension-table, the combination with the central fixedly-held top section having pendent sides 1^c, permanent cross-bars 4, the latter being in a plane with the lower edges of the sides 1^c, and the guide-rails 2, attached to the fixedly-held top one near each side; of the extensible sections A and B, each comprising end portions 6, of a depth equal that of the sides 1^c, an inwardly-extending cleat on the lower edge, in a plane with the cross-bars 4, and slide-rails, the rail-section being spaced to enter between the guides 2 and the sides 1^c, and the rail of section B spaced to engage the inner faces of the said guides 2, and detachable leaf-sections adapted to fit lengthwise under the fixed table-top, and with their outer edges abutting the inner sides of the slide-rails of the section B, and to rest upon the cross-bars 4, 4 and the cleats *d*, and having a length equal the length of the fixed table-top, all being arranged substantially as shown and described.

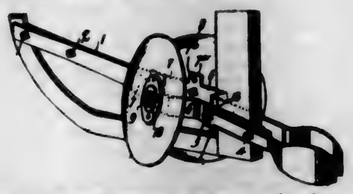
710,877. WINDOW-CURTAIN FIXTURE. LEVI SPRINKLE and CHARLES H. FOX, Richmond, Ind. Filed Feb. 7, 1902. Serial No. 93,962. (No model.)

Claim.—1. In a window-curtain fixture in combination with a pair of rods slidably attached together and adapted to move endwise parallel with each other and a mechanism for locking said rods against an outward movement, of a clamping member, formed of one piece of material, attached securely to the outer end of each rod, said clamping member consisting of a flat portion at right angles to the rods, with a hole through the center thereof, a front portion bent at right angles to said flat portion and adapted to nearly surround and tightly grip the ends of the rods, and, a rear portion extending in at right angles to said flat portion and provided with teeth for engaging the window-casing, all substantially as shown and described.



2. In a window-curtain fixture in combination with a pair of rods 10 and 11 with clamping members attached to the outer ends of each and means for locking together their inner ends of a pair of window-shade brackets and a pair of curtain-pole brackets provided with inwardly-projecting hooks on their upper portions adapted to hook over the rods 10 and 11 at any points along their lengths, all substantially as shown and described and for the purposes set forth.

710,878. FURROW OPENING AND COVERING ATTACHMENT FOR SEED-DRILLS. LAFAYETTE C. SWIRE, Lenard, Ill. Filed Mar. 15, 1902. Serial No. 98,413. (No model.)



Claim.—1. In combination with the runner and seed-tube of a planter, bars having means to clamp their front and rear ends to the runner and seed-tube respectively, disks carried by said bars and means to vertically adjust the disks thereon, substantially as described.

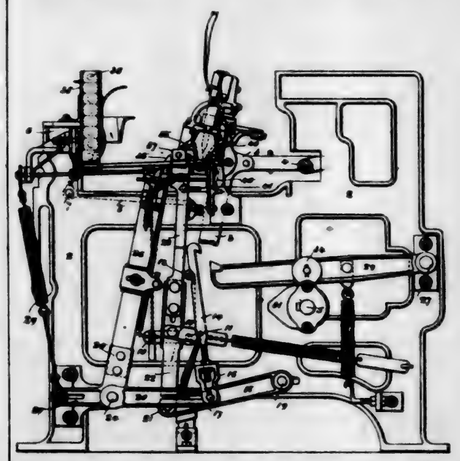
2. In combination with the runner and seed-tube of a planter, bars having means to clamp their front and rear ends to the runner and seed-tube, respectively, and disks carried by said bars, substantially as described.

3. In combination with the runner and seed-tube of a planter, bars having means to clamp their front and rear ends to the runner and seed-tube, respectively, and disks and coverers carried by said bars, and disposed respectively in advance and rear of the seed-tube, substantially as described.

4. In combination with the runner and seed-tube of a planter, bars having means to clamp their front and rear ends to the runner and seed-tube respectively, disks carried by said bars in advance of the seed-tube and coverers disposed in rear of the seed-tube and having forwardly-extending arms attached to the bars, substantially as described.

5. In combination with the runner and seed-tube of a planter, bars having means to clamp their front and rear ends to the runner and seed-tube respectively, disks carried by said bars in advance of the seed-tube and coverers disposed in rear of the seed-tube and having forwardly-extending arms pivotally connected to the bars so that the coverers may be vertically adjusted, and means to clamp said arms to said bars to secure the coverers when adjusted, substantially as described.

710,879. WEFT-REPLENISHING MECHANISM FOR LOOMS. RICHARD TALBOT and WILLIAM ROBERTS, Blackburn, England, assignors to Blackburn Loom and Weaving Machinery Making Company, Limited, Blackburn, England. Filed Jan. 7, 1902. Serial No. 88,773. (No model.)



Claim.—1. In combination, a shuttle-receptacle, the lathe, a shuttle-box thereon, a reciprocating shuttle-carrier, a forked rod for raising the shuttle from the shuttle-carrier to the shuttle-box, a hooked arm for operating the said forked rod, a second hooked arm connected with the reciprocating shuttle-carrier for operating the same, a pair of oscillating levers for operating the hooked arms, the tappet-shaft, cams thereon for operating the oscillating levers and means for throwing the hooked arms into the path of the oscillating levers, substantially as described.

2. In combination, a shuttle-receptacle, the lathe, a shuttle-box thereon, a carrier for the shuttle comprising an arm 26, means for raising the shuttle from the carrier into the shuttle-box comprising the arm 22 carrying a fork, levers 18 and 20 connected respectively with the arms 22 and 26, hooked arms 13 and 14 connected respectively with the levers 18 and 20, oscillating levers 28 and 29, means for operating the same, and means for throwing the hooked arms into the path of the said oscillating levers, substantially as described.

710,880. NUMBERING-MACHINE. FREDERICK M. TODD, New York, N. Y., assignor of one-half to Tracy Manufacturing Company, New York, N. Y., a Corporation of New York. Filed Aug. 21, 1901. Serial No. 73,288. (No model.)

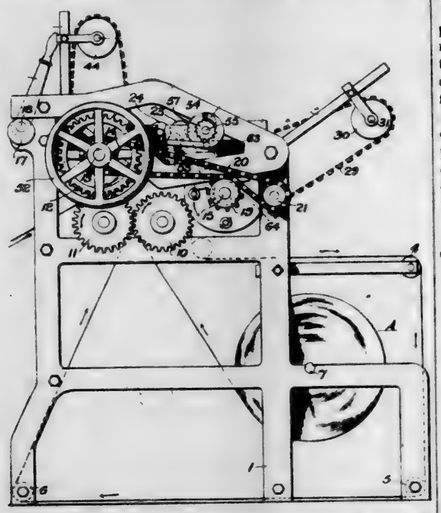
Claim.—1. In a numbering-machine, a rotary wheel having a plurality of peripheral sections forming bases or plates located further from the axis of the wheel than are the intervening edges, in combination with a printing-belt wheel type or dies are seated on the aforesaid plates during the printing operation to bring non-adjacent types into printing position.

2. In a numbering-machine, a non-circular wheel having equidistant tangential plates, between which are intervening peripheral sections of less radius than the plates, in combination with an endless printing-belt consisting of interhinged type-carrying links that are seated on the plates to bring the non-adjacent type into printing position, and guides on the sides of the wheel to keep the belt in place on the wheel periphery.

3. In a numbering-machine, a plural-sided wheel some of whose sides are of greater radius than the remainder, said sides of greater radius being equidistant from each other, in combination with an endless printing-belt consisting of type-carrying links that are seated on sides of greater radius to bring non-adjacent types into printing position.

4. In a numbering-machine, a non-circular wheel having equidistant

tangential platens between which are sections of less radius than the platens, in combination with a printing-belt consisting of type-carrying links adapted to be seated on the platens when in printing position, guides on the sides of the wheel to keep the belt in place thereon, and printing devices carried on one of the said guides at points near the said platens to permit printing therefrom in line with the printing done by the belt.



5. In a numbering-machine, a non-circular wheel having equidistant tangential platens between which are sections of less radius than the platens, in combination with a printing-belt consisting of type-carrying links adapted to be seated on platens when in printing position, a type-carrying disk on one side of the wheel whose type are carried at points near the platens so as to permit printing therefrom in line with the printing done by the belt, and typographic numbering devices likewise carried by the wheel and actuated from the belt when the numbers on said devices are to be changed.

6. In a printing-machine for printing both sides of a web, means for leading the web through a printing-couple to print one side, then around the roll of paper and through a second printing-couple to receive an impression on the other side, in combination with a single inking device located so as to ink the printing members of both printing-couples, substantially as described.

7. In a printing-machine containing two printing-couples arranged to print the opposite sides of a web, means consisting of guide-rollers for leading the web through the first printing-couple to print one side, then around the roll of paper and through the second printing-couple to receive the impression on the other side, in combination with an inking device arranged to ink the printing members of both printing-couples.

8. In a printing-machine containing two printing-couples arranged to print both sides of a web, said printing-couples consisting each of an impression-cylinder and a plural arrangement of non-circular wheels and endless type-carrying belts that print from non-adjacent types, means consisting of suitable guide-rollers for leading the web through the first printing-couple to print one side, then around the roll of paper and through the second printing-couple to print the other side.

9. In a numbering-machine, the combination with two printing-couples, each comprising an impression-cylinder and a plural arrangement of non-circular wheels and endless type-carrying belts, of a single ink-fountain and its rollers serving both printing-couples, and means for conveying the web through the couples to cause printing on both sides.

10. In a numbering-machine containing two printing-couples arranged to print both sides of a web, the combination with the main frame and the impression members of the printing-couples journaled therein, of a swinging frame pivotally supported on the main frame and the printing members of the printing-couples suitably supported in said swinging frame, said printing members consisting each of a plurality of non-circular wheels and endless type-carrying belts running thereon and printing from non-adjacent types, together with means whereby the adjustment of the frame enables the printing members to receive motion from the impression members, substantially as set forth.

11. In a numbering-machine containing two printing-couples arranged to print upon the opposite sides of a web, the combination with the main frame and the impression members of the printing-couples journaled therein, of a swinging frame pivotally supported on the main frame, and the printing members of the printing-couples supported in said swinging frame, said printing members consisting each of a series of non-circular wheels and endless belts that print from non-adjacent types, and means for adjusting the swinging frame consisting of cams or eccentrics.

12. In a numbering-machine, a printing-couple consisting of an impression member and a printing member having a series of one or more rotary non-circular wheels with an endless type-carrying belt running thereover that prints from non-adjacent types, together with a disk and spring-pawl devices on the shaft of the non-circular wheel, with means for rotating said shaft in order to reset the type in printing position.

13. In a numbering-machine the combination with a shaft, a series of non-circular wheels arranged thereon, a series of printing-belts that print from non-adjacent types and are carried on the aforesaid wheels, a disk to which is pivoted a pawl provided with a spring to hold it in an elevated or depressed position, said disk being arranged in connection with the shaft, and means for driving said shaft in the operation of the machine.

710,881. BALANCING DEVICE FOR TURBINE-GATES. WILLIAM W. TYLER, York, Pa. Filed June 15, 1901. Serial No. 64,692. (No model.)

Claim.—1. A turbine water-wheel having a cylinder-gate provided with wings, a cylinder and a piston therein connected with the gate, the under side of the piston being exposed to the pressure of the whole fall of water, and the pressure on the top of the piston being that of the pressure of the water below the wings inside of the gate, as set forth.

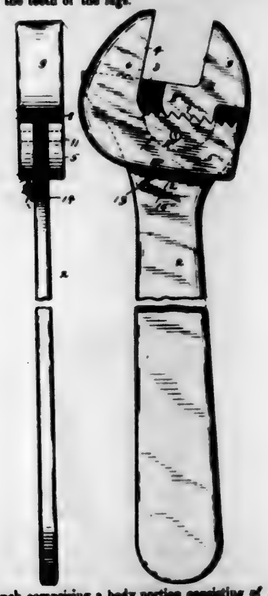
2. A turbine water-wheel having a cylinder-gate provided with wings, a cylinder, and a piston therein connected with the said gate, the area of the piston being substantially one-half of the area of the gate-wings upon which the pressure is exerted, the said cylinder being opened at the bottom, and a pipe connecting the closed top of the cylinder with a water-chamber inside of the gate, as set forth.

3. A turbine water-wheel having main chutes, a runner against which the water is directed by the main chutes, a cylinder-gate having wings extending between the bars forming the main chutes, a cylinder connected at its closed top with the main chutes between adjacent bars at the top thereof, and a piston in the cylinder and carrying the said gate, as set forth.

4. A turbine water-wheel having main chutes, a runner against which the water is directed by the main chutes, a cylinder-gate having wings extending between the bars forming the main chutes, a cylinder connected at its closed top with the main chutes between adjacent bars at the top thereof, and a piston in the cylinder and carrying the said gate, and means for raising or lowering the said gate independently of the said cylinder and piston, as set forth.

710,882. ADJUSTABLE NUT-WRENCH. JOSEPH T. VILES, Indianapolis, Ind., assignor of one-half to Oscar Bryan, Indianapolis, Ind. Filed Mar. 14, 1902. Serial No. 98,188. (No model.)

Claim.—1. In a wrench, a body portion comprising a handle, a head flat on each side integral therewith said head having a straight edge and a stationary jaw at one end of said straight edge and lateral lugs on said head, an opening through the head between the lugs and the handle said lugs being toothed, a slotted jaw working on said head and having teeth to engage the teeth of the lugs.



2. A wrench comprising a body portion consisting of a handle expanded at one end to form a flat head, said head having a straight edge opposite the handle, an integral jaw at one end of the straight edge, lugs with inner serrated edges, adjacent to said straight edge, a slot or perforation through the head adjacent to the lugs, an adjustable jaw slotted to receive the flat head and adjustable along the straight edge of said head, said head having a right-angled inner portion taking under said lugs and having serrations to engage those of the lugs, a pin passing through the adjustable jaw and through the opening in the head and resilient means for holding the serrated jaw against the serrated lugs.

3. A wrench comprising a handle, an expanded end forming a flat head, said head having a straight edge opposite the handle and an integral jaw, lugs with inner serrated edges adjacent to the straight edge, a perforation between the lugs and the handle, an L-shaped jaw slotted to receive the flat head and adjustable along the straight edge, serrations of the jaw to engage those of the lugs, a pin connecting the slotted members of the jaw and passing through the perforation of the head and a spring carried by the body and pressing the adjustable jaw against the shoulder.

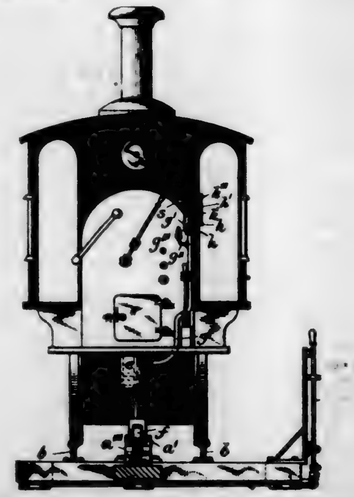
710,888. DANGER-SIGNAL FOR RAILWAYS. WILLIAM WARNA, New York, N. Y. Filed Mar. 10, 1902. Serial No. 97,884. (No model.)

Claim.—1. A railway-signal embracing a track element, means by which the same may be raised and lowered, a fluid-cylinder carried by the engine or train, an alarm to be operated by fluid therefrom, a longitudinally-movable rod, a piston within said cylinder and a device to engage said track element and be moved bodily thereby to adjust said rod and piston longitudinally, said piston and device being secured to opposite ends of said rod.

2. A railway-signal embracing a track element having means by which it may be raised and lowered, and a train element embracing a fluid cylinder carried by the engine or train, an alarm to be operated by fluid therefrom, a piston in said cylinder, a longitudinally-movable rod depending from said piston, and a roller carried by the lower end of said rod to engage said track element.

3. A train element of a railway signaling system, embracing, in combination with a signaling device proper, actuating and controlling means therefor including a fluid-cylinder, a piston in said cylinder, a locking means for the signaling device proper controlled in one direction of its movement by the action of said piston, and means for controlling the action of the fluid to thereby operate said piston.

4. A train element of a railway signaling system, embracing, in combination, a signaling device proper, means for operating the same in one direction, means for locking the same against the action of said operating means, and means for releasing the same from its said locking means, including a fluid-cylinder, a piston in said cylinder having its rod engaged with said locking means, and means for controlling the action of the fluid to thereby operate said piston and disconnect the locking means from the signaling device proper.



5. A train element of a railway signaling system, embracing, in combination, a pivoted signaling device proper, having a signal at one end and means at its other end for turning it pivotally to expose the signal, means for locking said signal against the action of said turning means, and devices for disengaging the locking means from said signaling device proper, including a fluid-cylinder, a piston in said cylinder and means for controlling the action of the fluid to thereby operate said piston.

6. A train element of a railway signaling system, embracing, in combination, a visual signal, means for normally locking the same, means for adjusting it into danger position when released from said locking means, a fluid-cylinder, a piston in said cylinder operative to disengage said locking means from said signal, an audible signal, and means for actuating said piston and audible signal.

7. A railway signaling system embracing a track element and a train element, said train element having a fluid-cylinder, a piston therein, a signaling device proper, a locking means for the latter controlled in one direction of its movement by operation of said piston, and means controlled by obstruction imposed by the track element of the system to control the operation of said piston.

8. A railway signaling system, embracing a track element and a train element, said train element having a fluid-cylinder, a piston therein, a pivoted arm having a visual signal, means for actuating said arm automatically in one direction, a device for locking said arm against the action of said actuating means, means between said locking device and piston by which the locking device will be controlled on one direction of its movement by operation of said piston, and means controlled by obstruction imposed by the track element of the system to control the operation of said piston.

9. A railway signaling system, embracing a track element and a train element, said train element having a fluid-cylinder, a piston therein, a piston-rod, a pivoted arm having a visual signal at one end, means connected with the other end of said arm to elevate said signal, a pivoted means for locking said arm against the action of said elevating means, said locking means projecting into the path of said piston-rod and actuated thereby to release said arm, and means controlled by obstruction imposed by the track element of the system to control the operation of said piston and piston-rod.

10. A railway signaling system embracing a striking-plate arranged near the track and having means for adjusting it, a fluid-cylinder carried by the train and containing a reciprocating piston provided with a rod adapted to be brought into rolling contact with the striking-plate when raised, a signal, and a locking means for said signal released therefrom by operation of said rod and piston.

11. A railway signaling system embracing a striking-plate arranged near the track and having means for adjusting it, a fluid-cylinder carried by the train and containing a reciprocating piston provided with a rod having a rolling contact device at its lower end to engage the striking-plate when the latter is raised, a second fluid-cylinder having communication with the first one and provided with a piston, an audible signal having communication with said first cylinder, a piston in said second cylinder and a visual signal controlled by operation of the piston in said second cylinder.

12. A railway signaling system, embracing a striking-plate arranged near the track and having means for adjusting it, a fluid-cylinder carried by the train and containing a reciprocating piston provided with a rod adapted to be brought into rolling contact with the striking-plate when the latter is raised, a second fluid-cylinder having communication with the first one and provided with a piston, an audible signal between said cylinders, a visual signal, a locking means for the visual signal, and means actuated by movement of the piston in said second cylinder to release said visual signal.

13. A railway signaling system embracing a track element having means for adjusting it; and a train element comprising a vertical fluid-cylinder having a piston which depends from it and is provided at its lower end with a contact device to engage the track element, a second fluid-cylinder having communication with the first one, an audible signal having communication with said first cylinder, and a visual signal controlled by the second cylinder.

14. A railway signaling system embracing a track element having means for adjusting it; and a train element comprising a fluid-cylinder having a piston which depends from it and is raised by said track element, a second fluid-cylinder having communication with the first one, an audible signal having communication with said first cylinder, a visual signal having a means for locking it, means controlled by the fluid from said second cylinder for releasing said visual signal, and means connected with said visual signal for throwing the same into exposed position.

15. A railway signaling system, embracing a track element having means for adjusting it; and a train element comprising a fluid-cylinder having a piston which depends from it and is raised by said track element when the latter is elevated, a second fluid-cylinder having communication with the first one, an audible signal having communication with said first cylinder and caused to sound by the fluid therefrom, a visual signal having a locking means, means controlled by the fluid from said second cylinder for actuating the locking means to permit exposure of said visual signal, and means operated to expose said visual signal when the locking means is disengaged.

16. A railway-signal embracing a striking-plate near the tracks, means for raising and lowering the same, an air-cylinder carried by the train and provided with a vertically-reciprocating piston having a dependent piston-rod provided with a roller to engage said striking-plate when the latter is elevated, a signal normally invisible to the engineer and means for turning the signal into a visible position set into operation by the upward motion of the piston within the air-cylinder.

17. A railway-signal consisting of a striking-plate near the tracks, means for raising and lowering the same, an air-cylinder carried by the train and provided with a vertically-reciprocating piston having a dependent piston-rod provided with a roller to engage said striking-plate when the latter is elevated, and a whistle adapted to be blown by the compression of the air in the cylinder when the piston is moved upward by the travel of said roller along said striking-plate, and a visual signal adjusted into danger position by the same compression of air in the cylinder.

18. A railway-signal consisting of a striking-plate near the tracks, means for raising and lowering the same, an air-cylinder carried by the train and provided with a vertically-reciprocating piston having a dependent piston-rod provided with a roller to engage said striking-plate, a whistle adapted to be blown by the compression of the air in the cylinder when the piston is moved upward by the travel of said roller in said plate and a signal normally invisible to the engineer and brought into view through means actuated by the same compression of the air in the cylinder.

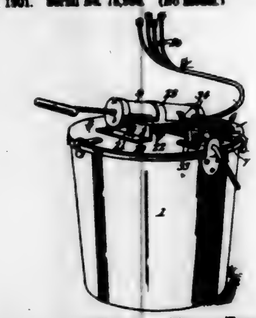
19. A railway signaling system consisting of a track element having means for adjusting it, and a train element embracing an air-cylinder provided with a piston having its rod adapted to be brought into rolling contact with the track element when the latter is elevated, and thereby move said piston, a whistle adapted to be blown by the compression of the air in the cylinder when the piston is moved by the travel of said contact on said track element, and a signal in the engineer's cab, normally invisible to the engineer and brought into his view through means actuated by the same compression of the air in said cylinder.

20. A train element of a railway signaling system, embracing, in combination, a fluid-cylinder, a piston therein, a signal, a locking means for said signal, and means interposed between said piston and locking means and operated by the former to disengage the latter from said signal.

21. A train element of a railway signaling system, embracing, in combination, a fluid-cylinder, a piston therein provided with a rod designed to be operated by the track element of the system, a signal, a locking means for said signal, means connecting said locking means with said piston and operated by the latter to disengage the former from the signal, and means for adjusting said signal when the same is released.

22. A train element of a railway signaling system, embracing, in combination, a visual signal, means for normally locking the same, means adjusting it into danger position when released from said locking means, a fluid-cylinder, a piston therein, means between said piston and locking means for disconnecting the latter from the signal when the piston is actuated, an audible signal, and means for actuating said piston and sounding said audible signal, including a second fluid-cylinder having communication with the one first mentioned and a piston in said second cylinder.

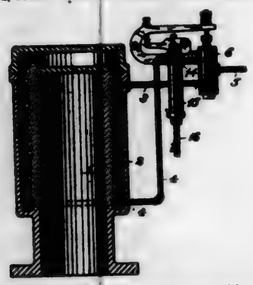
710,884. COW-MILKER. PERRY A. WEST, Browning, Wis. Filed Oct. 17, 1901. Serial No. 79,006. (No model.)



Claim.—1. A cow-milker, comprising a milk-receptacle having a suitable top or lid, spring retaining-clamps for said lid, a pump-stand mounted upon the said top or lid comprising two substantially L-shaped sides and a connecting bar or top, substantially semicircular cut-out portions in the sides of said pump-stand, an opening in the top of the stand which extends its whole length and communicates with the cut-out portions in the sides, a pump adapted to lie in said stand, and an arched bent mounted on either side of the cut-out portion in the top of the stand to secure the pump in position.

2. A teat-clamp comprising a body portion bent to cylindrical contour and having one of its edges formed with openings, arms on the opposite edge adapted to be inserted through the said openings and then bent upon themselves whereby the clamp is secured on the end of a tube, upwardly-extending spring-arms formed integral with the said body portion to embrace a teat, and a central tube with which the foregoing devices engage.

710,885. GAS-ENGINE. GEORGE WESTINGHOUSE, Pittsburg, Pa. Filed Jan. 31, 1896. Serial No. 577,550. (No model.)



Claim.—1. In a gas-engine, the combination with a cylinder having a cooling-jacket provided with an inlet-port at one end and an outlet-port at the other end, of a cooling-fluid-inlet pipe provided with a controlling-valve, a cooling-fluid-outlet pipe containing a thermostatic device and a pair of counting levers interposed between the thermostatic device and the inlet-controlling valve, whereby the inflow of the cooling fluid is controlled by the temperature of the fluid as it is discharged from the jacket.

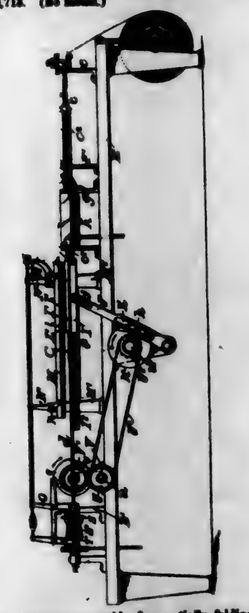
2. The combination with a gas-engine cylinder provided with a cooling-jacket, of a cooling-fluid-inlet pipe provided with a differential valve a cooling-fluid-outlet pipe containing a thermostatic device and valve-adjusting levers interposed between the thermostatic device and the inlet-controlling valve, whereby the inflow of the cooling fluid is controlled by the temperature of the cooling fluid as it is discharged from the jacket.

3. The combination with a gas-engine cylinder having a cooling-jacket, of a cooling-fluid-inlet pipe, a differential controlling-valve therein, a spring acting in conjunction with the fluid-pressure to open the valve, a cooling-fluid-outlet pipe, a thermostatic device therein and valve-adjusting connections between said device and the controlling-valve, whereby the inflow of cooling fluid is controlled by the temperature of the cooling fluid as it is discharged from the jacket.

4. The combination with a gas-engine cylinder having a cooling-jacket, of a cooling-fluid-inlet passage, a differential controlling-valve therein, two springs acting upon said valve, one in conjunction with and the other in opposition to the pressure of the cooling fluid, a cooling-fluid-outlet passage, a thermostatic device in said passage and valve-adjusting connections between said device and the controlling-valve.

5. In a gas-engine, the combination with a cylinder having a cooling-jacket, of a cooling-fluid-inlet passage provided with a valve, a cooling-fluid-outlet passage provided with a thermostatic device and a pair of reversely-pivoted levers interposed between the thermostatic device and the inlet-valve, substantially as set forth.

710,886. MACHINE FOR MAKING PAPER TUBES. JOHN H. WHITE and EDWARD L. WHITE, Englewood, N. J. Filed Oct. 23, 1901. Serial No. 79,713. (No model.)



Claim.—1. A former or guide for partially folding a paper strip comprising a support, a block capable of having thereon, having a folding-guide thereon, and an axial perforation therethrough, a mandrel reciprocating through said perforation, and devices for adjusting the block around the mandrel in its support.

2. The combination, substantially as hereinbefore set forth, of a folding-guide, a reciprocating mandrel adapted to carry a partially-folded paper strip therethrough, and a supporting-bar on which the mandrel traverses.

3. The combination, substantially as hereinbefore set forth, of a reciprocating mandrel and a paper-strip guide attached directly thereto.

4. The combination, substantially as hereinbefore set forth, of a fixed folding-guide, a reciprocating mandrel adapted to carry a partially-folded paper strip therethrough, and a paper-strip guide carried by the mandrel.

5. The combination, substantially as hereinbefore set forth, of a supporting-rod, a mandrel reciprocating thereon, a paper-strip guide carried by the mandrel, and a folding-guide traversed by the mandrel.

6. The combination, substantially as hereinbefore set forth of a reciprocating mandrel, a guide attached directly thereto, a fixed former or partial-folding guide and a finishing-folding guide, through which the mandrel carries the paper strip.

7. The combination, substantially as hereinbefore set forth, of a reciprocating mandrel, a paper-strip guide attached directly thereto and two folding-guides through which the mandrel carries the paper strip to complete the formation of the tube.

8. The combination, substantially as hereinbefore set forth, of pasting mechanism, a supporting-rod, a mandrel reciprocating thereon, and a folding-guide through which the pasted strip is carried by the mandrel.

9. The combination, substantially as hereinbefore set forth, of folding-guides, a mandrel, a heater encircling the mandrel and which softens the paper and sets it in permanent form after the guides have formed it into a tube, a supporting-rod passing through the guides, mandrel and heater and on which the mandrel slides and means for drawing the mandrel and paper simultaneously and coincidentally through the heater.

10. The combination, substantially as hereinbefore set forth, of a supporting-rod, a mandrel reciprocating thereon, and reciprocating feed-clamps which carry forward the paper tube and mandrel on the rod.

11. The combination, substantially as set forth of a reciprocating mandrel, fixed folding-guides which complete the formation of the tube, and reciprocating feed-clamps separate from the folding-guides, which clamps carry forward the finished tube and mandrel.

12. The combination, substantially as hereinbefore set forth, of a supporting-rod, a mandrel reciprocating thereon, folding-guides, and feed-clamps which carry forward the paper tube on the mandrel.

13. The combination, substantially as hereinbefore set forth, of pasting mechanism, a reciprocating mandrel, folding-guides, and feed-clamps separate from the folding-guides, which clamps carry forward the pasted tube on the mandrel.

14. The combination, substantially as hereinbefore set forth, of pasting mechanism, a supporting-rod, a mandrel reciprocating thereon, folding-guides, and reciprocating feed-clamps which carry forward the pasted tube on the mandrel.

15. Feed-clamps, substantially such as hereinbefore set forth, comprising a lower member reciprocating in a fixed path, an upper member reciprocating therewith and movable laterally relatively thereto, a laterally-movable pressure-bar connected with the upper member, and means for raising and lowering the pressure-bar and upper member positively to open and close the clamp.

16. The combination, substantially as hereinbefore set forth, of the upper member of the feed-clamp, a longitudinally-grooved pressure-bar, lugs connected with the upper member traversing these grooves, rocking levers carrying the pressure-bar, a link-rod connecting these levers with actuating mechanism which releases the clamp, a spring which normally closes the clamp, and an adjusting-stop regulating the pressure of the clamp.

17. The combination, substantially as hereinbefore set forth, of the lower feed-clamp reciprocating in a fixed path, the upper clamp reciprocating therewith and movable laterally relatively thereto, a supporting-rod, and a mandrel movable thereon by the clamps and carrying the finished tube.

18. The combination, substantially as hereinbefore set forth, of a supporting-rod, a reciprocating mandrel, means for forming a paper tube around the mandrel, and a cutter revolving around the supporting-rod and adapted to sever the tube delivered thereto by the mandrel.

19. The combination, substantially as hereinbefore set forth, of a supporting-rod over which the finished paper tube passes, a cutter revolving around the rod, means for approximating the cutter and rod to sever the tube between them, and devices for adjusting the position of the cutter relatively to the axis of the supporting-rod, so that the tube may be severed without cutting into the rod.

20. The combination, substantially as hereinbefore set forth, of a reciprocating mandrel, its supporting-rod having an enlarged rear portion, means for forming a tube around the mandrel, devices feeding the mandrel and tube to the enlarged portion of the supporting-rod, and a cutter severing the tube into proper lengths.

710,887. SPIRAL CONVEYER. CASEY S. WILLIAMS, Dalton, Iowa. Filed Mar. 26, 1902. Serial No. 100,048. (No model.)

Claim.—1. A spiral conveyer, having a blade-shaft made in sections, the ends of adjacent sections having projecting tongues made U shape in cross-section, a coupling-plug having a middle journal portion and projecting ends made square in cross-section for engaging the said tongues, and clips for clipping the said tongues and the ends of the plug together, as set forth.

2. A spiral conveyer, having a blade-shaft made in sections, the ends of adjacent sections having projecting tongues made U shape in cross-section, a coupling-plug having a middle journal portion and projecting ends made square in cross-section for engaging the said tongues, and clips for clipping the said tongues and the ends of the plug together, the clips engaging registering recesses in the said tongues and ends of the coupling member, to hold the said plug and tongues from longitudinal movement one on the other, as set forth.

3. A spiral conveyer having a blade-shaft made in tubular sections, the ends of adjacent sections having projecting portions U-shaped in cross-section, a coupling-plug having a journaled portion, and projecting ends engaging said U-shaped portions of the shaft-sections, the ends of the coupling-plug being provided with transverse recesses registering with recesses in the side members of the U-shaped portions of the shaft-sections, and clips engaging said registering recesses, as set forth.

710,888. SPIRIT-LEVEL AND PLUMB. SEVERS WIEBERG, Galesburg, Ill. Filed Mar. 27, 1902. Serial No. 100,349. (No model.)

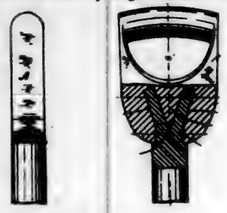
Claim.—1. In a spirit-level, and in combination, a stock, a cylinder containing a level-tube, an adjustable plate in which one end of said cylinder is journaled, the other end of which cylinder is journaled in a bearing in a frame, and an adjusting-screw for raising and lowering said plate and thereby one end of the level-tube, substantially as described and shown.

2. In a spirit-level, and in combination, a cylinder containing a level-tube, an adjustable plate in which one end of said cylinder is journaled, the other end of which cylinder is journaled in a bearing in a frame inclosing said parts, and said frame inclosed in a level-stock, and means for raising and lowering said plate and thereby the adjacent end of the cylinder, substantially as shown and described.

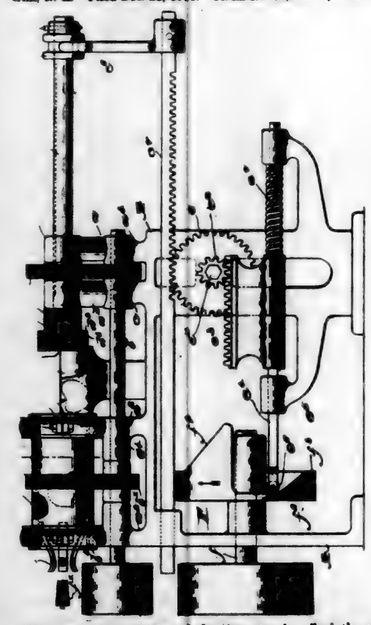
3. In combination in a spirit-level, the level-stock A, the frame B, the cylinder K, the sliding adjustable plate C and the screw E, all substantially as shown and for the purpose described.

710,889. D-HANDLE. THOMAS W. WEBSTER, Anderson, Ind. Filed Nov. 11, 1901. Serial No. 81,893. (No model.)

Claim.—A D-handle formed in two pieces, the D proper being provided in its lower portion with a longitudinal opening and two smaller openings extending inwardly from the longitudinal opening, the smaller openings being inclined and extending at opposite angles from the longitudinal opening, and a stem provided with a reduced portion forming a tenon adjacent to its upper end and of a size to snugly fit the longitudinal opening when inserted therein, the tenon forming a shoulder on the stem, the lower edge of the D surrounding the tenon, and the shoulder bearing against the bottom of the D and two further-reduced portions forming dowels extending from the tenon forming the upper end of the stem, each dowel having a smaller diameter than the tenon and being of a size to snugly fit the inclined openings when inserted therein.



710,890. PEELING APPARATUS FOR FRUIT-PARERS. LUCIUS I. YEOMANS, Walworth, New York, assignor to Goodell Company, Antrim, N. H. Filed Dec. 28, 1901. Serial No. 87,529. (No model.)



Claim.—1. In a machine of the character described, the combination of devices for holding the fruit in position to be pared, means for whirling the fruit, and means for causing the fruit to be engaged with the holding devices.

2. In a machine of the character described, the combination of devices for holding fruit in position to be pared, a rotatable body to contact with and whirl the fruit to cause the greatest diameter of the fruit to assume a position substantially perpendicular to the axis of rotation of said rotatable body, and means for urging the fruit into engagement with the holding devices.

3. In a machine of the character described, the combination of a fork for holding the fruit in position to be pared, means for whirling the fruit, and means for forcing the whirling fruit upon the said holding devices.

4. In a machine of the character described, the combination of devices, for holding fruit in position to be pared, means for whirling the fruit to cause the greatest diameter of the fruit to assume a position substantially perpendicular to the axis of the said means, yielding fingers, and means to urge the fruit between said fingers and onto the holding devices.

5. An apparatus for feeding fruit to a paring-machine, comprising a cylinder, means to rotate it, a pusher, means to slide and rotate the same, and a receptacle for the fruit to be transferred by said pusher into said cylinder.

6. In an apparatus of the class described, a cylinder, a yielding pusher, means to rotate said cylinder and pusher and to slide the pusher that it, while in rotation, may push the fruit within said cylinder to be whirled thereby.

7. In an apparatus of the class described, a cylinder, a yielding pusher, means to rotate said cylinder and pusher and to slide the pusher that it, while in rotation, may push the fruit within said cylinder to be whirled thereby, and yielding fingers rotatable with said cylinder to receive the fruit as it leaves the cylinder.

8. The combination of a hollow cylinder, means to push fruit into said cylinder, and means for imparting rotation to the cylinder to cause the fruit contained therein to rotate and position the core thereof substantially parallel with the longitudinal axis of the cylinder.

9. The combination of a hollow cylinder, a yielding pusher for pushing fruit into said cylinder and means for imparting rotation to said cylinder to cause the fruit therein to rotate and be positioned with the core thereof substantially parallel with the longitudinal axis of the cylinder.

10. The combination of a hollow cylinder having a lining of yielding material, means to push fruit into said cylinder, and means for imparting rotation to the cylinder to cause the fruit contained therein to rotate and position the core thereof substantially parallel with the longitudinal axis of the cylinder.

11. In a machine of the character described, the combination of a cylinder having yielding fingers at one end, means to push fruit into the opposite end of said cylinder, and means for imparting rotation to said cylinder that the latter may whirl the fruit contained therein and cause the core thereof to assume a position substantially parallel with the longitudinal axis of the cylinder.

710,891. MOLD FOR FORMING CONCRETE TROUGHS OR OTHER ARTICLES. ISAAC HAWS, Hannibal, N. Y. Filed Sept. 12, 1901. Serial No. 75,231. (No model.)

Claim.—As a new article of manufacture, a mold for forming concrete troughs or bins consisting of an outer case having a bottom with sides and ends hinged thereto to open outward, and an inner case having a bottom with sides hinged thereto to open inward, detached extensions to the bottom covering the thickness of the sides, and ends that may be slid out vertically, substantially as and for the purpose set forth.

710,892. BOX-COVER FASTENER. WILLIAM J. FITZGERALD and MOSES RIES, Milwaukee, Wis. Filed Mar. 31, 1902. Serial No. 100,694. (No model.)

Claim.—1. In a box-cover fastener, the combination with a box provided with the usual side pieces and a cover therefor, the latter provided with depending flexible side pieces or flanges adapted to fit the upper portion of the side pieces of the box, and one of the side pieces of one of said parts provided with a slot, of a fastening device consisting of a main member provided with means for securing it to one of the side pieces of one of said parts, and having a member projecting at an angle therefrom and bent into a single loop, the portion of the loop nearest the main member being narrowed to form a contracted neck, and said loop being gradually widened toward and to its free end to form an enlarged extremity, the loop adapted to be forced through and into engagement with the slot of the other part when pressure is exerted on the side piece to which the fastening device is connected, the said loop when so engaged having its narrow neck portion fitting in the slot and its widened or enlarged extremity extending beyond the slot, whereby the two parts are releasably locked together, the enlarged extremity of the loop preventing accidental disengagement of said parts.

2. In a box-cover fastener, the combination with a box provided with the usual side pieces and a cover therefor, the latter provided with depending flexible side pieces or flanges adapted to fit the upper portion of the side pieces of the box, and one of the side pieces of one of said parts provided with a slot, of a fastening device having means for securing it to one of the side pieces of one of said parts, and having one end bent around and thence upwardly for a short distance to form a recess in which the edge of the side piece to which the fastening device is secured is received and clamped, the said fastening device being thence bent from the upwardly-extending portion at an angle and into a single loop.

3. In a box-cover fastener, the combination with a box provided with the usual side pieces and a cover therefor, the latter provided with depending flexible side pieces or flanges adapted to fit the upper portion of the side pieces of the box, and one of the side pieces of one of said parts provided with a slot, of a fastening device having means for securing it to one of the side pieces of one of said parts, and having one end bent around and thence upwardly for a short distance to form a recess in which the edge of the side piece to which the fastening device is secured is received and clamped, the said fastening device being thence bent from the upwardly-extending portion at an angle and into a single loop, the portion of the loop nearest the main member being narrowed to form a contracted neck, and said loop being gradually widened toward and to its free end to form an enlarged extremity, the loop adapted to be forced through and into engagement with the slot of the other part when pressure is exerted on the side piece to which the fastening device is connected, the said loop when so engaged having its inner neck portion fitting in the slot and its widened or enlarged extremity extending beyond the slot, whereby the two parts are releasably locked together, the enlarged extremity of the loop preventing accidental disengagement of said parts.

5. A box-cover fastener, consisting of a main member provided with means for securing it to the part to which it is to be attached, and having a member projecting at an angle therefrom and bent into a single loop, the portion of the loop nearest the main member being narrowed to form a contracted neck, and said loop being gradually widened toward and to its free end to form an enlarged extremity.

6. A box-cover fastener consisting of a main member provided with means for securing it to the part to which it is to be attached, and having one end bent around and thence upwardly for a short distance to form a recess in which the edge of the part to which the fastening device is attached is received and clamped, the said fastening device being thence bent from the upwardly-extending portion at an angle and into a single loop.

7. A box-cover fastener, consisting of a main member provided at one end with a projecting prong, and having its opposite end bent around and thence upwardly for a short distance to form a recess, the said fastening device being thence bent from the upwardly-extending portion at an angle and into a single loop.

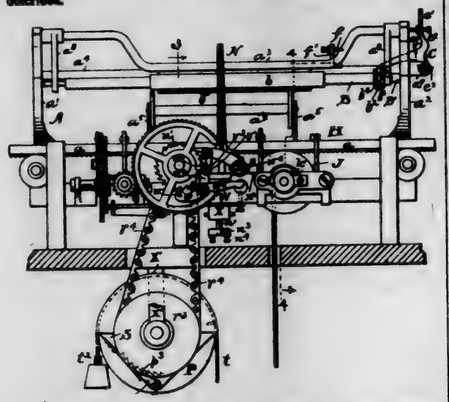
8. A box-cover fastener consisting of a main member provided at one end with a projecting prong, and having its opposite end bent around and thence upwardly for a short distance to form a recess, the said fastening device being thence bent from the upwardly-extending portion at an angle and into a single loop, the portion of the loop nearest the main member being narrowed to form a contracted neck, and said loop being gradually widened toward and to its free end to form an enlarged extremity.

710,893. CARRIAGE MECHANISM FOR TYPE-WRITERS. CHARLES SEARS, Cleveland, Ohio. Filed Sept. 20, 1898. Serial No. 731,051. (No model.)

Claim.—1. In a type-writing machine, in combination, a movable carriage, a rack thereon, a spring-drum having teeth meshed with said rack, a fixed frame, a rotatable shaft mounted therein and passing axially through said drum, a spring having its ends fixed to said drum and shaft, means for locking said shaft against rotation by said spring, and a treadle adapted to rotate said drum, substantially as described.

2. In a type-writing machine, in combination, a movable carriage having a rack, a spring-drum having teeth meshing in said rack, a frame, a shaft rotatably mounted through said drum and frame, a ratchet-wheel rigid with said shaft, a pawl, pivoted to said frame cooperating with said ratchet, a treadle and a strap adapted to rotate said drum, said shaft be-

ing adapted to receive a key for winding up said spring, substantially as described.



3. In a type-writing machine, the combination of a transversely-movable carriage, feed-rolls mounted thereon, a ratchet secured to said feed-rolls, and a pawl-plate loosely mounted on the same axis and having a notch in its edge, a pawl on said plate engaging with the ratchet, with a lever pivoted to the carriage having on one arm a finger which enters said notch, a set-screw in another arm and adapted to engage with one part of the carriage, a spring to move the lever in one direction to cause such engagement with the carriage, and an adjustable stop on the frame of the machine for engagement with the lever when the carriage is returned to its starting-point, substantially as specified.

4. In a type-writing machine, the combination of a transversely-movable carriage, feed-rolls mounted thereon, a ratchet secured to one of the feed-rolls, a pawl-plate pivoted to the carriage on the same axis with respect to said feed-roll, a pawl on said plate, said plate having a notch in its edge with a lever pivoted to the carriage on an axis substantially at right angles to the axis of the feed-rolls, said lever having at one end an arm which engages with said notch, a set-screw passing through another arm of said lever and adapted to engage with a part of the carriage, a spring for rocking the lever to cause such engagement, a set-screw adjustable on the machine-frame and adapted to engage with said lever when the carriage is returned to its starting-point, and a stop with which said carriage engages to determine its starting-point, substantially as specified.

5. In a type-writing machine, the combination of an impression-hammer, and a spring for moving it forward, with a spring of greater force, connections between the said stronger spring and hammer whereby the latter is retracted, means for disconnecting said stronger spring and hammer, and means adapted to put said stronger spring under tension, substantially as described.

6. In a type-writing machine, the combination of the impression-hammer, a spring for moving it in the impression direction, a shaft having a sprocket-wheel, and mechanism operated by said shaft for drawing the hammer backward, means for releasing the connections between said hammer and the shaft whereby the hammer may be moved by its spring, with a rotatable shaft, a spring connected thereto, a sprocket-wheel secured thereon, and a sprocket-chain connecting the two sprocket-wheels, substantially as specified.

7. In a type-writing machine, the combination of a pivoted impression-hammer, and a spring for moving it in the impression direction, with a rotatable shaft, a ratchet, and a sprocket-wheel also secured thereto, a frame mounted concentrically with said shaft, connections between the frame and hammer, a pawl mounted on the frame and engaging with the ratchet, mechanism for releasing the pawl from engagement with the ratchet and for preventing the ratchet from turning, a spring-actuated shaft, a sprocket-wheel secured thereto, a sprocket-chain passing over the two sprocket-wheels referred to, and means for winding up said spring-motor, substantially as specified.

8. In a type-writing machine, the combination of the impression-hammer, a spring for moving it in the impression direction, a shaft having a sprocket-wheel, and mechanism operated by said shaft for drawing said hammer backward, means for releasing the connections between said hammer and shaft whereby the hammer may be moved by its spring, with a rotatable shaft, a sprocket-wheel secured thereon, and a sprocket-chain connecting the two sprocket-wheels, a spring-barrel loosely mounted on said shaft, two ratchet-wheels secured thereon, a pawl pivoted to the fixed support, and engaging with one ratchet-wheel, a plate mounted axially with respect to the spring-barrel, a pawl pivoted thereto engaging with the other ratchet-wheel, and a strap secured to and passing around said segment, a lever to which one end of said strap is fastened, and a weight fastened to the other end of said strap, substantially as specified.

9. In a type-writing machine, in combination, a carriage having a rack, a pinion engaging said rack, a spring impelling said pinion to feed said carriage, a foot-lever, and means connecting it with said pinion to wind said spring and return said carriage simultaneously, substantially as described.

710,894. STOVE-TRUCK. JAMES H. SMITH, Big Rapids, Mich. Filed Jan. 2, 1902. Serial No. 88,349. (No model.)

Claim.—1. In combination with the side bars of a stove-truck, supporting-plates secured thereon, axle-arms pivoted thereto, longitudinally-adjustable axletree-bearings secured to said arms, an axle and wheels supported in said bearings, and a connecting-rod and lever connected therewith, substantially as and for the purpose set forth.

2. In combination with a truck-frame, plates secured to the ends thereof, axle-arms pivoted thereto and having offsets to form auxiliary bearings therewith, longitudinally-adjustable axle-bearings bolted thereto, an axle and wheels, a lever pivoted to the truck-frame, a connecting-rod connecting the lever with the axle, with a frame pivoted to the back of said truck-frame, centers on said frame, and an adjustable elbowed link-brace pivoted to said frame and the truck-frame, substantially as and for the purpose set forth.

3. In combination with a truck-frame, supporting-plates secured thereto, projections from the side of said plates for supporting the axle-tree-arms, when extended, a pivotal center and convex auxiliary bearings thereon, an axle-arm pivoted thereto and provided with a concave bearing-surface corresponding with the convex surface on the plates, and a longitudinally-adjustable axle-bearing bolted thereto, together with an axle, wheels, connecting-rod and lever for manipulating the same, substantially as specified.

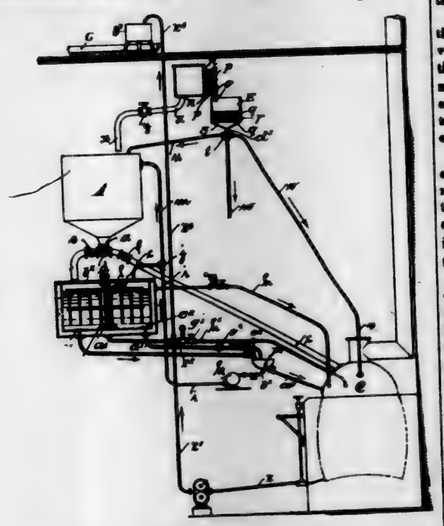
710,895. COLTER. STEPHEN A. INGERSOLL, Sandoval, Ill. Filed June 26, 1901. Serial No. 66,176. (No model.)

Claim.—1. In a colter, a standard; a fork extending downwardly from the standard; and a bolt mounted in the lower ends of said fork, a bearing-disk mounted on each end of the bolt; a sleeve integral with one of said disks; a tubular bushing mounted on said sleeve; a nut secured upon the said bushing, which nut fits into an aperture in the colter-disk; and a flanged disk mounted upon the square nut on each side of the colter-disk, substantially as specified.

2. In a colter, a standard; a fork extending downwardly from the standard; a cutting-disk carried by said fork; a clamp comprising an apertured ring; a beveled base portion fitting in said ring, an apertured clamping-jaw for receiving the standard; integral with said base portion; a key for locking the said standard in position and for holding the base portion rigidly in the ring, substantially as specified.

710,896. APPARATUS FOR CONTINUOUS BEER PRODUCTION. CORNELIUS SCHEIER, Gothenburg, Germany. Filed Apr. 24, 1901. Serial No. 57,212. (No model.)

Claim.—The combination, in an apparatus for making beer, of a mash-tun, a drainage-vat located on a lower level than the same, valved discharge-pipes connecting the mash-tun and drainage-vat, a brewing-copper located on a lower level than the drainage-vat, a valved discharge-pipe connecting the mash-tun and brewing-copper, an open cooler located on a level between the drainage-vat and brewing-copper, inclined valved discharge-pipes connecting the drainage-vat with the cooler, an inclined valved discharge-pipe connecting said open cooler with the brewing-copper, a pump, valved pipes connecting the pump with the cooler and with the mash-tun and drainage-vat, two connected infusion-vat vessels, a valved discharge-pipe connecting one of said vessels with the mash-tun, a discharge-pipe connecting the other of said vessels with the brewing-copper, and a discharge-pipe connecting said second vessel with the mash-tun, substantially as set forth.



710,897. FLUID-OPERATED SIGNAL. CHESTER I. HALL and JAMES HALSTEAD, El Paso, Tex. Filed July 26, 1901. Serial No. 70,153. (No model.)

Claim.—1. In a fluid-operated signal, the combination with a conveyer for the fluid, having an exhaust, of means for opening and closing the exhaust, a fluid-operated receiving-indicator connected with the conveyer, means for supplying the fluid to the conveyer, and a fluid-operated transmitting-indicator connected with the conveyer and located contiguous to the fluid-supplying means.

2. In a fluid-operated signal, the combination with a conveyer for the fluid having an exhaust, of a fluid-operated receiving-indicator connected with the conveyer, a fluid-reservoir having communication with the conveyer, a valve for simultaneously controlling said communication and the exhaust, operating means for the valve, and a fluid-operated transmitting-indicator connected with the conveyer and located contiguous to the valve-operating mechanism.

3. In a fluid-operated signal, the combination with a conveyer for the fluid, of a fluid-operating receiving-indicator connected with the conveyer, a fluid-reservoir having a supply passage-way communicating with the conveyer, said conveyer being provided with an exhaust passage-way, mechanism for alternately opening and closing the supply and exhaust, operating means for the controlling mechanism, and a fluid-operating transmitting-indicator connected with the conveyer and located contiguous to the valve-operating mechanism.

4. In a fluid-operated signal, the combination with a conveyer-tube, of a fluid-operated receiving-indicator connected with the tube, a fluid-reservoir, a valve-casing, supply-tubes extending from the reservoir and the conveyer-tube to the casing, said conveyer-tube being provided with an exhaust that communicates with the casing, and a rotary valve located in the casing for controlling the exhaust and the inlet to the conveyer-tube.

5. In a fluid-operated signal, the combination with a conveyer-tube, of a fluid-operated receiving-indicator connected with the tube, a fluid-reservoir, a valve-casing, supply-tubes extending from the reservoir and the conveyer-tube to the casing, said conveyer-tube being provided with an exhaust that communicates with the casing, a valve located in the casing and controlling the exhaust and the supply pipe from the reservoir, an operating-handle for the valve, and a fluid-operated transmitting-indicator having communication with the conveyer-tube and located adjacent to the handle.

6. In a fluid-operated signal, the combination with a conveyer for the fluid, of means for supplying fluid to the conveyer, a fluid-operated receiving-indicator connected to the conveyer, and a fluid-operated alarm also connected to the conveyer, said indicator and alarm being operable simultaneously by the introduction of fluid to the conveyer.

7. In a fluid-operated signal, the combination with a conveyer for the fluid, of means for supplying fluid to the conveyer, a fluid-operated receiving-indicator connected to the conveyer, and a fluid-operated alarm also connected to the conveyer independently of the indicator, whereby said indicator and alarm can be operated simultaneously by the introduction of fluid to the conveyer.

8. In a fluid-operated signal, the combination with a conveyer for the fluid, of means for supplying fluid to the conveyer, a fluid-operated receiving-indicator connected to the conveyer, a fluid-operated alarm also connected to the conveyer independently of the indicator, whereby said indicator and alarm are operable simultaneously upon the introduction of fluid to the conveyer, and means for controlling the supply of fluid to the conveyer.

9. In a fluid-operated signal, the combination with a conveyer-tube having an exhaust, of a plurality of fluid-operated indicators, each indicator comprising a plunger-barrel connected with the conveyer-tube, a plunger slidably mounted in the tube and freely movable toward the ends thereof, a dial, and a pointer arranged upon the dial and freely rotatable thereon in either direction, a connection between the pointer and the plunger to rotate the pointer in either direction upon the movement of the plunger one way or the other, separate fluid-reservoirs, each having a communication with the conveyer-tube, independent valves controlling the several communications, and operating devices for said valves, said devices being located adjacent to the indicators.

10. In a fluid-operated signal, the combination with a conveyer for the fluid, of means for supplying fluid to the conveyer, a plunger-barrel connected to the conveyer, a plunger slidably mounted in the barrel and freely movable toward either end thereof, a dial, a rotary pointer mounted on the dial and freely movable in either direction and a connection between the plunger and pointer, whereby they will move simultaneously in either direction.

11. In a fluid-operated signal, the combination with a conveyer for the fluid, of means for supplying fluid to the conveyer, a plunger-barrel connected to the conveyer, a plunger slidably mounted in the barrel and provided with a stem having a rack, a dial, a rotary pointer mounted on the dial and having a pinion engaging the rack of the plunger, and a coiled return-spring engaging the pointer.

12. In a fluid-operated signal, the combination with a conveyer for the fluid, of means for supplying fluid to the conveyer, a plunger-barrel having communication with the conveyer, a valve controlling the communication between the barrel and the conveyer, a plunger slidably mounted in the barrel, a dial, and a rotary pointer mounted on the dial and having a connection with the plunger, said dial and plunger being freely and simultaneously movable in either direction.

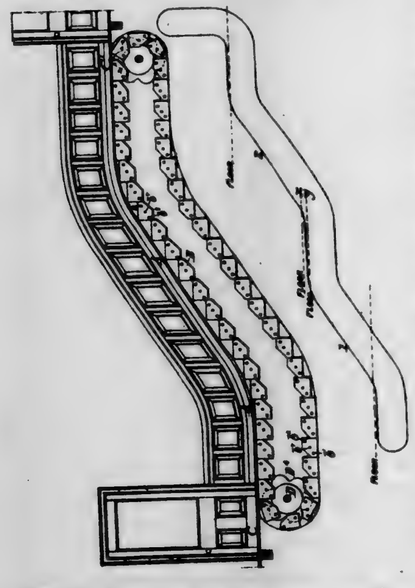
13. In apparatus of the class described, the combination with a conveyer, of a fluid-operated indicator connected with the conveyer, a fluid

reservoir, a pipe leading from the reservoir and having a valve-casing secured thereto, said casing being connected with the conveyor and having an oil-aperture in one end, a valve rotatably mounted within the casing and having an oil-groove in one face that alines with the oil-aperture of the casing when the valve is moved to a predetermined position, said valve being also provided with an opening extending through the same, one end of the opening being arranged to aline with the aperture in the valve-casing upon the movement of the valve to a certain position, said casing being provided with oil-conducting grooves that aline with the opening in the valve.

14. In a fluid-operated signal, the combination with a conveyor for the fluid, of means for supplying fluid to the conveyor, a plunger-barrel connected to the conveyor, a plunger slidably mounted in the barrel and provided with a stem having a rack, a dial, a rotary pointer mounted on the dial and having a pinion engaging the rack of the plunger, and automatic means for returning the pointer after its movement by the plunger.

REISSUES.

12,086. MOVING STAIRWAY. JAMES M. DODGE, Philadelphia, Pa., assignor to the Stair Lift Company, Camden, N. J., and Philadelphia, Pa. Filed July 24, 1902. Serial No. 116,836. Original No. 500,772, dated Feb. 6, 1894.



Claim.—1. In a moving stairway, step-sections free to slide upon each other, substantially as described.

2. The combination in a stairway, of a series of moving step-sections abutting one against another throughout the length of the stairway, guides for the sections, and means for moving the sections, substantially as described.

3. The combination in a stairway, of a series of moving step-sections abutting one against another and fitting against the side walls of a guideway, guides for the sections, and means for pushing the sections, substantially as described.

4. The combination in a stairway, of a series of independent moving steps, guides for the said steps, and means for pushing the series of steps from a fixed point, substantially as described.

5. The combination in a moving stairway, of moving step-sections, guideways at each side of the stairway, wheels on the step-sections adapted to travel on said guideways, and mechanism situated at one end of the stairway and operating to push the step-sections, substantially as described.

6. The combination in a moving stairway, of independent step-sections, two guideways therefor, and projections on each step-section, one adapted to one guideway and the other adapted to the other guideway, said guideways being so arranged in respect to each other and of such a curve that the step-sections will gradually increase in height as they move away from one platform and will gradually diminish in height as they approach the other platform, substantially as described.

7. The combination in a moving stairway, of sections independently movable to form steps or platforms, guides therefor, each step-section having projections adapted to the guides, a driving-shaft, and wheels on the driving-shaft adapted to engage the step-sections, substantially as described.

8. The combination in a stairway, of moving step-sections, with a platform situated on a level slightly below the tread of the step-sections at delivery-point, substantially as set forth.

9. The combination in a stairway, of moving step-sections, a platform situated on a level slightly above the tread of the step-sections at receiving-point, and a platform situated on a level slightly below the tread of the step-sections at the delivery-point, substantially as described.

10. The combination in a moving stairway, of traveling step-sections, and a floor or platform at the delivery end thereof, the travel of the step-sections being continued above said floor or platform so as to form an abutment, substantially as described.

11. The combination in a moving stairway, of traveling step-sections, with guides for said sections, guides extending upward beyond a floor or platform at the delivery end of said stairway, so that the step-sections will be carried to a point above said platform and act as an abutment, substantially as described.

12. The combination in a moving stairway, of a floor or platform at each end of the stairway, independent step-sections, means for moving the said sections, and guides for the said sections, said guides being so formed that the steps will gradually increase in height as they move away from one platform and will gradually decrease in height as they approach the other platform, the platform at the receiving end being above the level of the step-sections and the platform at the delivery end being below the level of the step-sections, and the guides for the step-sections extending considerably above the platform at the delivery end so that the step-sections will pass upward and form an abutment, all substantially as described.

13. In a moving stairway, the combination of separate step-sections, guides therefor, and means for pushing the step-sections forward, substantially as described.

14. In a moving stairway, the combination of a series of disconnected step-sections, and guides therefor, with means for engaging and moving said step-sections successively and thereby imparting motion to the series, substantially as described.

15. The combination in a moving stairway, of step-sections free to slide upon each other, guides therefor, the guides at one end being adjustable for the purpose of taking up lost motion, substantially as described.

16. A moving platform or stairway consisting of sections, inclined guides therefor, and means for positively moving the sections forwardly along the inclined guides at a given speed by causing them to push one upon another.

17. A moving carrier guided so as to form a platform, the direction of travel of the said carrier being abruptly changed at said platform so as to serve as an abutment, substantially as described.

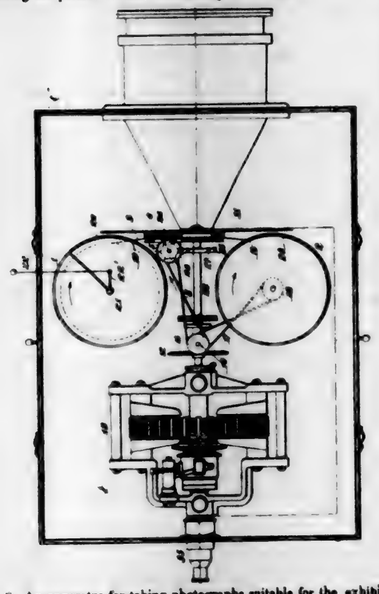
18. A moving carrier guided so as to form a platform, the direction of travel of said carrier being abruptly changed at said platform so as to serve as an abutment above the platform, in combination with one or more fixed platforms adjoining that of the moving carrier, substantially as described.

19. A moving carrier consisting of a series of sections guided so as to form a platform, the direction of travel of the said sections being abruptly changed at said platform so as to form an abutment, substantially as described.

12,087. KINETOSCOPE. THOMAS A. EDISON, Llewellyn Park, N. J. Filed June 10, 1902. Serial No. 110,967. Original No. 589,168, dated Aug. 31, 1897. (Division A.)

Claim.—1. An apparatus for taking photographs suitable for the exhibition of objects in motion, having in combination a camera having a single stationary lens; a single sensitized tape-film supported on opposite sides of, and longitudinally movable with respect to, the lens, and having an intermediate section crossing the lens; feeding devices engaging such intermediate section of the film and moving the same across the lens of the camera at a high rate of speed and with an intermittent motion; and a shutter exposing successive portions of the film during the periods of rest, substantially as set forth.

2. An apparatus for taking photographs suitable for the exhibition of objects in motion, having in combination a camera having a single stationary lens; a single sensitized tape-film supported on opposite sides of, and longitudinally movable with respect to, the lens, and having an intermediate section crossing the lens; a continuously-rotating driving-shaft; feeding devices operated by said shaft engaging such intermediate section of the film and moving the same across the lens of the camera at a high rate of speed and with an intermittent motion; and a continuously-rotating shutter operated by said shaft for exposing successive portions of the film during the periods of rest, substantially as set forth.



3. An apparatus for taking photographs suitable for the exhibition of objects in motion, having in combination a camera having a single stationary lens; a single sensitized tape-film supported on opposite sides of, and longitudinally movable with respect to, the lens, and having an intermediate section crossing the lens; a continuously-rotating driving-shaft; feeding devices operated by said shaft engaging such intermediate section of the film and moving the same across the lens of the camera at a high rate of speed and with an intermittent motion; a shutter exposing successive portions of the film during the periods of rest; and a reel revolved by said shaft with variable speed for winding the film thereon after exposure, substantially as set forth.

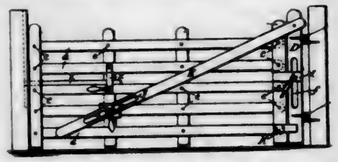
4. An apparatus for taking photographs suitable for the exhibition of objects in motion, having in combination a single camera, and means for passing a sensitized tape-film across the lens at a high rate of speed and with an intermittent motion, and for exposing successive portions of the film during the periods of rest, the periods of rest being greater than the periods of motion, substantially as set forth.

12,088. KINETOSCOPIC FILM. THOMAS A. EDISON, Llewellyn Park, N. J. Filed July 18, 1902. Serial No. 116,422. Original No. 589,168, dated Aug. 31, 1897. (Division B.)

Claim.—1. An unbroken transparent or translucent tape-like photographic film having thereon uniform sharply-defined photographs of successive positions of an object in motion as observed from a single point of view at rapidly-recurring intervals of time, such photographs being arranged in a continuous straight-line sequence, unlimited in number save by the length of the film, and sufficient in number to represent the movements of the object throughout an extended period of time, substantially as described.

2. An unbroken transparent or translucent tape-like photographic film provided with perforated edges and having thereon uniform sharply-defined photographs of successive positions of an object in motion as observed from a single point of view at rapidly-recurring intervals of time, such photographs being arranged in a continuous straight-line sequence, unlimited in number save by the length of the film, and sufficient in number to represent the movements of the object throughout an extended period of time, substantially as described.

12,039. GATE. ISRAEL L. LANDIS, Chicago, Ill. Filed June 23, 1902. Serial No. 112,944. Original No. 680,417, dated June 13, 1901.



Claim.—1. In a gate, the combination with the frame of a transversely-slotted subpost suitably hinged to the main supporting-post and carrying said frame, a pair of straps attached to the supporting-battens of said frame and projecting over and slidable against the lateral faces of said subpost, and a rod connecting said straps, extending through said slot and slidable therein, and provided with means for clamping said straps against said subpost.

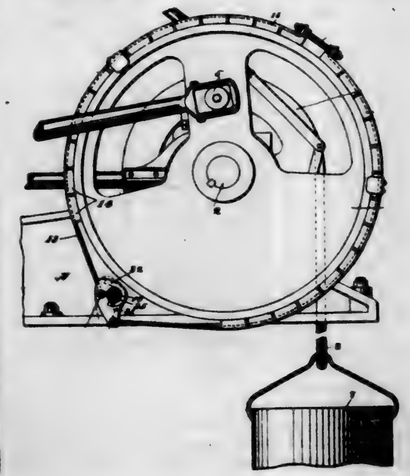
2. In a gate, the combination with an adjustable frame of a transversely-slotted subpost to carry said frame, a pair of guide and clamping plates attached to the supporting-battens of said frame and projecting over the lateral faces of said subpost, and a rod extending through said slot, connecting said plates and provided with means for clamping said plates against said subpost.

3. In a gate, the combination with a frame the members of which are pivotally connected with each other to permit of an oblique as well as a rectangular configuration of said frame, of a transversely-slotted subpost to carry said frame, a pair of straps attached to the supporting-battens of said frame and projecting over and slidable against the lateral faces of said subpost, and a rod extending through said slot, slidable therein and provided with means for clamping said straps against said subpost.

4. In a gate, the combination with a frame the members of which are pivotally connected with each other of a transversely-slotted subpost to carry said frame, clamping-plates attached to said frame and projecting over the lateral faces of said subpost, a rod extending through said slot, connecting said plates and provided with means for clamping said plates against said subpost, a diagonal brace pivotally attached at one end to the top of said subpost and slotted at its other end, and a guide-pin upon said frame extending through said slot and provided with means for clamping said brace and frame.

5. In a gate, the combination with the transversely-slotted subpost of the adjustable frame, clamping-plates attached to said frame and slidable against the lateral faces of said subpost, means operable through the slot to clamp said plates against the subpost, the diagonal bracing-arm pivotally attached to the top of said subpost, means for clamping said arm and frame to give rigidity to said frame, the sliding latch-bolt, and means for clamping said latch-bolt and frame.

12,040. AUTOMATIC BRAKE. ALBON E. NORRIS, Cambridge, Mass. Filed May 29, 1902. Serial No. 109,573. Original No. 638,185, dated Nov. 28, 1899.



Claim.—1. A brake mechanism comprising a wheel, a band-brake surrounding said wheel, an oscillatory actuator, the ends of the band-brake being connected to said actuator at points located at different distances from its axis of oscillation, and the actuator being operated through the brake-band on the reverse or backward rotation of said wheel, thereby to set the brake, and automatically-operative means acting against said actuator to maintain the said brake-band in contact with said wheel.

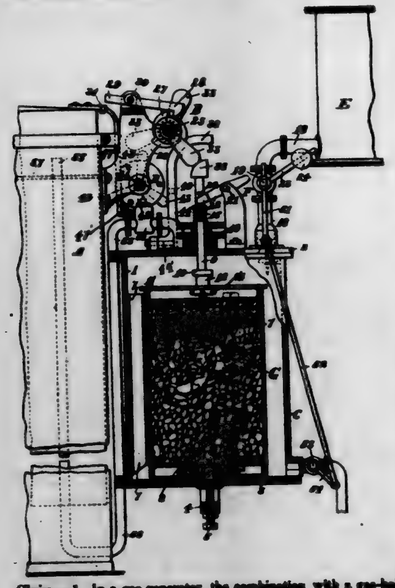
2. The combination with a motor-shaft of a motor-shaft-controlled brake, comprising a wheel rotatable by said shaft, a brake-band surrounding said wheel, an oscillatory actuator to which the ends of said brake are connected at different effective distances from the axis of oscillation, and automatically-operative means tending constantly to wrap said brake-band about and in frictional contact with said wheel, whereby positive rotation of said motor-shaft in one direction acts through said frictional contact upon and to move said band and actuator in one direction to relieve the braking effect, and rotation of said motor-shaft in a reverse direction similarly acts to move said band and actuator in an opposite direction to increase the braking effect.

3. A brake mechanism comprising a wheel, a band surrounding said wheel, a fixed shaft, an actuator loosely mounted upon said shaft, a collar fixed to the shaft, and a coiled spring surrounding one end of the shaft and secured respectively to said collar and actuator.

4. A brake mechanism comprising a wheel, an actuator mounted for oscillation and consisting of two parts, a brake-band surrounding said wheel and secured between the two parts of the actuator at points located at different distances from the axis of said actuator, and a web uniting the two parts of the actuator and adapted to engage the brake-band, thereby to limit the movement of the actuator in one direction.

5. The combination with the motor-shaft of a hoisting apparatus and a hoisting-drum capable of being clutched thereto, of a motor-shaft-controlled brake comprising a wheel rotatable by said shaft, a brake-band surrounding said wheel, an oscillatory actuator to which the ends of said brake-band are connected at different effective distances from the axis of oscillation and automatically-operative means tending constantly to rotate said actuator in a direction to wrap said brake-band about and in frictional contact with said wheel, whereby positive rotation of said motor-shaft in one direction acts through said frictional contact upon and to move said band and actuator in one direction to relieve the braking effect, and rotation of said motor-shaft in a reverse direction similarly acts to move said band and actuator in an opposite direction to increase the braking effect.

12,041. ACETYLENE-GAS GENERATOR. GIORGIO G. SMITH, Florence, Italy. Filed Jan. 27, 1902. Serial No. 91,536. Original No. 680,169, dated Oct. 23, 1900.



Claim.—1. In a gas-generator, the combination with a gas-holder having a part movable upon change of volume of gas therein, of a closed receptacle independent from said gas-holder, and adapted to contain both water and a case of gas-producing agent; a conduit between said gas-holder and receptacle; means for opening the case; means for supplying the receptacle with water; and devices controlled by the movable part of the gas-holder for operating the means for opening the case and for supplying water to the receptacle.

2. In a gas-generator, the combination with a gas-holder having a part movable upon change of volume of gas therein, of a closed receptacle; a conduit between the gas-holder and receptacle; means for supplying the receptacle with water; means for mounting or supporting a case of gas-producing agent within the receptacle; devices for puncturing the case at remote points; a device controlled by the movable part of the gas-holder for operating the puncturing devices and means also controlled by said movable part for causing the supply of water to enter the receptacle.

3. In an acetylene-gas generator, the combination with a gas-holder having a bell, of a closed receptacle for holding a case of carbid; means controlled by the bell for puncturing the carbid-case, and means also controlled by the bell as it closes, for supplying said receptacle with water.

4. In an acetylene-gas generator, the combination with a gas-holder, of a closed receptacle, capable of containing a case of carbid; a water-tank in communication with the receptacle; means for causing the water from the tank to pass into the receptacle; a tool for puncturing the carbid-case; and means operating automatically upon the reduction of the volume of gas in the gas-holder, for operating the tool.

5. In a gas-generator, the combination with a gas-holder, of a series of closed receptacles, each capable of containing or supporting one or more cases of gas-producing agent; devices for forming openings of dissimilar hydrostatic functions in each of the cases; and mechanism for actuating the opening devices of the receptacles successively.

6. In an acetylene-gas generator, the combination with a gas-holder having a bell, of a closed receptacle independent of the gas-holder, and capable of containing a carbid-case; a tool working through a wall of the receptacle and serving to perforate the carbid-case; and means for actuating said tool.

7. In an acetylene-gas generator, the combination with a gas-holder of a closed receptacle independent of the gas-holder, and capable of containing a carbid-case; a tool within the receptacle, and a tool working through a wall of the receptacle, said tools serving to perforate the carbid-case at separated points; and means for actuating said tools.

8. In a gas-generator, the combination with a receptacle, capable of containing a case of gas-producing agent; a punch operating through a wall of the receptacle and serving to perforate the case; a device for actuating the punch; a gas-holder; and a conduit for conveying the gas generated in the receptacle to said gas-holder.

9. In a gas-generator, the combination with a receptacle capable of receiving a case containing gas-producing agent; a punch for perforating the case; a shaft carrying means for operating said punch and normally locked against rotation; a gas-holder having a bell; a device connected to said bell for releasing the shaft; and means for actuating the shaft when released.

10. In a gas-generator, the combination with a punch for opening a case of gas-producing agent; a protector for preventing the punch from being operated except at the proper time; means for actuating the protector; and means for actuating the punch.

11. In a gas-generator, the combination with a receptacle, adapted to receive a case containing a gas-producing agent; a punch; means for actuating the punch; a protecting-cap for the punch; and means for withdrawing the cap prior to the operation of the punch.

12. In a gas-generator, the combination of a receptacle adapted to contain a case of gas-producing agent; a punch; a swinging protector; means for withdrawing the protector; and means for actuating the punch.

13. In a gas-generator, the combination of a receptacle, adapted to contain a case of gas-producing agent; a tool working through a wall of the receptacle and adapted to perforate the case; means for actuating the tool; and a movable protector for preventing the operation of the tool except at the proper time.

14. In a gas-generator, the combination of a receptacle carrying a punch and capable of containing a carbid-case; means normally sustaining the case above the punch; and means for forcing the case down upon the punch.

15. In a gas-generator, the combination of a receptacle carrying a punch and capable of containing a case; means normally sustaining the case above the punch; and means embodying a second punch for perforating the case and also forcing the same upon the first punch.

16. In a gas-generator, the combination with a receptacle, capable of holding a case containing a gas-producing agent, of a punch therein; means for normally holding the case out of contact with the punch; a punch working through a wall of the receptacle; and means in connection with the working punch for forcing the case upon the first punch.

17. In a gas-generator, the combination with a receptacle adapted to contain a case of carbid, of a punch in said receptacle; means for forcing the case against the punch; means for forcing the case away from the punch; and means for introducing water into the receptacle.

18. In a gas-generator, the combination with a receptacle adapted to contain a case of gas-producing agent, of a stationary punch therein; a movable punch working through a wall of the receptacle; means for forcing the case against the stationary punch; and means for actuating the movable punch.

19. In a gas-generator, the combination with a receptacle, adapted to contain a case of gas-producing agent; a device for perforating said case; a water-supply; means for controlling the supply of water to the receptacle; and a device actuated by the receptacle-perforating device for operating the means for controlling the supply of water.

20. The combination with a gas-holder, of a receptacle independent of the holder, capable of receiving a case of gas-producing agent; a conduit connecting the holder and receptacle; means for simultaneously perforating the case at different points; and means for supplying water to the receptacle at the time the case is perforated.

21. The combination with a gas-holder, of a closed receptacle capable of containing a case of carbid; a conduit between the receptacle and gas-holder; a stationary punch within the receptacle; a reciprocatory punch working through a wall of the receptacle; and means for introducing water to the receptacle.

22. The combination with a gas-holder, of a receptacle for receiving a case containing carbid; means for perforating said case; means for introducing water into the receptacle; a valve in the water-supply means and controlled by the means for perforating the case; and a conduit for conveying the generated gas to the gas-holder.

23. The combination with a gas-holder, of a receptacle; a conduit between the gas-holder and receptacle; means for supporting a carbid-case within the receptacle; means for supplying water to the receptacle; means for perforating the case at its top and at its bottom; and means for causing water to be supplied simultaneously with the perforating operation.

24. In a gas-generator, the combination of a closed receptacle for receiving a case containing carbid; a punch working through one end of the receptacle; means for actuating the punch; a lever moving with the punch; a water-supply pipe leading to the receptacle; and a valve in the water-supply pipe actuated by the lever.

25. In a gas-generator, the combination with a receptacle for receiving a carbid-case, of a water-supply pipe communicating therewith; a punch for perforating the case; and means for actuating the punch and controlling the water-supply.

26. In a gas-generator, the combination with a receptacle adapted to contain a carbid-case; a punch for perforating the case; a pivoted lever moving with the punch; a water-supply pipe communicating with the receptacle; a valve in the pipe actuated by the pivoted lever; and a weight for the valve.

27. The combination with the bell of a gas-holder, of a receptacle communicating with said holder and adapted to receive a case containing a charge of carbid, the gas from which will enter the gas-holder; a punch for perforating the carbid-case; means for actuating the punch; a water-supply conduit leading to the receptacle; and means carried by the bell for controlling the movement of the punch-actuating means.

28. The combination with a gas-holder, of a series of receptacles, each adapted to receive a carbid-case, in communication with the gas-holder; a series of punches; mechanism for actuating the punches; and means for enabling the bell to control said actuating mechanism for setting in operation punches for successively perforating the cases in the receptacles.

29. The combination with a gas-holder, of a series of receptacles, each independently in communication with the gas-holder, and each adapted to contain a carbid-case; a series of punches; a shaft; and a series of wipers disposed on the shaft at different angles, for successively actuating the punches to perforate the carbid-cases.

30. In a gas-generator, the combination with a rotary shaft carrying a wiper, of means normally tending to rotate said shaft; a step for restraining the movement of the shaft; means for withdrawing the step; a punch actuated by the wiper; and a receptacle adapted to contain a case to be perforated by the punch.

31. In a gas-generator the combination with a rotary shaft carrying a wiper, of means the tendency of which is normally to rotate said shaft; a ratchet carried by the shaft; a pawl engaging the ratchet; means for releasing the pawl; a punch actuated by the wiper when the shaft is released; and a receptacle adapted to contain a case to be perforated by the punch.

32. In a gas-generator, the combination, with a rotary shaft carrying a wiper, of a drum secured to the shaft; a rope carrying a weight, coiled on the drum; a ratchet secured to the shaft; a pawl in engagement with the ratchet; means for releasing the pawl; a punch operated by the wiper; a spring for returning the punch to its normal position; and a receptacle capable of holding a case containing a gas-producing agent, and through a wall of which receptacle the punch operates.

33. The combination with a punch, of means for actuating said punch; a hinged protector normally located over the punch; and a shaft carrying a wiper for withdrawing said protector.

34. In an acetylene gas-generator, the combination with the bell of a gas-holder, of a gas-tight receptacle adapted to receive a sealed carbid-containing case; a tank to supply the same with water; means within the receptacle and outside the gas-holder for puncturing the case when the contents of the latter is to be developed; and means released by the fall of the bell for operating the puncturing device in the receptacle and for establishing communication between the water-tank and the receptacle as the bell sinks below a certain level.

35. In an acetylene-gas generator, the combination with a gas-holder embodying a bell, of a series of receptacles each adapted to contain a case of carbid; and means in connection with each receptacle and controlled by the bell of the gas-holder for consecutively puncturing the carbid-case therein and feeding water to the receptacles.

36. In an acetylene-gas generator, the combination with a gas-holder and bell, of a series of separate receptacles to contain hermetically-sealed carbid-cases; means for puncturing the carbid-cases; a separate water-tank for each receptacle to contain the proper quantity of water to develop the carbid therein; and means actuated by each fall of the bell of the gas-holder below a certain point to puncture the carbid-case in and supply water to the receptacles consecutively.

37. In an acetylene-gas generator, the combination with a gas-holder and bell, of separate receptacles adapted to contain sufficient hermetically-sealed carbid to fill the bell with gas when the carbid is developed; a removable bottom plate for each of said receptacles having a punch; a spring adapted normally to hold a carbid-case above the punch; a movable punch; a stuffing-box to guide the same through the cover of the receptacle; a flange supported on the movable punch above the carbid-case; means for supplying water to each receptacle; and means operated at each fall of the bell below a certain level and serving to actuate the movable punch and to turn on the water-supply to said receptacle.

38. In an acetylene-gas generator, the combination, with a gas-holder and bell, of a series of complete receptacles mounted in proximity thereto; and each capable of containing a carbid-case; a rotary shaft mounted adjacent to the receptacles; a puncturing device for each receptacle; a series of striker-arms radially equidistant from each other on the shaft; means for rotating the shaft a part of a turn at each descent of the bell and thereby imparting a blow to the puncturing devices consecutively; means for supplying water to the receptacles; and means operating in connection with the puncturing devices for opening the water-supply to said receptacles.

39. The combination, with a gas-holder and bell, of a series of separate receptacles capable of containing sealed carbid-cases; means actuated by the bell for puncturing the cases consecutively; protecting-caps to cover the puncturing device; and means for consecutively withdrawing the caps before the puncturing mechanism is operated.

40. In an acetylene-gas generator, the combination with a gas-holder having a bell, of a series of receptacles for containing sealed carbid-cases; a puncturing device for each receptacle; a separate water-tank for each receptacle; means for consecutively operating one of the puncturing devices at each fall of the bell beyond a certain point.

41. In an acetylene-gas generator, the combination with a gas-holder having a bell, of a series of receptacles for containing sealed carbid-cases; a puncturing device for each receptacle; a separate water-tank for each receptacle; means for consecutively operating one of the puncturing devices at each fall of the bell beyond a certain point; a petcock at the bottom of each receptacle; and means controlled by the puncturing device for closing the petcock as soon as the puncturing device is operated.

42. In a generator, the combination with a receptacle capable of receiving, and retaining when closed, a sealed case containing a charge of gas-producing agent, of a closure for closing the receptacle; means for establishing communication to and from the charge at different vertical planes; and means acting independently of the action of the closure for actuating the communication-establishing means.

43. In a gas-generator, the combination with a receptacle capable of receiving a case, of means for perforating the case at both its upper and lower portions.

44. In a gas-generator, the combination with the bell of a gas-holder, of a gas-tight receptacle for holding a sealed case containing a gas-producing agent; a tank to supply the receptacle with a coöperative gas-producing agent; means within the receptacle for opening communication between the receptacle and the case at a place where the coöperative agent may freely enter and also at a place where the generated gas may freely escape; and means set in motion when the bell sinks below a pre-

determined level, for actuating the opening device and establishing communication between the tank and receptacle.

45. In a gas-generator, the combination with a receptacle adapted to contain both a case of gas-producing agent and also a coöperative agent, of means for establishing communication between the interior of the receptacle and the interior of the case at a plane where the coöperative agent may freely enter the case and also at a plane where the generated gas may freely escape from the case.

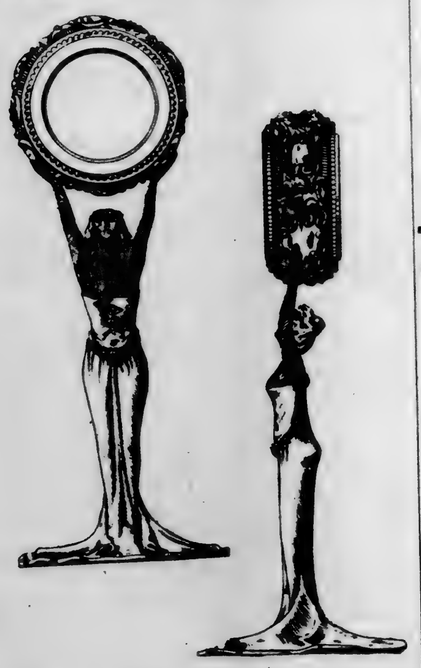
46. In a gas-generator, the combination with means for holding a case of gas-producing agent, of means for supplying a fluid coöperative agent; means for producing an entry for the coöperative agent into the case; and means for producing an exit for the gas from the case separate from the entry thereto.

DESIGNS.

36,083. FINGER-RING. MAURICE L. POWERS, New York, N. Y. Filed Aug. 19, 1902. Serial No. 120,206. Term of patent 3½ years.

Claim.—The ornamental design for a finger-ring as herein shown and described.

36,084. CLOCK-CASE. LOUIS V. ARONSON, Newark, N. J., assignor to the Art Metal Works, Newark, N. J. Filed Apr. 26, 1902. Serial No. 104,883. Term of patent 3½ years.

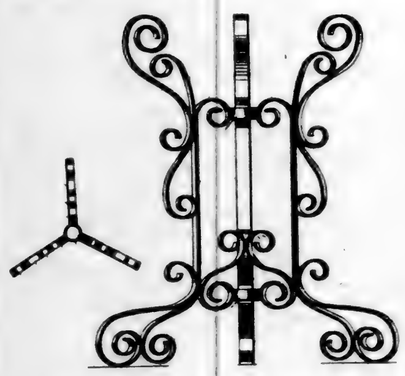


Claim.—The ornamental design for a clock-case as herein shown and described.

36,085. LAMP-BODY. ALBERT L. BARON, Brooklyn, N. Y., assignor to Central Lighting Company, New York, N. Y., a Corporation of New Jersey. Filed May 7, 1902. Serial No. 106,373. Term of patent 14 years.

Claim.—The ornamental design for a lamp-body substantially as shown and described.

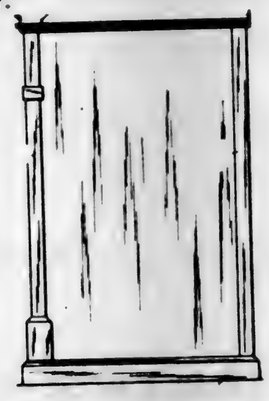
36,086. JARDINIÈRE-STAND. FREDERICK W. OLSEN, Mount Pleasant, Wis. Filed Aug. 18, 1902. Serial No. 120,162. Term of patent 7 years.



Claim.—The ornamental design for a jardinière-stand, as herein shown and described.

36,087. CASE FOR COIN-CONTROLLED MECHANISM. MICHAEL BENEDICT, New York, N. Y. Filed Mar. 5, 1902. Serial No. 96,854. Term of patent 3½ years.

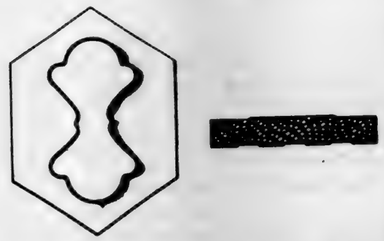
36,087.



Claim.—The ornamental design for a case for a coin-controlled mechanism as herein shown and described.

36,088. WITHDRAWN.

36,089. TILE. ALFRED PLANT, Keyport, N. J. Filed Aug. 11, 1902. Serial No. 119,397. Term of patent 7 years.

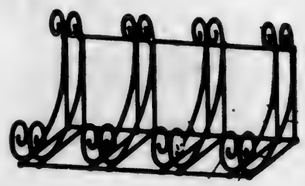


Claim.—The ornamental design for a tile, substantially as herein shown and described.

36,090. STOVE. CHARLES PUSHMORE, Detroit, Mich., assignor to Prince Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 16, 1902. Serial No. 119,894. Term of patent 7 years.

Claim.—The ornamental design for a stove substantially as herein shown and described.

36,091. BICYCLE-RACK. MONTGOMERY G. MERRITT, Rome, N. Y. Filed Aug. 4, 1902. Serial No. 118,414. Term of patent 7 years.

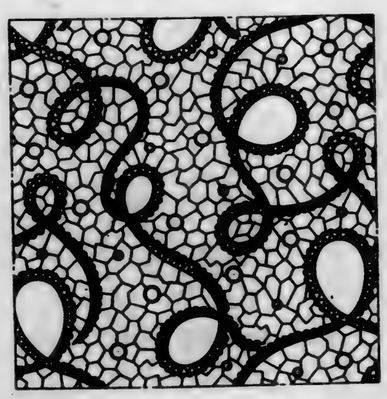


Claim.—The ornamental design for a bicycle-rack, substantially as herein shown and described.

36,092. UMBRELLA-COVER. ROSA L. SMITH, Rome, Ohio. Filed Aug. 13, 1902. Serial No. 119,502. Term of patent 3½ years.

Claim.—The ornamental design for an umbrella-cover, as herein shown and described.

36,093. SHADE-CLOTH. JOSEPH H. WEISSER, New York, N. Y. Filed Aug. 16, 1902. Serial No. 119,974. Term of patent 3½ years.



Claim.—The ornamental design for shade-cloth herein shown and described.

TRADE-MARKS

REGISTERED SEPTEMBER 30, 1902.

38,942. SHEETINGS. Bolton Mills, Bolton, S. C. Filed Aug. 30, 1902.

The representation of two cats in the attitude of flight and a dog in pursuit. Used since May 1, 1902.

38,943. BILLIARD-CLOTH. Benjamin Abbott Stevens, Toledo, Ohio. Filed July 10, 1902.

Lavrell

The word "Lavrell." Used since 1899.

38,944. COTTON THREADS. New England Cotton Yarn Company, Jersey City, N. J., and New Bedford Mass. Filed July 24, 1902.

The word "Echo" and a circle inclosing the same. Used since July 24, 1902.

38,945. CAP-VISORS. H. Mayer & Son, New York, N. Y. Filed Aug. 18, 1902.

NEALEATHER

The word "Nealeather." Used since September 9, 1899.

38,946. SAFETY SWIMMING-SLEEVES. Frank B. Wilson, New York, N. Y. Filed May 22, 1902.

S.S.S.

The letters "S. S. S." Used since April 15, 1902.

38,947. CERTAIN NAMED COVERING AND PROTECTIVE MATERIALS. The Standard Paint Company, New York, N. Y. Filed July 2, 1902.

The representation of a peacock with his tail spread out within a circle, in which also appear the letters "S P C." This is surrounded by a blank ring, on which appears at the top the word "Peacock." Used since June 26, 1902.

38,948. PLASTIC METALLIC PACKINGS. The Hilliman-James Co., Pittsburg, Pa. Filed July 31, 1902.

38,948.

A stuffing-box, shown in longitudinal section and having therein a packing-ring, in which are embedded metallic pellets indicated by small circles and dots on the surface of the packing. Used since July 7, 1902.

38,949. PLASTIC METALLIC PACKINGS. The Hilliman-James Co., Pittsburg, Pa. Filed July 31, 1902.

A keg or barrel lying on its side, with its open end toward the front and showing therein and in front thereof pellets as they would appear if a barrel filled with cases had been packed over on its side—that is, the top surface of the pellets is inclined downwardly from the rear end of the barrel to the front and the pellets extend from the front of the barrel into a broad low pile. A scoop is shown in the barrel, partly embedded in the pellets. Shading appears at each side of the barrel. Used since July 7, 1902.

38,950. FILMS, PLATES, AND PHOTOGRAPHIC PAPERS. Actien-Gesellschaft für Anilin-Fabrikation, Berlin, Germany. Filed Aug. 13, 1902.

Agfa.

The word "Agfa." Used since February, 1897.

38,951. COAL-TAR DYESTUFFS. Actien-Gesellschaft für Anilin-Fabrikation, Berlin, Germany. Filed Aug. 13, 1902.

Agfa.

The word "Agfa." Used since February, 1897.

38,952. ILLUMINATING-OILS. The Philadelphia Chemical Co., Philadelphia, Pa. Filed July 30, 1902.

ASTROLEUM.

The word "Astroleum." Used since June 26, 1902.

38,953. MANUFACTURED POWDER FOR POLISHING, CLEANING, AND PRESERVING CERTAIN NAMED SURFACES. Silver Salt Company, St. Paul, Minn. Filed July 7, 1902.

The words "Silver Salt" and the representation of a female figure holding a pan in her hands above a table, which pan contains a mixture of water and the powder, with articles in process of treatment. Used since April 1, 1902.

38,954. HAIR REMEDY. Alexander P. Ryan, Montreal, Canada. Filed July 17, 1902.

Chevlurine

The word "Chevlurine." Used since July 10, 1901.

38,955. REMEDY FOR LA GRIPPE, CATARRH, COLDS, AND HEADACHES. Frank W. Dubois, Springfield, Mo. Filed Oct. 19, 1901.

The pictorial representation of a grip or traveling-bag and the compound word "Anti-Gripine" thereon. Used since September 1, 1901.

38,956. REMEDY FOR THE BLOOD. Augustus B. Scott, New Philadelphia, Ohio. Filed June 24, 1902.

PLANT.

The words "Life Plant" and the representation of a flying eagle with a sprig in its beak. Used since January 1, 1900.

88,957. CHILL AND FEVER TONIC. TRAPP & RAMSDEN, Montevallo, Ala. Filed Jan. 15, 1902.

666

The three figures "6 6 6." Used since September 1, 1901.

88,958. CERTAIN NAMED MEDICINAL SUBSTANCES. JAMES W. GERNEY, New York, N. Y. Filed June 6, 1902.

CASCOIDS

The word "CASCOIDS" partly inclosed within a border. Used since January, 1899.

88,959. DRIED FRUITS. ANDREWS & Co., New York, N. Y. Filed June 7, 1901.

AURORA

The word "AURORA." Used since March, 1901.

88,960. FLOUR. HIGGS STORY & Co., Bozeman, Mont. Filed Sept. 2, 1902.

PRIDE OF MONTANA

The words "PRIDE OF MONTANA." Used since January 18, 1902.

88,961. FLOUR. HIGGS STORY & Co., Bozeman, Mont. Filed Sept. 2, 1902.

MONTANA BELLE

The words "MONTANA BELLE." Used since October 21, 1896.

88,962. FLOUR MADE FROM WHEAT. H. H. KING & Co., Minneapolis, Minn. Filed Jan. 20, 1902.

BONNIE BELLE

The words "BONNIE BELLE." Used since January 1, 1897.

88,963. BARLEY GRITS. SOUTHERN CEREAL Co., Marseilles, Ill. Filed May 14, 1902.

CREAM OF BARLEY.

The words "CREAM OF BARLEY." Used since January 4, 1902.

88,964. REFINED SUGAR. THE FEDERAL REFINING COMPANY, Jersey City, N. J. Filed Aug. 30, 1902.

FEDERAL

A shield, with a star appearing at the apex of the shield immediately above the letter "E" in the word "FEDERAL," which word is shown

on the face of said shield, and immediately below said word appears a heavy line or bar. Paralleling this first bar there appear on the surface or body of the shield two separate lines or bars at a uniform distance apart, all three parallel lines or bars appearing in relief against a white background or surface, the lower point of the shield being deeply shaded and tapering down to the point. Used since June 26, 1902.

88,965. MILK AND MILK PRODUCTS. THE BERNESE ALPS MILK Co., Stalden, Switzerland. Filed May 28, 1902.

The representation of a bear, in a sitting position, with its young in its lap being fed from a bottle. Used since 1892.

88,966. COFFEES. SOUTHERN COFFEE COMPANY, Galveston, Tex. Filed July 14, 1902.

SEA WALL

A pictorial illustration of a coast scene representing a sea-wall, a driveway and a village to the left of the sea-wall, a part of the shore and sea at the right of the sea-wall, and a breakwater, fort, lighthouse, and ships beyond the breakwater, an elliptical border around the coast scene, and the words "SEA WALL" above the latter. Used since July 7, 1902.

88,967. SPIRIT-VINEGAR. CHAS. E. MEYER & Co., Prospect, Ill. Filed Aug. 8, 1902.

CEREO

The word "CEREO." Used since May 1, 1902.

88,968. BEER AND MALT EXTRACT. BOHEMIAN BREWING Co., Chicago, Ill. Filed May 24, 1902.

The monogrammic representation of three "B's" arranged to form a triangle, in which the abbreviation "Co." appears, this monogrammic representation appearing in a circular colored background of darker shade than the body of the letters, while the triangular space in the middle of the letters is darker than said circular background. Used since October, 1891.

88,969. CERTAIN NAMED CARBONATED BEVERAGES. STATIC CARBONATING COMPANY, New York, N. Y. Filed June 23, 1902.

Static

The word "STATIC." Used since April 21, 1896.

88,970. CARBONATING APPARATUS AND APPLIANCES. STATIC CARBONATING COMPANY, New York, N. Y. Filed July 30, 1902.

Static

The word "STATIC." Used since April 21, 1896.

88,971. CYLINDRICAL FOOD-CHOPPERS. LANDERS, FRARY AND CLARK, New Britain, Conn. Filed June 27, 1902.

CLIMAX

The word "CLIMAX." Used since April, 1902.

88,979. CHEMICAL FIRE-EXTINGUISHERS. THE TEA TRAY COMPANY OF NEWARK, N. J., Newark, N. J. Filed July 1, 1902.

MATCHLESS GIANT

The words "MATCHLESS GIANT." Used since June 3, 1902.

88,978. CYCLES, MOTOR-VEHICLES, AND THEIR PARTS. FABRIQUE DE MOTEURS & DE MACHINES, (ARCHIBALD HARRY HEMMING, LOCH & CIE.) St. Aubin, Switzerland. Filed June 30, 1902.

ZEDEL

The word "ZEDEL." Used since May 1, 1902.

THE NORRIS PETERS CO. PHOTO-LITH. WASH. D. C.

LABELS

REGISTERED SEPTEMBER 30, 1902.

9,450.—*Title:* "DIVER BRAND SPONGES." (For Sponges.) A. ISAACS & Co., New York, N. Y. Filed September 5, 1902.

9,451.—*Title:* "AIRINIT." (For Footwear.) FRANK WILLIAM SLATER, Montreal, Canada. Filed September 2, 1902.

9,452.—*Title:* "BAUME DE PRINCESSE." (For Facial Massage Preparation.) ALLERHOUSE PHARMACAL CO., Council Bluffs, Iowa. Filed July 16, 1902.

9,453.—*Title:* "C. BOHLEY'S COUGH MEDICINE." (For Cough Medicine.) CONRAD BOHLEY, Paterson, N. J. Filed July 25, 1902.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

COMMISSIONER'S DECISIONS.

BRODERICK AND BASCOM ROPE COMPANY v. LESCHEN AND SONS ROPE COMPANY.

Decided September 19, 1902.

1. TRADE-MARK—INTERFERENCE—DATE OF ADOPTION AND USE SET UP IN STATEMENT—WEIGHT GIVEN TO TESTIMONY SHOWING EARLIER USE.

Where a certain date of adoption and use of a trade-mark is set up in the statement and declaration filed with an application for registration and the testimony offered in the interference proceeding shows an earlier date, *Held* that such testimony may be considered and such weight given to it as may be proper under the circumstances of the case.

2. SAME—SAME—AMENDMENT TO STATEMENT AFTER DETERMINATION OF INTERFERENCE.

A motion during the progress of a trade-mark interference to amend the statement in the application as to the date of adoption and use is unnecessary and will be denied. Amendment may be made after the conclusion of the interference.

APPEAL on motion.

TRADE-MARK FOR WIRE ROPE.

Application of Broderick and Bascom Rope Company filed October 31, 1900, No. 62,034. Registered trade-mark of A. Leschen and Sons Rope Company, dated December 4, 1900, No. 35,552.

Messrs. Higdon & Longan and *Mr. Robert P. Haines* for Broderick and Bascom Rope Company.

Messrs. Knight Bros. for A. Leschen and Sons Rope Company.

ALLEN, *Commissioner:*

This is an appeal by the Broderick and Bascom Rope Company from the decision of the Examiner of Interferences denying its motion to file a substitute statement and declaration and granting the motion of A. Leschen and Sons Rope Company to take surrebuttal testimony.

Prior to the decision of *Sherwood* v. *Horton, Cato and Company*, (84 O. G., 2018,) rendered by Mr. Commissioner Duell on May 28, 1898, Rule 13 of the rules adopted by this Office for the registration of trade-marks contained the following provision:

* * * Each applicant and registrant will be held to the date of adoption alleged in the statement filed with his application.

The rules have since been revised, and those now in force do not contain this provision.

In the decision of *Sherwood* v. *Horton, Cato and Company* (84 O. G., 2018) it was held that testimony offered to show an earlier date of use than that alleged in the statement filed with the application—

may be considered and such weight given to it as may be proper under the circumstances of the case.

This practice is approved. If it was warranted in view of the rules in force at the time the decision was rendered, it is warranted now.

No good reason appears why the interference should be transmitted at this time for the purpose of permitting an amendment to be filed. Such a course would only result in further delay. An amendment can be filed after the determination of the question of priority should priority be awarded to the Broderick and Bascom Rope Company.

In considering the motion made by A. Leschen and Sons Rope Company for permission to take surrebuttal testimony the Examiner of Interferences very properly said:

Inasmuch as the full consideration both of the testimony objected to and of any surrebuttal testimony which may be taken will naturally be deferred until the final hearing, it is believed that it would be but equitable to allow the taking of surrebuttal testimony by the senior party, "the propriety of the evidence presented" being considered at the final hearing. (*Talbot* v. *Monell*, 74 MS. C. D., p. 1.)

The decision of the Examiner of Interferences is affirmed.

JEAN AND GOODE v. HITCHCOCK.

Decided September 30, 1902.

INTERFERENCE—MOTION AFTER LIMIT OF APPEAL EXPIRED—JURISDICTION RESTORED.

Where a motion was filed within the limit of appeal and to accommodate counsel was noticed for hearing two days after the limit had expired, *Held* that the jurisdiction of the Examiner of Interferences will be restored to consider the motion.

ON petition.

COPYING-BATH.

Application of Charles W. Jean and Clarence R. Goode filed September 28, 1901, No. 76,960½. Application of Ralph Hitchcock filed May 22, 1900, No. 17,574.

Mr. James T. Law and *Mr. William G. Henderson* for Jean and Goode.

Mr. A. M. Austin and *Messrs. Sturtevant & Greeley* for Hitchcock.

ALLEN, *Commissioner:*

This is a petition that the jurisdiction of the Examiner of Interferences be restored to consider a motion to extend the limit of appeal in the above-entitled case.

A decision upon priority was rendered in favor of Hitchcock on the record on July 30, 1902, and August 30 was fixed as the limit of appeal. On Au-

gust 20 Jean and Goode filed a motion to extend the limit of appeal fifteen days and fixed that motion for hearing by the Examiner of Interferences on August 22, after the limit of appeal had expired. The motion was dismissed for lack of jurisdiction on the authority of *Meyrose* v. *Jahn*, (56 O. G., 1447.) This petition was then filed, and on September 10 Jean and Goode filed a motion to dissolve the interference. This motion for dissolution was filed after the expiration of the fifteen days' extension which had been requested, and therefore no useful purpose would be served by permitting the Examiner of Interferences to consider that motion for extension unless it is considered as asking for a sufficient extension to include September 10, when the motion to dissolve was filed.

In support of this petition it is alleged that the attorney for Jean and Goode ordered a copy of the Hitchcock application on August 13, and, not having received that copy, on August 19 directed his associate to obtain an extension of the limit of appeal. The associate then filed the motion on August 20, and in order to give opposing counsel reasonable notice thereof he did not set it for hearing on that day, but at their request fixed August 22 as the day of hearing. The motion was filed within the limit and was fixed for hearing only two days thereafter.

Under all of the circumstances it is believed that Jean and Goode should be given a hearing upon their motion to extend the limit of appeal to include September 10.

The petition is granted and the jurisdiction of the Examiner of Interferences is restored to consider the motion to extend the limit of appeal.

EX PARTE PARKHURST.

Decided September 30, 1902.

1. PETITION—APPEAL—QUESTION OF MERITS.

The actions of the Examiner in citing a certain patent in rejecting the claims and in holding that the invention is abandoned will not be reviewed upon petition, since they relate to the merits and are appealable to the Examiners-in-Chief.

2. SAME—SAME—RIGHT TO MAKE CLAIM.

The ruling by the Examiner that certain descriptive matter in the claim does not properly apply to the device disclosed is a ruling that the applicant is not entitled to make the claim and relates to the merits.

ON petition.

CARTRIDGE-PACKETS.

Application of Edward G. Parkhurst filed February 8, 1896, No. 578,551.

Messrs. Blodgett & Peck for the applicant.

ALLEN, *Commissioner:*

This is a petition for relief from the action of the Primary Examiner in the following matters:

1. Citing a certain patent to Russell in rejecting the claims.

2. Ruling that the invention covered by certain claims has been abandoned.

3. Construing certain decisions as warranting the conclusion that the invention is abandoned.

4. Considering certain affidavits of the applicant as showing that he has abandoned the invention, and

5. Ruling that the statement in certain claims that "the locker extends the length of the clip-body" is incorrect.

Referring to the first point, it is clear that the question whether or not the patent to Russell can properly be cited in rejecting the claims relates to the merits and is appealable to the Examiners-in-Chief. If the Examiner regards it as a valid reference, it is his duty to cite it, and his discretion will not be controlled upon direct petition. The applicant has his remedy by appeal.

As to the second, third, and fourth points it appears that they relate to the question of abandonment of the invention, and Rule 133 specifically gives the right of appeal to the Examiners-in-Chief in such case. If the applicant is of the opinion that the facts and authorities relied upon do not warrant the conclusion of abandonment, his remedy is by appeal.

As to the fifth point it would seem that if the locker disclosed does not in fact extend the length of the clip the applicant is not entitled to make the claims to such a locker. This point also relates to the merits and is appealable to the Examiners-in-Chief.

The petition is dismissed.

SHAFFER v. DOLAN.

Decided September 30, 1902.

1. INTERFERENCE—REOPENING—ADDITIONAL TESTIMONY.

After an interference has been decided by the Examiner of Interferences it will not be reopened for the purpose of permitting one of the parties to take additional testimony when it appears that said testimony is unimportant and, further, that the facts could have been discovered with reasonable diligence before the testimony was originally taken.

2. SAME—SAME—EVIDENCE ACCESSIBLE.

Where a witness testifies as to an exhibit which is said to be a copy of the original and says that he believes that the original is in his safe in his office and after a decision by the Examiner of Interferences the party wishes to reopen the interference to show that the original could not have been produced, *Held* that he could and should have produced the evidence originally.

APPEAL on motion.

TIP FOR GAS-BURNERS.

Patent granted Henry E. Shaffer January 17, 1899, No. 617,942. Application of Edward J. Dolan filed December 17, 1897, No. 662,267.

Messrs. Church & Church and *Mr. Frederick F. Church* for Shaffer.

Messrs. Dickerson, Brown, Raegener & Binney for Dolan.

ALLEN, *Commissioner:*

This is an appeal by Dolan from a decision of the Examiner of Interferences refusing to grant his motion to reopen the above-entitled interference for the purpose of taking further testimony on behalf of Dolan.

The records show that a decision was rendered May 3, 1902, by the Examiner of Interferences awarding priority of invention to Shaffer.

An appeal was taken to the Examiners-in-Chief

and was subsequently withdrawn for the purpose of bringing this motion before the Examiner of Interferences.

The additional testimony is desired for the purpose of again calling witness Dickerson, who testified in behalf of Dolan, in order that he may account for the non-production in evidence of a certain original burner-tip referred to by him in his testimony.

Counsel for Dolan are of the opinion that the failure to account for the non-production of this original tip was the principal reason which influenced the Examiner of Interferences in rendering a decision of priority adverse to Dolan. The Examiner of Interferences is of the contrary opinion, for he says that—

> * * * this was not the sole ground of the decision, and the Examiner finds therein other reasons which would still obtain if testimony as to the loss of the tip were made a part of the record. In his opinion, therefore, the result would not have been different had said testimony been originally included in the case.

The testimony of witness Dickerson was taken in California, and a certain tip was introduced in evidence which was said by Dickerson to be a copy of the original tip. Objection was made to this tip by the counsel for Shaffer on the ground that the original tip was not accounted for. Subsequently Dickerson testified that he was of the opinion that the original burner-tip was in his private safe in New York, but he could not be positive without looking the matter up.

Counsel for Dolan state that one of the reasons for not bringing this motion earlier was that in the absence of further objection on the part of Shaffer they were of the opinion that witness Dickerson had satisfactorily explained why the original tip could not at that time be introduced in evidence.

It is stated that Mr. Dickerson has now returned to New York and that he has searched his safe and is unable to find the original burner-tip in question. It is now desired to recall Mr. Dickerson in order that he may testify to this fact.

The facts do not warrant the conclusion that the evidence which it is now sought to introduce is newly discovered or that it could not have been discovered with reasonable diligence before the testimony of Dickerson was originally taken.

The decision of the Examiner of Interferences is affirmed.

SHALLENBERGER v. ANDREWS.

Decided September 30, 1902.

INTERFERENCE—MOTION FOR DISSOLUTION—FACTS SHOWN BY THE TESTIMONY.

A motion for dissolution should not be brought on grounds arising from the testimony. Facts which are alleged to be established by the testimony are to be determined on final hearing and not on motions for dissolution.

APPEAL on motion.

BOLSTER.

Application of Charles S. Shallenberger filed November 14, 1901, No. 82,314. Application of James S. Andrews filed September 23, 1901, No. 76,246.

Messrs. Higdon & Longan and *Mr. John S. Barker* for Shallenberger.

Messrs. Knight Bros. for Andrews.

ALLEN, *Commissioner:*

This is an appeal by Shallenberger from a decision of the Examiner of Interferences denying his motion to transmit this interference to the Primary Examiner to hear and determine a motion for dissolution.

The motion to dissolve was brought on the ground that Andrews has no right to make the claims which form the issue of this interference, for the reason that the invention was not made by said Andrews, but by one Charles T. Westlake. It is alleged that this fact is brought out in the testimony.

A motion for dissolution should not be brought on grounds arising from the testimony.

Facts which are alleged to be established by the testimony are to be determined on final hearing and not on motions for dissolution. (*Thomson and Unbehend* v. *Hisley*, 66 O. G., 1596; *Latham* v. *Force and Parenteau*, 82 O. G., 185; *Shiels* v. *Lawrence et al.*, 87 O. G., 180; *Paget* v *Bugg*, 89 O. G., 1342; *Sullivan* v. *Thomson*, 94 O. G., 585; *Frederick* v. *Frederick and Frederick*, 99 O. G., 1865.)

The decision of the Examiner of Interferences is affirmed.

EX PARTE HARRISON.

Decided September 23, 1902.

REOPENING AN APPLICATION AFTER APPEAL TO THE COMMISSIONER—RULE 142.

Where on appeal the Commissioner has affirmed the decision of the Examiners-in-Chief affirming the rejection by the Examiner of the claims in an application for a patent, *Held* that the application will not be reopened for further consideration by the Examiner in the absence of any showing to excuse the delay in bringing the petition to reopen, and where no showing is made of great hardship or irreparable injury to the applicant in case this application is not reopened.

ON petition.

OIL-RESERVOIR FOR CAR-JOURNALS.

Reissue application filed by Charles E. Harrison August 2, 1899, No. 725,927.

Mr. George E. Waldo for the applicant.

ALLEN, *Commissioner:*

This is a petition to reopen the above-entitled application and restore jurisdiction to the Examiner under the provision of Rule 142 in order that a new set of claims may be entered and considered by him.

The record shows that the application has been considered on appeal by the Examiners-in-Chief and by the Commissioner.

The Examiner rejected the reissue application on the ground that the invention described and shown therein differed from that described and shown in the original patent. The claims were also rejected on the ground of anticipation.

The Examiners-in-Chief affirmed the rejection of the Examiner. One of the Examiners-in-Chief filed an opinion dissenting in part to the decision, being of the opinion that the invention did not differ from that originally shown and described and that the application for a reissue was properly made. He, however, took the view of his associates as to the question of anticipation.

The Assistant Commissioner on appeal expressed

the opinion that the reissue application did not contain new matter, but affirmed the decision of the Examiners-in-Chief on the ground that the claims were anticipated by the references. This decision was rendered July 18, 1901.

On August 26, 1901, a petition for rehearing was filed, which petition was denied on August 27, 1901.

On January 22, 1902, an amendment was filed canceling the claims and substituting four new claims in lieu of those canceled.

This amendment was refused entry by the Examiner on the ground that he had no jurisdiction over this application. Nearly six months thereafter, on July 15, 1902, this petition was brought to restore jurisdiction to the Examiner in order that the amendment filed January 22, 1902, might be entered and considered by him. No reason is set forth to explain the delay in bringing this petition. Nearly a year has elapsed since the date of the Assistant Commissioner's decision. This petition should have been promptly brought after this decision was rendered.

Rule 142 provides that cases will be reopened—

only for consideration of matter not already adjudicated upon, sufficient cause being shown.

In *ex parte Goldsmith* (58 O. G., 1092) it was said:

The last four words of the rule—"sufficient cause being shown"—are to be particularly noted—

and in that case the petition was denied for the lack of a good and sufficient reason showing why the amendment was not earlier presented.

The record in this case fails to show any cause whatever for the delay in prosecuting the claims which are now presented or for failure to bring this petition promptly.

No showing is made of great hardship or irreparable injury to the applicant in case this application is not reopened for further consideration by the Examiner.

The petition is denied.

SHAW *v.* GALLY.

Decided September 24, 1902.

PRELIMINARY STATEMENT—MOTION TO STRIKE OUT.

Where a preliminary statement is held by the Office to be informal in that it does not sufficiently state the facts and the party is called upon for a new statement, *Held* that the new statement will not be stricken out on motion merely because it states additional facts besides those called for by the Office.

APPEAL on motion.

MUSIC-SPOOL.

Application of Charles H. Shaw filed November 27, 1901, No. 83,891. Patent granted Robert A. Gally March 5, 1901, No. 669,342.

Messrs. Chapin, Haywood & Marble for Shaw.

Mr. R. A. Gally pro se.

ALLEN, *Commissioner:*

This is an appeal by Gally from the decision of the Examiner of Interferences denying his motion to strike out a part of Shaw's preliminary statement.

The Examiner properly treated the motion as one to strike out the entire statement, since otherwise the motion must have been dismissed as irregular. The Office cannot strike out part of a statement, but may strike out the entire statement, because a part of it is improper, and may then require a statement omitting the improper part.

The record shows that Shaw filed a statement on April 8, 1902, alleging, among other things, that he completed a device embodying his invention at a certain time. He was notified that the statement was informal and incomplete in certain respects and he was required to file a new one. He filed a second statement on April 22, 1902, attempting to cure the defects referred to, and this statement was not in all respects the same in substance as the first, since it included additional facts. It alleged that no model was made and that the machine which was completed was full-sized and was operated. This statement was objected to by Gally as informal, and a new statement was required and was furnished on June 28, 1902.

Gally now objects to the allegation in Shaw's last statement that no model was made and that the device originally referred to was full-sized and was operated and argues that the statement should not set forth any facts except those alleged originally.

Shaw's amended statement is not inconsistent with the one first filed, but merely alleges additional facts. It is a more complete statement of the facts, and since Shaw had the right to and, in fact, was required to make his statement more complete and was allowed a certain time within which to do it the amended statement must be accepted as proper. The objection by Gally has not the force which it might have had if Shaw had attempted to change material dates instead of merely making his statement more full.

The decision of the Examiner of Interferences is affirmed.

"Minute" for malted cereal coffee refused registration, *ex parte* Whitman Grocery Company 1768
"Napthol-Methane" for carbon-black held to be registrable, *ex parte* Castle Brook Carbon Black Company 683
"Nevers-Tick" for lubricants refused registration, *ex parte* Woolworth 1976
"Success" for stoves and ranges held registrable, *ex parte* Huenefeld 1329
"Telegraphone" for apparatus for recording and reproducing sounds refused registration, *ex parte* Hutchins 1330
"Waukwell" for shoes held registrable, *ex parte* Parker, Holmes & Company 1111
Treating materials such as fuel, *ex parte* Naef 2601
Type-writing machine, Felbel v. Oliver 1975
Felbel v. Oliver 2175
*Oliver v. Felbel 2284
Vehicle brake and coaster, Robinson v. Townsend v. Copeland 668
Washing-machine, *ex parte* Casler 1330
Wood flooring, Blackman v. Alexander 2388

DIGEST OF DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS

IN THE MATTER OF

PATENTS, TRADE-MARKS, ETC.

OFFICIAL GAZETTE—JULY-SEPTEMBER, 1902.

DIGEST OF DECISIONS.

[Decisions of the United States courts are indicated by an asterisk (*).]

ABANDONED EXPERIMENTS.

(See Interference, 24.)

ABANDONMENT.

(See Appeal to the Examiners-in-Chief, 5.)

RESPONSIVE ACTION.

Where within the time required by law an applicant takes an action which is completely responsive to the Examiner's action, *Held* that the case cannot properly be held to be abandoned. [*Ex parte* Scott, 681.

ALLOWED APPLICATIONS.

(See Withdrawal of Allowed Applications.)

1. REGULARITY AND IMPROPRIETY DISTINCT QUESTIONS.

Where the Examiner allows an application and the notice of allowance is properly sent, *Held* that the allowance cannot be set aside after a forfeiture of the case for failure to pay the final fee upon the allegation that it was an error for the Examiner to have allowed it. [*Ex parte* Bryant, 2778.

2. NOTICE REGULAR—FORFEITED CASE.

Where a notice of allowance is sent to the attorney who has been prosecuting the case and he afterward raises the question as to his right to prosecute the case and the final decision is in favor of his right, *Held* that the case was regularly allowed and that the final fee not having been paid within six months it is forfeited. [Id.

AMENDMENTS.

(See Abandonment; Rejection of Cases; Trade-Marks, 31.)

1. NEW MATTER—NEW SPECIES OF INVENTION.

Where an application as filed discloses several specific forms of the same generic invention, *Held* that an amendment cannot properly be made disclosing another specific form although it embodies the generic invention. [*Ex parte* Hoegh, 458.

2. SAME—DISCLOSURE OF BEST FORM OF INVENTION.

The requirement of the statute that an applicant disclose the best mode of applying his invention does not warrant an amendment to an application disclosing a different form of the invention from that contained in the application as originally filed. [Id.

3. CLAIMS—MULTIPLICATION OF.

While all reasonable latitude should be allowed an applicant in presenting claims in order that the patent when issued may afford him full protection, an unreasonable and unnecessary multiplication of the claims will not be permitted. [Id.

4. EXAMINATION—PRACTICE—NOT ENTERED.

Where the Examiner rejects the claims and in reply the applicant requests reconsideration and presents an argument responsive to the Examiner's action and at the same time presents as an amendment a new claim drawn to a different invention, *Held* that the amendment should not be entered, but that the Examiner should act upon the claims already in the case in view of the argument presented. [*Ex parte* Scott, 681.

5. ACTIONS BY APPLICANT—SUFFICIENCY—PRACTICE.

An applicant may accept the ruling of the Office as to some of its requirements and at the same time controvert the ruling as to others, and when he does so, treating all requirements, his action cannot be objected to as insufficient. [*Ex parte* Naef, 2901.

6. AFTER FINAL REJECTION—REASONS FOR DELAY.

Where after a final rejection, which is regularly and properly given, the applicant wishes to amend and alleges that he did not before properly understand the invention, *Held* that he has not shown good and sufficient reasons why the amendment was not sooner presented and that it should be refused admission. [*Ex parte* Schmidt, 2902.

7. NEW MATTER—PRACTICE.

Where the Examiner is of the opinion that certain descriptive matter inserted by amendment and included in a claim is not warranted by the original disclosure, *Held* that he should reject the claim. [*Ex parte* Howlett, 2775.

AMENDMENTS TO PRELIMINARY STATEMENTS.

(See Preliminary Statements, 1, 2, 3, 5, 6, 7.)

ANTICIPATION.

(See Invention, 3.)

APPEAL TO THE COMMISSIONER.

(See Appeal to the Examiners-in-Chief, 1, 2; Interference, 4, 5; Jurisdiction of the Court of Appeals of the District of Columbia, 2; Reopening of Appealed Cases.)

APPEAL TO THE COURT OF APPEALS OF THE DISTRICT OF COLUMBIA.

(See Jurisdiction of the Court of Appeals of the District of Columbia.)

1. JURISDICTION—DIVISION OF APPLICATION.

An appeal from the decision of the Commissioner of Patents requiring division between process and apparatus dismissed for want of jurisdiction. [**In re* Frasch, 1977.

2. DIVISION—INTERLOCUTORY ORDER.

The requirement for division is not a refusal of a patent, but is a mere interlocutory order from which there can be no appeal. [*Id.

3. REFUSAL OF PATENT—FINAL ORDER NECESSARY.

The right to appeal to the Court of Appeals of the District of Columbia from a decision of the Commissioner of Patents is limited to two classes of cases: first, where an application for patent has been finally denied, and, second, where in an interference proceeding there has been a final determination of the question of priority of invention between adverse claimants. [*Id.

4. INTERFERENCE—APPEAL TO COURT—ISSUE UNPATENTABLE—MOOT QUESTION.

The court should not be called upon to decide priority between rival claimants to an invention where the Patent Office expressly reserves for future consideration the question of patentability of the invention. It is not the province of the court to decide moot causes. [*Oliver *v.* Felbel, 2284.

APPEAL TO THE EXAMINERS-IN-CHIEF.

1. MISTAKE—REQUEST TO TRANSFER THE APPEAL TO COMMISSIONER AFTER EXPIRATION OF LIMIT OF APPEAL REFUSED.

Where an appeal has been taken to the Examiners-in-Chief from the decision of the Examiner refusing to dissolve an interference and it appears that the appeal was taken by mistake, *Held* that said appeal cannot be transferred to the Commissioner's docket after the limit of appeal has expired, for such a proceeding would have the effect of permitting an appeal to the Commissioner after the limit of appeal has expired. [Beck *v.* Long, 451.

2. SAME—PRACTICE.

In the event that an appeal in an interference proceeding is taken by mistake to the Examiners-in-Chief and the mistake is not discovered until after the limit of appeal has expired, *Held* that the proper practice to pursue is to withdraw the appeal to the Examiners-in-Chief and to file an appeal to the Commissioner, at the same time requesting an extension of the limit of appeal to include the date of filing. The reasons should be set forth why the appeal was not taken to the Commissioner sooner, and a copy of the paper should be served upon the opponent. [Id.

3. PETITION—REJECTION OF CLAIMS.

Where the Examiner has finally rejected the claims on the ground that they are not patentable, *Held* that his action will not be reviewed upon petition, but only upon appeal to the Examiners-in-Chief. [*Ex parte* Eickelberg, 2778.

4. REJECTION AFTER INTERFERENCE—RULE 133.

Where a final decision on priority has been rendered against a party in an interference and his claims involved have been finally rejected under Rule 133, *Held* that he has the right of appeal to the Examiners-in-Chief from the rejection. [*Ex parte* Schupphaus, 2778.

5. QUESTION OF MERITS.
The actions of the Examiner in citing a certain patent in rejecting the claims and in holding that the invention is abandoned will not be reviewed upon petition, since they relate to the merits and are appealable to the Examiners-in-Chief. [*Ex parte* Parkhurst, 3012.

6. RIGHT TO MAKE CLAIM.
The ruling by the Examiner that certain descriptive matter in the claim does not properly apply to the device disclosed is a ruling that the applicant is not entitled to make the claim and relates to the merits. [Id.

APPLICATIONS.

(See Copies of Pending Applications; Date of Filing Application; Division of Application; Drawings, 4; Examination of Applications; Interference, 28; Withdrawal of Allowed Applications.)

ASSIGNEES.

(See Attorneys, 1; Interference, 11.)

ASSIGNEE OF PART INTEREST—RIGHT TO PROSECUTE CASE—NOTICE TO OTHER PARTIES.
A petition asking that one of two joint owners be permitted to prosecute the application without the consent of the other will not be granted without serving a copy of the petition upon that other owner and giving him an opportunity to oppose it. [*Ex parte* Badgley, 2604.

ASSIGNMENTS.

(See Attorneys.)

DUTY OF OFFICE MINISTERIAL.
The Office cannot undertake to adjudicate the rights of parties on disputed questions of fact relating to assignments, since it acts in a ministerial capacity in such matters. [*Ex parte* Turner, 2608.

ATTORNEYS.

(See Allowed Applications, 2.)

1. PROTEST AGAINST REVOCATION OF POWER.
Where the attorneys appointed by the inventor protest against the revocation of their power by him on the ground that they represent an assignee and the only evidence presented that there has been an assignment consists of *ex parte* affidavits, *Held* that the protest will be dismissed. [*Ex parte* Collins, 2601.

2. REVOCATION OF POWER BY APPLICANT—ASSIGNMENT.
Where the applicant appoints attorneys in the case, *Held* that he may revoke their power even after an assignment of the invention. [Id.

BURDEN OF PROOF.

(See Interference, 9, 12, 13, 17.)

CLAIMS.

(See Amendments, 3; Combination; Division of Applications; Drawings, 1, 2, 3; Interference, 1, 2, 3, 4, 5, 27; Rejection of Cases.)

COMBINATION.

(See Division of Application, 14, 17, 22; Invention, 1, 4.)

CLAIM—INTANGIBLE ELEMENT SHOULD NOT BE INCLUDED.
An "opening" should not be made a positive or direct element in combination claims, for the reason that an opening is not a tangible thing. It can exist only in connection with some other element. If it is desired to describe this element as provided with an opening, there is no objection to such a course. [*Ex parte* Davin, 452.

COMMISSIONER OF PATENTS.

(See Withdrawal of Allowed Applications.)

CONCEPTION OF INVENTION.

(See Preliminary Statement, 8; Testimony, 2.)

CONSTRUCTION OF RULES.

(See Appeal to the Examiners-in-Chief, 4; Division of Applications, 20; Drawings, 1, 2, 3; Interference, 2; Rejection of Cases, 5; Reopening of Appealed Cases.)

CONSTRUCTION OF SPECIFICATIONS AND PATENTS.

(See Description.)

COPIES OF PENDING APPLICATIONS.

REQUEST FOR COPY OF APPLICATION—IDENTIFICATION OF CASE.
Where a party asks for a copy of an application for use in court and as authority for the request alleges that the applicant testified in the case that such an application was on file, *Held* that the request should identify the application. [*In re* Macwilliam, 2774.

COURT OF APPEALS OF THE DISTRICT OF COLUMBIA.

(See Appeal to the Court of Appeals of the District of Columbia; Jurisdiction of the Court of Appeals of the District of Columbia.)

DATE OF FILING APPLICATION.

COMPLETE PROCESS—NO DRAWING.
Where an application for a process was filed December 11, 1901, complete as to all of its parts except the drawing and it appeared that a drawing was not necessary for a full disclosure of the invention, *Held* that the application should be given a filing date as of December 11, 1901. [*Ex parte* Ludington, 236.

DECISIONS OF PATENT OFFICE AFFIRMED.

(See Interference, 8; Invention, 3.)

PRIORITY.
The decision of the Assistant Commissioner (100 O. G., 961) awarding priority of invention to Pupin affirmed. [*Stone *v.* Pupin, 1113.

DELAY.

(See Amendments, 6; Interference, 16, 24.)

DEPOSITIONS.

(See Interference, 20.)

DESCRIPTION.

(See Testimony, 2.)

SUFFICIENCY—LIBERAL CONSTRUCTION.
The fact that the invention oversteps the boundary of preexisting knowledge both as to structure and scientific principles warrants a liberal view of the scope of the descriptive specifications rather than a narrow and restrictive one. [*Stone *v.* Pupin, 1113.

DESIGNS.

(See Division of Applications, 3, 6, 7.)

1. SUBJECT-MATTER.
The subject-matter of a design application relates to the appearance of the article and not to its mechanical function. It is immaterial in what manner the invention is described in such an application or what the showing is, the subject-matter still relates to a design. [*Ex parte* Waterman, 253.

2. MISTAKE IN DESCRIPTION AND CLAIM.
If through ignorance or mistake an applicant claims in a design application subject-matter for which a design patent cannot under the statutes be granted, the claims must be rejected. (*Ex parte Proudfit*, 10 O. G., 585.) [Id.

DILIGENCE.

(See Interference, 6, 12, 13, 16, 22, 25.)

DISCLAIMER OF INVENTION.

(See Interference, 23.)

DISCLOSURE OF INVENTION.

(See Amendments, 1, 2; Division of Applications, 4, 5; Foreign Publication; Interference, 7, 8, 10, 23; Preliminary Statements, 8.)

DISSOLUTION OF INTERFERENCE.

(See Interference, 1, 4, 5; Motion to Dissolve Interference.)

DIVISION OF APPLICATIONS.

(See Appeal to the Court of Appeals of the District of Columbia, 1, 2.)

1. ARTICLE—PROCESS.
Division was properly required between claims covering a golf-ball and claims covering the process of making the same where it appears that the golf-balls are not necessarily the product of the method and that they could be made by other methods than that claimed. [*Ex parte* Foulis, 232.

2. INSULATING COMPOUND AND INSULATED CONDUCTOR.
Division properly required between claims for an insulating compound and process of making it and claims for an insulated conductor and process of making the same.
[*Ex parte* Lee, 233.

3. DESIGN APPLICATION—MECHANICAL APPLICATION.
A mechanical application cannot be considered a division of a design application. [*Ex parte* Waterman, 233.

4. SUBJECT-MATTER.
It is fundamental that "a proper divisional application does and can contain only matter carved out of the original case." (*Ex parte Henry*, 64 O. G., 899.) The subject-matter of the divisional application need not have been claimed or reached by any statement of invention in the original case. It is sufficient if the matter has been fully disclosed in the original application. [Id.

5. SAME—DISCLOSURE.
This disclosure, however, must be in an application in which the applicant would be permitted to present and prosecute a claim for the matter so disclosed. In other words, an applicant will be permitted to claim in a divisional application such segregable matter as might have, had he so elected, been claimed in the original application. [Id.

6. DESIGN AND MECHANICAL PATENTS.
Design patents and mechanical patents cover different monopolies. They are granted under different sections of the statute for different terms. [Id.

7. REQUIREMENT FOR DIVISION UNWARRANTED.
There is no warrant for a requirement for division in such a case. Since claims for mechanical functions cannot be made in a design application, it follows that such claims cannot be divided out of such an application. [Id.

8. REQUIREMENT OF—ACTION ON MERITS—PRACTICE.
Where the independence of the inventions is clear, it is the usual practice not to act on the merits of the case when the requirement of division is made in the first action. The most that is usually done is to cite patents after a cursory examination in order to show that the requirement of division has been correctly made. [*Ex parte* Goldman, 234.

9. SAME—SAME—SAME.
If the Examiner desires to make a complete action on the merits of the case in the same letter in which division has been required, there is no objection to his doing so; but it should be made clear in said action that the whole case has been considered on its merits and that not only those claims which are specifically rejected have been considered, but all of the others as well. [Id.

10. FINAL REJECTION PREMATURE—RIGHT TO AMEND.
Where in requiring division the Examiner rejects some of the claims upon references, but does not make it plain that he has given a full action upon the merits, *Held* that a final rejection given in the next letter is premature and that the applicant is thereafter entitled to amend. [Id.

11. STEAM-BOILER—FURNACE.
Division was properly required between claims covering a boiler construction and claims covering a furnace construction, as they are recognized by inventors and manufacturers as separate and independent inventions and are capable of separate use irrespective of their particular construction.
[*Ex parte* Downie and Messner, 235.

12. STAND FOR BILLIARD-TABLES—ADJUSTING DEVICE FOR LEVELING THE TOP OF THE TABLE.
Division should not be required between a claim for a stand for a billiard-table and a claim covering the stand in combination with the table-adjusting device.
[*Ex parte* Burrowes, 452.

13. LAWN-MOWER—CLUTCH.
Division was properly required between claims for a lawn-mower mechanism one of the elements of which is a clutch and the claims for the specific clutch construction. A clutch is a distinct and independent invention from the mechanism in which it is used as an element. [*Ex parte* Adams, 453.

14. PUMP AND MOTOR-GOVERNOR—COMBINATION CLAIMS.
Held that division should not be required between claims for the combination of a specific form of pump for pumping water and air with a closed receptacle and claims for the same combination with the addition thereto of a specific form of motor-governor where the combinations have not acquired a distinct status in the art. [*Ex parte* Cushing, 661.

15. PROCESS AND PRODUCT.
Held that division should not be required between claims to a process of depositing zinc on metallic surfaces and claims to the article produced where there is doubt as to the possibility of producing the article by any other process and the process will not produce any other article.
[*Ex parte* Cowper-Coles, 661.

16. GAS-ENGINE.
Held that division was properly required between claims to a sparking igniter, claims to a governor-valve, claims to a relief-valve, and claims to the general structure of a gas-engine. They cover separate and independent inventions.
[*Ex parte* Tyler, 666.

17. SAME—PARTS SPECIALLY ADAPTED FOR USE TOGETHER.
Held that division should not be insisted upon between claims to the engine bed or frame and to the valve-gear and claims to the general engine structure where the combinations are specially adapted for use in the general engine structure. [Id.

18. VESSEL—HULL AND RUDDER.
Held that division was properly required between claims to the external configuration of the hull of a vessel and claims to the means for mounting the rudder, since they are recognized as independent subjects of invention and are separately classified in this Office. [*Ex parte* Bustin, 1111.

19. SAME—MEANS FOR PROPELLING VESSELS—INDEPENDENT INVENTION.
Held that claims covering the means for propelling the ship should be claimed in a separate application from claims to the shape of the hull and to the means for mounting the rudder.
[Id.

20. WHEN REQUIREMENT SHOULD BE MADE—RULE 42.
Held that when the independence of the inventions is clear the requirement for division will be made before any action upon the merits, and when the independence of the inventions is not clear the requirement may be made at any time before the final action. [*Ex parte* Alminana, 1331.

21. UMBILICAL-TRUSS STRUCTURE—BELT.
Where certain claims are drawn to an umbilical-truss structure and other claims are not so limited, but nevertheless cover the unitary structure of the invention, *Held* that the device covered by all the claims is a single invention and divison between the broad and narrow claims should not be required.
[Id.

22. SPRING-MOTOR AND COMBINATION OF MOTOR WITH A FAN.
Held that division was properly required between claims to a spring-motor and claims to that motor in combination with a fan. [*Ex parte* Hoyt, 2177.

23. GAS-ENGINE—SPECIFIC DEVICE—CAPABLE OF GENERAL USE.
Held that division should be required between claims to the general gas-engine structure and specific claims covering, respectively, a self-lubricating journal-box, a lubricator for a crank-pin, a crank-pin, a speed-regulating device, a valve capable of use in any engine structure.
[*Ex parte* Tyler, 2177.

24. SAME.
Held that claims for a valve mechanism which covers a structure which is peculiarly adapted for use in the general gas-engine structure disclosed and claimed should not be divided from the claims covering the general gas-engine structure.
[Id.

25. ABANDONMENT OF APPLICATION—ACTION SUFFICIENT TO SAVE CASE.
Where the Examiner requires division between process and apparatus claims and between claims to different species of the apparatus without mentioning the particular claims by number, and the applicant amends by canceling the process claims and asks for reconsideration and a specific statement as to the apparatus claims, *Held* that his action is proper and saves the case from abandonment. [*Ex parte* Naef, 2601.

26. PROCESS AND PRODUCT.
Held that division was properly required between a claim for the process of making a box and a claim for the box where the box is not necessarily made by the process.
[*Ex parte* Schmidt, 2602.

DOUBLE USE.

(See Invention, 4.)

DRAWINGS.

(See Combination; Date of Filing Application.)

1. RULE 50 DEFINED.
Where the specification describes the grain of wood as running lengthwise and this feature is included in the claims, the drawing should show the same, since the rules require that the drawing must show every feature of the invention covered by the claims. (Rule 50.) [*Ex parte* Davin, 452.

2. RULE 50 DISTINGUISHED FROM RULE 51.
Where the grain of wood is an essential feature of the invention, the requirement that the drawing should show the same is not inconsistent with the requirement of the fourth section of Rule 51, which states that imitations of wood in surface-graining should not be attempted. [Id.

3. RULE 50—SECTIONAL VIEW OF ELEMENT.
Where an element is described and claimed, *Held* that said element should also be clearly shown in the drawing and that an illustration of said element by means of a sectional view where it does not completely illustrate the structure is not sufficient. [*Ex parte* Alminana, 1331.

4. CLEAR DISCLOSURE NECESSARY.
The requirement for additional illustration is proper when the drawing does not disclose with certainty what the invention is. [*Ex parte* Seitzinger, 2773.

EVIDENCE.

(See Testimony.)

EXAMINATION OF APPLICATIONS.

(See Amendments, 4.)

MAKING CASES SPECIAL.
Applications must be examined in regular order, and the Office cannot give one case precedence over others because of the applicant's business arrangements which are dependent upon a speedy allowance of the patent.
[*Ex parte* Bischoff, 2008.

EXAMINERS.

(See Allowed Applications.)

EXHIBITS.

(See Interference, 31.)

FINAL FEES.

(See Allowed Applications.)

FIRST AND ORIGINAL INVENTOR.

(See Interference, 9, 17.)

FOREIGN PUBLICATION.

DISCLOSURE—WHAT NECESSARY.
A description of an invention in a foreign publication in order to defeat a patent in this country must be so clear as to enable persons "skilled in the art" to make the invention.
[Pupin *v.* Hutin and Leblanc *v.* Stone, 931.

FORFEITED CASES.

(See Allowed Applications.)

RENEWAL—ALLEGED ASSIGNEE.
Where an alleged assignee asks to be allowed to renew a forfeited application and files a copy of the alleged assignment saying that the original is lost and the inventor protests saying that no valid assignment has been made, *Held* that the request must be denied. [*Ex parte* Turner, 2008.

INOPERATIVENESS.

(See Interference, 8.)

INTERFERENCE.

(See Appeal to the Court of Appeals of the District of Columbia, 3; Appeal to the Examiners-in-Chief, 4; Jurisdiction of the Court of Appeals of the District of Columbia; Motion to Dissolve Interference; Motion to Reopen Interference; Preliminary Statement; Rejected Claims; Testimony; Trademarks, 30, 31.)

1. IRREGULARITY—ALLOWANCE OF CLAIMS.
Where the Examiner has not notified the parties that the claims in issue are patentable, *Held* that this does not constitute such irregularity as will preclude a proper decision of the question of priority of invention and does not warrant a dissolution of the interference. [Luger *v.* Browning, 231.

2. INTERLOCUTORY QUESTIONS—FINAL HEARING.
Held that questions as to the patentability of the claims and irregularity in the declaration should be raised by motion under Rule 122 and that they will not be considered upon an appeal relating to priority of invention. [Id.

3. PATENT AND APPLICATION—REISSUE APPLICATION—CLAIMS REJECTED AND CANCELED.
Where one interference is declared between a pending application of S. and a patent to R. and another interference is declared between the said pending application of S. and an application for a reissue of the patent to R., *Held* that on a consolidation of the two interferences the same will continue as to counts corresponding to claims in the patent, even though these claims were originally presented in the reissue application and subsequently canceled therefrom on reference to an English patent to S. [Read *v.* Scott, 449.

4. DISSOLUTION—RIGHT TO MAKE CLAIMS—APPEAL TO COMMISSIONER DIRECT DISMISSED.
Where the Examiner dissolves an interference on the ground that the respective parties thereto have no right to make the claims, no appeal from such a decision can be taken directly to the Commissioner, and such an appeal will be dismissed.
[Story *v.* Criswell, 688.

5. SAME—APPEAL—MOOT QUESTION.
Where the Examiner dissolves an interference because the parties thereto have no right to make the claims on the ground of inoperativeness and the limit of appeal from said decision having expired, *Held* that the question of interference in fact necessarily becomes a moot question, and an appeal from a decision involving the same will be dismissed. [Id.

6. MOTION TO REOPEN—DILIGENCE IN FINDING NEW FACTS—WHAT CONSTITUTES.
Where a motion is brought to reopen an interference proceeding and take additional testimony and the facts in support of said motion are that a certain letter which is thought to be material to the case is subsequently found in an envelop placed among other papers, which papers were searched prior to and during the taking of the testimony, and the only reason for not primarily finding the said letter was that because of an indorsement on the envelop containing the same the contents of the envelop were not looked into, *Held* not to constitute sufficient ground for granting the motion.
[Robinson *v.* Townsend *v.* Copeland, 688.

7. DISCLOSURE OF INVENTION.
A disclosure of the invention to a party skilled in the art to which the invention belongs is sufficient to be regarded as a disclosure in the sense of the patent law.
[Pupin *v.* Hutin and Leblanc *v.* Stone, 931.

8. PRIORITY—SUFFICIENCY OF DISCLOSURE IN APPLICATION—DECISION OF PATENT OFFICE CONCLUSIVE.
The decisions of the expert tribunals of the Patent Office as to the sufficiency of the disclosure in the original application to support the invention defined in the counts of the issue will be accepted as conclusive by the court in considering questions of priority of invention. [*Stone *v.* Pupin, 1113.

9. ORIGINALITY—BURDEN OF PROOF.
Where it is shown that H. independently built and operated a machine and filed an application for a patent on the same, H. must be presumed to be an original inventor, and it is incumbent upon F., who alleges prior disclosure to H., to establish his allegation by clear proof.
[Funk *v.* Matteson *v.* Haines, 1563.

10. ORIGINALITY—PROOF OF DISCLOSURE.
When H. is the only party to establish an actual reduction to practice and when the testimony in behalf of F. not only does not support the allegation of F. that the invention was disclosed through his agent to H., but is quite persuasive that the invention disclosed to H. related to another structure, *Held* that priority of invention should be awarded to H. [Id.

11. PRELIMINARY STATEMENT BY ASSIGNEE.
Where an inventor refuses to file a preliminary statement and the records show that the assignee was diligent in endeavoring to obtain a statement from the inventor, *Held* that a statement made by the assignee should be accepted even though filed shortly after the expiration of the time for filing preliminary statements. [Reynolds *v.* Bean, 1765.

12. SENIOR APPLICANT—JUNIOR APPLICANT—BURDEN OF PROOF—PRIORITY OF INVENTION.
H. being the senior party, the first to apply to the Patent Office, has *prima facie* the priority of right, and the *onus* of proof is upon any junior applicant to show not only priority of invention, but he must also show that he has used reasonable diligence in adopting and perfecting his invention, for in such a case the mere conception without actual reduction to practice within a reasonable time does not avail a junior party making the claim. [*Funk *v.* Matteson *v.* Haines, 1764.

13. SAME—SAME—SAME.
Whoever first perfects a machine is entitled to the patent therefor and is the real inventor, although others may have previously had the idea and made some experiments toward putting it in practice, subject, however, to this qualification, that if the party who conceives the invention was at the time of a second invention by another party using reasonable diligence in perfecting the same he is entitled to be recognized as the first inventor, although the second to conceive may have been the first to reduce to practice, either actual or constructive. (*Agawam Co. *v.* Jordan*, 7 Wall., 583.) [*Id.

14. PRIORITY—REDUCTION TO PRACTICE—WHAT IS NECESSARY.
In order to constitute a patentable invention, there must be more than mere progress to an end, however near that progress may have approximated to the end in view. The law requires not conjecture, but certainty, and where the question relates to a machine the conception must have been clothed in substantial form, which demonstrated at once its practical efficiency and utility. (*Coffin *v.* Ogden*, 5 O. G., 270; 18 Wall., 120.) [*Id.

15. SAME—PROOFS—ALLEGATION IN PRELIMINARY STATEMENTS.
In the production of proof in matters of interference the parties must be held strictly to the dates set forth in their preliminary statements. [*Id.

16. SAME—CONCEPTION—DELAY IN REDUCTION TO PRACTICE—EFFECTS OF.
Assuming the truth of the statement contained in the preliminary statement of F. or even that contained in his testimony as to the time of conception of the invention, the great delay in attempting to complete and reduce the invention to practical operation is entirely without explanation and must consequently give rise to a strong presumption against his pretensions. [*Id.

17. SAME—BURDEN OF PROOF.
H. being the first to reduce to practice and the first to apply to the Office must be presumed to be an original inventor of the machine which it is conceded he built and operated and for which he was the first to make an application for a patent. F. controverts this right of H., and it is incumbent upon him to show by clear and indubitable proof that the presumption in favor of H. is not well founded and that the right is in himself. Such proof F. has failed to produce, and priority of invention is therefore awarded to H. [*Id.

18. PRIORITY—DECISION AFFIRMED.
As the parties to this interference are also parties to the pending interference, No. 20,436, and as this case depends in all respects upon the same facts and the evidence is the same, *Held* that for the reasons in that case assigned H. is the prior inventor. [*Funk *v.* Haines, 1766.

19. SUPPRESSION OF TESTIMONY—PRINTED RECORD.
Where certain testimony taken is ordered suppressed, *Held* that it should not be embodied in the printed record, since that record should contain only matter properly in the case.
[Feibel *v.* Oliver, 1975.

20. SAME—REMOVING SUPPRESSED DEPOSITION FROM PRINTED RECORD.
Where a party prints in his record depositions which have been suppressed, *Held* that a motion to expunge, cancel, and remove entirely from the printed record will be granted.
[Id.

21. PRIORITY OF INVENTION—CONCEALMENT OF INVENTION.
Where F. reduced the invention to practice and for one year and five months thereafter made no other machines and made no substantial advance toward placing the invention on the market, during which time O. made the invention and put it into use, *Held* that F. is the first inventor in the absence of a showing that he intentionally concealed the invention from the public or abandoned the idea of obtaining a patent and using the invention. [Feibel *v.* Oliver, 2175.

22. REDUCTION TO PRACTICE—DILIGENCE IN USING INVENTION.
By a reduction to practice a party's rights are protected, and it is not necessary thereafter to use the same amount of diligence in putting the invention upon the market as is necessary in a reduction to practice by one first to conceive but the last to reduce to practice. [Id.

23. PRIORITY—DISCLAIMER OF INVENTION.
Where O. deliberately states in answer to a question propounded by his own counsel that he does not claim to be the inventor of the matter in controversy, *Held* that priority of invention cannot be awarded to him.
[*Oliver *v.* Feibel, 2384.

24. DELAY—PRESUMPTIVE EVIDENCE.
Long and unexplained delay yielding to activity only when the knowledge comes of the entrance of a rival on the field is always presumptive evidence that what is claimed to have been a reduction to practice was no more than an unsatisfactory or abandoned experiment. [*Id.

25. DILIGENCE.
The diligence required of an inventor is diligence rather in the reduction of his invention to practice than in application to the Patent Office or in manufacturing his device for public use. [*Id.

26. REDUCTION TO PRACTICE—CONCEALMENT OF INVENTION.
When reduction to practice by the first inventor is shown, his right to a patent is not barred by delay thereafter unless there be some circumstance of concealment, suppression, or abandonment of the invention. [*Id.

27. DECISION—RIGHT TO A PATENT.
Held that a final decision on priority in an interference is not a decision that the defeated party is not entitled to a patent upon the claims, although it may furnish a basis for such a decision. [*Ex parte* Schüpphaus, 2775.

28. SUBSTITUTE APPLICATION—REFUSAL TO CONSIDER—RIGHTS OF APPLICANT.
Where after a decision against him in an interference a party files a new application as a substitute for the one involved, *Held* that he is entitled to take any action in the new case which he could have taken in the old and that the Office cannot refuse to consider the new case. [Id.

29. MOTION AFTER LIMIT OF APPEAL EXPIRED—JURISDICTION RESTORED.
Where a motion was filed within the limit of appeal and to accommodate counsel was noticed for hearing two days after the limit had expired, *Held* that the jurisdiction of the Examiner of Interferences will be restored to consider the motion. [Jean and Goode *v.* Hitchcock, 3011.

30. REOPENING—ADDITIONAL TESTIMONY.
After an interference has been decided by the Examiner of Interferences it will not be reopened for the purpose of permitting one of the parties to take additional testimony when it appears that said testimony is unimportant and, further, that the facts could have been discovered with reasonable diligence before the testimony was originally taken.
[Shaffer *v.* Dolan, 3012.

31. SAME—EVIDENCE ACCESSIBLE.
Where a witness testifies as to an exhibit which is said to be a copy of the original and says that he believes that the original is in his safe in his office and after a decision by the Examiner of Interferences the party wishes to reopen the interference to show that the original could not have been produced, *Held* that he could and should have produced the evidence originally. [Id.

INVENTION.

1. PATENTABILITY—NEW ELEMENT OF OLD COMBINATION.
The combination of a trimmer with one type of stitch-forming mechanism being old, *Held* that it is not invention to combine that trimmer with another stitch-forming mechanism, whether the second stitch-forming mechanism be new or old, when no new result is accomplished which differs in kind from the result accomplished by the first combination and when each element acts in its own way and is not affected by the other and performs its function in the combination irrespective of the other. [*Ex parte* McNeil, 1976.

2. SAME—SAME.
Held, further, that the invention, if any, is in the stitch-forming mechanism and that the applicant should claim it separately if he regards himself as the inventor of it. [Id.

3. PATENTABILITY—MCNEIL—SEWING-MACHINE—CLAIMS NOT PATENTABLE.
The claims in the application of Chester McNeil for a sewing-machine, Serial No. 665,198, filed December 31, 1897, examined and *Held* to be not patentable in view of the prior art. (Decision of Assistant Commissioner, 100 O. G., 1976, affirmed.)
[*In re* McNeil, 2178.

4. COMBINATION UNPATENTABLE—ELEMENT NEW—DOUBLE USE.
Where the combination in a sewing-machine of a trimmer in advance of one form of stitch-forming mechanism is old, *Held* that the combination of that trimmer with another stitch-forming mechanism is not patentable, whether that stitch-forming mechanism is new or old. [*Id.

JURISDICTION OF THE COURT OF APPEALS OF THE DISTRICT OF COLUMBIA.

(See Appeal to the Court of Appeals of the District of Columbia; Patentability.)

1. PATENTABILITY A PREREQUISITE TO INTERFERENCE.
Patentability of the invention is a necessary prerequisite to the declaration of an interference, and the court is without jurisdiction in a case where there is not a final favorable decision on that question by the Patent Office.
[*Oliver *v.* Feibel, 2384.

2. PATENTABILITY DOUBTFUL—PRACTICE.
Where a question as to the patentability of the invention is raised by some tribunal of the Patent Office after the declaration of an interference, *Held* that it should be finally settled before a decision on priority is rendered which entitles the defeated party to appeal to the court. [*Id.

JURISDICTION OF EXAMINER.

(See Withdrawal of Allowed Applications.)

JURISDICTION OF THE EXAMINER OF INTERFERENCES.

(See Interference, 29.)

LABELS.

(See Prints, 2.)

1. COMMISSIONER OF PATENTS DETERMINES LAWFULNESS.
The Commissioner of Patents is authorized and required to determine whether the thing presented for registration is a label and complies with the requirements of the law. He is not required to register everything which is presented and called a label.
[*Ex parte* Regina Music Box Company, 1112.

2. MUST BE DESCRIPTIVE AS WELL AS ARTISTIC.
A label to be registrable in the Patent Office must not only possess artistic merit, but must be descriptive of the article for which it is used. [Id

3. For Article of Manufacture—Descriptive.
A mere statement by the applicant for registration that he intends to use the design presented upon a particular article of manufacture does not make it *for* that article within the meaning of the law. The indication of the article must be in the label itself. [Id.

4. Registrability Determined by Intrinsic Qualities.
The registrability of a label must be determined by its intrinsic qualities and not by some possible or contemplated use of it. [Id.

LIMIT OF APPEAL.

(See Appeal to the Examiners-in-Chief, 1, 2; Interference, 5, 29.)

MECHANICAL PATENT.

(See Division of Applications, 3, 6, 7.)

MERITS OF THE CASE.

(See Appeal to the Examiners-in-Chief, 5, 6; Division of Applications, 8, 9, 10.)

MISTAKE.

(See Appeal to the Examiners-in-Chief, 1, 2.)

MODEL.

(See Preliminary Statement, 5, 7.)

MOTION TO DISSOLVE INTERFERENCE.

(See Appeal to the Examiners-in-Chief, 1, 2; Interference, 2.)

Facts Shown by the Testimony.
A motion for dissolution should not be brought on grounds arising from the testimony. Facts which are alleged to be established by the testimony are to be determined on final hearing and not on motions for dissolution.
[Shallenberger v. Andrews, 3013.

MOTION TO REOPEN INTERFERENCE.

(See Interference, 6.)

Requisites.
Where a motion to reopen an interference to take further testimony does not set forth the facts to which the proposed witnesses will testify, *Held* that the motion will not be granted.
[Robinson v. Townsend v. Copeland, 668.

NEW ELEMENTS.

(See Invention, 1, 4.)

NEW MATTER.

(See Amendments, 1, 2, 3, 7; Appeal to the Examiners-in-Chief, 6.)

NEWLY-DISCOVERED EVIDENCE.

(See Interference, 6.)

NOTICE OF ALLOWANCE.

(See Allowed Applications; Withdrawal of Allowed Applications.)

PATENTABILITY.

(See Interference, 3; Invention, 1, 3, 4; Jurisdiction of the Court of Appeals of the District of Columbia.)

Invention—Jurisdiction to Vacate Favorable Decision.
Until the patent is actually issued it is always competent for the Patent Office, with due regard to the rules of law, to vacate its favorable adjudication upon the question of patentability for good and sufficient cause. [*Oliver v. Felbel, 2384.

PATENTS AND APPLICATIONS.

(See Interference, 3.)

PENDING APPLICATIONS.

(See Copies of Pending Applications.)

PETITION TO THE COMMISSIONER OF PATENTS.

(See Appeal to the Examiners-in-Chief, 1, 2, 4, 5.)

PETITION TO THE COURT.

Practice—Statement of Points.
A petition to the Commissioner should state the point or points to be reviewed and should not be taken until the questions have been twice acted upon by the Examiner.
[*Ex parte* Organ, 231.

PRELIMINARY STATEMENTS.

(See Interference, 11, 15, 16.)

1. Amendment.
Where it appears that an amendment to a preliminary statement will not carry the date of reduction to practice back of that of the opposing party and a reasonable excuse is offered for the delay in presenting the amendment and, further, that no testimony has been taken, *Held* that the amendment should be permitted. [Gales v. Berrigan, 232.

2. Amendment.
Where testimony has been taken by both parties, a motion for leave to amend a preliminary statement by changing the date of reduction to practice will not be granted where there is no showing that the utmost diligence in preparing the original statement had been used and when it does not appear that a mistake has been made in alleging the date of reduction to practice. (*McDermott v. Hildreth*, 98 O. G., 1282.)
[Lockwood v. Schmidt, 453.

3. Interference—Partial Dissolution—New Statements Not Permitted.
Where preliminary statements have been filed in an interference proceeding and on motion the interference is subsequently dissolved as to one of the counts and continued as to others, this fact of itself does not warrant new times for filing preliminary statements being set, as such a proceeding would have the effect of permitting the amendment of the original statement. [Seaman v. Brooks, 685.

4. Same—Same—Motion to File New Statement—Showing Required.
Where the showing which accompanies a motion to file a new preliminary statement, which is in effect a motion to amend the original statement, merely states that additional facts have been discovered, without specifying said facts, and that the utmost diligence was exercised in making the discovery of the new facts, without stating what means were employed and the reasons why the same means could not have been earlier employed, *Held* not sufficient to warrant the grant of the motion. (*McDermott v. Hildreth*, 98 O. G., 1282.)
[Id.

5. Interference—Amendment.
Where a preliminary statement contains the allegation that no model was made and it is desired to amend it by adding the allegation that an experimental device was made and it appears that said device was in fact a model, *Held* that the amendment should not be permitted, since it would make the statement contradictory. [Williams v. Liberman, 1351.

6. Same—Same—Same.
Where there is no attempt to change the date of conception, disclosure, or reduction to practice, the reason for the strict rule against amendment does not apply. [Id.

7. Same—Amendment—Model.
Where it appears from the testimony that a model was in fact made which had been forgotten and motion to amend the preliminary statement to allege that fact is made before the opposing party's time for taking testimony is closed, *Held* that the amendment will be permitted. [Id.

8. Same—Testimony at Variance with Preliminary Statement is Inadmissible.
A party is confined in his proofs to the dates set up in his preliminary statement as to conception and disclosure, and evidence tending to establish an earlier date is inadmissible. (*Cross v. Phillips*, 87 O. G., 1899.)
[Funk v. Matteson v. Haines, 1563.

9. Motion to Strike Out.
Where a preliminary statement is held by the Office to be informal in that it does not sufficiently state the facts and the party is called upon for a new statement, *Held* that the new statement will not be stricken out on motion merely because it states additional facts besides those called for by the Office.
[Shaw v. Gally, 2014.

PRINTED RECORD.

(See Interference, 20.)

PRINTS.

1. Must be Descriptive.
A print in order to be registrable must be descriptive of the article which it is intended to advertise.
[*Ex parte* Royal Medicine Company, 2775.

2. Prints and Labels—Descriptive.
Prints and labels are made registrable by the same section of the copyright law, and the requirement that they indicate the article to which they refer applies to both. [Id.

PRIORITY OF INVENTION.

(See Appeal to the Court of Appeals of the District of Columbia, 3, 4; Appeal to the Examiners-in-Chief, 4; Decision of the Patent Office Affirmed; Interference, 2, 8, 10, 12, 13, 14, 17, 21, 22, 23, 27.)

PROCESS.

(See Date of Filing Application.)

PROCESS AND PRODUCT.

(See Division of Applications, 1, 2, 15.)

REDUCTION TO PRACTICE.

(See Interference, 10, 13, 14, 16, 23, 24, 25, 26; Testimony, 1.)

REFUSAL OF PATENT BY COMMISSIONER.

(See Appeal to the Court of Appeals of the District of Columbia, 3.)

REISSUE APPLICATIONS.

(See Interference, 3.)

Rejection of Claims Corresponding to Those in Original Patent—Effect on Validity of Original Patent.
The cancellation of claims in a reissue application which correspond to the claims of the patent which it is sought to reissue has no effect upon the claims in the patent while the reissue application is still pending in the Patent Office. (*The McCormick Harvesting Machine Co. v. Aultman & Co.*, 88 O. G., 1988.) [Read v. Scott, 449.

REJECTED CASES.

(See Appeal to the Examiners-in-Chief, 4; Reopening of Appealed Cases.)

REJECTED CLAIMS.

Allowance of Claims—Notice—Interference.
Where the Examiner has rejected certain claims, but subsequently declares an interference as to them, *Held* that this amounts to an allowance of them, although no formal notice to that effect was sent. [Luger v. Browning, 231.

REJECTION OF CASES.

(See Amendments, 4, 7; Appeal to the Examiners-in-Chief, 4; Division of Applications, 9, 10; Interference, 27.)

1. Final—Amendment Not Affecting Substance of Claims.
Where after the rejection of claims the applicant presented an amendment correcting the spelling of words positively including elements which were inferentially included before and transposing a descriptive phrase from one place to another, *Held* that the amendment is merely formal in character and does not prevent a final rejection. [*Ex parte* Casler, 1380.

2. Final—Amendment—Claims Not the Same in Substance.
Where a claim including a "tub" as an element is rejected and the applicant presents an amendment including an "oscillating tub," *Held* that the claim is not the same in substance and that a final rejection is not in order. [Id.

3. Final—Formal Amendments.
Where an applicant makes merely formal amendments to the claims and requests reconsideration, *Held* that a final rejection is in order. [*Ex parte* Downing, 2176.

4. Amendment After Final Rejection—Additional Claim—Formal Amendment.
A party cannot demand the admission of an additional claim after final rejection as placing the case in better form for appeal, since if it differs from other claims it affects the merits. [Id.

5. Same—Duplication of Claims.
Where after final rejection the applicant presents by amendment an additional claim which is substantially the same as one of those rejected, *Held* that the amendment should not be entered, either with or without the showing referred to in Rule 68, since duplicate claims are not permissible. [Id.

REJECTION OF CLAIMS.

(See Reissue Applications.)

REOPENING OF APPEALED CASES.

Reopening In Application After Appeal to the Commissioner—Rule 142.
Where on appeal the Commissioner has affirmed the decision of the Examiners-in-Chief affirming the rejection by the Examiner of the claims in an application for a patent, *Held* that the application will not be reopened for further consideration by the Examiner in the absence of any showing to excuse the delay in bringing the petition to reopen, and where no showing is made of great hardship or irreparable injury to the applicant in case this application is not reopened.
[*Ex parte* Harrison, 2018.

REOPENING OF INTERFERENCE.

(See Interference, 30, 31.)

RESULTS.

(See Invention, 1.)

SPECIFICATIONS.

(See Description.)

1. Private Identifying-Marks—"Case No. 2332."
An applicant will not be permitted to include in the specification private identifying-marks which have no meaning to any one else, such as "Case No. 2332."
[*Ex parte* Ball, 2002.

2. Irrelevant Matter.
The object of the specification is to describe the invention, and it should not include matter which does not assist in accomplishing that result and which, if considered at all, may lead to confusion. [Id.

SUBSTITUTE APPLICATIONS.

(See Interference, 28.)

TECHNICAL TERMS.

Interference.
The words "skilled in the art" include *careful workmen* who are skilful in the particular line of business in which they are engaged. The law does not warrant a construction of these words which includes only persons of high scientific attainments. [Pupin v. Hutin and Leblanc v. Stone, 961.

TESTIMONY.

(See Interference, 6, 19, 20, 30; Trade-Marks, 30.)

1. Interference.
When the testimony of the principal is worthy of belief and his testimony is corroborated by one credible witness, *Held* sufficient to establish a conception and a reduction to practice of the invention.
[Pupin v. Hutin and Leblanc v. Stone, 961.

2. Same.
Where the contents of a written report made by an inventor stands without sufficient corroboration as to time, this report cannot be considered as sufficient to establish a date of conception of the invention, even though it did in fact describe the invention. [Id.

3. Suppression—Reopening Interference.
Where testimony is suppressed because of irregularities in the taking thereof and it appears that the irregularities were due entirely to inadvertence and not to an intention to delay the proceedings, *Held* that the party should be given an opportunity to retake the testimony.
[Blackman v. Alexander, 2268.

TRADE-MARKS.

1. Patented Article—"Holophane"—Not Registrable.
The word "Holophane" alone is not registrable as a trade-mark for prismatic glass, for the reason that it is the name of the patented article in connection with which the mark is used and for the further reason that the word is shown to have been used as the name of the article long prior to any date of use which is set up by the present applicant.
[*Ex parte* Holophane Glass Company, 450.

2. NAME AND ARBITRARY SYMBOL—SAME.
Where it appears that the word "Holophane" alone is not registrable, it cannot be made registrable by association with an arbitrary symbol. (*Ex parte Farnum and Company*, 18 O. G., 412.) [Id.

3. GOODS OF THE SAME CLASS—LAMPS AND BICYCLE-LAMPS.
A trade-mark for gas or vaporizing lamps, except bicycle-lamps, refused registration in view of substantially the same mark registered for bicycle-lamps, since the goods are of the same class and the use of the same mark by different owners will mislead the purchasing public.
[*Ex parte* Aladdin Gas Light Company, 450.

4. ANTICIPATION—"DERMAKOLA" AND "DERMACURA."
The word "Dermakola" should not be refused registration upon the registered word "Dermacura" in view of the difference in the sound of the words and in view of the difference in appearance due to the style in which they are printed.
[*Ex parte* Laxakola Company, 451.

5. "GALENA"—REGISTRABLE.
The word "Galena" as a trade-mark for manufactured metals *Held* to be registrable on the ground that while it has a limited geographical significance and is also descriptive of lead sulfid its arbitrary significance when used in connection with antifriction metals is so far predominating that it will be so understood by the public.
[*Ex parte* Magnus Metal Company, 451.

6. THE WORD "BESTOFALL" NOT REGISTRABLE.
The word "Bestofall" not registrable as a trade-mark, as it indicates the quality of the goods in that they are the best of all in that class. [*Ex parte* West, 682.

7. THE SINGLE WORD "BESTOFALL" NOT DIFFERENT FROM THE THREE WORDS "BEST OF ALL."
The single word "Bestofall" conveys the same idea as the three words "best of all." It cannot, therefore, in any true sense be said to be a coined word. [Id.

8. A "RED STAR REPRESENTED BY A WORD OR SYMBOL" NOT REGISTRABLE OVER A "STAR INCLOSING THE LETTER 'G.'"
A trade-mark consisting of a "red star represented by a word or symbol" *Held* not to be registrable in view of the registered mark which consists of a "star inclosing the letter 'G'" on the ground that there is such a resemblance between the two marks that the purchasing public would be deceived.
[*Ex parte* Swan and Finch Company, 682.

9. THE WORD "NAPTHOL-METHANE" REGISTRABLE FOR CARBON-BLACK.
The compound word "Napthol-Methane" *Held* to be registrable as a trade-mark for carbon-black, for the reason that it is well known that this substance contains nothing but carbon. If these words are descriptive at all, they are not descriptive of this substance; neither are they deceptive, as they would never be understood as describing carbon-black.
[*Ex parte* Castle Brook Carbon Black Company, 683.

10. THE WORD "AURORA" REGISTRABLE.
The word "Aurora" *Held* to be registrable as a trade-mark, as its fanciful or arbitrary meaning so predominates over its purely geographical significance that it would be understood by the purchasing public as an arbitrary word designating origin or ownership.
[*Ex parte* Aspegren and Company, 684.

11. ARBITRARY WORDS—NAME OF LOCALITY.
Where a word having an arbitrary or fanciful meaning has been adopted as a name of locality, *Held* that the question whether or not it is registrable as a trade-mark depends upon the question whether or not its arbitrary meaning so far predominates over its geographical meaning that it will be so understood by the purchasing public. [Id.

12. REGISTRABLE MARKS—INDICATION OF ORIGIN OR OWNERSHIP.
Whether or not a word is registrable as a trade-mark depends upon the meaning which will be given to it by the purchasing public. If it will be understood as indicating origin or ownership, it is registrable. [Id.

13. "WAUKWELL" FOR SHOES—NOT DESCRIPTIVE.
The word "Waukwell" as a trade-mark for shoes *Held* registrable, since it is not descriptive of the shoes.
[*Ex parte* Parker, Holmes & Company, 1111.

14. ANTICIPATION—"WAUKWELL"—"WALKEASY."
Held that the trade-mark "Waukwell" is not anticipated by the prior marks "Walkeasy" and "Walk-a-way" for the same class of goods, since purchasers exercising ordinary care would not confuse the marks and be misled. [Id.

15. "GRECIAN"—GEOGRAPHICAL OR DESCRIPTIVE.
Held that the word "Grecian" should not be registered as a trade-mark, since it either conveys the idea that the articles to which it is applied came from Greece and is therefore geographical or that they are made in the Grecian style and is therefore descriptive.
[*Ex parte* Classic Corset Company, 1329.

16. "SUCCESS"—ARBITRARY AND FANCIFUL WORD.
Held that the word "Success" as a trade-mark for stoves and ranges is registrable, since it does not describe any quality or characteristic of the articles and would be understood by purchasers as arbitrary and fanciful.
[*Ex parte* Huenefeld, 1329.

17. DEFINITION OF DESCRIPTIVE WORDS.
The prohibition against the registration of descriptive words as trade-marks applies only to those words which state or define some quality or characteristic of the article or designate its class, grade, style, or quality or the ingredients of which it is composed. [Id.

18. "TELEGRAPHONE" REFUSED REGISTRATION ON "TELEGRAPHOPHONE."
The word "Telegraphone" refused registration as a trade-mark for apparatus for recording and reproducing sounds in view of the descriptive word "Telegraphophone," which has long been in use to describe such apparatus.
[*Ex parte* Hutchins, 1330.

19. "MINUTE" FOR COFFEE—DESCRIPTIVE.
The word "Minute" should not be registered as a trade-mark for malted cereal coffee, since it is descriptive of a quality or characteristic of the coffee, meaning that it is of such a character as to be prepared for use in a minute.
[*Ex parte* Whitman Grocery Company, 1763.

20. DESCRIPTIVE—"FULLCUT."
"Fullcut" as a trade-mark for clothing refused registration on the ground that it is descriptive, since it would convey to the purchasing public a definite idea of the style of the clothing.
[*Ex parte* Miami Clothing Manufacturing Company, 1975.

21. SAME—PRINTING IN SCRIPT.
Merely printing a mark otherwise not registrable in script with a flourish beneath it does not render it registrable. [Id.

22. DESCRIPTIVE—"NEVERS-TICK."
"Nevers-Tick" as a trade-mark for lubricants refused registration upon the ground that it is descriptive.
[*Ex parte* Woolworth, 1976.

23. "MALT MYRRH" FOR MALT LIQUORS—DESCRIPTIVE.
Held that "Malt Myrrh" as a trade-mark for malt liquors is not registrable, since the word "Malt" is clearly descriptive and "Myrrh" is either descriptive or deceptive.
[*Ex parte* Barrett & Barrett, 1976.

24. ANTICIPATION—"FLORODORA" AND "FLORIDENA."
The word "Florodora" refused registration in view of the prior registered mark "Floridena."
[*Ex parte* Grossmith, 2175.

25. DESCRIPTIVE—"DR. HOFFMANN'S DROPS."
"Dr. Hoffmann's Drops" refused registration as a trade-mark for medicine, since "Hoffmann" is an ordinary surname and "Drops" is descriptive. [*Ex parte* Traudt, 2383.

26. "CATARRHAL JELLY"—NOT REGISTRABLE.
The words "Catarrhal Jelly" as a trade-mark for a jelly-like remedy for catarrh *Held* descriptive and not registrable.
[*Ex parte* Kenyon, 2388.

27. FACSIMILE—DESCRIPTIVE WORDS.
Where the facsimile of a trade-mark includes certain arbitrary symbols and the representation of the sea having printed thereon the word "Lotion," *Held* that the word "Lotion" being descriptive forms no part of the mark and should be removed. [*Ex parte* Star Lotion Remedy Company, 2603.

28. DRAWINGS—DESCRIPTIVE WORDS NOT INCLUDED.
A descriptive word cannot be made a part of a trade-mark by association with arbitrary symbols in the ordinary way, and therefore the drawing of the application should disclose only the arbitrary symbols. [Id.

29. SAME—PARTS INSEPARABLE.
A descriptive word should not be retained in the drawing of a trade-mark application unless its parts are so interwoven with the arbitrary parts of the mark as to become an inseparable part thereof. [Id.

30. INTERFERENCE—DATE OF ADOPTION AND USE SET UP IN STATEMENT—WEIGHT GIVEN TO TESTIMONY SHOWING EARLIER USE.
Where a certain date of adoption and use of a trade-mark is set up in the statement and declaration filed with an application for registration and the testimony offered in the interference proceeding shows an earlier date. *Held* that such testimony may be considered and such weight given to it as may be proper under the circumstances of the case.
[Broderick and Bascom Rope Company *v.* Leschen and Sons Rope Company, 3011.

31. SAME—AMENDMENT TO STATEMENT AFTER DETERMINATION OF INTERFERENCE.
A motion during the progress of a trade-mark interference to amend the statement in the application as to the date of adoption and use is unnecessary and will be denied. Amendment may be made after the conclusion of the interference.
[Id.

WITHDRAWAL OF ALLOWED APPLICATIONS.

ALLOWANCE OF APPLICATION.
After an application has been allowed and the notice of allowance sent to the applicant or his agent the act of allowance is complete and the application can be returned to the jurisdiction of the Examiner only by a formal withdrawal from the issue files by the Commissioner.
[*Ex parte* Bryant, 2773.

WITNESSES.

(See Interference, 31; Testimony, 1.)

ALPHABETICAL LIST OF PATENTEES

FOR

THE QUARTER ENDING SEPTEMBER 30, 1902.

[Claims and drawings of Designs do not appear in the Monthly Volumes. Separate indexes for Designs, Trade-Marks, Labels, Prints, and Disclaimers follow this.]

Name, residence, and invention.	No.	Date.	Monthly volume. Specification.	Monthly volume. Drawing.	Official Gazette. Volume.	Official Gazette. Page.
A. G. Spalding & Bros. (See McMaster, John, assignor.)						
A. Geisel Manufacturing Company. (See Dahman, William H., assignor.)						
A. J. Rost Manufacturing Company. (See Fenn, William B., assignor.)						
Abbee, Leslie H., Denver, Colo. Safety hitching device	705,629	July 29	4488	972	100	967

Andrew, Alexander G., Calumet, Mich. Furnace-grate						
Andrews, Curt C. (See Fisher, Charles A., assignor.)	704,169	July 8	1510	823 / 824	100	317
Andrews, Frank O., Christchurch, New Zealand. Potato-digging machine	707,894	Aug. 26	3700	831	100	1924
Andrews, George E., Providence, R. I. Automatic cut-out	705,372	July 22	3941	854	100	846
Androvette, George E., Brooklyn, N. Y. Prism-glass for skylights	704,469	July 8	2069	446	100	433
Angell, John, St. Louis, Mo. Purge-feeding apparatus for steam plants						
Angers, Joseph N. (See Walsh and Angers.)						
Annable, Warren W., assignor to Appliance Company, Limited, Grand Rapids, Mich. Trolley-wheel	708,451	Sept. 2	810	185	100	2146
Ansley, John D., Everett, Mass., assignor, by mesne assignments, to Alliston Foundry Company. Sash-weight	705,902	July 29	5131	1119	100	1099
Anthony, Mark, New York, N. Y., assignor, by mesne assignments, to Diamond Match Company. Printing-press	705,631	July 29	4485	973 / 974	100	908
Anthony & Scovill Company. (See Mathein, Josef, assignor.)						
Anton, Paul R., Topeka, Kans., assignor to Topeka Tent and Awning Company. Foldable stool	705,883	July 29	4955	1078	100	1068
Apelt, Rudolph H., Boston, Mass. Trolley-wheel	706,211	Aug. 5	400	85	100	1198
Appel, Daniel, Cleveland, Ohio, assignor to Union Paper Bag Machine Company, Philadelphia, Pa. Making paper bags	708,001	Sept. 2	1	1	100	1981
Appert Glass Company. (See Appert, Leon, assignor.)						
Appert, Leon, Paris, France, assignor to Appert Glass Company. Machine for making glass plates	710,032	Sept. 30	3949	891	100	2853
Appleby, James P., Hopkins, Minn. Molding-machine	707,535	Aug. 26	2927	662 / 663	100	1770
Appleby, John F., Chicago, Ill. Automatic grain-binder	708,002	Sept. 2	8	1, 2	100	1981
Appliance Company. (See Annable, Warren W., assignor.)	708,192	Sept. 2	363	86	100	2055
Arbenz, Frederick A., Hoboken, N. J. Necktie	708,751	Sept. 9	1362	810	100	2271
Archer, Capelle H., assignor of one-half to H. S. Winston, Richmond, Va. Dado-cutter	706,373	Aug. 5	737	160	100	1205
Archer, George E., Nutley, N. J. Time damper mechanism	709,132	Sept. 16	2155	494	100	2454
Ardizone, Thomas, assignor to J. Murphy, Brooklyn, N. Y. Prepared sealing-wax	709,952	Sept. 30	3795	856	100	2821
Arendell, Andrew J., Sparta, Tenn. Envelop	708,853	Sept. 9	1596	361 / 362	100	2318
Argles, Augustus C., Wimbledon, England. Exhibiting device						
Armour & Company. (See Kirby, Thomas B., assignor.)						
Armour & Company. (See Sharp, William E., assignor.)						
Armstrong, Albert H., Schenectady, N. Y., assignor to General Electric Company. Armature-winding for induction-motors	706,208	Aug. 12	1007	221	100	1335
Armstrong, Albert H., Schenectady, N. Y., assignor to General Electric Company. Armature-winding for induction-motors	706,632	Aug. 12	1290	271	100	1379
Armstrong Bros. Tool Co. (See Welter and Armstrong, assignors.)						
Armstrong, Charles C., Columbus, Ohio. Sealing attachment	704,498	July 15	2112	457	100	457
Armstrong, Ernest P., Colorado Springs, Colo. Sash-lock	708,611	Sept. 9	1097	246	100	2214
Armstrong, John. (See Welter and Armstrong.)						
Armstrong, John, London, England. Furnace or forge	705,312	July 22	3797	828	100	818
Armstrong, William B., San Francisco, Cal. Electric log-register	704,691	July 1	593	131 / 132	100	117
Arndt, Max, Aix-la-Chapelle, Germany. Instrument for indicating the pressure of gas	708,758	July 1	698	154	100	139
Arnn, McKenzie, Bristol, Va. Mineral compound	708,516	July 1	255		100	51
Arnold, David B., Terra Haute, Ind. Drive-gear for traction-engines	705,894	July 29	4957	1078 / 1079	100	1069
Arnold, James A., Allegheny, Pa. Apparatus for forming glass articles	705,813	July 29	4813	1045 / 1046	100	1034
Arnold, George W., and W. M. Cranston, assignors of one-third to J. E. Lutz, Philadelphia, Pa. Cigar-bunch-rolling machine	707,536	Aug. 26	2929	663	100	1770
Arnold, Wilber E., Madisonville, Ohio. Safe	705,877	Aug. 12	1599	380	100	1481
Arnold, William H., Oakland, Cal. Actuating mechanism for awnings	705,005	Aug. 5	5	2	100	1117
Arnot, Cephas W., Yysilanti, Mich. Dish-washing machine	704,494	July 15	2114	457 / 458	100	457
Arnott, Alfred A., assignor to Arnott Light and Burner Company, New Haven, Conn. Hydrocarbon-burner	706,486	Aug. 5	908	212	100	1312
Arnott Light and Burner Company. (See Arnott, Alfred A., assignor.)						
Arper, George W., Oakland, Cal. Oil-burner	708,691	Sept. 9	1246	286	100	2245
Arter, Arthur M., Hammersmith, England. Electric-arc lamp	704,495	July 15	2117	458	100	459
Arthur, Nicol S., Glasgow, and J. S. Binnie, Kilmalcolm, Scotland. Mechanical stoker	710,171	Sept. 30	4231	954 / 955	100	2012
Arthurs, Biddle, Pittsburg, Pa. Measuring and emptying device for bottles	709,858	Sept. 30	3586	808	100	2779
Asbell, Sylvester J., Paterson, N. J. Tank-valve	704,230	July 8	1615	349	100	347
Ashcroft, Robert H., Dunedin, New Zealand. Filling or refilling fountain-pens	709,731	Sept. 23	3329	749	100	2718
Ashley, Frank M., Brooklyn, N. Y. Water-gage	705,192	July 22	3518	763	100	763
Ashton, George T., and J. F. Bainter, Pittsburg, Pa. Adjustable window-shade and curtain-pole holder	705,548	July 29	4341	989	100	999
Ashton, Orrell, Lawrence, Mass. Coin-controlled vending apparatus	706,193	Sept. 2	363	86, 87	100	2056
Aspinwall, Lewis A., assignor to Aspinwall Manufacturing Company, Jackson, Mich. Pea-sheller	709,657	Sept. 23	3300	714 / 715	100	2685
Aspinwall, Lewis A., assignor to Aspinwall Manufacturing Company, Jackson, Mich. Potato-sorter	709,658	Sept. 23	3300	715 / 716	100	2686
Aspinwall, Lewis A., assignor to Aspinwall Manufacturing Company, Jackson, Mich. Potato-digger	709,659	Sept. 23	3300	716	100	2687

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Aspinwall, Lewis A., assignor to Aspinwall Manufacturing Company, Jackson, Mich. Potato-planter	709,660	Sept. 23	3210	716	100	2688
Aspinwall Manufacturing Company. (See Aspinwall, Lewis A., assignor.)						
Assau, William F., *et al.* (See Scheele, Walter T., assignor.)	709,661	Sept. 23	3212	717	100	2688
Assorati, Antenor, New York, N. Y. Game-board	705,532	July 29	4487	974	100	988
Astarita, Raffaello, New York, N. Y. Toy game	706,878	Aug. 12	1700	380	100	1482
Athens Foundry & Machine Co. (See Jennings, Ebenezer S., assignor.)						
Atkinson, Henry C., Louisville, Ky. Door signal or alarm	706,146	Aug. 5	282	59	100	1175
Atkinson, Llewelyn B., London, England. Mechanism for recording or registering the maximum movement of any mechanism						
Atkinson & Mentzer. (See Mentzer, John P., assignor.)						
Atlantic Gulf and Pacific Company. (See Perry, Raymond A., assignor.)						
Atlas Match Company. (See Hutchinson, William F., assignor.)						
Atmospheric Products Company. (See Bradley and Lovejoy, assignors.)						
Atwater, S. L., trustee. (See Harris, Charles B., assignor.)						
Atwater, William C. (See Taylor and Atwater.)	708,292	Sept. 2	550	125	100	2008
Atwood, Leonard, Philadelphia, Pa. Locomotive	710,296	Sept. 30	4351	978	100	2940
Audley, Francis H., New York, N. Y. Holder for policemen's clubs						
Auerbach, Louis. (See Oppenheimer, David, assignor.)	704,289	July 8	1734	376	100	302
Augir, Wayland B., Deerharbor, Wash. Bell	706,792	Aug. 12	1540	345	100	1447
August, Edward A., Chicago, Ill. Attachment for beer-pumps						
Auld, Hugh R., Boston, assignor, by mesne assignments, of one-half to J. J. McGlinchy, Chelsea, Mass. Rubber-tire setter	704,953	July 15	3025	649	100	648
Aultman Company. (See Wright, Edgar A., assignor.)						
Ausfuehrungen fuer Eisenbahn Oberbau, Abth. Stossfangschiene, Siegm. Eppenstein. (See Barschall, Max, assignor.)						
Austin Cartridge Company. (See Morris, William L., assignor.)						
Austin and Craw. (See Craw, Frank C., assignor.)						
Austin, Frederick C. (See Judd, William J., assignor.)						
Austin, Frederick C. (See Morenus, William H., assignor.)						
Austin, Permillia J. (See Austin, William J., assignor.)						
Austin, William J., Milwaukee, Wis., assignor to P. J. Austin. Railway-rail joint	708,979	July 8	1129	244	100	230
Austrian, Joseph E. (See Harris, Charles R., assignor.)						
Austwick, Henry L., Chicago, Ill. Tobacco-pipe	705,193	July 22	3519	763	100	763
Automatic Boiler Feed-Water Regulator Co. (See Cummings, Charles, assignor.)						
Automatic Railway Mail Pouch Delivery Company. (See Slagle, Robert L., assignor.)						
Automatic Scale Company. (See Sherwood, Harry B., assignor.)						
Automatic Street Indicator Company. (See Morgan, Charles E., assignor.)						
Automatic Target Machine Company. (See McCullough, John L., assignor.)						
Automatic Vacuum Canning Company. (See Hodgson, John G., assignor.)						
Avery Drill Company. (See Avery, Russell, assignor.)						
Avery, Edward R., assignor of one-half to C. E. Morris and P. H. Gohn, Pony, Mont. Rail-joint for railways	707,494	Aug. 19	2933	640	100	1734
Avery, Frank, Orin, Wyo. Check-perforating machine	709,458	Sept. 23	3226	694	100	2607
Avery, Henry W., Cleveland, Ohio. Non-refillable receptacle	706,712	Aug. 12	1367	305	100	1411
Avery, Henry W., assignor to Avery Stamping Company, Cleveland, Ohio. Metallic railway-tie	710,172	Sept. 30	4234	955	100	2913
Avery Manufacturing Company. (See Bartholomew, John B., assignor.)						
Avery, Mary L., assignor to M. Crowell, Oakland, Cal. Dress-chart	705,194	July 22	3520	764	100	763
Avery, Russell, Sausalito, assignor to Avery Drill Company, San Francisco, Cal. Rock-drill	709,191	Sept. 16	2275	517	100	2478
Avery Stamping Company. (See Avery, Henry W., assignor.)						
Avery Wall Paper Machine Company. (See Sproot, Jacob P., assignor.)						
Avril, Paul V., assignor to himself and La Société Marinier, Navoit et Jeanson, Paris, France. Electromagnetic device for controlling the rotation of shafts	710,311	Sept. 30	4476	1010	100	2905
Aydelotte, William E. (See Hammond, John E., assignor.)						
Ayer, Walter R., Raccourci, La. Whiffletree-clip	706,879	Aug. 12	1701	381	100	1482
Aylmer, Henry, Sherbrooke, Canada. Refrigerator	710,179	Sept. 30	4235	955	100	2913
Aylworth, Daniel W., South Haven, Mich. Wire-tie	708,612	Sept. 9	1098	247	100	2214
Ayvad, Hachig A., Hoboken, N. J. Blank for life-preservers	708,363	July 1	2	1	100	3
B. F. Avery & Sons. (See Holsclaw, Wilford H., assignor.)						
Babcock, Henry C., Jr., *et al.* (See Lurch, Edward, assignor.) (Reissue.)						
Babcock & Wilcox Company. (See Rosenthal, James H., assignor.)						
Bachmann, John F., Greensburg, Pa. Tool-holder	709,953	Sept. 30	3796	856	100	2821
Bachrach, Isaac, *et al.* (See Howe, John C., assignor.)						
Back, John R., assignor to F. E. Reed Company, Worcester, Mass. Tool-post	709,693	Sept. 23	3271	732	100	2700
Bacon Air Lift Company. (See Young and Shaw, assignors.)						
Bacon, Byron R. (See Duncan, Max E., assignor.)						
Bacon, Byron R., South Orange, N. J. Key-guard	706,005	Aug. 5	7	2	100	1118
Bacon, Henry S., Worcester, Mass. Location-tracer	706,713	Aug. 12	1369	305	100	1412
Badendieck, John A., *et al.* (See Kolf, Max, assignor.)						
Badger, Arthur C., Boston, Mass. Mail-chute	708,950	Sept. 9	1768	406	100	2355
Badische Anilin & Soda Fabrik. (See Bally, Oscar, assignor.)						
Badische Anilin and Soda Fabrik. (See Julius, Paul, assignor.)						
Baechler, Carl, Zurich, Switzerland. Filtering apparatus	707,537	Aug. 26	2930	668	100	1771
Baer, Abraham L., Milwaukee, Wis. Fountain-holder for pens	704,691	July 15	2455	580	100	598
Baeuerle, Jerome A., Kalamazoo, Mich. Oil-can	705,018	July 22	3157	681	100	689
Bahr, Ewald E. (See Hodge, John W. K., assignor.)						
Bahr, Jacob G., Brooklyn, N. Y. Covering for demijohns	705,895	July 29	4959	1079	100	1063
Bahrs, George H. (See Goodrich, Alfred K., assignor.)						
Bailer, Otto A., Philadelphia, Pa. Producing a composition of matter to be used as a substitute for rubber	708,008	Sept. 2	7	------	100	1982
Bailey, Charles C. (See Hurd, Frederick A., assignor.)						
Bailey, Charles O., Ogdensburg, N. Y. Eyeglasses or spectacles	707,046	Aug. 12	1969	446	100	1540
Bailey, David M., Caldwell, Kans. Wireworking-tool	708,618	Sept. 9	1099	247	100	2215
Bailey, Edwin W. M., Amesbury, Mass. Mounting for whiffletrees	708,004	Sept. 2	8	2	100	1982
Bailey, Frederick O., Portland, Me. Adjustable hub-runner	704,290	July 8	1725	376	100	368
Bailey, Henry F., assignor of one-half to L. E. Steele and H. E. Sims, Denver, Colo. Non-refillable bottle	708,981	Sept. 16	1942	494	100	2289
Bailey, Howard S., and W. E. Wild, Denver, Colo. Ore-concentrator	706,708	Aug. 12	1542	345 / 346	100	1447
Bailey, John R., assignor to M. Lauphsimer, Baltimore, Md. Steam-boiler furnace	707,495	Aug. 19	2885	640 / 641	100	1735
Bailey, John R., assignor to M. Lauphsimer, Baltimore, Md. Steam-boiler furnace	707,496	Aug. 19	2886	641	100	1735
Bailey, John W., Jersey City, N. J. Apparatus for the combustion of finely-divided solid fuel	710,033	Sept. 30	3950	891	100	2854

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Bailey, John W., Jersey City, N. J., assignor to General Lead Company. Apparatus for producing white lead	709,954	Sept. 30	3797	857	100	2821
Bailey, John W., Jersey City, N. J., assignor to Union Lead and Oil Company. Producing lead carbonate	709,955	Sept. 30	3803	857 858	100	2823
Bailey, John W., Jersey City, N. J., assignor to Union Lead and Oil Company. Apparatus for producing white lead	709,956	Sept. 30	3810	858	100	2824
Bailey, John W., Jersey City, N. J., assignor to Union Lead and Oil Company. Producing white lead	709,957	Sept. 30	3814	859	100	2825
Bailey, Samuel R., Amesbury, Mass. Shaft-shackle for vehicles	708,864	July 1	3	1	100	3
Bailey, Samuel R., Amesbury, Mass. Shaft-shackle for vehicles	708,865	July 1	4	2	100	3
Bailey, Thomas, New York, N. Y. Fireproof building	704,771	July 15	2907	564	100	559
Bailey, William, *et al.* (See Brooker, Albert, assignor.)						
Baillargeon, Octav, Cohoes, N. Y. Nut-lock	706,218	Aug. 5	401	66	100	1198
Bainter, Jesse F. (See Ashton and Bainter.)						
Baird, Hugh, Glasgow, Scotland. Apparatus for cleaning windows	708,854	Sept. 9	1867	362	100	2319
Baker, Albert E., *et al.* (See Henry, Curtis B., assignor.)						
Baker, Franklin, Jr., and E. J. Fritsch, Philadelphia, Pa.; said Fritsch assignor to said Baker. Machine for cutting cocoanuts	709,811	Sept. 23	3511	791 792	100	2749
Baker, Fred L. (See Carpenter and Baker.)						
Baker, George S., London, England. Wheel-gear	707,672	Aug. 26	3814	721	100	1899
Baker, Howard A., Clarksville, Tex. Sash-lock	708,624	July 1	467	106	100	92
Baker, James, Carroll, Nebr. Shovel-support	709,198	Sept. 16	2279	518	100	2479
Baker, John, Meacham, Ill. Rim and felly for rubber vehicle-tires	707,586	Aug. 26	2981	663 664	100	1771
Baker, Riley. (See Daily and Baker.)						
Baker, Robert L., Somerville, Mass. Cover-lifting device for pails, &c	708,288	Sept. 2	551	125	100	2098
Baker, Thomas K., Minneapolis, Minn. Coffee-maker	710,133	Sept. 30	4157	936	100	2807
Baker, Thomas K., Minneapolis, Minn. Coffee-maker	710,135	Sept. 30	4158	937	100	2807
Baker, Walter C., Cleveland, Ohio. Motor-vehicle	709,859	Sept. 30	3586	808	100	2779
Baker, Willard D., Rogers, Ark., assignor to E. B. Harrington, trustee, Kansas City, Mo. Preserving food products	709,631	Sept. 16	2750	619	100	2580
Baker, Willard D., Rogers, Ark., assignor to E. B. Harrington, trustee, Kansas City, Mo. Preserving food products	709,632	Sept. 16	275	619	100	2580
Baldwin, Charles B., Brooklyn, N. Y. Box-covering machine	708,515	Sept. 9	932	211 212	100	2182
Baldwin, Charles L., and O. A. Green; said Baldwin assignor to M. E. Baldwin, New York, N. Y. Elevator	709,732	Sept. 23	3329	749 780	100	2713
Baldwin, Eugene N., and I. M. Schellinger, Royersford, Pa. Glass-ladle	708,113	Sept. 2	209	80	100	2025
Baldwin, Frank S., Newark, N. J. Calculating-machine	706,375	Aug. 5	740	161 163	100	1266
Baldwin, Henry F. (See Mansfield, George L., assignor.)						
Baldwin, Horace O., deceased, New Brighton, Pa.; M. E. Baldwin, administratrix. Railjoint	706,374	Aug. 5	738	161	100	1266
Baldwin, Mary E., administratrix. (See Baldwin, Horace O.)						
Baldwin, Maud E. (See Baldwin and Green, assignors.)						
Baldwin, Miles C., assignor of one-half to T. R. Stevenson, Elmira, N. Y. Artificial leg	708,005	Sept. 2	10	2	100	1983
Baldwin, Richard D., assignor of one-half to H. H. Wright, Chicago, Ill. Brake-shoe-lubricating filler	706,147	Aug. 5	284	59	100	1175
Baldwin, Stephen G., Marion, Ind. Ink-well	709,133	Sept. 16	2156	494	100	2476
Baldwin, William F., Boston, Mass. Safety-pin	709,860	Sept. 30	3589	808	100	2779
Baldwin, William I., and E. A. Kline, Chagrin Falls, Ohio. Paper-bag machine	708,635	July 1	468	107	100	92
Ball, Farlen F., Sonora, Cal. Cuspidor-rack	708,234	Sept. 2	558	125	100	2094
Ball, Henry P. (See Leonard and Ball.)						
Ball, Henry P., Brooklyn, assignor, by mesne assignments, to H. W. Leonard, Bronxville, N. Y. Electric rheostat or heater	707,194	Aug. 19	2286	512	100	1621
Ball, Henry P., New York, N. Y., assignor to General Incandescent Arc Light Company. Electric switch	708,006	Sept. 2	11	3	100	1983
Ball, Henry P., New York, N. Y., assignor to General Incandescent Arc Light Company. Time limit device for circuit-breakers	708,007	Sept. 2	13	3	100	1983
Ball, Henry P., New York, N. Y., assignor to General Incandescent Arc Light Company. Reverse-current device for circuit-breakers	708,008	Sept. 2	15	4	100	1984
Ballantyne, Brigham, Sumpter, Oreg. Automatic circuit-breaker	704,496	July 15	2120	458	100	459
Ballard, Milton H., assignor to G. W. Emerson & Co., Lynn, Mass. Polishing-machine	705,550	July 29	4343	939	100	989
Ballbach, Louis, Detroit, Mich. Lacing-eye for shoes, &c	705,918	Aug. 5	402	86	100	1198
Balliet, Herbert S., Bethlehem, Pa. Signal device	705,549	July 29	4341	939	100	989
Ballou, Eugene H., Pawtucket, R. I. Leno-loom	708,951	Sept. 9	1764	407 408	100	2255
Bally, Oscar, Mannheim, assignor to Badische Anilin & Soda Fabrik, Ludwigshafen, Germany. Anthracene dye and making same	707,673	Aug. 19	2516	.....	100	1680
Bally, Oscar, Mannheim, assignor to Badische Anilin & Soda Fabrik, Ludwigshafen, Germany. Anthracene dye and making same	707,674	Aug. 19	2518	.....	100	1680
Bamford, Charles F., Bedford, England. Wind-motor	705,195	July 22	3321	764	100	764
Bancroft, C. C. (See Myers, Ephraim, assignor.)						
Bane, James O., Waseca, Minn. Pump-spring connection	706,149	Aug. 5	287	60	100	1175
Bangley, Joseph L., assignor of one-half to T. J. Eley and H. W. Campbell, Suffolk, Va. Heating-stove	704,470	July 8	2061	447	100	433
Bangs, Edwin D., assignor of two-thirds to A. L. Rodee and E. Q. Bangs, Milwaukee, Wis. Horseshoe	708,982	Sept. 16	1844	494	100	2280
Bangs, Edwin Q., *et al.* (See Bangs, Edwin D., assignor.)

Beeler, Esten B., Chicago, Ill. Window-cleaner	707,073	Aug. 19	2055	459 460	100	1570
Beers, Alexander W., Bayonne, N. J. Folding box	703,886	July 1	944	206	100	190
Béha, Joseph, Thann, Germany. Water-purifying apparatus for steam-boilers	704,782	July 15	2531	547	100	544
Behm, Joseph, San Francisco, Cal. Oil and air mixing and gas-generating apparatus	707,376	Aug. 19	2021	590 591	100	1690
Behnke, Otto, assignor to F. Krupp, Essen, Germany. Gun-carriage	704,778	July 15	2610	565	100	560
Behrens, Albert J., San Francisco, Cal. Tank-hoop lug	705,019	July 22	3169	684	100	692
Behrens, Edward C. H., Charleston, S. C. Plant-protector	705,378	July 22	3942	854	100	846
Behreus, Walter, and J. P. Tihon, Paris, France. Electric railway	704,692	July 15	2456	530	100	529
Beider, Peter, Paterson, N. J. Lifting device						
Beil, August C. (See Down, Earnest U., assignor.)						
Beisel, Peter J., assignor of one-half to H. F. Smith, Allentown, Pa. Door-operating device	703,372	July 1	15	4	100	5
Beist, Ernst, Magdeburg, Germany. Dilator	708,452	Sept. 2	811	185	100	2146
Beitney, Augustus, *et al.* (See Barrath, Edward, assignor.)						
Beier, Adolf, assignor of two-fifths to F. Hartley, Pittsburg, and C. H. Parsons, Sharon, Pa. Fluid-pressure-regulated gas-valve	706,153	Aug. 5	298	63, 64	100	1177
Beier, Adolf, assignor of two-fifths to F. Hartley, Pittsburg, and C. H. Parsons, Sharon, Pa. Gas-burner	706,633	Aug. 12	1221	271	100	1379
Beifeld, A. Miller, *et al.* (See Davis, Charles L., assignor.)						
Beifeld, Gamaliel. (See Beifeld, Shearer, Findlay, and Beifeld.)						
Beifeld, William, R. Shearer, J. Findlay, and G. Beifeld, assignors of one-fifth to G. Gleason, Minooka, Ill. Lock-nut for vehicle-axles	710,240	Sept. 30	4339	980	100	2941
Beifry, Alfred W. (See Smith, James M., assignor.)	710,034	Sept. 30	3953	891	100	2854
Beiknap, Willis H., Summit, N. J. Paper-roll holder	710,397	Sept. 30	4629	1044	100	2997
Bell, Chester L., and J. Halstead, El Paso, Tex. Fluid-operated signal						
Bell, George H. (See Lemaire, Timothy, assignor.)						
Bell, Henry, *et al.* (See Prescott, Thomas D., J. C., and H. A., assignors.)						
Bell, Martha. (See Abrahams, Mary E., assignor.)						
Bell, Robert A., assignor to C. A. Rutter, Philadelphia, Pa. Machine for making blue-prints	704,232	July 8	1617	350	100	338
Bell, Robert A., assignor to C. A. Rutter, Philadelphia, Pa. Machine for making prints	708,989	Sept. 16	1853	426	100	2391
Bell, Walter H., Dayton, Ohio, assignor, by mesne assignments, to National Cash Register Company, Jersey City, N. J. Cash-register	705,552	July 29	4346	940	100	940
Bell, Watson H., Brooklyn, N. Y. Sand-distributer for railways	710,184	Sept. 30	4159	937	100	2698
Bell, William D., Slayton, Minn. Weight-motor and governor mechanism	707,377	Aug. 19	2038	591	100	1690
Bell, William J., Baraboo, Wis. Combined switch and lightning-arrester	708,980	July 8	1131	245	100	240
Bellangé, Gaston, Arcachon, France. Safety contact-interrupter for electric wires	705,020	July 22	3170	684	100	692
Belledin-Grau, Edouard, and F. S. de Mondran, Paris, France. Tire for vehicle-wheels which cannot be readily punctured	707,378	Aug. 19	2036	592	100	1690
Bellis, David C., Elizabeth, N. J., assignor to R. W. Scott, Philadelphia, and L. N. D. Williams, Ashbourne, Pa. Knitted fabric	707,752	Aug. 26	3408		100	1807
Bellows, Arthur B., Pittsburg, Pa. Gondola car	709,734	Sept. 23	3334	751 752	100	2714
Bellows, Arthur B., Pittsburg, Pa. Gondola car	710,175	Sept. 30	4239	956	100	2914
Bellows, Arthur B., Pittsburg, Pa. Steel gondola car	710,176	Sept. 30	4240	956	100	2914
Belt, J. M. (See Mervin, Charles R., assignor.)	710,177	Sept. 30	4241	956	100	2914
Bender, Andrew, Washington, D. C. Spring-motor	708,373	July 1	17	4	100	6
Bender, George L., assignor of one-half to W. A. Bender, San Francisco, Cal. Tie-plating machine	708,755	July 1	701	155 156	100	140
Bender I. Firm Carl. (See Bender, Philipp, assignor.)						
Bender, Jacob S., Kansas City, Mo. Combined grain-door and loading and unloading platform for box-cars	708,900	Sept. 2	561	127	100	2006
Bender, Philipp, assignor to Firm C. Bender I, Dotzheim, near Wiesbaden, Germany. File-handle	706,378	Aug. 5	751	164	100	1207
Bender, W. A. (See Bender, George L., assignor.)						
Bender, Wilhelm, assignor to Zellstoffabrik Düren Hermann Maria Schoeller & Co., Düren, Germany. Evaporator	709,297	Sept. 16	2487	550	100	2324
Benedict, Charles W. (See Johnson and Benedict.)						
Benedict, Lewis. (See Leiger, George F., assignor.)						
Benefield, Chauncey R., Alpika, Miss. Cotton elevator and separator	705,374	July 22	3944	854	100	847
Benitz, Leo C., Philadelphia, Pa. Lead-pencil	705,900	July 29	4968	1081	100	1065
Bennett, Delbert F., Redding, Cal. Receptacle for papers and letters	708,617	Sept. 9	1106	248	100	2216
Bennett, Emmet M., Boston, Mass., assignor to Wyckoff, Seamans & Benedict, Ilion, N. Y. Type-writing machine	707,817	Aug. 26	3541	799	100	1894
Bennett, Emmett G., Atlanta, Ga. Hame-fastener	707,497	Aug. 19	2398	641 642	100	1785
Bennett, Frederick D. (See Sanford, William W., assignor.)						
Bennett, George H., New York, N. Y. Tiling	708,194	Sept. 2	368	87	100	2056
Bennett, George M., assignor of one-half to T. Forgham, Kenosha, Wis. Friction-clutch	709,194	Sept. 16	2289	518	100	2480
Bennett, George S., and J. W. Thatcher; said Bennett assignor to said Thatcher and A. Meyenborg, San Francisco, Cal. Dental mouth-mirror	709,812	Sept. 23	3513	702	100	2780
Bennett, James E., Momence, Ill. Running-gear for wagons	707,896	Aug. 26	3704	831	100	1995
Bennett, James F., and H. S. Moorwood, Sheffield, England. Carburetor	705,081	July 22	3170	685	100	693
Bennett, Lydia A., Cleveland, Ohio. Envelop	707,074	Aug. 19	2057	460	100	1570
Bennett, Thomas G. (See Burns and Bennett.)						
Bennett, Thomas S., Providence, R. I. Band for bracelets, &c., and manufacturing same	709,195	Sept. 16	2288	518 519	100	2480

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Bennett, Thomas S., assignor to D. F. Briggs Company, Attleboro, Mass. Tubular-rivet-setting machine	709,190	Sept. 15	2286	519	100	2481
Bennett, Wilbur, Waynesboro, Va. Sash-lock	709,591	Sept. 22	3068	699	100	2664
Bennett, William S., New York, N. Y. Railway-signal	705,313	July 22	3799	823 824	100	818
Benninghofen, Ernest A., Hamilton, Ohio. Trowel	706,514	Aug. 12	1018	225	100	1357
Benoit, Elie, Worcester, Mass. Multiplying-gearing	706,794	Aug. 12	1548	347	100	1449
Benson, William W., Philadelphia, Pa. Pipe-bending apparatus	706,010	Aug. 5	13	3, 4	100	1119
Benster, Menzo M., Gettysburg, S. D. Fence-wire fastener	708,756	July 1	704	156	100	141
Bentley, Harry, Whitehaven, England. Machinery for breaking pig-iron	708,301	Sept. 2	563	128	100	2696
Benton, Charles H., Cleveland, Ohio. Engine. (Reissue)	12,009	July 15	3136	678	100	669
Bentson, Hans J., Chicago, Ill., assignor to F. Howard. Excavating-machine. (Reissue)	12,010	July 15	3140	678 679	100	670
Bentz, John J., Brooklyn, N. Y. Non-refillable bottle	708,308	Sept. 2	565	128	100	2696
Benzinger, Frederick, Union Hill, N. J., assignor to General Incandescent Arc Light Company. Circuit-breaker	707,952	Aug. 26	3796	853	100	1945
Berford, Victor, Tara, Canada. Sod-line-cutter mechanism for railway-track appliances	706,516	Aug. 12	1019	225	100	1357
Berg, Bernard, San Francisco, Cal. Pneumatic malting-kiln	706,716	Aug. 12	1372	306	100	1412
Berg, Henry. (See Mellen, Edward J., assignor.)	706,895	Aug. 12	1714	383	100	1484
Berg, Rudolf, assignor of one-half to F. Wenig, Pittsburg, Pa. Valve mechanism						
Berger Manufacturing Company. (See Schlafly, Julius H., assignor.)						
Bergeron, Henry J. (See Moreal and Bergeron.)	708,374	July 1	19	4, 5	100	7
Bergin, Daniel S., Chicago, Ill. Mechanism for electric propulsion of road-vehicles	707,075	Aug. 19	2058	460	100	1571
Bergin, Daniel S., Chicago, Ill. Combined overhead and underground electric railway	706,580	July 1	200	60	100	52
Bergman, Erick P., and A. E. Renard, Concordia, Kans. Magazine-firearm	705,196	July 22	3523	764	100	764
Bergmann, Nora E. P., New York, N. Y. Handkerchief-holder	710,085	Sept. 30	3954	892	100	2955
Bergstrom, Carl A., Tacoma, Wash. Adjustable rocking-chair	706,986	Aug. 12	1716	383	100	1485
Bernardi, Joseph A., Salem, Oreg. Domestic boiler						
Bernasconi, Charles. (See Grobet and Bernasconi.)	705,022	July 22	3171	695	100	698
Bernhardt, Wilhelm, Vienna, Austria-Hungary. Explosive-engine						
Bernier, Peter. (See Sebastian, Daniel S., assignor.)						
Bernstein Electric Manufacturing Company. (See Gardner, Edgar S., assignor.)	708,899	July 1	946	207	100	190
Berry, Benjamin D., assignor of one-half to W. H. Berry, Chester, Pa. Sash-holder						
Berry, Charles L., *et al.* (See Quist, John and C., assignors.)						
Berry, William H. (See Berry, Benjamin D., assignor.)						
Berthold, George H. E. (See Waterman and Berthold.)	707,945	Aug. 26	3787	849 850	100	1943
Bertier de Sauvigny, Léon de, Paris, France. Machine for coal-breaking	705,023	July 22	3173	695	100	698
Bertogliatti, Charles E., New York, N. Y. Music-sheet turner	707,879	Aug. 19	2696	592 593	100	1690
Bertrand, Léon, Paris, France. Apparatus for quenching or cooling coke						
Berwald, Bennet J. (See Hall and Berwald.)	709,892	Sept. 23	3095	689	100	2964
Best, Daniel, San Leandro, Cal. Traction-engine						
Best, Ezra, *et al.* (See Best, William N., assignor.)						
Best, John H., *et al.* (See Best, William N., assignor.)						
Best, William N., assignor of one-half to W. A. Cooper, Los Angeles, Cal. Hydrocarbon-burner	708,458	Sept. 2	813	185	100	2146
Best, William N., Los Angeles, Cal., assignor of two-thirds to J. H. and E. Best, Quincy, Ill. Perfect-combustion furnace	709,571	Sept. 23	3061	682	100	2657
Bethea, Clarence and R. L., Littlerock, S. C. Washer for vehicle-axles	706,215	Aug. 5	406	87	100	1199
Bethea, Robert L. (See Bethea, Clarence and R. L.)	704,733	July 15	2533	547 548	100	545
Bethel, Walter C., Seattle, Wash. Electric alarm-clock						
Bethlehem Steel Company. (See Meigs and Hammar, assignors.)						
Bettendorf Metal Wheel Company. (See Einfeldt, Emil, assignor.)	706,705	Aug. 12	1550	347	100	1450
Betteridge, Albert J., assignor to International Silver Co., Meriden, Conn. Tilting vessel						
Bets, Ernest, assignor to Columbian Hydro-Carbon Burner Company, Washington, D. C. Hydrocarbon-burner	709,387	Sept. 16	2774	600	100	2264
Betzel, William F., Portsmouth, assignor of one-half to R. T. Thorp, Norfolk, Va. Carbureter	707,697	Aug. 26	3706	831 832	100	1998
Beumee, Ullrich J. (See Anderson, John E., assignor.)	709,375	July 1	21	5	100	7
Bevans, William H., Washington, D. C. Semi-automatic breech-loading ordnance						
Beverly, James A. (See Smith, Jonas P., assignor.)						
Bevington, James H. (See Allen, James B., assignor.)	709,197	Sept. 16	2288	519	100	2481
Bevington, James H., Cleveland, Ohio. Detonating device						
Bevington, Thomas. (See Masecar and Bevington.)						
Beyer, Herman E. L. (See Starmer, Harry G., assignor.)	706,808	Sept. 2	566	129	100	2097
Bianchi, Joseph, Philadelphia, Pa. Apparatus for animated pictures						
Bickelmann, Conrad O. (See Crum, Fred H., assignor.)						
Bickford, Frank H., Dayton, Ohio, assignor, by mesne assignments, to National Cash Register Company, Jersey City, N. J. Cash-register	707,880	Aug. 19	2687	598	100	1691
Bickford and Huffman Company. (See Colley, Frederick G., assignor.)						
Bickford and Huffman Company. (See Heath and Baseman, assignors.)	708,951	July 1	1056	230	100	210
Bickford, John E., Whitman, Mass. Peg-cutter for horns of pegging-machines	707,498	Aug. 19	2859	642	100	1726
Bickford, John E., Whitman, Mass. Pegging-machine	708,195	Sept. 2	370	87, 88	100	1067
Bickford, John H., Salem, Mass. Controlling device for electric generating systems	708,990	Sept. 16	1555	426 427	100	2201
Bickford, John H., Salem, Mass. Valve	708,757	July 1	705	156	100	141
Bickford, John S. V., Camborne, England. Automatic feed-regulator for steam-boilers	707,076	Aug. 19	2060	461	100	1571
Bicknell, John O., Weymouth, Mass. Welts for boots or shoes						
Bidle, William S. (See Costello and Bidle.)	706,879	Aug. 5	751	165	100	1267
Bieber, Robert S., Brooklyn, N. Y. Gem-setting	707,198	Aug. 19	2296	513	100	1625
Biencstok, Edgar A., St. Louis, Mo. Stamp-affixer						
Bierley, Henry A., assignor to Household Manufacturing Company, Indianapolis, Ind. Insect-trap	704,298	July 8	1780	377	100	903
Biersach, Louis, assignor of one-half to K. Mueller, Milwaukee, Wis. Letter-press-copying cloth and frame	707,758	Aug. 26	3409	768	100	1867
Bietenholz, Alfred, Blumenthal, Germany. Draw-off or stretching rollers for textile machinery	709,694	Sept. 23	3272	732	100	2701
Bigelow, Julian F. (See Crannell, Orlo G., assignor.)						
Bigelow, Prescott. (See Anderson, William G., assignor.)	705,094	July 22	3174	696	100	698
Bigsby, Myron H., Kirksville, Mo. Support for limbs						
Bill, Louis H., San Francisco, Cal., assignor to Duck Brake Company of New York, New York, N. Y. Roller-brake	708,114	Sept. 2	211	50	100	2025
Billings, Swan. (See Stille and Billings.)						
Bincette, Joseph, St. Constant, Canada. Breech-loading firearm	708,304	Sept. 2	569	129	100	2097

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Bingham, Charles D., Watertown, assignor to Prentiss Vise Company, New York, N. Y. Vise	708,376	July 1	24	5	100	6
Binnie, John S. (See Arthur and Binnie.)	704,171	July 8	1514	325	100	818
Binns, Pickles, Shipley, England. Bottle filling and stoppering machine						
Binz, Charles A. (See Landerman and Binz.)						
Birch, Frank. (See Perks and Birch.)						
Birchall, George W., *et al.* (See Justen, Joseph M., assignor.)						
Bird, Burney B. (See Wagner and Bird.)						
Bird, Charles S., and J. B. Hanscom, assignors to F. W. Bird and Son, East Walpole, Mass. Waterproofing paper	708,454	Sept. 2	816	186	100	2147
Bird, Joseph M., Washington, D. C. Hat-box	704,431	July 8	1976	430	100	416
Bird and Son, F. W. (See Bird and Hanscom, assignors.)						
Birdsey and Somers. (See Doolittle, James E., assignor.)	708,758	July 1	706	156 157	100	141
Birkenstock, John W. and R. W. Funk, assignors to Empire Pneumatic Tool Company, New York, N. Y. Pneumatic riveting-tool	708,521	July 1	266	60, 61	100	54
Birkery, Cornelius, Hartford, Conn. Ball-cock	707,499	Aug. 19	2840	642	100	1726
Birmingham, John P., assignor to D. C. Humphreys, trustee, Lexington, Va. Nut-lock						
Birnbaum, Theodore, Berlin, Germany. Driving mechanism for rotary gramophone turn or supporting plates	705,636	July 29	4492	975	100	969
Bishop, Albert T., Southington, Conn. Lantern	705,816	July 29	4821	1047	100	1036
Bishop, Charles B., assignor to P. & F. Corbin, New Britain, Conn. Engraving-machine	709,863	Sept. 30	3592	810 811 812 813	100	2780
Bishop, David W., Lenox, Mass. Acetylene-gas generator	707,077	Aug. 19	2060	461	100	1571
Bishop, David W., Lenox, Mass. Acetylene-gas generator	707,078	Aug. 19	2064	461	100	1572
Bishop, William, *et al.* (See Cahill, Thomas H., assignor.)						
Bissell Carpet Sweeper Company. (See Mason, Francis C., assignor.)	707,047	Aug. 12	1990	447	100	1540
Bitner, Harry, Berwyn, Ill. Banana-shipping case	710,036	Sept. 30	3955	892	100	2955
Bitner, Harry, Berwyn, assignor to F. Schmitz, Chicago, Ill. Banana-shipping case						
Bittner, Frederick J. (See Hewes and Bittner.)	708,377	July 1	25	6	100	8
Bivins, Abraham, Denver, Colo. Wrench	704,294	July 8	1732	377	100	864
Bjortkander, Gustaf O., Eau Claire, Wis. Leather-lace cutter	704,610	July 15	2325	505	100	501
Black, Amos R., Lamar, Colo. Treating beet-seed						
Black, John A. (See Crapper, Ebenezer, Jr., assignor.)						
Blackburn Loom and Weaving Machinery Making Company. (See Talbot and Rossetter, assignors.)	707,294	Aug. 19	2474	535	100	1059
Blackhall, Charles D., Buffalo, N. Y. Paper-cutting machine	704,774	July 15	2611	565	100	560
Blackledge, John W., Chicago, Ill. Combined cradle and baby-jumper	705,554	July 29	4548	940	100	941
Bladen, Thomas G., Vandergrift, Pa. Tack-puller	708,014	Sept. 2	84	6	100	1995
Blagden, Silliman, Boston, Mass. Oyster-opening tool	708,115	Sept. 2	212	50	100	2025
Blaine, George E., Coshocton, Ohio. Seat-spring for vehicles	709,695	Sept. 23	3273	733	100	2701
Blake, Byron S., Rochester, N. Y. Metal fastening for cross-wires	708,455	Sept. 2	818	186 187	100	2147
Blake, Charles W., Port Republic, N. J. Ship's windlass	705,314	July 22	3801	824	100	819
Blake, Francis C., London, England. Carbureter	706,154	Aug. 5	301	64	100	1178
Blake, George E., Greencastle, Ind. Pressure-generator						
Blake, John C., Toledo, Ohio, assignor to Indiana Rubber and Insulated Wire Company, Jonesboro, Ind. Rubber-tire-setting machine	710,135	Sept. 30	4161	937	100	2893
Blake, Joseph S., assignor to Flexible Door and Shutter Company, Worcester, Mass. Flexible door	705,553	July 29	4347	940	100	940
Blakey, George G. and R. O., Pittsburg, Pa. Skelp-bending machine	708,015	Sept. 2	25	6	100	1986
Blakey, Robert O. (See Blakey, George G. and R. O.)	708,305	Sept. 2	573	130	100	2098
Blanck, Henry C., Philadelphia, Pa. Bung						
Bland, Andrew J. (See Cummins and Bland.)	705,637	July 29	4493	975	100	969
Blandy, Richard R., Kensington, England. Means applicable for use in transporting fruit						
Blatt, Samuel. (See Hawkes, John F., assignor.)						
Blatter, Ulric. (See Durkee, Frederick M., assignor.)	708,378	July 1	27	6	100	8
Blaustein, Solomon, Baltimore, Md. Window-shade hanger	704,775	July 15	2612	565	100	560
Blechmann, Ewald, Beyenburg, Germany. Sad-iron	709,735	Sept. 23	3336	752	100	2714
Blee, Charles O., and J. H. Redding, Roanoke, Ind. Fence-post	706,887	Aug. 12	1717	384	100	1485
Bleakhorn, Harriet, Minneapolis, Minn. Clothes-drainer	707,079	Aug. 19	2067	461	100	1573
Blevney, John C., Newark, N. J. Feed-pump and connection for horseless carriages	707,673	Aug. 26	3217	722	100	1830

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Blume, Gustave A. (See Hodges and Blume.)						
Blumer, Arthur, La Varenne, France. Stopper for bottles	706,634	Aug. 12	1223	271	100	1379
Blun, Ferdinand S. M. (See Gaisman and Rosa, assignors.)						
Blyth, Herbert K., assignor of one-half to R. L. Nelson, Chicago, Ill. Elbow and pipe	706,898	Aug. 12	1719	384	100	1495
Boas, Feodor, St. Hyacinthe, Canada. Artificial stone	707,898	Aug. 26	3708	.....	100	1926
Boatright, Robert F., Ka, Va. Wire-stretcher	705,555	July 29	4349	941	100	941
Bodmer, Christian, assignor of one-half to J. A. Traut, New Britain, Conn. Bevel	710,178	Sept. 30	4242	957	100	2915
Bodwell, Charles A., Jr., Lakeville, Cal. Telescoping valise	710,057	Sept. 30	3956	892	100	2855
Boehm, Conrad R., Charlottenburg, near Berlin, Germany. Manufacture of carbons for arc-lamps	708,602	July 1	595	.....	100	118
Boehringer & Soehne, C. F. (See Ach. Fritz, assignor.)						
Boeklen, Reinhold. (See Purper, Moser, and Boeklen.)						
Boenning, William M., Port Washington, Wis. Apparatus for edge-uniting veneers	709,864	Sept. 30	3602	813, 814, 815	100	2782
Boesch, Basil W., Boston, Mass. Making cellulose acetate	708,456	Sept. 2	823	.....	100	2148
Boesch, Basil W., Boston, Mass. Purifying cellulose esters	708,457	Sept. 2	824	.....	100	2148
Boettcher, Frederick W. G., Detroit, Mich. Sash adjuster and lock	708,517	Sept. 9	942	213	100	2184
Bogardus, Washington A. H., L. Collis, and G. G. Powell, New York, N. Y. Tubular despatch apparatus	709,434	Sept. 16	2754	619, 620	100	2581
Bogart, Walter, *et al.* (See Le Mond, George E., assignor.)						
Bogia, Louis F., Jr., Philadelphia, Pa. Regulating-socket	708,016	Sept. 2	26	6	100	1986
Bohl, Julius G. (See Lafferty, Erastus S., assignor.)						
Boise, Frank C. (See Warner, Isaac M., assignor.)						
Bole, William A., Pittsburg, Pa., assignor to Westinghouse Machine Company. Engine	710,136	Sept. 30	4162	938	100	2898
Boley, Daniel C., Chicago, assignor to H. Block, Pekin, Ill. Apparatus for treating pulverized ores of gold or silver	709,508	Sept. 23	3097	690	100	2555
Bolinger, Frank J., *et al.* (See Hart, Frank, assignor.)						
Bolinger, George H., *et al.* (See Hart, Frank, assignor.)						
Boller, Peter, Chicago, Ill. Button-holder for upholstering-machines	704,501	July 15	2131	461	100	461
Bollinger, Edmond, Fostoria, Ohio. Merry-go-round	709,462	Sept. 23	2883	636, 637	100	2609
Bollinger, Sidney W., Pittsburg, Pa. Car-haul	707,200	Aug. 19	2209	514	100	1628
Bolton, Andrew J., Pleasant Site, Ala. Wind-wheel	705,589	July 29	4495	975	100	970
Boltze, George F., Fort Madison, Iowa. Grappling device	704,858	July 15	2767	597, 598	100	598
Bomgren, Johan A., Stockholm, Sweden. Support for steam-turbine wheels	705,025	July 22	3176	686	100	698
Bommarius, Frederick, New Orleans, La. Filter	707,899	Aug. 26	3709	882	100	1926
Bon Durant, Thomas N., Moundridge, Kans. Grain-door for cars	708,017	Sept. 2	28	7	100	1986
Bonar, James, Pittsburg, Pa. Steam-trap	707,295	Aug. 19	2476	555, 556	100	1659
Bond, Frank. (See Carlisle, Charles C., assignor.)						
Bone, Frank A., Lebanon, Ohio. Retaining-wall	705,792	July 29	4675	1012	100	1005
Bonneau, Paschal. (See Gagné, Edouard, assignor.)						
Bonner, Oliver R. (See Wride, John F., assignor.)						
Bonnett, Ernest W., *et al.* (See Harrington, Louder, assignor.)						
Bonsor, Hewson, Birmingham, England. Gas-stove	708,982	July 8	1134	245	100	240
Bontempi, Augusto, assignor to M. B. Scott-Uda, Naples, Italy. Sculpturing-machine	709,388	Sept. 16	2676	600, 601	100	2564
Boone, Charles H., *et al.* (See Hoerichs, Edward, assignor.)						
Boos, Joseph B., Muscatine, Iowa. Screw-door safe	708,991	Sept. 16	1859	427	100	2592
Booser, Eli A., Altoona, Pa. Car-fender	704,776	July 15	2613	536	100	561
Booth, Edward L. (See Comstock, Andrew J., assignor.)						
Booth, Frederick, Tefft, Ind. Chainless bicycle	709,463	Sept. 23	2885	637	100	2609
Booth, Jacob, Reynoldsville, Pa. Cuspidor	705,375	July 22	3945	855	100	847
Booth, James C., Monessen, Pa. Railway-switch-operating device	709,865	Sept. 30	3608	815	100	2788
Booth, John, Central Falls, R. I. Yarn-spinning apparatus	705,783	July 29	4678	1012	100	1005
Booth, Kraft. (See Gillinder and Booth.)						
Booth, Ralph W., New Brunswick, N. J. Faucet	709,389	Sept. 16	2681	601	100	2566
Booth, Ralph W., New Brunswick, N. J. Jar-cover	709,390	Sept. 16	2682	601	100	2566
Booth, Thomas C., New Brunswick, N. J. Can and attaching a label thereto	706,635	Aug. 12	1225	272	100	1380
Boozer, Arthur G., Tocapau, S. C. Shell-rolls for spinning-machines	709,298	Sept. 16	2487	559	100	2584
Boozer, George W., San Antonio, Tex. Wrench	708,696	July 1	469	107	100	92
Borbein, Henry F., assignor to Gus V. Brecht Butchers Supply Company, St. Louis, Mo. Motor-vehicle	708,703	Sept. 9	1454	332	100	2291
Borie, Louis J., San Francisco, Cal. Electromagnetic capping-machine	708,952	July 1	1057	230	100	210
Born, George W., Graysflat, W. Va. Water-cooler	705,876	July 22	3946	855	100	847
Bornand, William H. (See Gattolliat, Paul S., assignor.)						
Borner, John, Rahway, N. J. Apparatus for impregnating wood	708,522	July 1	268	61	100	54
Bos, Floris H., Hoogland, Netherlands. Keyhole-guard	707,381	Aug. 19	2630	593, 594	100	1691
Bosch, Robert. (See Simms and Bosch.)						
Bosmann, Nicolas, assignor of one-half to E. S. Slocum, Chicago, Ill. Refrigerator	708,992	Sept. 16	1861	428	100	2592
Boss, Martin P., San Francisco, Cal., assignor to Hydro-Carbon Smelting Co., New York, N. Y. Iron blast-furnace	708,116	Sept. 2	213	51	100	2025
Bossart-Bächli, Johann, Suhr, Switzerland. Needle-compasses	710,242	Sept. 30	4363	980	100	2941
Bossert Electric Construction Company. (See Bossert, William F., assignor.)						
Bossert, Otto H., Denver, Colo. Drill-holding chuck-bolt for rock-drills	704,502	July 15	2188	461	100	462
Bossert, William F., assignor to Bossert Electric Construction Company, Utica, N. Y. Interior-conduit outlet-box	705,026	July 22	3176	686	100	694
Bossert, William F., assignor to Bossert Electric Construction Company, Utica, N. Y. Junction-box	708,602	Sept. 9	1247	286	100	2245
Bossett, Albert T., Kansas City, Mo. Explosive-engine	708,518	Sept. 9	944	213, 214	100	2184
Bostian, Merrill H. (See Doll and Bostian.)						
Boston Electric Heating and Power Company. (See Hawkins and Flint, assignors.)						
Boston Gas Iron Mfg. Co. (See Burns, William G., assignor.)						
Bostwick, Henry A., Spokane, Wash., assignor of one-half to George Lawrence Company, Portland, Oreg. Hopple or pastern-halter	705,556	July 29	4350	941	100	941
Bothwell, William. (See Fleming, John M., assignor.)						
Botsford, W. F. (See Lotspeich, Rhoten F., assignor.)						
Bottlewalla, Hormusji E., Bombay, India. Oil-lamp	706,717	Aug. 12	1375	306	100	1413
Botts, R. Linneus, St. Paul, Minn. Drafting-plotter	709,786	Sept. 23	3337	752	100	2714
Bouchaud-Praceiq, Edouard, Angoulême, France. Carbureter	709,866	Sept. 30	3610	816	100	2784
Boudry, Pierre, Weaverville, Cal. Safety attachment for hydraulic nozzles	708,602	Sept. 9	1249	286	100	2245
Boullly, August, Chicago, Ill. Head-covering	707,956	Aug. 26	3799	853	100	1945

Bowers, William F., San Francisco, Cal. Retainer for hose-couplings	708,117	Sept. 2	215	51	100	2025
Bowling Ball Company. (See Lahr, Henry B., assignor.)						
Bowman, Charles M., Lebanon, Pa., assignor to Diamond Match Company, New York, N. Y. Match	707,060	Aug. 19	2069	.....	100	1573
Bowman, John, Wessington, S. D. Railway-gate	706,516	Aug. 12	1021	225	100	1337
Bowman, Oliver S., Chicago, Ill. Sheet-aliner for printing-presses	705,198	July 22	3531	765	100	766
Bowser, Wesley S., St. Louis, Mo. Means for operating awnings	708,693	July 1	596	132	100	118
Boyce, Markland H., assignor of one-half to R. McClintock, Baltimore, Md. Shade-hanger	707,900	Aug. 26	3713	882	100	1927
Boyce, Thomas J., Chicago, Ill. Rotary scraper for finishing artificial dentures	706,013	Aug. 5	17	4	100	1120
Boyd, Peter, assignor to National Tube Company, Pittsburg, Pa. Apparatus for welding and tapering sockets	706,517	Aug. 12	1022	225, 226	100	1337
Boyd, Peter, assignor to National Tube Company, Pittsburg, Pa. Apparatus for welding and tapering sockets	706,518	Aug. 12	1025	226, 227	100	1338
Boyd, Peter, assignor to National Tube Company, Pittsburg, Pa. Welding and tapering sockets	706,519	Aug. 12	1027	226, 227	100	1338
Boyd, Peter, assignor to National Tube Company, Pittsburg, Pa. Apparatus for welding and tapering sockets	706,520	Aug. 12	1030	227	100	1338
Boyer, Oliver, assignor of one-half to W. H. Orr, Lima, Ohio. Separating mechanism for corn-husking machines	710,187	Sept. 30	4164	988, 989	100	2899
Boyet, John T., Lewisburg, Tenn. Cotton-chopper	706,889	Aug. 12	1720	384, 385	100	1486
Braam, Jacques P. de, Paris, France. Recorder for signals and engine-drivers	708,998	Sept. 16	1864	428	100	2393
Braby, Henry, Ayr, Queensland, Australia. Fire-lighter	710,315	Sept. 30	4483	1012	100	2967
Bracey, Frank, Jefferson City, Mo. Combined mop and wringer	708,857	Sept. 9	1592	365	100	2330
Brachvogel, R. Adam, *et al.* (See Eberstein, John G., assignor.)						
Brackett, Frederick, Baltimore, Md. Apparatus for mixing and kneading dough	706,990	Aug. 12	1722	385	100	1486
Bradbury, Samuel W., Cape Town, Cape Colony. Wire-tightener	708,196	Sept. 2	381	88	100	2050
Bradbury, Walter S., Willimantic, Conn. Bicycle-stand	706,718	Aug. 12	1376	307	100	1413
Bradet, George H., assignor of one-half to G. Goblisch, St. Paul, Minn. Signal-lantern	707,545	Aug. 26	2950	667	100	1775
Bradfield, Emma N. (See Bradfield, Mason, assignor.)						
Bradfield, Mason, assignor to E. N. Bradfield, Los Angeles, Cal. Conveyer	709,737	Sept. 23	3838	758	100	2714
Bradford, Chester. (See Hilleary and Bradford.)						
Bradford, Chester, Indianapolis, Ind. Boot or housing for pneumatic elevators	708,983	July 8	1134	245	100	240
Bradford, Edward T., deceased; M. C. C. Bradford, administratrix, assignor to Standard Smelter Company, Denver, Colo. Hot-blast furnace	705,640	July 29	4495	976	100	970
Bradford, John A., Victor, Colo. Lubricator for car-trucks	708,806	Sept. 2	575	130	100	2098
Bradford, Leonard F., *et al.* (See Sprague, Lewis G., assignor.)						
Bradford, Mary C. C., administratrix. (See Bradford, Edward T.)						
Bradley, Charles S., and D. R. Lovejoy, New York, assignors, by mesne assignments, to Atmospheric Products Company, Niagara Falls, N. Y. Manufacturing nitrogen compounds from atmospheric nitrogen	709,867	Sept. 30	3611	816, 817	100	2784
Bradley, Charles S., New York, and D. R. Lovejoy, assignors, by mesne assignments, to Atmospheric Products Company, Niagara Falls, N. Y. Apparatus for subjecting gases to high-tension discharges	709,868	Sept. 30	3614	817	100	2784
Bradley, Christopher C., Syracuse, N. Y. Thill-coupling. (Reissue)	12,034	Sept. 23	3581	807	100	2765
Bradley, Christopher C., Syracuse, N. Y. Thill-coupling. (Reissue)	12,035	Sept. 23	3582	807	100	2765
Bradley, Emory O. and M. L., Tacoma, Wash. Car-standard	705,200	July 22	3533	766	100	766
Bradley, Franklin F. (See Osgood and Bradley.)						
Bradley, James N., Washington, D. C. Metal can	706,290	Aug. 5	593	129	100	1235
Bradley, Melvin L. (See Bradley, Emory O. and M. L.)						
Bradley, Richard, Branford, Conn. Ice-carrier	707,818	Aug. 26	3544	790	100	1895
Bradley, William, *et al.* (See Foore, Margaretta E., assignor.)						
Bradley, William O. R., *et al.* (See Strong, Robert H., assignor.)						
Bradley, William S. (See Dempster and Bradley.)						
Bradley, William S., Philadelphia, Pa. Guard-rail for street-cars	704,432	July 8	1979	431	100	416
Bradley, William S., Philadelphia, Pa. Quoit	709,532	Sept. 23	2998	668	100	2645
Bradshaw, Charles E., Cleveland, Ohio. Window appliance	708,519	Sept. 9	946	214	100	2184
Bradshaw, Charles T., Philadelphia, Pa. Quoit	706,892	Aug. 12	1731	386, 387	100	1488
Brady, James C., Pittsburg, Pa. Carpet-cleaning machine	708,687	July 1	470	107	100	93
Brady, Joseph H., Kansas City, Mo. Pneumatic signaling apparatus	706,891	Aug. 12	1729	386	100	1487
Bramhall, Charles F., Kingman, Kans. Portable revolving theater	709,198	Sept. 16	2289	519	100	2481
Bramson, Max, Warsaw, Russia, assignor to H. F. Vogel, St. Louis, Mo. Petroleum incandescent-light burner	710,008	Sept. 30	4072	918	100	2879
Bramwell, James C. (See Holritz, Edward A., assignor.)						
Brand, William, Oshkosh, Wis. Display-tray	709,798	Sept. 23	3340	753	100	2715
Brandell, Claus, Chicago, Ill. Compasses	706,014	Aug. 5	19	5	100	1120
Brandenburg, Anthony A., and W. C. Knobelock, St. Louis, Mo. Cooking vessel	709,869	Sept. 30	3615	817	100	2786
Brandner, Paul, Brooklyn, N. Y. Chimney or other curved fireproof structure	709,813	Sept. 23	3314	792	100	2750
Brandt, Andrew G., Scranton, and D. L. Griffiths, Olyphant, Pa.; said Brandt assignor to said Griffiths. Washing-machine	707,061	Aug. 19	2070	462	100	1573
Brandt, Frederic R., Dayton, Ohio. Atmospheric steam-condensing apparatus	708,197	Sept. 2	382	89	100	2050
Brankowitch, Wladimir, assignor to A. Matifat and Co., Paris, France. Brake for cycles	704,955	July 15	3029	650	100	649
Brank-ston, Ralph T., assignor to W. G. Armstrong, Whitworth & Company, Limited, Newcaste-upon-Tyne, England. Apparatus for loading ordnance	705,027	July 22	3178	687	100	694
Brantingham, Allen C., Toledo, Ohio, assignor to Nordyke & Marmon Company, Indianapolis, Ind. Self-cleaning sieve	704,433	July 8	1980	431	100	417
Brauer, Adolph, Seattle, Wash. Sash-fastener	710,138	Sept. 30	4169	939	100	2900
Braun, Frederick W. (See Calkins, Albert C., assignor.)						
Braüninger, John, Lorain, Ohio. Cup	709,891	Sept. 16	2683	602	100	2566
Brawner, Harry O., Baltimore, Md. Bottle stopper and sprinkler	708,118	Sept. 2	215	51	100	2026
Braxton, Elias L., Pactolus, N. C. Fertilizer-distributer						
Bray, Mellen. (See Davis, Wilbur G., assignor.)						
Bray, Mellen N. (See Lisotte, Joseph, assignor.)						
Brayton, James T., Chicago, Ill. Sight for firearms	708,119	Sept. 2	217	52	100	2026

Bucknam, Ezra S., assignor to J. A. Brill, Philadelphia, Pa. Convertible railway-car	709,076	Sept. 16	2043	466, 467	100	2430
Buckstaff Edwards Co. (See Koeser, Carl D., assignor.)						
Budd, William H., Jr. (See Prouty and Budd.)						
Budweiser, Bernhard, Chicago, Ill. Display-box	709,663	Sept. 23	3214	717	100	2688
Buerkle, August, Allegheny, Pa. Valve mechanism for water-heaters	707,758	Aug. 26	3418	770	100	1869
Buffalo Manufacturing Company. (See Mast, William J. D., assignor.)						
Buffalo Pitts Company. (See Todd, Marquis J., assignor.)						
Buffum, Evelyn, Chicago, Ill. Spool-stand	710,096	Sept. 30	4076	919, 920	100	2879
Bugbee, A., *et al.* (See Hughes, Thomas W., assignor.)						
Bugg, Herbert L., Walnutridge, Ark. Acetylene-gas generator	705,902	July 29	4970	1082	100	1066
Buhl, William H. (See Modlin and Buhl.)						
Buhoup, Harry C., Chicago, Ill. Car-bolster	706,370	July 1	29	6	100	8
Bullard, Albert M., Somerville, Mass., assignor to American Bell Telephone Company. Automatic telephone-exchange	709,739	Sept. 23	3341	753, 754	100	2715
Bullard, Albert M., Somerville, and M. C. Rorty, Dedham, assignors to American Bell Telephone Company, Boston, Mass. Automatic telephone-exchange system and apparatus	709,740	Sept. 23	3351	754, 755	100	2716
Bullard, James H., Springfield, assignor to Overman Automobile Company, Chicopee, Mass. Flue construction for steam-carriages	708,460	Sept. 2	832	190	100	2150
Bullard, Royal M., Chicago, Ill., assignor to Wyckoff, Seamans & Benedict, Ilion, N. Y. Type-writing machine	703,967	July 8	1145	249	100	243
Bullard, William L. (See Penty and Bullard.)						
Bulloch, Joseph G., Cherokee, N. C. Lemon-squeezer	703,988	July 8	1151	250	100	244
Bullock, George H., Wakefield, R. I. Table	705,203	July 29	4972	1092	100	1066
Bullock, William A. (See Macbeth, Frank D., assignor.)						
Bulmer, George D., Duquesne, Pa. Merry-go-round	703,761	July 1	711	157, 158	100	142
Bunce, Earl M., Collingwood, Ohio. Railway-tie	708,321	Sept. 9	948	215	100	2185
Bunce, Earl M., Collingwood, Ohio. Railway-tie	708,322	Sept. 9	949	215	100	2185
Bundy, Clifton L., Philadelphia, Pa., assignor to Philadelphia Electrical and Manufacturing Company. Electric-arc lamp	707,283	Aug. 19	2934	595	100	1692
Bunnell, Morton G., assignor to F. C. Austin Manufacturing Company, Chicago, Ill. Street-sprinkler valve	709,900	Sept. 30	3820	900	100	2826
Bunzl, Ernest, *et al.* (See Kuhn, Edmond, assignor.)						
Bunzl, Gustav, *et al.* (See Kuhn, Edmond, assignor.)						
Buoker, Daniel A., West Peabody, Mass. Knitting-machine	706,206	July 22	3540	767	100	769
Burbank, Louis S., Worcester, Mass. Rythmical rattle	705,819	July 29	4825	1048	100	1086
Burch, Charles J., assignor of one-half to F. R. Lancaster and J. H. Knauer, Lena, Ind. Singletree-clip	706,897	Aug. 12	1745	389	100	1491
Burchinal, Charles H. (See Wilkinson and Burchinal.)						
Burden, Oscar H., assignor of one-half to T. F. Adams, Kaslo, British Columbia, Canada. Latch	708,362	Sept. 9	1004	896	100	2328
Burdett, Everett W., *et al.*, administrators. (See Gilbert, Frederick A.)						
Burdict, Orrin C., and B. C. Candee, Buffalo, N. Y.; said Candee assignor to said Burdict. Mechanical movement for nut-making or other machinery	707,302	Aug. 19	2302	515	100	1654
Burfeind, Joachim H. (See Officer, Neill, and Burfeind.)						
Burgart, Philip H., Payne, Ohio. Safety-elevator	710,032	Sept. 30	3957	892	100	2855
Burger, Edward. (See Swisher and Burger.)						
Burger, Franz. (See Williams, Henry M., assignor.)						
Burger, Franz, assignor of three-fourths to H. M. Williams, Fort Wayne, Ind. Swivel-truck for vehicles	706,523	Sept. 9	950	215	100	2183
Burger, Franz, and H. M. Williams, Fort Wayne, Ind.; said Burger assignor of one-half to said Williams. Heating apparatus	706,796	Aug. 12	1551	347	100	1450
Burger, Victor A. A. (See Swisher and Burger.)						
Burgers, Franz, Bulmke, Germany. Profile-tool for making pipe-molds	706,378	July 22	3948	855, 856	100	848
Burgess, Charles. (See Schofield, Robert, assignor.)						
Burgess, George E., Buffalo, N. Y. Car-brake mechanism	704,506	July 15	2142	464	100	464
Burgett, John W., Guttenberg, N. J. Suspenders	705,205	July 22	3546	768	100	769
Burk, Ambros, Columbia City, Ind. Neck-yoke	708,019	Sept. 2	31	7	100	1997
Burk, Edward. (See Swift and Burk.)						
Burke, Alfred, *et al.* (See Neubauer, Carl E., assignor.)						
Burke, James, Berlin, Germany. Dynamo-electric machine	706,017	Aug. 5	22	5	100	1121
Burke, John T. (See Patterson and Burke.)						
Burke, Robert E., Anderson, Ind., assignor to M. B. Wilson, Chicago, Ill. Road-grading machine	706,393	Aug. 5	760	166, 167	100	1268

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'gs.	Official Gazette. Vol.	Official Gazette. Page.
Burland, Edward G., Watsonville, Cal. Canopy	706,722	Aug. 12	1385	308	100	1415
Burner, William L., assignor to Case Manufacturing Company, Columbus, Ohio. Hominy, meal, and grits drier	707,384	Aug. 19	2537	596	100	1698
Burnett, Alfred E., Jr. (See Merrie and Burnett.)						
Burnett, William S., and W. H. Goodall, Milwaukee, Wis. Multiplex telesig	705,511	July 22	4194	912 918	100	896
Burnham, Williams and Company. (See Collins, Thomas E., assignor.)						
Burns, Alexander B. (See Burns, David M. and A. B.)						
Burns, David M. and A. B., Greenbay, Wis. Boiler or water-heater	707,203	Aug. 19	2304	515	100	1644
Burns, Edward, Zearing, Iowa. Non-refillable bottle	707,759	Aug. 26	3419	770	100	1970
Burns, George A. (See English and Burns.)						
Burns, Henry H., *et al.* (See Dempster, Robert, assignor.)						
Burns, Henry S., and T. G. Bennett, assignors to Winchester Repeating Arms Co., New Haven, Conn. Cellular primer-tray	705,318	July 22	3809	826	100	820
Burns, John E., Northport, N. Y. Cross-tie	706,523	Aug. 12	1036	228	100	1340
Burns, William G., assignor to Boston Gas Iron Mfg Co., Boston, Mass. Self-heating sad-iron	705,204	July 22	3543	708	100	768
Burr, Franklin H., Atlantic, assignor to Fast Mail Delivery Company, Council Bluffs, Iowa. Mail receiving and delivering mechanism for railways	707,507	Aug. 19	2841	643	100	1736
Burr, Jesse T., Cleveland, Ohio. Wrench	710,179	Sept. 30	4245	957	100	2916
Burrell, Edmund R. (See Strange and Graham, assignors.)						
Burridge, Lee S., New York, N. Y., and S. T. Smith, Stamford, Conn., assignors to Wagner Typewriter Company, New York, N. Y. Card-holder for type-writers	706,524	Aug. 12	1067	228	100	1340
Burrill, Frank C. (See Eaton and Burrill.)						
Burrill, George H., Adaville, Iowa. Grain-drill	709,741	Sept. 23	3370	756	100	2719
Burritt, Chester C., Bayonne, N. J. Door-stop	704,855	July 15	2773	600	100	594
Burrow, Edgar A., Hico, Tex. Oil heater, strainer, and separator	707,760	Aug. 26	3421	770	100	1870
Burrowes, Edward T., Portland, Me., assignor to Curtain Supply Company, Chicago, Ill. Device for spring-actuated shades	705,051	July 22	3182	688	100	695
Burruss, William C., Norfolk, Va. Lamp-chimney protector	709,398	Sept. 16	2686	602	100	2566
Burry, John, Fort Lee, N. J. Means for controlling the charging of secondary batteries	709,465	Sept. 23	2839	637 638	100	2610
Burry, John, assignor to M. Wyler, Fort Lee, N. J., and M. Burry, Brooklyn, N. Y. Magneto-therapeutic apparatus	708,999	July 8	1152	250	100	244
Burry, Marie, *et al.* (See Burry, John, assignor.)						
Burton, Charles S., trustee. (See Crook, Charles M., assignor.)						
Burton, Gale W., Muncie, Ind. Baggage-truck	708,900	July 8	1154	250	100	244
Burton, George W., Morehead, Ky. Brake for vehicles	706,898	Aug. 12	1746	390	100	1491
Burton, John L., assignor to Draper Company, Hopedale, Mass. Filling-carrier receptacle for weft-replenishing looms	708,594	Sept. 9	951	216	100	2186
Burton, Orville C. (See Stiker and Burton.)						
Busby, Charles, Fossil, Oreg. Wrench	709,742	Sept. 23	3371	756	100	2719
Busch, John G., Alma, Wis. Window-shutter	706,217	Aug. 5	409	87, 88	100	1290
Bush, Hiram T., Detroit, Mich. Water-closet bowl	705,319	July 22	3810	826	100	820
Bush, Samuel P. (See Groobey and Bush.)						
Bush, Samuel P., assignor to Buckeye Malleable Iron and Coupler Co., Columbus, Ohio. Friction draw-gear and buffing apparatus for railway-cars	707,820	Aug. 26	3548	800 801	100	1896
Bush, Thomas J., Lexington, Ky. Rotary engine	709,961	Sept. 30	3823	860	100	2827
Bushnell, Glenn C., Hartford, Ohio. Dashboard	704,812	July 15	2704	585	100	578
Bushnell, John S., Brooklyn, N. Y. Tube-cleaning device	708,200	Sept. 2	366	89	100	2060
Buskirk, George W., New York, N. Y. Blotter or desk-pad	708,525	Sept. 9	953	216	100	2186
Buss, Otto, Rüschlikon, Switzerland. Casein photographic film and making same	705,643	July 29	4499	.....	100	971
Bussinger, William J., assignor to T. Devlin & Company, Philadelphia, Pa. Quick return for feeding devices	708,863	Sept. 9	1606	367	100	2128
Butcher, James M., and W. G. Hartwig, Chicago, Ill., assignors to American Automatic Change Maker Company, Little Rock, Ark. Coin-delivery device	707,065	Aug. 12	2080	453 454	100	1549
Butcher, Joseph, New York, N. Y. Pendulum-regulator for clocks	709,594	Sept. 23	3100	691	100	2366
Butcher, Joseph, New York, N. Y., assignor to S. N. Putnam, Jersey City, N. J. Electric clock	705,558	July 29	4358	942 943	100	941
Butler, Bert, Kensett, Iowa. Hand-cart	704,612	July 15	2828	505 506	100	502
Butler, Edwin T., Chambuslang, near Glasgow, Scotland. Photographic camera for producing and viewing images in natural colors	708,795	Sept. 9	1458	333	100	2299
Butler, Henry G., Danville, Ill. Dredging-scoop	708,753	Sept. 9	1365	311 312	100	2272
Butler, James, St. Louis, Mo. Nut-lock	708,390	July 1	31	7	100	9
Butler, John F. (See Mallin, Isaac H., assignor.)						
Butler, Paul, Lowell, Mass. Cartridge-shell-gaging machine	708,128	Sept. 2	224	53, 54	100	2028
Butler, Thomas S., Vandergrift, Pa. Track-brake	709,743	Sept. 23	3372	756	100	2719
Butler, William A., and A. Kunze, San Francisco, Cal. Continuous kiln	705,585	July 1	282	64	100	57
Butler, William E., Bedford, Ind. Drilling-machine	708,995	Sept. 16	1870	430 431	100	2394
Butt, William D., Kansas City, Mo. Advertising device	706,595	Aug. 12	1068	228	100	1340
Butt, William D., Kansas City, Mo. Advertising device	707,205	Aug. 19	2307	516	100	1635
Butt, William D., Kansas City, Mo. Advertising device	709,466	Sept. 23	2841	638	100	2510
Butt, William D., Kansas City, Mo. Hydrostatic press	710,059	Sept. 30	3956	898	100	2856
Butterworth, Hubert V., Newark, N. J. Recorder for phonographs, &c	707,904	Aug. 19	2305	516	100	1635
Buttling, Avery H. (See O'Brien, Joseph, assignor.)						
Buttner, Henry F., Idaho Falls, Idaho. Non-refillable bottle	704,613	July 15	2330	506	100	502
Butts, Edmund R., Oberon, N. D. Harrow	709,256	Sept. 16	2403	544	100	2306
Butz, Albert M., Oakpark, Ill. Thermostatic circuit-closer	705,379	July 22	3949	856	100	848
Buyse, Edward, South Bend, Ind. Timing device for carrier-pigeons	708,581	July 1	82	7	100	9
Buzzell, John G., Lynn, Mass. Machine for abrading fronts of shoe-heels	708,991	July 8	1155	251	100	245
Bycraft, William J., Newton, Ind. Ter. Bottle-closure	709,201	Sept. 16	2296	521	100	2483
Byerly, William A., Bridgewater, Va. Gate	708,382	July 1	33	7	100	9
Byers, Joseph A., Milwaukee, Wis. Making hats	708,388	July 1	37	7	100	10
Bylngton, John F., Battlecreek, Mich., assignor to F. A. Hardy & Co., Chicago, Ill. Machine for grinding lenses	710,180	Sept. 30	4248	957	100	2916
Byrnes, Clarence P., Pittsburg, Pa. Spring-cushioning device	704,818	July 15	2705	585	100	578
Bystrom, John, Chicago, Ill. Hydrocarbon-lamp	708,384	July 1	28	8	100	10
C. B. Cottrell & Sons Company. (See Seymour, Ralph C., assignor.)						
C-K Manufacturing Company. (See Klein, Charles J., assignor.)						
Cabot, John W., Johnstown, Pa., and S. W. Vaughen, Lorain, Ohio. Blast-regulator for furnaces	710,247	Sept. 30	4378	983	100	2943
Cade, Enos B., Skaguay, Alaska Ter. Tidal motor	708,461	Sept. 2	834	190	100	2130

Dittmar, Frank F. (See Guenzel, Ernst J., assignor.)	706,807	Aug. 12	1570	352	100	1455
Dixon, Charles E. and J. E., Pittsburg, Pa. Ditching-jack	707,834	Aug. 26	3585	800	100	1902
Dixon, Henry L., Pittsburg, Pa. Plate-glass-annealing apparatus						
Dixon, John E. (See Dixon, Charles E. and J. E.)	705,827	July 29	4336	1050	100	1039
Dixon, Joseph W., and J. D. Devine, Versailles, Pa. Rail-joint						
Dixon, Sidney R., trustee. (See Davis, David W., assignor.)	705,634	July 29	4321	9 2	100	975
Djup, Bertha, Stambaugh, Mich. Rolling pin	710,009	Sept. 30	4095	922	100	2881
Doane, Samuel E., Marlboro, Mass., assignor to Bryan-Marsh Company, New York, N. Y. Exhausting incandescent electric lamps of relatively low voltage	710,186	Sept. 30	4257	939	100	2918
Doane, Samuel E., Marlboro, Mass., assignor to Bryan-Marsh Company, New York, N. Y. Exhausting incandescent electric lamps						
Dobbs, Archibald E. (See Johnston, John, assignor.)						
Doble, William H., Quincy, Mass., assignor to Pneumatic Scale Corporation, Portland, Me. Feed apparatus for weighing or packaging machines	705,229	July 22	3594	778	100	778
Doble, William H., Quincy, Mass., assignor to Pneumatic Scale Corporation, Portland, Me. Packaging-machine	708,627	Sept. 9	1122	252 253	100	2220
Dobson, Alexander, Beaverton, assignor to Peat Machinery Supply Company, Limited, Toronto, Canada. Apparatus for harvesting peat	706,585	Aug. 12	1055	232	100	1344
Dockter, John A., *et al.* (See Triance, John C., assignor.)	705,655	July 29	4322	982	100	975
Docter, Cancel T., Vanwinkle, Ga. Grain-door attachment	704,788	July 15	2938	568	100	564
Dodd, William S., Washington, Pa. Metallic railway-tie and fastener	703,903	July 1	979	213	100	196
Dodge, James M., assignor to Link Belt Engineering Company, Philadelphia, Pa. Discharge device for conveyers	705,393	July 22	3971	880	100	852
Dodge, James M., assignor to Link Belt Engineering Company, Philadelphia, Pa. Caneseling	708,608	Sept. 9	1259	289	100	2247
Dodge, James M., assignor to Link Belt Engineering Company, Philadelphia, Pa. Horizontal conveyer	708,759	Sept. 9	1382	316 317	100	2275
Dodge, James M., assignor to Link Belt Engineering Company, Philadelphia, Pa. Endless conveyer	12,030	Sept. 30	4032	1044 1045 1046 1047	100	2998
Dodge, James M., Philadelphia, Pa., assignor to Stair Lift Company, Camden, N. J., and Philadelphia, Pa. Moving stairway. (Reissue)	706,642	Aug. 12	1243	275	100	1395
Dods, John C., assignor to J. Green, St. Louis, Mo. Clamp for retort-mouthpieces	704,442	July 8	1999	435	100	421
Doellinger, Louis F., Davenport, Iowa. Filling-indicator	708,898	July 1	55	10	100	14
Doering, August, Burt, assignor of three-fourths to W. K. Ferguson, E. J. Murtaugh, and W. P. Jones, Algona, Iowa. Platform-scale	705,228	July 22	3596	778	100	778
Doering, Ernst, Berlin, Germany. Box or case						
Doersch, Conrad, trustee. (See Young, James A., assignor.)						
Doggett, Reginald L. S., East Orange, N. J., assignor to Standard Varnish Works, New York, N. Y. Expansible stopper	707,784	Aug. 26	3427	772	100	1872
Doherty, John. (See Flesche, Hall, and Doherty.)						
Doherty, Michael J., *et al.* (See Reynolds, Willie H., assignor.)	708,167	Aug. 5	324	68, 69	100	1188
Doherty, Thomas, Sarnia, Canada. Gas-engine	704,521	July 15	2175	471	100	472
Dolan, James J., and E. Estep, Sandwich, Ill. Metal-bending tool	704,784	July 15	2939	568	100	564
Dolan, John J., Jr., Baltimore, Md. Track-sanding apparatus						
Dolbear, Clinton E., assignor to American Mining and Metal Extraction Company, Boston, Mass. Electrolytically treating ores	709,817	Sept. 23	3519	.....	100	2751
Doll, Horace H., and M. H. Bostian, Camden, N. J. Automatic switch	705,561	July 1	334	76	100	67
Donaldson, Edwin, Brooklyn, assignor to International Blind Stitch Company, New York, N. Y. Sewing-machine attachment for overedge or blind stitching	709,308	Sept. 16	2506	564 565	100	2586
Donaldson, James H., Chicago, Ill. Window-shade holder	708,468	Sept. 2	841	192	100	2152
Doner, Martin J., assignor of one-half to J. J. Dunnavant, St. Louis, Mo. Roundabout	708,873	Sept. 9	1625	373	100	2327
Dones, Ella B., assignor of one-half to F. W. Heandler, Cincinnati, Ohio. Invalid-bed	708,592	Sept. 9	600	136	100	2104
Doney, Edward D., Ovando, Mont. Hay rake and loader	709,756	Sept. 23	3389	760	100	2722
Dönits, Emil, assignor to Firm of C. Zeiss, Jena, Germany. Photographic shutter	709,079	Sept. 16	2053	468 469	100	2432
Donnelly, Edward P., Boston, Mass. Air-brake apparatus	704,737	July 15	2543	550	100	547
Donnelly, James H., assignor of one-half to W. W. Ruley, Philadelphia, Pa. Side guard for cars	708,209	Sept. 2	398	92	100	2062
Donnelly, Patrick J. (See Cole and Donnelly.)						
Doolittle, James E., Bridgeport, Conn., assignor to Birdsey and Somers, Bridgeport, Conn., and New York, N. Y. Corset	704,007	July 8	1177	258	100	250
Doore, Allen J. (See Doore, George W. and A. J.)						
Doore, George W., Dover, Me., and A. J. Doore, Greene, Iowa; said A. J. Doore assignor to said George W. Doore. Paint	704,969	July 15	3041	.....	100	630

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Doppelmayr, Louis, Valverde, and M. Weber, Denver, Colo. Celery-bunching device	706,643	Aug. 12	1944	275	100	1395
Dorsa, Harry G., Brooklyn, N. Y. Combined crib and table	704,443	July 8	2000	435	100	421
Doremus, James M. (See Beebe, William, assignor.)						
Dorer, Charles H., *et al.* (See Penty and Bullard, assignors.)						
Döring, Albert, assignor to Aktiengesellschaft, vormals Seidel & Naumann, Dresden, Saxony, Germany. Bobbin holder-case for sewing-machines	709,886	Sept. 30	3679	829	100	2795
Dorman, William S., New York, N. Y. Machine for sealing bottles	705,564	July 29	4365	945	100	945
Dormandy, Garry J., Lansingburg, assignor to United Shirt and Collar Company, Troy, N. Y. Machine for folding collar-blanks, &c	708,030	Sept. 2	58	14, 15	100	1093
Dorn, Edward H. (See Hopkins and Dorn.)						
Dornblaser, Arthur S. (See Segner, Harry H. and C. B., assignors.)						
Dorner, Henry A., assignor to Dorner Truck & Foundry Co., Logansport, Ind. Car-truck	705,049	July 22	3217	695 696	100	701
Dorner Truck & Foundry Co. (See Dorner, Henry A., assignor.)						
Dorough, Walter P., *et al.* (See McLaughlin, James A., assignor.)	707,401	Aug. 19	3675	------	100	1701
Dörr, Carl T., Ohligs, assignor to F. Krupp, Essen, Germany. Ordnance powder-bag	705,031	July 1	601	------	100	119
Dörr, Clemens, Cologne, Germany. Utilizing carboniferous colliery waste	707,400	Aug. 19	3673	004	100	1700
Dorrestein, C. A., administrator, *et al.* (See Morrell, James A., assignor.)						
Dorris, George P., St. Louis, Mo. Transmission-gear for automobiles	709,757	Sept. 23	3395	763	100	2724
Dorticus, Clatonia J., Newton, N. J., assignor to Dorticus Manufacturing Co. Photograph-burnisher	709,060	Sept. 16	1880	432	100	2396
Dorticus Manufacturing Co. (See Dorticus, Clatonia J., assignor.)	709,587	Sept. 30	3680	880	100	2796
Dosch, Peter, Yonkers, N. Y. Sash-cord pulley	710,258	Sept. 30	4546	1035 1037	100	2981
Dossey, William J., Rhome, Tex. Apparatus for cooling water	706,526	Aug. 12	1057	252 253	100	1344
Doud, Charles A., and C. B. Shouse, assignors to Western Banana Crate Manufacturing Company, La Crosse, Wis. Banana-crate						
Dougan, David W., and F. C. Watson, Philadelphia, Pa. Stuffing-box for piston-rods	709,970	Sept. 30	3850	895	100	2833
Douglas, Heman F. (See Slyder, William J., assignor.)	707,058	Aug. 12	2007	449	100	1544
Douglas, Nathan, Cambridge, Mass. Garment-holder	704,322	July 15	2177	471	100	472
Douglas, William D., Chicago, Ill. Air-feeding device	707,900	Aug. 26	3811	856	100	1947
Douglas, William H., Washington, D. C. Cock or faucet	706,108	Aug. 5	325	69	100	1168
Douillet, Edouard, La Garenne-Colombes, France. Apparatus for refining oils	707,835	Aug. 26	3586	809	100	1902
Dover, George W., Cranston, R. I., assignor to George W. Dover Company. Pin	704,528	July 15	2179	472	100	472
Dovey, George J. (See Head and Dovey.)						
Dow, Herbert H., Midland, Mich. Means for generating counter electromotive force	709,886	Sept. 30	3679	829	100	2795
Dowagiac Manufacturing Company. (See Brown, William F., assignor.)	705,284	July 22	2597	779	100	778
Dowden, Ashford T., assignor to Dowden Manufacturing Company, Prarie City, Iowa. Portable chair-swing	706,537	Aug. 12	1059	283	100	1345
Dowden Manufacturing Company. (See Dowden, Ashford T., assignor.)	710,187	Sept. 30	4259	960	100	2918
Down, Earnest U., Haskins, assignor of one-fourth to A. C. Beil, Waterville, Ohio. Valve for engines	708,211	Sept. 2	401	93	100	2063
Downard, Byron B., Milwaukee, Wis. Key-fastener	709,001	Sept. 16	1881	432	100	2396
Downer, John H., Allenport, Pa. Adjustable ice-creeper						
Downes, Louis W., Providence, R. I. Electric snap-switch	709,474	Sept. 23	2858	642	100	2613
Downes, Louis W., Providence, R. I. Manufacturing electrical conductors	708,699	Sept. 9	1951	289	100	2248
Downing & Co., C. J. (See Rice, Wietts L., assignor.)	707,214	Aug. 19	2324	------	100	1626
Downing, Horatio E., Reading, Okla. Ter. Animal-poke	707,054	Aug. 12	2010	450	100	1544
Downs, William, Orange, N. J. Fuel-economizer feed-water heater	707,504	Aug. 19	2848	645	100	1738
Downs, William F., Jersey City, N. J. Treating rebellious ores of the precious metals	708,808	Aug. 12	1572	352	100	1455
Dowse, William B. H., Newton, Mass. Fastener	707,307	Aug. 19	2497	561	100	1654
Dowse, William B. H., Newton, Mass., assignor to Consolidated Fastener Company, Portland, Me. Fastener						
Doyle, John, Grand Rapids, and G. H. Kimball, Detroit, assignors of one-third to W. J. McWain, Saginaw, Mich. Railway-tie	704,911	July 29	4901	1096	100	1070
Doyle, Michael F., Scranton, Pa. Carpenter's tool	708,536	Sept. 9	908	219	100	2189
Dr. Paul Meyer Actiengesellschaft. (See Jahnz, Erwin H., assignor.)						
Draper, Clare H., assignor to Draper Company, Hopedale, Mass. Shuttle-checking mechanism for looms						
Draper, Clare H., assignor to Draper Company, Hopedale, Mass. Warp stop-motion for looms						
Draper Company. (See Burton, John L., assignor.)

Dudley, Charles T., Golden, Colo., assignor of one-fourth to W. W. Dudley, F. L. Browne, and W. T. Norton, Washington, D. C. Treatment of steel ingots for forging	705,330	July 22	2845	------	100	827
Dudley, William W., *et al.* (See Dudley, Charles T., assignor.)	707,559	Aug. 26	2978	672	100	1780
Duff, Hugh Y. B., Cheswick, Pa. Hide-securing apparatus	707,558	Aug. 26	2977	672	100	1780
Dufour, Corinne, Savannah, Ga. Combined undervest and corset-cover	704,444	July 8	2002	436	100	421
Dummer, Edward, Newton, Mass. Paper-feeder	706,086	Aug. 5	66	14	100	1131
Dun Lany, William P., Cleveland, Ohio. Hair-fastener						
Dunahoo, James M., Hood River, assignor of one-half to R. J. Ginn, Moro, Oreg. End-less-chain reel	704,445	July 8	2007	436	100	422
Dunbar, Francis W., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill. Telephone system. (Reissue)	12,031	Sept. 16	2811	632	100	2593
Duncan, Arthur T., Clinton, Mo. Shell-base for cartridges	707,681	Aug. 26	3228	725	100	1882
Duncan, Frederick B. assignor to Northern Electrical Manufacturing Company, Madison, Wis. Lubricating device	708,824	Sept. 2	604	137	100	2104
Duncan, James. (See Duncan, William M., assignor.)	703,771	July 1	728	161	100	146
Duncan, Lewis S., New York, N. Y. Moistener						
Duncan, Max E., New York, N. Y., assignor to B. R. Bacon, South Orange, N. J. Can-opener	707,560	Aug. 26	2979	672	100	1781
Duncan, Max E., New York, N. Y., assignor to B. R. Bacon, South Orange, N. J. Can-opener	707,561	Aug. 26	2980	673	100	1781
Duncan, Signora H., Nashville, Tenn. Cuspidor	706,538	Aug. 12	1060	283	100	1345
Duncan, William M., assignor of one-half to J. Duncan, Alton, Ill. Molding-machine	704,712	July 15	2493	539 540	100	537
Duncombe, George H. (See Faulkner, Alonzo D., assignor.)	705,742	July 29	4709	1017	100	1010
Dunham, Charles L., Centerview, Ohio. Pipe-wrench	705,743	July 29	4709	1017	100	1010
Dunham, Charles L., Centerview, Ohio. Nut-lock	707,908	Aug. 26	3725	895	100	1929
Dunham, George W., and J. W. Fox, East Cleveland, Ohio. Foot-warmer for vehicles	709,008	Sept. 16	1886	------	100	2397
Dunham, H. G., *et al*, trustees (See McClave, William, assignor.)	707,090	Aug. 19	2085	466	100	1576
Dunham, Henry V., New York, N. Y. Producing soluble milk-albumen	706,911	Aug. 12	1762	393	100	1494
Dunham, Willard A., Weymouth, Mass. Lacing-hook	708,895	Sept. 2	605	137	100	2105
Dunham, William L., assignor to W. B. Matthews and F. H. Hough, Washington, D. C. Tool for removing caps from bottles	707,308	Aug. 19	2498	561	100	1654
Dünkelsbühler, Moritz. (See Wachwitz, Heinrich, assignor.)	708,720	July 1	641	142	100	128
Dunlap, William J., Etna, Pa. Tool for oil-wells, &c	707,502	Aug. 26	2982	673	100	1781
Dunn, Charles A., West Homestead, Pa. Envelop	709,090	Sept. 16	2055	469	100	2438
Dunn, James E., Chicago, Ill. Artificial denture	709,091	Sept. 16	2056	470 471	100	2438
Dunn, Thomas J., Jersey City, N. J. Electrotherapeutic battery	709,092	Sept. 16	2058	471	100	2438
Dunn, William A., Smithville, assignor of one-half to A. M. Miller, Duluth, Minn. Shaping metal I-beams, channel-beams, &c	709,093	Sept. 16	2059	471 472	100	2434
Dunn, William A., Smithville, assignor of one-half to A. M. Miller, Duluth, Minn. Machine for shaping metal I-beams, channel-beams, &c	709,094	Sept. 16	2062	473	100	2434
Dunn, William A., Smithville, assignor of one-half to A. M. Miller, Duluth, Minn. Roller-mill	709,095	Sept. 16	2063	473 474	100	2434
Dunn, William A., Smithville, assignor of one-half to A. M. Miller, Duluth, Minn. Roller-mill and cutter						
Dunn, William A., Smithville, assignor of one-half to A. M. Miller, Duluth, Minn. Machine for rolling metal I-beams, channel-beams, &c						
Dunnavant, John J. (See Doner, Martin J., assignor.)	704,345	July 8	1636	354	100	342
Dunne, Patrick W., River Forrest, Ill. Means for transmitting rotary motion	704,346	July 8	1637	355	100	342
Dunne, Patrick W., River Forrest, Ill. Burglar-alarm						
Dunster, Henry, Jr., *et al.* (See Sibley, Edward W., assignor.)						
Duplex Printing Press Company. (See Bechman, Henry F., assignor.)	706,780	Aug. 12	1360	313	100	1418
Dupont, Paul A., Rouen, France. Two-cycle rotary motor	709,668	Sept. 23	3825	719	100	2691
Durand, Henry S., Rochester, N. Y. Mechanical motor						
Durand and Ivey. (See Durand, John, assignor.)	704,808	July 8	1742	390	100	366
Durand, John, Durham, N. C., assignor to Durand and Ivey, Union Point, Ga. Hand-stamp	707,909	Aug. 26	3726	895	100	1929
Durand, Nelson C., assignor to International Text Book Company, Scranton, Pa. Bound-modifier	707,563	Aug. 26	2983	673	100	1781
Durgin, Alfred B., Medford, Mass. Comb	707,564	Aug. 26	2984	673	100	1781
Durgin, Alfred B., Medford, Mass. Comb						
Durkee, Frederick M., Newton, assignor of one-half to U. Blatter, Jamaica Plain, Boston, Mass. Watch-dial illuminator	704,446	July 8	2009	437	100	423
Durner, Augustus E., Evansville, Wis. Harrow-disk sharpener	708,902	Sept. 9	1472	336	100	2295
Dusek, Anton E., assignor of one-half to J. W. Dusek, Crowlake, S. D. Soap-holder	709,143	Sept. 16	2172	499	100	2459
Dusek, Joseph W. (See Dusek, Anton E., assignor.)						
Dutchess Tool Company. (See Van Houten, Frank H., assignor.)	707,091	Aug. 19	2086	466	100	1576
Dutton, Thomas A., Egypt, Ga. Sugar-cane stripper	703,772	July 1	729	161	100	146
Duvall, Stephen A., Penrith, W. Va. Railway-switch						
Dye, William H., assignor of one-half to J. M. Wharton, Indianapolis, Ind. Oil-fuel generator	705,565	July 29	4367	946	100	945
Dye Works, formerly L. Durand Huguenin & Co. (See De la Harpe, Charles, assignor.)	708,700	Sept. 9	1262	290	100	2246
Dyer, Charles V., and W. S. Willette, Conroe, Tex. Insect-destroying machine						
Dyer, Frank M. (See Newton, William J., assignor.)	705,898	July 29	4885	1050	100	1039
Dziech, John, assignor of one-half to C. Frankenstein, Cincinnati, Ohio. Tailor's pressing-machine						
E. & H. T. Anthony & Co. (See Latham, Woodville, assignor.)						
E. Ingraham Company. (See Throop and Ingraham, assignors.)						
E. Van Noorden Company. (See Steffey, Josiah H., assignor.)						
E. W. Bliss Company. (See Klocke, William, assignor.)						
E. W. Bliss Company. (See Leavitt, Frank M., assignor.)						
Eagen, John J., Oakland, Cal. Dumping-wagon	709,210	Sept. 16	2819	585	100	2487

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Eagle Pencil Company. (See Holzworth, Louis, assignor.)						
Eames, George M., assignor to Wheeler & Wilson Manufacturing Company, Bridgeport, Conn. Treadle-power stand for sewing-machines	704,536	July 15	2181	472	100	473
Earhart, Sylvester F. (See Kiler, Charles M., assignor.)						
Earl, Charles M., assignor of two-thirds to W. J. Stapleton and E. McBride, Detroit, Mich. Cable-sleeve	707,056	Aug. 12	2011	450	100	1344
Earl, William D. (See Adams, George E., assignor.)						
East, James W., Tate Springs, Tenn. Tool	704,819	July 15	2716	566	100	561
Easterling, James R., *et al.* (See Harrison, Julian R., assignor.)						
Easterling, John M., *et al.* (See Harrison, Julian R., assignor.)						
Eastman, Ernest A. (See Specht, Eugene T., assignor.)						
Eastman Kodak Company. (See McCurdy, Arthur W., assignor.)						
Easton & Burnham Machine Company. (See Fay, Rimmon C., assignor.)						
Easton & Burnham Machine Company. (See Fay, Rimmon C. and F. L., assignors.)						
Eastwood, Arthur C., assignor to Electric Controller & Supply Company, Cleveland, Ohio. Protective operating device for electric motors	704,447	July 8	2010	437	100	493
Eastwood, Arthur C., assignor to Electric Controller and Supply Company, Cleveland, Ohio. Rheostat	704,448	July 8	2014	437	100	494
Eastwood Wire Manufacturing Company. (See Joule, Joseph, assignor.)						
Eaton-Huribut Paper Company. (See Pike, William A., assignor.)						
Eaton, Matthias B., Boston, Mass. Flanger	704,525	July 15	2183	473	100	473
Eaton, Oscar E., Boston, and F. C. Burrill, Hull, Mass. Compass-light	705,080	July 22	2218	496	100	702
Ebeling, Phillip, Moundsville, assignor of one-half to G. L. Caldwell, Wellsburg, W. Va. Glass-press	708,396	Sept. 2	006	137 138	100	2105
Ebeling, Phillip, Moundsville, assignor of one-half to G. L. Caldwell, Wellsburg, W. Va. Stroke-regulating mechanism for glass-presses, &c.	708,489	Sept. 2	848	192 198	100	2152
Eberhardt, Fred L., and H. F. Emme, assignors to Gould & Eberhardt, Newark, N. J. Oil-hole protector	705,919 704,009	Aug. 12 July 8	1573 1178	362 257	100 100	1455 950
Ebersole, John, Chambersburg, Pa. Hot-water heating system	708,337	Sept. 2	009	138	100	2105
Eberstein, John G., assignor to J. J. Hovey, J. F. Dean, and R. A. Brachvogel, Chicago, Ill. Door or window alarm	708,773	July 1	781	162	100	147
Eckert, Heinrich. (See Debes, Eduard, assignor.)						
Eckert, Joseph, New York, N. Y. Window shade and fixture						
Economical Gas Apparatus Construction Company *et al.* (See Merrifield, Leonard L., assignor.)						
Economy Locomotive Sander Company. (See Hooper, John C., assignor.)						
Edgely, Henry H., Altoona, Pa. Ringless curtain-pole	706,339 709,144	Aug. 12 Sept. 16	1061 2174	234 498	100 100	1345 2459
Edgerly, Clarence E., Biddeford, Me. Game apparatus						
Edgerton, Joseph W. (See Sjoberg, Albert, assignor.)						
Edgerton, Nathan H., Philadelphia, Pa. Dynamo and magneto-electric machine	708,803	Sept. 9	1474	336 337	100	2295
Edgerton, Nathan H., Philadelphia, Pa. Dynamo and magneto-electric machine	708,875	Sept. 9	1628	374	100	2328
Edison Phonograph Works. (See Waterman and Berthold, assignors.)						
Edison, Simeon O., East Orange, N. J. Treating fibers of annual growth for industrial purposes	704,698	July 15	2469	583	100	582
Edison Storage Battery Company. (See Edison, Thomas A., assignor.)						
Edison, Thomas A., Llewellyn Park, N. J. Apparatus for bricking pulverized material	708,562	July 1	286	76	100	67
Edison, Thomas A., Llewellyn Park, N. J. Reproducer for phonographs	708,774	July 1	783	168 168	100	147
Edison, Thomas A., Llewellyn Park, N. J. Apparatus for concentrating magnetic iron ores	704,010	July 8	1180	257	100	350
Edison, Thomas A., Llewellyn Park, N. J. Reproducer for sound-records	705,889	July 29	2329	1051	100	1089
Edison, Thomas A., Llewellyn Park, N. J. Kinetoscope. (Reissue)	12,037	Sept. 30	4636	1047	100	2998
Edison, Thomas A., Llewellyn Park, N. J. Kinetoscopic film. (Reissue)	12,038	Sept. 30	4639	1048	100	2999
Edison, Thomas A., Llewellyn Park, N. J., assignor to Edison Storage Battery Company. Reversible galvanic battery	704,302	July 8	1743	381	100	366
Edison, Thomas A., Llewellyn Park, N. J., assignor to Edison Storage Battery Company. Reversible galvanic battery	704,304	July 8	1744	.....	100	366
Edison, Thomas A., Llewellyn Park, N. J., assignor to Edison Storage Battery Company. Electrode for batteries	704,305	July 8	1746	381	100	367
Edison, Thomas A., Llewellyn Park, N. J., assignor to Edison Storage Battery Company. Reversible galvanic battery	704,306	July 8	1748	381	100	367
Edler, Lewis J., *et al.* (See MacMillan, Clyde, assignor.)						
Edmiston, George F., Chicago, assignor of one-half to G. R. Ainsworth, Wilmette, Ill. Steam cooking utensil	707,217	Aug. 19	2229	321	100	1089
Edser, Edwin, and M. Wildermann, London, England. Electrolytic decomposition of alkaline salts	709,971	Sept. 30	3852	866 867	100	2833
Edson, Eugene R., Cleveland, Ohio. Drying oil-yieldable or oil-containing material	708,868	July 1	57	11	100	14
Edson, Eugene R., Cleveland, Ohio. Apparatus for separating naphtha from oil	704,011	July 8	1184	258	100	351
Edson, Eugene R., Cleveland, Ohio. Rendering apparatus	707,565	Aug. 26	2985	674	100	1781
Edson, Eugene R., Cleveland, Ohio. Reducing or rendering fish or other material	707,566	Aug. 26	2991	674	100	1782
Edson, Eugene R., Cleveland, Ohio. Rendering apparatus	707,567	Aug. 26	2995	674	100	1782
Edwards, Arthur H., London, England. Apparatus for the transmission of power in varying directions	708,904	July 1	980	213 214	100	195
Edwards, Arthur H., London, England. Mechanism for releasing or operating photographic shutters	708,876	Sept. 9	1630	374 375	100	2328
Edwards, Charles R., Pittsburg, Pa. Rail-joint	705,566	July 29	4369	946	100	945
Edwards, Edgar A., Cincinnati, Ohio. Electric-arc lamp	708,022	Sept. 2	70	16, 17	100	1995
Edwards, Elbert C., Emporia, Kans. Elevator-stop	706,644	Aug. 12	1946	375	100	1395
Edwards, Ellsworth J., Aspen, Colo. Wheel	705,567	July 29	4370	947	100	946
Edwards, Frank W., Logansport, Ind. Lubricator	706,284	Aug. 5	429	91	100	1214
Edwards, James N., Macon, Mo. Rotary engine	706,731	Aug. 12	1401	312 313	100	1419
Edwards, John W., Cleveland, Ohio. Non-refillable bottle	710,219	Sept. 30	4498	1013	100	2069
Edwards, Oliver M., Syracuse, N. Y. Shade-roller	704,736	July 15	2547	550	100	547
Edwards, Oliver M., Syracuse, N. Y. Shade-roller	708,701	Sept. 9	1364	290	100	2048
Edwards, Roland H., London, England. Projecting apparatus	704,449	July 8	2015	438	100	494
Edwards, Thomas, Sebastopol, Ballarat, Victoria, Australia. Generator for chlorin gas	709,004	Sept. 16	1897	433	100	2328
Edwards, Victor E., Worcester, Mass. Rolling-mill	709,973	Sept. 30	3853	867 868	100	2833
Edwards, William J., and W. M. Wauters, Bayonne, N. J. Doweling-machine	705,657	July 29	4584	983 984	100	976
Edwards, William J., and W. M. Wauters, Bayonne, N. J. Machine for drilling edges of boards	705,658	July 29	4581	984	100	976
Eek, Albin C., and A. F. Cedergquist, St. Louis, Mo. Rotary engine	708,386	Sept. 2	611	128 129	100	2106
Egan, Charles E., assignor to J. S. Carr, Durham, N. C. Lightning-arrester	708,389	Sept. 2	613	129	100	2106

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Dr'g.	Vol.	Page.
Egbers, George H., Cincinnati, Ohio. Device for raising or lowering awnings	705,744	July 29	4701	1017	100	1010
Egedal, Hans P., Thor, Iowa. Gate	707,218	Aug. 19	2231	581	100	1689
Eggener, Joseph B. (See Thompson, William H., assignor.)						
Eggers, Anton C., trustee. (See Phillipson, Emil, assignor.)						
Ehrenfeld, Charles, Pasadena, Cal. Dredge and well-borer	706,360	Aug. 5	796	173	100	1275
Ehret, Cornelius D., Philadelphia, Pa., assignor to American Wireless Telephone and Telegraph Company and Consolidated Wireless Telegraph and Telephone Company. Automatic selective system	707,056	Aug. 12	2012	450	100	1545
Ehret, Cornelius D., Washington, D. C., assignor to American Wireless Telephone and Telegraph Company and Consolidated Wireless Telegraph and Telephone Company. Wireless-telegraph system	710,854	Sept. 30	4540	1027	100	2981
Ehret, Cornelius D., Rosemont, Pa., assignor to Consolidated Wireless Telegraph and Telephone Company. Wireless-telegraph system	710,855	Sept. 30	4562	1027	100	2981
Ehrhardt, Gustav, Eisenach, Germany. Firing-pin arrangement for breech-loading ordnance	709,701	Sept. 23	3293	735	100	2702
Ehrhardt, John A., *et al.* (See Zander, William A. H., assignor.)						
Ehrhart, George, Fulton, N. Y. Paper-making machine	703,775	July 1	735	163	100	148
Ehrle, Oscar F. (See Oehmen, Gustave N., assignor.)						
Ehrman, Clarence P. (See Gibbs, James E., assignor.)						
Eichelbaum, Georg, Berlin, Germany. Obtaining food extracts	708,880	Sept. 2	615	.....	100	2107
Eichelberger, William, Windber, Pa. Soot-cleaner for steam-boilers	705,912	July 29	4903	1086, 1087	100	1070
Eichenberger, Otto, assignor to P. Galopin, Geneva, Switzerland. Perspectograph	704,307	July 8	1751	382	100	368
Eichengrün, Arthur, Elberfeld, Germany, assignor to Farbenfabriken of Elberfeld Co., New York, N. Y. Photographic developer	707,408	Aug. 19	2677	.....	100	1701
Eichengrün, Arthur, Elberfeld, Germany, assignor to Farbenfabriken of Elberfeld Co., New York, N. Y. Pyrotechnic compound	710,047	Sept. 30	3976	.....	100	2850
Eicher, Harry W., Meyersdale, Pa. Lock	709,209	Sept. 16	2508	565	100	2529
Eichhorn, Augustus, Orange, N. J. Radiator	709,758	Sept. 23	3400	763	100	2725
Eichhorn, Charles H. (See Eichhorn and Dernell.)						
Eichhorn, Frederick H. and C. H., and F. P. Dernell, Athens, N. Y. Ice-runway	704,450	July 8	2020	439	100	425
Eidmann, Edward C. (See Wood, Augustus L., assignor.)						
Eikel, Louise. (See Seifert, John W., assignor.)						
Eilenberger, Peter E., Belvidere, N. J. Try-square	709,759	Sept. 23	3402	763	100	2725
Eilerman, Benjamin F. (See Grimes, Sunderland, and Eilerman.)						
Eilertsen, Lucien, Paris, France. Dental apparatus	709,978	Sept. 30	3856	868	100	2884
Einfeldt, Emil, Davenport, Iowa, assignor to Bettendorf Metal Wheel Company. Metal wheel	703,697	July 1	602	128	100	119
Einfeldt, Emil, Davenport, Iowa, assignor to Bettendorf Metal Wheel Company. Machine for forming wheel-hubs from tubular blanks	705,518	July 22	4213	915, 916	100	900
Einstein, Alfred C., St. Louis, Mo. Acetylene-gas generator	706,810	Aug. 12	1575	358	100	1455
Eiseman, Moses H., Chicago, Ill., assignor of one-half to L. Roser, Jr. Hose-supporter	705,519	July 22	4215	916	100	901
Eisenmann, Jacob, Frankfort-on-the-Main, Germany. Guard device for coupled cars	709,145	Sept. 16	2176	498	100	2460
Ek, Arvid, Portland, Me. Net-support for ping-pong tables	709,699	Sept. 23	3327	790	100	2991
Ekelund, John A., Minneapolis, assignor of one-fourth to N. A. Johnson, Murdock, Minn. Combined cane and fishpole	706,225	Aug. 5	429	98	100	1304
Eklund, Alexander, Attleboro, Mass. Bottle-stopper	704,820	July 15	2717	588	100	581
Elam, William E., Atlanta, Ga. Reversibly-suspended flexible sheet	703,394	July 1	58	11	100	14
Elbers, Alexander D., Hoboken, N. J. Treating fine iron ores for blast-furnaces	708,881	Sept. 9	616	.....	100	2107
Elden, Leonard L., Boston, assignor of one-half to S. B. Condit, Jr., Somerville, Mass. Electrical switch	707,505	Aug. 19	2849	645	100	1738
Electric Boat Company. (See Holland, John P., assignor.)						
Electric Controller & Supply Company. (See Eastwood, Arthur C., assignor.)						
Electric Railway Signalling Syndicate. (See Spagnoletti, James E., assignor.)						
Electric Storage Battery Company. (See Entz, Justus B., assignor.)						
Electric Storage Battery Company. (See Lesley, Hugh, assignor.)						
Electric Storage Battery Company. (See Martin, Harold M., assignor.)						
Electric Storage Battery Company. (See Rodman, Hugh, assignor.)						
Electric Storage Battery Company. (See Steinmetz, Edward G., assignor.)						
Electrite Company. (See Sundh, August, assignor.)						
Electro Dental Manufacturing Company. (See Schramm, Adolph W., assignor.)						
Eley, David, Lakefork, Ohio. Corn-planter	705,051	July 22	3219	696, 697	100	702
Eley, David, Lakefork, Ohio. Corn-planter	705,052	July 22	3224	697, 698	100	703
Eley, David, Lakefork, Ohio. Corn-planter	705,053	July 22	3226	698, 699	100	703
Eley, Thomas J., *et al.* (See Bangley, Joseph L., assignor.)						
Elger, William D. (See Beam, William D., assignor.)						
Elias, Friedrich, Berlin, Germany. Making peroxid of magnesium	709,086	Sept. 16	2065	.....	100	2484
Elias, Leopold, Breslau, Germany. Asbestos stereotype	709,398	Sept. 16	2692	.....	100	2567
Elkan, Walter, assignor to C. F. Cooke, Chicago, Ill. Liquid-receptacle	709,211	Sept. 16	2313	525	100	2487
Ellenberger, Charles C., Jr. (See Darling and Ellenberger.)						
Ellington, Allen W., Los Angeles, Cal. Applicator	706,732	Aug. 12	1402	313	100	1419
Ellinwood, Augustus E., Akron, Ohio. Machine for boxing matches	707,508	Aug. 26	3000	674, 675, 676	100	1784
Elliot, Dayton W., Minneapolis, Minn. Drier	707,765	Aug. 26	3423	772	100	1872
Elliott, Alvin D. (See Mayo and Elliott.)						
Elliott, Alvin D., Lawrence, Mass., assignor, by mesne assignments, to United Shoe Machinery Company. Nail-assorting apparatus	707,140	Aug. 19	2178	489	100	1586
Elliott, Anah S., Mechanicsville, Iowa. Rake	706,897	Aug. 5	798	174	100	1276
Elliott Company. (See Elliott, Sterling, assignor.)						
Elliott, David C. (See Larimer and Elliott.)						
Elliott & Hatch Book Typewriter Company. (See Kylar, Matthew S., assignor.)						
Elliott & Hatch Book Typewriter Company. (See Hopkins, Clarence F., assignor.)						
Elliott, Homer P. (See Seagrave and Elliott.)						
Elliott, Ralph W., Oakley, Cal. Pneumatic pump	709,212	Sept. 16	2314	526	100	2487
Elliott, Sterling, Boston, Mass. Guard for third-rail systems	703,568	July 1	338	76	100	68
Elliott, Sterling, assignor to Elliott Company, Boston, Mass. Sorting and addressing machine	707,961	Aug. 26	3312	856, 857, 858	100	1947
Elliott, Sterling, assignor to Elliott Company, Boston, Mass. Stencil-frame	708,698	Sept. 9	1195	253	100	2221
Ellis, Arthur W., Sumpter, Oreg. Adjustable window-shade carrier	708,699	Sept. 9	1196	253	100	2221
Ellis, George H., *et al.* (See Henry, Curtis B., assignor.)						
Ellis, Malcolm, and N. W. Perkins, Jr., assignors to C. H. Filley, St. Louis, Mo. Adding-machine	707,809	Aug. 19	2499	561, 562, 563	100	1665

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Ellis, Marshall D., Congress Heights, D. C., assignor of one-half to G. M. Field, Highpoint, N. C. Apparatus for preserving foods	706,506	Aug. 5	999	220	100	1319
Ellis, Samuel J., and C. Neilsen, Memphis, Tenn. Seed-cake trimmer	709,700	Sept. 23	3402	764	100	2725
Ellis, Seele H., Brooklyn, assignor to H. L. Fox, New York, N. Y. Railway-car	710,048	Sept. 30	3977	897	100	2959
Ellis, Seele H., Brooklyn, assignor to H. L. Fox, New York, N. Y. Clamp	710,049	Sept. 30	3980	898	100	2960
Ellis, Warren E., Haverhill, Mass. Fastener for shoe-uppers	704,451	July 8	2021	439	100	426
Ellison, James A., Wilmington, Del. Stop-valve	708,564	July 1	339	77	100	68
Ellison, Oscar E., Austin, Pa. Wood-splitting machine	705,659	July 29	4582	984 985	100	978
Elmore, Alexander S., London, England. Apparatus for the separation of minerals by the selective action of oils, &c	703,205	July 1	982	214	100	196
Elson, Benjamin F., Brooklyn, N. Y. Polishing-wheel and manufacturing same	704,789	July 15	2636	570	100	566
Elward, John H., Pretty Prairie, Kans. Mixing-machine	707,404	Aug. 19	3677	604	100	1701
Elward, John H., Pretty Prairie, Kans., assignor to Indiana Manufacturing Company, Indianapolis, Ind. Pneumatic stacker	706,037	Aug. 5	67	15	100	1131
Elward, John H., Hutchinson, Kans., assignor to Indiana Manufacturing Company, Indianapolis, Ind. Pneumatic stacker. (Reissue)	12,022	Aug. 19	2909	658 659	100	1749
Elzea, John W., Rantoul, Kans. Rail-joint	709,473	Sept. 23	2980	642	100	2614
Emerick, William H., Chicago, Ill. Draft-rigging	705,590	July 22	4217	916 917	100	901
Emerson, Albert, and A. S. Hovander, Williamsport, Pa. Automatic railway-signal	707,405	Aug. 19	3680	605	100	1701
Emerson & Co., George W. (See Ballard, Milton H., assignor.)						
Emerson Manufacturing Company. (See Waterman, Lewis E., assignor.)						
Emerson, William R., Washington, D. C. Strainer for suction-pipes of pumps	704,012	July 8	1186	258	100	251
Emery, Abram D., Taunton, Mass., assignor to Draper Company, Portland, Me., and Hopedale, Mass. Automatic stopping mechanism for looms	705,913	July 29	4095	1087 1088	100	1071
Emery, Wilber, Ashland, Ky. Wire twisting and reeling machine	705,331	July 22	3846	838	100	827
Emery, Wilber, Ashland, Ky. Barbed-wire machine	705,394	July 22	3972	860 861	100	852
Emery, William H., assignor to P. T. Sykes, Auburn, Me. Puzzle	709,888	Sept. 30	3661	830	100	2796
Emig, John A., and J. G. Krout, York, Pa. Insecticide and fertilizer	704,013	July 8	1188	.....	100	252
Emme, Henry F. (See Eberhardt and Emme.)						
Emmert, Joseph F., assignor to Emmert Manufacturing Company, Waynesboro, Pa. Vise	709,399	Sept. 16	2603	604	100	2567
Emmert Manufacturing Company. (See Emmert, Joseph F., assignor.)						
Emmes, William T., Cincinnati, Ohio. Quick-feed arrangement for gears	707,560	Aug. 26	3006	676 677	100	1786
Emmet, William L. R. (See Steinmetz and Emmet.)						
Emmet, William L. R., Schenectady, N. Y., assignor to General Electric Company. Electrically-controlled switch	706,540	Aug. 12	1062	234	100	1345
Emmons, Grosvenor B. (See Mills, Francis A., assignor.)						
Empire Cash Register. (See Collins, Norman, assignor.)						
Empire Pneumatic Tool Company. (See Birkenstock and Funk, assignors.)						
Enderton, William H., assignor of one-half to T. Minto, Cambridge, Ohio. Pipe-wrench	705,054	July 22	3229	699	100	704
England, Frank A. (See Miller and England.)						
Engle, William G., Enderlin, N. D. Support for spring structures	710,260	Sept. 30	4294	989	100	2948
Engleking, Henry F., Chicago, Ill. File	709,889	Sept 30	3682	830	100	2797
English, Clifton B., Easton, Pa., and J. W. Thompson, Bloomsbury, N. J. Grit-mill	706,645	Aug. 12	1247	276	100	1286
English, James J. (See Lally and English.)						
English, William F., Philadelphia, Pa. Manifolding note-book	709,259	Sept. 16	2408	545	100	2507
English, William M., and G. A. Burns, San Francisco, Cal. Antiseptic telephone-mouthpiece	706,169	Aug. 5	326	69	100	1183
Ennes, Charles E., assignor of one-half to J. Rice, Chicago, Ill. Elevator	709,974	Sept. 30	3857	868	100	2834
Enness, John R. (See Hillery, John, assignor.)

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Fessenden, Reginald A., Manteo, N. C. Wireless signaling	706,742	Aug. 12	1433	317, 318	100	1425
Fessenden, Reginald A., Manteo, N. C. Wireless signaling	706,743	Aug. 12	1440	318	100	1426
Fessenden, Reginald A., Manteo, N. C. Current-actuated wave-responsive device	706,744	Aug. 12	1441	318	100	1426
Fessenden, Reginald A., Manteo, N. C. Signaling by electromagnetic waves	706,745	Aug. 12	1443	319	100	1426
Fessenden, Reginald A., Manteo, N. C. Signaling by electromagnetic waves	706,746	Aug. 12	1448	319	100	1427
Fessenden, Reginald A., Manteo, N. C. Apparatus for signaling by electromagnetic waves	706,747	Aug. 12	1450	319	100	1428
Feval, Leon, assignor, by mesne assignments, to Transparent Cellulose Products Company, New Brunswick, N. J. Making collapsible tubes, &c	706,541	Aug. 12	1064	234	100	1345
Fewings, Frederick J., Duluth, Minn. Car or engine replacer	706,542	Aug. 12	1065	234, 235	100	1346
Fichter, Eugene, Paterson, N. J. Non-refillable bottle	703,398	July 1	64	12	100	15
Field, Benjamin P. (See Carman, Clarence A., assignor.)						
Field, Charles C. (See Pullman and Field.)						
Field, Guy M. (See Ellis, Marshall D., assignor.)						
Field, Robert, and A. Hanson, Huddersfield, England. Mouth-organ	708,805	Sept. 9	1480	339	100	2296
Field, William C., assignor of three-fifths to W. T. Delahunty and W. A. Shorb, Decatur, Ill. Safety-valve	705,572	July 29	4379	949	100	947
Fielding, Arthur, Salford, England. Manufacture of viscose	708,760	Sept. 9	1384	.....	100	2276
Fielding, Arthur, Salford, England. Fixing viscose on textiles, &c	708,761	Sept. 9	1385	.....	100	2276
Fields, Charles C., Morristown, Tenn. Wrench	706,042	Aug. 5	79	17	100	1133
Fields, Oliver E., Duncannon, Pa. Lifting-jack	706,043	Aug. 5	80	17	100	1133
Fifer, Archie G., Quincy, Ill. Toy cannon	706,399	Aug. 5	802	173	100	1276
Fike, William W., Garrett County, Md. Metallic tie	709,850	Sept. 23	3572	805	100	2768
Filley, Charles H. (See Ellis and Perkins, assignors.)						
Fillingham, Joseph P., assignor of nine-tenths to R. R. Hicks and E. L. Markey, Battle-creek, Mich. Automatic governor for fluid-compressors	707,667	Aug. 26	3941	727	100	1834
Fillmore, George M., Washington, D. C., assignor of two-thirds to J. H. Ralston, Hyattsville, Md., M. H. Ramage and A. Schultels, Washington, D. C. Feed-box for live stock	709,488	Sept. 16	2766	623	100	2588
Filson, Frank L., Point Pleasant, W. Va. Sheet-metal pipe	710,202	Sept. 30	4396	990	100	2949
Finch, Hosea W., Tacoma, Wash. Split pulley	706,917	Aug. 12	1769	395	100	1496
Finch, Robert B., assignor of one-half to E. T. Jones, Denver, Colo. Eyeglasses	709,574	Sept. 23	3066	682	100	2658
Findlay, John. (See Belfield, Shearer, Findlay, and Belfield.)						
Fink, Karl. (See Wieser, Joseph, assignor.)						
Finley, Homer P., Ann Arbor, Mich. Grain-harvester	707,896	Aug. 26	3587	810	100	1903
Finn, George, Newark, N. J. Sad-iron	705,578	July 29	4380	950	100	948
Finney, Frank B. (See Allen, John F., assignor.)						
Finney, John H., assignor of one-half to D. G. Gilmore, Chicago, Ill. Pneumatic cushion	709,977	Sept. 30	3860	860	100	2885
Firm, Joseph L., assignor to Goss Printing Press Company, Chicago, Ill. Printing-press	704,624	July 15	2347	510	100	505
Firth Sterling Steel Company. (See Clarke, Eben B., assignor.)						
Fischer, Albert, Oberhausen, Germany. Reversing-valve for regenerative or similar furnaces	707,573	Aug. 26	3014	678	100	1787
Fischer, Alexander, Berlin, Germany. Electric accumulator-plate	708,334	Sept. 2	690	139, 140	100	2107
Fischer, Arthur, Augsburg, Germany. Sliding door for railway goods-vans	703,908	July 1	986	215	100	197
Fischer, Ferdinand, and L. Kiefer, Carlsruhe, Germany. Right and left opening door	707,910	Aug. 26	3727	835, 836	100	1929
Fischer, Jacob, and H. Schneider, Solothurn, Switzerland. Coupling for wires, conductors, or the like	704,869	July 15	2799	605	100	599
Fish, John C., Shelby, Ohio. Bed-guard	706,748	Aug. 12	1453	320	100	1429
Fisher Book Typewriter Company. (See Fisher, Robert J., assignor.)						
Fisher Book Typewriter Company. (See Fisher and Stackpole, assignors.)						
Fisher Book Typewriter Company. (See Halle, Hiram J., assignor.)						
Fisher Book Typewriter Company. (See Laganke, Charles F., assignor.)						
Fisher, Charles A., Thorold, Canada, assignor of one-tenth to C. C. Andrews, North Tonawanda, N. Y. Friction-clutch	706,400	Aug. 5	803	175	100	1276
Fisher, Francis E., Glen Arbor, Mich., assignor of one-half to T. C. H. Wegeforth, Chicago, Ill. Vehicle-axle	709,218	Sept. 16	2316	526	100	2488
Fisher, Henry W., Pittsburg, Pa. Cable-testing apparatus	703,777	July 1	737	163	100	148
Fisher, John V. (See Shives, Peter P., assignor.)						
Fisher, John W., Akron, Ohio, assignor of one-half to F. Reifsnyder, Chicago, Ill. Horse-shoe	706,543	Aug. 12	1067	235	100	1346
Fisher, Joyce C., Mussoorie, India. Bicycle-lock	707,310	Aug. 19	2507	563	100	1605
Fisher, Robert J., Athens, Tenn., assignor to Fisher Book Typewriter Company, Cleveland, Ohio. Line-spacing-lock mechanism for type-writing machines	708,954	July 1	1065	231	100	212
Fisher, Robert J., Athens, Tenn., assignor to Fisher Book Typewriter Company, Cleveland, Ohio. Platen for type-writing machines	705,521	July 22	4220	917	100	902
Fisher, Robert J., Athens, Tenn., assignor to Fisher Book Typewriter Company, Cleveland, Ohio. Tally-sheet attachment for billing-platens	705,522	July 22	4223	918	100	903
Fisher, Robert J., Athens, Tenn., assignor to Fisher Book Typewriter Company, Cleveland, Ohio. Ribbon-feeding mechanism for type-writing machines	705,523	July 22	4234	919	100	905
Fisher, Robert J., Athens, Tenn., assignor to Fisher Book Typewriter Company, Cleveland, Ohio. Type-writing machine	708,213	Sept. 2	403	93, 94	100	2064
Fisher, Robert J., Athens, Tenn., assignor to Fisher Book Typewriter Company, Cleveland, Ohio. Card or sheet platen for type-writing machines	709,005	Sept. 16	1889	433, 434	100	2398
Fisher, Robert J., Athens, Tenn., and R. D. Stackpole, Chicago, Ill., assignors to Fisher Book Typewriter Company, Cleveland, Ohio. Carbon-roll billing-platen for type-writing machines	705,524	July 22	4240	919, 920	100	906
Fisher Typewriter Company. (See Laganke, Charles F., assignor.)						
Fisk, Charles H. (See Strickler and Fisk.)						
Fiske, Henry A., Newton, assignor, by mesne assignments, to E. D. Chadwick, Brookline, Mass. Flow-arresting device	708,335	Sept. 2	621	140	100	2106
Fitch, Eugene, Astoria, N. Y., assignor to Union Typewriter Company, Jersey City, N. J. Adding-machine	709,477	Sept. 23	2602	643, 644	100	2614
Fitz, Amos G., Auburn, Me. Last	705,574	July 29	4382	950	100	948
Fitzgerald, John E., Boston, Mass. Envelop	707,963	Aug. 26	3819	859	100	1948
Fitzpatrick, James A., Bakersfield, Cal. Rod-coupling	709,400	Sept. 16	2695	605	100	2508
Fitzpatrick, John J., Washington, Pa. Toy	706,918	Aug. 12	1770	395	100	1496
Flannery, Joseph M., *et al.* (See McWatters, Thomas, assignor.)						
Fleckenstein, Leonard S., Easton, Md. Combined corn cooking and canning machine	706,401	Aug. 5	804	175, 176	100	1277
Fleckenstein, Valentine, assignor to Northwestern Grass Twine Company, St. Paul, Minn. Machine for making mats for bottle-covers, &c	705,332	July 22	3849	833, 834	100	898
Fleckenstein, Valentine, assignor to Northwestern Grass Twine Company, St. Paul, Minn. Machine for making mats for bottle-covers, &c	705,333	July 22	3856	835, 836	100	899
Fleetwing Die Press. (See Sproule, Robert F., assignor.)						
Fleischer, William, New York, N. Y. Hook and eye	708,084	Sept. 2	75	17	100	1997

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page
Fleming, Andrew, Brooklyn, N. Y. Adjustable support	706,228	Aug. 5	439	92	100	1306
Fleming, John C., New York, N. Y. Drying apparatus	705,914	July 29	4999	1088	100	1071
Fleming, John M., assignor of one-half to W. Bothwell, Ottawa, Canada. Centering attachment for lathes	707,573	Aug. 26	3016	678	100	1787
Fleming, Joseph W., assignor of one-half to H. Horter, Jr., Philadelphia, Pa. Safety device for elevators	707,311	Aug. 19	2508	564	100	1665
Fleming, Richard, Lynn, Mass., assignor to General Electric Company. System of electrical distribution	706,544	Aug. 12	1069	235	100	1347
Fleming, Richard, Swampscott, Mass., assignor to General Electric Company. Electric-arc lamp	706,545	Aug. 12	1071	236	100	1347
Fleming, Richard, Swampscott, Mass., assignor to General Electric Company. Electric-arc lamp	708,132	Sept. 2	248	59	100	2033
	707,574	Aug. 26	3017	678	100	1788
Flemming, Carl E., Schönheide, Germany. Combination brush and comb						
Flesche, Gustav A., Brooklyn, H. A. Hall, New York, N. Y., and J. Doherty, Ashbrook, N. J., assignors to American Soda Fountain Company, Boston, Mass. Carbonator	705,061	July 29	4540	966	100	980
Fletcher, Edward, assignor to Nailless Lid Box Company, San Francisco, Cal. Box-fastening	708,702	Sept. 9	1260	291	100	2249
Fletcher, Eliza J., administratrix. (See Ricketts, John L., assignor.)						
Fletcher, Henry G. M. (See Perks and Fletcher.)						
Fletcher, James R., assignor to Yale & Towne Manufacturing Company, Stamford, Conn. Door-knob	708,336	Sept. 2	634	140	100	2108
Fletcher, John R., Dayton, Ohio. Suspension-clamp	706,327	Aug. 5	437	92	100	1305
Fletcher, William H., Paterson, N. J. Dyeing-machine	706,171	Aug. 5	381	70, 71	100	1185
Flexible Door and Shutter Company. (See Blake, Joseph S., assignor.)						
Flicek, Edward, Milwaukee, Wis. Curtain-fixture	708,955	July 1	1072	231	100	212
Fliegel, Josef, Mallmitz, Germany. Apparatus for heating liquids	705,745	July 29	4702	1018	100	1010
Flint, Herbert L. (See Hawkins and Flint.)						
Flood, Alfred L., assignor of one-half to W. L. Weber, Chicago, Ill. Tile	708,470	Sept. 2	846	193	100	2158
Flood, Alfred L., assignor of one-half to W. L. Weber, Chicago, Ill. Tile	708,471	Sept. 2	847	193	100	2158
Flood, Alfred L., assignor of one-half to W. L. Weber, Chicago, Ill. Tile	708,472	Sept. 2	848	193	100	2158
Florack, Gottfried, Dusseldorf, Germany. Feed-water heater	707,575	Aug. 26	3018	679	100	1788
Florey, Clarence M., assignor of one-fourth to J. H. Brooks, Scranton, Pa. Axle-box for carriages or wagons	706,402	Aug. 5	807	176	100	1277
Flory, Llewellyn H., Ashley, Pa. Skirt-supporter	706,172	Aug. 5	383	71	100	1185
Floss, William, Meadow Lands, Pa. Rail-joint	705,575	July 29	4884	960	100	948
Flowers, Elmer, Harrisburg, Pa. String-fastening device	704,016	July 8	1191	259	100	252
Floyd, Frank H., Quincy, Mass. Machine or apparatus for raising or lowering the temperature of liquids	708,708	Sept. 9	1271	291	100	2250
Floyd, George G., assignor to American Steel-Body Double-Bolster Co., St. Louis, Mo. Car body-bolster	706,647	Aug. 12	1251	276	100	1387
Floyd, George R., Cincinnati, Ohio. Automatic line-catch for trolley-wires	707,222	Aug. 19	2341	583	100	1659
Flynn, Joseph, Boston, Mass. Plumber's testing-plug	705,059	July 22	3240	701	100	706
Fogler, John W. (See Kenney and Fogler.)						
Foglesong, Washington, assignor of one-half to J. Collins, Dayton, Ohio. Excavating and loading apparatus	704,740	July 15	2554	550, 551	100	548
Foley, Bartholomew J., Pittsburg, Pa. Electric switch	710,188	Sept. 30	4260	960	100	2919
Follett, Joseph L., assignor to Follett Machine Company, New York, N. Y. Universal joint for shafting	706,403	Aug. 5	808	176	100	1277
Follett Machine Company. (See Follett, Joseph L., assignor.)						
Folmer, William F., New York, N. Y. Photographic shutter	706,507	Aug. 5	1000	220	100	1319
Folsom, John E., Mitchell, Ill. Automatic circuit-closer for telegraph-keys	707,312	Aug. 19	2510	564	100	1666
Foote, Arthur D., Grass Valley, Cal. Building dams	704,181	July 8	1539	330, 331	100	333
Foote, Theodore M., Brooklyn, N. Y., assignor to Western Telegraph Typewriting Machine Company. Printing-telegraph	705,237	July 22	3006	781, 782, 783, 784	100	780
Forbes, Duncan, Newark, N. J. Sash-lock	710,189	Sept. 30	4261	960, 961	100	2919
Forbes, Peter, Oakley, Mich. Scythe-snath-fastening device	706,814	Aug. 12	1580	354	100	1456
Force, William A., New York, N. Y. Printing-die	705,228	July 22	3019	784	100	783
Ford, James T., San Francisco, Cal. Pipe-wrench	705,060	July 22	3241	701	100	706
Ford, James T., Cartagena, Colombia. Building subaqueous foundations	707,098	Aug. 19	2068	466	100	1577
Forde, Thomas J., Geneva, Ohio. Vapor-generating apparatus for hydrocarbon-burners	707,680	Aug. 26	3247	728	100	1835
Forde, Thomas J., Geneva, Ohio. Carbureter	709,706	Sept. 23	3285	736	100	2708
Fore River Ship and Engine Company. (See Wellington, Frank O., assignor.)						
Foreman, David H., *et al.* (See Garson, Julius H., assignor.)						
Foreman, David H., assignor of one-fourth to A. T. Hurr, Denver, Colo. Upright automatic switch-stand	707,066	Aug. 12	2065	454, 455	100	1550
Foreman, John W., Healdsburg, Cal. Conveying apparatus	707,668	Aug. 26	3245	727	100	1835
Foreman, Samuel E., Paducah, Ky. Trace-fastener	704,741	July 15	2557	551	100	549
Forgham, Thomas. (See Bennett, George M., assignor.)						
Forister, John H., Evelyn, Tex., assignor of one-half to J. N. McAda. Cotton-chopper	705,746	July 29	4705	1018	100	1011
Forker, William H., Meadville, Pa. Oval-cutting machine	705,576	July 29	4885	950, 951	100	948
Fornander, Alfred, New York, N. Y., assignor to Carpet Yarn Printing Company. Apparatus for coloring yarns	705,334	July 22	3269	687	100	932
Forrer, Joseph D. (See Merrick and Forrer.)						
Forrest, John H. (See Heal, William E., assignor.)						
Förster, Carl, Gablonz, Austria-Hungary. Feeder for sewing-machines	708,631	Sept. 9	1128	254	100	2261
Forster, John C., Pittsburg, Pa. Gas-stove	706,309	Aug. 5	616	134	100	1240
Forster, John J., and R. L. Murdock, Avalon, Pa. Soap-press	708,919	Aug. 12	1771	396, 397	100	1496
Fortney, Samuel N., Jefferson Township, Montgomery county, Ohio. Shears	709,478	Sept. 23	2868	644	100	2622
Fortunesco, Nicolas J., and A. Georges, assignors of one-third to J. Georges, Liege, Belgium. Rotary engine or motor	708,879	Sept. 9	1687	377	100	2389
Foskett, Frederick, San Antonio, Tex. Safety device for steam-boilers	704,589	July 15	2190	475	100	476
Fossel, Joseph, Boston, Mass. Mechanism for grinding flats in carding-engines	705,645	July 1	491	111	100	97
Foster, Abraham G. W., Sr., Powellville, Ga. Combined seed-planter and fertilizer-distributer	705,404	Aug. 5	809	176, 177	100	1277
Foster, Charles, West Warren, Mass. Loom-fixer's knife	707,680	Aug. 26	3257	728	100	1838
Foster, Charles H., Omaha, Nebr. Hinge	708,214	Sept. 2	407	94	100	2055
Foster, Charles H., Omaha, Nebr. Hot-air furnace	708,215	Sept. 2	409	94	100	2055
Foster, Charles H., New York, N. Y., assignor to Union Special Sewing Machine Company, Chicago, Ill. Feeding mechanism for sewing-machines	705,577	July 29	4886	951	100	948
Foster, Edward, Cleveland, N. Y. Car-coupling	705,405	Aug. 5	811	177	100	1278

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Foster, Frank W., Melrose, Mass. Square shaking-grate	706,546	Aug. 12	1072	286, 287	100	1347
Foster, Joseph Brooklyn, N. Y. Water-heater	705,335	July 22	3872	887	100	882
Foster, Manning R., Jr., Orange, N. J. Hatter's hair-strainer	709,070	Sept. 23	3228	720	100	3691
Foster, Rolon E. (See Pratt and Foster.)						
Foster, Sidney A., Detroit, Mich. Wire button	709,587	Sept. 23	3005	669	100	3546
Fouts, George H., Dayton, Ohio. Hot-air furnace	704,309	July 8	1754	383	100	269
Fowler, Alfred B., Boston, Mass., assignor to United Shoe Machinery Company, Paterson, N. J. Lock-stitch shoe-sewing machine	707,094	Aug. 19	2089	467	100	1577
Fowler, Alfred B., Central Falls, R. I., assignor, by mesne assignments, to United Shoe Machinery Company, Paterson, N. J. Channeling-machine	707,576	Aug. 26	3019	679	100	1789
Fowler, Charles S., *et al.* (See Holmes, Daniel M., assignor.)						
Fowler, George L., London, England. Respirator	704,017	July 8	1192	259	100	258
Fowler, Jonathan O., Jr., assignor to J. W. Gibbs, New York, N. Y. Electromedical appliance	708,216	Sept. 2	410	93	100	2065
Fowler, Joseph C., and Joseph C., Jr., Baltimore, Md., assignors to Typographic Development Company, Chicago, Ill. Type casting and setting machine	705,595	July 22	4949	921, 922	100	905
Fox, Adam H., Wissahickon, Pa. Oil-burner	708,566	July 1	340	77	100	68
Fox, Charles D., Appleton, Wis. Car-mover	704,870	July 15	2799	605	100	599
Fox, Charles H., East Orange, and W. H. Randolph, Jr., Rahway, N. J. Toy	707,577	Aug. 26	3023	680	100	1789
Fox, George H., Bangor, Me. Means for closing jars	704,873	July 15	2805	607	100	600
Fox, Hugh L. (See Ellis, Seele H., assignor.)						
Fox, John C., assignor of two-thirds to E. J. Ulbrich and C. F. Paige, Colorado Springs, Colo. Refrigerating apparatus	708,646	July 1	494	111, 112	100	97
Fox, John H., Fostoria, Ohio. Magazine torpedo-cane	704,810	July 8	1735	383	100	269
Fox, John W. (See Dunham and Fox.)						
Fox Machine Company. (See Fox, William R., assignor.)						
Fox Machine Company. (See Fox and Lund, assignors.)						
Fox, William H., assignor to H. L. Piper, Toronto, Canada. Hospital-bed	704,625	July 15	2349	510	100	506
Fox, William R., assignor to Fox Machine Company, Grand Rapids, Mich. Copy-holder	704,018	July 8	1193	259	100	258
Fox, William R., and G. J. Barrett, Grand Rapids, Mich. Type-writing machine	706,749	Aug. 12	1454	320, 321	100	1429
Fox, William R., and M. Lund, assignors to Fox Machine Company, Grand Rapids, Mich. Feed mechanism for milling-machines	707,095	Aug. 19	2092	467	100	1577
Foxon, Frank. (See Peart, George R., assignor.)						
France, Frank, Fargo, N. D. Branding-iron	703,567	July 1	342	77	100	69
Francis, Charles A., South Bend, Ind. Wagon-brake	705,061	July 22	3243	701, 702	100	705
Francis, William H., Philadelphia, Pa. Disinfecting apparatus	704,182	July 8	1541	331, 332	100	323
Francisco, Charles W., Brantford, Canada. Fuel-saver and smoke-consumer	706,229	Aug. 5	440	93	100	1205

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Gentslinger, George, Wapakoneta, Ohio. Fence	709,215	Sept. 16	2319	526	100	2489
Geo. W. Stafford Company. (See Stafford, George W., assignor.)						
Geofroy, George de. (See Conti, Geofroy, and Le Gall du Tertre.)						
George F. Blake Manufacturing Company. (See De Laval and Chisholm, assignors.)						
George Lawrence Company. (See Bostwick, Henry A., assignor.)						
George M. Stevens Co. (See Stevens, George M., assignor.)						
George N. Pierce Company. (See Fergusson, David, assignor.)						
George W. Dover Company. (See Dover, George W., assignor.)						
Georges, Alfred. (See Fortunesco and Georges.)						
Georges, Joseph. (See Fortunesco and Georges, assignors.)						
Gerardin, Benjamin M., Jersey City, N. J. Rule	704,313	July 8	1765	385	100	371
Gerdes, Adolf, Berlin, Germany. Cash-register	708,570	July 1	344	78	100	69
Gerfin, Frederick C., assignor of one-half to F. W. Kort, Columbia, Pa. Take-up for looms	704,314	July 8	1765	385	100	371
Gerlach, Frank W., and F. W. Moore, Kenton, Ohio. Guide for sewing-machines	705,668	July 29	4544	987	100	980
Gerlach, John. (See Schmiedeke, Louis, assignor.)						
Gerrard, Edward, assignor to National Dry Kiln Company, Indianapolis, Ind. Heating apparatus	707,691	Aug. 26	3258	729	100	1888
Gervais, Charles E., assignor to Gervais Manufacturing Company, New York, N. Y. Lamp	706,923	Aug. 12	1779	398	100	1498
Gervais, Charles E., assignor to Gervais Manufacturing Company, New York, N. Y. Lamp	706,924	Aug. 12	1782	399	100	1498
Gervais Manufacturing Company. (See Gervais, Charles E., assignor.)						
Gesellschaft zur Verwertung der Patente für Glaserzeugung auf Electrischem Wege Becker & Co., M. B. H. (See Bronn, Jegor, assignor.)						
Gessner, David. (See Sarfert, Alexander T., assignor.)						
Gestetner, David, London, England. Stencil-printing apparatus	707,579	Aug. 26	3024	680 681	100	1789
Getzmann, Filip H. (See Hultgren, Johan P., assignor.)						
Geurink, Bernard A., Cleveland, Ohio. Steam-generator or water-heater	709,006	Sept. 16	1895	434	100	2399
Geyer, John L., and R. A. Prime, Cincinnati, Ohio. Pressure-reducer for gas or other pipes	707,818	Aug. 19	2530	567	100	1698
Gibb, William, Boston, Mass. Game apparatus	709,007	Sept. 16	1897	434	100	2400
Gibbons, Robert J., Chicago, Ill. Water-heater	709,091	Sept. 16	2085	478	100	2439
Gibbons, Wallace A. (See Kidd and Gibbons.)						
Gibbs, Charles, New York, N. Y. Electrical type-writer	710,364	Sept. 30	4399	990 991	100	2949
Gibbs, George. (See Howard and Gibbs.)						
Gibbs, George, assignor to S. H. and S. V. St. John, Canon City, Colo. Explosive-engine	708,734	July 1	645	143	100	129
Gibbs, Glenn D., Pittsburg, Pa. Stop-cock for gas-burners	704,315	July 8	1766	385	100	371
Gibbs, Howard W., assignor to W. Hall & Co., Boston, Mass. Brake-handle	707,692	Aug. 26	3250	729	100	1888
Gibbs, James E., assignor of one-half to C. P. Ehrman, Staunton, Va. Sash-fastener	709,148	Sept. 16	2179	499	100	2460
Gibbs, James G., Nemaha, Iowa. Washing-machine	707,693	Aug. 26	3261	729	100	1888
Gibbs, John W. (See Fowler, Jonathan O., Jr., assignor.)						
Gibbs, John W., New York, N. Y. Electric roller for massage and therapeutical purposes	707,506	Aug. 19	2356	647	100	1789
Gibbs, Loren C., Leslie, Mich. Holder for train-orders	710,265	Sept. 30	4401	991	100	2950
Giblin, Charles, Cleveland, Ohio. Car-fender	705,918	July 29	5004	1089	100	1072
Gibon, Theodore, Clarksville, Tenn. Aeroplane	710,260	Sept. 30	4402	991 992	100	2950
Gibson, Frank W., St. Louis, Mo. Toy bowling-alley	706,925	Aug. 12	1784	899	100	1498
Gibson, Josiah, Parkridge, Ill. Educational card	705,579	July 29	4886	952	100	949
Gibson, Randall L. (See Osenbaugh and Gibson.)						
Gidden, William T. (See Smith, Gidden, and Salamon.)						
Gieshoidt, Josef, Dusseldorf, Germany. Machine for drawing tubes	704,316	July 8	1767	386	100	371
Giesler, Arthur, assignor to Stilwell-Bierce & Smith-Vaile Co., Dayton, Ohio. Horizontal-water-wheel system	705,998	July 29	5133	1119	100	1099
Giesler, Arthur, assignor to Stilwell-Bierce & Smith-Vaile Co., Dayton, Ohio. Turbine-water-wheel system	705,999	July 29	5134	1119	100	1099
Gilardoni, Xavier P., assignor to Se Dite Gilardoni Fils, A. Brault et Cie., Choisy-le-Roi, France. Tile-press	706,925	Aug. 12	1785	399	100	1499
Gilbert, Frederick A., Brookline, and E. O. Lundin, Beachmont, Mass., assignors to General Electric Company. Electric-arc lamp	706,547	Aug. 12	1074	237	100	1348
Gilbert, Frederick A., Brookline, and E. O. Lundin, Beachmont, Mass., assignors to General Electric Company. Apparatus for maintaining uniform resistance in electric circuits	710,052	Sept. 30	3966	899	100	2961
Gilbert, Frederick A., deceased; E. O. Lundin, Boston, Mass., W. A. Paine, and E. W. Burdett, administrators. Maintaining uniform resistance in arc-lamp circuits	710,053	Sept. 30	4011	955	100	2967
Gilbert, Theodore M. (See Gilbert and Nash.)						
Gilbert, William M. and T. M., and W. C. Nash, Neenah, Wis. Suction-box cover for paper-making machines	708,219	Sept. 2	417	96	100	2066
Giles, Azro M., Dickinson Center, N. Y. Saw-set	708,702	Sept. 9	1385	317	100	2276
Gill, Charles C. (See Tucker, Benjamin W., assignor.)						
Gill, Edwin R., Englewood, N. J. Self-propelled vehicle	708,649	July 1	500	118	100	98
Gill, Edwin R., New York, N. Y. Electric battery	705,919	July 29	5006	1090	100	1073
Gill, Edwin R., New York, N. Y., assignor, by mesne assignments, to Otis Elevator Company. Elevator	705,838	July 22	3870	839 840	100	884
Gill, Edwin R., New York, N. Y., assignor to Invention Developing Company. Elevator	707,899	Aug. 26	3698	812	100	1908
Gill, Edwin R., New York, N. Y., assignor to Invention Developing Company. Means for winding converters or like articles	708,220	Sept. 2	419	96	100	2067
Gill, Ernest A., Gloucester, Mass. Fog-horn	708,460	July 1	66	18	100	16
Gill, James B., San Francisco, Cal. Toll-collecting and call-recording device for telephone systems. (Reissue)	12,015	July 22	4328	985 986	100	932
Gillaspy, Leonard, assignor of one-half to D. A. Mayer, Sturgeon, Mo. Vehicle-top	706,816	Aug. 12	1598	365	100	1457
Gillespie, Charles W., Tascosa, Tex. Stirrup	704,184	July 8	1544	353	100	324
Gillespie, Robert T., Rochester, Pa. Fountain-pen	708,281	Sept. 2	420	96	100	2067
Gillespie, Robert T., Rochester, Pa. Reservoir-pen	709,230	Sept. 16	2409	546	100	2507
Gillet, Martin, Arlington, Mass., assignor to J. G. Jordan, trustee, Merchantville, N. J. Machine-belting	705,044	Aug. 5	61	17	100	1152
Gillette, Harleigh, Highland Park, Ill. Electric clock	706,817	Aug. 12	1583	355 356	100	1457
Gilliam, John A., trustee. (See Anderson, Edward L., assignor.)						
Gilliland, Andrew W., St. Louis, Mo. Fume-arrester	709,856	Sept. 30	3993	833	100	2709
Gillinder, Frederick R., and K. Booth, Philadelphia, Pa., assignors to Gillinder & Sons, Incorporated. Snap for finishing glassware	704,790	July 15	2639	571	100	566
Gillinder & Sons. (See Gillinder and Booth, assignors.)						
Gillis, Harry B., assignor of one-half to M. Lang, Mishawaka, Ind. Bicycle	704,317	July 8	1768	386	100	372

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Gilljam, Hubert, Laurenaburg, Germany. Carding-machine	709,980	Sept. 30	2665	870	100	2385
Gillmor, John E., Jersey City, N. J., assignor to Union Switch and Signal Company, Swissvale, Pa. Automatic switch-lock	709,629	Sept. 23	2155	703 704	100	2376
Gilmer, John T., Mobile, Ala. Turpentine-still	709,315	Sept. 16	2518	567 568	100	2531
Gilmore, David G. (See Finney, John H., assignor.)						
Gilmore, Howard, Boston, Mass. Incandescent electric lamp	706,313	Aug. 5	694	136	100	1342
Gilmore, Howard, Boston, Mass. Compound incandescent electric lamp	706,314	Aug. 5	696	137	100	1342
Giltz, Conrod, Lafargeville, N. Y. Veterinary obstetric instrument	704,629	July 15	2255	512	100	507
Gimson, Arthur J. (See Gimson, Josiah M., J., A. J., and S. A.)						
Gimson, Josiah. (See Gimson, Josiah M., J., A. J., and S. A.)						
Gimson, Josiah M., J., A. J., and S. A., Leicester, England. Knife, cutter, or dicing-out instrument	709,008	Sept. 16	1899	485	100	2400
Gimson, Sydney A. (See Gimson, Josiah M., J., A. J., and S. A.)						
Ginn, Robert J. (See Dunaboo, James M., assignor.)						
Ginther, Otto. (See Kantner, Ralph, assignor.)						
Giorgio, Francis A., assignor of one-half to C. E. Houghton, Baltimore, Md. Roller-bracket for window shades and curtains	705,339	July 22	2262	840	100	884
Girardot, Léonce. (See Charron and Girardot.)						
Girdwood, John, Edinburgh, Scotland. Bat or racket for game known as ping-pong or table-tennis	708,911	July 1	989	215	100	198
Girin, Pierre, assignor to Ste. Ame. de Commentry-Fourchambault et Decazéville, Paris, France. Rolling-mill	706,548	Aug. 12	1076	237 238	100	1348
Giriot, Joseph, Jette St. Pierre, assignor to Société Générale du Laminage Annulaire pour la Fabrication de Chaines Sans Soudure, Brussels, Belgium. Apparatus for making chains	704,185	July 8	1545	833	100	524
	704,743	July 15	2564	553	100	550
	707,224	Aug. 19	2343	524	100	1632
Giussani, Tomaso, Milan, Italy. Preserving wood						
Given, Chester, *et al.* (See Le Mond, George E., assignor.)						
Glafke, Charles E., Los Angeles, Cal. Baker's oven	708,975	Sept. 9	1824	420	100	2366
Glasgow, Bruce M., assignor, by mesne assignments, to E. Risser, New York, N. Y. Machine for filling bottles	705,229	July 22	3020	784 785	100	783
Glauber, Isaac N. and J. H., Cleveland, Ohio. Plug and coupling for water or steam pipes	704,921	July 15	2719	588	100	592
Glauber, Joseph H. (See Glauber, Isaac N. and J. H.)						
Gleason, Byron H., assignor of one-half to A. T. Van Valkenburgh, Canastota, N. Y. Dump-wagon	704,318	July 8	1769	386	100	372
	704,319	July 8	1772	387	100	372
Gleason, Edward M., Neenah, Wis. Stove-damper	704,186	July 8	1546	333	100	324
Gleason, Frank J., Vanwert, Ohio. Boat propelling device						
Gleason, George. (See Belfield, Shearer, Findlay, and Belfield, assignors.)						
Gleason, William J., assignor of one-half to J. Megonigal, Philadelphia, Pa. Lawn-mower attachment	706,650	July 1	503	113 114	100	99
Gleeson, Margaret M. (See Henneberry and Gleeson.)						
Glen Rock Stamping Company. (See McCauley, Charles H., assignor.)						
Glendy, John W., Dublin, Va. Reversible plow	709,439	Sept. 16	2767	628	100	2383
Glenn, Robert J., Verona, Ill. Dumping-wagon	708,134	Sept. 2	251	60	100	2084
Glessner, William B., Crystalsprings, Kans. Carriage top and curtain	707,915	Aug. 26	3736	837	100	1992
Glosser, William H., Forsyth, assignor of one-half to G. L. Jones, Emery, Ill. Marker-bar for planters	704,791	July 15	2640	571	100	566
Glover, Charles, New Britain, Conn., assignor to P. & F. Corbin. Coaster-brake	706,549	Aug. 12	1077	238	100	1349
Glover, Charles, New Britain, Conn., assignor to P. & F. Corbin. Coaster-brake	709,479	Sept. 23	2888	645	100	2022
Glover, William J., St. Helens, England. System of erecting and adjusting bridge suspension-cables	709,316	Sept. 16	2521	568	100	2382
	705,834	July 29	4849	1053	100	1041
Glowacki, Erazm, Mielnica, Austria-Hungary. Air-motor						
Glynn, Cyrus L. (See Wyman, Albert O., assignor.)						
Glynn, Patrick F., Adrian, Minn. Clothes-pounder	704,080	July 15	2256	512	100	507
Glynn, Thomas E., *et al.* (See Laux, Mathias, assignor.)						
Gnesda, Anton, and F. Häcker, Agram, Austria-Hungary. Support for casement-windows	708,401	July 1	68	13	100	16
Goblisch, George. (See Bradet, George H., assignor.)						
Goddard, Frank C., Akron, Ohio. Motor-vehicle	709,897	Sept. 30	3005	883	100	2399
Goddard, Frederick M., assignor to G. Westinghouse, Pittsburg, Pa. Circuit-breaker for electric-lamp glowers	710,356	Sept. 30	4554	1027	100	2992
Godfrey, Alexander, Haverhill, Mass., assignor to United Shoe Machinery Company, Paterson, N. J. Take-up and tension for sewing-machines	706,045	Aug. 5	82	16	100	1133
Godfrey, Horace S., Chicago, Ill. Freight-car	709,009	Sept. 16	1900	435 436	100	2400
Godshalk, Edward H. (See Martin and Palmer, assignors.)						
Goerz, Carl P., Friedenau, near Berlin, Germany. Folding camera with roll-film magazine	704,220	July 8	1774	387	100	373
Goerz, Carl P., Friedenau, near Berlin, Germany. Astigmatically-corrected wide-angle objective	706,650	Aug. 12	1254	277	100	1337
Goerz, Carl P., Friedenau, near Berlin, Germany. Magazine plate-holder	706,651	Aug. 12	1255	277 278	100	1338
Goerz, Carl P., Friedenau, near Berlin, Germany. Folding stereoscopic camera	709,480	Sept. 23	2891	645 646	100	2022
Goerz, Carl P., Friedenau, near Berlin, Germany. Binocular prism-telescope	709,898	Sept. 30	3098	888	100	2800
Gogel, Jacob, Toledo, Ohio. Tire-heater	705,340	July 22	3084	840	100	835
Gohn, Philip H., *et al.* (See Avery, Edward R., assignor.)						
Golbert & Company, R. L. (See Taylor, Arthur B., assignor.)						
Gold, Edward E., New York, N. Y. Hose-coupling	704,792	July 15	2642	571	100	567
Gold, Edward E., New York, N. Y. Mounting for electric heaters	708,086	Sept. 2	78	18	100	1997
Gold, Edward E., New York, N. Y. Means for operating gates for railway-cars	709,961	Sept. 16	2410	546	100	2508
Gold, Egbert H., Chicago, Ill. Car-heating system	707,964	Aug. 26	3820	859	100	1948
Gold, Egbert H., Chicago, Ill. One-way valve	709,962	Sept. 16	2413	547	100	2508
Goldfoot, John G., Albany, N. Y. Computing-scale for railway mileage-books	706,046	Aug. 5	85	18, 19	100	1134
Goldie, William, Wilkinsburg, Pa. Ballasting railway-tracks	707,840	Aug. 26	3595	812	100	1904
Golding, William, New York, N. Y. Corset-cover	707,916	Aug. 26	3787	838	100	1989
Goldman, Cecelia H., St. Louis, Mo. Show-top	708,912	July 1	990	216	100	198
Goldman, David, Milwaukee, Wis. Box or receptacle	706,231	Aug. 5	443	98	100	1207
Goldsby, Andrew J., Pronax, Mo. Wire-stretcher	708,706	Sept. 9	1278	288	100	2251
Goldschmidt, Ferdinand, Chicago, Ill. Candy-dipping machine	704,248	July 8	1640	356	100	343
Goldthwait, Abel G. (See Tolhurst and Goldthwait.)						
Gollings, Henry, Oak Station, Pa. Glass-making machine	706,550	Aug. 12	1078	238	100	1349
Golob, John, Joliet, Ill. Accordion	709,071	Sept. 23	2229	720 721 722	100	2091
Gonce, John W., Kinderhook, Ala. Locking device	709,010	Sept. 16	1908	437	100	2400

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Gooch, Frank, Shelburn, Oreg. Bicycle attachment	705,664	July 29	4546	987	100	961
Goodale, George S., Houghton, Mich. Target	704,681	July 15	2357	513	100	508
Goodale, George S., Houghton, Mich. Extension-fitting for leveling-rods	707,225	Aug. 19	2344	524 525	100	1633
Goodall, P. H. (See Devine, Charles E., assignor.)						
Goodall, William H. (See Burnett and Goodall.)						
Goodbrand, Walter, Manchester, England. Two-speed driving-gear for bicycles	704,680	July 15	2436	526	100	525
Goodchild, John, guardian. (See O'Connor, John, assignor.)						
Goodell Company. (See Brooks, Myron B., assignor.)						
Goodell Company. (See Prentiss, Charles W., assignor.)						
Goodell Company. (See Yeomans, Lucien I., assignor.)						
Goodell, Zina. (See Hall, Benjamin F., assignor.)						
Gooding, Charles S. (See Beauregard, Victor, assignor.)						
Goodman, Joseph, Pittsburg, Pa. Adjustable sheave-arm for leers	708,543	Sept. 9	978	221	100	2191
Goodrich, Alfred K., assignor to G. H. Bahrs, San Francisco, Cal. Plow	708,571	July 1	345	78	100	69
Goodrich, Ernest C., assignor to himself and N. Britz, Houghton, Mich. Electrical floor-key	706,927	Aug. 12	1787	400	100	1490
Goodrich, George W. (See Broach and Goodrich.)						
Goodson, George A., Minneapolis, Minn. Type casting and setting machine	705,341	July 22	3995	840 841	100	835
Goodson Graphotype Company. (See Reynolds, John R., assignor.)						
Goodwin, Manson C., Portland, Me. Electric hose-coupling	709,216	Sept. 16	2290	596	100	2489
Goodwin, William B., San Francisco, Cal. Rowing appliance	710,147	Sept. 30	4185	942	100	2908
Goodwyn, Thadeus A., Madill, Ind. Ter., and P. E. Stovall, Waxahachie, Tex. Baling-press	707,917	Aug. 26	3738	838	100	1982
Goodyear, C. P., Sr., *et al.* (See Dempster, William E., assignor.)						
Goodyear, F. H. & C. W. (See Kidder, Wellington P., assignor.)						
Goodyear Shoe Machinery Company. (See Webster, Harold A., assignor.)						
Goodyear Tire and Rubber Company. (See State, Will C., assignor.)						
Goodyear's India Rubber Glove Manufacturing Company *et al.* (See Traver, Jay E., assignor.)						
Goodyear's Metallic Rubber Shoe Company *et al.* (See Traver, Jay E., assignor.)						
Gooing, Martin B., Vicksburg, Miss. Cotton-chopper and clod-crusher	704,823	July 15	2720	589	100	582
Gooing, Martin B., Vicksburg, Miss. Combined road-cart and insect-catcher	707,965	Aug. 26	3822	859	100	1949
Goossen, John, Marion, N. Y. Device for quartering fruit	706,174	Aug. 5	336	72	100	1185
Goozey, Charles A., Woonsocket, R. I. Lock-buckle	708,339	Sept. 2	629	141	100	2109
Gordan, Herbert. (See Riggins and Gordan.)						
Gordon, Charles W., St. Paul, Minn. Apparel-cap	705,066	July 22	3258	705	100	709
Gordon, Frederick W. (See Hanson and Gordon.)						
Gordon, George, Luther, Mich., assignor of one-fourth to T. P. Magrane, Chicago, Ill. Rail-joint	707,966	Aug. 26	3823	859 860	100	1949
Gordon, James P., Florence, Colo. Washing-machine	703,913	July 1	991	216	100	195
Gordon, John M. (See Dickerson and Gordon.)						
Gordon, Joseph P., Rockford, Ill. Fracture apparatus	708,340	Sept. 2	630	142	100	2109
Gordon, Minthorne T., and F. Davis, Stapleton, N. Y. Clothes-line support	704,029	July 8	1218	263	100	258
Gordon, Thomas, Philadelphia, Pa. Incandescent gas-burner	708,223	Sept. 2	433	96	100	2067
Gordon, Walter T., Juniper, Oreg. Draper, &c.	704,823	July 15	2721	589	100	582
Gordon, William, and G. E. Warren, Boston, Mass., assignors to Metallic Heel and Counter Company, Kittery, Me. Boot or shoe	706,551	Aug. 12	1080	239	100	1349
Gordon, William H. (See O'Neill and Gordon.)						
Gore, James H. (See Greer and Gore.)						
Gorter, Henry H., assignor to M. E. Gorter, San Francisco, Cal. Portable water-tower	708,136	Sept. 2	252	60, 61	100	2084
Gorter, Mary E. (See Gorter, Henry H., assignor.)						
Goss Printing Press Company. (See Firm, Joseph L., assignor.)						
Goss Printing Press Company. (See Goss, Samuel G., assignor.)						
Goss, Samuel G., assignor to Goss Printing Press Company, Chicago, Ill. Printing machinery	707,100	Aug. 19	2108	469 470	100	1580
Goss, Samuel G., assignor to Goss Printing Press Company, Chicago, Ill. Printing-press	707,101	Aug. 19	2107	470 471	100	1581

Hadaway, John B., Brockton, Mass. Shoe-sewing and welt-beveling machine	704,457	July 8	2033	441	100	429
Hadaway, John B., Brockton, Mass. Shoe-sewing and welt-beveling machine	704,458	July 8	2039	442	100	429
Hadaway, John B., Brockton, Mass. Boot or shoe	705,231	July 29	3626	786	100	784
Hadaway, William S., Jr., New York, N. Y. Electric heater	705,668	July 29	4551	988	100	981
Hadfield, Robert A., Sheffield, England. Hardening projectiles	709,681	Sept. 23	3161	705	100	2577
Hadley, Artemus N., Indianapolis, Ind. Cutter for corn-harvesters	705,988	July 29	5010	1091	100	1074
Haeseler, Charles H., Philadelphia, Pa. Pneumatic hammer	707,980	Aug. 26	3744	840	100	1963
Hagen, Ferdinand J., New York, N. Y. Marking-machine	709,011	Sept. 16	1905	487, 488	100	2401
Hager, Godfrey, Brooklyn, N. Y. Bookbinding-sheet	709,509	Sept. 23	3109	693	100	2068
Hagerman, Charles C., assignor to Hagerman & Williams, Marion, Iowa. Metal fence-post	707,586	Aug. 26	3040	683	100	1793
Hagerman & Williams. (See Hagerman, Charles C., assignor.)						
Haggstrom, Charles J., Warren, Pa. Fire-escape	708,546	Sept. 9	982	222	100	2191
Haglin, Charles F., Minneapolis, Minn. Fireproof flooring	708,764	Sept. 9	1389	317, 318	100	2277
Hagman, William J., Philadelphia, Pa., assignor to Niles-Bement-Pond Company, Jersey City, N. J. Flanging-press	708,406	July 1	78	15	100	18
Hagström, Nils F., Brooklyn, N. Y. Sectional shoe-last	708,958	July 1	1077	232	100	214
Hahn, Joseph J. (See Van Nostran, Joseph E., assignor.)						
Haight, Levi A., Kansas City, Mo. Windmill	704,090	July 8	1225	264	100	258
Hailles, Polydore. (See Mahy and Hailles.)						
Haines, Chester, *et al.* (See Haines, Jacques C., assignor.)						
Haines, Jacques C., assignor of two-thirds W. E. Huber and C. Haines, Chicago, Ill. Tire and fastener for vehicle-wheels	709,483	Sept. 23	2896	647	100	2023
Hainsworth, Robinson, Hull, England. Safety suspending apparatus for elevators or the like	707,410	Aug. 19	2668	607	100	1704
Hakes, George G., Ilion, N. Y. Card-index	705,343	July 22	3893	842	100	836
Halapleus, James G., Toledo, Ohio. Cigarette-roller	708,915	July 1	995	217	100	198
Halapleus, James G., Toledo, Ohio. Atomizer	705,074	July 22	3265	707	100	711
Hale, Asa D., Eagleville, Mo. Animal-poke	708,407	July 1	79	15	100	18
Hale, Henry S., Philadelphia, Pa. Car-seat	705,075	July 22	3267	707	100	711
Hales, Henry W., Ridgewood, N. J. Photographic camera	707,819	Aug. 19	2522	567, 568	100	1668
Haley, James T., Alhambra, Cal. Orange or lemon cleaner	708,916	July 1	996	217	100	199
Hall, Almon, Toledo, Ohio. Canteen	708,654	July 1	511	115	100	100
Hall, Benjamin F., assignor of one-half to Z. Goodell, Salem, Mass. Punching-machine	706,532	Aug. 12	1081	239	100	1349
Hall, Charles F., Chicago, Ill. Bascule-bridge	708,348	Sept. 2	641	145	100	2111
Hall, Charles M., Niagara Falls, N. Y. Manufacture of carbon electrodes	705,076	July 22	3269	708	100	712
Hall, Charles M., Niagara Falls, N. Y. Manufacturing alumina	706,553	Aug. 12	1092	240	100	1350
Hall, Charles W., Jr., and B. J. Berwald, Bradford, Pa. Automatic valve	705,344	July 22	3893	842	100	836
Hall & Co., William. (See Gibbs, Howard W., assignor.)						
Hall, Francis E. (See Batchelor and Hall.)						
Hall, Frank E., Quincy, Mass. Elastic tire and manufacturing same	708,235	Sept. 2	426	97	100	2068
Hall, Fred J., and P. S. Stauffer, Springfield, Mass. Coin-controlled machine	707,773	Aug. 26	3451	778	100	1877
Hall, George B., London, England. Machinery for making slabs with plain or ornamental surfaces of plastic cement or composition	707,921	Aug. 26	3750	840, 841	100	1926
Hall, George L., Brooklyn, N. Y. Rail-joint	705,345	July 22	3895	843	100	837
Hall, George L., Brooklyn, N. Y. Insulated rail-joint	708,349	Sept. 2	544	145, 146	100	2112
Hall, George L., Brooklyn, N. Y. Insulated rail-joint	708,350	Sept. 2	645	146	100	2112
Hall, Henry A. (See Fleeche, Hall, and Doherty.)						
Hall, Henry J. S., New York, N. Y. Screw-cap closure	707,280	Aug. 19	2525	568	100	1669
Hall, Hugh A. (See Churchill and Hall.)						
Hall, James B., Cleveland, Ohio. Bait-bucket	706,407	Aug. 5	816	178	100	1279
Hall, John L., Schenectady, N. Y., assignor to General Electric Company. Speed-indicating system	706,554	Aug. 12	1085	240	100	1350
Hall, Sylvester T., Riverside, Cal. Tree-limb support	704,081	July 8	1226	264	100	259
Hall, Willard L., Philadelphia, Pa. Illusion apparatus	709,764	Sept. 23	3411	766, 767	100	2727
Hall, William F., Boston, Mass. Trolley-wheel	708,700	July 1	605	134	100	190
Hall, William F., Boston, Mass. Trolley-wheel	708,701	July 1	607	134	100	190
Hallden, John A., Rockford, assignor of one-third to E. Carlson, Chicago, Ill. Sandpapering-machine	705,332	July 22	3627	786	100	784
Halle, Hiram J., assignor to Fisher Book Typewriter Company, Cleveland, Ohio. Work-gage attachment for type-writing machines	705,527	July 22	4255	922, 923	100	911
Hallenscheid, Gustav, Ronsdorf, Germany. Twisted auger	703,576	July 1	361	83	100	71
Halley, Robert, assignor of one-fourth to Piano Manufacturing Company, Chicago, Ill. Furnace	707,108	Aug. 19	2113	471, 472	100	1582
Halley, Robert, assignor of one-fourth to Piano Manufacturing Company, Chicago, Ill. Adjustable furnace	707,104	Aug. 19	2115	473, 473	100	1582
Halley, Robert, assignor of one-fourth to Piano Manufacturing Company, Chicago, Ill. Liquid-fuel burner	707,510	Aug. 19	2859	649	100	1740
Hallock, Otto P., Mattituck, N. Y. Barrel	705,400	July 22	3996	863	100	856
Halloran, Martin H., Pittsburg, Pa. Lubricator for elevator-ropes or the like	709,318	Sept. 16	2525	568	100	2532
Hallowell, Howard T., Philadelphia, Pa. Pressed-metal belt-shifter arm	706,519	Aug. 12	1598	357	100	1455
Hallowell, Howard T., Davisgrove, Pa. Hanger	710,191	Sept. 30	4254	961, 962	100	2919
Halls, John T., Dumfries, Va. Extensible pan	709,150	Sept. 16	2181	499, 500	100	2461
Hallwood Cash Register Company. (See Hallwood, Henry S., assignor.)						
Hallwood, Henry S., assignor, by mesne assignments, to Hallwood Cash Register Company, Columbus, Ohio. Cash register and indicator	704,795	July 15	2646	572, 573, 574	100	868
Hallwood, Henry S., assignor, by mesne assignments, to Hallwood Cash Register Company, Columbus, Ohio. Cash-register	704,796	July 15	2658	574, 575, 576	100	870
Halpain, William M., Hamilton, Tex. Wire-stretcher	704,875	July 15	2927	607	100	901
Halstead, Charles C., Blodgett, Mo. Stovepipe	708,709	July 1	608	135	100	190
Halstead, Herbert. (See Cooley, Harry W., assignor.)						
Halstead, James. (See Bell and Halstead.)						
Halverson, Christine M., Los Angeles, Cal. Mechanical music-chart	708,189	Sept. 2	263	63	100	2086
Hamann, Christel, Friedenau-Berlin, assignor to E. Schuster, Berlin, Germany. Calculating-machine	705,888	July 29	4865	1054	100	1048
Hamann, Christian, assignor to P. Haack, Berlin, Germany. Calculating-machine	708,785	July 1	752	166, 167	100	151

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Hambay, James T., New York, N. Y. Electric block system for railway-trains	707,226	Aug. 19	2345	585	100	1678
Hamer, Frank G., Cincinnati, Ohio. Gas-furnace	705,077	July 22	2271	586 709	100	712
Hamilton, Carl B. (See Woodford, Samuel B., assignor.)						
Hamilton, Clarence J., assignor to C. J. Hamilton & Son, Plymouth, Mich. Gun-barrel.	704,968	July 15	2047	654	100	651
Hamilton, Clayton M., assignor to W. H. Davis, Boston, Mass. Folding bed	710,268	Sept. 30	4405	992 998	100	2951
Hamilton, George F., Council Bluffs, Iowa. Door-securer	704,634	July 15	2302	518	100	809
Hamilton, Henry A., and F. H. Crawford, Emlenton, Pa. Overshoe	708,547	Sept. 9	988	223	100	1192
Hamilton, James, Glasgow, Scotland. Means for housing propellers of ships	707,411	Aug. 19	2690	607 608	100	1704
Hamilton, Jonathan R., Sioux Falls, S. D. Dilator	705,348	July 22	2037	843	100	857
Hamilton & Son, C. J. (See Hamilton, Clarence J., assignor.)						
Hamilton, Supplina, Endicott, Wash. Swinging gate	705,401	July 22	2037	863	100	856
Hamm, William S., and J. A. Mosher, Chicago, Ill., assignors to Adams & Westlake Company. Acetylene-gas generator	705,078	July 22	2073	709	100	712
Hammar, Sigard A. S. (See Meigs and Hammar.)	705,580	July 29	4390	932	100	949
Hammerly, Richard, New York, N. Y. Fire-escape	706,402	Aug. 5	819	179	100	1279
Hammond, George B., and T. Dennis, Neath, England; said Dennis assignor to said Hammond. Apparatus for coating metal plates	706,901	Aug. 12	1791	401	100	1500
Hammond, George S., Chicago, Ill. Cigarette-former	706,706	July 1	761	167	100	152
Hammond, George W., assignor of one-half to S. S. Wiener, Philadelphia, Pa. Apparatus for preventing trolley-wheels from leaving the feed-wire	710,054	Sept. 30	3966	899 900	100	2961
Hammond, Isaac B., Portland, Oreg. Dredger and excavator	708,351	Sept. 2	646	146	100	2112
Hammond, John E., assignor of one-half to W. E. Aydelotte, Sullivan, Ind. Rail-joint	704,249	July 8	1642	356	100	343
Hammond, Myron B., Bridgeport, Conn. Hose-supporter hook	704,587	July 15	2212	479	100	478
Hammond, Myron B., Bridgeport, Conn. Garment-clasp	708,087	Sept. 2	80	18	100	1996
Hammond, Myron B., Bridgeport, Conn. Hose-supporter	707,287	Aug. 19	2348	526 527	100	1633
Hancock, Henry J., assignor of one-half to W. S. Jessup, New York, N. Y. Chain-stitch sewing-machine	708,352	Sept. 2	647	146	100	2113
Handiges, Philip T., assignor of one-half to Damascus Brake Beam Company, St. Louis, Mo. Brake-beam fulcrum	704,459	July 8	2044	442 443	100	430
Hanger, James E., Washington, D. C. Adjustable reclining-chair	709,201	Sept. 30	3702	895	100	2801
Hankins, Elias, Purdon, Tex. Plow	709,519	Sept. 16	2526	569	100	2563
Hankins, Lewis T., Troy, assignor of one-half to H. M. Case, Toledo, Ohio. Combined curd-knife and whey-strainer	706,175	Aug. 5	337	72, 73	100	1186
Hannan, Joni B. (See Cavanagh, Hannan, and Clarke.)	709,632	Sept. 23	3164	708	100	2677
Hanneborg Odilon B. H., Christiania, Norway. Excavator	709,320	Sept. 16	2527	569	100	2533
Hannum, Henry A., Cazenovia, N. Y. Game apparatus	706,316	Aug. 5	699	137	100	1265
Hano, Philip New York, N. Y. Manifolding sales or copying book	706,320	Aug. 12	1590	358	100	1459
Hanscom, John B. (See Bird and Hanscom.)	706,233	Aug. 5	445	94	100	1207
Hansell, Robert B., Baltimore, Md. Display-bench for dog-shows	706,234	Aug. 5	447	94	100	1207
Hansen, Charles H., Racine, Wis. Awning-protector	706,602	Aug. 12	1794	401	100	1503
Hansen, John M., Pittsburg, Pa. Truck-frame for railway-cars	708,236	Sept. 2	497	97	100	2068
Hansen, John M., Pittsburg, Pa. Truck-frame for railway-cars	703,577	July 1	361	88	100	72
Hansen, Lars. (See Wile, Louis, assignor.)	703,578	July 1	363	88	100	72
Hansen, Rasmus P., Erindslev Sogn, Denmark. Valve mechanism for explosive-engines	706,049	Aug. 5	98	19, 20	100	1135
Hanson, Albert. (See Field and Hanson.)	708,308	Sept. 9	1496	340 341	100	2298
Hanson, August, New Haven, Conn. Adjustable shade-bracket	706,491	Aug. 5	975	214	100	1318
Hanson, Bengt M. W., assignor to Pratt & Whitney Company, Hartford, Conn. Milling-cutter	703,655	July 1	513	115	100	101
Hanson, Bengt M. W., and F. W. Gordon, assignors to Pratt & Whitney Company, Hartford, Conn. Gear-tumbler	704,822	July 8	1778	388	100	373
Hanson, Bengt M. W., and F. W. Gordon, assignors to Pratt & Whitney Company, Hartford, Conn. Variable-speed device	709,902	Sept. 30	3705	895	100	2902
Hanson, Charles M., Peacedale, R. I. Apparatus for dyeing slivers	710,322	Sept. 30	4497	1014	100	3070
Hanson, Richard B., assignor to J. H. Diehl, Buffalo, N. Y. Bow-facing car	705,796	July 29	4788	1060	100	1062
Hansson, Per. (See Rosengrén, Anders A., assignor.)	707,228	Aug. 19	2350	527	100	1633
Happold, Henry C., New York, N. Y. Focusing-hood for photographic cameras	707,321	Aug. 19	2526	568	100	1669
Harbison & Walker Company. (See Reif, Otto M., assignor.)						
Harcourt, Edgar G., Birmingham, England, and M. B. Lloyd, Minneapolis, Minn. Electrical push and switch	703,725	July 1	649	144	100	130
Hard, John R New York, N. Y. Hook and eye	704,250	July 8	1642	356 357	100	343
Hardeman, William E., Carlton, Victoria, Australia. Sliding window						
Hardenberg, William L. von, Brooklyn, N. Y. Trolley	708,997	July 29	5138	1120	100	1100
Harding, Henry M., New York, N. Y. Support for suspended-cable-track roads	708,579	July 1	804	94	100	72
Harding, Hiram B., Los Angeles, Cal. Tug sheave-clutch	706,050	Aug. 5	94	20	100	1135
Harding, J Horace. (See Clark, Absolam F., assignor.)	705,726	July 1	653	144	100	131
Hardinge, Franklin, assignor to Geneva Optical Company, Chicago, Ill. Lens-measuring instrument	704,588	July 15	2213	479	100	479
Hardison, Edwin A., assignor of one-half to J. L. Oliva, Santa Paula, Cal. Well-rig	704,589	July 15	2214	479	100	479
Hardman Rubber Company. (See Schwerin, Silas, assignor.)						
Hardsocg, Lester C. (See Hardsocg Martin, assignor.)	708,088	Sept. 2	81	19	100	1998
Hardsocg, Martin, assignor of one-half to L. C. Hardsocg, Ottumwa, Iowa. Combination miner's tool	705,581	July 29	4391	958 959	100	949
Hardy, James H., Waco, Tex. Trousers-guard	704,222	July 8	1778	388	100	374
Hardy Motor Works. (See Hardy, Roy E., assignor.)	709,908	Sept. 30	3706	895	100	2902
Hardy, Roy E., Detroit, assignor, by mesne assignments, to Hardy Motor Works, Limited, Port Huron, Mich. Mixing-valve for gas or gasolene engines						
Haren, Edward. (See Olsted, Christian, assignor.)						
Harker, Oliver A., Jr., Carbondale, Ill. Metallic fence-post						
Harmon, Alonzo, Tecumseh, Nebr. Cultivator						
Harmon, Anthony, *et al.* (See Gaynor, John J., assignor.)						
Harmon, Edward N., Belvedere, Cal. Tank						
Harmon, Edwin C., trustee. (See Wood, James E., assignor.)						
Harner, Daniel W. (See Walton and Harner.)						
Harper, Charles R., Marshalltown, Iowa. Vise and bracket						
Harper, Frank, Beverly, Ohio. Gas-burner						
Harper, James N., Kansas City, Mo. Automatic electric semaphore-signal						
Harper, Smith, Abington Township, Montgomery county, Pa., assignor to S. Harper & Sons. Asphalt-hoe						

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Harper & Sons, Smith. (See Harper, Smith, assignor.)						
Harper, Walter L., Mena, Ark. Automatic railway-signal	704,877	July 15	2812	609	100	609
Harriman, Henry L., New York, N. Y. Weft-replenishing loom	709,440	Sept. 16	2769	624	100	2584
Harrington, Charles F., Lyndhurst, N. J. Voting-machine	708,787	July 1	782	168	100	152
Harrington, E. B., trustee. (See Baker, Willard D., assignor.)						
Harrington, Harry C., and W. M. Towers, Rome, Ga. Car-mover	709,765	Sept. 23	3415	767	100	2729
Harrington, Louder, Chester, Pa., assignor to J. F. Wells and E. W. Bonnett, Aberdeen, Md. Can-dipping machine	707,969	Aug. 26	3331	861	100	1950
Harrington, Samuel H., New York, N. Y. Railway heater system	704,797	July 15	2667	577	100	870
Harris, Abraham, trustee. (See Cornfield, Noah, assignor.)						
Harris, Barnett W., Waveland, Ind. Gas-filter	707,774	Aug. 26	3455	778	100	1878
Harris, Charles B., assignor to S. I. Atwater, trustee, New York, N. Y. Artificial fuel	709,851	Sept. 23	3573	.....	100	2765
Harris, Charles R., Williamsport, Pa., assignor to Harris Safety Company, New York, N. Y. Fire-alarm	704,681	July 15	2438	527	100	895
Harris, Charles R., Williamsport, Pa., assignor to Harris Safety Company, New York, N. Y. Nozzle	705,754	July 29	4716	1020	100	1013
Harris, Charles R., Williamsport, Pa., assignor of one-half to J. E. Austrian, New York, N. Y. Attachment for suspenders	706,933	Aug. 12	1796	402	100	1501
Harris, Charles R., and C. C. Barrick, Los Angeles, Cal. Composition of fireproof wall-plaster	708,353	Sept. 2	648	.....	100	2113
Harris, Charles R., and C. C. Barrick, Los Angeles, Cal. Fireproof wall-plaster	708,354	Sept. 2	649	.....	100	2113
Harris, David W., Alamo, Tenn. Plow-brace	706,935	Aug. 12	1796	402	100	1501
Harris, Elmo G., Rolla, Mo. Centrifugal pump	705,847	July 22	3397	843	100	937
Harris, Frank H., Toledo, Ohio. Toy cart	706,934	Aug. 12	1797	402	100	1501
Harris, H. Gordon. (See Howard, James H., assignor.)						
Harris, Hugh, and S. M. Reese, Galion, Ohio. Wagon-rack	705,755	July 29	4718	1021	100	1013
Harris, Isaac L., assignor of one-half to H. Partridge, Jacksonville, Fla. Acetylene-gas generator	704,032	July 8	1227	264 / 265	100	259
Harris, Isaiah, Van Wert, Ohio. Ironing-machine	707,968	Aug. 26	3327	860 / 861	100	1950
Harris, John, Cleveland, Ohio. Gas-burner	704,635	July 15	2363	515	100	509
Harris Safety Company. (See Harris, Charles R., assignor.)						
Harris, Samuel J., Lake City, Fla. Switch	708,917	July 1	999	217	100	199
Harris, Samuel J., Lake City, Fla. Safety appliance for switches	708,918	July 1	1000	218	100	199
Harris, Thomas. (See Carl, John H., assignor.)						
Harris, William P., assignor to Fruit Stoning and Preserving Syndicate, Limited, London, England. Machine for removing stones from cherries or other single-stoned fruit	704,876	July 15	2809	608	100	601
Harris, William R., Akron, Ohio. Rubber tire	708,408	July 1	80	16	100	19
Harris, William W., assignor to Max Huncke Chemical Company, New York, N. Y. Embalming-catheter	707,775	Aug. 26	3457	778	100	1878
Harris, William W., and W. D. Chew, Eldorado, Ark. Street-car and railway indicator	705,285	July 22	3036	787 / 788	100	785
Harrison, Anna M. (See Harrison, Benjamin J., assignor.)						
Harrison, Arthur W., assignor of two-thirds to F. A. Marcher, Los Angeles, Cal. Electrode-separator for batteries	708,708	Sept. 9	1282	298	100	2252
Harrison, Benjamin J., assignor to A. M. Harrison, Whiteplains, N. Y. Portable folding chair	707,841	Aug. 26	3596	812	100	1904
Harrison, Frank A., Keokuk, Iowa. Tea or coffee pot	708,919	July 1	1002	216	100	200
Harrison, Frank B. (See Tunks, Nelson H., assignor.)						
Harrison, Joseph H., *et al.* (See Quayle, William, assignor.)						
Harrison, Julian R., assignor of one-half to J. M. and J. R. Easterling, Barnwell, S. C. Fountain-comb	710,269	Sept. 30	4406	998	100	2961
Harrison, Meyer, *et al.* (See Quayle, William, assignor.)						
Harrison, Newton, assignor of one-half to W. H. Laird, New York, N. Y. Hair-pin	708,959	Sept. 9	1785	412	100	2359
Harrison, Newton, assignor of one-half to W. H. Laird, New York, N. Y. Electric clock	709,818	Sept. 23	3520	798	100	2751
Harrod, Orrian L., assignor to Medicated Poultry Perch Company, Belle Center, Ohio. Poultry-perch	704,968	July 15	3048	654	100	651
Harrop, John T., Garfield, N. J. Mold for cement or concrete curbs	706,410	Aug. 5	823	180	100	1280
Harselm, Robert G., *et al.* (See Gaynor, Timothy, Jr., assignor.)						
Hart & Cooley Company. (See Hart, Howard S., assignor.)						
Hart, Frank, assignor of two-thirds to F. J. and G. H. Bolinger, J. O. Sutherland, and J. C. Perkins, Newcastle, Pa. Nut-lock	706,409	Aug. 5	822	179	100	1280
Hart, Henry, New York, N. Y. Plant pot or holder	706,821	Aug. 12	1592	358	100	1459
Hart, Howard S., assignor to Hart & Cooley Company, New Britain, Conn. Register, ventilator, or the like	703,409	July 1	82	16	100	19
Hart, Thomas J., assignor to Sherwood Manufacturing Company, Buffalo, N. Y. Flue-cleaner	705,758	July 29	4715	1020	100	1013
Hartell, Etta M., Brooklyn, N. Y. Garden implement	705,233	July 22	3033	787	100	786
Hartgrove, H. H. (See O'Neal, Isaac N., assignor.)						
Harthan, Charles E., Lynn, Mass., assignor to General Electric Company. Electric-arc lamp	710,055	Sept. 30	3991	900	100	2668
Hartley, Charles P., Washington, D. C. Combined pocket rule, square, compasses, and comb	708,355	Sept. 9	650	147	100	2113
Hartley, Frederic, *et al.* (See Beier, Adolf, assignor.)						
Hartley, Wilfred, Utica, E. D. Rivers and E. Beach, assignors to Remington Arms Company, Ilion, N. Y. Firearm	705,234	July 22	3035	787	100	786
Hartley, William G., Lowell, Mass. Loom for weaving velvets	708,580	July 1	965	84	100	72
Hartman, John M., Philadelphia, Pa. Mold-coating for apparatus for casting pig metal	709,672	Sept. 23	3231	722	100	2593
Hartmann, Christoph, assignor to Farbwerke, vorm. Meister, Lucius & Brüning, Höchst-on-the-Main, Germany. Blue anthraquinone dye and making same	704,796	July 15	2666	.....	100	571
Hartness, James, Springfield, Vt. Fluid-regulating device	708,410	July 1	83	16	100	19
Hartness, James, Springfield, Vt. Back gearing for lathes	708,411	July 1	85	16 / 17 / 18	100	20
Hartwig, William G. (See Butcher and Hartwig.)						
Harvey, George W. (See Brewer and Harvey.)						
Harvie, William C. (See Potter and Harvie.)						
Haskell, Broderick, Saginaw, Mich. Car-truck	704,168	July 8	1549	333 / 334	100	235
Haskell, Broderick, Saginaw, Mich. Brake-beam	707,105	Aug. 19	2117	473	100	1553
Haskell, Charles S. (See Haskell, William E. and C. S.)						
Haskell, Henry L., Ludington, Mich. Dice-cup	709,633	Sept. 23	3165	706	100	2578
Haskell, Henry L., Ludington, Mich. Game-board	709,634	Sept. 23	3166	706	100	2578
Haskell, Henry L., Ludington, Mich. Game-board	709,635	Sept. 23	3168	707	100	2578
Haskell, William E. and C. S., Philadelphia, Pa. Organ	708,705	Sept. 9	1391	318	100	2377

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Haskins, Caryl D., Schenectady, N. Y., assignor to General Electric Company. Electric meter	706,555	Aug. 12	1086	240	100	1350
Haskins, Caryl D., Schenectady, N. Y., assignor to General Electric Company. Automatic circuit-breaker	710,056	Sept. 30	3994	901	100	2963
Haskins, Elbert O., Rutherford, N. J. Sectional heating-boiler	707,229	Aug. 19	2350	527	100	1634
Haskins, James H., assignor of one-half to McCormick Harvesting Machine Company, Chicago, Ill. Feed mechanism for blank-threading machines	708,140	Sept. 2	284	63, 64	100	2036
Haskins, Robert B., Cincinnati, Ohio. Apparatus for the manufacture of molders' chaplets	709,541	Sept. 23	3011	671	100	2647
Hasselius, Peter, Chicago, Ill. Potato-digger	703,787	July 1	653	145	100	181
Hassett, Frank C., Kelsoe, Wash. Horn-stand	706,176	Aug. 5	340	73	100	1186
Hassum, Nils O., Jersey City, N. J. Hair-pin	703,412	July 1	86	18	100	20
Hastings, Clarence B. (See Hastings, John R. and C. B.)						
Hastings, John R. and C. B., Lampasas, Tex. Saddle	709,904	Sept. 30	3707	835	100	2902
Hastings, Samuel M., trustee. (See Hughes, Will J., assignor.)						
Hastings, Seth P., Wellington, assignor to G. D. Henderson, Cleveland, Ohio. Grinding device	704,324	July 8	1780	389	100	374
Hatch, Albert T., South Elgin, Ill. Table-server	705,237	July 22	3640	788	100	787
Hatch, Edward P., *et al.* (See Powell, Myron H., assignor.)						
Hatch, Edward P., Lagrange, assignor, by mesne assignments, to himself, Union Special Sewing Machine Company, Chicago, Ill., and M. H. Powell, Muskegon, Mich. Machine for inserting tape into edging	707,061	Aug. 12	2023	452	100	1547
Hatch, Tracy B., assignor to Submerged Electric Motor Company, Menomonie, Wis. Electrical machine	705,398	July 22	3642	788 789	100	787
Hatfield, Benjamin F., Dublin, Ind. Seed-cleaner and grain-separator	709,786	Sept. 23	3417	768	100	2729
Hatfield, Joseph M., Corning, Ohio. Torpedo-shell protector	710,333	Sept. 30	4500	1014	100	2971
Hatfield, William H., Wade, Ill. Hoisting and transporting device	709,905	Sept. 30	4705	886	100	2902
Hatfill, Andrew T., and G. B. Lee, Decorah, Idaho. Door-lock attachment	705,286	July 22	3639	788	100	787
Hathaway, Harlow D. (See Hayden and Hathaway.)						
Hathaway, William A. (See Rathbun, John O., assignor.)						
Hatton, Joseph E., Santo Domingo, Santo Domingo. Apparatus for defecating liquids	706,994	July 29	5011	1091	100	1074
Hauberg, Sophus C., Copenhagen, Denmark. Liquid-separator	705,669	July 29	4553	988	100	982
Haulbrook, Robert W., Maysville, Ga. Cultivator plow attachment	703,856	July 1	514	115	100	101
Hausfeld, Joseph E. (See Carter and Hausfeld.)						
Hauss, Augustus P., New Albany, Ind. Receiving and delivering apparatus for mail-bags	707,412	Aug. 19	2691	608	100	1704
Haussmann, Paul, Burg, near Magdeburg, Germany. Pulsometer	703,788	July 1	709	169	100	154
Havens, Joseph D. (See Irving, Junius B., assignor.)						
Haverfield, Joseph L. (See Paris, Steelman, and Haverfield.)						
Hawes, William W. (See Unser, John, assignor.)						
Hawkes, Albert K., Atlanta, Ga. Eyeglasses	708,141	Sept. 2	266	64	100	2007
Hawkes, John F., assignor of one-half to S. Blatt, Jersey City, N. J. Shoe-fastener	707,694	Aug. 26	3202	729	100	1839
Hawkins, Augustus L., assignor of one-half to J. M. Page, Georgetown, Tex. Harness	703,789	July 1	770	168	100	154
Hawkins, Gardner C., Boston, and H. L. Flint, Cambridge, Mass., assignors to Boston Electric Heating and Power Company, Portland, Me., and Boston, Mass. Electric fan	707,842	Aug 26	3600	813	100	1904
Hawks, Moses L., New York, N. Y. Can-opener	706,323	Aug. 12	1595	359	100	1460
Hawks, William, assignor to Chicago Solar Light Company, Chicago, Ill. Hydrocarbon-lamp	705,582	July 29	4394	953	100	950
Hawley Down Draft Furnace Company. (See Schwartz, Edward H., assignor.)						
Haworth, Lysander L., Decatur, Ill. Bump-board for wagon-boxes	706,822	Aug. 12	1594	358	100	1460
Haws, Isaac, Hannibal, N. Y. Mold for forming concrete troughs or other articles	710,391	Sept. 30	4618	1042	100	2995
Hawthorne, Thomas, London, Canada. Combined perforating, ring forming, and inserting machine	708,636	Sept. 9	1134	256 257 258	100	2223
Hay, James R. (See Carryl, Henry D., assignor.)						
Hay, Julia B., executrix. (See Hay, Robert.)						
Hay, Robert, deceased, Summit, N. J.; J. B. Hay, executrix. Bottle-neck	706,556	Aug. 12	1087	241	100	1351
Hay, William G. (See Musker and Hay.)						
Hay, William J., Oshkosh, Wis. Skirt facing and binding	704,068	July 8	1230	265	100	259
Haycox, Arthur J., Mansfield, Ohio. Electric signal	705,583	July 29	4395	953	100	950
Hayden-Corbett Chain Company. (See Bauermeister, William, assignor.)						
Hayden, Henry F., assignor of one-third to J. H. Jennings, Washington, D. C. Smoke-preventing furnace	704,325	July 8	1782	389	100	374
Hayden, Henry F., assignor of one-third to J. H. Jennings, Washington, D. C. Smoke-preventing furnace	704,326	July 8	1785	390	100	375
Hayden, Jefferson B., Abilene, Tex. Draft-equalizer	709,092	Sept. 16	2986	478	100	2440
Hayden, Samuel H., and H. D. Hathaway, Flint, Mich. Cross-bar for vehicle-shafts	704,460	July 8	2045	443	100	430
Hayden, Samuel R., assignor of two-thirds to A. L. Clark and C. W. Lake, Kansas City, Mo. Inserting-machine for newspapers	707,587	Aug. 26	3041	664	100	1793
Hayes, Christopher, Junee, New South Wales, Australia. Oscillating propeller	705,348	July 22	3600	844	100	888
Hayes, Edward, Wolverton, England. Construction of composite vessels	703,413	July 1	89	18	100	20
Hayes, Walter H., London, England. Velocipede or the like	708,809	Sept. 9	1459	341	100	2298
Hayes, William H., Flushing, N. Y. Forming and pressing machine	705,756	July 29	4718	1021	100	1013
Hays, James T., and J. W. Wilson, Garland, Tex. Rotary steam-engine	705,079	July 22	3676	710	100	713
Haysler, G. C. (See Kellogg, Albert A., assignor.)						
Hayward, Eugene, assignor of two-thirds to J. T. Lueder and J. B. Morris, Chicago, Ill. Means for utilizing compressed air	706,653	Aug. 12	1266	279	100	1389
Hayward, Walter, Palmerston, Canada. Bag-holder	704,251	July 8	1644	357	100	344
Hazard, Charles B., Xenia, Ohio. Straw-stacker	703,414	July 1	90	19	100	21
Hazledine, John, Philadelphia, Pa. Apparatus for extinguishing fire in oil-tanks or the like	705,925	July 29	5013	1091 1092	100	1074
Hazlehurst, Edward, Chicago, Ill. Spinning-top	708,706	Sept. 9	1393	319	100	2278
Head, William S., and G. J. Dovey, Latrobe, Pa. Carbureter	704,084	July 8	1231	265	100	260
Headley, Frederick H., St. Austell, England. Electric switch	710,270	Sept. 30	4408	993	100	2951
Heal, John G., Detroit, Mich. Automobile air-pump	706,051	Aug. 5	96	20, 21	100	1135
Heal, William E., assignor of one-half to J. H. Forrest, Marion, Ind. Manufacture of window and plate glass	710,357	Sept. 30	4555	1023	100	2963
Healy, William W. (See Stone and Healy.)						
Heany, John A., Philadelphia, Pa., assignor to Teter-Heany Developing Company, Charleston, W. Va., and Philadelphia, Pa. Electric switch or cut-out	707,843	Aug. 26	3603	813	100	1905
Heaphy, Thomas M., London, England. Means for testing thermostats	706,177	Aug. 5	341	73, 74	100	1185
Heath, James S. and L., and E. Baseman, assignors to Bickford and Huffman Company, Macedon, N. Y. Speed mechanism	710,271	Sept. 30	4409	994	100	2962
Heath, James S., and E. Baseman, assignors to Bickford and Huffman Company, Macedon, N. Y. Seeding-machine	710,272	Sept. 30	4411	994	100	2962
Heath, Lawrence. (See Heath and Baseman.)						
Heathfield, Richard, London, England. Galvanizing-machine	707,898	Aug. 19	2598	560	100	1069

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Hebberd, Charles E., Brooklyn, N. Y. Construction of metallic-frame buildings	708,548	Sept. 9	984	222	100	2192
Heberle, Josef W. R. T., Sala, Sweden. Apparatus for separating magnetic and non-magnetic materials from one another	709,982	Sept. 30	3866	871	100	2636
Heck, Gustav, assignor of one-half to R. Mardian, Detroit, Mich. Vehicle-axle	704,827	July 8	1787	390	100	875
Heckel, Wilhelm, Biebrich, Germany. Clarinet	706,557	Aug. 12	1089	241	100	1351
Heckert, William, Findlay, assignor of one-half to H. W. Seney, Toledo, Ohio. Combined gas and steam engine	708,687	Sept. 9	1147	259 260	100	2225
Hedden, Hiram J., Whiteplains, assignor to A. B. Levy, New York, N. Y. Fluid-pressure brake system	705,259	July 22	3643	789	100	786
Hedley, Edward M., Depew, N. Y. Pneumatic track-sander	705,757	July 29	4719	1021	100	1014
Hedstrom, Carl O., Portland, Conn., assignor to G. M. Hendee, Springfield, Mass. Fuel or other reservoir for internal-combustion engines	707,922	Aug. 26	3753	841	100	1226
Hedstrom, Carl O., Portland, Conn., assignor to G. M. Hendee, Springfield, Mass. Chain-adjusting device for motor-vehicles	707,923	Aug. 26	3754	841 843	100	1226
Heffington, Calvin F. (See Reames and Heffington.)						
Heffley, William, Jackson Township, Lebanon county, assignor of one-half to H. B. Miller, Robesonia, Pa. Gage and butt-cutter for cigars	706,986	Aug. 12	1799	402	100	1501
Hehr, John G., Pittsburg, Pa., assignor of two-thirds to E. J. Vilsack and J. J. O'Reilly. Bottle-washing machine	703,415	July 1	92	19, 20	100	21
Heideger, Frank J., West Bridgewater, Pa. Sand-blast machine	708,880	Sept. 9	1638	377	100	2329
Heiliger, Fritz, Andernach, Germany. Thermophore	708,549	Sept. 9	986	223	100	2192
Heimann, Albert. (See Hollweg, Carl, assignor.)						
Heineke, Martin, assignor to Sattley Manufacturing Company, Springfield, Ill. Raddle for straw-carriers	705,528	July 22	4270	923	100	911
Heineman, Solomon E., assignor to Mers Capsule Company, Detroit, Mich. Counting-machine	707,062	Aug. 12	2026	453	100	1548
Heinemann, Adolf, Eberswalde, Germany. Extracting ellagic acid	706,411	Aug. 5	825	.....	100	1281
Heinicke, Hermann, Schoeneberg, near Berlin, Germany. Electric accumulator	704,744	July 15	2566	558	100	551
Heinsdorf, Ernst O. (See Colby and Heinsdorf.)						
Heinze, John O., Jr., Revere, Mass. Magnetic wheel	709,484	Sept. 23	2898	647	100	2634
Heinze, John O., Jr., Revere, Mass. Induction-coil	709,485	Sept. 23	2901	648	100	2635
Heissenberger, John, New York, N. Y. Punching-machine	708,959	July 1	1078	233	100	215
Helios Electricitaets-Aktiengesellschaft. (See Schwartz, Alfred, assignor.)						
Hellen, Samuel H. (See Moran, Stephen W., assignor.)						
Hellenkamp, Albert B., Cleveland, Ohio. Drum-stand	706,937	Aug. 12	1801	408	100	1502
Heller, Charles W., and E. A. Jones, Cass City, Mich. Folding crate	709,542	Sept. 23	3013	671	100	2647
Hellweg, Henry, Milwaukee, Wis. Metallic shoe-heel	708,581	July 1	386	84	100	72
Hellwig, Bernhard, Cincinnati, Ohio. Pop safety-valve	708,089	Sept. 2	83	19	100	1908
Helm, James A., assignor of one-half to A. C. Wagner, Newark, Ohio. Angle-cock	704,964	July 15	3049	655	100	651
Helmers, Ludwig O., assignor to Ichthyol-Gesellschaft Cordes, Hermanni & Co., Hamburg, Germany. Separating sulfonic acids	709,331	Sept. 16	2528	.....	100	2533
Heltner, Ole M. (See Tepfer and Heltner.)						
Hemingway, Joseph, Chicago, Ill., assignor of three-fourths to C. J. Rothermel, Spring-valley, Minn., and W. E. Rothermel, Chicago, Ill. Continuous process of coking coal	705,986	July 29	5017	1092 1093	100	1075
Hemleb, Martin. (See Diehl and Hemleb.)						
Hemleb, Martin, Elizabeth, N. J., assignor to Singer Manufacturing Company. Rotary take-up for sewing-machines	705,240	July 22	3645	789	100	786
Hemp, Lewis W., St. Louis, Mo. Heating-stove	709,673	Sept. 23	3033	723	100	2602
Hemp, Lewis W., St. Louis, Mo. Heating-stove	709,674	Sept. 23	3034	723	100	2602
Hemry, Sarah A., St. Joseph, Mo. Oven	704,328	July 8	1788	391	100	875
Hendee, George M. (See Hedstrom, Carl O., assignor.)						
Hendershott, Leroy J., Spokane, Wash. Hand-stamp	704,189	July 8	1550	334	100	825
Henderson, Albert E., Toronto, Canada. Thrust-bearing	705,839	July 29	4957	1054	100	1043
Henderson, Albert E., Toronto, Canada. Roller-bearing	708,475	Sept. 2	861	194	100	2154
Henderson, Albert E., assignor to Toronto Roller Bearing Company, Limited, Toronto, Canada. Roller-bearing	709,322	Sept. 16	2530	569	100	2531
Henderson, Albert E., assignor to Toronto Roller Bearing Company, Limited, Toronto, Canada. Roller-bearing	709,441	Sept. 16	2772	624	100	2584
Henderson, George D. (See Hastings, Seth P., assignor.)						
Henderson, George W. (See Zaepfel, George, assignor.)						
Henderson, Gustav, Woodside, N. Y. Painter's tool	705,349	July 22	3002	844	100	886
Henderson, Thomas M., Portsmouth, Va., assignor of two-thirds to C. P. Storrs, Wilmington, Del., and R. R. Hicks, Norfolk, Va. Train-pipe coupling	709,401	Sept. 16	2696	605	100	2585
Hendley, Frank W. (See Dones, Ella B., assignor.)						
Hendrick, Eli E., Carbondale, Pa. Bearing	706,988	Aug. 12	1804	408	100	1502
Hendryx, Andrew B., New Haven, Conn. Fishing-reel	705,758	July 29	4728	1022	100	1014
Henneberry, Ella T., and M. M. Gleeson, Deerlodge, Mont. Puttying-tool	708,709	Sept. 9	1283	293	100	2268
Hennebique, François, Paris, France. Ceiling structure composed of beton and iron	707,994	Aug. 26	3755	842	100	1987
Hennegin, Herbert H., assignor to International Motor Company, St. Louis, Mo. Combined driving-gear and brake for motor-vehicles	708,856	Sept. 2	651	147	100	2113
Hennessey, John J., Milwaukee, Wis. Door-hanger	705,080	July 22	3278	710 711	100	713
Hennessey, John J., Milwaukee, Wis. Bracket for sliding doors	705,081	July 22	3280	711	100	713
Hennessey, John J., Milwaukee, Wis. Friction draft-rigging for railway-cars	708,550	Sept. 9	987	228	100	2192

Hoyt, Will F., and D. B. Saltsman, Dowagiac, Mich. Grain-drill	709,637	Sept. 23	3170	707	100	2679
Huard, Edward F., Springfield, Mo. Means for automatically closing swinging doors	706,945	Aug. 12	1815	406	100	1504
Hub Two Speed Gear Company. (See Pellant, Alfred, assignor.)						
Hubbard, Albert S., Greenwich, Conn. Electrical position-indicator	708,478	Sept. 2	856	195	100	2155
Hubbard, William W., Manchester, N. H. Elevator-operating mechanism	706,826	Aug. 12	1603	360	100	1462
Huber, Edward, Marion, Ohio. Compensating gearing	705,585	July 29	4409	955 956	100	953
Huber, Edward, Marion, Ohio. Riddle	706,061	Aug. 5	120	25	100	1142
Huber, Edward, Marion, Ohio. Friction-clutch	706,660	Aug. 12	1279	282	100	1362
Huber, Edward, Marion, and A. Milmine, Toledo, Ohio. Metal framework for buildings	704,829	July 15	2729	590	100	584
Huber, Edward, and J. W. Miller, Marion, Ohio. Pneumatic stacker	705,407	July 22	3995	865	100	858
Huber, John F., Rochester, assignor to L. T. Huber, Lockport, N. Y. Book for holding and filing sales-slips, &c	708,230	Sept. 2	435	99	100	2070
Huber, Lewis T. (See Huber, John F., assignor.)						
Huber, William E., *et al.* (See Haines, Jacques C., assignor.)						
Huberdeau, Thomas, Larimore, N. D. Rail-joint	704,190	July 8	1551	334	100	225
Hubert, Philip G., New York, N. Y. Solar heater	705,850	July 22	3903	845	100	889
Hucks, William, Jr., Camden Town, London, England. Apparatus for use in dispensing aerated liquids	709,407	Sept. 16	2711	606	100	2571
Huebner, Paul, Milwaukee, Wis. Sprinkler-head	709,907	Sept. 30	3711	837	100	2806
Huenefeld, Ernst H. (See Carter, John R., assignor.)						
Huenefeld, Ernst H. (See Carter and Hausfeld, assignors.)						
Huenefeld, Ernst H. (See Proes and Tucker, assignors.)						
Huff, Wilson S. (See Webb and Huff.)						
Huffman, Mary C., Boston, Mass. Skirt-retainer	704,042	July 8	1243	305	100	261
Huffmaster, Charles A., San Leandro, Cal. Variable-speed governor	707,697	Aug. 26	3266	780	100	1840
Hufft, B. (See Word, David C., assignor.)						
Hughes, Daniel E., Espy, Pa. Bevel	709,487	Sept. 23	2903	648	100	2635
Hughes, Frederic G. (See Hylard, John, assignor.)						
Hughes, George H., London, England. Cattle-food	707,113	Aug. 19	2132	.....	100	1567
Hughes, Harry N., Duquesne, Pa. Device for unloading coal-flats or the like	710,194	Sept. 30	4207	962	100	2920
Hughes, Robert D., Vermillion, assignor of two-thirds to R. O. Horton and C. P. Patteson, Lynchburg, Va. Nut-lock	704,332	July 8	1794	392	100	377
Hughes, Thomas W., assignor of two-thirds to L. N. Clayton and A. Bugbee, Trenton, N. J. Ash or garbage receptacle	705,672	July 29	4557	990	100	983
Hughes, Will J., St. Louis, Mo. Pump	705,351	July 22	3904	845	100	889
Hughes, Will J., St. Louis, Mo., assignor to S. M. Hastings, trustee, Chicago, Ill. Refrigerator-car	706,661	Aug. 12	1281	283	100	1892
Hughes, William S., Philadelphia, Pa., assignor to E. A. Willard, New York, N. Y. Smoke and spark preventing device	707,388	Aug. 19	2548	574	100	1674
Hughes, William W., Urbana, Ohio. Antifriction-cover for bicycle-saddles	707,592	Aug. 26	3049	686	100	1795
Hulett, George H., Cleveland, Ohio. Ore-bin	705,761	July 29	4727	1028	100	1015
Hull, Foster J. (See Dement and Hull.)						
Hull, Foster J., Brooklyn, N. Y., assignor, by mesne assignments, to American Mechanical Cashier Company. Check-covering device	710,860	Sept. 30	4561	1029	100	2983
Hull, James S. (See Smith and Hull.)						
Hulse, Edgar J., Washington, D. C. Skylight	707,419	Aug. 19	2707	611	100	1707
Hult, Carl A. and O. W., Stockholm, Sweden. Rotary motor	706,181	Aug. 5	351	75, 76	100	1188
Hult, Oscar W. (See Hult, Carl A. and O. W.)						
Hultgren, Johan P., assignor of one-half to F. H. Getzmann, Stockholm, Sweden. Centrifugal separator	708,643	Sept. 9	1161	264	100	2228
Hultman, Ivar, assignor of one-half to A. M. Johanson, Stockholm, Sweden. Calculating-machine	706,180	Aug. 5	347	75	100	1187
Hultquist, Carl E., Rockford, Ill. Cuff-holder	704,644	July 15	2379	515	100	513
Humiston, Dawson M., Tonica, Ill. Glazier's hammer	708,790	July 1	771	169	100	154
Humphrey, Alfred H., Kalamazoo, Mich. Igniter	705,678	July 29	4559	990	100	988
Humphrey, Alfred H., assignor to H. S. Humphrey, Kalamazoo, Mich. Heater	704,043	July 8	1244	268	100	902
Humphrey, Herbert A., Westminster, London, England. Apparatus for purifying gas	709,772	Sept. 23	3431	779	100	2731
Humphrey, Herbert S. (See Humphrey, Alfred H., assignor.)						
Humphreys, David C., trustee. (See Birmingham, John P., assignor.)						
Hungerford, Churchill, Philadelphia, Pa. Filter	707,388	Aug. 19	2551	575	100	1674
Hunkins, William S., Merriam Park, Minn. Garment-supporter	708,226	July 1	1011	220	100	908
Hunsaker, Oscar W., St. Louis, Mo. Cash-register	705,353	July 22	3908	846 847	100	840
Hunt, Charles, Belfast, Ireland. Life-preserver	710,275	Sept. 30	4416	995	100	2963
Hunt, Charles J., *et al.* (See Johnston, George W., assignor.)						
Hunt, Charles W., West New Brighton, N. Y. Vehicle	708,231	Sept. 2	437	99	100	2070
Hunt, Charles W., West New Brighton, N. Y. Hoisting apparatus	708,713	Sept. 9	1293	294	100	2255
Hunt, Charles W., West New Brighton, N. Y. Transmitting mechanism	709,265	Sept. 16	2490	548	100	2510
Hunt, Harry L., and W. E. Moon, Traverse City, Mich. Magazine fuse-box	706,022	Aug. 5	120	25	100	1142
Hunt, Helm, Ferris & Company. (See Ferris, Henry L., assignor.)						
Hunt, Joseph H. (See Case, Wilmer S., assignor.)						
Hunt, Tilman H., Albany, Mo. Dust-applicator	705,089	July 22	3903	718	100	717
Hunt, Wilfred, Bothwell, Scotland. Type-writer	709,152	Sept. 16	2151	500	100	2461
Hunter, Daniel J. (See McRorie and Hunter.)						
Hunter, David E., Cambridge, assignor to Library Bureau, Boston, Mass. Roller copying-press	705,352	July 22	3905	845 846	100	839
Hunter, David E., Cambridge, assignor to Library Bureau, Boston, Mass. Folio-holder	709,221	Sept. 16	2288	527 528	100	2490
Hunter, Frank R. (See Herndon, Jesse F., assignor.)						
Hunter, George G. (See Batcheller, Walter B., assignor.)						
Hunter, Hamilton, assignor of one-half to S. D. Rouse, Covington, Ky. Show-window construction	709,985	Sept. 30	3871	872	100	2837
Hunter, Robert L., Cleveland, Ohio. Cross-index	708,479	Sept. 2	858	196	100	2155
Hunter, Rudolph M., Philadelphia, Pa. Making electric accumulator-plates	708,490	July 1	98	21	100	92
Huntington, Charles S., Los Angeles, Cal. Lock	708,987	July 1	1015	230	100	908
Huntington, William S., New York, N. Y., assignor to Composite Board Company. Making artificial lumber	709,488	Sept. 23	2905	649	100	2905
Huntoon, Charles F., assignor to Chicago Railway Equipment Company, Chicago, Ill. Side bearing for railway-cars	704,044	July 8	1246	288 289	100	902
Hupfeld, Ludwig, Leipsic, Germany. Mechanism for effecting varying touch of key or musical instruments	706,946	Aug. 12	1817	406 407	100	1504
Hüppi, Johann, Rümlang, near Zurich, Switzerland. Lifting-jack	704,688	July 15	2440	527	100	586
Hurd, Frederick A., assignor to C. C. Bailey, Cookshire, Canada. Manufacture of cheese	707,698	Aug. 26	3268	.....	100	1840

Mayo, Benjamin F., Salem, Mass., assignor, by mesne assignments, to United Shoe Machinery Company. Heel-nailing machine	707,144	Aug. 19	2187	490	100	1598
Mayo, Benjamin F., Salem, and A. D. Elliott, Winchester, Mass., assignors to United Shoe Machinery Company, Paterson, N. J., and Boston, Mass. Nail-assorting mechanism	707,138	Aug. 19	2168	486 / 487 / 488	100	1595
Mayo, Robert D., Frankfort, Mich. Life-boat	709,417	Sept. 16	2758	612	100	2075
Mayr, Walter A., Chicago, Ill. Curtain-stretcher	705,857	July 29	4804	1064	100	1051
Mazey, John T. (See Illingworth, Mazey, and Naylor.)						
McAda, James N. (See Forister, John H., assignor.)						
McAdam, John V., assignor to American Steel-Body Double-Bolster Co., St. Louis, Mo. Car body-bolster	706,630	Aug. 12	1817	291	100	1401
McAlpine, Lemuel B., assignor to Climax Road Machine Company, Marathon, N. Y. Road-roller	710,185	Sept. 30	4221	952	100	2010
McAtee, James A., Mahanoy Plane, Pa. Automatic draft-regulating device	707,769	Aug. 26	3480	786	100	1868
McAuliffe, John W., Providence, R. I. Waste-trap	705,777	July 29	4753	1030	100	1021
McBee, Randolp, Washington, D. C. Stop-box	704,696	July 15	2400	519	100	517
McBee, Vardry E., Norfolk, Va. Railway-tie plate	709,348	Sept. 16	2576	581	100	2343
McBerty, Frank R., Evanston, assignor to Western Electric Company, Chicago, Ill. Selective calling appliance for telephone-lines	710,333	Sept. 30	4514	1017	100	2074
McBerty, Frank R., and F. H. Loveridge, Evanston, assignors to Western Electric Company, Chicago, Ill. Signal-lamp for telephone-switchboards	709,906	Sept. 30	3898	877	100	2340
McBride, Edward, *et al.* (See Earl, Charles M., assignor.)						
McBride, Vincent R., Stillwater, Okla. Ter. Sash-lock	706,845	Aug. 12	1643	367	100	1471
McBride, William C., Hillsboro, Tex. Ventilator and mirror-protector	704,076	July 8	1318	287	100	276
McCabe, Thomas W. R., Winsted, Conn. Winding-key head	708,243	Sept. 2	456	103	100	2074
McCabe, William L., Seattle, Wash. Portable conveyer	705,378	July 29	4754	1030	100	1021
McCabe, William L., Seattle, Wash. Endless conveyer	707,613	Aug. 26	3096	695	100	1802
McCabe, William L., Tacoma, Wash. Driving mechanism for portable electric conveyers	707,614	Aug. 26	3087	695 / 696	100	1803
McCaffery, John P., *et al.* (See Strong, Robert H., assignor.)						
McCahon, Alexander, St. Joseph, Mo. Combination air and vapor motor	709,090	Sept. 16	1955	448	100	2010
McCain, John A., Atlanta, Ga. Cotton-planter	705,598	July 29	4453	960	100	958
McCall, Harry M., assignor of five-eighths to James Rees Sons' Company, Pittsburg, Pa. Motor-vehicle	706,439	Aug. 5	862	193	100	1295
McCall, James O. (See Williams and McCall.)						
McCall, Lyman H. (See Moore, Andrew R., assignor.)						
McCall, Thomas B. (See Brown and McCall.)						
McCammon, William M., and C. A. Lee, Formoso, Kans. Grain-elevator	708,576	Sept. 9	1662	233	100	2201
McCandless, George A. (See Smith, William M., assignor.)						
McCanna, Edward W., Anaconda, Mont. Steam-boiler	705,779	July 29	4756	1030	100	1022
McCarthy, Louis, Boston, Mass. Insulator	706,194	Aug. 5	373	80	100	1193
McCarty, Eugene J. (See Swinscoe and McCarty.)						
McCarty, Harry C., Williamsport, Pa. Journal-box lid	703,736	July 1	667	148	100	134
McCaughtry, Samuel, Washington, Pa. Measuring device for Artesian wells	706,438	Aug. 5	860	192	100	1295
McCauley, Charles H., Baltimore, Md., assignor to Glen Rock Stamping Company, Glenrock, Pa. Hinge	704,077	July 8	1319	288	100	276
McCay, Spencer, Topeka, Kans. Bale-tie	706,193	Aug. 5	371	80	100	1193
McCay, Spencer, Topeka, Kans. Cuff-holder	707,615	Aug. 26	3089	695	100	1803
McCay, Spencer, Topeka, Kans. Sharpener for mower or reaper knives	707,616	Aug. 26	3091	696	100	1804
McCay, Spencer, Topeka, Kans., assignor to F. L. Woodbridge, Newark, Ohio. Washboard	706,192	Aug. 5	370	79	100	1192
McClain, Sallie G., Philadelphia, Pa. Corset	709,238	Sept. 16	2368	537	100	2198
McClary, Allan W., St. Paul, Minn. Annealing receptacle for castings	708,384	Sept. 2	660	155	100	2121
McClave-Brooks Company. (See McClave, William, assignor.)						
McClave, William, assignor to McClave-Brooks Company, Scranton, Pa. Stoking mechanism for furnaces	705,590	July 29	4434	961	100	958
McClave, William, Scranton, Pa., assignor, by mesne assignments, to H. G. Dunham and G. G. Brooks, trustees. Grate and grate-bar	707,790	Aug. 26	3490	786 / 787	100	1864
McClay, David W., Newark, N. J., assignor to Tea Tray Company of Newark, N. J. Catch	709,903	Sept. 9	1685	388	100	2340
McClean, James, and L. E. Phipps, Kansas City, Kans. Hog-belly-rolling machine	709,997	Sept. 30	3890	877 / 878	100	2341
McClellan, Herman, Cincinnati, Ohio. Bearing for piano-strings	703,708	July 1	613	136	100	121
McClellan, Lewis K., Cedar Rapids, Nebr. Farm-gate	709,244	Sept. 2	457	104	100	2074
McClellan, Stephen, Brooklyn, N. Y. Joist-boring tool	704,657	July 15	2401	519	100	518
McClelland, John J., London, England. Sand-molding machine	708,078	July 8	1320	288	100	277
McClelland, Robert H., *et al.* (See Anderson, Albert, assignor.)						
McClintock, Robert. (See Boyce, Markland H., assignor.)						
McClintock, William, New York, N. Y. Clamp for marble wash bowls or basins	707,153	Aug. 19	2206	494	100	1601
McCluer, Charles R., assignor of one-half to C. F. Quincy, Chicago, Ill. Combined deflector and screen	706,440	Aug. 5	863	193	100	1296
McClung, James S., Pueblo, Colo. Pen or pencil holder	710,298	Sept. 30	4446	1002	100	2259
McClung, Vernendo B. (See Hill, Terelius A., assignor.)						
McClure, John W., Richmond, Ind. Bush-chisel	703,950	July 1	1056	229	100	210
McClure, Napoleon. (See Turcotte, Alexander G., assignor.)						
McColl, Francis P., assignor to American Key Can Company, Chicago, Ill. Metal can	703,445	July 1	138	31	100	80
McCollum, Alfred F., Espy, assignor of three-fifths to J. Magee, 2d, Bloomsburg, Pa. Loom for weaving pile fabrics	709,447	Sept. 16	2782	626 / 627	100	2286
McCollum, Thomas E., Toronto, Canada. Momentum car-brake	709,923	Sept. 30	3744	843	100	2310
McConnell, Edward, Richmond, Va. Safety-pin	703,955	July 1	1099	237	100	218
McConnell, James H., Evanston, Ill. Apparatus for increasing combustion in furnaces	707,249	Aug. 19	2263	514	100	1640
McConnell, Leslie, Brewton, Ala. Nut-lock	708,395	Sept. 2	662	156	100	2121
McConney, Robert B. (See Ray and McConney.)						
McCord, Alvin C., assignor to McCord & Company, Chicago, Ill. Spring-cushion	709,998	Sept. 30	3892	878	100	2341
McCord, Alvin C., assignor to McCord & Company, Chicago, Ill. Spring-cushion	709,999	Sept. 30	3895	878	100	2342
McCord & Company. (See Denegre, Edward, assignor.)						
McCord & Company. (See McCord, Alvin C., assignor.)						
McCord, James R., Jr., St. Louis, Mo. Balance-book	704,705	July 15	2482	536	100	535
McCord, Ralph, St. Louis, Mo. Non-refillable bottle	709,081	Sept. 16	1957	448	100	2011
McCormack, George E., assignor to Precision Eyelet Company, East Bridgewater, Mass. Eyelet	708,577	Sept. 9	1684	394	100	2302
McCormick Harvesting Machine Company. (See Haskins, James H., assignor.)						
McCormick Harvesting Machine Company. (See Johnston, Edward A., assignor.)						
McCormick Harvesting Machine Company. (See Macphail, James, assignor.)						
McCornack, Herbert, Westchester, Pa. Centrifugal separator	706,087	Aug. 5	163	33, 34	100	1150
McCornack, Herbert, Westchester, Pa. Shaft-mounting	706,088	Aug. 5	164	34	100	1150

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
McCown, Sylvester, Athalia, assignor to Weil, Brockman & Company, Cincinnati, Ohio. Press for packing barrels or other packages	706,681	Aug. 12	1319	292	100	1401
McCrosky, William B., Eureka Springs, Ark. Jar-closure	706,771	Aug. 12	1501	333	100	1459
McCulloch, John H., Newville, Pa. Inhaler	707,445	Aug. 19	2749	622	100	1716
McCullough, James, Rosebank, N. Y., assignor to Schmidt-Perrin Manufacturing Company, Jersey City, N. J. Bilge-block	704,358	July 8	1865	404	100	294
McCullough, John L., Brooklyn, N. Y. Target	707,617	Aug. 26	3093	697	100	1804
McCullough, John L., Brooklyn, N. Y., assignor to Automatic Target Machine Company. Target apparatus	708,245	Sept. 2	459	104 / 105	100	2075
McCullough, Thomas F., Memphis, Tenn. Indicator	710,294	Sept. 30	4447	1002 / 1005	100	2260
McCurdy, Arthur W., Washington, D. C., assignor to Eastman Kodak Company, Rochester, N. Y. Apparatus for developing photographic films	707,791	Aug. 26	3493	787 / 788 / 789	100	1864
McCutcheon, Alexander, Emporia, Kans. Fire-escape	708,777	Sept. 9	1410	323 / 324	100	2281
McDaniel, Sanford A., *et al.* (See Tuttle, William C., assignor.)						
McDermott, David L., assignor of one-half to J. A. Graham, Carlisle, Pa. Combined plumb-bob, level, &c	707,518	Aug. 19	2880	653	100	1744
McDermott, Joseph J., New Brighton, Pa. Rail-joint	710,000	Sept. 30	3896	878	100	2342
McDevitt, William J., Philadelphia, Pa. Cabinet for graphophones, graphophone-records, or the like	705,009	July 15	2135	477 / 478	100	668
McDonald, Donald S., Mabou, Canada. Furnace	709,107	Sept. 16	2108	483 / 484	100	2445
McDonald, George W., assignor of one-half to H. McDonald, Jersey City, N. J. Clothes-line holder	710,205	Sept. 30	4301	967	100	2260
McDonald, Henry. (See McDonald, George W., assignor.)						
McDonald, Joseph W., Larimore, N. D. Mechanical telegraph-transmitter	706,251	Aug. 5	475	101	100	1212
McDonald, Kenneth. (See Galway, John J., assignor.)						
McDonald, Michael B. (See Ware, Erastus A., assignor.)						
McDonald, Samuel, Youngstown, Ohio. Manufacturing basic Bessemer steel	706,089	Aug. 5	167	.....	100	1151
McDougall, Alexander, Duluth, Minn. Artificial-stone board	709,791	Sept. 23	3468	780	100	2739
McDougall, Barnett, San Francisco, Cal. Roof, ceiling, and floor construction	707,250	Aug. 19	2384	534	100	1640
McDonough, Dennison, Eau Claire, Wis. Stilt	704,658	July 15	2404	520	100	518
McDowell, John G., Pittsburg, Pa. Brick-carrier	705,277	July 22	3721	807	100	801
McElroy-Grunow Electric Railway System. (See Bourne, Frank, assignor.)						
McEvoy, Frank E., Wheelwright, Mass. Couch-roll attachment for paper-machines	704,079	July 8	1322	288	100	277
McFadden, Benjamin B., Binghamton, N. Y. Folding box	704,080	July 8	1324	288 / 289	100	277
McFadden, Hugh, assignor of one-half to M. McLeod, Rumford Falls, Me. Means for chaining logs	704,908	July 15	2636	619	100	612
McFarren, Bert, Navarre, Ohio. Electric-wire pole	709,554	Sept. 23	3003	676	100	2651
McFatrich, George W., Chicago, Ill. Educational optical instrument	709,792	Sept. 23	3465	780 / 781	100	2740
McGill, John J., assignor of two-thirds to E. W. Richey and S. A. Johnson, Chicago, Ill. Automatic electromechanical semaphore-signal	706,586	Aug. 12	1137	251 / 252	100	1361
McGinnis, Ella. (See Noble, William J., assignor.)						
McGinnity, John, South Omaha, Nebr. Measuring and discharging apparatus for filling cans	709,793	Sept. 23	3466	781	100	2740
McGlinchey, Charles E. (See Stokes and McGlinchey.)						
McGlinchy, John J. (See Auld, Hugh R., assignor.)						
McGowan, Charles R. (See Meats and McGowan.)						
McGowan, Henry L., St. John, Canada. Signaling-machine	708,904	Sept. 9	1686	388	100	2340
McGowan, William L., Philadelphia, Pa. Conduit	708,446	July 1	139	32	100	80
McGowan, William L., Philadelphia, Pa. Conduit	708,447	July 1	142	32	100	81
McGowan, William L., Philadelphia, Pa. Conduit	709,504	Sept. 23	2944	657	100	2638
McGuire, Frederick. (See Cherpaw and McGuire.)						
McGuire, George H., Dahlonega, Ga. Wing attachment for plows	709,505	Sept. 23	2946	657	100	2638
McGuire, Peter J., Blairsville, Pa., assignor to Champion Sanitary Enamel-Ware Co. Water-closet bowl	706,990	Aug. 12	1690	423	100	1519
McGurrin, Frank E., Salt Lake City, Utah. Domestic garbage-burner	704,359	July 8	1867	404	100	294
McHale, Martin, Phoenix, and J. Trainner, Eholt, Canada. Rock-drill chuck	704,081	July 8	1326	289	100	278
McHenry, Francis J. (See Phillips and McHenry.)						
McIlyar, Corwin C., Cambridge, Ohio. Mail-bag catcher	704,904	July 15	2857	620	100	612
McIntire, John C., Jr. (See Long, Lee, assignor.)						
McIntosh, John A. and W., assignors to P. Ryan, J. Ruse, and D. J. Johnston, Toronto, Canada. Compensating organ-pipe	709,349	Sept. 16	2577	581	100	2343
McIntosh, John E., and J. A. Seymour, Auburn, N. Y. Adjuster for centrifugal governors	707,792	Aug. 26	3499	789	100	1866
McIntosh, William. (See McIntosh, John A. and W.)						
McIntosh, William, Clinton, Mass. Dumping-wagon	707,618	Aug. 26	3095	697 / 698	100	1805
McKague, Joseph H., Columbia Heights, Minn. Hernial truss	707,619	Aug. 26	3098	698	100	1805
McKaig, Eddy T., Chicago, Ill. Gasolene-engine	707,788	Aug. 26	3502	790	100	1866
McKaig, Eddy T., Chicago, Ill. Lubricating apparatus for engines	707,794	Aug. 26	3507	791	100	1867
McKay, Gordon, Newport, R. I. Dredge	706,195	Aug. 5	374	80	100	1193
McKay, Harry C., Essington, Pa., assignor, by mesne assignments, to American Patent Kid Company. Varnish for making enamel or patent leathers	704,092	July 8	1327	.....	100	278
McKee, Thomas M., and S. B. Saffell, Indianapolis, assignors to National Adjustable Chair Company, Greenfield, Ind. Automatic adjustable chair	706,991	Aug. 12	1691	424	100	1519
McKeel, George A., Jackson, Mich. Ferrule for fork-handles	709,108	Sept. 16	2110	484	100	2445
McKeever, Jacob S., Philadelphia, Pa. Fan attachment for rocking-chairs	708,905	Sept. 9	1688	389	100	2340
McKeever, John P., Wardensville, W. Va. Window-screen	705,278	July 22	3722	807	100	801
McKelvey, Frank A., Knoxville, Pa. Air-brake	706,252	Aug. 5	478	101 / 102	100	1213
McKenna, Edward W., Chicago, Ill. Transfer system	705,119	July 22	3364	739 / 740	100	731
McKenzie, Joel B. L., Rahway, N. J. Water-gage connection	709,239	Sept. 16	2369	537	100	2198
McKeown, Joseph B., Union Hill, N. J. Machine for applying coatings	707,620	Aug. 26	3099	698	100	1805
McKim, A., Sr., *et al.* (See McWatters, Thomas, assignor.)						
McKim, Andrew H., *et al.* (See McWatters, Thomas, assignor.)						
McKim, James T. (See Miller, Lewis, assignor.)						
McKim, James T., assignor of one-half to L. Miller, Thorntown, Ind. Cement	704,849	July 15	2764	.....	100	592
McKim, James T., and L. Miller, Thorntown, Ind. Burial-vault	704,850	July 15	2764	597	100	592
McKinley, Andrew, New York, N. Y. Nut-lock	703,448	July 1	143	32	100	81
McKinley, Robert W., Ripley, Ohio. Whiffletree	707,795	Aug. 26	3507	791	100	1868
McKinney, Henry D., Janesville, Wis. Checking device for harness	708,906	Sept. 9	1690	389	100	2340

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Meier, Frank J., Weigand, Nebr. Warmer	705,267	July 22	3708	803	100	798
Meier, Hugh D., Brooklyn, N. Y. Variable-movement-controlling mechanism	710,302	Sept. 30	4389	966	100	2027
Meigs, John F., South Bethlehem, and S. A. S Hammar, Bethlehem, assignors to Bethlehem Steel Company, South Bethlehem, Pa. Breech mechanism	704,898	July 15	2860	617, 618	100	611
Meinecke, Christian W., Jersey City, N. J., assignor to Meinecke and Company, New York, N. Y. Bottle-stopper	709,418	Sept. 16	2730	613	100	2576
Meinecke & Company. (See Klauberg, Charles, assignor.)						
Meinecke and Company. (See Meinecke, Christian W., assignor.)						
Meischke-Smith, Georgius F. (See Meischke-Smith, William and G. F.)						
Meischke-Smith, William and G. F., Dresden, Germany. Driving-gear for varying speed and reversing	706,580	Aug. 12	1128	249	100	1359
Meister, Albert R., Sacramento, Cal. Rotary grooving-tool	705,209	July 22	3705	803	100	798
Melanson, Thomas F., Upper Charlo, Canada. Car-coupling	708,571	Sept. 9	1094	231	100	2300
Mellen, Edward J., Newark, assignor to H. Berg, Orange Valley, N. J. Hat-brim stretcher	709,643	Sept. 23	3179	709, 710	100	2021
Mellett, Lemuel, Somerville, assignor to American Otophone Company, Boston, Mass. Telephone-receiver	707,441	Aug. 19	2743	621	100	1715
Meloon, Jonathan C., Providence, R. I., assignor to General Fire Extinguisher Company, New York, N. Y. Electric attachment	708,155	Sept. 2	290	69	100	2041
Melvin, David N., Linoleumville, N. Y. Machine for the manufacture of inlaid linoleum	704,068	July 8	1298	280, 281, 282	100	272
Melvin, David N., Linoleumville, N. Y. Machine for the manufacture of inlaid linoleum	704,069	July 8	1303	283, 284	100	274
Melvin, David N., Linoleumville, N. Y. Machine for the manufacture of inlaid linoleum	704,070	July 8	1309	284, 285, 286	100	275
Mendels, Eugene E. (See Keane, Maxwell, assignor.)						
Mendenhall, Aaron E., Anderson, Ind. Door-fastener	707,858	Aug. 26	3029	818	100	1910
Mendenhall, Albert, assignor of one-half to B. V. Seevers, Oskaloosa, Iowa. Thill-coupling	710,305	Sept. 30	4570	1030	100	2983
Menefee, George W., Berkeley, Cal. Hoister and conveyer	709,547	Sept. 23	3022	672	100	2649
Menges, Charles L. R. E., The Hague, Netherlands. Galvanometer	706,982	Aug. 12	1875	420	100	1516
Menges, Edward E., assignor to Seamless Rubber Co., New Haven, Conn. Package for water-bottles, water-bags, &c.	706,330	Aug. 5	656	143	100	1247
Menges, Edward E., assignor to Seamless Rubber Co., New Haven, Conn. Nipple	710,114	Sept. 30	4113	928	100	2986
Menne, Hermann A. E., assignor to Cöln-Müsener Bergwerks Actien Verein, Creuzthal, Westphalia, Germany. Fusion of metals	703,940	July 1	1039	225	100	207
Menne, Hermann A. E., Creuzthal, assignor to Cöln-Müsener Bergwerks Actien Verein, Creuzthal, Westphalia, Germany. Burner for the removal of hardened masses in furnaces or the like	705,418	July 22	4021	871	100	864
Menns, Albert W., Revere, and A. T. Van Horn, Malden, Mass., assignors to Menns-Van Horn Motor Company, Portland, Me., and Boston, Mass. Engine-support	709,445	Sept. 16	2779	625, 626	100	2586
Menns-Van Horn Motor Company. (See Menns and Van Horn, assignors.)						
Mensching, Carl. (See Levinstein and Mensching.)						
Mentwig, Otto, Neustadt, Germany. Box of building material	707,446	Aug. 19	2780	622, 623	100	1716
Mentzer, John P., assignor to Atkinson & Mentzer, Chicago, Ill. Ink-well	706,329	Aug. 5	655	142	100	1247
Merches, Nicholas, Oldham, S. D. Draft attachment	706,948	Aug. 5	470	100	100	1211
Merck, Firm of E. (See Blum, Ferdinand, assignor.)						
Merck, Firm of E. (See Smith, Watson, assignor.)						
Mergenthaler Linotype Company. (See Cotsworth, Alfred G., assignor.)						
Mergenthaler, Ottmar, deceased, (Safe Deposit and Trust Company of Baltimore City and A. Greenleaf, executors,) and W. T. Hoofnagle; said Hoofnagle assignor to Ott. Mergenthaler Company, Baltimore, Md. Linotype-machine	707,645	Aug. 26	3154	709	100	1816
Meridith, J. E. (See Kennedy, Erastus L., assignor.)						
Meriwether, Charles S. (See Mansfield, William, assignor.)						
Merkel, James B., Hattiesburg, Miss. Window-shade hanger	708,156	Sept. 2	291	70	100	2041
Merle, George, Brooklyn, N. Y. Fish-trap	708,380	Sept. 2	685	154	100	2120
Merley, Nicholas, Canton, Ohio. Building-block die	708,795	Sept. 9	1316	300	100	2260
Merlin, Sidney L. W., Paris, France. Type-writing machine	708,821	Sept. 9	1321	348	100	2304
Merralls, William A., San Francisco, Cal. Stamp-mill mortar	709,104	Sept. 16	2104	482	100	2444
Merrick, Frank A., Johnstown, assignor, by mesne assignments, to Westinghouse Electric and Manufacturing Company, Pittsburg, Pa. Electric switch	706,581	Aug. 12	1129	249	100	1360
Merrick, Frank A., Johnstown, assignor, by mesne assignments, to Westinghouse Electric and Manufacturing Company, Pittsburg, Pa. Trolley	709,168	Sept. 16	2230	507	100	2469
Merrick, Frank A., Johnstown, assignor, by mesne assignments, to Westinghouse Electric and Manufacturing Company, Pittsburg, Pa. Circuit-breaker	709,292	Sept. 16	2348	532	100	2494
Merrick, Frank A., and E. W. Stull, Johnstown, Pa., assignors to Lorain Steel Company. Controller for electric motors	708,157	Sept. 2	292	70	100	2042
Merrick, Frank A., and E. W. Stull, Johnstown, assignors, by mesne assignments, to Westinghouse Electric and Manufacturing Company, Pittsburg, Pa. Controller for electric motors	708,158	Sept. 2	295	71	100	2043
Merrick, Frank A., and J. D. Forrer, Johnstown, assignors, by mesne assignments, to Westinghouse Electric and Manufacturing Company, Pittsburg, Pa. Operating mechanism for motor-controllers	708,794	Sept. 9	1314	300	100	2260
Merrick, Frank W., Boston, Mass. Sewing-machine needle	708,941	July 1	1041	226	100	207
Merrick, Frank W., Boston, Mass. Take-up for sewing-machines	707,145	Aug. 19	2180	490, 491	100	1506
Merrie, Hugh, and A. E. Burnett, Jr., Cincinnati, Ohio. Overflow attachment for bath-tubs or the like	706,968	Aug. 12	1878	420	100	1517
Merrifield, Leonard L., assignor to E. J. Checkley, trustee, and Economical Gas Apparatus Construction Company, Limited, Toronto, Canada. Gas-producer	707,146	Aug. 19	2193	491, 492	100	1599
Merrill, Alva M., Brooklyn, N. Y. Safety attachment for gas-cocks	705,419	July 22	4023	872	100	864
Merrill, Bela G., Oakpark, Ill. Manifolding sales or order book	706,709	Aug. 12	1497	332	100	1488
Merrill, Benjamin J. (See Henry, Edward G., assignor.)						
Merrill, George N. (See Johnston and Merrill.)						
Merriman, Leonard J., Ivanhoe, N. C. Plant-protector	707,947	Aug. 19	2380	533	100	1689
Merritt, Arthur A. (See Onderdonk and Merritt.)						
Merritt, James S., Philadelphia, Pa. Slide-scale	703,437	July 1	125	28	100	97
Merritt, Louis G., Lockport, N. Y. Veneer-cutting machine	706,331	Aug. 5	657	148	100	1248
Mervin, Charles R., assignor of one-half to J. M. Bolt, Mankato, Kans. Door-catch	704,651	July 15	2292	517	100	516
Merz Capsule Company. (See Heineman, Solomon E., assignor.)						
Messer, William F., assignor to Lambert Company, Chicago, Ill. Apparatus for reproducing phonograms	705,772	July 29	4744	1067	100	1019

Mills, Francis A., assignor of one-half to G. B. Emmons, Methuen, Mass. Shuttle-lock for looms	706,190	Aug. 5	367	79	100	1199
Mills, Henry D., Fisha Eddy, assignor of one-half to P. H. Lawless, Eastbranch, N. Y. Window-screen	709,346	Sept. 16	2573	580	100	2543
Mills, James, Wilmington, Del. Molding-flask	710,831	Sept. 30	4512	1016, 1017	100	2978
Mills, Roland A., Osceola, Nebr. Hand tenoning-machine	707,959	Aug. 26	3630	818	100	1910
Milmine, Alfred. (See Huber and Milmine.)						
Milne, William A., Brown's Corners, Canada. Peat-press	708,574	Sept. 9	1030	232	100	2201
Milner, William. (See Grosvenor and Milner.)						
Milward, George H., Nottingham, England. Machinery for spinning and doubling fibrous substances	705,774	July 29	4749	1028, 1029	100	1029
Mims, Giles D. (See Pope and Mims.)						
Minck, Harry, and H. L. Droste, Richmond, Ind. Rail-joint	710,290	Sept. 30	4439	1001	100	2958
Minder, Johann, assignor to Oxylin-Werke Actien-Gesellschaft, Piesteritz, Germany. Preparing and treating rubber-coated materials	708,823	Sept. 9	1524	.....	100	2305
Miner, Benjamin F., Montague, Mass. Combination stopper and brush for bottles	705,271	July 22	3709	804	100	799
Minges, Richard, and J. Ewell, Jr., Denver, Colo. Nut-lock	705,490	July 22	4023	872	100	864
Minogue, Martin T., Springfield, Ohio, assignor of one-half to S. F. Pierce, St. Paul, Minn. Motive-power engine	706,494	Aug. 5	979	215	100	1314
Minto, Thomas. (See Enderton, William H., assignor.)						
Minton, Charles. (See Minton, Francis, assignor.)						
Minton, Daniel J. (See Searles and Minton.)						
Minton, Francis, assignor to C. Minton, London, England. Device for gathering balls	704,848	July 15	2763	597	100	502
Mishler, Phares M., Hagerstown, Md. Wire-fence machine	703,804	July 1	792	174	100	159
Mitchell, Alexander, Oxbow, Canada. Churn	709,497	Sept. 23	2917	650, 651	100	2627
Mitchell, Charles F., Baltimore, Md. Non-refillable bottle	703,944	July 1	1047	227	100	308
Mitchell, Charles W., Brooklyn, N. Y., assignor to Twisted Wire Box Strap Company of New York. Pail-hook	709,919	Sept. 30	3735	841	100	2800
Mitchell, Dean C. (See Salmon and Mitchell.)						
Mitchell, Eugene E., Washington, D. C., assignor to M. Ingraham, Wabasha County, Minn. Toy boat	707,148	Aug. 19	2198	492	100	1600
Mitchell, Ferris A., New York, N. Y. Metallic lathing	704,072	July 8	1314	286	100	275
Mitchell, Frank A., Washington, D. C. Roofing compound	707,710	Aug. 26	3284	.....	100	1844
Mitchell, Frank W., Leaf River, Ill. Tire-setter	706,563	Aug. 12	1132	250	100	1360
Mitchell Gas Generator and Burner Company. (See Mitchell, Willis, assignor.)						
Mitchell, George, Naco, Ariz. Ter. Reducing copper matte to refined copper	705,109	July 22	3348	.....	100	727
Mitchell, Harry S. (See Porterfield, John C., assignor.)						
Mitchell, James E., assignor of three-fourths to G. B. Mevis, G. F. Stiles, and C. Fredericks, Lowell, Mass. Buckle	706,090	Aug. 5	152	32	100	1147
Mitchell, John E., St. Louis, Mo. Dust-collector	704,900	July 15	2832	618, 619	100	611
Mitchell, John E., St. Louis, Mo. Dust-collector	705,944	July 29	5050	1100	100	1098
Mitchell, Willis, Malden, assignor to Mitchell Gas Generator and Burner Company, Boston, Mass. Vapor-burning torch	706,842	Aug. 12	1635	366	100	1469
Moberg, Carl J., Jersey City, N. J., assignor to A. E. Schatz, Mount Vernon, N. Y. Electric clock	709,234	Sept. 16	2354	533, 534	100	2496
Mock, George, assignor of one-half to C. T. Stewart, Bardstown, Ky. Wagon-standard	708,968	Sept. 9	1805	415	100	2363
Mock, Severin, Pawtucket, and C. D. Robinson, Crompton, R. I.; said Robinson assignor to said Mock. Cleaner for spinning-machines	708,061	Sept. 2	116	28	100	2005
Modern Telescopic Company. (See Phillips and McHenry, assignors.)						
Moderson, Paul, Fruitvale, Cal. Lawn-sprinkler	706,986	Aug. 12	1682	421	100	1518
Modlin, Thomas B., and W. H. Buhl, Hurdland, Mo. Railway-tie plate	709,169	Sept. 16	2251	507	100	2469
Modrell, John H. (See Wilcox, Reuben O., assignor.)						
Moeller, Julius, Moscow, Russia. Carrying device	707,610	Aug. 26	3081	693	100	1802
Moesinger, Traugott, Brooklyn, N. Y. Feeder for cigarette-machines	709,930	Sept. 30	3737	841, 842	100	2809
Moffett, George E. (See Schermerhorn and Moffett.)						
Moffitt, Samuel B., and C. O. Weisenburger, Sharon, Pa. Valve	704,654	July 15	2398	518	100	517
Mohr, William T., Gladerun, Pa. Bone-black kiln	708,808	Sept. 9	1676	385, 386	100	2337
Mohs, Julius, Brandenburg, Germany. Machine for molding bricks	704,754	July 15	2578	556, 557	100	553
Mole, John G., Batavia, Ill. Clothes-line prop-head	704,078	July 8	1316	227	100	276
Molet, Alfred, Buenos Ayres, Argentina. Apparatus for mixing gas	709,498	Sept. 23	2919	651	100	2628
Molinari, Anton, Woodridge, N. J. Stopper for bottles	703,735	July 1	666	147	100	133
Molitor, Charles, Chicago, Ill. Lighting implement	704,559	July 15	2245	486	100	485
Mollitor, Joseph A., Chicago, Ill. Metal bedstead	709,551	Sept. 23	3028	674	100	2650
Monahan, Robert F., Buffalo, N. Y. Bicycle-frame	709,716	Sept. 23	3310	743	100	2708
Monck, Leopold F., New York, N. Y. Buttonhole-cutter	705,945	July 29	5052	1100	100	1098
Mondran, Frederick S. de. (See Belledin-Gras and Mondran.)						
Monjeau, Cleophas, Middletown, Ohio. Sand-screen for well-tubes	707,611	Aug. 26	3069	694	100	1802
Monneret, Léon F. A., Paris, France. Machine for cutting helicoidal gear-teeth	709,225	Sept. 16	2358	534, 535, 536	100	2497
Montague, John R., assignor to Hydraulic Car-Brake Company, Syracuse, N. Y. Car-brake	705,946	July 29	5054	1100, 1101	100	1099
Montel, Leo, New York, N. Y., assignor to Acetyvone Manufacturing Company, New York, N. Y., and Jersey City, N. J. Acetylene-gas generator	705,272	July 22	3711	804, 805	100	799
Montgomery, Boughey W. D. (See Taylor, Cooke, and Montgomery.)						
Montgomery, Walter R., assignor of one-half to J. H. Shepherd, Shreveport, La. Banana-crate	708,654	Sept. 9	1174	268	100	2331
Moody, George W., Newmire, Colo. Calf-weaner	708,945	July 1	1048	228	100	209
Moody, Robert A., Selma, Ind. Axle-nut wrench	707,248	Aug. 19	2382	533	100	1640
Moody, Walter S., Schenectady, N. Y., assignor to General Electric Company. System of electrical distribution	707,150	Aug. 19	2200	496	100	1600
Mooers, Louis P., assignor to Peerless Manufacturing Company, Cleveland, Ohio. Friction-clutch	706,081	Aug. 5	153	32	100	1148
Moomy, Joseph G., Erie, Pa. Article of manufacture having an elastic portion and a securing portion	709,993	Sept. 30	3884	876	100	2939
Moomy, Joseph G., Erie, Pa. Tip for ends of pneumatic-tire tubes	709,994	Sept. 30	3885	876	100	2940
Moon, Edward W., St. Louis, Mo. Brake for motor-shafts of elevators	707,442	Aug. 19	2744	621	100	1715
Moon, George R., Columbus, Ohio. Gas heating-stove	710,162	Sept. 30	4219	942	100	2908
Moon, Herman, Grove City, Pa. Clutch	705,278	July 22	3714	805	100	800
Moon, Joseph S., Nevada, Mo. Animal-trap	704,355	July 8	1057	402	100	398

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Moon, William E. (See Hunt and Moon.)						
Moore, Andrew J., Lebanon, Pa. Incubator	704,560	July 15	2246	486 / 487	100	485
Moore, Andrew R., assignor of one-half to L. H. McCall, Charlotte, Mich. Brake	707,149	Aug. 19	2199	498	100	1600
Moore, Andrew R., assignor of one-half to L. H. McCall, Charlotte, Mich. Friction-power	708,655	Sept. 9	1176	268	100	2221
Moore, Charles A. (See Moore, Frederick W., assignor.)						
Moore, Edward T. (See Brown and Moore.)						
Moore, Fernando C., San Bernardino, Cal. Bicycle	704,901	July 15	2354	619	100	612
Moore, Frank W. (See Gerlach and Moore.)						
Moore, Frederick W., Lynn, Mass., assignor to C. A. Moore, New York, N. Y. Splitting skins	708,868	Sept. 2	687	.....	100	2121
Moore, George, Salt Lake City, Utah. Apparatus for leaching ores, &c	706,334	Aug. 5	663	144	100	1949
Moore, Gilbert C., Guntown, Miss. Cut-off device for train-lines	706,433	Aug. 5	895	191	100	1294
Moore, Herman, Moundsville, W. Va. Water-level-testing device for boilers	703,421	July 22	4025	872	100	864
Moore, Isaac, *et al.* (See Williams, Joseph H., assignor.)						
Moore, Jehu C., Brooklyn, N. Y. Overseaming attachment for sewing-machines	708,824	Sept. 9	1525	349	100	2305
Moore, Jennie. (See Wimmer, Charles L., assignor.)						
Moore, Joseph D. (See Sleight, Milton W., assignor.)						
Moore, Kingman C., Macon, Ga. Clothes-drier	704,561	July 15	2249	487	100	496
Moore, Miles F. (See Lee and Moore.)						
Moore, Moses B., Pennington, N. J., and G. W. Leddon, Philadelphia, Pa., assignors to Pennington Foundry and Heater Company, Pennington, N. J. Hot-air heater	705,422	July 22	4027	873	100	865
Moore, Walter T. (See Simmons and Moore.)						
Moore, William E., and F. R. Clark, Augusta, Ga. Weft-replenishing loom	704,485	July 8	2094	454 / 455	100	440
Moore, William L., Lacie, Ky. Tobacco-fork	705,775	July 29	4751	1029	100	1080
Moore, William N., Joliet, Ill. Mail-box	706,848	Aug. 12	1639	367	100	1470
Moore, William N., Joliet, Ill. Cooking-stove	708,082	Sept. 2	117	28	100	2006
Moore, William R., Eden, N. Y. Combined advertising match-box and cigar-tip cutter	705,987	Aug. 12	1885	421	100	1518
Moore, Willis L., Washington, D. C. Air cooling, drying, and purifying apparatus	705,947	July 29	5056	1101	100	1088
Moorhouse, Joseph, Ashton-under-Lyne, England. Pulley-and-band power-transmitting appliance	704,208	July 8	1575	340	100	330
Moorman, Eli H., deceased, Winterset, Iowa; S. M. Moorman, administratrix. Duplex hook for hitching-straps, &c	706,678	Aug. 12	1314	291	100	1400
Moorman, Sarah M., administratrix. (See Moorman, Eli H.)						
Moorwood, Hedley S. (See Bennett and Moorwood.)						
Moran, John, Bradley, Ill. Potato-digger	709,707	July 1	612	126	100	121
Moran, Stephen W., Boston, assignor of one-half to S. H. Hellen, Wakefield, Mass. Dispensing apparatus for liquids	710,291	Sept. 30	4440	1001 / 1002	100	2598
Morehead, John, Detroit, Mich. Steam-trap	709,347	Sept. 16	2574	580 / 581	100	2343
Morenus, William H., Lakeview, Iowa, assignor to F. C. Austin, Chicago, Ill. Grading and excavating machine	709,921	Sept. 30	3738	842 / 843	100	2809
Moresi, Agricole P., and H. J. Bergeron, Jeanerette, La. Steam-engine	709,719	Sept. 23	3312	743 / 744	100	2708
Moreton, James A. M., *et al.* (See Rock, Frederick W., assignor.)						
Morgal, Lewis E., assignor of one-half to C. B. Cropley, Washington, D. C. Smoke-consumer	707,341	Aug. 19	2564	578	100	1677
Morgan, Charles E., Portland, Oreg., assignor to Automatic Street Indicator Company. Street-indicator for railway-cars	709,236	Sept. 16	2363	536	100	2497
Morgan, Charles O., Redwood Falls, Minn. Metal-sawing apparatus	708,946	July 1	1050	228	100	909
Morgan, Daniel F., Toledo, Ohio. Glove	708,160	Sept. 2	298	71	100	2043
Morgan, David E., Phœnix, Ala. Foot and head supporter	707,860	Aug. 26	2631	618	100	1911
Morgan-Gardner Electric Company. (See Cartlidge, Frank, assignor.)						
Morgan, Henry W., Lestershire, N. Y. Bicycle-lock	704,655	July 15	2309	519	100	517
Morgan, John W., Jr., McKeesport, Pa. Manufacture of car-wheels	709,446	Sept. 16	2761	626	100	2598
Morgan, Marshal W., Mount Vernon, Ind. Hydrocarbon-burner	705,948	July 29	5059	1101	100	1064
Morith, Joseph G., Buffalo, N. Y. Pipe-wrench	705,596	July 29	4430	960	100	957
Moritz, Emil L. N. Frymire, and S. Koons, Watsontown, Pa. Radiator	705,110	July 22	3851	796	100	727
Mork, Harry S., Boston, A. D. Little, Brookline, and W. H. Walker, Newton, assignors, by mesne assignments, to Chemical Products Company, Boston, Mass. Making cellulose esters	709,922	Sept. 30	3742	.....	100	2810
Morley, Charles O., assignor of one-half to J. J. May, Brooklyn, N. Y. Rotary engine	705,574	July 22	3716	805 / 806	100	800
Morley, Joseph D., Lake Pleasant, N. Y. Dish-washing apparatus	707,443	Aug. 19	2746	621	100	1715
Moroney, Daniel M., *et al.* (See Howe, John C., assignor.)						
Morrell, Edward J., Quincy, Mass. Carpenter's folding square	704,074	July 8	1316	287	100	276
Morrell, James A., Lansdale, Pa., assignor of two-thirds to H. C. Stuart, Denver, Colo., and S. B. Allison, deceased, New Orleans, La; C. A. Dorrestein, administrator. Apparatus for the manufacture of sugar	703,430	July 1	129	29, 30	100	28
Morrill, Charles, deceased; S. C. Morrill, New York, N. Y., executrix. Saw-set	703,440	July 1	131	30	100	29
Morrill, Frank E., San Francisco, Cal. Game-board	705,776	July 29	4758	1039	100	1051
Morrill, Sarah C., executrix. (See Morrill, Charles.)						
Morris, Archie, *et al.* (See Clark, Spencer, assignor.)						
Morris, Calvin S., St. Louis, Mo. Folding sample-case	708,489	Sept. 2	895	200	100	2161
Morris, Calvin S., St. Louis, Mo. Folding display box or tray	708,490	Sept. 2	896	200	100	2161
Morris, Charles E., *et al.* (See Avery, Edward R., assignor.)						
Morris, John B., *et al.* (See Hayward, Eugene, assignor.)						
Morris, William L., Cleveland, Ohio. Pot for containing shellac, &c	704,204	July 8	1576	340	100	330
Morris, William L., assignor to Austin Cartridge Company, Cleveland, Ohio. Printing device	709,532	Sept. 23	3028	674 / 675	100	2650
Morrison, Alexander G. (See Hepburn and Morrison.)						
Morrison, Fred C., Chicago, Ill. Can-labeling machine	709,499	Sept. 23	2921	651 / 652 / 653 / 654	100	2628
Morrison, Thomas, Braddock, Pa. Feed-table mechanism	704,890	July 15	2626	614	100	607
Morrison, William O. N., Belvidere, Ill. Bread-cutter	709,553	Sept. 23	3032	676	100	2651
Morrison, William W., Ellsworth, Me., assignor to Wagner Typewriter Company, New York, N. Y. Type-writing machine	705,423	July 22	4029	873	100	865
Morrissey, Thomas F., West Orange, N. J., assignor of two-thirds to J. M. and D. D. Schwartz, New York, N. Y. Button-machine	704,856	July 8	1650	402 / 403	100	393
Morrissey, William L., Summit, N. J. Horse-hoppie	708,088	Sept. 2	118	28	100	2006
Morrow, Henry W. (See Britton and Morrow.)						
Morrow, Norman, *et al.* (See Dempster, Robert, assignor.)						
Morrow Protective Process Company. (See Curtiss, George W., assignor.)						
Morse, Clyde S., Shabbona, Ill. End-board for farm-wagons	706,434	Aug. 5	665	191	100	1294

Nickel Manufacturing Company. (See Nickel and Peterson, assignors.)						
Nickerson, Walter A., Houlton, Me. Fire-extinguishing and life-saving apparatus	710,069	Sept. 30	4013	906	100	2957
Nickerson, William E., Cambridge, Mass., assignor to New England Automatic Weighing Machine Company, Portland, Me. Apparatus for feeding weighing-machines	706,598	Aug. 12	1144	253 254	100	1268
Nicolet, John, Canton, Ohio. Shoe-blacking machine	706,091	Aug. 5	170	84	100	1151
Niedermaier, Georgs. (See Spaulding, George H., assignor.)						
Nielsen, Frederik V., San Francisco, Cal. Boom-rigging	710,334	Sept. 30	4517	1018	100	2974
Nielsen, Stefanus, Brooklyn, N. Y. Reversing mechanism	705,808	July 29	4440	982	100	959
Nieriker, Hermann, Zurich, Switzerland. Elastic anesthetic apparatus	707,622	Aug. 26	3107	699	100	1807
Niesen, Joseph M., Elkhorn, Wis. Sign-board	705,781	July 29	4761	1022	100	1023
Nieters, Joseph J., St. Louis, Mo. Brick-press	708,778	Sept. 9	1411	294	100	2281
Nighman, Charles A., Jersey City, N. J. Rod-rolling mill	706,903	Aug. 12	1804	424 425	100	1520
Nighman, Charles A., Jersey City, N. J. Rolling rods	706,904	Aug. 12	1808	425	100	1521
Niles-Bement-Pond Company. (See Hagman, William J., assignor.)						
Niles, Clevland P., Chinook, Mont. Field-gate	706,683	Aug. 12	1822	292	100	1402
Niles, George A., assignor to Standard Harrow Company, Utica, N. Y. Tooth-fastener for weeders	707,624	Aug. 26	3108	700	100	1807
Nilson, Nils, San Francisco, Cal. Ink-fountain for printing-presses	707,625	Aug. 26	3109	700	100	1807
Nilson, Swen, Boston, Mass. Boat-lashing device	703,664	July 1	534	120	100	105
Nippert, John W., Forsyth, Mont. Fastening means for doors or windows	706,995	Aug. 12	1900	425	100	1521
Noack, Adolph G., Cleveland, Ohio. Water-filter	705,696	July 29	4607	999 1000	100	992
Noble, Daniel H., Sheridan, Mont. Rail-joint	707,447	Aug. 19	2752	623	100	1717
Noble, Donald, Finsbury, London, England, assignor to Wheeler & Wilson Manufacturing Company, Bridgeport, Conn. Eyelet-sewing machine	706,253	Aug. 5	479	102 103	100	1218
Noble, Edward T., Chicago, Ill. Box	708,578	Sept. 9	1085	234	100	2282
Noble, John O., Trenton, N. J. Basin-clamp	709,170	Sept. 16	2283	507	100	2469
Noble, William J., Philadelphia, Pa., assignor of one-half to E. McGinnis, Princeton, N. J. Mail delivering and catching device	708,300	Sept. 2	700	157 158	100	2123
Noiseless and Draughtless Door and Window Cushion Company. (See Tachleky, Oscar, assignor.) (Reissue.)						
Nolan, Edward, Wolf Summit, W. Va. Wheel-hub	710,002	Sept. 30	3999	879	100	2843
Nolan, Louis C., St. Paul, Minn. Trolley-wire finder	706,338	Aug. 5	670	146	100	1250
Norddeutscher Lloyd. (See Hoppe, Paul, assignor.)						
Norden-Bittner Electric Company. (See Norden, Mortimer, assignor.)						
Norden, Mortimer, assignor to Norden-Bittner Electric Company, New York, N. Y. Electric-light sign	706,429	July 22	4038	875	100	867
Nordyke & Marmon Company. (See Brantingham, Allen C., assignor.)						
Norman, William C., Smithton, Ark. Calendar	709,353	Sept. 16	2582	582	100	2544
Norres, Wilhelm, Schalke, Germany. Electric mine-exploder	707,626	Aug. 26	3110	700	100	1808
Norrington, Henry H., West Bay City, Mich. Manifold duplicating device	709,858	Sept. 23	3373	805	100	2764
Norrington, Nova Z., Hammond, Ind. Valve	704,067	July 8	1334	291	100	279
Norris, Almon E., Cambridge, Mass. Automatic brake. (Reissue)	12,040	Sept. 30	4542	1049	100	2999
Norris, William, Blackpool, and H. Spurrier, St. Annes-on-the-Sea, England. Steam-generator	708,066	Sept. 2	124	29	100	2007
North American Leather Company. (See Pianko, Mendel, assignor.)						
North, James A., Lowry City, Mo. Fruit-stemmer	707,154	Aug. 19	2307	494 495	100	1601
North, Paul, *et al.* (See Fulford, Elijah D., assignor.)						
North, Thomas M., Brooklyn, N. Y., assignor to R. Hoe and Company. Printing-press	708,665	July 1	533	121	100	105
Northern Electrical Manufacturing Company. (See Duncan, Frederick B., assignor.)						
Northrop, Hamilton F., New York, N. Y. Variable-speed gear	707,986	Aug. 26	3775	847	100	1940
Northrop, Sandford. (See Liethegener, Henry, assignor.)						
Northrop, Sandford. (See Steinbrenner, Andrew G., assignor.)						
Northrop, Sandford, and A. G. Steinbrenner, St. Louis, Mo. Side bearing for railway-cars	704,088	July 8	1335	291	100	279
Northwestern Grass Twine Company. (See Fleckenstein, Valentine, assignor.)						
Norton, Gerrit, assignor to M. M. Norton, New York, N. Y. Machine for capping bottles	710,296	Sept. 30	4449	1003 1004	100	2960
Norton, Horatio N. (See Hodgson and Norton.)						
Norton, Horatio N., Maywood, Ill., assignor, by mesne assignments, to American Can Company, Jersey City, N. J. Can-head-delivering apparatus	704,266	July 8	1678	365 366	100	352
Norton, Horatio, N., Maywood, Ill., assignor, by mesne assignments, to American Can Company, Jersey City, N. J. Can-testing machine	704,267	July 8	1679	366	100	352
Norton, James A., assignor of one-half to M. C. Malloy and J. F. Munday, Wilkesbarre, Pa. Trolley-pole catch	706,092	Aug. 5	172	85	100	1152
Norton, Martha M. (See Norton, Gerrit, assignor.)						
Norton, Reuben H. (See Tucker, Holling G., assignor.)						
Norton, William T., *et al.* (See Dudley, Charles T., assignor.)						
Nowlin, Thomas B., Saxton, Pa. Shade-holder	706,093	Aug. 5	174	85	100	1152
Nowotny, John S., Madisonville, Ohio, assignor to General Electric Company. Electric-arc lamp	705,122	July 22	3871	730 731	100	732
Nowotny, John S., Madisonville, Ohio, assignor to General Electric Company. Electric-arc lamp	705,541	July 22	4313	968	100	920
Noyes, Arthur H., Boston, Mass. Safety locking-hook	708,910	Sept. 9	1594	300	100	2341
Null, William H., Philoah, W. Va. Stove	706,589	Aug. 12	1147	254	100	1268
Nussbaumer, William O., Sheboygan, Wis. Folding table	709,171	Sept. 16	2283	507	100	2469
Nutrisio, Henry, Henderson, N. C. Coffee-pot	707,987	Aug. 26	3776	847	100	1940
Nutry, John, Midlandpark, N. J., assignor of two-thirds to C. P. and R. Lenk, New York, N. Y. Driving-gear	708,579	Sept. 9	1086	234 235	100	2282
Nycum, Joseph W. S., Pittsburg, Pa. Pipe-coupling	704,909	July 15	2908	634	100	696
O'Bern, Joshua H., New Brighton, Pa. Puzzle	704,089	July 8	1336	291	100	279
O'Brien, James, and J. Mattimore, Staten Island, N. Y. Apparatus for transposing electric-circuit wires so as to equalize induction	710,206	Sept. 30	4308	967	100	2980
O'Brien, Joseph, Brooklyn, assignor of one-half to A. H. Buttling, New York, N. Y. Wrench	705,860	July 29	4399	1065	100	1032
O'Brien, Patrick J., Buffalo, N. Y. Revolving bar or counter	706,094	Aug. 5	174	85, 86	100	1152
O'Brien, Thomas E., Narrabri West, New South Wales, Australia. Drilling-machine	704,567	July 15	2260	489	100	488
O'Brien, Thomas J., Buffalo, N. Y. Street-receiver	705,927	July 29	4610	1000	100	992
O'Byrne, William, assignor of one-half to W. Winters, New York, N. Y. Pencil-sharpener	708,977	July 1	1101	237	100	218

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
O'Connell, Joseph J., assignor to Western Electric Company, Chicago, Ill. Coin-collector for telephone toll-lines	704,208	July 8	1661	366	100	352
O'Connor, James, East Cambridge, Mass. Chair	708,911	Sept. 9	1695	390	100	2341
O'Connor, John, assignor of one-half to J. Goodchild, guardian, New York, N. Y. Bottle	709,419	Sept. 16	2731	613	100	2576
O'Connor, Timothy F., Sauk Center, Minn. Safety ash-pan	708,102	Sept. 2	301	72	100	2044
O'Day, Granville D. (See Groves and O'Day.)						
O'Donnell, Edmond G., assignor to American Hat Sweat Sewing Machine Company, Fall River, Mass. Combined presser-foot and needle-bar lifting mechanism for sewing-machines	709,354	Sept. 16	2584	582 583	100	2545
O'Dowd, Henry W., New York, N. Y. Water-heater	708,738	July 1	669	148	100	134
O'Hean, Charlotte A., Detroit, Mich. Corset	706,096	Aug. 5	177	86	100	1153
O'Neal, Isaac N., assignor of one-half to H. H. Hartgrove, Kokomo, Ind. Wire fence	708,391	Sept. 2	708	158	100	2124
O'Neill, Wesley, and W. H. Gordon, Russellville, Pa. Water distribution	707,448	Aug. 19	2753	623 624	100	1717
O'Reilly, John J., *et al.* (See Hehr, John G., assignor.)						
O'Rourke, John F., New York, N. Y. Subaqueous tunnel construction	708,949	Sept. 2	466	106 107	100	2076
Oastler, William C., New York, N. Y. Scraper or cleaner for wheels	705,123	July 22	3876	731	100	733
Oberwalder, William C., New York, N. Y. Composition for cleaning and preserving metals	705,956	July 29	5071		100	1096
Oblinger, Barrett C., and A. H. C. Beatty, Independence, Mo. Heat-reflector for stoves	706,996	Aug. 12	1901	426	100	1521
Oblinger, Barrett C., and A. H. C. Beatty, Independence, Mo. Stovepipe-cleaner	707,713	Aug. 26	3290	730	100	1845
Ochs, Milton T. J., Allentown, Pa. Plaster composition	705,549	July 22	4319		100	961
Ochs, Peter. (See Weaver, Albert S., assignor.)						
Octomobile Company. (See Andrea, George S., assignor.)						
Ocumpaugh, Charles H., Rochester, N. Y. Bicycle	709,679	Sept. 23	3343	725	100	2604
Oddie, Philip F., Wimbledon, England. Steam-pump	703,968	July 1	1102	237	100	218
Oddie, Philip F., Oschersleben, Germany. Equalizing device for steam-pumps	708,912	Sept. 9	1606	391	100	2342

Ohse, Wilhelm, Berlin, Germany. Producing photographs in relief	706,774	Aug. 12	1506	334	100	1440
Olaffsen, Peter, Tacoma, Wash. Rat-trap	704,910	July 15	2909	624	100	626
Old, Wm. W., executor. (See Hodgson, Herbert E. assignor.)						
Oldham, Joseph R., Cleveland, Ohio. Bulk-cargo vessel	704,362	July 8	1870	405	100	395
Oldham, Samuel, Philadelphia, Pa. Pneumatic impact-tool	704,912	July 15	2913	625	100	627
Olds, Ransom E., Detroit, Mich. Friction-clutch	704,911	July 15	2911	624	100	627
Oliger, Jacob D. (See Deering, Uriah H., assignor.)						
Oliva, Joseph L. (See Hardison, Edwin A., assignor.)						
Oliver Chilled Plow Works. (See Davis, Calvin R., assignor.)						
Olmstead, Clarence L., New Haven, Conn. Adjustable hanger	708,709	July 1	615	137	100	122
Olsen, Ole, St. Louis, Mo. Street-car fender	705,788	July 29	4763	1033	100	1023
Olsen, Torbjorn, Manistee, Mich. Saw-tooth tool	709,355	Sept. 16	2567	583	100	2546
Olson, Alfred, San Diego, Cal. Hat attachment	708,918	Sept. 9	1599	392	100	2342
Olson, Charles, Grand Rapids, Mich. Steam-boiler	709,082	Sept. 16	1959	448	100	2411
Olson, Charles J., assignor of one-half to N. Buck, Chicago, Ill. Bowling-alley	708,779	Sept. 9	1413	324 325	100	2282
Olson, Olof R., assignor to Horisontal Swing Co., Kansas City, Mo. Lawn or house swing	709,110	Sept. 16	2114	484 485	100	2446
Olsson, Georg O. M., Stockholm, Sweden, assignor to De Laval Steam Turbine Company. Apparatus for controlling the speed of steam-turbines	705,194	July 22	3878	731 732	100	733
Olsted, Christian, Wyandotte County, assignor to E. Haren, Kansas City, Kans. Apparatus for combustion of fuel	707,027	Aug. 26	3111	700 701	100	1805
Onderdonk, Lansing, Boston, Mass., assignor to Union Special Sewing Machine Company, Chicago, Ill. Feeding mechanism for sewing-machines	703,811	July 1	810	178	100	168
Onderdonk, Lansing, Boston, Mass., assignor to Union Special Sewing Machine Company. Stitch-forming mechanism for sewing-machines	703,812	July 1	812	179	100	168
Onderdonk, Lansing, Boston, Mass., assignor to Union Special Sewing Machine Company, Chicago, Ill. Stitch-forming mechanism for sewing-machines	703,813	July 1	815	180	100	168
Onderdonk, Lansing, New York, N. Y., assignor to Union Special Sewing Machine Company, Chicago, Ill. Feeding mechanism for sewing-machines	705,605	July 29	4444	962 964	100	960
Onderdonk, Lansing, and A. A. Merritt, New York, N. Y., assignors to Union Special Sewing Machine Company, Chicago, Ill. Feeding mechanism for sewing-machines	705,604	July 29	4442	962 963	100	959
Oney, Hugh R., Jackson, Ohio. Heating-stove	706,097	Aug. 5	178	86	100	1153
Ong, Harlon F., Wendling, Oreg. Switch-stand attachment	704,363	July 8	1871	405	100	395
Oppenheimer, David, assignor to L. Auerbach, New York, N. Y. Necktie	704,569	July 15	2262	490	100	488
Oppermann, Carl T. J., London, England. Composition for use in secondary batteries	706,444	Aug. 5	908		100	1299
Oppermann, Heinrich, Berlin, Germany. Producing oxidized milk-albumen	704,662	July 15	2409		100	520
Ordody, Ludwig v., Budapest, Austria-Hungary. Producing long and short fibers from reeds, rushes, or similar plants	703,814	July 1	816		100	168
Ordway, Charles, Brooklyn, N. Y. Vacuum evaporating apparatus	709,172	Sept. 16	2285	508	100	2470
Orlikowski, Frank, Cleveland, Ohio. Molding artificial stone	708,248	Sept. 2	465	108	100	2076
Ormand, David. (See Martin and Ormand.)						
Ormsby, Henry J., Eureka, Kans. Tug-fastener	704,570	July 15	2263	490	100	488
Orr, Alexander, Gloversville, N. Y. Electrically-operated valve-gate	707,988	Aug. 26	3777	848	100	1941
Orr, Charles A. (See Pugh, Edwin A., assignor.)						
Orr, William H. (See Boyer, Oliver, assignor.)						
Ortaig, Jean, Tempe, Ariz. Ter. Vehicle-brake	705,431	July 22	4040	876	100	868

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Orth, Georg, assignor to Firm C. Zeiss, Jena, Germany. Automatic shutter-setting mechanism	704,755	July 15	2580	557	100	558
Orth, Henry, Jr., administrator. (See Hoepfner, Carl.)						
Ortmann, John H. W., and C. W. Herbst, Hamburg, Germany. Bottle-washing machine	705,430	July 22	4089	875	100	867
Orvis, Orel D., New York, N. Y. Steam-generator	704,571	July 15	2264	490, 491	100	488
Orvis, Orel D., New York, N. Y. Steam-boiler furnace	709,173	Sept. 16	2237	508	100	2470
Orvis, Orel D., New York, N. Y. Combination draft-furnace	709,174	Sept. 16	2239	509	100	2471
Osborn, Alexander C., Clarksburg, W. Va. Sawmill-feed	706,339	Aug. 5	671	146	100	1251
Osborn, Francis C., Detroit, Mich. Platform-support for scales	710,003	Sept. 30	3900	879, 880	100	2843
Osborn, Frank D., Birmingham, Ala., assignor of one-half to A. C. Macpherson, Brooklyn, N. Y. Street letter-box	705,957	July 29	5072	1105	100	1086
Osborn Manufacturing Company. (See Neilson, Henry, assignor.)						
Osborne, Latham M., Apollo, Pa. Gas-service safety-valve	705,125	July 22	3980	732	100	734
Osel, Kistel, St. Paul, Minn. Flush car-door	708,914	Sept. 9	1700	392	100	2342
Osenbaugh, Charles C., and R. L. Gibson, Remington, Pa. Rail-joint	706,445	Aug. 5	907	196	100	1299
Osgood, Fred E., and F. F. Bradley, assignors of one-third to R. A. Kent, Chicago, Ill. Vehicle-tire	706,590	Aug. 12	1149	254	100	1364
Osgood, Frederick M., Manchester, N. H. Aerial toy	704,090	July 8	1337	291, 292	100	279
Osgood, James M., Boston, Mass. Passenger-car	705,482	July 22	4044	856	100	869
Osgood, John L., Buffalo, N. Y. Lathe	707,155	Aug. 19	2209	495	100	1602
Osgood, Leonard S., deceased; R. L. Osgood, Tooele, Utah, administratrix. Pipe-coupling	710,004	Sept. 30	3901	880	100	2843

Perks, Edwin, and F. Birch, Coventry, England. Motor mechanism for road-vehicles	708,827	Sept. 9	1533	35 351	100	2307
Perks, Walter G., and H. G. M. Fletcher, Hayle, England. Magazine-camera	707,156	Aug. 19	2210	495	100	1602
Perotti, Louis, Newark, N. J. Wine-press	706,437	July 22	4056	879	100	871
Perrie, James. (See Carlson and Perrie.)						
Perrin, Henri, Sérézin du Rhône, France. Producing enameled polychrome photographs, &c	708,918	Sept. 9	1707	.....	100	2344
Perrins, Limited. (See Beck, Arthur E., assignor.)						
Perron, Camillo, Rome, Italy. Treatment of nickel and copper-nickel ores	709,277	Sept. 16	2445	.....	100	2515
Perry, John C., Clinton, Mass. Hoop-making machine	705,180	July 22	3388	734 735 736 737	100	735
Perry, Raymond A., San Francisco, Cal., assignor of one-half to Atlantic Gulf and Pacific Company, New York, N. Y., and San Francisco, Cal. Dredger	708,817	July 1	821	181	100	164
Perry, Raymond A., Oakland, Cal., assignor of one-half to Atlantic Gulf & Pacific Co., New York, N. Y., and San Francisco, Cal. Hydraulic-dredger cutter	705,784	July 29	4764	1033	100	1024
Peteler, Francis, Minneapolis, Minn. Dumping-car	706,254	Aug. 5	485	103 104	100	1215
Peter, Francis A., Washington Township, Lehigh county, Pa. Snow guard or fender	706,684	Aug. 12	1324	292	100	1402
Peterman, John F., Indianapolis, Ind. Automobile attachment for vehicles	708,459	July 1	158	36	100	33
Peters, N. B., *et al.* (See Davis, John B., assignor.)						
Peters, W. J., *et al.* (See Davis, John B., assignor.)						
Petersen, Henry A. F., New York, N. Y. Hose or pipe coupling	706,847	Aug. 12	1646	368	100	1471
Peterson, Albert H., *et al.* (See Chapman, William S., assignor.)						
Peterson, Andrew P., Racine, Wis. Crayon-sharpener	704,365	July 8	1873	406	100	395
Peterson, Edwin O., Elgin, Nebr. Collection-calendar	705,697	July 29	4449	965	100	961
Peterson, Oscar, and J. H. Clark, Chicago, Ill. Device for digging ditches	708,395	Sept. 2	713	159 160	100	2126
Peterson, Peter B. (See Nickel and Peterson.)						
Peterson, S., *et al.* (See Brooks, Theodore L., assignor.)						
Pethick, John T., Carbondale, Pa. Sash-lock	708,919	Sept. 9	1708	394	100	2344
Pethybridge, Walter, London, England. Treatment of telluride gold ores	709,087	Sept. 16	1957	.....	100	2418
Pethybridge, Walter, London, England. Treating telluride gold ores	709,088	Sept. 16	1958	.....	100	2418
Petigor, Morris H., New York, N. Y. Soda-water-dispensing fountain	708,659	Sept. 9	1187	271	100	2238
Petit, Ademor N., Newark, N. J., assignor to International Phonograph and Indestructible Record Company, Limited, Liverpool, England. Sound-record of celluloid	708,828	Sept. 9	1537	351	100	2308
Petit, Ademor N., Newark, N. J., assignor to International Phonograph and Indestructible Record Company, Limited, Liverpool, England. Producing sound-records in celluloid	710,299	Sept. 30	4455	.....	100	2962
Petranyi, Emerich, Elizabeth, N. J. Pellet or tablet making apparatus	705,777	Aug. 12	1510	335 336	100	1441
Petre, Lewis D., Chicago, Ill. Seat-hinge	708,163	Sept. 2	802	72	100	2044
Petsche, Gustav B., assignor to Southwark Foundry & Machine Company, Philadelphia, Pa. Cam mechanism	705,701	July 29	4721	1002	100	994
Pettee, William E., Newton, Mass. Bottle-labeling machine	707,631	Aug. 26	3118	702 703	100	1809
Pettengill, John, Jefferson, Me. Dish-washer	703,460	July 1	159	37	100	34
Petter, Adolph J., San Francisco, Cal. Ore crusher and pulverizer	703,461	July 1	160	37	100	34
Pettes, James A., Grand Manan, Canada. Anchor	710,167	Sept. 30	4226	953	100	2911
Pfälzische Nähmaschinen & Fährrader Fabrik, vormals Gebrüder Kayser. (See Regenstein, Hermann, assignor.)						
Pfaudler, John M., Rochester, N. Y. Lubricator	708,608	July 29	4450	965	100	961
Pfeiffer, Louis A., and L. D. Staples, San Francisco, Cal. Oil-burner	706,341	Aug. 5	676	147	100	1252
Pfister, Josef, Vienna, assignor to J. von Brenner, Schloss Gaidford, Austria-Hungary. Staining woods	708,069	Sept. 2	126	31	100	2008
Pflieger, John H., Johnstown, Pa., assignor to Lorain Steel Company. Railway-track structure	705,131	July 22	3396	737	100	736
Pflueger, William F., Altona, Nebr. Coupling mechanism for windmills and pumps	707,718	Aug. 26	3302	739 740	100	1847
Pflugradt, William J., and M. Ries, Milwaukee, Wis. Box-cover fastener	710,392	Sept. 30	4619	1042	100	2995
Pfremmer, Joseph S., Fountain, Minn. Traction-engine	706,685	Aug. 12	1525	208	100	1402
Phares, William W., New York, N. Y. Vibrating propeller	706,198	Aug. 5	381	81	100	1194
Phelan, John M. J., Victoria, Canada. Mitering and tool-guiding device	704,919	July 15	2932	629 630	100	631
Phelps, Charles, Oskaloosa, Iowa. Tilting-flask support	709,925	Sept. 30	3746	844	100	2811
Phelps, Edward W., assignor of one-half to T. Nadeau, Montreal, Canada. Incandescent gas-burner	706,686	Aug. 12	1526	208	100	1403
Phelps, Edwin S., New York, N. Y. Gage for measuring keys for pin-tumbler locks	709,240	Sept. 16	2370	537 538	100	2496
Pherson, Anthony, Rochester, N. Y. Bicycle-pedal	706,594	Aug. 12	1156	256	100	1365
Philadelphia Electrical and Manufacturing Company. (See Bundy, Clifton L., assignor.)						
Philadelphia Pneumatic Tool Company. (See Keller, Julius, assignor.)						
Philippi, Wilhelm H., Bürgel-Offenbach, Germany. Tanning	708,396	Sept. 2	716	.....	100	2126
Philips, Edwin S., assignor to American Road Machine Co., Kennett Square, Pa. Conveyer-belt-supporting mechanism	706,848	Aug. 12	1648	368	100	1472
Phillips, Cecil O., assignor to American Cotton Oil Company, New York, N. Y. Producing cotton-seed oil	705,785	July 29	4705	1033	100	1024
Phillips, Charles B., Blissfield, Mich. Cream-separator	708,730	Sept. 9	1323	302	100	2202
Phillips, Charles W. (See Wieder, Henry G. A. I., assignor.)						
Phillips, Columbus, Meridian, Miss. Furnace	704,097	July 8	1354	295	100	283
Phillips, Edwin U., and F. J. McHenry, assignors to Modern Telescopic Company, Portland, Oreg. Telescopic traveling-bag	705,488	July 22	4057	880	100	872
Phillips, Elwood C., assignor of three-fourths to C. R. Barrett, Chicago, Ill. Wrought-metal barrel	704,366	July 8	1874	406	100	396
Phillips, Elwood C., assignor of one-fourth to O. A. Scheibe, Chicago, Ill. Barrel bung and bushing	706,103	Aug. 5	186	39	100	1155
Phillips, Elwood C., assignor of three-fourths to C. R. Barrett, Chicago, Ill. Bowling-alley pin	707,632	Aug. 26	3122	703	100	1810
Phillips, Emmett B., Richmond, Va. Vehicle-hub	709,241	Sept. 16	2373	538	100	2490
Phillips, George A., Marion, Ind. Paper-file	705,132	July 22	3396	738	100	737
Phillips, George W. (See Reed, Henry P. G., assignor.)						
Phillips, James R., assignor to American Tin Plate Company, Pittsburg, Pa. Pickling and swilling apparatus	708,660	Sept. 9	1190	271 272	100	2234
Phillips, James R., assignor to American Tin Plate Company, Pittsburg, Pa. Apparatus for treating and tinning plates	708,970	Sept. 9	1813	418	100	2364

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Phillips, John H. (See Phillips, Morris R., assignor.)						
Phillips, Morris R., assignor of one-half to J. H. Phillips, East Quogue, N. Y. Butter-cutter	705,548	July 22	4320	934	100	921
	707,349	Aug. 19	2573	582	100	1679
Phillips, Thomas L., Aurora, Ill. Water-heater						
Phillipson, Emil, assignor to A. C. Eggers, trustee, Brooklyn, N. Y. Stopper for water-bottles	710,207	Sept. 30	4904	968	100	2080
Phillipson, Emil, assignor to A. C. Eggers, trustee, Brooklyn, N. Y. Stopper for water-bottles	710,208	Sept. 30	4905	968	100	2080
Philo Burt Manufacturing Company. (See Sheldon, Philo B., assignor.)						
Phipps, Leslie E. (See McClean and Phipps.)						
Pianko, Mendel, Woodhaven, N. Y., assignor to North American Leather Company. Leather	704,707	July 15	2484	536	100	535
Pickard, Frank H., deceased, (T. W. Stanfield, administrator,) assignor of one-half to P. W. Trewhitt, Hill City, Tenn. Running-gear for wagons	707,520	Aug. 19	2883	653	100	1745
Pickard, Greenleaf W. (See Shoemaker and Pickard.)						
Pickard, Greenleaf W., Boston, Mass., assignor, by mesne assignments, to Consolidated Wireless Telegraph and Telephone Company. Coherer	708,070	Sept. 2	129	31	100	2008
Pickard, Greenleaf W., Boston, Mass., assignor, by mesne assignments, to Consolidated Wireless Telegraph and Telephone Company. Wireless telegraph system	708,071	Sept. 2	130	31	100	2008
Pickard, Greenleaf W., Boston, Mass., assignor, by mesne assignments, to Consolidated Wireless Telegraph and Telephone Company. Wireless telegraphy	708,072	Sept. 2	132	31, 32	100	2008
Pickens, James L. (See Park and Pickens.)						
Pickett, Fred C., Kansas City, Mo. Combined electric and gas lighting system	709,039	Sept. 16	1969	450	100	2413
Pickles, Charles K., assignor to himself, L. Bry, St. Louis, Mo., and I. Block, Memphis, Tenn. Pneumatic lasting-machine	704,098	July 8	1857	295, 296	100	284
Pickles, Charles K., St. Louis, Mo., assignor, by mesne assignments, to Chicago Pneumatic Tool Company. Pneumatic hammer	707,350	Aug. 19	2574	582	100	1680
Pieper, Alphonse F. (See Pieper, Oscar H. and A. F.)						
Pieper, Nicolas, Liege, Belgium. Lock and extractor mechanism for firearms	706,190	Aug. 5	382	82	100	1195
Pieper, Oscar H. and A. F., Rochester, N. Y. Electric-motor regulation	704,098	July 8	1875	297	100	289
Pierce, Fred T., and A. E. Kuchenbecker, Geneva, Minn. Can-washer	705,133	July 22	3398	788	100	737
Pierce, Jesse W., Belton, Tex. Can-opener	707,273	Aug. 19	2589	535	100	1641
Pierce, La Fayette, Moundsville, Mo. Automatic railway-switch-operating mechanism	709,141	Sept. 16	2116	485	100	2447
Pierce, Simeon F. (See Minogue, Martin T., assignor.)						
Pierson, Charles. (See Griffiths, Spencer M., assignor.)						
Pifer, George N., assignor to American Automatic Photograph Company, Cleveland, Ohio. Means for loading automatic photographic apparatus	708,164	Sept. 2	304	72	100	2044
Pifer, George N., assignor to American Automatic Photograph Company, Cleveland, Ohio. Photographic plate	708,165	Sept. 2	306	73	100	2045
Pifer, George N., assignor to American Automatic Photograph Company, Cleveland, Ohio. Automatic photographic apparatus	708,166	Sept. 2	307	73, 74, 75	100	2045
Pifer, George N., assignor to American Automatic Photograph Company, Cleveland, Ohio. Coin-controlled automatic photographic apparatus	708,167	Sept. 2	315	75	100	2046
Pifer, George N., assignor to American Automatic Photograph Company, Cleveland, Ohio. Shutter for automatic photographic apparatus	708,168	Sept. 2	318	76	100	2046
Pifer, George N., assignor to American Automatic Photograph Company, Cleveland, Ohio. Magazine plate-feeding apparatus	708,493	Sept. 2	800	201	100	2162
Piggott, Edward J., Chicago, Ill. Cheese-hoop	706,104	Aug. 5	187	39	100	1155
Pike, Charles B., Whitehall, N. Y. Receptacle for coins or small articles of merchandise	708,731	Sept. 9	1325	302	100	2262
Pike, William A., Pittsfield, Mass., assignor to Eaton-Hurlbut Paper Company, Portland, Me., and Pittsfield, Mass. Packing and display box for stationery	704,708	July 15	2485	536	100	535
Pilling, Charles J., and G. T. Barber, assignors to G. P. Pilling & Son, Philadelphia, Pa. Hinge for surgical instruments	704,207	July 8	1579	341	100	331
Pilling & Son, George P. (See Pilling and Barber, assignors.)						
Pillmore, William F., and D. Anderegg, Westernville, N. Y. Driving mechanism for hoisting and conveying apparatus	706,105	Aug. 5	189	40	100	1155
Pillmore, William F., and D. Anderegg, Westernville, N. Y. Bean-separator	709,646	Sept. 23	3184	711	100	2682
Pinel, Joseph, Altringham, assignor to Linotype Company, Limited, London, England. Device for forming accents on linotypes	708,651	Sept. 9	1191	272	100	2234
	704,259	July 8	1683	367	100	358
Pinson, Frederick W., Willenhall, England. Padlock	704,573	July 15	2267	491	100	489
Pintsch, Richard, Berlin, Germany. Device for generating electricity on running cars	704,574	July 15	2268	491, 492	100	490
Pintsch, Richard, Berlin, Germany. Power-transmission regulator for electromagnetic couplings	704,575	July 15	2270	492	100	490
Pintsch, Richard, Berlin, Germany. Centrifugal coupling						
Piper, Harry L. (See Fox, William H., assignor.)						
Piper, James W., Waltham, Mass. Gas-burner	709,356	Sept. 16	2587	583	100	2546
Pirie, John T., Jr., Chicago, Ill. Combined bill-sheet and journal-leaf	706,849	Aug. 12	1650	369	100	1472
Pirosh, Berthold, Chicago, Ill. Perpetual-reminder system	704,100	July 8	1877	297	100	290
Pirrung, Felix, Ravenswood, Ill. Sprinkling scrub-brush	706,861	July 29	4900	1065	100	1052
Pitcher, Lewis S., Albany, N. Y., assignor to W. M. Dudgeon, executor of R. Dudgeon, deceased. Hydraulic jack	706,650	Aug. 12	1651	369	100	1473
	709,357	Sept. 16	2589	584	100	2546
Pittman, George L., Bethesda, Ohio. Nut-lock	708,732	Sept. 9	1327	302	100	2263
Pitts, Mary, Chicago, Ill. Stopper for bottles						
Pittsburgh Blue Print Company. (See Whinery, Samuel B., assignor.)						
Pittsburgh Cigar Machine Company. (See Weierbach and Dickson, assignors.)						
Place, James F., Glenridge, N. J. Liquefying air or other gases and cooling by means thereof	707,633	Aug. 26	3123	703	100	1810
Place, James F., Glenridge, N. J. Vessel for holding and shipping liquid air or other liquid gases	707,634	Aug. 26	3125	704	100	1811
Plano Manufacturing Company. (See Hailey, Robert, assignor.)						
Plant, Oliver W., Providence, R. I. Cutter for gear-teeth	707,719	Aug. 26	3304	740	100	1847
Platko, John, Newton, assignor of one-fourth to Ertz & Joseph, Bradford, Pa. Steam-boiler	707,002	Aug. 12	1909	428	100	1523
	708,818	July 1	824	181, 182	100	165
Plattenburg, Joseph, McKeesport, Pa. Car-brake						
Pless Pol, Stanislas de, Laeken-Brussels, Belgium. Device for carrying packages	705,439	July 22	4058	880	100	872
Plews, Arthur S., London, England. Making white antimony oxid	704,367	July 8	1875	406	100	306
Plotnik, Paul, Delano, Minn. Hay-rack	708,462	July 1	162	87	100	34
Plowman, Harry, London, England. Steam-generator of the locomotive type	709,421	Sept. 16	2734	614	100	2577
Plunkett, Robert L., *et al.* (See Hook, Alonzo L., assignor.)						
Pneumatic Carriage Company. (See Hoadley, Joseph H., assignor.)						
Pneumatic Scale Corporation. (See Doble, William H., assignor.)						
Podlesák, Henry J., Lincoln, Nebr. Electrical releaser for fire-doors, &c.	709,997	Sept. 23	3120	695	100	2669
Pohl, Eduard, Weisswasser, Germany. Producing metals in a finely-divided state	706,475	Aug. 5	951	207	100	1308

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Pohlmann, Adele. (See Ruckstuhl and Pohlmann.)						
Poillevillain, Auguste F., (dit Paul Villain,) Paris, France. Apparatus for indicating when certain predetermined speeds are exceeded by vehicles	707,254	Aug. 19	2390	535, 536	100	1641
Poirier, Octave A., Minneapolis, Minn. Grain-drill	707,700	Aug. 26	3513	782, 793	100	1889
Poirrier, Alcide F., assignor to Ste. Ame des Matières Colorantes et Produits Chimiques de St. Denis, Paris, France. Blue sulfur dye and making same	708,602	Sept. 9	1195	.....	100	2234
	705,892	July 29	4901	1066	100	1052
Politsky, Simon A., and J. Agust, Boston, Mass. Gas-burner	709,358	Sept. 16	2589	.....	100	2546
Poliacsek, Emil, Budapest, Austria-Hungary. Desulfurizing furnace-gases	708,074	Sept. 2	141	34, 35	100	2010
Pollard-Ailing Manufacturing Company. (See Crane, Walter E., assignor.)						
Pollard, Edwin, Sissden, England. Machine for grooving lumber	708,073	Sept. 2	134	32, 33	100	2009
Pollard, Edwin, Silsden, England, and J. R. Thomas, Cincinnati, Ohio, assignors to Pollard & Metcalfe, Limited, Silsden, England. Fire-lighter machine	707,003	Aug. 12	1911	428	100	1523
Pollard, James P., Silverlake, Wash. Rotary engine	709,509	Sept. 23	2954	659	100	2634
Pollard, John H., Centralia, Ill. Boiler-tube cutter						
Pollard & Metcalfe. (See Pollard and Thomas, assignors.)						
Pollard & Metcalfe. (See Thomas, John R., assignor.)						
Pond, Edmund M., Rutland, Vt. Medicated tampon	706,778	Aug. 12	1515	336	100	1442
Pond, Orlando M., Independence, Iowa. Package-carrier	704,368	July 8	1876	406	100	306
Ponthus, Prosper, and L. Therrode, Paris, France. Collimator-gyroscope for obtaining artificial horizons	705,702	July 29	4623	1002, 108	100	995
Poole, Arthur F., Wheeling, W. Va. Electric clock	708,253	Sept. 2	472	109, 110	100	2077
Poole, John W., Lynn, Mass., assignor to Poole Skiving Company, Kittery, Me. Leather skiving machine	707,351	Aug. 19	2578	582, 583	100	1681
Poole, Samuel E., Randolph, Ohio. Starting means for explosive-engines	708,463	July 1	163	37	100	35
Poole Skiving Company. (See Poole, John W., assignor.)						
Poore, Margaretta E., assignor to R. Poore, Herne Hill, London, and W. Bradley, Wood Green, Middlesex, England. Combined shirt-front and braces	708,397	Sept. 2	717	160, 161	100	2126
Poore, Richard, *et al.* (See Poore, Margaretta E., assignor.)						
Pope, Frederick B., Augusta, Ga., and G. D. Mims, Parksville, S. C.; said Mims assignor to said Pope. Forming elastic and yieldable material in bales of cubic or square shape	705,134	July 22	3400	738, 739	100	737
Pope, Frederick B., Augusta, Ga., and G. D. Mims, Parksville, S. C.; said Mims assignor to said Pope. Apparatus for making cubic or square bales, &c.	705,135	July 22	3402	739, 740, 741	100	737
Pope, Howard, Hollidaysburg, Pa. Eaves-trough hanger	707,941	Aug. 26	3783	848	100	1942
Pope, John C. and W. J., Piano, Ill. Forming joints for intersecting wires or rods	707,352	Aug. 19	2581	583	100	1681
Pope, Willie J. (See Pope, John C. and W. J.)						
Poppenhusen, Herman A., Evanston, Ill. Automatic switch	705,786	July 29	4766	1034	100	1024
Poppert, Jesse G., Milwaukee, Wis. Electrical gas-lighter	708,398	Sept. 2	718	161	100	2127
Popplewell, Felix K., Bronte, Tex. Nut-lock	704,101	July 8	1878	297	100	290
Porritt, Josiah, San Francisco, Cal. Thrust-bearing	706,779	Aug. 12	1516	336, 337	100	1442
Porter, Henry H., Dowagiac, Mich. Bearing	705,803	July 29	4902	1066	100	1052
Porter, Henry H., Dowagiac, Mich. Vehicle-axle and axle-box	705,804	July 29	4903	1066	100	1053
Porter, Major D., assignor to C. F. Jewett, trustee, New York, N. Y. Steering and controlling device for road-vehicles	704,102	July 8	1879	297	100	290
	708,464	July 1	164	38	100	35
Porter, Robert, Ottumwa, Iowa. Buckle	704,920	July 15	2988	630	100	632
Porter, Robert L., Philadelphia, Pa. Croquette-mold						
Porter, Wilson E., assignor to New Haven Clock Company, New Haven, Conn. Stem-winding watch	705,703	July 29	4927	1002	100	995
	706,342	Aug. 5	678	147	100	1158
Porterfield, John C., Columbus, assignor to H. S. Mitchell, London, Ohio. Hand-trap	709,926	Sept. 30	3748	844, 845, 846	100	2811
Porto-Riche, Edgard de, Paris, France. Steam-generator	709,510	Sept. 23	2954	659	100	2695
Post, Charles B., New London, Ohio. Gib-and-key device	704,208	July 8	1580	341	100	331
Post, Claude L., Chicago, Ill. Calendar	708,075	Sept. 2	143	35	100	2010
Post, Elisha A., Allegan, Mich. Mold for making paper-board burial-caskets	707,942	Aug. 26	3784	849	100	1942
Post, Friedrich G. J., Hamburg, Germany. Writing or copying pad	707,353	Aug. 19	2582	583	100	1681
Post, John H., assignor, by mesne assignments, to Leader Manufacturing Company, Hartford, Conn. Embroidery frame and holder						
Post, John T. (See Parks, Leonard D., assignor.)						
Postley, Arthur, New York, N. Y. Device for stopping or closing gas-mains	708,076	Sept. 2	144	35	100	2011
Pothe, George S., Dallas Center, Iowa. Apparatus for carrying mail-matter	705,440	July 22	4059	880	100	872
Potter, Edson, Greensburg, Ind. Fly-trap	705,459	July 29	5075	1106	100	1087
Potter, Henry N., assignor to G. Westinghouse, Pittsburg, Pa. Mercury-vapor lamp	707,975	Aug. 26	3841	863	100	1953
Potter, Henry N., assignor to G. Westinghouse, Pittsburg, Pa. Mercury-vapor lamp	707,976	Aug. 26	3843	863	100	1953
Potter, John A., Philadelphia, Pa. Slag-heating apparatus	709,112	Sept. 16	2118	486	100	2447
Potter, John A., and W. C. Harvie, Monterey, Mexico. Treating mattes	710,300	Sept. 30	4456	1005	100	2062
Potter, Millard F., St. Paul, Minn. Milk-pail attachment	708,582	Sept. 9	1041	235	100	2203
Potter, William B., Schenectady, N. Y., assignor to General Electric Company. Electromagnetic switch for surface-contact electric-railway systems	705,136	July 22	3410	741	100	739
Potter, William B., Schenectady, N. Y., assignor to General Electric Company. Electric switch	705,137	July 22	3414	742	100	740
Potter, William B., Schenectady, N. Y., assignor to General Electric Company. Blow-out magnet	705,138	July 22	3418	742	100	741
Potter, William B., Schenectady, N. Y., assignor to General Electric Company. Electric railway	706,106	Aug. 5	192	40	100	1156
Potter, William B., Schenectady, N. Y., assignor to General Electric Company. Electric-railway system	710,072	Sept. 30	4025	908	100	2869
Potter, William W., Pawtucket, R. I. Window-fastener	706,595	Aug. 12	1158	257	100	1365
Potvliet, Michiel, Amsterdam, Netherlands. Water-sealed air-pump	705,704	July 29	4927	1002	100	995
Pouleur and Wells. (See Wells, Charles G., assignor.)						
Poulson, Niels, Brooklyn, N. Y. Slab or tile for building purposes	707,635	Aug. 26	3131	704	100	1812
Powell, George G. (See Bogardus, Collis, and Powell.)						
Powell, George G., New York, N. Y. Dredging apparatus	708,583	Sept. 9	1042	236, 237	100	2203
Powell, Joseph M., Orestes, Ind. Gas, oil, and water separator	708,819	July 1	826	182	100	165
Powell, Myron H., *et al.* (See Hatch, Edward P., assignor.)						
Powell, Myron H., assignor, by mesne assignments, to himself, Union Special Sewing Machine Company, Chicago, and E. P. Hatch, Lagrange, Ill. Tape inserting and stitching mechanism	707,004	Aug. 12	1913	429	100	1523
Powell, Myron H., assignor, by mesne assignments, to himself, Union Special Sewing Machine Company, Chicago, and E. P. Hatch, Lagrange, Ill. Machine for inserting tape into edging	707,005	Aug. 12	1914	429	100	1524

Prebyl, Frank L. (See Ott and Prebyl.)						
Precision Eyelet Company. (See McCormack, George E., assignor.)						
Prentice, Frederick, Deercreek, Minn. Butter-packer	710,328	Sept. 30	4522	1019, 1020	100	2975
Prentice, John P., and R. G. Gregory, Barberton, Ohio, assignors to Stirling Company, Chicago, Ill. Turbine flue-cleaner	708,254	Sept. 2	480	110	100	2078
Prentiss, Charles W., assignor to Goodell Company, Antrim, N. H. Fruit-knife	706,107	Aug. 5	195	40	100	1157
Prentiss Vise Company. (See Bingham, Charles D., assignor.)						
Prescott, De Witt C., Chicago, Ill., assignor to R. F. Barker and M. Corry, Marinette, Wis. Steam set-works for sawmills	708,829	Sept. 9	1587	352	100	2308
Prescott, Henry A. (See Prescott, Thomas D., J. C., and H. A.)						
Prescott, James C. (See Prescott, Thomas D., J. C., and H. A.)						
Prescott, Thomas D., Philadelphia; J. C. and H. A. Prescott, Minersville, assignors of two-fifths to J. H. Closson and H. Bell, Philadelphia, Pa. Rotary engine	709,242	Sept. 16	2375	538, 539	100	2499
Pressed Steel Car Company. (See Ditchfield, Frank, assignor.)						
Pressed Steel Car Company. (See Müller, Ejnar J., assignor.)						
Pressler, Susie E., Toledo, Ohio. Safety attachment for trolley-car vestibules	705,705	July 29	4638	1008	100	996
Prestwich, John A., Tottenham, England. Internal-combustion engine	710,302	Sept. 30	4461	1006	100	2963
Price, Corwin T., Washington, D. C., assignor to Nedo Company. Tooth brush and powder cabinet	709,927	Sept. 30	3750	846	100	2811
Price, Jonathan D., Aurora, assignor to Miller Signal Company, Chicago, Ill. Railway-signal	709,040	Sept. 16	1971	451	100	2414
Price, Jonathan D., Aurora, assignor to Miller Signal Company, Chicago, Ill. Railway-signal	709,243	Sept. 16	2376	539	100	2500
Price, Jonathan D., and A. C. Miller, Aurora, Ill. Train-controlling apparatus	705,391	July 22	3747	814	100	909
Price, Richard H., Booneville, Miss. Sash lock and lift	703,465	July 1	165	38	100	35
Prickman, Robert J. (See Adams, William P. C., assignor.)						
Priebe, Herman C., Bradford, assignor of one-half to F. J. Reichmann, Chicago, Ill. Draft-rigging	708,607	July 1	409	95, 96	100	81
Priestman, Frederick, Burlington, Iowa. Composition for removing paint or varnish	705,139	July 22	3420	.....	100	742
Prieto, Manuel, Mexico, Mexico. Machine for disintegrating fibrous plants	705,140	July 22	3420	742, 743	100	742
Prime, Robert A. (See Geyer and Prime.)						
Prince, John A., New York, N. Y. Bronze-mill	708,466	July 1	166	38, 39	100	35
Prindle, Corydon L., Evanston, Ill. Periodical-file	708,169	Sept. 2	322	77	100	2047
Prior, John T., Priors, Ga. Rat-killer	704,576	July 15	2472	492	100	490
Prior, Matthew, Watertown, Mass. Window-operating mechanism for greenhouses	708,669	July 1	543	128	100	107
Pritchard, Theodore J., Sunshine, La. Hollow grate-bar	708,400	Sept. 2	723	162	100	2128
Pritt, Romey W., Julia, W. Va. Combined level and plumb	704,869	July 8	1877	407	100	396
Proctor, Charles B., Indianola, Iowa. Berry-box	707,866	Aug. 26	3541	820	100	1912
Proctor, George A., and E. F. Carpenter, Janesville, Wis. Sliding door	707,637	Aug. 26	3183	705	100	1813
Proctor, Guy H., Somerville, assignor to New England Electric Manufacturing Company, Boston, Mass. Electric-incandescent-lamp socket	708,467	July 1	167	39	100	35
Proskey, Winfield S., Ocala, Fla. Oil-spraying apparatus	707,636	Aug. 26	3181	705	100	1812
Pross, George F., and A. P. Tucker, assignors to E. H. Huenefeld, Cincinnati, Ohio. Wire-bending machine	707,006	Aug. 12	1916	429, 430	100	1524
Prött, Carl H., Rheydt, Germany. Apparatus for dispersing liquids or making spray	709,556	Sept. 23	3035	676	100	2651
Prouse, Alvin S. (See Richard, William, assignor.)						
Prouse, Ollie M., Tunis Mills, Md. Car-fender	706,851	Aug. 12	1658	370	100	1473
Prouty, Burt, and W. H. Budd, Jr., Columbus, Ohio. Cracker-stacking machine	708,255	Sept. 2	482	110, 111	100	2079
Prud'homme, Hector, Manchester, N. H. Door-securer	710,118	Sept. 30	4122	930	100	2888
Pryde, David. (See Gauerman and Pryde.)						
Pückler, Heinrich v., Schloss Friedland, Silesia, Germany. Air-purifier	705,865	July 29	4905	1056	100	1053
Puff, Carl, Spandau, Germany. Explosive projectile or shell for ordnance	709,854	Sept. 23	3576	806	100	2764
Puff, Edward, Montgomery, N. Y. Buttonhole-moistener	704,577	July 15	2273	493	100	490
Pugh, Edwin A., assignor of one-half to C. A. Orr, Springfield, Ill. Cleaner for guns	709,557	Sept. 23	3036	677	100	2652
Pugh, Jesse H., assignor of one-third to D. W. Miller, Toledo, Ohio. Hot-air wall-register	705,603	July 29	4454	965	100	962
Pullman, William, and C. C. Field, Sodus, N. Y. Trolley-pole	709,118	Sept. 16	2119	456	100	2447
Pulwitt, Fredrick, Springfield, Ill. Elevator	708,830	Sept. 9	1589	352	100	2308
Punzelt, Edward E., assignor to H. E. Dann and O. H. Banks, Norwalk, Conn. Adjustable screw-propeller	705,866	July 29	4907	1057	100	1053
Pupin, Michael I., New York, N. Y. Multiple telegraphy	707,007	Aug. 12	1918	430	100	1525
Pupin, Michael I., Yonkers, N. Y. Multiple telegraphy	707,008	Aug. 12	1921	430	100	1525
Pupke, Eberhard L., East Orange, assignor to Agatine Shoe Hook & Eyelet Company, Newark, N. J. Lacing-hook	710,210	Sept. 30	4806	968	100	2931

Putnam, John P., Boston, Mass. Apparatus for protecting seals of sewer-gas traps	706,255	Aug. 5	488	104	100	1215
Putnam, Simeon N. (See Butcher, Joseph, assignor.)						
Putney, Newton E., Southbridge, Mass. Knife	705,441	July 22	4061	880	100	872
Pyott, Louis T., assignor to J. E. Reyburn, Philadelphia, Pa. Hoisting-machine	706,256	Aug. 5	491	105	100	1216
Quain, John R., County of Middlesex, England. Electrical heating apparatus	703,970	July 1	1107	239	100	219
Quartz, James, Jr., Boston, Mass., assignor to F. S. Webster Company, Boston, Mass.; New York, N. Y.; Chicago, Ill., and London, England. Ink-pad box	705,610	July 29	4455	966	100	962
Quarzitol Company. (See Loewenthal, Jean, assignor.)						
Quasebarth, Gustav C., assignor of one-half to N. Holbert, St. Louis, Mo. Boiler-tube cleaner	706,200	Aug. 5	383	82	100	1195
Quayle, William, assignor to J. H. and M. Harrison, Denver, Colo. Protractor	703,608	July 1	411	96	100	81
Quest, Francis E., Knoxville, Pa. Switch-operating device	708,971	Sept. 9	1815	418, 419	100	2364
Quimby, Albert G., *et al.* (See Lewis, Albert H., assignor.)						
Quimby, William E., New York, N. Y. Brake for administering prescribed resistance to the starting movements of hand-operated controllers	703,468	July 1	168	39	100	36
Quin, John, Toronto, Canada. Sander for railways	704,210	July 8	1582	342	100	332
Quincy, Charles F. (See McCluer, Charles R., assignor.)						
Quinn, B. B. (See Lincoln, John C., assignor.)						
Quinn, Charles J., Scranton, Iowa. Chimney-top	706,450	Aug. 5	912	198	100	1300
Quinn, John C., Port Costa, Cal. Water-pressure safety oil-feeder	703,824	July 1	833	183	100	166
Quinn, Thomas E. (See Lutz, George A., assignor.)						
Quist, Charles. (See Quist, John and C.)						
Quist, John and C., assignors of one-half to O. P. Pearson and C. L. Berry, Mystic, Iowa. Mechanical movement	703,825	July 1	834	183	100	167
Qvarnström, Pontus M., Stockholm, Sweden. Timber-drag for sawing crooked timber	705,442	July 22	4062	881	100	873
R. M. Keating Motor Company. (See Keating, Robert M., assignor.)						
Raasloff, Harald de, New York, N. Y. Centrifugal machine	707,521	Aug. 19	2884	653	100	1745
Raber, Franklin C., Akron, Ohio. Blackboard-eraser	709,722	Sept. 23	3816	745	100	2709
Rabinowitz, Sundel, New York, N. Y. Window-cleaning chair	705,292	July 22	3749	814	100	869
Radcliffe, Joseph H. (See Bryan, Joseph P., assignor.)						
Radcliffe, Thomas D., assignor of one-third to C. R. Metcalf, Lawrence, Kans. Wheeled scraper	706,343	Aug. 5	680	147, 148	100	1258
Radcliffe, Thomas D., assignor of one-third to C. R. Metcalf, Lawrence, Kans. Wheeled scraper or scoop	707,977	Aug. 26	3846	864	100	1958
Railroad Gas Lighting Company. (See Caldwell, Charles W., assignor.)						
Rait, George B., Sheldon, Iowa. Draft device and spark-arrester	704,922	July 15	2942	631	100	638
Ralston, Isaac, assignor of one-half to T. Spillane, New Bethlehem, Pa. Sucker-rod stub	705,443	July 22	4063	881	100	873
Ralston, Jackson H., *et al.* (See Fillmore, George M., assignor.)						
Ralston, Willis H., *et al.* (See Jewell, Danford W., assignor.)						
Ramage, Alexander S., Cleveland, Ohio. Pigment	708,584	Sept. 9	1045	.....	100	2204
Ramage, Alexander S., Cleveland, Ohio. Treating ferrous liquors	708,585	Sept. 9	1046	238	100	2204
Ramage, M. H., *et al.* (See Fillmore, George M., assignor.)						
Rambeaud, René F. C., Parthenay, France. Coupling for railway-wagons, &c	703,670	July 1	545	123	100	107
Ramos, Charles, Vancouver, Canada. Gold-saving machine	704,372	July 8	1883	408	100	397
Rand Drill Company. (See Parsons, Frederick W., assignor.)						
Randall, Fred. (See Trivett and Randall.)						
Randall, James D., deceased, (J. E. Randall, administratrix,) assignor of one-half to J. W. Buchanan, Memphis, Tenn. Electric bath apparatus	703,826	July 1	835	184	100	167
Randall, Jesse O., Silversprings, N. Y. Heating and ventilating system	703,827	July 1	836	184	100	167
Randall, John, Deadwood, S. D. Apparatus for extracting metals from ores	708,494	Sept. 2	892	202	100	2162
Randall, Josephine E., administratrix. (See Randall, James D.)						
Randall, Oscar F., Davis, Ill. Brake mechanism	704,108	July 8	1380	208	100	290
Randall, Percy, and G. Davis, Northampton, England. Boot-stitching machine	709,041	Sept. 16	1975	451	100	2415
Randel, Blemus H. (See Abbott and Randel.)						
Randle, William E., Yorkana, Pa. Rail-joint	707,720	Aug. 26	3805	740	100	1848
Randolph, William H., Jr. (See Fox and Randolph.)						
Rankin, Alexander M., assignor to O. E. Madden, New York, N. Y. Boiler-furnace	705,960	July 29	5076	1106, 1107	100	1087
Rankin, Archibald P., Lakewood, and A. C. Dierickx, Cleveland, Ohio. Hatch-fastener	709,928	Sept. 30	3752	847	100	2811
Ransdell, French E., and H. C. Muddiman, Manassas, Va. Door catch and buffer	708,401	Sept. 2	724	163	100	2128
Rash, Howard C. and L. C., assignors to Natural Body Brace Company, Salina, Kans. Abdominal and back supporter	708,402	Sept. 2	725	163	100	2128
Rash, Leon C. (See Rash, Howard C. and L. C.)						
Rathbun, John O., Providence, assignor of one-half to W. A. Hathaway, Edgewood, R. I. Flushing-valve	704,211	July 8	1584	342	100	332
Raton Air Brake Improvement Company. (See Turner and Farquharson, assignors.)						
Rauch, William H., Wichita, Kans. Fruit-picker	705,141	July 22	3823	743	100	742
Raus, Emanuel, Prague, Austria-Hungary. Safety-ball for tram protecting-rollers	707,255	Aug. 19	2392	536	100	1642
Raven, August, Jemeppe, Belgium. Blowing-engine	709,929	Sept. 30	3754	847, 848	100	2812, 201
Rawley, Oren C. (See Johnson and Rawley.)						
Rawlins, John, St. Louis, Mo. Sheet-music retainer	704,104	July 8	1382	208	100	
Rawson, Edward, Moscow, Idaho. Wood-fluting machine	704,373	July 8	1885	408, 409	100	398
Ray, Alexander, assignor to E. S. Lowry, Philadelphia, Pa. Chute-wagon	709,723	Sept. 23	3316	745	100	2710
Ray, Edgar M., and R. B. McConney, Denver, Colo.; said McConney assignor of one-half to said Ray. Dump-car	704,578	July 15	2273	493, 494	100	490
Ray, Frederick, assignor of one-half to J. Spiers, Jr., San Francisco, Cal. Centrifugal-pump runner	704,756	July 15	2581	557	100	554
Ray, Samuel W., assignor to New Process Manufacturing Company, Dallas, Tex. Acetylene-gas generator	705,798	July 29	4771	1064	100	1025
Ray, Stanley, Cambridge, Mass. Coin-holder	708,733	Sept. 9	1328	308	100	2363
Raymond, Charles M., assignor of one-half to L. E. Hoffman, Cleveland, Ohio. Steam-generator or water-heater	709,042	Sept. 16	1976	451	100	2415
Raymond, Emmet B., St. Louis, Mo. Oil-burner	704,374	July 8	1886	409	100	398

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Reach, George A. (See Gamble, John, assignor.)						
Read, Ellis D., Pittsburg, Pa. Bottle or flask	704,105	July 8	1383	298	100	291
Read, Frederick H., Providence, R. I. Ankle-support	703,828	July 1	838	184	100	168
Read, George F., assignor to R. Hoe, New York, N. Y. Web-printing machine	705,142	July 22	3494	743	100	743
Read, George F., assignor to R. Hoe, New York, N. Y. Sheet-transferring mechanism	707,721	Aug. 26	3806	740 741	100	1848
Reagan, James, Philadelphia, Pa. Furnace	707,157	Aug. 19	2212	495 496	100	1603
Reagan, James, Philadelphia, Pa. Furnace	707,158	Aug. 19	2214	496	100	1603
Real, Carl, Schwyz, Switzerland. Emergency-brake for tramway-cars	708,784	Sept. 9	1329	306	100	2263
Reames, John W., and C. F. Heffington, Corley, Ark. Swinging gate	707,256	Aug. 19	2392	536	100	1642
Rech, Jacob E., Philadelphia, Pa. Anchor	708,739	July 1	670	149	100	134
Recht, Frederick, Brooklyn, assignor to Rex Cap and Cork Company, New York, N. Y. Cap for bottles	707,978	Aug. 26	3848	864	100	1954
Reck, Rollend R., Marienville, Pa. Reversing mechanism	705,961	July 29	5078	1107	100	1087
Recklinghausen, Max von. (See Vogt and Recklinghausen.)						
Rector, John R., Lipan, Tex. Storage system	706,451	Aug. 5	914	198	100	1300
Redding, James H. (See Blee and Redding.)						
Redford, Percy, Manchester, England. Packing for stuffing-boxes	709,511	Sept. 23	2955	660	100	2635
Reed, Arthur W., Orvisburg, Miss. Automatic car-brake	706,452	Aug. 5	915	198	100	1300
Reed, Calvin M., Sumneytown, Pa. Rail-fastener	707,257	Aug. 19	2394	537	100	1642
Reed, Charles J., Philadelphia, Pa. Circuit-breaker	710,367	Sept. 30	4574	1031	100	2982
Reed, Charles K. and C. A., Worcester, Mass. Temporary binder	706,257	Aug. 5	492	105	100	1216
Reed, Chester A. (See Reed, Charles K. and C. A.)						
Reed, Franklin M., assignor of one-third to H. W. Roll, Indianapolis, Ind. Pulverized-fuel burner	706,495	Aug. 5	982	215 216	100	1315
Reed, Henry P. G., Chicago, Ill., assignor to G. W. Phillips, Camden, N. J. Clamp for pipes	706,780	Aug. 12	1518	337	100	1443
Reed, John C., Allegheny, Pa. Apparatus for molding	703,740	July 1	672	149 150	100	135
Reed, John W., Greensburg, Pa. Device for washing diapers	708,980	Sept. 9	1710	394	100	2344
Reed, Lemon M., Cleveland, Ohio. Measuring-scoop	704,931	July 15	2978	637	100	629
Reedy, William H., *et al.* (See Rice, Joseph, assignor.)						
Reedy, William I., *et al.* (See Rice, Joseph, assignor.)						
Reely, William M., Spokane, Wash. Sash-holder	703,829	July 1	859	185	100	168
Reese, Benjamin F. (See Naysmith and Reese.)						
Reese, Samuel M. (See Harris and Reese.)						
Reeves, Oscar F., Saginaw, Mich. Bicycle saddle-post	708,408	Sept. 2	727	163	100	2129
Reeves, William W., Braddock, Pa. Mold for hollow concrete articles	705,789	July 29	4772	1035	100	1036
Regenstein, Hermann, assignor to Pfälzische Nähmaschinen & Fahrräder Fabrik, vormals Gebrüder Kayser, Kaiserslautern, Bavaria, Germany. Ring-shuttle for sewing-machines	704,923	July 15	2944	631	100	633
Reich, Fred W., Tipton, Kans. Feed-water heater	705,998	July 22	3751	814	100	809
Reichardt, Ferdinand A., Elizabeth, and H. Wilcox, Newark, N. J.; said Wilcox assignor to said Reichardt. Sharpening-machine	704,106	July 8	1384	298 299	100	291
Reichenbach, Henry M., Dobbs Ferry, N. Y. Apparatus for animated photography	710,339	Sept. 30	4524	1020 1021	100	2976
Reichert, Max, London, England. Apparatus for developing and fixing cartridge photographic films	706,852	Aug. 12	1654	370	100	1473
Reichlin, Xaver, Horgen, Switzerland, assignor to A. Schorno, Irvington, N. J. Door check and closer	708,586	Sept. 9	1048	238	100	2304
Reichmann, Frank J. (See Priebe, Herman C., assignor.)						
Reid, Charles H., Danbury, Conn. Chuck	708,735	Sept. 9	1330	306	100	2264
Reid, Philip S., Rosedale, N. J. Guard for optical instruments	708,831	Sept. 9	1541	352	100	2308
Reif, Otto M., Allegheny, assignor to Harbison & Walker Company, Pittsburg, Pa. Brick-mold	708,256	Sept. 2	485	111	100	2079
Reifsnyder, Frank. (See Fisher, John W., assignor.)						
Reinhardt, Carl, Kaiserslautern, Germany. Testing eggs	707,009	Aug. 12	1924	431	100	1595
Reinhold, Wilhelm, Berlin, Germany. Packing for stuffing-boxes	703,469	July 1	169	39	100	96
Reisner, Nicholas, Hawkeye, Iowa. Whiffletree attachment	706,109	Aug. 5	198	41	100	1157
Reist, Henry G., Schenectady, N. Y., assignor to General Electric Company. Dynamo-electric machine	706,108	Aug. 5	196	41	100	1157
Reist, Henry G., Schenectady, N. Y., assignor to General Electric Company. Lubricating device	708,170	Sept. 2	328	77	100	2047
Reitz, Albert J., Portsmouth, Ohio, and J. H. Lange, Allegheny, Pa. Metal railway-tie	704,922	July 15	2979	638	100	629
Rembert, Henry, Houston, Tex. Making cotton-bales	703,470	July 1	170	40	100	97
Remington Arms Company. (See Hartley, Rivers, and Beach, assignors.)						
Remington Automobile & Motor Company. (See Rose, Harry, assignor.)						
Remington, Charles H., Roswell, N. Mex. Ter. Automatic railway-switch danger-signal	707,010	Aug. 12	1925	431	100	1595
Remore, Charles P., Tully, N. Y. Smoking-pipe	708,404	Sept. 2	728	164	100	2129
Renard, Arthur E. (See Bergman and Renard.)						
Rendle, William S., East Boston, Mass. Spur-shore screw	703,830	July 1	840	185	100	168
Renner, John, Burlington, Iowa. Roller-bearing support for shade-rollers	708,786	Sept. 9	1332	304	100	2264
Reno, Jesse W., New York, N. Y. Inclined elevator	708,663	Sept. 9	1196	273	100	2235
Renshaw, Frederick W., *et al.* (See Woodman, George A., assignor.)						
Rensman, Henry R., assignor of one-half to L. Kuczkowski, Chicago, Ill. Pneumatic saddle-pad	709,980	Sept. 30	3757	849	100	2812
Rentsch, Henry, Bacon, Mo. Disk cutter attachment for corn-planters	710,211	Sept. 30	4309	969	100	2931
Rentsch, Henry, Bacon, Mo. Corn-planter	710,303	Sept. 30	4463	1007	100	2968
Rentzel, John B., Manchester, Pa. Washing-machine	705,962	July 29	5080	1107 1108	100	1088
Rettich, Frank D., Cincinnati, Ohio. Toy	706,110	Aug. 5	199	41	100	1157
Reubelt, Horace B., Franklin, Tenn. Non-refillable bottle	708,171	Sept. 2	324	77	100	2047
Rex Cap and Cork Company. (See Recht, Frederick, assignor.)						
Reyburn, John E. (See Pyott, Louis T., assignor.)						
Reynard, Charles M. (See Taliaferro and Reynard.)						
Reynders, John V. W., and W. T. Sears, Harrisburg, Pa. Fluid-pressure-operated tool	706,688	Aug. 12	1330	294	100	1404
Reynolds, Alfred, *et al.* (See Graves, George A., assignor.)						
Reynolds, Charles, Jersey City, N. J. Necktie	709,680	Sept. 23	3244	725	100	2695
Reynolds, Charles J., Boston, Mass. Seal-lock	704,107	July 8	1387	299	100	292
Reynolds, Dexter, Albany, N. Y. Producing steel direct from oxid-of-iron ore	707,698	Aug. 26	3134	705	100	1813
Reynolds, Edwin, Milwaukee, Wis. Controlling mechanism for steam-engine regulators	704,270	July 8	1685	367	100	358
Reynolds, George H., Chicago, Ill., assignor to Otis Elevator Company, East Orange, N. J. Control device for hoisting-machines	704,271	July 8	1687	368 369	100	354
Reynolds, Harry J., assignor of one-half to E. T. Laundon, Cleveland, Ohio. Feed-water heater and purifier	706,782	Aug. 12	1523	338	100	1444

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Reynolds, Henry S., Brooklyn, assignor to E. C. Seaman, New York, N. Y. Milk-can	707,011	Aug. 12	1928	431	100	1526
Reynolds, James J., Huntington, W. Va. Artificial tooth	705,143	July 22	3426	744	100	743
Reynolds, James W., Jacksonville, Fla. Device for delivering mail-pouches to railway-cars	704,757	July 15	2582	558	100	554
Reynolds, John R., Hartford, Conn., assignor, by mesne assignments, to Goodson Graphotype Company. Type-chase for making matrix-plates	707,522	Aug. 19	2887	654	100	1745
Reynolds, John R., Hartford, Conn., assignor, by mesne assignments, to Goodson Graphotype Company. Master type-bar for matrix-plates	707,523	Aug. 19	2890	654	100	1746
Reynolds, Peter T., Butte, Mont. Mine-ventilator	708,831	July 1	841	185	100	169
Reynolds, William H., Houston, Tex. Steam-trap	706,781	Aug. 12	1520	338	100	1443
Reynolds, Willie H., assignor to M. J. Doherty and T. Gahan, Chicago, Ill. Fluid-meter	710,212	Sept. 30	4310	969	100	2931
Rhea, Robert L., Peoria, Ill. Seeding-machine	710,119	Sept. 30	4123	930	100	2888
Rheinische Metallwaaren-und Maschinenfabrik, Firm. (See Müller, Gustav, assignor.)						
Rhoades, Alonzo E., Hopedale, Mass., assignor to Draper Company, Hopedale, Mass., and Portland, Me. Warper stop-motion mechanism	703,471	July 1	175	40	100	97
Rhoades, Cicero, assignor of one-third to W. T. Stroud, Fredonia, Kans. Railway-rail joint	705,963	July 29	5081	1108	100	1088
Rhodes, James B., Grand Rapids, Mich., assignor to Cronk and Carrier Manufacturing Company, Elmira, N. Y. Shears for cutting grass	708,737	Sept. 9	1333	304	100	2264
Rhodes, John C., New Bedford, Mass., assignor, by mesne assignments, to J. C. Rhodes & Co., Incorporated. Eyelet. (Reissue)	12,008	July 8	2108	456	100	442
Rhodes, Joseph E., Boston, Mass. Blanket for use in printing	705,894	July 22	3752	814	100	809
Rhodes, Joseph S., East Las Vegas, N. Mex. Ter. Stovepipe-holder	705,964	July 29	5083	1108	100	1088
Rhodes, Seth A., Chicago, Ill. Optical instrument	709,359	Sept. 16	2590	584 585	100	2546
Rhonemus, Harry A., assignor to S. F. Rhonemus, Springfield, Ohio. Leg-improver	707,258	Aug. 19	2396	537	100	1642
Rhonemus, S. F. (See Rhonemus, Harry A., assignor.)						
Rice, Edwin W., Jr., Schenectady, N. Y., assignor to General Electric Company. Rotary transforming apparatus	706,598	Aug. 12	1163	258	100	1367
Rice, Hamilton, Mystic, Conn. Embossing-machine	706,297	July 22	3756	815	100	810
Rice, Joel T., Hot Springs, Ark. Flying-machine	704,375	July 8	1887	409	100	898
Rice, John, Fort Collins, Colo. Horseshoe	705,144	July 22	3428	744	100	743
Rice, Joseph. (See Ennes, Charles E., assignor.)						
Rice, Joseph, assignor of two-thirds to W. H. and W. I. Reedy, Chicago, Ill. Elevator	710,007	Sept. 30	3905	881	100	2844
Rice, Otis D., Winthrop, Mass. Program-clock	704,108	July 8	1389	299	100	292
Rice, Vietts L., New York, N. Y., assignor, by mesne assignments, to C. J. Downing & Co., Inc. Engine	705,145	July 22	3428	744 745	100	744
Rice, William P., Chicago, Ill. Apparatus for conveying grain in malt-houses	709,558	Sept. 23	3038	677	100	2652
Rich, Francis A., Karangahake, New Zealand. Velocipede driving-gear	707,012	Aug. 12	1929	432	100	1527
Richard, Frank, Sunfield, Mich. Axletree repair implement	705,898	July 29	4909	1087	100	1053
Richard, William, assignor of one-half to A. S. Prouse, Bloomville, Ohio. Shears	705,444	July 22	4063	881	100	873
Richards, Arthur M., Chicago, Ill. Attachment for chairs	704,109	July 8	1392	300	100	293
Richards, Arthur W., Indianola, Iowa. Corn-husker	707,013	Aug. 12	1931	432	100	1527
Richards, Francis H., Hartford, Conn. Cigar-marking machine	709,360	Sept. 16	2597	585 586	100	2548
Richards, Francis H., Hartford, Conn., assignor to Kempshall Manufacturing Company. Manufacture of playing-balls	710,368	Sept. 30	4575	1032	100	2986
Richards, James F., Luke, Md. Paper-making machine	707,014	Aug. 12	1933	432 433	100	1527
Richards, Thomas C., Winsted, Conn. Curtain-pole	705,296	July 22	3755	815	100	810
Richards, Walter J., Milwaukee, Wis. Commutator-brush holder	708,664	Sept. 9	1197	273	100	2235
Richards, Walter J., assignor to N. A. Christensen, Milwaukee, Wis. Controlling apparatus for electric motors	704,665	July 15	2418	532	100	530
Richards, Willard F., Buffalo, assignor to C. M. Goulid, New York, N. Y. Lubricator	706,201	Aug. 5	385	82	100	1195
Richardson, Alfred, *et al.* (See Sporrong, Carl A., assignor.)						
Richardson, Earl H. (See Swan and Richardson.)						
Richardson, Harry H., Beaverfalls, Pa. Combination square and level	705,867	July 29	4908	1087	100	1053
Richardson, John F., Pittsburg, Pa. Street-indicator for street-cars	708,882	Sept. 9	1541	353	100	2308
Richardson, Samuel L., New York, N. Y. Clothes-drying attachment for range-boilers	705,295	July 22	3754	815	100	810
Richey, Eugene W., *et al.* (See McGill, John J., assignor.)						
Richie, Silas A., North Middletown, Ky. Animal-poke	704,924	July 15	2945	632	100	625
Richmond, Henry E., Westwood, N. J. Stereoscope	705,706	July 29	4629	1003	100	996
Richter, Friedrich A. (See Schütze, August, assignor.)						
Richter, Friedrich A., Rudolstadt, Germany. Toy	706,689	Aug. 12	1333	295	100	1404
Richter, Herman, Cullman, Ala. Bullet-mold	705,146	July 22	3480	745	100	744
Rickard, Elziver O., assignor to Kelsey Furnace Company, Syracuse, N. Y. Furnace	705,965	July 29	5084	1109	100	1088
Rickard, Elziver O., assignor to Kelsey Furnace Company, Syracuse, N. Y. Furnace	706,496	Aug. 5	984	216 217	100	1315
Ricke, George H., Cincinnati, Ohio, assignor to Perfection Bush Company, Covington, Ky. Bung-bushing	710,006	Sept. 30	3904	881	100	2844
Ricker, James H., assignor of two-thirds to S. P. Greene and J. A. T. Evans, Fort Worth, Tex. Fuel compound	707,722	Aug. 26	3310		100	1849
Ricketts, John L., assignor to L. R. Fletcher, deceased, Philadelphia, Pa.; E. J. Fletcher, administratrix. Electrical safety alarm and signal mechanism for railways	707,689	Aug. 26	3136	705 706	100	1813
Riddle, James D., Chatham, Va. Cultivator	704,876	July 8	1889	410	100	899
Rider, Ebenezer W., Detroit, Mich. Electric low-water alarm	708,472	July 1	176	41	100	97
Ridgely and Johnson Tool Company. (See Vaughan, Henry H., assignor.)						
Ridgway, Charles. (See Hoy, Ermia L., assignor.)						
Ridgway, Ellis B., Coatesville, Pa. Fluid-pressure-actuated hoist, &c	707,015	Aug. 12	1934	433	100	1528
Ridgway, John J., Rosebank, N. Y. Conveying-belt	707,355	Aug. 19	2585	584	100	1682
Ridlon, Charles A., Alba, Mich., assignor of two-thirds to W. K. and G. A. Jackson, Buffalo, N. Y. Polishing and drying broom-handles	707,159	Aug. 19	2216	497	100	1608
Rieber, Andreas, Flensburg, Germany. Means for propelling vehicles	704,877	July 8	1893	410	100	400
Riecker, Charles E., and H. S. Walter, assignors to Stanley Rule and Level Company, New Britain, Conn. Plane-lift	707,356	Aug. 19	2586	584	100	1682
Ries, Elias E., New York, N. Y. Automatic cycle or bicycle skate	706,783	Aug. 12	1524	338	100	1444
Ries, Moses. (See Pflugradt and Ries.)						
Riesberg, Van Vechten W., Philadelphia, Pa. Apparatus for making carbonic-acid or other gas	704,272	July 8	1691	369	100	354
Riesberg, Van Vechten W., Philadelphia, Pa. Making carbonic-acid gas	705,111	Aug. 5	201	42	100	1158
Rieser, Emile. (See Glasgow, Bruce M., assignor.)						
Rietzschel, Alexander H., Munich, Germany. Camera	705,445	July 22	4054	882	100	873
Rigby, Clark F., New Martinsville, W. Va. Casing-head	703,832	July 1	842	185	100	169
Riggins, Julian B., and H. Gordan, Clarksville, Va. Churn	708,665	Sept. 9	1199	273	100	2235
Riggs-Spencer Company. (See Case, Frank B., assignor.)						
Rignall, William B., Edinburgh, Scotland. Convertible bicycle-rest	706,453	Aug. 5	916	198	100	1301

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.

Robinson, Arthur W., Montreal, Canada. Boom for dredges, excavators, &c	708,588	Sept. 9	1051	239	100	2295
Robinson, Arthur W., Montreal, Canada. Hoisting-gear for dipper-buckets for use upon dredges, steam-shovels, &c	708,589	Sept. 9	1053	239	100	2295
Robinson, Arthur W., Montreal, Canada. Steam-shovel, &c	708,590	Sept. 9	1054	239 / 240	100	2295
Robinson, Charles D. (See Mock and Robinson.)						
Robinson, Charles W., Sharpsville, Pa. Nut-lock for rail-joints	705,612	July 29	4457	966	100	963
Robinson, Clark, Hartley, Iowa. Carbureter	706,451	Aug. 5	217	199	100	1301
Robinson, Daniel C., Monessen, Pa. Stone or ore crusher	708,495	Sept. 2	894	202	100	2168
Robinson, Dixon A. (See Stone, Enoch G., assignor.)						
Robinson, Freeman C., and J. E. Green, Council Bluffs, Iowa. Burglar-alarm	708,496	Sept. 2	895	202	100	2168
Robinson, Henry G. (See Gulliver, Harry, assignor.)						
Robinson, James F., Waco, Tex. Nut-lock	703,612	July 1	420	98	100	83
Robinson, John M., Goldthwaite, Tex. Weed-cutting attachment for plows	707,801	Aug. 26	3516	793	100	1889
Robinson, Martin W., Medford, Mass. Electric battery	705,148	July 22	3433	746	100	744
Robinson, Ralph C., Boston, assignor to J. Irving, Newton, Mass. Chemical apparatus	706,784	Aug. 12	1528	339	100	1445
Robinson, Seymour N. (See Payne, Theodore P., assignor.)						
Robinson, Theodore D., Albany, N. Y. Type-writing machine	704,112	July 8	1398	301	100	294
Robinson, Thomas C., Boston, assignor of one-half to E. B. and H. A. Welch, Cambridge, Mass. Bicycle driving mechanism	703,613	July 1	421	98	100	83
Robinson, William W., Des Moines, Iowa. Sulky-plow	708,405	Sept. 2	730	164	100	2129
Robison, Charles W., McKees Rocks, Pa. Sash lock and lift	708,406	Sept. 2	733	165	100	2130
Robson, George, London, England. Means for longitudinally compressing wired-on cushion-tires before fitting them into their rims	704,214	July 8	1590	344	100	383
Roche, William, Jersey City, N. J. Circuit-closer for portable electrical apparatus	704,113	July 8	1399	301	100	294
Rochester Optical and Camera Company. (See Hutchings, Charles E., assignor.)						
Rochester Optical and Camera Company. (See Hutchings, Robertson, and Mutschler, assignors.)						
Rochester Optical and Camera Company. (See Robertson and Hutchings, assignors.)						
Rock, Frederick W., assignor of three-fourths to R. C. Sprague, E. H. Patterson, and J. A. M. Moreton, Detroit, Mich. Car-brake	703,614	July 1	422	98	100	84
Rockwell, David W., Brockton, Mass. Water-gage for steam-boilers	707,943	Aug. 26	3784	849	100	1942

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Rockwell, Frederick C., West Hartford, Conn. Handwriting-developer	709,114	Sept. 16	2121	486	100	2448
Rockwell, Lucius A., *et al.* (See Holmes, Daniel M., assignor.)						
Rockwell, Ludlem H., assignor of one-half to W. M. Kramer, Mount Carmel, Pa. Toy bubble-blower	705,966	July 29	5088	1109	100	1090
Rodee, Archie L., *et al.* (See Bangs, Edwin L., assignor.)						
Rodman, Hugh, assignor to Electric Storage Battery Company, Philadelphia, Pa. Storage-battery separator	704,759	July 15	2586	558 / 559	100	535
Rodriguez, Joseph, New York, N. Y. Hat-hook	708,066	Sept. 9	1200	274	100	2236
Roebuck, Alvah C., and F. McMillan, Chicago, Ill. Kinetographic apparatus	706,113	Aug. 5	204	42, 43	100	1158
Roedel, Louis, Passaic, N. J. Rotary slide-valve for pumps, compressors, or motors	709,682	Sept. 23	3246	725 / 726 / 727	100	2695
Roedel, Louis, Passaic, N. J. Rotary slide-valve for pumps, compressors, or motors	709,683	Sept. 23	3252	728	100	2696
Roeh, John, Oroville, Wash. Automatic current-motor	705,967	July 29	5089	1109 / 1110	100	1090
Roehm, Charles M. (See Vliet, Joshua B., assignor.)						
Roenius, Edmund, Grand Rapids, Wis. Computing-machine	704,114	July 8	1401	301	100	295
Roesch, Alfred, Bridgeport, Conn., assignor to Davis & Roesch Temperature Controlling Company, New York, N. Y. Thermostat	704,115	July 8	1403	302	100	295
Roesch, Alfred, Bridgeport, Conn., assignor to Davis & Roesch Temperature Controlling Company, New York, N. Y. Temperature-regulator	705,613	July 29	4458	966 / 967	100	963
Roesky, Emil W. (See Deplanty, Charles F., assignor.)						
Roessler, Fritz, Frankfort-on-the-Main, Germany, assignor to Roessler & Hasslacher Chemical Company, New York, N. Y. Making sodium cyanid	708,079	Sept. 2	147	.....	100	2011
Roessler & Hasslacher Chemical Company. (See Roessler, Fritz, assignor.)						
Rogers, Arthur R. (See Johnson, Charles, assignor.)						
Rogers, Charles M., *et al.* (See Ivor Barry, assignor.)						
Rogers, Charles W., assignor of twelve twenty-fifths to J. W. Mathis and E. Worthing, Chicago, Ill. Radiator	705,614	July 29	4460	967	100	963
Rogers, Joseph W., Montgomery, Pa. Combined washing and wringing machine	704,984	July 15	2982	639	100	639
Rogers, Thomas B., Brooklyn, N. Y. Tank or ice-chest	706,455	Aug. 5	919	199	100	1301
Rogers, William H., New York, N. Y. Box or crate	710,213	Sept. 30	4312	969	100	2931
Rohlmann, Oscar F. F. (See Jenkins and Rohlmann.)						
Rohmer, William B., Bay St. Louis, Miss. Mail-bag catching and delivering mechanism	707,017	Aug. 12	1939	433 / 434	100	1529
Rohmer, William B., Bay St. Louis, Miss. Combined fertilizer-distributer and seed-planter	710,011	Sept. 30	3914	884	100	2846
Rojat, David, Nimes, France. Filtering apparatus	708,833	July 1	844	186	100	169
Roll, Harry W. (See Reed, Franklin M., assignor.)						
Rollason, Minnie E., Brooklyn, N. Y. Glove	704,579	July 15	2277	494	100	491
Rollman, Elmer A., West Manchester, Ohio. Machine for sorting tobacco-leaves	705,800	July 22	3762	816	100	811
Rollo, Louie C., *et al.* (See Ivor, Barry, assignor.)						
Romünder, Hermann, Newark, assignor to Convertible Car Company, Bloomsbury, N. J., Convertible car	707,018	Aug. 12	1942	434 / 435	100	1530
Ronaldson, Adam L., London, England. Boring apparatus	710,012	Sept. 30	3918	885	100	2847
Ronan, Anson G., Toronto, Canada. Revolving electric igniter	708,080	Sept. 2	149	36	100	2011
Rookus, John J., Zeeland, Mich. Beet-harvester	710,075	Sept. 30	4030	909	100	2870
Rooney, Patrick B., New York, N. Y. Bed-bottom	704,215	July 8	1592	344 / 345	100	383
Root, Elam E., assignor to J. F. Haas, Lancaster, Pa. Vehicle-wheel spindle	705,968	July 29	5091	1110	100	1091
Root, Ellis J., San Francisco, Cal. Latch	705,301	July 22	3764	817	100	811
Root, F. S., *et al.* (See Brooks, Theodore L., assignor.)						
Roper, Charles F., assignor to Draper Company, Hopedale, Mass. Mechanism for truing spinning-rings	709,512	Sept. 23	2955	660	100	2635
Rorty, Malcolm C. (See Bullard and Rorty.)						
Rosati, Tito, Florence, Italy. Electric cable	706,599	Aug. 12	1165	258	100	1307
Rosback, Frederick P., Chicago, Ill. Wire-stitching machine	706,690	Aug. 12	1333	295 / 296	100	1404
Rose, Edward, and I. Isbill, Chattanooga, Tenn. Bed-bottom	710,304	Sept. 30	4465	1007	100	2903
Rose, Harry, assignor to Remington Automobile & Motor Company, Utica, N. Y. Controlling mechanism	705,302	July 22	3765	817	100	812
Rose, Marshall. (See Hindley, Walker, and Rose.)						
Rosen, Nathan, New York, N. Y. Finger-ring	704,278	July 8	1608	369	100	355
Rosenberg, Charles K., San Francisco, Cal. Account-book	704,216	July 8	1593	345	100	333
Rosenberry, Alvin M., assignor of one-half to M. H. Davis, Shelby, Ohio. Carbureter	709,647	Sept. 23	3185	711	100	2692
Rosenfeld, Louis, New York, N. Y. Adjustable loading-chute	709,600	Sept. 23	3123	696	100	2670
Rosengrén, Anders A., Malmö, assignor of one-half to P. Hansson, Dalköpings, Trelleborg, Sweden. Automatic coupling for railway-cars	707,724	Aug. 26	3313	741	100	1849
Rosenthal, James H., London, England, assignor to Babcock & Wilcox Company, New York, N. Y. Header for sectional steam-generators	704,968	July 15	3058	657	100	653
Rosenthal, Sigmund A., London, England. Generation of motive power	709,115	Sept. 16	2122	486	100	2448
Roser, Louis, Jr. (See Eiseman, Moses H., assignor.)						
Roser, Louis, Jr., Chicago, Ill. Garment-supporting device	708,497	Sept. 2	897	203	100	2168
Rosett, Dora T., New York, N. Y. Hospital-mattress	710,076	Sept. 30	4032	909	100	2871
Ross, Delmar C., *et al.* (See Chubb, James A., assignor.)						
Ross, Joseph. (See Gaisman and Ross.)						
Ross, Joseph W., Alma, Ill. Plant-protector	704,116	July 8	1405	302	100	295
Ross, Samuel. (See Hutchinson, Elias S., assignor.)						
Ross, Walter T. (See Paul and Gundlack, assignors.)						
Ross, William L., Omaha, Nebr. Furnace	703,474	July 1	178	41, 42	100	38
Rossetter, William. (See Talbot and Rossetter.)						
Rossler, Konrad, Fort Worth, Tex. Shears-sharpener	709,648	Sept. 23	3188	712	100	2693
Rossman, James G., Boston, Mass. Adjustable brace or support for movable structures	705,707	July 29	4631	1003	100	996
Rossow, Martin, Dessau, Germany. Veneer-drying machine	705,708	July 29	4631	1003 / 1004	100	996
Rost, Ernst, Dresden, Germany. Cushioning device for valves	707,160	Aug. 19	2218	497	100	1603
Rostochil, John, Chicago, Ill. Edging device	707,641	Aug. 26	3142	707	100	1814
Roth, Ludwig, St. Louis, Mo. Rail-joint	709,045	Sept. 16	1981	452	100	2416
Rothberg, Mathew E., Lebanon, Pa. Coke-oven	705,446	July 22	4065	882 / 883	100	873
Rothenbucher, George E. R., Brooklyn, N. Y. Combination-wrench	708,741	July 1	675	150	100	135
Rothenbusch, Philipp, assignor to F. Ruth, New York, N. Y. Combination table and ironing-board	709,176	Sept. 16	2242	510	100	2471
Rothermel, Curtis J., *et al.* (See Hemingway, Joseph, assignor.)						
Rothermel, William E., *et al.* (See Hemingway, Joseph, assignor.)						
Rothschild, Jacob. (See Winn, Jasper C., assignor.)						
Rounds, Albert C., assignor of one-half to U. V. Schauroth, Buffalo, N. Y. Insole	707,642	Aug. 26	3144	707	100	1815

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Rourke, James, Parkersburg, W. Va. Portable drilling-machine	705,791	July 29	4775	{1036 1037}	100	1026
Rouse, Shelley D. (See Hunter, Hamilton, assignor.)						
Roussanoff, Wassily, Moscow, Russia. Steam-generator	708,834	July 1	845	{186 187 784}	100	169
Rowe, Edward, Indiana, Pa. Railway signaling apparatus	709,798	Sept. 23	3481	{785 786}	100	2743
Rowe, John J., New Kensington, Pa. Wheel	706,477	Aug. 5	954	208	100	1308
Rowland, Henrietta H., administratrix. (See Rowland, Henry A.)						
Rowland, Henry A., deceased; H. H. Rowland, administratrix, assignor to Rowland Telegraphic Company, Baltimore, Md. Keyboard for use in telegraphy	704,927	July 15	2950	{633 634}	100	635
Rowland, Henry A., deceased; H. H. Rowland, administratrix, assignor to Rowland Telegraphic Company, Baltimore, Md. Telegraphic distribution	704,928	July 15	2954	{634 635 636}	100	636
Rowland, Henry A., deceased; H. H. Rowland, administratrix, assignor to Rowland Telegraphic Company, Baltimore, Md. Means for producing and maintaining synchronous motion	704,929	July 15	2970	637	100	637
Rowland, Henry A., deceased; H. H. Rowland, administratrix, assignor to Rowland Telegraphic Company, Baltimore, Md. Means for impressing periodically-varying electric currents upon telegraph or other circuits	704,930	July 15	2976	637	100	638
Rowland Telegraphic Company. (See Penniman and Wiegand, assignors.)						
Rowland Telegraphic Company. (See Rowland, Henry A., assignor.)						
Roy, Thomas L., and T. Marshall, Jr., Chicago, Ill. Burner attachment	709,278	Sept. 16	2446	553	100	2515
Royal, Belford G., assignor to Gramophone and Typewriter, Limited, London, England. Coin-operated talking-machine	706,203	Aug. 5	389	83	100	1197
Royle, Vernon, Paterson, N. J. Brake	703,835	July 1	818	187	100	170
Roys, Margaret T. (See Roys, Willis E., assignor.)						
Roys, Willis E., Richmond Hill, assignor to M. T. Roys, New York, N. Y. Steam-heating system	705,969	July 29	5068	1110	100	1091
Rubber and Celluloid Harness Trimming Co. (See Schreiner, Joseph, assignor.)						
Ruckstuhl, Frederick W., and A. Pohlmann, New York, N. Y. Potato-creamer	707,019	Aug. 12	1944	435	100	1530
Rudd, Ole, West Duluth, Minn. Die for making cant-hook clasps	706,691	Aug. 12	1536	297	100	1495
Rudd, Ole, West Duluth, Minn. Power-shaft coupling	707,857	Aug. 19	2587	584	100	1682
Ruddick, John J., Newton, assignor to United States Electric Signal Company, Watertown, Mass. Signaling system	704,117	July 8	1406	302	100	296
Rudge, Arthur E. (See Rudge, Charles H., assignor.)						
Rudge, Charles H., assignor of one-half to A. E. Rudge, Newark, N. J. Crupper-dock-forming machine	704,969	July 15	3069	{657 658}	100	653
Rudolph, Johannes P., Görlitz, Germany. Ornamenting surfaces	708,408	Sept. 2	898	203	100	2164
Ruedy, Albert, Toledo, Ohio. Ball thrust-bearing	706,114	Aug. 5	207	43	100	1159
Ruef, Charles S., and C. L. Tomlinson, assignors to Grand Detour Plow Company, Dixon, Ill. Riding-plow	704,274	July 8	1694	{369 370}	100	355
Rueger, Charles C., Butte, Mont. Stamp-tappet	707,259	Aug. 19	2397	537	100	1643
Rueger, Charles C., Butte, Mont. Pocket-compass	709,046	Sept. 16	1982	{458 459}	100	2416
Rueger, Charles C., Butte, Mont. Pipe-wrench	710,077	Sept. 30	4033	909	100	2871
Ruegg, Werner, Sömmerda, Germany. Safety device for shell-fuses	708,833	Sept. 9	1542	353	100	2300
Ruggles, Nelson J., Columbus, Ohio. Wall-plaster	708,591	Sept. 9	1057	------	100	2306
Ruley, William W. (See Donnelly, James H., assignor.)						
Rulf, Ari, Brussels, Belgium. Apparatus for carbonating liquids	705,115	Aug. 5	208	43	100	1159
Rumney, Fred A., East Somerville, Mass., assignor to United Shoe Machinery Company, Paterson, N. J. Machine for setting eyelets	707,643	Aug. 26	3146	708	100	1815
Rumney, Fred A., East Somerville, Mass., assignor to United Shoe Machinery Company, Paterson, N. J. Machine for setting eyelets	707,644	Aug. 26	3150	{708 709}	100	1816
Rundell, Albert L., Providence, R. I., assignor of one-half to E. G. Davis, Plainfield, Conn. Ash-sifter	708,257	Sept. 2	486	111	100	2079
Rundell, William, Plymouth, England. Sash-fastener	704,580	July 15	2278	494	100	492
Runnalls, Richard, Westerly, R. I. Corkscrew	708,667	Sept. 9	1201	274	100	2236
Rüping, Max, Charlottenburg, Germany. Impregnating wood	709,799	Sept. 23	3486	------	100	2743
Rupp, Charles, assignor to J. S. Thorne Company, Philadelphia, Pa. Automatic releasing device for window-sashes	709,800	Sept. 23	3487	785	100	2743
Rupp, Peter. (See Studer and Rupp.)						
Runtz, Henry, Chicago, Ill. Display-holder for neckties	705,149	July 22	3434	746	100	745

Schmitz, Cornelius, Godesberg, Germany. Apparatus for continuous beer production	710,396	Sept. 30	4026	1043, 1044	100	2906
Schmitz, Frank. (See Bitner, Harry, assignor.)						
Schmitz, Frank, Chicago, Ill. Banana-shipping case	710,016	Sept. 30	3923	896	100	2848
Schmitz, Frank, Chicago, Ill. Banana-shipping case	710,017	Sept. 30	3924	896	100	2848
Schmitz, Wilhelm, Elberfeld, assignor to Continentale Gesellschaft für Elektrische Unternehmungen, Nuremberg, Germany. Suspended railway-vehicle	708,175	Sept. 2	330	79	100	2048
Schneck, Fredrick. (See Straeten and Schneck.)						
Schneekloth, Hans A., New York, N. Y. Cigar-machine	705,872	July 29	4917	1069, 1070	100	1055
Schneider, Charles P. E., and J. B. G. A. Canet, La Creuzot, France. Apparatus for sighting guns with independent line of sight	706,345	Aug. 5	685	148, 149	100	1254
Schneider, Frederick, New York, N. Y. Overshoe for horses	708,608	Sept. 9	1202	274	100	2236
Schneider, George, Newport, Ky. Tongueless buckle	706,857	Aug. 12	1661	372	100	1474
Schneider, George, Newport, Ky. Crupper	707,808	Aug. 26	3044	821	100	1918
Schneider, Henry C., North Milwaukee, Wis. Extension-table	705,711	July 29	4640	1005	100	998
Schneider, Hermann. (See Fischer and Schneider.)						
Schneider, John, Newark, N. J. Leather-stretching clamp	707,809	Aug. 26	3045	821	100	1918
Schneider, Louis H. (See Barlow, Howard E., assignor.)						
Schneider, William, Chicago, Ill., assignor to Whitfield Company, Memphis, Tenn. Telescopic compound engine	707,647	Aug. 26	3156	710	100	1817
Schneider, William J. (See Williams, Michael, assignor.)						
Schneller, John P., Catasauqua, Pa. Heat-radiator for smoke-pipes	709,051	Sept. 16	1998	455	100	2419
Schoeler, Felix, Berlin, Germany. Instrument for measuring the degree of exposure to light	707,164	Aug. 19	2225	499	100	1605
Schoen, Charles T. (See Loss, Henrik V., assignor.)						
Schoenmehl, Charles B., Waterbury, Conn. Galvanic battery	705,616	July 29	4463	968	100	904
Schoff, Frederic. (See Jackson, James H., assignor.)						
Schofield, Arthur F., Westford, Conn. Calk-equipped horseshoe	706,305	Aug. 5	393	84	100	1197
Schofield, Ernest, Leeds, England. Excavator for trenches, cuttings, or the like	708,972	July 1	1110	240	100	220
Schofield, George W., Brooklyn, N. Y. Amusement or roundabout apparatus	708,884	Sept. 9	1546	353, 854	100	2310
Schofield, George W., Brooklyn, N. Y. Merry-go-round	708,885	Sept. 9	1549	354	100	2310
Schofield, Robert, assignor of two-thirds to C. Burgess, New Bedford, Mass. Skewer for bobbins	704,584	July 15	2284	496	100	492
Schofield, Silas C., Freeport, Ill. Tool-guide for grindstones	709,177	Sept. 16	2945	510	100	2472
Schofield, Silas C., Freeport, Ill. Tool holder and guide for grindstones	709,178	Sept. 16	2946	510, 511	100	2472
Scholer, August, Pittsburg, Pa. Metallic tie and rail-fastener	705,617	July 29	4465	968	100	904
Scholl, Albert, Mannheim, Germany. Apparatus for raising liquids by means of steam or compressed air	708,699	Sept. 9	1203	274, 275	100	2236
Schön, Frank, New York, N. Y. Mandrel for paper-rolls	708,740	Sept. 9	1337	305	100	2265
Schöning, William, Christiania, Norway. Preserving eggs	709,583	Sept. 23	3062	.....	100	2662
Schooley, Frank W., assignor of one-half to B. L. Hiatt, Dublin, Ind. Wire-reel truck	709,992	Sept. 30	3760	849, 850	100	2818
Schorno, Antony. (See Reichlin, Xaver, assignor.)						
Schott, George. (See Watts, Louis A., assignor.)						
Schott, John B., Quincy, Ill. Overdraw-check for bridles	708,410	Sept. 2	779	166	100	2131
Schrag, John J., assignor of one-half to T. L. Gourley, Toledo, Ohio. Switch-stand	707,360	Aug. 19	2592	595	100	1683
Schramm, Adolph W., Philadelphia, Pa., assignor to Electro Dental Manufacturing Company, Camden, N. J. Dental engine	704,937	July 15	2986	640	100	640
Schreck, Conrad J., Gallipolis, Ohio. Safety-harness for children	708,463	July 1	191	46	100	40
Schreiner, Joseph, Irvington, N. J., assignor to Rubber and Celluloid Harness Trimming Co. Brush	709,610	Sept. 23	3124	696	100	2670
Schrock, Harvey J., Goshen, Ind. Folding crate	706,692	Aug. 12	1837	397	100	1405
Schroedter, August, Berlin, Germany. Apparatus for filling bottles or jugs with beer	704,886	July 8	1906	412, 413	100	402
Schuldt, Henry J., assignor to P. W. Herzog, St. Paul, Minn. Street-car fender	705,150	July 22	3435	746, 747	100	745
Schulte, Eduard. (See Brejcha and Schulte.)						
Schulteis, Albert, *et al.* (See Fillmore, George M., assignor.)						
Schulz, Adolph, Chicago, Ill. Plow	707,726	Aug. 26	3222	743	100	1851
Schulz, Arthur, Friedenau, Germany. Means for moving heavy loads	704,887	July 8	1908	413	100	403
Schulz, Henry, New York, N. Y. Machine for winding drum-armatures	709,179	Sept. 16	2947	511, 512, 513	100	2473
Schulz, Richard, Berlin, Germany. Combined superheater and steam-generator	707,021	Aug. 12	1946	435, 436, 437	100	1580
Schulz, Richard, Berlin, Germany. Steam-turbine	707,727	Aug. 26	3224	743, 744	100	1852
Schulz, Richard, Berlin, Germany. Oil-separator	707,728	Aug. 26	3226	745	100	1852
Schulze, Carl W. R., Leipsic, Germany. Perambulator	706,864	Aug. 12	1658	371	100	1474
Schuman, Alexander C., assignor to S. Coleman, Louisville, Ky. Adding-machine	704,998	July 15	2988	640, 641	100	641
Schuman, Alexander C., assignor to S. Coleman, Louisville, Ky. Calculating-machine	709,368	Sept. 16	3007	587, 588	100	2551
Schuman, Alexander C., assignor to S. Coleman, Louisville, Ky. Computing-machine	709,368	Sept. 16	3019	589, 590	100	2553
Schuman, Alexander C., assignor to S. Coleman, Louisville, Ky. Dating attachment for calculating-machines	709,364	Sept. 16	3035	590, 591	100	2556
Schuman, Alexander C., assignor to S. Coleman, Louisville, Ky. Calculating-machine	709,365	Sept. 16	3035	591	100	2556
Schureman, David S., Rockford, Ill. Water-closet	710,342	Sept. 30	4380	1021, 1022	100	2978

Stillwell, Wendell H., Davenport, Iowa. Car-coupling	706,273	Aug. 5	545	117	100	1225
Stilwell-Bierce & Smith-Vaile Co. (See Giesler, Arthur, assignor.)						
Stilwell, Charles B., Philadelphia, Pa. Savings-bank	707,875	Aug. 26	3653	823	100	1915
Stimpson, Charles, Plainfield N. J. Sash-lock	704,279	July 8	1705	372	100	358
Stimpson, Edward S., assignor to Draper Company, Hopedale, Mass. Shuttle-binder for looms	703,498	July 1	215	51	100	45
Stimpson, Edward S., assignor to Draper Company, Hopedale, Mass. Thread-parter for looms	704,715	July 15	2497	540	100	538
Stimpson, Edward S., assignor to Draper Company, Hopedale, Mass. Filling-replenishing loom	710,023	Sept. 30	3932	898	100	2849
Stimpson, Edward S., assignor to Draper Company, Hopedale, Mass. Let-off-arresting mechanism for looms	710,024	Sept. 30	3935	868	100	2850
Stimpson, Edwin B., Brooklyn, N. Y. Locking device for use in punching-machines or the like	703,747	July 1	699	152	100	137
Stimpson, Edwin B., Brooklyn, N. Y. Tab-cutting machine	703,748	July 1	691	153	100	138
Stimpson, Edwin B., Brooklyn, N. Y. Adjustable guide	703,749	July 1	693	153	100	138
Stimpson, Edwin B., Brooklyn, N. Y. Machine for setting buttons	707,274	Aug. 19	2437	546 547	100	1652
Stimpson, Walter F., Milan, Mich. Brick-machine	707,275	Aug. 19	2441	548	100	1653
Stimpson, Walter F., Detroit, Mich. Brick-machine	707,276	Aug. 19	2444	549	100	1654
Stimson, Alfred T., Eureka, Cal. Rotary engine	704,280	July 8	1706	372 373	100	359
Stimson, Charles W., New York, N. Y. Clasp	706,272	Aug. 5	543	117	100	1225
Stimson, Charles W., New York, N. Y. Corset	710,220	Sept. 30	4323	972	100	2933
Stimson, David S., and A. Stevenson, Kittery, Me. Pinless hinge	704,590	July 15	2293	498	100	494
Stinebring, George W., Shreve, Ohio. Frictional gearing	705,714	July 29	4647	1006 1007	100	1000
Stipp, Edwin M., Leakey, Tex. Stack former and protector	706,610	Aug. 12	1184	262 263	100	1371
Stirling Company. (See Prentice and Gregory, assignors.)						
Stirrett, George, Brandon, Canada. Grain-car door	709,247	Sept. 16	2387	540	100	2503
Stobbs, Matthew, and J. S. Thompson, Sydney, New South Wales, Australia. Combined road-cleaner, elevator, and dirt-cart	705,478	July 22	4122	896	100	884
Stock, Friedrich. (See Lauber and Stock.)						
Stockett & Co., William E. (See Riordon, Robert R., assignor.)						
Stockett, John W., Washington, D. C. Breech-loading ordnance	705,157	July 22	8445	749	100	747
Stocks, Lucy H., Leeds, England. Means or apparatus for cooking eggs	704,140	July 8	1465	313	100	308
Stoelting, Charles T., St. Louis, Mo. Street-car fender	704,141	July 8	1467	314	100	308
Stokes, Charles F., Chicago, Ill., and C. E. McGlinchey, Highlandville, Mass.; said McGlinchey assignor to said Stokes. Motion-transmitting device	705,624	July 29	4474	970 971	100	966
Stoll, Heinrich, Reutlingen, Germany, assignor to National Knitting Co., Milwaukee, Wis. Knitting-machine	708,786	Sept. 9	1427	328	100	2283
Stoltz, Peter, Berlin, Germany. Steam-generator	709,871	Sept. 16	2644	593	100	2558
Stone, Clarence, assignor of one-half to A. R. Grever, Philadelphia, Pa. Variable-speed gearing	706,611	Aug. 12	1185	263	100	1371
Stone, David K., and W. W. Healy, Bloomingdale, Mich. Coin-controlled vending-machine	705,477	July 22	4120	896	100	884
Stone, Enoch G., assignor of one-half to D. A. Robinson, Bloomington, Tenn. Automatic vehicle-brake	704,281	July 8	1710	373	100	360
Stone, George, assignor to M. T. Stevens and Sons, North Andover, Mass. Yarn-drying apparatus	705,158	July 22	8448	749 750 751	100	747
Stone, Marie L., Toronto, Canada. Cooking or heating oil-stove	708,508	Sept. 2	909	206	100	2166
Stonebraker, Jeremiah, Barnesville, Ohio. Shade-roller hanging apparatus	708,090	Sept. 2	103	39	100	2015
Stones, William G., assignor to Smoke Preventer Company, Limited, Blackburn, England. Fuel-feeding apparatus. (Reissue)	12,023	Aug. 19	2916	659 660	100	1751
Storm, Edwin R., New York, N. Y. Printing-plate holder	708,676	July 1	556	125	100	110
Storrs, Charles P., *et al.* (See Henderson, Thomas M., assignor.)						
Storrs, Charles P., Wilmington, Del. Screw-jack	707,730	Aug. 26	3329	745	100	1953
Storrs, Eugene R., Cripplecreek, Colo. Sweep-operated hoisting-windlass	705,880	July 29	4984	1078	100	1058
Stout, William H., Dayton, Ohio. Machine for making veneer boxes	706,274	Aug. 5	546	118 119 120	100	1226
Stovall, Phillip E. (See Goodwyn and Stovall.)						
Stover, James R., Coraopolis, Pa. Stove-damper attachment	707,866	Aug. 19	3602	588	100	1695
Stowe, Benjamin L., Jersey City, N. J. Hydraulic or fire hose	706,466	Aug. 5	938	205	100	1305
Stowell, Ellery, Denver, Colo. Hoisting device	704,222	July 8	1602	347	100	335
Stowell, Henry F., Rochester, N. Y. Separable garment-supporting button attachment	705,476	July 22	4119	895	100	893
Strache, Hugo, Vienna, Austria-Hungary. Apparatus for generating water-gas	704,619	July 1	435	101	100	86
Straeten, Hubert, and F. Schneck, Chicago, Ill. Grate for boilers	706,275	Aug. 5	552	120	100	1227
Straight, Bennett D., Chicago, Ill. Rotary hand-fan	708,091	Sept. 2	165	39	100	2015
Strand, John, Mankato, Kans. Corn-harvester	709,424	Sept. 16	2738	615 616	100	2377
Strang, Henrik C., Chicago, Ill. Engine-governor	709,059	Sept. 16	2008	457 458	100	2422
Strang, Henrik C., Chicago, Ill. Four-cycle explosive-engine	709,060	Sept. 16	2011	458 459	100	2423
Strange, Edward H., London, and E. Graham, Tilehurst, assignors of one-half to E. R. Burrell, Milwall, London, England. Manufacture of varnishes	708,935	Sept. 9	1729	400	100	2343
Strattan, Samuel R., Washington, D. C. Paper-clip	709,523	Sept. 23	2085	665	100	2542
Strattner, Frederick, Salisbury, Md. Air-brake valve	708,092	Sept. 2	166	39	100	2015
Stratton, Eugene, and F. A. Cole, New York, N. Y. Guard for heel-trimming and edge-trimming machines	710,343	Sept. 30	4532	1023	100	2978

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Straub, Jacob, Campbellsport, Wis. Loading apparatus	704,142	July 8	1468	314	100	308
Straus, Max, Denver, Colo. Hand-strap for street-railway cars	704,143	July 8	1470	315	100	308
Streat, Herbert G., New York, N. Y. Necktie	704,591	July 15	2295	498	100	495
Street, Ernest A. G., Paris, assignor to Société Anonyme le Carbone, Levallois-Perret, near Paris, France. Electric battery	707,781	Aug. 26	3331	746	100	1853
Strickler, Levi, and C. H. Fisk, Richmond, Ind. Window-curtain fixture	710,377	Sept. 30	4590	1035	100	2988
String, Benjamin T., assignor to C. R. Mullen, Philadelphia, Pa. Button-sewing machine	706,124	Aug. 5	222	47	100	1162
Strobel & Brown. (See Brown, Henry W., assignor.)						
Stroh, George, assignor of one-half to G. Osius, Detroit, Mich. Ammonia-still	710,231	Sept. 30	4325	972 973	100	2984
Strohm Elevator Safety Device Company. (See Strohm, Samuel D., assignor.)						
Strohm, Samuel D., assignor to Strohm Elevator Safety Device Company, Philadelphia, Pa. Safety device for elevators	706,479	July 22	4123	897 898	100	884
Strohm, Samuel D., assignor to Strohm Elevator Safety Device Company, Philadelphia, Pa. Safety device for elevators	706,480	July 22	4128	898	100	885
Strom, Axel A., assignor to Strom Manufacturing Company, Chicago, Ill. Structural-metal beam	708,936	Sept. 9	1731	400	100	2349
Strom, Axel A., assignor to Strom Manufacturing Company, Chicago, Ill. Switch-stand	709,614	Sept. 23	3131	697 698	100	2671
Strom Manufacturing Company. (See Strom, Axel A., assignor.)						
Stromborg, Fritz O., Braddock, Pa. Apparatus for rolling sheet metal	703,620	July 1	437	101	100	86
Strong, Robert H., assignor of two-thirds to W. O. R. Bradley and J. P. McCaffery, Galesburg, Ill. Machine for affixing postage-stamps or labels upon envelops, cards, &c.	708,423	Sept. 2	760	171	100	2135
Strong, Robert H., assignor of two-thirds to W. O. R. Bradley and J. P. McCaffery, Galesburg, Ill. Stamp-affixing machine	708,424	Sept. 2	762	171	100	2135
Strong, William J., Brooklyn, N. Y. Valve mechanism for coin-controlled gas-vending machines	704,950	July 15	3011	646 647	100	646
Stroud, William T. (See Rhoades, Cicero, assignor.)						
Stuart, Charles, Paterson, N. J. Intensifying the luster of silk fiber	705,715	July 29	4649	1007	100	1000
Stuart, Charles, Paterson, N. J. Machine for lustering silk	705,716	July 29	4650	1007 1008	100	1000
Stuart, Charles, Paterson, N. J. Intensifying the luster of silk	709,524	Sept. 23	2987	665	100	2643
Stuart, Henry C., *et al.* (See Morrell, James A., assignor.)						
Studer, Peter, and P. Rupp, Whitehouse, Ohio. Rotary engine	708,937	Sept. 9	1732	401	100	2349
Studnicka, Albert J., Minneapolis, Minn. Drill-chuck	709,061	Sept. 16	2013	459	100	2423
Stukes, John M., San Antonio, Tex. Preserving and storing building	706,125	Aug. 5	225	47, 48	100	1163
Stull, Emmett W. (See Merrick and Stull.)						
Stull, Emmett W., Johnstown, assignor, by mesne assignments, to Westinghouse Electric and Manufacturing Company, Pittsburg, Pa. Controller for electric motors	709,182	Sept. 16	2259	514	100	2475
Stumpf, John, Berlin, Germany. Compressor	706,276	Aug. 5	554	129	100	1227
Stupar, Frederick. (See Stupar, Joseph and F.)						
Stupar, Joseph and F., Chicago, Ill. Switch-operating device	709,183	Sept. 16	2264	514 515	100	2476
Stuparich, Paul J., San Francisco, Cal. Device for the manufacture of photographic card-mounts	708,675	Sept. 9	1212	276	100	2238
Sturges, James D., Buffalo, Minn. Cow-tail holder	709,937	Sept. 30	3768	851	100	2814
Sturgiss, Wilbur R., Conway, Ark. Clamp-buckle or fastener for bale-ties or the like	707,034	Aug. 12	1969	441	100	1585
Sturmey, John J. H., Coventry, England. Hinge-joint	703,499	July 1	216	51	100	45
Submerged Electric Motor Company. (See Hatch, Tracy B., assignor.)						
Sullivan, Daniel F., Lowell, assignor of one-half to M. J. Sullivan, Randolph, Mass. Knitting-machine	703,973	July 1	1112	240 241	100	220
Sullivan, David M., assignor of one-half to C. Cone, Greensboro, N. C. Creel for selvage-spools on slashers	709,833	Sept. 23	3512	798	100	2756
Sullivan, James, New York, N. Y. Antirattler for awning-fixtures	704,227	July 8	1924	417	100	405
Sullivan, Joseph H. (See Sanker and Sullivan.)						
Sullivan Machinery Co. (See Officer, Thomas, assignor.)						
Sullivan, Michael J. (See Sullivan, Daniel F., assignor.)						
Sullivan, Michael J., Springfield, Ohio. Gas-engine ignition-regulator	705,881	July 29	4936	1073 1074	100	1039
Sullivan, William T., Cincinnati, Ohio. Artist's sketch-book	708,500	July 1	218	51	100	45
Sulman, Henry L., and H. F. Kirkpatrick-Picard, London, England. Treatment of ore-slimes	708,504	Sept. 2	910	206	100	2166
Sulphur Elimination Syndicate. (See Gutensohn, Adolph, assignor.)						
Sulzbach & Co., H. (See Wieser, Daniel, assignor.)						
Sulzbacher, Jerome, New York, N. Y. Garment-supporter	707,876	Aug. 26	3655	823	100	1915
Sulzbacher, Jerome, New York, N. Y. Clasp or buckle	707,877	Aug. 26	3658	823	100	1916
Sulzer, Gebrüder. (See Sulzer, Heinrich, assignor.)						
Sulzer, Heinrich, assignor to Gebrüder Sulzer, Winterthur, Switzerland. Centrifugal pump	704,144	July 8	1471	315	100	309
Sumrall, Jessie D. (See Wells and Sumrall.)						
Summers, Samuel L., Philadelphia, Pa. Methylene disalicylic acid and making same	706,354	Aug. 5	701	.....	100	1258
Summers, Samuel L., Philadelphia, Pa. Acet salicyl phenetidin and making same	706,355	Aug. 5	702	.....	100	1258
Summers, Samuel L., Philadelphia, Pa. Acet salicyl phenetidin and making same	706,356	Aug. 5	703	.....	100	1258
Summers, Samuel L., Philadelphia, Pa. Methylene di-aceto di-salicylic acid and making same	707,178	Aug. 19	2257	.....	100	1618
Summers, Samuel L., Philadelphia, Pa. Camphoric-acid ester of methylene diguaiacol and making same	707,278	Aug. 19	2449	.....	100	1654
Summerton, Thomas, Christchurch, New Zealand. Apparatus for operating Venetian blinds	708,425	Sept. 2	765	172	100	2136
Sumner & Goodwin Company. (See Curtis, Nelson, assignor.)						
Sumner, William J., assignor of one-half to A. A. Coburn, Holyoke, Mass. Caster	706,209	Aug. 5	397	85	100	1198
Sundean, John M., Lincoln, Nebr. Suspenders	706,357	Aug. 5	704	153	100	1258
Sunderland, Wilfred W. (See Grimes, Sunderland, and Ellerman.)						
Sundh, August, Yonkers, N. Y., assignor to Otis Elevator Company, East Orange, N. J. Safety device	704,398	July 8	1925	417	100	405
Sundh, August, Yonkers, N. Y., assignor to Otis Elevator Company, East Orange, N. J. Electric controlling apparatus for elevators	706,136	Aug. 5	226	48	100	1163
Sundh, August, Yonkers, assignor to Electrite Company, New York, N. Y. Fluid-pressure electric-switch-controlling apparatus	706,478	Aug. 5	954	208	100	1308
Surbaugh, Joseph T., Arbuckle, Cal. Harness attachment	708,676	Sept. 9	1213	277	100	2238
Susemihl, Francis G., Detroit, Mich. Car-door	708,843	Sept. 9	1564	357	100	2313
Susquehanna Silk Mills. (See Klerx, Johann H., assignor.)						
Süsskind, Gottfried von, St. Georgen, Switzerland. Hydraulic press for thick fluid substances	708,180	Sept. 2	340	80, 81	100	2061
Susstrong, Carl A. (See Smith and Susstrong.)						
Sutcliffe, Edgar R., Leeds, assignor of one-half to F. Speakman, Leigh, England. Disintegrator	705,796	July 29	4785	1088 1089	100	1089
Sutherland, James L., Mayfield, Ky. Car-coupling	706,210	Aug. 5	398	85	100	1198
Sutherland, James O., *et al.* (See Hart, Frank, assignor.)						
Sutherland, Lucy A., Chicago, Ill. Hook and eye	705,159	July 22	3451	731	100	748

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Sutherland, Thomas, Hutchinson, Minn. Wire-fabric machine	708,679	Sept. 9	1213	277, 278, 279, 280	100	2238
Suttle, Willis A., Austin, Tex. Coupling for connecting handles to tools	705,973	July 29	5100	1111	100	1092
Sutton, Henry M., W. L. Steele, and M. Coerver, Dallas, Texas. Electrically-protected structure	708,093	Sept. 2	109	89	100	2016
Sutton, Thomas W., Pittsburg, Pa. Trolley	705,882	July 29	4940	1074	100	1069
Swan, James, Topeka, Kans. Journal-bearing	708,974	July 1	1114	241	100	221
Swan, Morton G., and E. H. Richardson, North Ontario; said Swan assignor to F. J. Kimball, Los Angeles, Cal. Machine for brushing and cleaning fruit, part of which is applicable to fruit-graders	709,562	Sept. 23	3044	678	100	2653
Swan, William G., Detroit, Mich. Draft-rigging for cars	704,716	July 15	2500	541	100	588
Swaney, Fletcher D., assignor of one-half to H. Galer, Kansas City, Kans. Ice-can	705,883	July 29	4942	1074	100	1069
Swannell, Joseph, Redbank, N. J. Strip for securing glass panes	710,025	Sept. 30	3939	890	100	2851
Swanson, John, Wadena, Minn. Grass-cutting machine	710,282	Sept. 30	4325	973	100	2834
Swanson, John A., Auburn, Kans. Oil-can spout	705,160	July 22	3452	751	100	748
Swarm, Emery E., Calamus, assignor to Swarm Fence Builder Tool Company, Davenport, Iowa. Wire-stretcher	707,782	Aug. 26	3331	746	100	1853
Swarm Fence Builder Tool Company. (See Swarm, Emery E., assignor.)						
Sweder, August M., Marquette, Mich. Reversing friction-clutch	706,277	Aug. 5	536	121	100	1228
Sweder, August M., Marquette, Mich. Reversing-clutch	706,479	Aug. 5	957	209	100	1309
Sweeney, Henry G., assignor to F. G. Kammerer, Chicago, Ill. Coin-controlled device	708,621	July 1	440	102	100	86
Sweeney, Henry G., assignor to F. G. Kammerer, Chicago, Ill. Glass-rinsing device	708,844	Sept. 9	1567	358	100	2314
Sweeney, James P. and T. W., assignors of one-third to W. N. Wylie, Tarentum, Pa. Window-shade and curtain-pole bracket	708,505	Sept. 2	912	207	100	2166
Sweeney, Samuel, San Francisco, Cal. Refrigerator, freezer, and churn	704,768	July 15	2602	563	100	558
Sweeney, Thomas W. (See Sweeney, James P. and T. W.)						
Sweet, John E., Syracuse, N. Y. Ingot-mold	707,279	Aug. 19	2450	550	100	1654
Sweet, Larntine C., Loami, Ill. Furrow opening and covering attachment for seed-drills	710,378	Sept. 30	4502	1036	100	2989
Swenson, James E. (See McLaughlin and Swenson.)						
Swift and Company. (See Davis, David I., assignor.)						
Swift, Frank E., Washington, Iowa. Continuous kiln	708,848	July 1	870	191, 192	100	174
Swift, Wilbur L., and E. Burk, New York, N. Y., assignors to Union Special Sewing Machine Company, Chicago, Ill. Folder for sewing-machines	706,278	Aug. 5	559	121	100	1228
Swindell, William E., Moberly, Mo. Attachment for cutting follies or the like	707,179	Aug. 19	2258	545	100	1618
Swinscoe, Henry K., and E. J. McCarty, Clinton, Mass. Flue-scraper	710,344	Sept. 30	4533	1023, 1024	100	2978
Swisher, Thomas J., V. A. A. and E. Burger, Kokomo, Ind. Wagon-brake	710,345	Sept. 30	4535	.....	100	2979
Sykes, Payson T. (See Emery, William H., assignor.)						
Synnestvedt, Paul, Glenview, Ill., assignor to Westinghouse Air Brake Company, Pittsburg, Pa. Engineer's brake-valve	708,677	July 1	550	126	100	111
Szczepanik, Jan, Vienna, Austria-Hungary, assignor to Barmer Bank-Verein, Hinsberg, Fischer & Comp., Barmen, Rhenish Prussia, Germany. Producing weaving-diagrams	708,849	July 1	872	192, 193	100	174
Szczepanik, Jan, assignor to Société des Inventions Jan Szczepanik & Cie., Vienna, Austria-Hungary. Producing weaving-diagrams	708,850	July 1	875	193	100	175
Szczepanik, Jan, assignor to Société des Inventions Jan Szczepanik & Cie., Vienna, Austria-Hungary. Producing weaving-diagrams	708,851	July 1	879	194	100	176
Szentjanossy, Sigmond, New York, N. Y. Cooking apparatus	706,906	Aug. 5	393	84	100	1197
T. B. Laycock Manufacturing Company. (See Tucker, William, assignor.)						
Taber, Arthur L., Corona, Cal. Hanger for window-screens	704,667	July 15	2419	523	100	521
Tabouret, Emile E., Brussels, Belgium. Making decorative tiles	708,680	Sept. 9	1220	280	100	2240
Taft, Frank E., Jamestown, N. Y. Stovepipe-ventilator	709,525	Sept. 23	2989	666	100	2643
Tagliani, Ernesto. (See Lepetit and Tagliani.)						
Taisey, Fred R., assignor to Taisey Pneumatic Service Company, Indianapolis, Ind. Inlet for pneumatic-despatch tubes	705,884	July 29	4944	1075	100	1060
Taisey Pneumatic Service Company. (See Taisey, Fred R., assignor.)						
Tait, John B., Highbridge, N. J. Sulky	708,496	Sept. 2	706	172	100	2135
Talbert, William F., Funkstown, Md. Corn-planter	707,733	Aug. 26	3332	746	100	1853
Talbot, Richard, and W. Rossetter, assignors to Blackburn Loom and Weaving Machinery Making Company, Limited, Blackburn, England. Weft-replenishing mechanism for looms	710,379	Sept. 30	4506	1026	100	2989
Taliaferro, James M., Lynchburg, Va. Tobacco-ordering chamber	709,988	Sept. 30	3769	851, 852	100	2815
Taliaferro, John C. (See Hodgson and Taliaferro.)						
Taliaferro, John C., and C. M. Reynard, Baltimore, Md. Tin-plate-cleaning machine	709,184	Sept. 16	2266	515, 516	100	2476
Talley, Felix W., New York, N. Y. Attachment for bicycles	704,145	July 8	1472	315	100	809
Taluau, Julius, assignor of one-half to H. W. Scattergood, Philadelphia, Pa. Stained-glass window or similar object and making same	704,399	July 8	1927	417	100	406
Taluau, Julius, assignor of one-half to H. W. Scattergood, Philadelphia, Pa. Framing glass	704,401	July 8	1931	418	100	407
Taluau, Julius, and H. W. Scattergood, Philadelphia, Pa. Framing glass	704,400	July 8	1928	417	100	406
Tamboer, John, Paterson, N. J. Non-refillable bottle	705,481	July 22	4130	898	100	885
Taplin, Homer E., Lawrence, Mass. Connector for sweep-sticks and picker-sticks of looms	708,745	Sept. 9	1546	307	100	2267
Taroli, Peter, Delray, Mich. Wrench	706,127	Aug. 5	231	48	100	1164
Tarrant, Arthur J. (See Smith and Tarrant.)

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Warner, Isaac M., assignor to F. C. Boise, Union City, Mich. Wire-fence stretcher	705,498	July 22	4166	907	100	891
Warner, Isaac M., assignor to F. C. Boise, Union City, Mich. Telephone or telegraph pole	708,277	Sept. 2	521	119	100	2087
Warner, Isaac M., assignor to F. C. Boise, Union City, Mich. Fence-post	709,835	Sept. 23	3544	799	100	2757
Warner, Lorin V., Cassopolis, Mich. Spring draft attachment	704,604	July 15	2816	503	100	409
Warner, William L., Chicago, Ill. Heater	709,947	Sept. 30	3787	855	100	2819
Warren, Ambrose G., assignor of one-half to J. W. Paxson Company, Philadelphia, Pa. Sand-blast apparatus	707,597	Aug. 19	2899	656	100	1747
Warren, Bernard J., Dover, Me. Fishing-rod holder	704,991	July 15	3105	669	100	668
Warren, Clinton J., Chicago, Ill. Bottling-machine	707,737	Aug. 26	3341	748 749 750 751 752 753 754	100	1855
Warren, Clinton J., Chicago, Ill. Machine for applying labels to bottles	707,738	Aug. 26	3354	751 752 753	100	1857
Warren, Clinton J., Chicago, Ill. Machine for wiring corks in bottles	707,739	Aug. 26	3358	754 755 756	100	1858
Warren, Clinton J., Chicago, Ill. Bottle-washing machine	707,740	Aug. 26	3362	756 757 758	100	1858
Warren, Clinton J., Chicago, Ill. Machine for corking bottles	707,923	Aug. 26	3878	871 872	100	1960
Warren, Clinton J., Clinton, Ill. Bottle-filling machine	707,904	Aug. 26	3883	872 873	100	1961
Warren, Edward K., and J. H. Holden, Threeoaks, Mich. Woven feather fabric	709,620	Sept. 23	3142	700	100	2674
Warren, Edward K., and J. H. Holden, Threeoaks, Mich. Woven feather fabric	709,621	Sept. 23	3143	700	100	2674
Warren, Edward K., and J. H. Holden, Threeoaks, Mich. Woven feather fabric	709,622	Sept. 23	3144	700	100	2674
Warren, George E. (See Gordon and Warren.)						
Warren, George E., Boston, Mass., assignor to Metallic Heel and Counter Company, Kittery, Me. Machine for making pieced soles	706,615	Aug. 12	1194	265	100	1873
Warren, Henry E., Newton, assignor to Lombard Governor Company, Boston, Mass. Relief-valve for reservoirs containing fluid under pressure	708,687	July 1	581	129	100	115
Warren, John E. (See Fassett and Warren.)						
Warren, John W., Omaha, Nebr. Purifying hydrocarbon oils	705,168	July 22	3467		100	751
Warring, Franklin B. (See Caton and Warring.)						
Warring, Franklin B., assignor to Caton's Foundry and Machine Company, San Jose, Cal. Hydrocarbon-feeder for explosive-engines	709,428	Sept. 16	2745	617	100	2579
Wash-Board Pail Company. (See Libenow, Ferdinand E., assignor.)						
Washa, William, New York, N. Y. Danger-signal for railways	710,383	Sept. 30	4002	1088 1089	100	2991
Washburn, Edwin C., Minneapolis, Minn. Draft-rigging for engines and cars	705,169	July 22	3468	754 755	100	751
Washburn, Theodore W., assignor to Wait Chair Company, Baldwinsville, Mass. Convertible chair	708,278	Sept. 2	522	119	100	2087
Washburn, Warren S., Adams Center, N. Y. Harvester	706,867	Aug. 5	724	158	100	1263
Washington, George, New Brighton, N. Y. Hydrocarbon incandescent lamp	706,504	Aug. 5	996	219	100	1318
Washington, George, New Brighton, N. Y. Gage	706,505	Aug. 5	998	220	100	1319
Wassmann, August. (See Tuck and Wassmann.)						
Waterbury Button Company. (See Smith, Joseph R., assignor.)						
Waterman, Albert P., Orange, and G. H. E. Berthold, Newark, assignors to Edison Phonograph Works, Orange, N. J. Numbering-machine	709,128	Sept. 16	2143	491 492	100	2452
Waterman, Elizabeth H., Binghamton, N. Y. Stocking-supporter	709,066	Sept. 16	2021	461	100	2494
Waterman, Lewis E., assignor to Emerson Manufacturing Company, Rockford, Ill. Disk plow	705,627	July 29	4480	971	100	967
Waterman, Lewis E., assignor to Emerson Manufacturing Company, Rockford, Ill. Wheeled plow	705,628	July 29	4482	972	100	967
Waterman, Sarah, New York, N. Y. Self-igniter	706,279	Sept. 2	523	119	100	2088
Watlington, Edgar H., Ridgewood, N. J., assignor to Sprague Electric Company, New York, N. Y. Hoisting apparatus	707,660	Aug. 26	3199	718	100	1826
Watrous, Earl G., Chicago, Ill. Water-closet valve	710,128	Sept. 30	4147	935	100	2894
Watrous, Earl G., Chicago, Ill. Valve	710,129	Sept. 30	4150	935	100	2895
Watson, Frank C. (See Dougan and Watson.)						
Watson, George A. (See Brooks and Watson.)						
Watson, Joseph G., *et al.* (See Stanley, John M., assignor.)						
Watson, Leslie J., assignor of one-half to G. F. Conner, Port Huron, Mich. Governor-valve	706,616	Aug. 12	1197	266	100	1874
Watson, Merrill, New York, N. Y. Fireproof floor construction	710,308	Sept. 30	4170	1008	100	2964
Watson, Peter B., Philadelphia, Pa. Folding reclining-chair	707,884	Aug. 26	3678	827 828	100	1921
Watson, Thomas, Bridge of Weir, assignor to E. S. Coats, Paisley, Scotland. Flier for spinning and doubling machines	708,945	Sept. 9	1748	404	100	2351
Watts, John, Akron, Ohio. Fifth-wheel	707,189	Aug. 19	2281	511	100	1630
Watts, John T., Crookston, Minn. Mechanical movement for converting motion	705,499	July 22	4168	907	100	891
Watts, Louis A., assignor of one-half to G. Schott, Cincinnati, Ohio. Adjustable curtain-bracket	708,280	Sept. 2	528	119	100	2088
Watts, Louis A., assignor of one-half to G. Schott, Cincinnati, Ohio. Adjustable shade-bracket	708,281	Sept. 2	529	120	100	2088
Watts, Louis A., assignor of one-half to G. Schott, Cincinnati, Ohio. Adjustable curtain-bracket	708,507	Sept. 2	917	208	100	2167
Watts, Thornton L., Muncy Valley, Pa. Railway-joint	707,468	Aug. 19	2786	631	100	1724
Waugh, Daniel S., Chicago, Ill. Valveless hammer	709,067	Sept. 16	2022	461	100	2495
Waugh, James M., Chicago, Ill. Draft-rigging for railway-cars	705,172	July 22	3474	756	100	752
Wauters, William M. (See Edwards and Wauters.)						
Way, Henry E., assignor of one-half to H. E. Griffith, Custer, S. D. Ore-testing tablet	704,409	July 8	1942	420	100	409
Wayman, Albert J., Dubois, Pa. Electrical connector	704,670	July 15	2423	594	100	582
Wayte, William M., Detroit, Mich. Game	707,469	Aug. 19	2788	631	100	1724
Wear, Frank F., *et al.* (See Tittle, Horatio S., assignor.)						
Weaver, Albert L. (See Winans, Daniel M., assignor.)						
Weaver, Albert S., assignor of one-half to P. Ochs, Providence, R. I. Guard for eyeglasses	710,297	Sept. 30	4338	976	100	2987
Weaver, Calvin P., Bloomsburg, Pa. Leaf-holder	704,410	July 8	1944	421	100	409
Weaver, Charles D., McPherson, Kans., assignor to Clark-Weaver Manufacturing Company, Greeley, Colo. Drying-reel	708,184	Sept. 2	346	88	100	2052

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Weaver, Charles D., McPherson, Kans., assignor to Clark-Weaver Manufacturing Company, Greeley, Colo. Shoe-lacing-tip machine	708,269	Sept. 2	526	120 121	100	2088
Weaver, William H. M., assignor of one-half to R. J. Speir, Macon, Ga. Electrical system of recording and checking as applied to railway signaling	710,348	Sept. 30	4539	1084 1085	100	2979
Webb, George B., Westfield, N. J., assignor to Wyckoff, Seamans & Benedict, Ilion, N. Y. Type-writing machine	708,866	July 1	900	198	100	180
Webb, Henry, Ashton, Mich. Machine for cutting vegetable-roots	706,368	Aug. 5	796	158	100	1363
Webb, Samuel F., and W. S. Huff, Wichita, Kans. Animal-poke	706,617	Aug. 12	1198	266	100	1874
Webb, Samuel J., Minden, La. Bale-press	706,618	Aug. 12	1200	266	100	1874
Webb, Samuel J., Minden, La. Rotary engine	709,622	Sept. 23	3145	700 701	100	2974
Webber, Mary E., Collierville, Tenn. Mosquito-canopy	709,586	Sept. 23	2995	667	100	2544
Webber, Samuel S., Trenton, N. J. Grip-actuating mechanism	706,369	Aug. 5	797	158	100	1363
Weber, Clyde R. (See Stearns and Weber.)						
Weber, Frederick C., Chicago, Ill. Electric smelting-furnace	704,996	July 15	3108	669 670	100	668
Weber, Frederick C., Chicago, Ill. Treating metallic oxids in the production of metals and alloys	705,727	July 29	4664	1011	100	1008
Weber, George A., Stamford, Conn., assignor to Weber Railway Joint Manufacturing Co., New York, N. Y. Railway-rail joint	705,179	July 22	3471	755	100	752
Weber, Henry H. (See Bastle and Weber.)						
Weber, Martin. (See Doppelmayr and Weber.)						
Weber, Moritz. (See Vogel and Weber.)						
Weber Railway Joint Manufacturing Co. (See Weber, George A., assignor.)						
Weber, William L. (See Flood, Alfred L., assignor.)						
Webster, Glenn C., assignor to Sterling Electrical Manufacturing Company, Warren, Ohio. Incandescent electric lamp	708,422	Sept. 2	773	173	100	2137
Webster, Harold A., Haverhill, Mass., assignor to Goodyear Shoe Machinery Company, Portland, Me. Tension device	704,411	July 8	1945	421	100	409
Webster, Hosea, Montclair, N. J. Superheater for steam-generators	708,435	Sept. 2	774	174	100	2138
Webster, Hosea, Montclair, N. J. Superheating steam	709,695	Sept. 23	3197	714	100	2984
Webster, J. H., *et al.* (See Fulford, Elijah D., assignor.)						
Webster, Joseph C., Philadelphia, Pa. Solder for soldering aluminium	707,470	Aug. 19	2788	.....	100	1725
Wechsler, Simon. (See Adelsberger and Friedmann, assignors.)						
Weddell, Oliver S., McKeesport, Pa. Rail-joint	707,471	Aug. 19	2789	632	100	1725
Wedderburn, George, Dunn Loring, Va. Carbureting-lamp	707,190	Aug. 19	2282	511	100	1020
Weder, Paul J., assignor to Sharp & Smith, Chicago, Ill. Veterinary surgeon's float	708,827	July 1	908	198	100	181
Weder, Paul J., assignor to Sharp & Smith, Chicago, Ill. Veterinary surgeon's float	708,828	July 1	905	198	100	181
Weder, Paul J., assignor to Sharp & Smith, Chicago, Ill. Veterinary surgeon's float	708,829	July 1	907	199	100	182
Weder, Paul J., assignor to Sharp & Smith, Chicago, Ill. Non-refillable bottle	704,994	July 15	3112	670	100	668
Wedgefuth, Louis C., New York, N. Y. Steering and braking device	704,156	July 8	1488	319	100	312
Weeber, Christian F. Jr., Albany, N. Y. Bottle-filling machine	708,870	July 1	906	199 200	100	183
Weed, Jacob E., Philadelphia, Pa., assignor of one-half to S. Twitchell Company, Camden, N. J., and Philadelphia, Pa. Bottle-filling machine	708,283	Sept. 2	532	121	100	2089
Weeks, Charles J., Tarrytown, N. Y. Postman's rack	706,457	Aug. 5	988	205	100	1305
Wegeforth, Theodore C. H. (See Fisher, Francis E., assignor.)						
Wegner, John J., Brooklyn, N. Y. Sack-race structure	705,886	July 29	4946	1075	100	1060
Wehmeyer, John W., St. Louis, Mo. Car-fender	704,615	July 15	3217	508	100	500
Weible, Thomas P., Columbus, Ohio. Non-refillable bottle	704,723	July 15	3217	544	100	542
Weichhart, John, San Francisco, Cal. Belt-carrier	706,236	Aug. 5	572	124	100	1231
Weidaw, Frank T., Syracuse, N. Y. Brush-holder	709,359	Sept. 23	3050	691	100	2855
Weidenbaker, Edmund, Chicago, Ill. Flask	707,742	Aug. 26	3369	758 759	100	1860
Weierbach, William, and E. S. Dickson, assignors to Pittsburgh Cigar Machine Company, Pittsburg, Pa. Cigar-bunching machine	706,137	Aug. 5	956	53	100	1171
Weigel, Joel, San Francisco, Cal. Clamp for tank or like hoops	707,041	Aug. 12	1981	444 445	100	1538
Weigel, Karl, Hanover, Germany. Harp	709,284	Sept. 16	2456	.....	100	2518
Weigl, Johann E., Vienna, Austria-Hungary. Matrix for stereotyping	705,801	July 22	4173	908	100	892
Weil, Brockman & Company. (See McCown, Sylvester, assignor.)						
Weil, Joseph, New York, N. Y. Necktie-fastener	704,996	July 15	3115	671	100	664
Weimer, Charles A., Carrollton, Ill. Detachable plow-point	709,187	Sept. 16	2271	.....	100	2477
Weinberg, Arthur, assignor to L. Cassella & Co., Frankfort-on-the-Main, Germany. Yellow acridin dye and making same	709,186	Sept. 16	2270	.....	100	2477
Weinberg, Arthur, and F. Klingemann, assignors to L. Cassella & Co., Frankfort-on-the-Main, Germany. Blue dye and making same	710,170	Sept. 30	4229	954	100	2912
Weindorf, Don F., Erie, Pa. Marine dock	704,255	July 8	1607	348	100	336
Weingaertner, Albert, St. Louis, Mo. Sash-balance connection						
Weingarten Bros. (See Grotta, David, assignor.)						
Weir, Max W., Newark, N. J., assignor to Densmore Typewriter Company, Syracuse, N. Y. Type-writing machine	708,509	July 1	227	55, 56	100	49
Weir, Max W., Newark, N. J., assignor to Wyckoff, Seamans & Benedict, Ilion, N. Y. Type-writing machine	706,136	Aug. 5	949	53	100	1169
Welsbrod, John F., Allegheny, Pa. Metallic railway-tie	706,788	Aug. 12	1535	344	100	1446
Weise, Paul, Lester Prairie, Minn. Combined milk strainer and ventilator	708,295	Sept. 2	584	121	100	2090
Weisenborn, George P. A., Clarence, Mo. Wire-fence machine	705,500	July 22	4170	907 908	100	893
Weisenburger, Charles O. (See Moffitt and Weisenburger.)						
Weiss, Carl W., New York, N. Y. Explosive-engine	704,995	July 15	3118	670	100	664
Weiss, Carl W., New York, N. Y. Regenerator-burner	710,130	Sept. 30	4154	936	100	2896
Weiss, Carl W., assignor of one-half to A. Mietz, New York, N. Y. Incandescent igniter for explosive-engines	708,284	Sept. 2	533	121	100	2090
Weiss, Carl W., assignor of one-half to A. Mietz, New York, N. Y. Lubricator for explosive-engines	710,086	Sept. 30	3940	869	100	2851
Weiss, Moritz, Vienna, Austria-Hungary. Pneumatic tire	707,661	Aug. 26	3500	718	100	1927
Weiss, Louis T., Flatbush, N. Y. Variable-speed gearing	705,639	July 1	455	105	100	69
Weiss, Robert, Kingersheim, near Mulhouse, Germany. Apparatus for dyeing	704,283	July 8	1715	374	100	360
Weissenthanner, Alfred L., New York, N. Y. Closure for bottles, jars, &c.	705,173	July 22	3473	756	100	753
Weisser, Mathias, Milwaukee, Wis. Telephone-transmitter	710,309	Sept. 30	4472	1036	100	2965
Welch, Abraham T., Baltimore, Md. Drier	708,603	Sept. 9	1074	243	100	2310
Welch, Abraham T., Baltimore, Md. Drier	708,605	Sept. 9	1082	244 245	100	2311
Welch, Abraham T., Baltimore, Md. Drier	708,604	Sept. 9	1087	244	100	2312
Welch, Abraham T., Baltimore, Md. Heating materials for the purpose of drying or treating	708,946	Sept. 9	1750	404	100	2952
Welch, E. Baker, *et al.* (See Robinson, Thomas C., assignor.)						
Welch, Edwin K., Philadelphia, Pa. Mortar composition	708,188	Aug. 5	957	.....	100	1171

Welch, H. Augusta, *et al.* (See Robinson, Thomas C., assignor.)						
Welch, Rosia W., assignor, by mesne assignments, to Southern Rice Polishing Machine Company, Baltimore, Md. Machine for cleaning rice, &c.	705,985	July 29	5119	1116	100	1096
Wellington, Frank O., Braintree, assignor to Fore River Ship and Engine Company, Quincy, Mass. Conduit-clamp	705,984	July 29	5118	1116	100	1096
Wellman, Arthur W., Madison, Wis. Woven-wire fencing	707,743	Aug. 26	3373	759	100	1861
Wellman, David L., Frasee, Minn. Flax-harvester	706,848	Sept. 9	1576	359 360	100	2816
Wellman, Harold R., New York, N. Y., assignor to General Incandescent Arc Light Company of New York. Case for fan-motors	708,105	Sept. 2	190	45	100	2081
Wellman, Louis P., West New York, N. J. Stirrup-strap	705,469	Aug. 5	941	205	100	1305
Wellman-Seaver-Morgan Engineering Company. (See Seaver, John W., assignor.)						
Wellman, Willard F., Belmont, Me. Roller-bushing for sheaves	710,088	Sept. 30	4060	915	100	2876
Wells, Channing M., Southbridge, Mass. Spectacle or eyeglass case	705,502	July 22	4174	908	100	892
Wells, Charles G., Hartford, assignor to Pouleur and Wells, Windsor, Conn. Machine for stringing tobacco	708,434	Sept. 2	775	174	100	2138
Wells, Frank A., New York, N. Y. Water-closet	708,106	Sept. 2	191	45	100	2081
Wells, James A., and J. D. Sumrall, Knight, Tex. Current-wheel	705,871	July 1	912	200	100	183
Wells, Jesse O., Des Moines, Iowa. Traction-engine	705,872	July 1	913	200 201	100	183
Wells, John F., *et al.* (See Harrington, Louder, assignor.)						
Wells, Luther, Versailles, Ky. Water-elevator	709,809	Sept. 23	3499	789	100	2746
Wells, Nelson D. (See Couch and Wells.)						
Welter, Samuel, and J. Armstrong, Chicago, Ill., assignors to Armstrong Bros. Tool Co. Tool-holder	707,472	Aug. 19	2791	632	100	1725
Welty, Joel, Fort Wayne, Ind. Machine for cutting and bending rules	707,744	Aug. 26	3374	759	100	1861
Wende, Frank J., Chicago, and B. B. Carter, Hinsdale, assignors, by mesne assignments, to D. & W. Manufacturing Company, Chicago, Ill. Printing-machine	709,810	Sept. 23	3500	789 790 791	100	2746
Wenig, Ferdinand. (See Berg, Rudolf, assignor.)						
Wenker, Raymond J., Milwaukee, Wis. Dental form for holding teeth	707,810	Aug. 26	3530	797	100	1892
Wenneis, William, Weehawken, N. J. Folding furniture	707,288	Aug. 19	2466	558	100	1658
Wentzel, James C., Greensburg, Pa. Rail-joint fastener	706,469	Aug. 5	943	205	100	1305
Wentzel, Otto, Jersey City, assignor of one-half to E. Kohler, Newark, N. J. Safety device for pin-tongues	708,715	July 1	227	140	100	134
Weasel, William, Appleton, Wis. Apparatus for making sulfurous acid	704,412	July 8	1947	422	100	409
Weppio, Isaac W., Baudon, Minn. Rotary steam-engine	708,684	Sept. 9	1230	291 292	100	2942
Werlin, Louis, Elsmere, Del. Automatic chemical fire-extinguisher	705,503	July 22	4175	908	100	893
Werner, Frederick W., Hempstead, N. Y. Means for promoting combustion	709,946	Sept. 30	3790	955	100	2819
Werner, Paul F., Willimansett, Mass. Trolley-track switch	709,580	Sept. 23	3091	688 689	100	2664
Werner, Paul F., Willimansett, assignor to Coburn Trolley Track Manufacturing Company, Holyoke, Mass. Switch for overhead tubular trolley-tracks	708,139	Aug. 5	958	54	100	1171
Wessel, Ferdinand, Brooklyn, N. Y. Machine for shaving electrotypes	708,485	Sept. 2	777	175	100	2138
Wessel, Ferdinand, Brooklyn, N. Y. Machine for beveling photo-engravers' plates	708,486	Sept. 2	779	176	100	2139
Wessel, Karl, assignor to Curled Fibre Manufacturing Company, St. Paul, Minn. Mattress-filling machine	707,745	Aug. 26	3376	760	100	1861
Wessel, Karl, assignor to Curled Fibre Manufacturing Company, St. Paul, Minn. Mattress-filling machine	707,746	Aug. 26	3381	761	100	1862
Wessel, William C., and H. W. Jacob, Pittsburg, Pa. Railway-rail joint	708,605	Sept. 9	1080	245	100	2813

Wesson, Joseph H., Springfield, Mass. Revolver-lock	708,437	Sept. 2	781	177	100	2139
West, Fred A., Browning, Wis. Cow-milker	710,884	Sept. 30	4605	1039	100	2992
West, Henry P. (See Walker, Joseph, assignor.)						
West, John T., Bowling Green, Ky. Rein-guard	705,988	July 29	5121	1117	100	1096
West, Lawrence B., Cincinnati, Ohio. Beam for railway-track foundations	706,619	Aug. 12	1202	267	100	1375
West, Trueman C., Hattiesburg, Miss. Baling-press	708,688	July 1	583	130	100	115
Western Banana Crate Manufacturing Company. (See Doud and Shouse, assignors.)						
Western Electric Company. (See Dean, William W., assignor.)						
Western Electric Company. (See McBerty, Frank R., assignor.)						
Western Electric Company. (See McBerty and Loveridge, assignors.)						
Western Electric Company. (See O'Connell, Joseph J., assignor.)						
Western Electric Company. (See Scribner, Charles E., assignor.) (Reissue.)						
Western Manufacturing Company. (See Shafer, Charles T., assignor.)						
Western Telegraph Typewriting Machine Company. (See Foote, Theodore M., assignor.)						
Western Wire Fence Company. (See Canfield, Frank, assignor.)						
Westervelt, Herbert E., South Bend, Ind. Paper-bag machine	709,129	Sept. 16	2146	492 493	100	2452
Westinghouse Air Brake Company. (See Herr, Edwin M., assignor.)						
Westinghouse Air Brake Company. (See Mason, Harry R., assignor.)						
Westinghouse Air Brake Company. (See Synnestvedt, Paul, assignor.)						
Westinghouse Air Brake Company. (See Westinghouse, Henry H., assignor.)						
Westinghouse Electric & Manufacturing Co. (See Davis, Harry P., assignor.)						
Westinghouse Electric & Manufacturing Company. (See Lamme, Benjamin G., assignor.)						
Westinghouse Electric and Manufacturing Company. (See Merrick, Frank A., assignor.)						
Westinghouse Electric and Manufacturing Company. (See Merrick and Forrer, assignors.)						
Westinghouse Electric and Manufacturing Company. (See Merrick and Stull, assignors.)						
Westinghouse Electric and Manufacturing Company. (See Stull, Emmett W., assignor.)						
Westinghouse Electric and Manufacturing Company. (See Tyler, Charles C., assignor.)						
Westinghouse, Georga. (See Goddard, Frederick M., assignor.)						
Westinghouse, George. (See Potter, Henry N., assignor.)						
Westinghouse, George, Pittsburg, Pa. Furnace	708,107	Sept. 2	192	46	100	2081
Westinghouse, George, Pittsburg, Pa. Car-coupling	708,747	Sept. 9	1250	308 309	100	2988
Westinghouse, George, Pittsburg, Pa. Gas-engine	710,395	Sept. 30	4607	1039	100	2992
Westinghouse, Henry H., Edgewood Park, assignor to Westinghouse Air Brake Company, Pittsburg, Pa. Fluid-pressure brake	707,473	Aug. 19	2793	632	100	1725
Westinghouse, Henry H., Edgewood Park, assignor to Westinghouse Air Brake Company, Pittsburg, Pa. Fluid-pressure brake	707,474	Aug. 19	2795	633	100	1726
Westinghouse Machine Company. (See Bole, William A., assignor.)						
Westinghouse Machine Company. (See Hodgkinson, Francis, assignor.)						
Westlake, Charles T., Granite City, Ill., assignor to Commonwealth Steel Company, St. Louis, Mo. Swinging spring-seat for car-bolsters	704,997	July 15	3116	671	100	664

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Westlake, Charles T., Granite City, Ill., assignor to Commonwealth Steel Company, St. Louis, Mo. Truck-end casting	706,789	Aug. 12	1587	345	100	1446
Weston, Asa L., Dover, Ohio. Hasp-fastener	704,413	July 8	1949	422	100	410
Weston, Charles B., Brooklyn, N. Y. Wall-paper machine	707,289	Aug. 19	2468	553	100	1658
Weston, Dyson. (See Tuckfield, Charles, assignor.)						
Westover, Henry J., Mount Vernon, assignor to H. W. Leonard, Bronxville, N. Y. Variable-speed and reversing gear	709,690	Sept. 23	3261	731	100	2698
Wetherill, John P., South Bethlehem, Pa. Magnetic separator	708,185	Sept. 2	348	83	100	2052
Wetherill, John P., South Bethlehem, Pa. Magnetic separator	708,186	Sept. 2	350	88, 84	100	2053
Wetherill, John P., South Bethlehem, Pa. Magnetic separator	708,187	Sept. 2	352	84	100	2054
Wetherill, William C., Joplin, Mo. Zinc-furnace	708,438	Sept. 2	782	177, 178	100	2139
Wetherman, Gerald F., and G. Holzhausen, Enfield, England. Stone or plate for photo-mechanical printing and for other purposes, and preparing same	707,747	Aug. 26	3384	.....	100	1864
Wethey, C. E., *et al.* (See Brooks, Theodore L., assignor.)						
Wharfield, Henry C., *et al.* (See Wharfield, Marion A., assignor.)						
Wharfield, Marion A., assignor of eight-fifteenths to B. G. McMechen and H. C. Wharfield, Toledo, Ohio. Link-motion for steam-engines	705,174	July 22	3481	757	100	754
Wharton, Harry, Loughborough, England. Reversing tap-holder	708,748	Sept. 9	1356	309	100	2270
Wharton, John M. (See Dye, William H., assignor.)						
Wharton, William, Jr., assignor to William Wharton, Jr., & Company, Incorporated, Philadelphia, Pa. Railway-switch	704,414	July 8	1950	422	100	410
Wheaton, Charles H., Iola, Kans. Leaf for books	709,529	Sept. 23	2996	667	100	2044
Wheeler, Charles H., and F. W. Kremer; said Wheeler assignor to India Rubber Company, Akron, Ohio. Vehicle-tire	705,175	July 22	3482	757	100	754
Wheeler, Charles H., and F. W. Kremer; said Wheeler assignor to India Rubber Company, Akron, Ohio. Vehicle-wheel	705,176	July 22	3483	757	100	754
Wheeler, Charles H., and F. W. Kremer; said Wheeler assignor to India Rubber Company, Akron, Ohio. Vehicle-wheel	705,177	July 22	3485	757	100	755
Wheeler, Charles H., and F. W. Kremer; said Wheeler assignor to India Rubber Company, Akron, Ohio. Solid-rubber tire	705,178	July 22	3487	758	100	755
Wheeler, Clifton H., and L. L. Pratt, Shorthills, N. J., assignors to Wheeler Condenser and Engineering Company, New York, N. Y. Water-cooling tower	707,042	Aug. 12	1981	445	100	1538
Wheeler Condenser and Engineering Company. (See Wheeler and Pratt, assignors.)						
Wheeler, Samuel D., Fowlstown, assignor of one-half to D. N. Miller, Attapulgus, Ga. Machine for stringing tobacco-leaves	710,027	Sept. 30	3942	869	100	2852
Wheeler, Seth, Albany, N. Y. Machine for perforating paper	707,895	Aug. 26	3680	828	100	1921
Wheeler, Webster B., Fullerton, Nebr. Electrically-controlled optical appliance	709,837	Sept. 23	3548	800	100	2758
Wheeler & Wilson Manufacturing Company. (See Dimond, George H., assignor.)						
Wheeler & Wilson Manufacturing Company. (See Eames, George M., assignor.)						
Wheeler & Wilson Manufacturing Company. (See Noole, Donald, assignor.)						
Wheelwright, Charles S., Bristol, R. I. Apparatus for cooking garbage	709,826	Sept. 23	3545	799	100	2757
Whelan, Joseph A., Rock Springs, Wyo. Weed-puller	707,475	Aug. 19	2798	633	100	1736
Wheler, Harvey, Harrisburg, Pa. Push-pole	705,179	July 22	3489	758	100	755
Whetham, Charles, Ruskin, Canada. Portable tripod	708,873	July 1	917	201	100	184
Whinery, Samuel B., assignor to Pittsburgh Blue Print Company, Pittsburg, Pa. Blue-printing apparatus	704,415	July 8	1950	422, 423	100	410
	705,504	July 22	4177	909	100	903
Whipple, Charles, Ashley, Ohio. Wire-fence tool	710,228	Sept. 30	4839	976	100	2937
White, Booker C., and T. J. Jones, Catlin, Ill.; said Jones assignor to said White. Mowing-machine	704,416	July 8	1951	423	100	410
White, Charles B. and F., Landover, Md. Spring bed-bottom	708,685	Sept. 9	1231	282	100	2242
White, Charles P., Spencer, N. C. Artificial limb						
White, Charles T., assignor of one-half to A. B. Graham, South Bend, Ind. Bottle-filling device	708,874	July 1	921	202	100	185
White, Edward L. (See White, John H. and E. L.)						
White, Frank L., assignor of one-half to W. B. Howel, Pine Bluff, Ark. Cotton-compressor	704,998	July 15	3117	671	100	664
White, Franklin. (See White, Charles B. and F.)						
White, Henry, and W. G. Taylor, Marion, Ohio, assignors of one-third to Z. T. Silvis, Greensburg, Pa., and H. J. Silvis, Mansfield, Ohio. Valve-gear	707,995	Aug. 26	3888	873, 874	100	1902
White, Henry P., Kalamazoo, Mich. Speed-regulator	708,439	Sept. 2	786	178	100	2140
White, John H. and E. L., Englewood, N. J. Machine for making paper tubes	710,286	Sept. 30	4018	1040	100	2933
White, Joseph, assignor to R. Hoe, New York, N. Y. Printing-machine	705,180	July 22	3489	758	100	756
White, Joseph, assignor to R. Hoe, New York, N. Y. Feeding mechanism for printing-machines	705,181	July 22	3495	758, 759	100	757
White, Paul H., assignor to White Steam Wagon Company, Indianapolis, Ind. Steam-generator	707,996	Aug. 26	3891	874	100	1903
White, Paul H., assignor to White Steam Wagon Company, Indianapolis, Ind. Valve-gear	709,949	Sept. 30	3791	855	100	2820
White, Rollin H., assignor to White Sewing Machine Company, Cleveland, Ohio. Valve mechanism for steam-carriage burners	707,478	Aug. 19	2805	634	100	1728
White Sewing Machine Company. (See White, Rollin H., assignor.)						
White Steam Wagon Company. (See White, Paul H., assignor.)						
White, William, Lawrenceburg, Tenn. Display-rack	704,157	July 8	1489	319	100	313
White, William, Philadelphia, Pa. Curbing and paving	701,999	July 15	3118	672	100	665
White, William L., Hedon, near Hull, England. Sweetmeat-machine	709,892	Sept. 16	2602	597, 598	100	2562
Whiteford, Horace F., *et al.* (See Johnston, George W., assignor.)						
Whitehead, Aura E., assignor to Farrand & Votey Organ Company, Detroit, Mich. Piano-player	705,000	July 15	3119	672	100	665
Whitehead, Edwin A., Broken Hill, New South Wales, Australia. Distance-recording apparatus for reciprocating bodies	708,440	Sept. 2	787	178, 179	100	2140
Whitehead, Frederick L., Butte, Mont. Water attachment for power-drills	704,158	July 8	1490	320	100	313
Whitehead & Hoag Company. (See Mountford, Sidney, assignor.)						
Whitehouse, Thomas, Birmingham, England. Apparatus for rolling flat sheet metal	705,887	July 29	4048	1076	100	1061
Whitely, William N., Springfield, Ohio. Bicycle	707,480	Aug. 19	2808	635	100	1729
Whitely, William N. and William N., Jr., Springfield, Ohio. Bicycle handle-bar	704,159	July 8	1491	320	100	313
Whitescarver, James C., Cameron, Mo. Copy-holder	707,662	Aug. 26	3891	718	100	1867
Whiteside, Isaac F. (See Gale, William L., assignor.)						
Whiteside, James, *et al.* (See Sporrong, Carl A., assignor.)						
Whiteside, Madison, Carrier, Okla. Ter. Combined wrench and tire-setter	704,725	July 15	2522	545	100	543
Whitfield Company. (See Schneider, William, assignor.)						
Whitin Machine Works. (See McLean, Henry H., assignor.)						
Whitin Machine Works. (See Owen, Henry A., assignor.)						
Whitin Machine Works. (See Owen, Oscar L., assignor.)						
Whiting, Charles J., Lasalle, Ill. Safety-catch for wheeled earth-scrapers	706,706	Aug. 12	1354	301	100	1409

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Whiting & Davis. (See Davis, Edward P., assignor.)						
Whiting, Paul, East Las Vegas, N. Mex. Ter. Equalizing-valve	707,476	Aug. 19	2799	633, 634	100	1727
Whiting, Paul, East Las Vegas, N. Mex. Ter. Quadruple valve	707,477	Aug. 19	2802	634	100	1727
Whitla, John S., administrator. (See Carrington, Jackson D.)						
Whitney, James E., Leominster, Mass. Antirattler for thill-couplings	704,160	July 8	1494	320	100	314
Whitney, Lemuel R., Milwaukee, Wis. Dust-collector	704,734	July 15	2519	544	100	542
Whitney, Pardon A., Southington, Conn. Animal-trap	706,470	Aug. 5	944	206	100	1806
Whitney, Ruel W., Cleveland, Ohio. Photographic exposure-meter	709,250	Sept. 16	2996	542	100	1905
Whiton, Morris F., Hingham, Mass. Rail-bond	707,663	Aug. 26	3903	718	100	1867
Whittemore, Charles P., Mount Vernon, Iowa. Monkey-wrench	705,799	July 29	4790	1039	100	1080
Whittemore, Charles W. (See Thornton and Whittemore.)						
Whittemore, Mary E., Mount Vernon, Iowa. Tape-needle	705,800	July 29	4791	1040	100	1080
Whittington, Joseph H., assignor to New York Supply Company, Buffalo, N. Y. Ribbon and stock supporter	707,479	Aug. 19	2807	635	100	1728
Whittlesey, Charles F., Albuquerque, N. Mex. Ter. Building block and wall	704,606	July 15	2317	508	100	500
Wiborgh, Johan G., and W. Palmaer, Stockholm, Sweden. Manufacturing manure from apatite or similar mineral phosphate	707,886	Aug. 26	3882	.....	100	1922
Wich, Ferdinand J., Altringham, England. Trimming mechanism for linotype-machines	705,801	July 29	4792	1040, 1041	100	1080
Wicks, Frederick, Esher, England. Metal-pump for type-casting. (Reissue)	12,017	July 22	4337	938	100	924
Wicksteed, Joseph H., Leeds, England. Duplex tool-holder for planers, &c	708,947	Sept. 9	1757	405	100	2358
Wickstrom, August, Beaver, Colo. Nut-cracker	707,997	Aug. 26	3892	874	100	1904
Widner, Ralph, Engle, N. Mex. Ter. Motor	705,001	July 15	3121	673	100	666
Wieder, Henry G. A. I., assignor to C. W. Phillips, London, England. Sound-reproducer	708,849	Sept. 9	1581	360	100	2317
Wiedlumyer, William, Norristown, Pa. Brake for pivotal running-gear of vehicles	707,481	Aug. 19	2809	635	100	1729
Wiegand, Henry H. (See Penniman and Wiegand.)						
Wiener, Samuel S. (See Hammond, George W., assignor.)						
Wiese, Conrad C. A. E., Hamburg, Germany. Night life-buoy	706,707	Aug. 12	1355	302	100	1409
Wiese, Frederick, Milwaukee, Wis. Fruit-jar	705,182	July 22	3502	759	100	760
Wieseckel, George, Allegheny, Pa. Vertical-lift lubricating-valve for steam-chests	708,106	Sept. 2	195	46	100	2022
Wiesen, John, Braddock, Pa. Hat-pin	710,849	Sept. 30	4544	1025	100	2980
Wieser, Daniel, assignor to H. Bulsbach & Co., Zurich, Switzerland. Manufacture of enameled metal plates	709,590	Sept. 23	2997	668	100	2044
Wieser, Joseph, Brooklyn, assignor of one-half to K. Fink, New York, N. Y. Pedal for self-playing attachments for pianos	705,002	July 15	3123	673	100	666
Wiget, Alfred. (See Kern and Wiget.)						
Wigle, Eli, Grand Rapids, assignor to Shaw-Walker Company, Muskegon, Mich. Mechanism for operating doors	710,229	Sept. 30	4841	976	100	2937
Wilbur, D. C. (See Riley, James W., assignor.)						
Wilbur, John W. (See McLery, Wilbur, and Wooster.)						
Wilbur, R. M. (See Allen, Everett P., assignor.)						
Wilcomb, Frank, Norristown, Pa. Circular spring-needle knitting-machine	705,505	July 22	4178	909, 910	100	893
Wilcox, Alva W., Newark, Ohio. Car-roof	705,888	July 29	4949	1077	100	1061
Wilcox Brothers. (See Thayer, Clark F., assignor.)						
Wilcox, Edward M. (See Jones, Frank A., assignor.)						
Wilcox, Elmer A., assignor to Standard Vending Company, Chicago, Ill. Vending-machine	705,005	July 15	3127	675, 676	100	667
Wilcox, Frank E., Mechanicsburg, Pa. Single perch-gear for vehicles	709,449	Sept. 16	2790	628	100	2568
Wilcox, Frank E., assignor of one-half to L. E. Hickok, Mechanicsburg, Pa. Vehicle-gear	709,068	Sept. 16	2027	462	100	2426
Wilcox, Frank E., assignor of one-half to L. E. Hickok, Mechanicsburg, Pa. Vehicle-gear	709,069	Sept. 16	2028	462	100	2426
Wilcox, Frank E., assignor of one-half to L. E. Hickok, Mechanicsburg, Pa. Vehicle-gear	709,070	Sept. 16	2029	463	100	2426
Wilcox, Frederick C. (See Pedersen, Niels, assignor.)						
Wilcox, Henry. (See Reichardt and Wilcox.)						
Wilcox, Reuben O., assignor to J. H. Modrell, Wichita, Kans. Bicycle-support	704,161	July 8	1495	320	100	314
Wild, Frederick W., Jr., Baltimore, Md. Power-transmitting device for hand-driven mechanisms	706,986	Sept. 2	535	122	100	2090
Wild, James R., Cambridge, Mass. Ventilator	710,350	Sept. 30	4545	1025	100	2980
Wild, William E. (See Bailey and Wild.)						
Wildermann, Meyer. (See Edser and Wildermann.)						
Wile, Louis, assignor of one-half to L. Hansen, Morris, Ill. Ear-muff	708,446	Sept. 2	208	182	100	2143
Wilkens, Edward F. (See Corssen, Ferdinand, assignor.)						
Wilkes, Aaron, *et al.*, administrators. (See Wilkes, Moses.)						
Wilkes, Moses, deceased; A. Wilkes and S. E. Gallagher, (also known as Elizabeth G. Wilkes,) Trenton, N. J., administrators. Swinging table for hydraulic presses	709,255	Sept. 16	2460	555	100	2518
Wilkin, Theodore S., Milwaukee, Wis. Band-saw wheel	708,850	Sept. 9	1582	360	100	2317
Wilkinson, Charles A., Worcester, Mass. Igniter	704,417	July 8	1952	423	100	411
Wilkinson, George, Harrogate, England. Cable-terminal box for electricity-supply purposes	705,803	July 29	4795	1041	100	1081
Wilkinson, Jennie, Cleveland, Ohio. Garment-supporter	705,506	July 22	4185	910	100	895
Wilkinson, John A., assignor of one-half to G. E. Frost, New York, N. Y. Rotary and folding chair	709,256	Sept. 16	2461	555	100	2518
Wilkinson, Walter S., Baltimore, Md. Manufacture of bituminous paving	705,725	July 29	4667	.....	100	1004
Wilkinson, Walter S., Baltimore, Md., and C. H. Burchinal, Pittsburg, Pa. Asphaltic paving mixture or composition	705,804	July 29	4797	.....	100	1081
Will, Eddie, Bigstone, S. D. Needle for binders	707,482	Aug. 19	2811	635	100	1729
Willard, Edward A. (See Hughes, William S., assignor.)						
Willcox, Elijah, Yonkers, N. Y. Ash-sifter	709,253	Sept. 16	2954	598	100	2562
Willetze, Will S. (See Dyer and Willetze.)						
William G. Bell Company. (See Cobb and Jenkins, assignors.)						
William Hamilton Manufacturing Co. (See Erb, Samuel, assignor.)						
William Powell Company. (See Desmond, John, assignor.)						
William Wharton, Jr., & Company, Incorporated. (See Wharton, William, Jr., assignor.)						
Williams, Carey G., Dalton, Iowa. Spiral conveyer	710,387	Sept. 30	4612	1040	100	2996
Williams, Ebenezer E., assignor of one-fourth to A. L. Wood, Nevada, Mo. Shipping-crate	707,665	Aug. 26	3905	719	100	1928
Williams, Edmund T. L., London, England. Means for preventing road-vehicles from slipping sidewise	709,838	Sept. 23	3551	800	100	2758
Williams, Edward, Birmingham, England. Machinery for the manufacture of rimmed wheels and disks	705,003	July 15	3124	673, 674	100	666
Williams, Edward A. (See Williams, George C., and E. A.)						
Williams, George A., and J. O. McCall, Dougherty, Ind. Ter. Stock-guard for railways	705,729	July 29	4670	1011	100	1004

ALPHABETICAL LIST OF PATENTEES OF DESIGNS.

Name, residence, and design.	No.	Date.	Official Gazette. Volume.	Page.
Abramson, Herbert J., Rockford, Ill. Sewing-machine table	36,003	Aug. 12	100	1554
Adler, Emanuel B., assignor to H. Adler, Pittsburg, Pa. Gas-stove front	36,077	Sept. 16	100	2597
Adler, Henry. (See Adler, Emanuel B., assignor.)				
Aizenman, Raphal, assignor to R. Aizenman, New York, N. Y. Stand for photograph-albums	36,028	Aug. 26	100	1966
Aizenman, Rosa. (See Aizenman, Raphal, assignor.)				
American Type Founders Company. (See Phinney, Joseph W., assignor.)				
Aronson, Louis V., assignor to Art Metal Works, Newark, N. J. Clock-case	36,084	Sept. 30	100	3002
Art Metal Works. (See Aronson, Louis V., assignor.)				
Babbitt, Seth W., Meriden, Conn. Metal ornament for silver or plated ware	35,998	Aug. 12	100	1553
Bailey, Charles A., assignor to J. and E. Stevens Co., Cromwell, Conn. Toy stove	36,081	Sept. 23	100	2765
Bailey, Joseph T., Philadelphia, Pa. Badge	36,042	Sept. 9	100	2371
Barnes, Gustave A. (See Nadall and Barnes.)				
Baron, Albert L., Brooklyn, assignor to Central Lighting Company, New York, N. Y. Lamp-body	36,085	Sept. 30	100	3002
Bartholomew, Lillian A., New York, N. Y. Pedestal-pincushion	35,981	July 22	100	925
Becker, Andreas, Vailsburg, assignor to Bracher, Becker & Barnett, Newark, N. J. Ring	36,009	Aug. 19	100	1732
Bender, Theodore, assignor to Roger Williams Silver Company, Incorporated, Providence, R. I. Handle for spoons, forks, or similar articles	35,982	July 29	100	1108
Benedict, Michael, New York, N. Y. Case for coin-controlled mechanism	36,087	Sept. 30	100	3002
Boekel, Julius. (See Boekel, William and J.)				
Boekel, William and J., Philadelphia, Pa. Nebulizer-support	36,000	Aug. 12	100	1554
Bracher, Becker & Barnett. (See Becker, Andreas, assignor.)				
Briscoe Manufacturing Company. (See Puddefoot, Charles, assignor.)				
Bromley, Joseph H. (See Burgess, Arthur, assignor.)				
Bromley & Sons, John. (See Petsold, Adolph, assignor.)				
Brown, Carl E., Columbus, Ohio. Zither-body	36,015	Aug. 19	100	1733
Burgess, Arthur, assignor to J. H. Bromley, Philadelphia, Pa. Lace curtain	36,020	Aug. 19	100	1754
Burgess, Arthur, assignor to J. H. Bromley, Philadelphia, Pa. Lace curtain	36,021	Aug. 19	100	1754
Central Lighting Company. (See Baron, Albert L., assignor.)				
Clarke, Clara J., Fremont, Ohio. Dresser	35,978	July 15	100	678
Clulee, John, Wallingford, assignor to International Silver Co., Meriden, Conn. Handle for spoons, forks, or similar articles	36,034	Sept. 2	100	2169
Conner, A. Reed, Cynthiana, Ky. Flag	35,985	Aug. 5	100	1320
Court, Charles S. (See Crees and Court.)				
Crary, Charles A., Huntington, W. Va., assignor to Enterprise Soap Works, Nashville, Tenn. Soap	36,078	Sept. 16	100	2597
Crees, Eustace, and C. S. Court, Providence, R. I., assignors to Watson and Newell Company. Handle for spoons or similar articles	35,994	Aug. 12	100	1552
Crees, Eustace, and C. S. Court, Providence, R. I., assignors to Watson and Newell Company. Handle for spoons or similar articles	35,995	Aug. 12	100	1553
Crees, Eustace, and C. S. Court, Providence, R. I., assignors to Watson and Newell Company Handle for spoons or similar articles	35,996	Aug. 12	100	1553
Curtis, Henry H. (See Marshall, William F., assignor.)				
Debacher, Robert E., New York, N. Y. Handle for toilet articles	36,022	Aug. 26	100	1965
Donohue, Michael A., Jr., Chicago, Ill. School-desk casting	36,005	Aug. 12	100	1555
Dudgeon, Thomas M., Crafton, assignor to Pittsburgh Stove and Range Company, Pittsburg, Pa. Andiron	36,046	Sept. 9	100	2371
Dudgeon, Thomas M., Crafton, assignor to Pittsburgh Stove and Range Company, Pittsburg, Pa. Andiron	36,047	Sept. 9	100	2371
Dudgeon, Thomas M., Crafton, assignor to Pittsburgh Stove and Range Company, Pittsburg, Pa. Andiron	36,048	Sept. 9	100	2372
Dudgeon, Thomas M., Crafton, assignor to Pittsburgh Stove and Range Company, Pittsburg, Pa. Andiron	36,049	Sept. 9	100	2372
Dudgeon, Thomas M., Crafton, assignor to Pittsburgh Stove and Range Company, Pittsburg, Pa. Portable basket-grate	36,050	Sept. 9	100	2372
Dudgeon, Thomas M., Crafton, assignor to Pittsburgh Stove and Range Company, Pittsburg, Pa. Basket-grate	36,051	Sept. 9	100	2372
Dudgeon, Thomas M., Crafton, assignor to Pittsburgh Stove and Range Company, Pittsburg, Pa. Basket-grate	36,052	Sept. 9	100	2372
Dudgeon, Thomas M., Crafton, assignor to Pittsburgh Stove and Range Company, Pittsburg, Pa. Basket-grate	36,053	Sept. 9	100	2372
Dudgeon, Thomas M., Crafton, assignor to Pittsburgh Stove and Range Company, Pittsburg, Pa. Basket-grate	36,054	Sept. 9	100	2373
Dudgeon, Thomas M., Crafton, assignor to Pittsburgh Stove and Range Company, Pittsburg, Pa. Fireplace-lining	36,055	Sept. 9	100	2373
Dudgeon, Thomas M., Crafton, assignor to Pittsburgh Stove and Range Company, Pittsburg, Pa. Fireplace-lining	36,056	Sept. 9	100	2373
Dudgeon, Thomas M., Crafton, assignor to Pittsburgh Stove and Range Company, Pittsburg, Pa. Fireplace-lining	36,057	Sept. 9	100	2373
Dudgeon, Thomas M., Crafton, assignor to Pittsburgh Stove and Range Company, Pittsburg, Pa. Fireplace-front	36,058	Sept. 9	100	2373
Dudgeon, Thomas M., Crafton, assignor to Pittsburgh Stove and Range Company, Pittsburg, Pa. Fireplace-front	36,059	Sept. 9	100	2373
Dudgeon, Thomas M., Crafton, assignor to Pittsburgh Stove and Range Company, Pittsburg, Pa. Fireplace-front	36,060	Sept. 9	100	2374
Dudgeon, Thomas M., Crafton, assignor to Pittsburgh Stove and Range Company, Pittsburg, Pa. Fireplace-front	36,061	Sept. 9	100	2374
Dudgeon, Thomas M., Crafton, assignor to Pittsburgh Stove and Range Company, Pittsburg, Pa. Fireplace-front	36,062	Sept. 9	100	2374
Dudgeon, Thomas M., Crafton, assignor to Pittsburgh Stove and Range Company, Pittsburg, Pa. Fireplace-front	36,063	Sept. 9	100	2374

Invention.	Name.	No.	Date.	Monthly volume. Specification.	Monthly volume. Drawing.	Official Gazette. Volume.	Official Gazette. Page.
Abdominal and back supporter	H. C. and L. C. Rash	708,402	Sept. 2	725	163	100	2126
Abdominal supporting-bandage	M. T. Barnett	705,715	Aug. 12	1871	306	100	1412
Abrading mechanism	J. M. Nash	707,631	Aug. 26	3101	609	100	1806
Accordion	J. Golob	709,671	Sept. 23	3220	720 721 722	100	2391
Acet salicyl phenetidin and making same	S. L. Summers	706,355	Aug. 5	702	.....	100	1326
Acet salicyl phenetidin and making same	S. L. Summers	706,356	Aug. 5	703	.....	100	1326
Acid and making same. Alkyloxymethyl ester of salicylic	J. Callsen	706,018	Aug. 5	94	.....	100	1191
Acid and making same. Methylene di-aceto di-salicylic	S. L. Summers	707,178	Aug. 19	2357	.....	100	1613
Acid and making same. Methylene disalicylic	S. L. Summers	706,354	Aug. 5	701	.....	100	1326
Acid and making same. Paramethyl-amidophenyglyoxylic	F. Ach	708,511	Sept. 9	925	.....	100	2181
Acid. Apparatus for making sulfurous	W. Wensel	704,412	July 8	1947	422	100	409
Acid ester of methylene digualacol and making same. Camphoric	S. L. Summers	707,278	Aug. 19	2449	.....	100	1654
Acid. Extracting ellagic	A. Heinemann	706,411	Aug. 5	895	.....	100	1281
Acid from sulfur dioxid in aqueous solution by electrolysis. Manufacturing sulfuric	C. B. Jacobs	704,881	July 15	2783	591	100	595
Acids. Separating sulfonic	L. O. Helmers	709,821	Sept. 16	2528	.....	100	2583
Adding-machine	A. C. Schuman	704,998	July 15	2986	640 641	100	641
Adding-machine	J. L. Levin	706,000	July 29	5143	1123	100	1101
Adding-machine	H. Ellis and N. W. Perkins, Jr	707,809	Aug. 19	2499	561 562 563	100	1665
Adding-machine	E. Fitch	709,477	Sept. 23	2808	643 644	100	2614
Adhesive	A. S. Hoyt	709,544	Sept. 23	3019	.....	100	2648
Adjustable back chair	J. F. Walton	705,171	July 22	3472	755	100	752
Adjustable brace or support for movable structures	J. G. Roseman	705,707	July 29	4631	1008	100	996
Adjustable chair. Automatic	T. M. McKee and S. B. Saffell	706,991	Aug. 12	1891	494	100	1519
Adjustable furnace	R. Halley	707,104	Aug. 19	2115	472 473	100	1588
Adjustable hanger	C. L. Olmstead	708,709	July 1	615	187	100	192
Adjustable seat and desk	J. W. Johnston	708,792	July 1	774	169	100	155
Adjustable stand	G. A. Wadsworth	704,608	July 15	2815	502	100	499
Advertising device	C. E. Johnson	705,090	July 22	3305	719	100	776
Advertising device	W. D. Butt	706,585	Aug. 12	1088	328	100	1340
Advertising device	W. D. Butt	707,205	Aug. 19	2307	516	100	1625
Advertising device	W. D. Butt	709,465	Sept. 23	2941	638	100	2610
Advertising device	C. G. Cribbs and F. M. Allerton	704,008	July 8	1172	255	100	249
Advertising device. Wind-actuated	D. Jones	710,195	Sept. 30	4268	963	100	2980
Advertising display device	W. R. Moore	706,967	Aug. 12	1885	421	100	1518
Advertising match-box and cigar-tip cutter. Combined	W. Hucks, Jr	709,407	Sept. 16	2711	608	100	2571
Aerated liquids. Apparatus for dispensing	J. P. Jackson	708,714	Sept. 9	1295	295	100	2355
Aerated waters on draft. Apparatus for serving	B. D. Hooper	708,289	Sept. 2	432	99	100	2070
Aerating-agitator	T. Gibon	710,266	Sept. 30	4402	991 992	100	2950
Aeroplane	I. Lancaster	708,889	Aug. 12	1614	362 363	100	1465
Aeroplane-covering	R. C. Scott	704,389	July 8	1910	414	100	408
Aging or treating spirits	H. M. Martinson	708,058	Sept. 2	111	26	100	2004
Agitator	J. Seymour	704,764	July 15	2596	582	100	557
Air and gas mixer	A. McCahon	709,080	Sept. 16	1955	448	100	2410
Air and vapor motor. Combination	F. A. McKelvey	708,358	Aug. 5	478	101 102	100	1313
Air-brake	E. P. Donnelly	704,787	July 15	2543	550	100	547
Air-brake apparatus	T. C. Manson	705,415	July 22	4016	869	100	868
Air-brake attachment	A. L. Tibbits	706,368	Aug. 5	711	155	100	1300
Air-brake attachment	W. H. Sauvage	708,480	July 1	186	44	100	39
Air-brake mechanism	D. W. Jewell	706,686	Aug. 12	1606	351	100	1452
Air-brake order system. Automatic	W. G. MacLaughlin	705,599	July 29	4485	959	100	955
Air-brake system	G. H. Abrams	706,871	Aug. 12	1698	378	100	1479
Air-compressor	E. J. St. Croix	709,580	Sept. 23	2978	664	100	2640
Air-compressing apparatus	W. J. Stevens	709,888	Sept. 23	3240	798	100	2756
Air-compressor	G. E. Martin	706,979	Aug. 12	1871	418 419	100	1515
Air-compressor. Compound	W. J. Linton	704,059	July 8	1274	276	100	267
Air-compressor. Hydraulic	C. M. W. Smith	705,460	July 22	4097	891	100	879
Air-compressors. Automatic regulator for hydraulic	F. Grumbacher	709,763	Sept. 23	3409	706	100	2727
Air cooling and filtering apparatus. Compressed-	C. W. Vollmann	708,847	Sept. 9	1574	350	100	2316
Air cooling and purifying apparatus	W. L. Moore	705,947	July 29	5056	1101	100	1088
Air cooling, drying, and purifying apparatus	W. D. Douglas	707,058	Aug. 12	2007	449	100	1544
Air-feeding device							

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'gs.	Official Gazette. Vol.	Official Gazette. Page.
Air from sand-blast apparatus. Apparatus for cleaning	J. E. Mathewson	707,134	Aug. 19	2157	485	100	1502
Air-heating apparatus. Compressed-	G. W. Hopkins	707,111	Aug. 19	2130	474	100	1496
Air. Means for utilizing compressed	E. Hayward	706,658	Aug. 12	1266	279	100	1284
Air-motor	E. Glowacki	705,824	July 29	4849	1053	100	1041
Air or other gases and cooling by means thereof. Liquefying	J. F. Place	707,093	Aug. 26	3123	708	100	1810
Air or other liquid gases. Vessel for holding and shipping liquid	J. F. Place	707,094	Aug. 26	3126	704	100	1811
Air-pressure regulator	J. H. Dickinson	704,782	July 15	2986	568	100	564
Air-purifier	H. v. Pückler	705,825	July 29	4905	1096	100	1052
Air-tool	N. Pecoraro	705,435	July 22	4053	879	100	871
Alarm: *See* Automatic alarm. Burglar-alarm. Coin-alarm. Door or window alarm. Fire-alarm. Low-water alarm. Refrigerator-pan alarm.							
Alarm-lock	A. Coyne	705,221	July 22	3573	773	100	774
Albuminous substances. Obtaining	A. Jolles	707,423	Aug. 19	2717	.....	100	1710
Alkali-metal sulfates from mixed solutions. Separating	C. Hoepfner	704,086	July 8	1294	.....	100	960
Alkaline salts. Electrolytic decomposition of	E. Edser and M. Wildermann	709,971	Sept. 30	3852	866 867	100	2935
Alkoxy-caffein and making same	F. Ach	707,812	Aug. 26	3531	.....	100	1898
Alloy	D. P. James	709,208	Sept. 16	2439	.....	100	2511
Alloy. Antifriction metal	H. Pearse and E. F. Ievers	708,520	Sept. 9	1940	.....	100	2208
Alloys of the alkali metals. Manufacture of	G. F. Jaubert	709,429	Sept. 23	3637	.....	100	2622
Alumina from silica. Separating	A. Kayser	708,551	Sept. 9	1038	.....	100	2196
Alumina. Manufacturing	C. M. Hall	706,553	Aug. 12	1088	240	100	1350
Aluminium capable of being welded or soldered. Rendering	C. P. Sörensen	708,860	Sept. 9	1560	.....	100	2312
Amalgam-trap	G. R. Tuttle	708,333	Sept. 9	1069	242	100	2209
Amalgamating metals	P. A. Knappe	705,096	July 22	3318	730	100	721
Amalgamating metals	P. A. Knappe	707,971	Aug. 26	3634	802	100	1951
Amalgamator	J. V. Coleman	708,694	July 1	597	132 133	100	118
Amalgamator	P. A. Knappe	705,095	July 22	3315	720	100	720
Amalgamator	G. H. Breymann	707,396	Aug. 19	2477	556	100	1660
Amalgamator	E. J. Kiss	707,897	Aug. 26	3055	667	100	1796
Amalgamator	P. A. Knappe	707,972	Aug. 26	3637	803	100	1952
Amalgamator	P. A. Knappe	709,846	Sept. 23	3568	803	100	2761
Ammonia-generator	J. A. Young	704,062	July 8	1284	278	100	270
Ammonia-compressor	J. T. Ludlow	705,845	July 29	4908	1067	100	1045
Ammonia-separator	V. Johnson	706,645	July 29	4908	427	100	413
Ammunition and water carrier and litter. Combined	H. F. L. Allen	704,426	July 8	1965	428	100	413
Ammunition and water carrier and litter. Portable	H. F. L. Allen	704,427	July 8	1966	428	100	414
Ammunition from the ammunition-carriage into the loading-axis of the gun. Apparatus for transferring	J. Krone	709,781	Sept. 23	3447	775 776	100	2736
Ammunition-hoist for ordnance	E. Trochain	704,985	July 15	3008	665 666	100	659
Ammunition-hoist for ordnance	A. T. Dawson and J. Horne	709,496	Sept. 16	2702	621 622	100	2582
Amusement or roundabout apparatus	G. W. Schofield	708,834	Sept. 9	1546	353 354	100	2310
Anchor	J. E. Rech	708,739	July 1	570	149	100	154
Anchor	J. A. Pettes	710,167	Sept. 30	4226	958	100	2911
Anchoring-post	H. F. Farwell	707,693	Aug. 26	3230	725	100	1892
Anesthetic apparatus. Elastic	H. Nieriker	707,623	Aug. 26	3107	699	100	1897
Anesthetics. Apparatus for administering	C. K. Teter	706,358	Aug. 5	705	153	100	1259
Animal-exterminator	L. N. Cornett	709,207	Sept. 16	2707	624	100	2544
Animal tendons. Treating	E. Nelson	709,252	Sept. 16	2561	.....	100	89
Animal-trap	T. D. Vanata	708,628	July 1	453	104	100	393
Animal-trap	J. S. Moon	704,355	July 8	1957	402	100	1305
Animal-trap	P. A. Whitney	706,470	Aug. 5	944	206	100	1226
Animal-trap	S. Hetherington	708,698	Sept. 9	1132	260	100	168
Animal-trap	F. H. Read	708,938	July 1	888	184	100	1129
Ankle-support	F. H. Daniels	706,081	Aug. 5	54	12	100	1152
Annealing furnace. Wire-	W. R. Winter	708,805	July 29	4800	1042	100	1052
Annunciator. Electric	A. S. Plews	704,367	July 8	1875	406	100	396
Antimony oxid. Making white	C. F. Utermöhlen	708,627	July 1	452	104	100	89
Antiseptic bandage	J. C. Friedrich	708,065	July 22	3253	704	100	708
Apparel	A. W. Ellington	706,732	Aug. 12	1402	313	100	1419
Applicator	G. Walter	708,285	Aug. 5	571	123 124	100	1231
Apron and dust-hood. Combined storm-	M. Kern and A. Wiget	710,325	Sept. 30	4502	1015	100	2971
Aquatic animals. Apparatus for transporting live	W. C. Parmley	709,794	Sept. 23	3469	781 782	100	2741
Arch construction. Concrete	F. L. Sessions	704,975	July 15	3070	660	100	656
Armature	A. H. Armstrong	705,508	Aug. 12	1007	221	100	1335
Armature-winding for induction-motors	A. H. Armstrong	705,093	Aug. 12	1220	271	100	1379
Armature-winding for induction-motors	H. Schulz	709,179	Sept. 16	2247	511 512 513	100	2473
Article-attacher	H. H. Sims	706,697	Aug. 12	1343	299	100	1406
Ash or garbage receptacle	T. W. Hughes	704,072	July 29	4557	990	100	988
Ash-pan. Safety	T. F. O'Connor	708,162	Sept. 2	801	72	100	2044
Ash-receptacle	J. and M. Kracker	707,849	Aug. 26	3615	815	100	1908
Ash-tray	P. Kulicke	708,660	Sept. 9	1169	266	100	2259
Ash-tray and advertising device	O. J. Willmot	707,054	Aug. 26	3204	719	100	1828
Asphalt-cooking drums. Scraper for	J. P. Nelson	705,954	July 29	5008	1104	100	1085
Astigmatically-corrected wide-angle objective	C. P. Goerz	706,650	Aug. 12	1254	277	100	1287
Atomizer	A. De Vilbiss	704,780	July 15	2818	567	100	562
Atomizer	J. G. Halspieus	705,074	July 22	3265	707	100	711
Atomizing apparatus	J. Robertson	708,611	July 1	416	97, 98	100	98
Atropinium alkyl nitrate	H. Dreser and J. Callsen	707,402	Aug. 19	2676	.....	100	1701

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'gs.	Official Gazette. Vol.	Official Gazette. Page.
Auger. Packing-	E. E. Ziegenfuss	707,290	Aug. 19	2469	554	100	1658
Auger. Twisted	G. Hallenscheid	708,576	July 1	861	83	100	71
Auger. Well-	R. O. Newell	708,947	Sept. 2	464	106	100	2076
Auriphone	F. I. Gano	709,978	Sept. 30	3861	809	100	2935
Autographic register	J. C. Shoup	707,456	Aug. 19	2766	637	100	1719
Automatic alarm	J. F. Laird	708,816	Sept. 9	1512	346	100	2202
Automatic brake	A. E. Norris. (Reissue)	12,040	Sept. 30	4542	1049	100	2900
Automatic gate	J. H. Wilson	708,445	Sept. 2	796	181	100	2142
Automatic lubricator	A. A. Freeman	704,021	July 8	1901	992	100	254
Automatic switch	H. H. Doll and M. H. Bostian	708,561	July 1	884	76	100	67
Automatic switch	H. A. Poppenhusen	705,786	July 29	4766	1084	100	1094
Automatic switch	M. Moskowitz	706,083	Aug. 5	157	32	100	1148
Automatic switch	M. Moskowitz	706,084	Aug. 5	158	33	100	1148
Automobile	J. D. Carrington	704,296	July 8	1734	378	100	264
Automobile	A. S. Krotz	704,809	July 15	2698	583 584	100	577
Automobile	S. S. Conant	704,860	July 15	2779	601 602	100	595
Automobile	S. T. Davis, Jr	705,824	July 29	4832	1049	100	1038
Automobile	M. F. Bates	706,982	Aug. 12	1707	382	100	1488
Automobile	J. C Henry	707,230	Aug. 19	2351	527	100	1634
Automobile	H. Lemp	710,068	Sept. 30	4001	903	100	2964
Automobile	J. G. Heal	706,051	Aug. 5	96	20, 21	100	1136
Automobile air-pump	J. F. Peterman	708,459	July 1	158	36	100	33
Automobile attachment for vehicles	A. Hitchon	706,415	Aug. 5	835	182 183	100	1282
Automobile driving-gear	A. A. Medina	707,840	Aug. 19	2563	578	100	1677
Automobile running-gear	G. R. Schlumberger	709,684	Sept. 23	3253	720	100	2696
Automobile steering device	J. G. MacPherson	707,435	Aug. 19	2733	618 619	100	1718
Automobile steering-gear	G. P. Dorris	707,400	Aug. 19	2673	604	100	1700
Automobiles. Transmission-gear for	E. H. Jones and E. C. Espey	706,183	Aug. 5	353	76	100	1188
Awl. Sewing-	B. T. Lamb and E. G. Gould	709,918	Sept. 30	3724	889	100	2886
Awning	W. H. Arnold	706,005	Aug. 5	5	2	100	1117
Awning-actuating mechanism	J. Sullivan	704,397	July 8	1924	417	100	405
Awning-fixtures. Antirattler for	C. H. Hansen	706,820	Aug. 12	1590	358	100	1439
Awning-protector	L. A. Daus	705,214	July 22	3579	774	100	775
Awning-roller support	G. H. Egbers	705,744	July 29	4701	1017	100	1010
Awnings. Device for raising or lowering	W. S. Bowser	708,693	July 1	596	132	100	118
Awnings. Means for operating	W. H. Davis	708,466	Sept. 2	840	192	100	2151
Axle	L. W. Kyes	710,157	Sept. 30	4204	947	100	2906
Axle	H. H. Porter	705,864	July 29	4903	1066	100	1053
Axle and axle-box. Vehicle-	O. Newhouse	704,095	July 8	1330	290	100	278
Axle box. Car-	C. M. Florey	706,462	Aug. 5	807	176	100	1277
Axle-box for carriages or wagons	G. Maase	705,263	July 22	3699	802	100	797
Axle boxes. Dust ring or disk for	G. J. Holton	704,028	July 8	1222	263	100	258
Axle-lubricator	R. H. Gowan	708,488	July 1	198	47	100	42
Axle lubricator. Vehicle-	D. W. Smedley	709,747	Sept. 23	3382	739	100	2721
Axle-spindle take-up device	J. J. Cook	704,327	July 8	1787	390	100	375
Axle. Vehicle-	G. Heck	705,600	July 29	4437	961	100	958
Axle. Vehicle-	H. Hestand and A. R. Matthews	707,845	Aug. 26	3607	813	100	1906
Axle. Vehicle-	F. E. Fisher	709,218	Sept. 16	2316	526	100	2488
Axle. Vehicle-	J. H. Cooper	710,254	Sept. 30	4384	995	100	2945
Axle. Vehicle-	C. and R. L. Bethea	706,215	Aug. 5	406	87	100	1199
Axle washer. Vehicle-	F. Richard	705,868	July 29	4909	1067	100	1053
Axletree repair implement	G. J. Holton	708,641	Sept. 9	1158	268	100	2227
Baby-jumper	A. P. Perkins	708,458	July 1	156	36	100	33
Baby-jumper. Collapsible	M. J. Wade	709,945	Sept. 30	3784	854	100	2918
Back and arm rest for water-closet or other seats	E. G. Hoffmann	708,228	Sept. 2	490	98	100	2059
Back-pedaling brake							
Bag: *See* Paper bag. Powder-bag. Traveling-bag.							
Bag closure and feeder	C. R. Siegel	705,435	July 22	4098	889	100	877
Bag-filling machine	J. L. Drohen	704,176	July 8	1524	327	100	321
Bag-filling machine	A. M. Bates	707,544	Aug. 26	2942	666 667	100	1773
Bag-holder	W. Hayward	704,251	July 8	1644	357	100	344
Bag-holder	A. D. Johnson	704,883	July 15	2736	591	100	585
Bag-holding device	F. R. Payne	708,456	July 1	153	35	100	33
Bag-making machine	J. F. Ames	709,451	Sept. 16	2794	629 630	100	2589
Bait. Trolling-	J. J. Hildebrandt	706,941	Aug. 12	1808	405	100	1503
Balancing-machine	F. Hodgkinson	710,148	Sept. 30	4186	943	100	2918
Bale compress. Round-	F. G. Dieterich	704,958	July 15	3033	651 652 658	100	650
Bale-press	S. J. Webb	706,618	Aug. 12	1300	266	100	1374
Bale-tie	W. T. Johnson	704,048	July 8	1252	270	100	262
Bale-tie	S. McCay	706,193	Aug. 5	371	80	100	1198
Bale-ties. Making	F. H. Daniels	708,555	July 1	382	73 739	100	65
Bales, &c. Apparatus for making cubic or square	F. B. Pope and G. D. Mims	705,135	July 22	3402	740 741	100	737
Bales. Making cotton-	H. Rembert	708,470	July 1	170	40 738	100	37
Bales of cubic or square shape. Forming elastic and yieldable material in	F. B. Pope and G. D. Mims	705,134	July 22	3400	739	100	737
Baling-press	T. C. West	708,688	July 1	588	130	100	115
Baling-press	L. Trabue	704,718	July 15	2502	741	100	529
Baling-press	J. P. Shaw	707,809	Aug. 26	3516	794	100	1889
Baling-press	T. A. Goodwyn and P. E. Stovall	707,917	Aug. 26	3738	858	100	1932
Baling-press	J. A. Spencer	708,969	Sept. 2	508	115 116	100	2063
Baling press. Hay-	E. S. Mead	707,709	Aug. 26	3387	735	100	1644
Ball: *See* Golf-ball. Playing-ball.							
Ball-and-socket joint for dolls, &c	E. Debes	708,800	July 1	972	212	100	195

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Ball apparatus. Captive	E. H. Miles	708,573	Sept. 9	1029	232	100	2201
Ball-gathering device	F. Minton	704,848	July 15	2763	597	100	592
Balls. Machine for reducing and finishing hollow	A. Johnston	703,499	Sept. 16	2715	609	100	2572
Balls. Making playing	E. Kempshall	704,463	July 8	2048	444	100	431
Balls. Manufacture of playing	E. Kempshall	707,425	Aug. 19	2730	615	100	1710
Balls. Manufacture of playing	E. Kempshall	707,595	Aug. 26	3051	687	100	1795
Balls. Manufacture of playing	E. Kempshall	710,198	Sept. 30	4281	964	100	2925
Balls. Manufacture of playing	E. Kempshall	710,328	Sept. 30	4575	1032	100	2986
Balls. Manufacture of playing	F. H. Richards	704,464	July 8	2049	444	100	431
Balls. Manufacturing playing	E. Kempshall	706,910	Aug. 12	1760	398	100	1494
Ballot-box	H. Droutlege	707,067	Aug. 12	1980	447	100	1540
Banana-shipping case	H. Bitner	710,016	Sept. 30	3923	886	100	2848
Banana-shipping case	F. Schmitz	710,017	Sept. 30	3924	886	100	2848
Banana-shipping case	H. Bitner	710,096	Sept. 30	3955	893	100	2855
Band-cutter and feeder	J. B. Denlinger	705,516	July 22	4307	914 915	100	899
Band-cutter and feeder	W. N. Crow	707,398	Aug. 19	2667	599 600	100	1697
Bandage	C. J. Higgins	709,767	Sept. 23	3420	768	100	2729
Bandoleer or cartridge-belt	J. Hylard	710,324	Sept. 30	4501	1014	100	2971
Banjo attachment	H. M. Bronson	706,941	Aug. 5	759	195	100	1268
Banjo-velluma. Drawing-down device for	W. J. Stent	708,954	Sept. 9	1726	400	100	2348
Bank. Savings	J. Cheim	706,294	Aug. 5	781	170	100	1272
Bank. Savings	C. B. Stilwell	707,675	Aug. 26	3653	823	100	1915
Bar: *See* Revolving bar. Type-bar.							
Bark from trees. Apparatus for removing	W. P. Kidder	707,428	Aug. 19	2724	616	100	1711
Barometer	A. L. Robbins	706,112	Aug. 5	202	42	100	1158
Barrel	O. P. Hallock	705,400	July 22	3986	863	100	856
Barrel, cask, &c. Knockdown	A. Maltby	705,355	July 22	3701	802	100	797
Barrel-finishing machine	G. M. Carter	708,994	July 8	1159	251 252	100	246
Barrel-head fastening	E. C. Shears	708,412	Sept. 2	741	166	100	2131
Barrel hook or handle	G. N. Beeching	705,815	July 29	4680	1046	100	1065
Barrel-making machinery	J. Van Develde	708,746	Sept. 9	1847	407	100	2298
Barrel-register	J. Mauser	708,738	July 1	668	147	100	182
Barrel. Wrought-metal	E. C. Phillips	704,955	July 8	1874	408	100	396
Barrels. Machine for making veneer	W. C. Grant	708,693	Sept. 9	1130	255	100	2222
Basin-clamp	J. O. Noble	709,170	Sept. 16	2823	597	100	2469
Basket. Folding	T. J. Langston	705,486	Aug. 5	854	187	100	1295
Basket forming and stapling machine	N. E. Brown	708,955	Sept. 9	1773	410	100	2356
Basket-webs. Machine for making	P. F. Lindt	707,606	Aug. 26	3068	690 691	100	1799
Bat and explosive. Ball-	J. C. Schwanengel	708,261	Sept. 2	490	112	100	2080
Bat or racket for game known as ping-pong or table-tennis.	J. Girdwood	708,911	July 1	989	215	100	198
Bath: *See* Heat-bath. Tempering-bath.							
Bath apparatus. Electric	J. D. Randall	709,936	July 1	935	184	100	167
Bath-cabinet	J. W. Riley	706,476	Aug. 5	962	207 208	100	1208
Bath-cabinet. Folding	B. D. Knickerbocker	706,069	Aug. 5	130	27	100	1145
Bath-tub. Folding or collapsible	W. H. Gamble	707,060	Aug. 12	2022	452	100	1547
Bath-tubs or the like. Overflow attachment for	H. Merrie and A. E. Burnett, Jr	706,988	Aug. 12	1878	420	100	1517
Bath-tubs, &c. Waste-fixture for	F. T. Meyer	704,705	July 15	2481	535	100	535
Batteries and making same. Active material for storage	W. E. Winship	705,875	July 1	923	.....	100	185
Batteries and product thereof. Making plates for storage	H. K. Hess	704,252	July 8	1646	358	100	344
Batteries. Composition for use in secondary	C. T. J. Oppermann	706,444	Aug. 5	906	.....	100	1299
Batteries. Means for controlling the charging of secondary	J. Burry	708,465	Sept. 23	2899	637 638	100	2610
Battery: *See* Electric battery. Galvanic battery. Electrotherapeutic battery. Secondary battery. Storage battery.							
Battery	W. T. Seddon	704,125	July 8	1429	305	100	301
Battery	W. L. Panikoff	706,340	Aug. 5	873	146 147	100	1251
Battery connection	E. A. Sperry	708,674	July 1	552	125	100	109
Battery jar. Storage	P. Kennedy	709,157	Sept. 16	2794	592	100	2463
Battery plates. Manufacturing secondary	G. H. Christian	708,694	Sept. 9	1250	.....	100	2245
Battery plates. Manufacturing secondary	G. H. Christian	708,695	Sept. 9	1252	.....	100	2246
Battery plates of the Planté type. Manufacture of secondary	H. M. Martin	704,751	July 15	2575	555	100	552
Battery separator-plate. Secondary	A. F. Clark	708,895	July 1	968	211	100	194
Battery separator. Storage	H. Rodman	704,750	July 15	2686	558 559	100	555
Battery tank. Storage	H. Lesley	704,750	July 15	2574	555	100	552
Beam-clamp	H. S. Collins	709,816	Sept. 23	3519	798	100	2751
Beam machine. Reciprocating	N. H. Seeley	707,169	Aug. 19	2220	500 501	100	1605
Beam. Structural-metal	A. A. Strom	708,986	Sept. 9	1781	400	100	2349
Beams, channel-beams, &c. Machine for shaping metal I-	W. A. Dunn	709,081	Sept. 16	2066	470 471	100	2486
Beams, channel-beams, &c. Shaping metal I-	W. A. Dunn	709,090	Sept. 16	2055	469	100	2488
Bean-cleaning machine	G. R. Davidson	710,143	Sept. 30	4175	940 941	100	2901
Bean-separator	W. F. Pillmore and D. Anderegg	709,546	Sept. 23	3184	711	100	2688
Bearing	H. H. Porter	705,893	July 29	4903	1099	100	1092
Bearing	E. E. Hendrick	706,988	Aug. 12	1904	428	100	1503
Bearing	M. Steiner	707,176	Aug. 19	2255	504	100	1613
Bearing	J. Gottbreht	709,403	July 1	69	14	100	16
Bearing. Antifriction	F. S. Seagrave and H. P. Elliott	707,650	Aug. 26	3170	713	100	1880
Bearing. Antifrictional	R. McLaughlin	709,677	Sept. 23	3386	794	100	2693
Bearing. Axle	H. Cogswell	709,205	Sept. 16	2205	494	100	2485
Bearing. Ball	A. Ruedy	706,114	Aug. 5	207	48	100	1159
Bearing. Ball thrust	C. R. Jay	705,674	July 29	4560	990	100	985
Bearing for engraving-machines. Spindle	A. B. Case	707,298	Aug. 19	2481	557	100	1661
Bearing for lawn-mowers. Ball	N. H. Seelye	707,167	Aug. 19	2238	500	100	1605
Bearing for shafts of machines	W. G. Griffin	708,405	July 1	76	15	100	15
Bearing. Roller	J. D. Twiggs, Jr	707,463	Aug. 19	2776	620	100	1729
Bearing. Roller	A. E. Henderson	708,475	Sept. 2	851	194	100	2154
Bearing. Roller	C. A. Carman	709,136	Sept. 16	2162	495	100	2455
Bearing. Roller	A. E. Henderson	709,398	Sept. 16	2580	569	100	2538
Bearing. Roller	A. E. Henderson	709,441	Sept. 16	2772	624	100	2594
Bearing. Roller	J. C. Wands	708,601	Sept. 9	1071	242	100	2309
Bearing. Roller side	T. Thistlewood	708,501	July 1	219	52	100	46
Bearing. Self-lubricating hub	W. B. Spencer	708,492	July 1	206	49	100	44
Bearing. Shaft	J. C. Blevney	707,673	Aug. 26	3217	723	100	1920
Bearing. Shaft or axle	J. Kilburn	705,847	July 29	4870	1058	100	1046
Bearing. Spindle	J. Kilburn	709,821	Sept. 23	3525	794	100	2758
Bearing. Spindle	A. E. Henderson	705,839	July 29	4857	1054	100	1048
Bearing. Thrust	J. Porritt	706,779	Aug. 12	1516	336 337	100	1442
Beating-engine	F. P. Miller	706,985	Aug. 12	1881	421	100	1517
Beating-engine	E. L. Savage	710,014	Sept. 30	3921	895	100	2947
Bed and sofa or chair. Convertible	L. Kragen	709,333	Sept. 16	2548	573	100	2537
Bed-bottom	P. B. Rooney	704,215	July 8	1592	344 345	100	333
Bed-bottom	E. Rose and I. Isbill	710,304	Sept. 30	4465	1007	100	2963
Bed-bottom. Spring	C. B. and F. White	704,416	July 8	1951	433	100	410
Bed-bottom. Spring	J. F. Brown	704,674	July 15	2429	535	100	528
Bed. Couch	F. M. Tinkham	707,807	Aug. 26	3525	796	100	1891
Bed-couch. Extension	J. Hoey	706,178	Aug. 5	344	74	100	1187
Bed. Folding	P. Clay	708,545	July 1	307	69	100	68
Bed. Folding	C. M. Hamilton	710,298	Sept. 30	4405	998 999	100	2951
Bed-frame	F. W. Walker	708,431	Sept. 2	771	173	100	2137
Bed-guard	J. C. Fish	706,748	Aug. 12	1458	320	100	1480
Bed. Hospital	W. H. Fox	704,695	July 15	2349	510	100	505
Bed. Invalid	E. B. Dones	708,332	Sept. 2	600	136	100	2104
Bed-lounge. Folding	N. Levine	704,688	July 15	2450	529	100	528
Bed-pan cover	H. C. Lippa	708,371	Sept. 2	670	151	100	2117
Bed-rail	W. Tucker	704,148	July 8	1475	316	100	310
Bed-slat-holding means	A. R. Cooper	705,384	July 22	3957	857	100	850
Bed-spring	M. Winters	706,694	Aug. 12	1211	268	100	1377
Beds or seats. Framework for spring	W. A. Murray	705,694	July 29	4605	999	100	991
Bedstead-fastening	B. H. Jones	704,702	July 15	2475	535	100	533
Bedstead. Invalid	J. D. Camfield	708,535	July 1	285	65	100	58
Bedstead. Metal	J. A. Mollitor	709,551	Sept. 23	3028	674	100	2650
Beer. Apparatus for cleaning cellular tissues used in clarifying	C. Spindler	709,652	Sept. 23	3198	718	100	2688
Beer-cooler	J. M. Dieterle	710,145	Sept. 30	4180	941	100	2902
Beer-cooler attachment	O. Schell	708,451	July 1	189	45	100	40
Beer-cooling apparatus	J. P. Hickey	705,943	July 22	3650	790	100	789
Beer. Manufacturing non-alcoholic	V. Lapp	709,718	Sept. 23	3301	741	100	2706
Beer-pipe cleaner	C. B. Johnson	705,947	July 22	3655	791	100	790
Beer production. Apparatus for continuous	C. Schmitz	710,396	Sept. 30	4086	1043 1044	100	2995
Beet-topper	M. W. Palmer	709,730	Sept. 23	3313	744	100	2709
Beet-topping machine	J. Albright	706,145	Aug. 5	231	58, 59	100	1175
Beet-culture implement	A. S. Capper	704,614	July 15	2331	505	100	503
Bell	W. B. Augir	704,389	July 8	1734	379	100	363
Bell and burglar-alarm. Combination door	F. E. Abbott	709,268	Sept. 16	2397	543	100	2505
Belt-carrier	J. Weichhart	704,723	July 15	2517	544	100	549
Belt. Conveyer	W. J. Selleck	705,876	July 29	4937	1071	100	1057
Belt. Conveying	J. J. Ridgway	707,255	Aug. 19	2585	584	100	1692
Belt fastener, clasp, or buckle	M. Cochran	704,497	July 8	1988	432	100	418
Belt. Leather	J. L. Fahey	706,213	Sept. 2	408	93	100	2084
Belt-shifter arm. Pressed-metal	H. T. Hallowell	706,819	Aug. 12	1586	357	100	1456
Belt stud or fastener	F. M. Linderman and C. A. Binz	708,565	Sept. 9	1009	229	100	2197
Belt-supporting mechanism. Conveyer	E. S. Phillips	708,846	Aug. 12	1648	368	100	1472
Belt-tightener	G. A. Schwingel	704,388	July 8	1909	413	100	408
Belt-tightener	N. C. Bassett	706,009	Aug. 5	11	3	100	1118
Belt-tightener	W. E. Bee	708,884	Sept. 9	1891	384	100	2320
Belt. Waist	H. J. Gaisman and J. Ross	708,568	July 1	343	78	100	69
Belts, &c. Device for cutting off pieces of	E. H. Jahns	709,408	Sept. 16	2714	609	100	2579
Belting. Machine	M. Gillet	706,044	Aug. 5	81	17	100	1123
Bending angle-irons, channel-irons, &c. Machine for	C. Gabriel	706,310	Aug. 5	617	135	100	1240
Berry-box	C. B. Proctor	707,866	Aug. 26	3041	680	100	1919
Berth. Ship's	A. W. Hitt	704,878	July 15	2815	609	100	608

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Bicycle driving mechanism	K. Brooks	710,945	Sept. 30	4370	998	100	2943
Bicycle-frame	B. F. Monahan	709,718	Sept. 23	3310	743	100	2708
Bicycle-frame. Cushioned	N. B. Zimmerman	708,582	July 1	468	106	100	91
Bicycle frame. Motor-	G. Wagner and B. B. Bird	709,380	Sept. 16	2658	596	100	2551
Bicycle-gear. Changeable	P. J. Scharbach	707,350	Aug. 19	2590	585	100	1668
Bicycle-gearing	D. Macdonald	705,106	July 22	3344	725 796	100	796
Bicycle-grips, &c. Mechanism for covering	J. A. Miller	706,949	Aug. 5	471	100	100	1212
Bicycle handle-bar	W. N. and W. N. Whitely, Jr.	704,159	July 8	1491	325	100	313
Bicycle-handle shield	O. Schmidt	705,346	Aug. 5	686	150	100	1265
Bicycle-lamp lock	A. Fellows	708,907	July 1	984	214	100	197
Bicycle-lock	H. W. Morgan	704,658	July 15	2899	519	100	517
Bicycle-lock	J. C. Fisher	707,310	Aug. 19	2507	562	100	1665
Bicycle-pedal	F. N. Cullen	706,028	Aug. 5	48	10	100	1127
Bicycle-pedal	A. Pherson	706,594	Aug. 12	1155	256	100	1365
Bicycle-pedal	J. A. Decuir	709,505	Sept. 16	2503	564	100	2549
Bicycle-pedal	T. A. Diebold	709,397	Sept. 16	2691	604	100	2567
Bicycle-pump. Automatic	W. B. Bignall	706,453	Aug. 5	916	199	100	1301
Bicycle-rest. Convertible	O. F. Reeves	708,403	Sept. 2	727	163	100	2129
Bicycle saddle-post	W. W. Hughes	707,582	Aug. 26	3049	686	100	1795
Bicycle-saddles. Antifriction-cover for	G. Spence	709,984	Sept. 30	3764	850	100	2814
Bicycle sprocket and crank	W. S. Bradbury	706,718	Aug. 12	1376	307	100	1413
Bicycle-stand	R. O. Wilcox	704,161	July 8	1495	330	100	314
Bicycle-support	G. W. Cole	707,909	Aug. 19	2314	517	100	1629
Bicycle toe-clip	K. Wunner	704,284	July 8	1717	374 375	100	361
Bicycles. Auxiliary hand-operated driving mechanism for	H. M. Lambert and O. H. Joy	704,895	July 15	2828	611	100	905
Bicycles. Combined mud-guard, supplemental seat, and parcel-holder for	J. Kynaston	707,122	Aug. 19	2141	479 480	100	1589
Bicycles. Device for coupling two	J. H. Sager and G. D. Green	707,282	Aug. 19	2402	539	100	1644
Bicycles or like vehicles. Cushion-frame for	W. Goodbrand	704,680	July 15	2436	526	100	525
Bicycles. Two-speed driving-gear for	J. McCullough	704,358	July 8	1865	404	100	394
Bilge-block	A. W. Thierkoff	708,853	July 1	893	194	100	177
Bill-carrying apparatus. Mechanical	J. T. Pirie, Jr.	706,849	Aug. 12	1650	369	100	1473
Bill-sheet and journal-leaf. Combined	W. H. Lane	710,279	Sept. 30	4432	997	100	2955
Billiard-cue	B. A. Stevens	708,744	Sept. 9	1845	407	100	2357
Billiard-cushion	B. W. Perkins	707,650	Aug. 26	3116	702	100	1809

Binder. Loose-leaf-ledger	H. H. Hoffmann	708,922	July 1	1005	219	100	200
Binder. Loose-sheet	J. B. Irving	705,949	Aug. 12	1880	407	100	1505
Binder-needle	E. Will	707,482	Aug. 19	2811	625	100	1729
Binder. Paper-	F. N. Volkert	707,057	Aug. 12	1973	443	100	1586
Binder. Temporary	P. Ladewig	708,730	July 1	658	146	100	132
Binder. Temporary	C. K. and C. A. Reed	706,257	Aug. 5	492	105	100	1216
Binding-envelop or file	H. D. Winton	705,006	July 15	3131	677	100	668
Bit: *See* Bridle-bit.							
Blacking-box holder	G. A. Joy	709,526	Sept. 16	2537	530	100	2498
Blacking machine. Shoe-	J. Nicolet	706,091	Aug. 5	170	34	100	1151
Blank-threading-machine feed mechanism	J. H. Haskins	708,140	Sept. 2	954	63, 64	100	2086
Blanket-guard	H. M. Williams	708,109	Sept. 2	196	47	100	2122
Blast-furnace	G. C. Shakleford	710,120	Sept. 30	4125	980 981	100	2989
Blast-furnace. Iron	M. P. Boss	708,116	Sept. 2	213	51	100	2085
Blast or other furnace	E. F. Coffin	705,922	July 29	4899	1049 444	100	1057
Blasting-cartridge	W. Kirsanov	704,465	July 8	2051	445	100	431
Bleaching apparatus	C. C. Clark	708,796	Sept. 9	1459	334	100	498
Bleaching-vat	F. Taylor, A. Cooke, and B. W. D. Montgomery.	704,402	July 8	1982	418	100	407
Blind stop. Window-	T. A. Upson	705,626	July 1	451	104	100	88
Blind. Window-	W. R. Briggs	706,618	Sept. 9	1106	248 249	100	2216
Blinds. Apparatus for operating Venetian	T. Summerton	705,425	Sept. 2	765	178	100	2136
Block: *See* Bilge-block. Machinist's V-block. Building-block. Mooring-block. Link-motion block.							
Blotter or desk-pad	G. W. Buskirk	708,525	Sept. 9	953	216	100	2186
Blower and compressor	C. Neumann	704,860	July 8	1868	404	100	394
Blower. Rotary fan-	F. B. Schermerhorn and G. E. Moffett.	708,307	July 22	3781	820	100	814
Blowing-engine	W. Kennedy	708,716	Sept. 9	1299	296	100	2256
Blowing-engine	A. Raven	709,909	Sept. 30	3754	847 848	100	2812
Blowpipe. Gas-	G. B. Snow	709,890	Sept. 23	3537	797	100	2755
Board: *See* Directory-board. Panel-board. Drawing-board. Pitch-board. End-board. Sign-board. Game-board. Stone-board. Ironing-board. Washboard. Keyboard.							
Boards by means of cleats. Machine for securing together	C. Johnson	707,116	Aug. 19	2134	476 477	100	1587
Boards. Machine for forming blanks from matched	C. Johnson	709,710	Sept. 23	3296	739 740	100	2705
Boards. Stacking of	G. Johnson, Jr.	704,360	July 8	1671	364	100	350
Boat anticapsizing device	F. W. Zimer	705,188	July 22	3514	762	100	762
Boat-fender	W. H. Higgins	708,476	Sept. 2	853	195	100	2154

Boats, &c. Apparatus for removing material from	A. M. Acklin	707,371	Aug. 19	2512	560	100	1668
Boats, &c. Apparatus for removing materials from	A. M. Acklin	707,491	Aug. 19	2826	640	100	1733
Boats, &c. Apparatus for removing materials from	A. M. Acklin	707,492	Aug. 19	2829	640	100	1734
Boats, tow-lines, &c. Safety releasing device for the sheets of	C. Smith and G. J. Hone	708,713	July 1	622	139	100	123
Bobbin-skewer	R. Schofield	704,584	July 15	2284	496	100	498
Body-brace	M. W. Russell	703,477	July 1	183	43	100	89
Body-brace	P. B. Sheldon	709,055	Sept. 16	2008	456	100	2491
Boiler: *See* Domestic boiler. Steam-boiler. Heating-boiler. Washboiler. Locomotive-boiler. Water-tube boiler.							
Boiler	L. Mahy and P. Hailiez	706,188	Aug. 5	362	78	100	1190
Boiler	A. W. Ofeldt	707,519	Aug. 19	2891	653 647	100	1744
Boiler and its furnace	S. A. Graham	707,509	Aug. 19	2858	648 649	100	1739
Boiler combustion apparatus. Steam-	J. R. Fraser	707,911	Aug. 26	3729	806	100	1980
Boiler-furnace	H. R. Scott	708,710	July 1	616	137 138	100	122
Boiler-furnace	T. York	705,508	July 22	4188	911	100	895
Boiler-furnace	A. M. Rankin	705,900	July 29	5076	1106 1107	100	1087
Boiler-furnace	A. Muir	709,605	Sept. 23	3117	694	100	2669
Boiler furnace. Steam-	H. B. Meech	704,853	July 8	1832	401	100	392
Boiler furnace. Steam-	J. R. Bailey	707,495	Aug. 19	2835	640 641	100	1735
Boiler furnace. Steam-	J. R. Bailey	707,496	Aug. 19	2836	641	100	1735
Boiler furnace. Steam-	H. H. Patterson and J. T. Burke	707,865	Aug. 26	3689	820	100	1912
Boiler furnace. Steam-	O. D. Orvis	709,178	Sept. 16	2237	508	100	2470
Boiler furnace. Steam-	H. Straeten and F. Schneck	706,275	Aug. 5	552	120	100	1227
Boiler-grate	D. M. and A. B. Burns	707,208	Aug. 19	2304	515	100	1684
Boiler or water-heater	F. Foskett	704,529	July 15	2190	475	100	475
Boiler safety device. Steam-	F. J. Manley	705,369	July 22	3387	853	100	845
Boiler safety device. Steam-	G. C. Quassebarth	706,200	Aug. 5	388	82	100	1195
Boiler-tube cleaner	J. H. Pollard	709,509	Sept. 23	2952	659	100	2634
Boiler-tube cutter	F. Palfrey	709,276	Sept. 16	2444	553	100	2515
Boiler-tube expander	D. W. Rockwell	707,943	Aug. 26	3784	849	100	1942
Boiler water-gage. Steam-	J. Béha	708,888	July 1	944	206	100	190
Boiler water-purifying apparatus. Steam-	W. Eichelberger	705,912	July 29	4993	1086 1087	100	1070
Boilers. Scot-cleaner for steam-	W. Schmidt and P. Thomsen	708,482	July 1	190	45	100	40
Boilers. Superheating device in tubular steam-	H. Moore	705,421	July 22	4025	872	100	864
Boilers. Water-level-testing device for	E. Carlson and J. Perrie	708,998	July 8	1158	251	100	245
Bolster	N. H. Tunks	708,508	July 1	2222	52	100	46
Bolster guide-block	J. E. Long	705,663	July 29	4579	995	100	987
Bolster-roll							
Bolt: *See* Door-bolt. Expansion-bolt. Expansible bolt. Sliding bolt							
Bolt and fastener therefor	A. H. Lewis	708,486	Sept. 2	879	199	100	2150
Bolt and nut cutter	W. B. Carolus	710,181	Sept. 30	4349	958	100	2916
Bolt and nut cutter	W. B. Carolus	710,182	Sept. 30	4351	958	100	2917
Bolt-locking device	D. Ferguson	705,571	July 15	4378	949	100	947
Bolt-machine	C. K. Lassiter	708,891	Sept. 9	1068	269	100	2284
Bolt-retainer	G. Lakhovsky	708,796	July 1	779	171	100	156
Bone-black kiln	W. T. Mohr	708,808	Sept. 9	1676	395 396	100	2287
Book. Account-	C. K. Rosenberg	704,216	July 8	1598	345	100	333
Book and carbon therefor. Manifold-	A. Levison	710,160	Sept. 30	4210	948	100	2907
Book. Artist's sketch-	W. T. Sullivan	708,500	July 1	218	51	100	45
Book-backing protector	S. Litwin	704,554	July 15	2288	493	100	483
Book. Balance-	J. R. McCord, Jr	704,706	July 15	2429	536	100	535
Book. Bank-deposit-coupon	P. Kuehn	705,851	July 29	4883	1061 1062	100	1048
Book. Coupon collection and receipt	W. S. Cappeller and C. S. Patteson	704,856	July 15	2775	600	100	594
Book-cover	C. Neuendorffer and B. Witach	705,869	July 29	4907	1065	100	1051
Book cover. Memorandum-	M. Vernon	709,687	Sept. 23	3258	720	100	2597
Book fastening device. Account or sales	L. A. Keith	705,412	July 22	4009	868	100	861
Book for holding and filing sales-slips, &c	J. F. Huber	708,220	Sept. 2	435	99	100	2070
Book-leaf	C. H. Wheaton	709,529	Sept. 23	2996	667	100	2644
Book. Manifold-	A. Levison. (Reissue)	12,035	July 1	1119	242	100	221
Book. Manifold copy-	J. C. Browning	706,310	Sept. 2	581	131	100	2099
Book. Manifolding note-	W. F. English	709,259	Sept. 16	2408	545	100	2507
Book. Manifolding sales or copying	P. Hano	709,380	Sept. 16	2527	569	100	2533
Book. Manifolding sales or order	B. G. Merrill	705,769	Aug. 12	1497	332	100	1426
Book or pad. Manifolding memorandum	E. Z. Lewis	704,844	July 15	2754	595	100	589
Book or parcel carrier or holder	T. H. Shottenberg	705,878	July 29	4932	1073	100	1058
Book-support and arm-rest	O. G. Law	710,104	Sept. 30	4094	924	100	2882
Book-support or copy-holder	G. W. Sawyer	707,979	Aug. 26	3849	864	100	1954
Books. Device for fastening loose-leaf	J. A. Waldo, Jr.	708,109	Sept. 2	187	44	100	2080
Bookbinder's clamp	L. J. A. Staniewicz	708,495	July 1	210	50	100	44
Bookbinding	J. L. McMillan	708,065	Sept. 2	120	29	100	2006
Bookbinding-machine	W. G. Joyce, Jr	708,988	July 1	1084	262	100	204
Bookbinding-sheet	G. Hager	709,599	Sept. 23	3109	693	100	2668
Bookkeeping	C. Seitz	700,725	Sept. 23	2321	746 747	100	1711
Bookkeeping system	F. Lapointe	710,103	Sept. 30	4091	924	100	2882
Boom-rigging	F. V. Nielsen	710,334	Sept. 30	4517	1018	100	2974

Bottle. Non-refillable	E. Burns	708,171	Sept. 2	824	77	100	2047
Bottle. Non-refillable	H. B. Reubelt	708,306	Sept. 2	566	128	100	2096
Bottle. Non-refillable	J. J. Bents	708,545	Sept. 9	981	222	100	2191
Bottle. Non-refillable	C. C. Guernsey	708,961	Sept. 16	1842	424	100	2289
Bottle. Non-refillable	H. F. Bailey	709,081	Sept. 16	1957	448	100	2411
Bottle. Non-refillable	R. McCord	709,099	Sept. 16	2009	480	100	2442
Bottle. Non-refillable	W. G. Lawrence	710,139	Sept. 30	4170	989	100	2900
Bottle. Non-refillable	H. Breunig and H. J. Waldeyer	710,319	Sept. 30	4492	1013	100	2999
Bottle. Non-refillable	J. W. Edwards	704,103	July 8	1863	396	100	351
Bottle or flask	E. D. Read	704,482	July 8	2088	455	100	459
Bottle or jar	E. L. Livingstone	708,173	Sept. 2	827	76	100	2048
Bottle-rest. Adjustable	R. Schmidt	709,698	Sept. 23	3677	734	100	2701
Bottle-rinser	H. W. Colby and E. O. Heinadorf	710,305	Sept. 30	4467	1007	100	2964
Bottle. Siphon-	E. Scheiber and E. Krvayaser	708,523	July 1	973	68	100	55
Bottle-stopper	H. S. Brewington	708,524	July 1	974	68	100	55
Bottle-stopper	H. S. Brewington	708,525	July 1	974	68	100	55
Bottle-stopper	H. S. Brewington	708,527	July 1	976	68	100	55
Bottle-stopper	H. S. Brewington	708,529	July 1	977	68	100	55
Bottle-stopper	A. Molinari	708,735	July 1	666	147	100	128
Bottle-stopper	A. Eklund	704,920	July 15	2717	588	100	581
Bottle-stopper	J. B. Crosby	708,501	Aug. 5	601	131	100	1126
Bottle-stopper	A. Blumer	708,624	Aug. 12	1288	271	100	1279
Bottle-stopper	S. Schwerin	708,698	Aug. 12	1288	297	100	1405
Bottle-stopper	J. J. Allison	707,126	Aug. 19	2286	512	100	1621
Bottle-stopper	A. C. Packer	707,548	Aug. 19	2572	561	100	1679
Bottle-stopper	W. H. Sherman	708,254	Sept. 2	492	113	100	2051
Bottle-stopper	M. Pitts	708,722	Sept. 9	1327	306	100	2268
Bottle-stopper	M. C. Wilson	708,749	Sept. 9	1356	309	100	2270
Bottle-stopper	I. Koscherak	709,161	Sept. 16	2323	505	100	2467
Bottle-stopper	I. Koscherak	709,162	Sept. 16	2324	505	100	2467
Bottle-stopper	C. W. Meinecke	709,418	Sept. 16	2730	613	100	2576
Bottle-stopper	J. T. Hicks	709,819	Sept. 23	3261	794	100	2732
Bottle-stopper	A. E. Snow	710,319	Sept. 30	4393	972	100	2985
Bottle-stopper	B. F. Miner	705,271	July 22	3709	804	100	799
Bottle-stopper and brush. Combination	H. O. Brawner	709,391	Sept. 16	2268	608	100	2506
Bottle stopper and sprinkler							

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Bottle stopper. Water-	E. Paillipson	710,207	Sept. 30	4304	968	100	2980
Bottle stopper. Water-	E. Phillipson	710,208	Sept. 30	4305	968	100	2980
Bottle-washing machine	J. G. Hehr	709,415	July 1	98	19.90	100	21
Bottle-washing machine	J. H. W. Ortmann and C. W. Herbst	705,480	July 22	4089	875	100	887
Bottle-washing machine	M. P. Shea	705,877	July 29	4228	1072	100	1057
Bottle-washing machine	C. J. Warren	707,740	Aug. 26	3302	756 757 758	100	1858
Bottle-washing machine	W. J. Cunningham	708,321	Sept. 2	598	136	100	2108
Bottles, jars, &c. Closure for	A. L. Weissenthanner	705,178	July 22	3478	755	100	752
Bottles, jars, or other vessels. Stoppering	F. W. Margette	706,347	Aug. 5	468	100	100	1211
Bottles or jars. Metal cap for	C. A. Calleson	708,598	Sept. 9	957	217	100	2187
Bottles or jugs with beer. Apparatus for filling	A. Schroedter	704,386	July 8	1906	412 413 748 749 750	100	402
Bottling-machine	C. J. Warren	707,737	Aug. 26	3341	751 752 753 754	100	1855
Bowling-alley	C. J. Olson	708,779	Sept. 9	1418	324 325	100	2382
Bowling-alley	H. B. Lahr	709,168	Sept. 16	2225	505	100	2467
Bowling-alley	H. J. Shipham	709,802	Sept. 23	3489	787	100	2744
Bowling-alley	E. C. Phillips	707,632	Aug. 26	3122	703	100	1810
Bowling-alley pin	W. McClintock	707,158	Aug. 19	2206	494	100	1601
Bowls or basins. Clamp for marble wash

Brake: *See* Air-brake. Automatic brake. Back-pedaling brake. Bicycle-brake. Car-brake. Coaster-brake. Cycle-brake. Emergency-brake. Fluid-pressure brake. Friction-brake. Marine brake. Roller-brake. Track-brake. Vehicle-brake. Wagon-brake.							
Brake	W. A. Crowdus	708,583	July 1	319	72	100	64
Brake	V. Royle	708,695	July 1	848	187	100	170
Brake	J. G. Alexander	704,229	July 8	1614	349	100	337
Brake	G. W. Stevens	705,624	July 29	4474	970	100	966
Brake	A. R. Moore	707,149	Aug. 19	2199	498	100	1600
Brake	B. Haskell	707,105	Aug. 19	2117	473	100	1583
Brake-beam	C. Vanderbilt	707,658	Aug. 26	3196	717	100	1826
Brake-beam	P. T Handiges	706,852	Sept. 2	647	146	100	2113
Brake-beam fulcrum	P. Muller	706,086	Aug. 5	102	33	100	1160
Brake-controller	D. Neale	707,345	Aug. 19	2509	580 / 581	100	1678
Brake, fender, and step. Combination	W. E. Quimby	708,468	July 1	168	39	100	36
Brake for administering prescribed resistance to the starting movements of hand-operated controllers.	H. W. Gibbs	707,698	Aug. 26	3259	729	100	1888
Brake-handle	G. P. Ritter	705,399	July 22	3760	816	100	811
Brake-head. Adjustable	G. P. Ritter	705,671	July 29	4456	966	100	968
Brake-head. Adjustable	O. F. Randall	704,103	July 8	1380	298	100	990
Brake mechanism	G. W. Greenwood	704,334	July 15	2203	477	100	477
Brake mechanism	D. S. Sebastian	708,337	Sept. 9	1555	355	100	2311
Brake mechanism	H. W. Cooley	710,253	Sept. 30	4382	985 / 986	100	2945
Brake-shoe	G. A. Woodman	704,491	July 8	2106	456	100	442
Brake-shoe	J. D. Gallagher	708,704	Sept. 9	1274	291	100	2250
Brake-shoe adjuster	E. M. Herr	705,927	July 29	5030	1095	100	1075
Brake-shoe-lubricating filler	R. D. Baldwin	706,147	Aug. 5	284	59	100	1175
Brander. Electric	H. L. Jenkins and O. F. F. Rohlmann.	709,809	Sept. 23	3115	694	100	2669
Branding-iron	F. France	708,567	July 1	342	77	100	69
Brazing	H. E. Grant	709,599	Sept. 30	3999	894	100	2800
Bread-cutter	W. O. N. Morrison	709,553	Sept. 23	3032	676	100	2651
Breech mechanism	J. F. Meigs and S. A. S. Hammar	704,998	July 15	2650	617	100	611
Brick and tile for walls, &c. Combined	D. W. Anderson	707,515	Aug. 26	3539	798	100	1898
Brick. Burning	J. Peck	708,294	Sept. 2	712	----	100	2126
Brick-carrier	J. G. McDowell	705,377	July 22	3721	807	100	801
Brick-edge-smoothing blade	W. Frey	705,084	July 22	3252	708	100	708
Brick-handler	J. H. and G. P. Martin	705,416	July 22	4017	870	100	863
Brick-kiln	T. M. Wilson	704,418	July 8	1953	424 / 425	100	411
Brick kiln and drier. Continuous	J. F. Du Bois	706,085	Aug. 5	63	13, 14	100	1158
Brick-machine	W. F. Stimpson	707,275	Aug. 19	2441	548	100	1654
Brick-machine	W. F. Stimpson	707,276	Aug. 19	2444	549	100	1654
Brick-machine dies. Lubricant apparatus for	H. K. King	704,097	Sept. 16	2093	480	100	2441
Brick-machines. Plunger-adjusting mechanism for re-press	J. Walker	708,276	Sept. 2	520	118	100	2057
Brick-mold	O. M. Reif	708,256	Sept. 2	485	111	100	2079
Brick-molding machine	J. Mohs	704,754	July 15	2578	556 / 557	100	558
Brick or block	L. A. Brown	708,760	July 1	709	157	100	142
Brick or block. Paving	W. J. Leary	710,032	Sept. 30	4000	908	100	2864
Brick-press	J. J. Nieters	708,778	Sept. 9	1411	324	100	2281
Bricks for building purposes. Machine for laying	J. H. Knight	704,647	July 15	2383	516	100	515
Bricks for building purposes. Machine for laying	J. H. Knight	704,648	July 15	2384	516	100	514
Bricks. Treatment of refractory	J. H. Knight	707,670	Aug. 26	3211	----	100	1829
Bricking pulverized material. Apparatus for	S. Zuckschwerdt	708,562	July 1	326	76	100	67
Bridge. Bascule	T. A. Edison	708,348	Sept. 2	641	145	100	2111
Bridge construction	C. F. Hall	708,468	Sept. 2	837	191	100	2151
Bridge suspension-cables. System for erecting and adjusting	G. M. Cheney	708,468	Sept. 2	837	191	100	2151
Bridge. Swing	W. J. Glover	709,816	Sept. 16	2521	568	100	2592
Bridle and bit	C. Worthington	707,044	Aug. 12	1986	446	100	1539
Bridle-bit	B. W. Kindig, Jr	710,156	Sept. 30	4003	947	100	2905
Bridle overdraw-check	C. W. Drown	708,700	Sept. 23	3231	735	100	2702
Broiler and toaster. Combined	J. B. Schott	708,410	Sept. 2	739	166	100	2131
Bromindigo. Making	P. G. Van Wie	708,502	Aug. 5	993	219	100	1318
Bronze-mill	M. von Gallois	705,921	Aug. 12	1776	----	100	1497
Brooder	J. A. Prince	708,466	July 1	166	38, 39	100	35
Brooder	W. P. Jones	705,953	Aug. 12	1826	409 / 410	100	1506
Brooder. Chicken-	O. R. Lincoln	707,127	Aug. 19	2147	481	100	1590
Broom	N. Pedersen	709,508	Sept. 23	2950	658 / 659	100	2634
Broom, &c	H. Neilson	705,602	July 29	4439	968	100	959
Broom-handles. Polishing and drying	M. Young	706,144	Aug. 5	280	58	100	1174
Broom-head	C. A. Ridlon	707,159	Aug. 19	2216	497	100	1606
Brush	W. Mansfield	704,493	July 8	2090	453	100	439
Brush	C. Klauberg	705,534	July 22	4279	925	100	914
Brush	J. Schreiner	709,610	Sept. 23	3134	696	100	2670
Brush and comb. Combination	F. H. Loveless	710,161	Sept. 30	4011	949	100	2908
Brush. Bottle-washing	C. E. Flemming	707,574	Aug. 26	3017	678	100	1788
Brush. Bottle-washing	R. Hoerning	704,986	July 15	2727	590	100	588
Brush-holder	C. K. Volckening	705,983	July 29	5117	1116	100	1096
Brush-holder	H. F. T. Erben	705,055	July 22	3990	690	100	704
Brush. Sprinkling scrub	F. T. Weidaw	706,286	Aug. 5	572	124	100	1251
Bucket. Bait	F. Pirrung	705,861	July 29	4900	1065	100	1059
Bucket-ear	J. B. Hall	706,407	Aug. 5	816	178	100	1279
	F. T. Brosi	709,999	Sept. 16	2468	560	100	2584

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Bucket or manger	W. H. Rymer	710,341	Sept. 30	4530	1022	100	2977
Bucket. Well	H. W. Holmes	708,923	July 1	1008	219	100	901
Buckle	R. Porter	708,464	July 1	164	38	100	35
Buckle	E. T. Specht	705,630	July 29	4469	969	100	965
Buckle	J. E. Mitchell	706,080	Aug. 5	152	32	100	1147
Buckle	D. M. McLean	708,267	Sept. 2	695	156	100	2122
Buckle	F. F. Hodges	708,584	July 1	369	85	100	73
Buckle and combination. Adjustable clamp	E. H. Crum	707,894	Aug. 19	2660	600	100	1697
Buckle. Back-bend	C. H. Johnson and L. H. Clements	708,359	Sept. 2	656	148	100	2114
Buckle. Harness	C. A. Goozey	708,339	Sept. 2	639	141	100	2109
Buckle. Lock	W. R. Sturgiss	707,084	Aug. 12	1969	441	100	1535
Buckle or fastener for bale-ties or the like. Clamp	G. Schneider	706,857	Aug. 12	1661	379	100	1474
Buckle. Tongueless	F. Woodward	708,878	July 1	989	232	100	186
Buckles. Means for securing straps to	R. B. Coffman	708,681	Sept. 9	1111	249	100	2218
Buggy. Baby	W. B. Williamson	704,789	July 15	2604	568	100	558
Buggy-bed stay	J. W. Simmons	709,580	Sept. 23	3041	677	100	2659
Buggy-boot	A. W. Wilson	708,695	Sept. 9	1226	288	100	2243
Buggy-boot attachment	H. A. Sorensen	704,276	July 8	1701	371	100	857
Buggy boot or apron	B. S. D. S. Martin	709,026	Sept. 16	1947	446 / 447	100	2609
Buggy storm-curtain	J. B. Vliet	708,505	July 1	294	68	100	47
Buggy-top adjuster	T. F. Horne	710,273	Sept. 30	4413	994 / 995	100	2953
Buggy-top locking-brace	M. Brown	705,901	July 29	4969	1061	100	1056
Buggy-top raiser	C. Matthey-Moier	704,847	July 15	2761	596	100	591
Bugs or other insects infesting dwellings, &c. Apparatus for destroying	F. A. Searight and G. J. Stevens	708,499	Sept. 2	898	208	100	2164
Building-block	C. F. Whittlesey	704,805	July 15	2817	608	100	600
Building block and wall	N. Merley	708,725	Sept. 9	1216	300	100	2260
Building-block die	W. M. Riley	704,983	July 15	2980	638	100	639
Building construction	C. E. Cottrell	709,257	Sept. 16	2404	545	100	2506
Building construction	M. W. Marsden	704,066	July 8	1290	280	100	271
Building material	O. Nentwig	707,446	Aug. 19	2750	622 / 623	100	1716
Building material. Box of	D. F. Saum	708,922	Sept. 9	1711	395	100	2345
Building-renovating apparatus	T. P. Payne	705,127	July 22	3888	782 / 783	100	784
Buildings. Construction of metallic frame	C. E. Hebberd	709,548	Sept. 9	984	232	100	2129
Buildings. Metal framework for	E. Huber and A. Milmine	705,829	July 15	2729	590	100	584
Bulkhead-doors. Means for operating	P. Hoppe	706,471	Aug. 5	944	206	100	1305
Bullet-mold	H. Richter	705,146	July 22	3430	745	100	744
Bung	H. C. Blanck	708,305	Sept. 2	573	130	100	2098
Bung and bushing. Barrel	E. C. Phillips	705,108	Aug. 5	186	39	100	1155
Bung and connection for beer-barrels. Valved	D. Beebe	706,984	Aug. 12	1711	382 / 383	100	1498
Bunsen burner	W. Kappel	706,820	Aug. 12	1612	362	100	1464
Bunsen burner	W. H. and G. E. Russell	708,259	Sept. 2	488	112	100	2080
Buoy	W. S. Crouch, Jr	706,808	Aug. 12	1568	349	100	1458
Buoy	W. S. Crouch, Jr	706,804	Aug. 12	1564	350	100	1458
Burglar-alarm	P. W. Dunne	704,946	July 8	1687	385	100	342
Burglar-alarm	C. Fruehauf	704,947	July 8	1689	385	100	343
Burglar-alarm	W. B. Thomas	704,981	July 15	3083	664	100	658
Burglar-alarm	J. H. Howard	707,513	Aug. 19	2864	650	100	1741
Burglar-alarm	F. C. Robinson and J. E. Green	708,496	Sept. 2	895	202	100	2163
Burial-case	C. D. Koeser	708,954	July 1	1029	233	100	205
Burial-case	J. B. Kerr, Jr	709,988	Sept. 30	3877	874	100	2688
Burial-casket	J. Koegel	706,960	Aug. 12	1844	412 / 413	100	1510
Burial-casket rough box	P. D. Skahen	709,428	Sept. 16	2737	615	100	2677
Burner: *See* Bunsen burner. Garbage-burner. Gas-burner. Gas-heating burner. Hydrocarbon-burner. Hydrocarbon-vapor burner. Liquid-fuel burner. Oil-burner. Pulverized-fuel burner. Regenerator-burner. Vapor-burner.							
Burner	M. S. Walker	707,985	Aug. 19	2462	552	100	1657
Burner	M. S. Walker	707,986	Aug. 19	2464	552	100	1657
Burner	J. L. Jones, Jr	710,276	Sept. 30	4417	996	100	2954
Burner attachment	T. L. Roy and T. Marshall, Jr	709,978	Sept. 16	2446	553	100	2515
Burner-cap	W. H. and R. W. Miller	708,658	July 15	2894	518	100	516
Burner-tip cleaner	S. Carlson	709,077	Sept. 16	2047	467	100	2431
Bushing. Bung	G. H. Ricke	710,005	Sept. 30	3904	881	100	2844
Bushing for sheaves. Roller	W. F. Wellman	710,088	Sept. 30	4060	915	100	2876
Bushings. Machine for truing piston-ring	A. R. Davis	705,788	July 29	4091	1015	100	1000
Bustle	H. H. Taylor	704,146	July 8	1472	316	100	300
Butter-cutter	M. R. Phillips	705,543	July 22	4290	934	100	921
Butter-packer	F. Prentice	710,238	Sept. 30	4522	1019 / 1020	100	2975
Button	G. W. Buchanan. (Reissue)	12,080	Aug. 19	2905	658	100	1749
Button	F. E. Stanley	708,673	Sept. 9	1209	276	100	2239
Button	J. Hilder	708,711	Sept. 9	1288	294	100	2254
Button and making same	M. D. Shipman	707,456	Aug. 19	2764	626	100	1719
Button. Combined badge and bouquet holding	G. J. Alexander	705,190	July 22	3516	768	100	762
Button-feeding mechanism	J. Hormby	707,399	Aug. 19	2544	573	100	1672
Button-machine	T. F. Morrissey	704,856	July 8	1859	402 / 403	100	398
Button-making machines. Grip-carrier for	J. Hormby	707,396	Aug. 19	2529	571	100	1672
Button-making machines. Segmental gear for	J. Hormby	707,398	Aug. 19	2543	572 / 573	100	1672
Button-making machines. Spindle adjustment for	J. Hormby	707,390	Aug. 19	2546	573 / 574	100	1673
Button or stud. Separable	J. L. Vredenburgh	708,181	Sept. 2	341	81	100	2051
Button-polishing machine	J. Hormby	708,708	Sept. 9	1256	319 / 320	100	2278

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Button. Separable	H. R. Sieverkropp	705,793	July 29	4781	1097	100	1098
Button-setting machine	E. B. Stimpson	707,274	Aug. 19	2437	546	100	1652
					547		
Button-stenciling machine	J. Hormby	705,084	July 22	3288	713	100	715
					714		
Button-stenciling-machine pigment-spraying mechanism	J. Hormby	705,086	July 22	3295	716	100	716
					717		
Button-stenciling-machine stencil-carrier	J. Hormby	705,085	July 22	3292	714	100	716
					715		
Button. Wire	S. A. Foster	709,537	Sept. 23	3005	669	100	2646
Buttonhole-cutter	L. F. Monck	705,945	July 29	5052	1100	100	1082
Buttonhole-machine. Automatic stop mechanism for	P. Fabisch	706,646	Aug. 12	1248	276	100	1386
Buttonhole-moistener	E. Puff	704,577	July 15	3273	493	100	490
Cabinet for bookcases, letter-files, &c	F. Tramblay	710,096	Sept. 30	4054	913	100	2875
Cabinet. Machine-bearing	T. Kundtz	709,093	Sept. 16	3096	480	100	2442
Cabinet. Prescription	J. J. Nesmith	710,001	Sept. 30	3897	879	100	2842
Cabinet. Tooth brush and powder	C. T. Price	709,927	Sept. 30	3750	846	100	2811
Cable-clip	H. R. Davis	705,891	July 22	3969	859	100	852
Cable-hanger	S. Du Perow	704,788	July 15	2635	570	100	565
Cable mechanism for hauling loads up inclined surfaces	W. J. Jackman	704,890	July 15	2730	590	100	584
					591		
Cable-rope equalizer	W. H. Beebe	707,816	Aug. 26	3540	798	100	1894
Cable-sleeve	C. M. Earl	707,058	Aug. 12	2011	450	100	1544
Cable-support	J. E. Gamalielson	707,814	Aug. 19	2513	565	100	1666
Cable-testing apparatus	H. W. Fisher	703,777	July 1	737	163	100	148
Cable-track roads. Support for suspended	H. M. Harding	707,228	Aug. 19	2350	527	100	1632
Calcining apparatus. Plaster	A. Lawrence	705,968	Aug. 12	1852	415	100	1511
Calcium carbid. Manufacturing	I. L. Roberts	708,921	Sept. 9	1711		100	2345
Calculating-machine	C. Hamann	703,786	July 1	753	166	100	151
					167		
Calculating-machine	C. Hamann	705,839	July 29	4855	1054	100	1048
Calculating-machine	I. Hultman	706,189	Aug. 5	347	75	100	1187
Calculating-machine	F. S. Baldwin	706,375	Aug. 5	740	161	100	1266
					162		
					163		
Calculating-machine	F. C. Rinsche	709,244	Sept. 16	2381	539	100	2501
Calculating-machine	A. C. Schuman	709,362	Sept. 16	2607	587	100	2551
					588		
Calculating-machine	A. C. Schuman	709,365	Sept. 16	2625	591	100	2556
Calculating-machine dating attachment	A. C. Schuman	709,364	Sept. 16	2623	590	100	2556
					591		
Calculator	E. W. Sibley	707,032	Aug. 26	3174	714	100	1821

Can-opener	J. W. Pierce	707,353	Aug. 19	2389	535	100	1641
Can-opener	M. E. Duncan	707,560	Aug. 26	2979	672	100	1781
Can-opener	M. E. Duncan	707,561	Aug. 26	2980	673	100	1781
Can-opener	C. T. Custer	708,901	Sept. 9	1471	336	100	2295
Can-opener	G. E. Woodbury	704,421	July 8	1960	426	100	412
Can or jar cover attachment. Fruit	J. A. Swanson	705,160	July 22	3452	751	100	748
Can spout. Oil	H. N. Norton	704,267	July 8	1679	366	100	352
Can-testing machine	W. H. H. Stevenson	704,278	July 8	1708	371	100	358
					372		
Can-testing machine	G. F. Leiger	704,480	July 8	2085	453	100	428
Can-washer	F. T. Pierce and A. E. Kuchenbecker	705,133	July 22	3398	738	100	737
Can wrench. Fruit	W. F. Kerr	708,149	Sept. 2	279	66	100	2089
Cans. Measuring and discharging apparatus for filling	J. McGinnity	709,798	Sept. 23	3466	781	100	2740
Canning apparatus	J. T. Garner	704,679	July 15	2435	526	100	525
Canning food products	J. G. Hodgson	704,258	July 8	1968	363	100	350
Candle-making machine	A. R. Peck	705,249	July 22	3741	813	100	806
Candle shield and drip-catcher	H. S. Nagengast	708,809	July 1	798	176	100	160
Candy-coating device	P. Panoulias	707,864	Aug. 26	3636	890	100	1911
Candy-cooler	G. S. Collum	709,199	Sept. 16	2167	497	100	2458
Candy-dipping machine	F. Goldschmidt	704,248	July 8	1640	356	100	343
Cane	A. Sjoberg	706,501	Aug. 5	992	218	100	1317
Cane	J. S. Judy	709,095	Sept. 16	2090	479	100	2441
Cane	J. A. Ekelund	706,225	Aug. 5	432	92	100	1204
Cane and fishpole. Combined	J. H. N. Wilson	706,481	Aug. 5	960	209	100	1310
					210		
Cane, &c. Device for cutting sugar	J. H. Fox	704,310	July 8	1755	383	100	369
Cane. Magazine torpedo	J. B. Allen	709,457	Sept. 23	2824	634	100	2607
Cane. Magazine torpedo	J. M. Dodge	705,393	July 22	3971	860	100	852
Cane-sling	E. W. Holdsombeck	708,417	July 1	95	20	100	22
Cane-stripper	T. A. Dutton	707,091	Aug. 19	2088	466	100	1576
Cane stripper. Sugar	W. C. Gregg	708,634	Sept. 9	1132	255	100	2229
					256		
Cannon. Automatic range-finding sight for	I. N. Lewis	706,767	Aug. 12	1492	330	100	1437
					331		
					332		
Canopy	E. G. Burland	706,722	Aug. 12	1385	308	100	1415
Canopy	F. C. Winants	707,483	Aug. 19	2612	636	100	1729
Canopy for vehicles. Folding	W. J. Slyder	706,605	Aug. 12	1177	261	100	1369
Canopy. Horse	A. J. Mapes	705,370	July 22	3989	853	100	845
Cant-hook clasps. Die for making	O. Rudd	706,691	Aug. 12	1396	297	100	1405
Canteen	A. Hall	703,654	July 1	511	115	100	100
Canteen	G. M. Spencer	707,878	Aug. 26	3651	822	100	1914
Canteen. Army	T. Kearns and I. C. Coin	704,686	July 15	3446	528	100	527
Cap	J. E. McLoughlin	708,606	July 1	407	95	100	81
Cap. Apparel	C. W. Gordon	705,068	July 22	3258	705	100	709
Capping-machine. Electromagnetic	L. J. Borie	708,952	July 1	1057	230	100	210
Car and elevating track. Automatic	W. L. McLaughlin and J. E. Swenson	708,395	Sept. 2	692	156	100	2122
Car and railway indicator. Street	W. W. Harris and W. D. Chew	705,235	July 22	3686	787	100	786
					788		
Car-axles. Means for driving generators by power taken from	J. L. Creveling	709,847	Sept. 23	3565	804	100	2761
Car. Ballast-spreading	W. R. Scott	707,649	Aug. 26	3164	711	100	1819
					712

Car body-bolster	G. G. Floyd	706,647	Aug. 12	1351	276	100	1387
Car body-bolster	J. V. McAdam	706,660	Aug. 12	1317	291	100	1401
Car-bolster	H. C. Buhoup	708,379	July 1	29	6	100	8
Car-bolster	G. P. Ritter	708,609	July 1	412	96, 97	100	88
Car-bolsters. Swinging spring-seat for	C. T. Westlake	704,997	July 15	3116	671	100	664
Car. Box	J. R. Kilbourne	709,330	Sept. 16	2544	572	100	2536
Car-brake	F. W. Rock	708,614	July 1	422	98	100	84
Car-brake	J. Plattenburg	708,618	July 1	894	181	100	165
					182		
Car-brake	F. O. Brown and E. T. Moore	704,506	July 15	2138	458	100	463
Car-brake	A. Broluska	705,098	July 22	3179	687	100	694
Car-brake	J. R. Montague	705,946	July 29	5054	1100	100	1092
					1101		
Car-brake	R. E. Lockwood	706,672	Aug. 12	1304	267	100	1398
					268		
Car-brake	W. House	707,231	Aug. 19	2547	574	100	1674
Car-brake	J. H. De May and F. Hoyland, Jr	709,884	Sept. 30	3678	828	100	2795
Car-brake	G. M. Griggs	709,961	Sept. 30	3867	870	100	2836
					871		
Car-brake. Automatic	A. W. Reed	706,459	Aug. 5	915	198	100	1300
Car-brake mechanism	G. E. Burgess	704,508	July 15	2142	464	100	464
Car-brake mechanism	A. W. Vollstorf	706,284	Aug. 5	568	128	100	1230
Car-brake. Momentum	T. E. McCollum	709,923	Sept. 30	3744	843	100	2810
Car-brake. Ratchet	H. Witte	704,227	July 8	1619	349	100	337
Car center-bearing. Railway	F. Ditchfield	709,755	Sept. 23	3391	761	100	2733
Car check-lock. Mine	L. J. Joder	704,882	July 15	2735	591	100	583
Car chock. Railway	A. D. Faulkner	708,906	July 1	963	214	100	196
Car construction	H. C. Hodges and G. A. Blume	704,905	July 15	3051	655	100	652
					656		
Car. Convertible	H. Romünder	707,018	Aug. 12	1942	434	100	1530
					435		

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Car. Convertible railway-	J. A. Brill and E. S. Bucknam	709,073	Sept. 16	2025	464	100	2428
					465		
Car. Convertible railway-	E. S. Bucknam	709,075	Sept. 16	2041	466	100	2430
Car. Convertible railway-	E. S. Bucknam	709,076	Sept. 16	2043	466	100	2430

					987		
Car-coupling	W. S. Lennon	710,283	Sept. 30	4430	998	100	2956
Car-coupling	W. Thornburgh	706,360	Aug. 5	707	154	100	1259
Car-coupling attachments. Spring-protecting device for railway-	G. A. Hermanson	706,236	Aug. 5	449	95	100	1206
Car-coupling. Automatic	J. M. Stanley	707,209	Aug. 19	2416	541	100	1647
Car-coupling. Automatic	A. A. Rosengrén	707,734	Aug. 26	3313	741	100	1849
Car-coupling. Automatic	S. Cox and G. W. Warden	708,206	Sept. 2	394	91	100	2062
Car-coupling. Automatic	J. A. Hinson	709,404	Sept. 16	2704	607	100	2569
Car-coupling draft-rigging. Railway-	E. D. Peppers	706,449	Aug. 5	910	197	100	1300
Car-door	F. G. Susemihl	708,843	Sept. 9	1564	357	100	2313
Car-door	S. J. Johnson	709,269	Sept. 16	2429	550	100	2511
					551		
Car-door	S. J. Johnson	709,270	Sept. 16	2433	551	100	2512
Car-door	G. Krygoski and E. A. Lowrie	708,366	Sept. 2	665	150	100	2116
Car-door fitting	G. Krygoski and E. A. Lowrie	708,367	Sept. 2	666	150	100	2116
Car-door fitting	K. Osel	708,914	Sept. 9	1700	392	100	2342
Car door. Flush	G. Stirrett	709,267	Sept. 16	2387	540	100	2535
Car door. Grain	A. L. Hook	709,325	Sept. 16	2537	571	100	2535
Car door. Grain	E. J. Müller	707,342	Aug. 19	2565	578	100	1677
Car-door mechanism	J. Simonton	707,450	Aug. 19	2768	627	100	1720
					628		
Car-door-operating device	W. E. Sharp	704,709	July 15	2495	536	100	536
					537		
Car. Double-deck	W. G. Swan	704,716	July 15	2500	541	100	538
Car draft-rigging	J. A. Hinson	704,802	July 15	2678	578	100	573
					579		
Car draft-rigging	J. M. Waugh	705,172	July 22	3474	756	100	753
Car draft-rigging. Railway-	E. W. Samen	709,361	Sept. 16	2605	586	100	2550
Car draft spring-rigging. Railway-	E. M. Ray and R. B. McConney	704,578	July 15	2273	493	100	490
					494		
Car. Dump-	F. S. Ingoldsby	706,662	Aug. 12	1282	283	100	1302
Car. Dump-	F. S. Ingoldsby	706,663	Aug. 12	1284	283	100	1303
Car. Dumping-	F. Peteler	706,254	Aug. 5	485	103	100	1215
					104		
Car end panel and seat-post. Open-	J. Seeberger	709,516	Sept. 23	2972	662	100	2639
Car fans and ventilators. Pneumatic motor for	C. A. Evans	705,830	July 29	4840	1051	100	1040
Car-fender	J. T. Hodgins	704,461	July 8	2046	443	100	430
Car-fender	E. A. Booser	704,776	July 15	2613	566	100	561
Car-fender	J. W. Wehmeyer	705,286	July 29	4946	1075	100	1060
Car-fender	C. Giblin	705,918	July 29	5004	1089	100	1072
Car-fender	A. M. Ferguson and J. A. U. Beaudry	706,041	Aug. 5	78	17	100	1133
Car-fender	O. M. Prouse	706,951	Aug. 12	1653	370	100	1473
Car-fender	E. C. Moulton	708,999	Sept. 9	1679	367	100	2338
Car-fender	J. H. Lutter	709,991	Sept. 30	3980	875	100	2858
Car-fender	J. Bauer	705,814	July 29	4819	1046	100	1035
Car fender or guard. Tramway-	E. F. Cannon	703,536	July 1	227	56	100	58
Car fender. Street-	C. T. Stoelting	704,141	July 8	1467	314	100	308
Car fender. Street-	C. Zimmerman	704,166	July 8	1504	322	100	316
Car fender. Street-	H. J. Schuldt	705,150	July 22	3435	746	100	745
					747		
Car fender. Street-	O. Spillern-Spitzer	705,466	July 22	4105	892	100	891
Car fender. Street-	O. Olsen	705,788	July 29	4763	1033	100	1025
Car. Freight-	H. R. Keithley	703,659	July 1	520	117	100	102
					118		
Car. Freight-	H. S. Godfrey	709,009	Sept. 16	1900	435	100	2400
					436		
Car friction draw-gear and buffing apparatus. Railway-	S. P. Bush	707,820	Aug. 26	3548	800	100	1896
					801		
Car gates. Means for operating railway-	E. E. Gold	709,261	Sept. 16	2410	546	100	2508
Car. Gondola	A. B. Bellows	710,175	Sept. 30	4239	956	100	2914
Car. Gondola	A. B. Bellows	710,176	Sept. 30	4240	956	100	2914
Car grain-door	T. N. Bon Durant	708,017	Sept. 2	28	7	100	1986
Car grain-door	L. A. Hoerr	708,486	Sept. 23	2902	648	100	2625
Car grain-door. Railway-box-	J. W. Wood	708,626	Aug. 12	1213	269	100	1377
Car guard device. Coupled-	J. Eisenmann	709,145	Sept. 16	2176	498	100	2450
Car guard-gate. Railway-	H. Witte	704,298	July 8	1613	349	100	337
Car guard-rail. Street-	W. S. Bradley	704,432	July 8	1979	431	100	416

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Car. Hand-	J. R. Roach	709,175	Sept. 16	2241	509	100	2471
Car-haul	S. W. Bollinger	707,200	Aug. 19	2300	514	100	1633
Car-haul	A. M. Acklin	709,691	Sept. 23	3266	732	100	2699
Car-heating apparatus. Railway-	J. Q. C. Searle	707,361	Aug. 19	2503	586	100	1684
Car-heating system	E. H. Gold	707,964	Aug. 26	3320	859	100	1948
Car-lighting. Generating apparatus for	A. F. Madden	705,854	July 29	4888	1093	100	1049
Car-lighting system. Combined electric and gas	J. L. Creveling	704,695	July 15	2463	532	100	530
Car-loader	J. L. Roberts	708,473	July 1	177	41	100	37
Car. Mail-	P. J. Farrell	709,894	Sept. 30	3690	888	100	2798
Car. Metallic railway-	R. H. Hornbrook and W. H. Woodcock.	707,416	Aug. 19	2702	611	100	1706
					612		
Car. Motor-	W. C. Holloway	705,402	July 22	3089	864	100	856
Car-mover	C. D. Fox	704,870	July 15	2799	606	100	599
Car-mover	H. C. Harrington and W. M. Towers	709,765	Sept. 23	3415	767	100	2729
Car or engine replacer	F. J. Fewings	706,542	Aug. 12	1065	234	100	1346
					235		
Car. Passenger-	J. M. Osgood	705,432	July 22	4044	876	100	869
Car. Platform-	H. F. Vogel and M. Weber	709,249	Sept. 16	2393	541	100	2504
Car-platforms. Trap-door for	J. G. Lawler	706,853	Aug. 12	1617	363	100	1465
Car. Railway-	G. W. Chipley	707,902	Aug. 19	2488	558	100	1692
					559		
Car. Railway-	S. H. Ellis	710,048	Sept. 30	3977	897	100	2859
Car-record device	J. R. Cavanagh, J. B. Hannan, and J. D. Clarke.	709,394	Sept. 16	2667	603	100	2566
Car rigging or draft appliance. Railway	S. H. Jansen	708,491	Sept. 2	865	197	100	2157
Car-roof	A. W. Wilcox	705,898	July 29	4949	1077	100	1061
Car-seat	H. S. Hale	705,075	July 22	3267	707	100	711
Car-seat ticket-holder	G. H. Roberts, Sr.	709,608	Sept. 23	3122	695	100	2670
Car seats and seat-post with which it connects. End panel for open-	J. Seeberger	709,517	Sept. 23	2973	663	100	2639
Car side bearing. Railway-	C. F. Huntoon	704,044	July 8	1246	268	100	202
					269		
Car side bearing. Railway-	S. Northrop and A. G. Steinbrenner	704,088	July 8	1335	291	100	279
Car side-guard	J. H. Donnelly	708,209	Sept. 2	398	92	100	2063

Change-making machine	A. B. Fowler	709,521	Sept. 23	2980	664	100	2641
Channeling-machine	M. R. Hutchison	707,576	Aug. 26	3019	679	100	1788
Charging-switch	H. S. Chandler	707,699	Aug. 26	3269	730	100	1840
Chart. Adjustable	M. L. Avery	708,754	Sept. 9	1367	312	100	2279
Chart. Dress-	J. Ritter	705,194	July 22	3520	764	100	763
Chatelaine-clasp	L. B. Prahar	704,212	July 8	1595	342	100	332
Chatelaine-hook	L. B. Prahar	708,820	July 1	827	182	100	166
Chatelaine-hook	L. B. Prahar	708,821	July 1	829	182	100	166
Chatelaine-hook	L. B. Prahar	708,822	July 1	831	183	100	166
Check-book keeper	T. Albee	707,583	Aug. 26	2926	662	100	1770
Check-lock. Automatic	H. W. Denison	709,141	Sept. 16	2170	497	100	2458
Check-perforating machine	F. Avery	709,458	Sept. 23	2926	634	100	2607
Check-perforator	M. Keane	709,775	Sept. 23	3439	774	100	2734
Check-severing device	F. J. Hull	710,300	Sept. 30	4561	1029	100	2968
Checks, &c. Means for certifying	J. S. Alexander	707,891	Aug. 26	3033	690	100	1823
Checking-machine	F. R. Wainwright	705,494	July 22	4159	905 / 906	100	690
Checkrein	C. B. Henry	704,636	July 15	2364	514	100	509
Checkrein-hook	J. P Ketteringham	709,778	Sept. 23	3443	774	100	2734
Checkreins. Elastic connection for	J. M. Chaffin	707,388	Aug. 19	2644	597	100	1695
Cheese-cutter	F. May	706,328	Aug. 5	653	143	100	1247
Cheese-hoop	E. J. Piggott	706,104	Aug. 5	187	39	100	1155
Cheese. Manufacture of	F. A. Hurd	707,698	Aug. 26	2988	.....	100	1840

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Cheese-marker	J. Wolfinger	707,528	Aug. 19	2900	656	100	1748
Chemical apparatus	R. C. Robinson	706,794	Aug. 12	1528	329	100	1445
Chenille-spotting machine	L. O. Trivett and F. Randall	709,587	Sept. 23	3085	667 688	100	2602
Chenille. Woven	T. F. and A. Naylor	704,083	July 8	1328	289	100	278
Cherries or other single-stoned fruit. Machine for removing stones from	W. P. Harris	704,876	July 15	2809	609	100	601
Child's safety-harness	C. J. Schreck	708,488	July 1	191	46	100	40
Chilian mill	G. F. Waddell and W. J. Evans	709,689	Sept. 23	3260	730 731	100	2697
Chimney or other curved fireproof structure	P. Brandner	709,889	Sept. 30	3515	817	100	2785
Chimney-top	C. J. Quinn	706,450	Aug. 5	912	198	100	1300
Chisel. Bush-	J. W. McClure	705,980	July 1	1056	229	100	210
Chlorin and alkali. Electrolytic apparatus for the production of	J. Mactear	705,814	July 22	3700	802	100	797
Chocolate coating or dipping machine	G. J. Hicks	707,777	Aug. 26	3459	779 780 781	100	1878
Chopper: *See* Cotton-chopper. Stalk-chopper. Meat-chopper.							
Christmas-tree holder	F. H. Crum	708,554	July 1	321	72	100	65
Chuck	C. H. Reid	708,735	Sept. 9	1330	303	100	2264
Chuck. Bur-	T. R. Tierce	706,703	Aug. 12	1349	301	100	1408
Chuck. Drill-	A. I. Jacobs	709,014	Sept. 16	1919	440	100	2404
Chuck. Drill-	A. J. Studnicka	709,061	Sept. 16	2013	459	100	2423
Chuck. Rock-drill	M. McHale and J. Trainner	704,081	July 8	1326	289	100	278
Churn	J. Dempster and W. S. Bradley	705,219	July 22	3567	776	100	1123
Churn	A. Close	706,023	Aug. 5	35	7	100	1123
Churn	J. B. Riggins and H. Gordan	708,665	Sept. 9	1199	273	100	2235
Churn	A. Mitchell	709,497	Sept. 23	2917	650 651	100	2027
Churn	W. B. Chalfant	709,137	Sept. 16	2164	496	100	2457
Churn. Centrifugal	J. A. Maddox	704,064	July 8	1287	279	100	271
Churn-power	C. Law	705,395	July 22	3698	852	100	844
Chute	F. L. Sackett	708,981	Sept. 2	151	36	100	2012
Chute	F. L. Sackett	708,982	Sept. 2	153	36, 37	100	2012
Chute	L. Rosenfeld	709,609	Sept. 23	3123	696	100	2570
Chute. Adjustable loading-	W. H. Taylor	709,373	Sept. 16	2649	594	100	2559
Chute. Coal-	F. W. Brink	707,297	Aug. 19	2479	557	100	1669
Chute for loading wheat or flour on ships	E. Myers	705,118	July 22	3563	729	100	780
Chute. Swinging animal-	A. Morten	704,902	July 15	2955	619	100	612
Cigar-box. Moisture-proof	G. W. Arnold and W. M. Cranston	707,536	Aug. 26	2929	663	100	1779
Cigar-bunch-rolling machine	M. M. Gardner	704,742	July 15	2558	551 552	100	549
Cigar-bunching machine	J. H. Schmidt	705,449	July 22	4009	864 865 866 867	100	874
Cigar-bunching machine	W. Weierbach and E. S. Dickson	707,742	Aug. 26	3369	758 759 761 762	100	1860
Cigar-bunching machine	J. R. Williams	707,748	Aug. 26	3386	763 764 765 766	100	1864
Cigar-bunching machines. Tobacco-conveying device for	J. R. Schmitt	710,018	Sept. 30	3995	896 897	100	2848
Cigar-cutter	J. C. F. Dick	709,209	Sept. 16	2309	525	100	2486
Cigar gage and butt-cutter	W. Heffley	706,986	Aug. 12	1799	402	100	1501
Cigar-machine	H. A. Schneekloth	705,872	July 29	4017	1069 1070	100	1055
Cigar-machine	W. A. Turner	709,943	Sept. 30	3779	853	100	2817
Cigar-maker's board	A. C. Cambridge	708,235	July 8	1622	351	100	339
Cigar-making machine. Automatic	B. H. Snavely and T. H. Keller	705,267	Aug. 5	513	110 111 112 113 114 115	100	1220
Cigar-marking machine	F. H. Richards	709,300	Sept. 16	2597	585 586	100	2548
Cigar or cigarette lighting device	R. Wilson	704,163	July 8	1497	321	100	314
Cigar-perforator	S. Mountford	706,679	Aug. 12	1815	291	100	1401
Cigar-pocket. Paper	O. L. Parmenter	706,998	Aug. 12	1903	425	100	1521
Cigar-shaper	C. G. Singley	708,085	Sept. 2	157	37	100	2013
Cigars. Machine for boxing little	G. M. Williams	708,789	Sept. 9	1437	329 330	100	2288
Cigarette-former	G. S. Hammond	706,981	Aug. 12	1791	401	100	1500
Cigarette-machine	G. Ferrari	707,706	Aug. 26	3431	773 774 775	100	1872
Cigarette-machine automatic stop mechanism	G. Ferrari	707,708	Aug. 26	3443	775 776	100	1875
Cigarette-machine feeder	T. Moesinger	709,920	Sept. 30	3737	841 842	100	2809
Cigarette-machine tobacco-measuring mechanism	G. Ferrari	707,707	Aug. 26	3441	775	100	1874
Cigarette-machines. Device for feeding tobacco in	J. Paul	709,507	Sept. 23	2950	658	100	2634
Cigarette-making machine. Individual-	F. J. Ludington	705,591	July 29	4413	956 957 958	100	953
Cigarette-mouthpieces. Producing	L. H. Sondheim	709,389	Sept. 16	2642	592	100	2557
Cigarette-roller	J. G. Halapleus	708,915	July 1	905	217	100	198
Cinder-hopper	M. Laux	708,608	July 1	400	94	100	79
Cineol arsenate and making same	W. Smith	705,545	July 22	4324	.....	100	922

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Circle-cutting device	E. O. Cartwright	708,586	July 1	290	66	100	58
Circuit-breaker	F. Benzinger	707,959	Aug. 26	3796	853	100	1945
Circuit-breaker	E. M. Hewlett	708,710	Sept. 9	1294	293	100	2252
Circuit-breaker	F. A. Merrick	709,222	Sept. 16	2348	533	100	2494
Circuit-breaker	C. J. Reed	710,367	Sept. 30	4574	1061	100	2985
Circuit-breaker. Automatic	B. Ballantyne	704,496	July 15	2120	458	100	459
Circuit-breaker. Automatic	C. D. Haskins	710,056	Sept. 30	3994	901	100	2953
Circuit-breaker. Automatic magnetic	W. M. Scott	704,974	July 15	3068	650	100	655
Circuit-breaker reverse-current device	H. P. Ball	708,008	Sept. 2	15	4	100	1984
Circuit-breaker. Time-limit	H. M. Hobart	706,055	Aug. 5	104	22	100	1138
Circuit-breaker time-limit device	H. P. Ball	708,007	Sept. 2	13	3	100	1983
Circuit-closer	D. F. Mulkey	706,435	Aug. 5	886	191	100	1294
Circuit-closer. Thermostatic	A. M. Buts	705,379	July 22	3949	856	100	848
Circuit-closing device	A. B. Chance	707,761	Aug. 26	3432	771	100	1870
Circuit-interrupter	M. S. Walker	708,189	Sept. 2	343	81, 82	100	2051
Circuits. Device for overcoming alternating-currents in direct-current	H. Brockelt	708,121	Sept. 2	221	53	100	2027
Clamp: *See* Basin-clamp. Pedestal-clamp. Beam-clamp. Pipe-clamp. Bookbinder's clamp. Rail-clamp. Conduit-clamp. Saw-clamp. Floor-clamp. Staging-clamp. Foundry pattern-clamp. Suspension-clamp. Furniture-clamp. Suture-clamp. Leather-setting-frame clamp. Trousers-clamp. Leather-stretching clamp. Wheel-clamp.							
Clamp	W. T. De Worth	707,660	Aug. 26	3227	724	100	1882
Clamp	J. A. Smith	707,808	Aug. 26	3517	794	100	1890
Clamp	S. H. Ellis	710,049	Sept. 30	3980	898	100	2960
Clarinet	W. Heckel	706,557	Aug. 12	1089	241	100	1351
Clasp: *See* Chatelaine-clasp. Garment-clasp.							
Clasp	C. W. Stimson	706,272	Aug. 5	543	117	100	1225
Clasp	C. A. Bryant	706,592	Aug. 12	1084	228	100	1359
Clasp	J. Sulzbacher	707,877	Aug. 26	3658	823	100	1916
Clasp or buckle	N. Crane	705,823	July 29	4031	1049	100	1038
Clasp or fastener	N. Crane	709,536	Sept. 23	3004	669	100	2540
Clasp or fastener	W. W. Ketler and E. Britton	704,883	July 15	2825	611	100	605
Claw-bar	M. J. Adams	709,131	Sept. 16	2158	494	100	2454
Clay, &c. Apparatus for molding the exterior of articles in							
Cleaner: *See* Beer-pipe cleaner. Road-cleaner. Boiler-tube cleaner. Seed-cleaner. Comb-cleaner. Spinning-machine cleaner. Flue-cleaner. Stovepipe-cleaner. Grain-cleaner. Turbine flue-cleaner. Gun-cleaner. Type-cleaner. Orange or lemon cleaner. Window-cleaner. Razor-cleaner.							
Cleaning and polishing composition	I. Stern	708,743	Sept. 9	1344	.....	100	2267
Cleaning-paste and making same	A. Wolpers	706,790	Aug. 12	1336	.....	100	1447
Clip: *See* Bicycle toe-clip. Paper-clip. Cable-clip. Single-tree-clip. Fence-fastening clip. Upholstering-clip. Whiffletree-clip.							
Clipper. Hair-	G. H. Coates	708,464	Sept. 2	938	191	100	2151
Clock. Calendar-	J. I. Peatfield	704,916	July 15	2923	626 627 628 629	100	629
Clock-chime	G. M. Stevens	710,084	Sept. 30	4051	912	100	2974
Clock. Electric	J. Butcher	705,558	July 29	4353	942 943	100	941
Clock. Electric	H. Gillette	706,817	Aug. 12	1583	355 356	100	1457
Clock. Electric	H. E. Andersson	708,112	Sept. 2	205	49	100	2024
Clock. Electric	A. F. Poole	708,253	Sept. 2	472	108 109 110	100	2077
Clock. Electric	C. J. Moberg	709,234	Sept. 16	2354	553 554	100	2496
Clock. Electric	N. Harrison	709,818	Sept. 23	3520	793	100	2751
Clock. Electric alarm-	Z. H. Kevorkian	708,425	July 1	108	24	100	24
Clock. Electric alarm-	W. E. Throop and W. S. Ingraham	708,854	July 1	884	195	100	177
Clock. Electric alarm-	W. C. Bethel	704,733	July 15	2533	547 548	100	545
Clock-escapement. Electromagnetically-controlled	A. H. Grenfell	704,874	July 15	2806	607	100	600
Clock pendulum-regulator	J. Butcher	709,594	Sept. 23	3100	691	100	2666
Clock. Program-	O. D. Rice	704,108	July 8	1389	299	100	292
Clock. Repeating	J. Kienzle	708,964	Sept. 2	663	149	100	2115
Clock. Self-winding	C. Hurst	704,333	July 8	1795	398	100	377
Clock. Self-winding	C. Hour	708,886	Sept. 9	1651	379 380	100	2382
Clock. Self-winding electric	C. M. Crook	708,953	July 1	1058	230 231	100	211
Clock. Self-winding electric	C. M. Crook	704,630	July 15	2388	508	100	504
Clock striking mechanism	F. W. Inden	708,769	Sept. 9	1398	320 321	100	2279
Cloth-cleaning device	F. O. Carlson and B. J. Haaland	704,615	July 15	2331	506	100	502
Cloth-cutting machine	J. G. and H. H. Grosheim	708,784	July 1	749	166	100	150
Cloth manufacturing. Brushing-machine for	G. W. Voelker	706,139	Aug. 5	244	51	100	1108

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Cloth-steaming machine	A. T. Sarfert	707,725	Aug. 26	3315	742	100	1850
Clothes-drainer	H. Blenkhorn	706,887	Aug. 12	1717	743	100	1485
Clothes-drier	K. C. Moore	704,561	July 15	2249	384	100	486
Clothes-drier. Ventilated	L. F. H. Gundlach	703,652	July 1	509	487	100	100
Clothes-drying attachment for range-boilers	S. L. Richardson	705,295	July 22	3754	114	100	810
Clothes-hanger	A. W. Van Demark	707,880	Aug. 26	3674	815	100	1980
Clothes-hook	C. Salmond	703,742	July 1	677	150	100	135
Clothes-hook	A. H. Cobb	707,898	Aug. 26	3557	804	100	1998
Clothes-line holder	T. Lemaire	705,101	July 22	3331	723	100	724
Clothes-line holder	A. H. Jones	707,847	Aug. 26	3609	814	100	1907
Clothes-line holder	G. W. McDonald	710,905	Sept. 30	4301	967	100	2929
Clothes-line prop-head	J. G. Mole	704,073	July 8	1316	287	100	276
Clothes-line support	M. T. Gordon and F. Davis	704,025	July 8	1218	263	100	258
Clothes-pounder	P. F. Glynn	704,630	July 15	2356	512	100	507
Clothes-pounder	K. D. McLay	709,109	Sept. 16	2112	484	100	2446
Clothes-wringer	F. H. Perkins	707,974	Aug. 26	3641	803	100	1953
Clothes-wringer	E. B. Gay	709,638	Sept. 23	3154	709	100	2576
Clutch	H. Moon	705,273	July 22	3714	805	100	800
Clutch	W. D. Cookson	706,381	Aug. 5	787	171	100	1273
Clutch	F. W. Jones	707,588	Aug. 26	3049	686	100	1795
Clutch	P. A. Houghtaling. (Reissue)	12,080	Sept. 9	1837	423	100	2370
Clutch	P. A. Houghtaling	709,771	Sept. 23	3429	771	100	2731
Clutch for induction-motors	A. Schwartz	706,117	Aug. 5	212	772	100	1160
Clutch. Free-wheel or like	W. H. Gurney and S. L. Taylor	709,900	Sept. 30	3700	44	100	2900
Clutch. Friction-	R. E. Olds	704,911	July 15	2911	884	100	627
Clutch. Friction-	L. P. Mooers	706,081	Aug. 5	153	32	100	1148
Clutch. Friction-	C. A. Fisher	706,400	Aug. 5	808	175	100	1276
Clutch. Friction-	E. Huber	706,650	Aug. 12	1279	282	100	1392
Clutch. Friction-	G. M. Bennett	709,194	Sept. 16	2282	518	100	2490
Clutch. Friction-	A. Mill	709,918	Sept. 30	3734	840	100	2906
Clutch. Friction-	J. Ferrari	707,709	Aug. 26	3445	776	100	1875
Clutch mechanism	E. Turney	709,557	Sept. 23	3053	680	100	2555
Clutch-operating mechanism	W. Klocke	710,199	Sept. 30	4292	954	100	2985
Clutch. Power-press	A. M. Sweder	706,479	Aug. 5	957	209	100	1209
Clutch. Reversing-	A. M. Sweder	706,277	Aug. 5	556	121	100	1238
Clutch. Reversing friction-	H. B. Harding	707,321	Aug. 19	2526	568	100	1669
Clutch. Variable-speed	W. A. Wood	707,890	Aug. 26	3690	829	100	1928
Coal-bagger	H. B. Sackett	707,358	Aug. 19	2580	595	100	1693
Coal-breaking machine	L. de Bertier de Sauvigny	707,945	Aug. 26	3787	849	100	1943
Coal-flats, &c. Device for unloading	H. N. Hughes	710,194	Sept. 30	4267	962	100	2920
Coal-unloading apparatus	C. D. Day	705,322	Aug. 5	423	90, 91	100	1202
Coaster-brake	C. Glover	705,549	Aug. 12	1077	238	100	1349
Coaster-brake	C. Glover	709,479	Sept. 23	2998	645	100	2622
Coat	H. Wolf	705,007	July 15	3132	677	100	668
Coating for brick or stone. Moisture-proof	W. A. Tucker	705,225	July 29	4479	.....	100	966
Coating-machine	G. Carlson	708,125	Sept. 2	234	54, 55	100	2080
Coating-machine	M. A. Smith	708,277	Sept. 2	499	114	100	2092
Coating metal plates. Apparatus for	G. B. Hammond and T. Dennis	706,408	Aug. 5	819	179	100	1279
Coating metals preparatory to being heated	H. Wachwitz	708,788	Sept. 9	1437	.....	100	2288
Coating of copper, bronze, or like surfaces. Iridescent	D. Sinclair	705,456	July 22	4090	.....	100	877
Coating one metal with another metal	S. H. Thurston	706,702	Aug. 12	1349	.....	100	1408
Coating-tray	P. B. Taylor	704,592	July 15	2295	499	100	495
Coatings. Machine for applying	J. B. McKeown	707,620	Aug. 26	3499	698	100	1805
Cocaine. Sterilizing and preserving	W. C. Riley	704,758	July 15	2584	556	100	2187
Cock and safety-valve. Combined gage	A. C. Calder	708,527	Sept. 9	956	216	100	651
Cock. Angle-	J. A. Helm	704,964	July 15	3049	655	100	651
Cock. Ball-	C. Birkery	703,521	July 1	266	60, 61	100	54
Cock. Ball-	A. W. Murray	708,905	July 1	798	175	100	159
Cock for air-brake mechanism. Angle-	M. L. Houder	708,059	Aug. 5	117	24	100	1141
Cock for gas-burners. Stop-	G. D. Gibbs	704,315	July 8	1766	385	100	371
Cock for multiple-light gaseliers. By-pass stop-	W. H. W. Fähndrich	704,678	July 15	2434	526	100	534
Cock. Gage-	W. I. Staaf	708,785	Sept. 9	1425	298	100	2285
Cock. Hydrant-	J. H. Kidder	707,119	Aug. 19	2138	478	100	1568
Cock or faucet	W. H. Douglas	704,522	July 15	2177	471	100	472
Cock or faucet	R. F. Lindsay	706,573	Aug. 12	1111	246	100	1356
Cock safety attachment. Gas-	A. M. Merrill	705,419	July 22	4022	872	100	864
Cock. Self-closing	P. Schwegel	704,121	July 8	1417	304	100	298
Cocoanut-cutting machine	F. Baker, Jr., and E. J. Fritsch	709,811	Sept. 23	3511	791	100	2749
Coffee-maker	T. K. Baker	710,132	Sept. 30	4157	926	100	2897
Coffee-maker	T. K. Baker	710,133	Sept. 30	4158	927	100	2897
Coffee-pot	M. H. Sexton	704,596	July 15	2268	497	100	494
Coffee-pot	H. Nutrizio	707,957	Aug. 26	3776	847	100	1940
Coffee-roaster	T. M. Ward	708,508	July 1	290	54, 55	100	47
Coffee-roaster	F. Krux	708,571	Aug. 12	1109	246	100	1355
Coherer	G. W. Pickard	708,070	Sept. 2	129	31	100	2008
Coin-actuated machine	P. S. Gattolliat	704,312	July 8	1758	394	100	370
Coin alarm and registering apparatus	A. Barrett	704,954	July 15	3026	650	100	648
Coin-case	B. B. Anderson	709,686	Sept. 23	3198	714	100	2685
Coin-controlled apparatus	A. Baumgarten	705,017	July 22	3164	688	100	691
Coin-controlled device	H. G. Sweeney	703,621	July 1	440	684	100	86
Coin-controlled device	J. D. Kneedler	705,361	July 22	3994	102	100	843
Coin-controlled machine	F. J. Hall and P. S. Stauffer	707,773	Aug. 26	3451	850	100	1877
Coin-delivery device	J. M. Butcher and W. G. Hartwig	707,065	Aug. 12	2080	778	100	1342
Coin-holder	A. Anderson	704,731	July 15	3526	453	100	1549
Coin-holder	S. Ray	708,733	Sept. 9	1398	547	100	544
Coins, &c. Receptacle for	C. B. Pike	708,731	Sept. 9	1325	306	100	2263

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Coke-drawer	D. Ferguson	707,686	Aug. 26	3239	726	100	1883
Coke. Making	P. Naef	706,443	Aug. 5	903	195	100	1206
Coke. Manufacturing	J. W. Seaver	707,525	Aug. 19	2696	655	100	1747
Coke-oven	M. E. Rothberg	705,446	July 22	4065	883	100	873
Coke-oven	W. T. Gates	707,914	Aug. 26	3735	837	100	1931
Coke-ovens or other kilns tight. Making the interior of	R. Kuhn	705,681	July 29	4576	994	100	986
Coke quenching or cooling apparatus	L. Bertrand	707,379	Aug. 19	2626	592	100	1690
Coking coal. Continuous process of	J. Hemingway	705,926	July 29	5017	1093	100	1075
Collapsible box	O. Feil	707,962	Aug. 26	3818	859	100	1946
Collar	E. F. Brown	709,074	Sept. 16	2040	465	100	2430
Collar-blanks, &c. Machine for folding	G. J. Dormandy	708,080	Sept. 2	58	14, 15	100	1998
Collar-fastener. Interlocking	H. Dalgety	705,212	July 22	3574	773	100	774
Collar for horses or the like	J. Ahrendt	707,814	Aug. 26	3587	798	100	1893
Collar. Split	E. H. Sexton	709,366	Sept. 16	2637	591	100	2557
Collar turning and ironing machine	C. C. Gridley	705,666	July 29	4548	988	100	981
Collars. Drying	R. Cluett	707,823	Aug. 26	3555	803	100	1897
Colliery waste. Utilizing carboniferous	C. Dörr	708,696	July 1	601	.....	100	119
Coloring apparatus. Yarn-	A. Fornander	705,334	July 22	3869	837	100	832
Colter	S. A. Ingersoll	710,895	Sept. 30	4625	1043	100	2996
Comb: *See* Currycomb. Fountain-comb.	A. B. Durgin	707,563	Aug. 26	3983	873	100	1781
Comb	A. B. Durgin	707,564	Aug. 26	3984	873	100	1781
Comb	W. Kronheim	707,598	Aug. 26	3957	868	100	1796
Comb	S. L. Kistler	703,527	July 1	390	91	100	78
Comb-cleaner	O. D. Orvis	709,174	Sept. 16	2239	509	100	2471
Combination draft-furnace	W. J. Carroll	709,078	Sept. 16	2047	468	100	2431
Combination-lock	G. E. R. Rothenbucher	708,741	July 1	675	150	100	135
Combination-wrench	F. W. Werner	709,948	Sept. 30	3790	855	100	2919
Combustion. Means for promoting	J. Tatham	709,872	Sept. 16	2546	598	100	2558
Combustion process	E. Baumgartner	705,635	July 29	4491	594	100	969
Combustion promoting and controlling device	L. R. Damon	709,305	Sept. 16	2500	975	100	2527
Commode. Sanitary	W. H. Young	708,690	July 1	591	564	100	117
Commode-stool	W. J. Richards	708,854	Sept. 9	1197	131	100	2235
Commutator-brush holder	J. de Bruyn, (Martinus G. Zoon)	705,297	Aug. 5	595	278	100	1235
Comparing handwritings or other objects. Apparatus for	J. T. Hicks	707,325	Aug. 19	2537	120	100	1672
Compartment-box for checks or the like	O. E. Eaton and F. C. Burrill	705,050	July 22	3218	570	100	702
Compass-light	C. C. Bueger	709,046	Sept. 16	1992	452	100	2416
Compass. Pocket-	C. Brandell	709,738	Sept. 23	3340	458	100	2715
Compasses	J. Bossart-Bächli	710,942	Sept. 30	4363	758	100	2941
Compasses. Needle-	D. W. Fratcher	704,188	July 8	1543	980	100	323
Composing-machine keyboard attachment	J. Murphy	707,788	Aug. 26	3488	332	100	1868
Composition of matter	E. L. Livingstone and W. A. Vandercook	708,774	Sept. 9	1405	.....	100	2290
Composition of matter	M. M. Kerr	707,426	Aug. 19	2721	616	100	1711
Compress	F. W. Parsons	704,914	July 15	2919	625	100	628
Compressor	J. Stumpf	708,276	Aug. 5	554	120	100	1227
Compressor	L. B. Manley	710,269	Sept. 30	4437	1001	100	2958
Computing-chart	E. Roenius	704,114	July 8	1401	301	100	295
Computing-machine	A. C. Schuman	709,363	Sept. 16	2618	588	100	2563
Concentrator	J. A. Holmes and J. F. Wood	709,770	Sept. 23	3425	770	100	2730
Concrete or the like. Machine for mixing	W. J. Judd	705,676	July 29	4564	991	100	984
Concrete troughs or other articles. Mold for forming	I. Haws	710,391	Sept. 30	4618	1042	100	2995
Condenser	E. Josse	703,793	July 1	775	169	100	155
Condenser. Induction-	L. Schutte	704,585	July 15	2267	497	100	493
Condensing apparatus. Atmospheric steam-	F. R. Brandt	707,081	Aug. 19	2070	462	100	1573
Condensing or cooling apparatus	C. C. Hill	708,712	Sept. 9	1290	294	100	2254
Condensing steam or cooling fluids	T. M. Colwell	705,251	July 22	3812	827	100	821
Conduit	W. L. McGowan	703,445	July 1	139	32	100	30
Conduit	W. L. McGowan	703,447	July 1	142	33	100	31
Conduit	W. L. McGowan	709,504	Sept. 23	2944	657	100	2633
Conduit	F. O. Wellington	705,984	July 29	5118	1116	100	1096
Conduit-clamp	G. A. Lutz	706,076	Aug. 5	146	30	100	1146
Conduit or tube. Flexible	W. F. Bossert	705,026	July 22	3176	686	100	694
Conduit outlet-box. Interior-	J. F. Greaves	709,762	Sept. 23	3408	765	100	2727
Conduit-rod coupling	R. W. Lyle	709,025	Sept. 16	1945	446	100	2405
Conduit-sections. Machine for cutting recesses in	W. A. Butler and A. Kunze	708,533	July 1	282	64	100	57
Continuous kiln	F. E. Swift	703,848	July 1	870	191	100	174
Control-sheet	M. Kuhn	705,254	July 22	3668	792	100	792
Controlling mechanism	H. Rose	705,302	July 22	3765	817	100	812
Converters, &c. Means for winding	E. R. Gill	708,220	Sept. 2	419	96	100	2067
Converters. Starting rotary	B. G. Lamme	710,362	Sept. 30	4566	1020	100	2964
Convertible chair	T. W. Washburn	708,278	Sept. 2	522	119	100	2067
Conveyer	R. S. Hill	704,540	July 15	2215	479	100	479
Conveyer	H. L. St. James	705,474	July 22	4116	894	100	883
Conveyer	F. Beck	706,294	Aug. 5	586	128	100	1234

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Drg.	Official Gazette. Vol	Page.
Conveyer	M. Bradfield	709,737	Sept. 23	3388	758	100	2714
Conveyer bucket. Endless-	P. B. Clarke	709,208	Sept. 16	2299	522 / 523	100	2484
Conveyer discharge device	J. M. Dodge	708,908	July 1	979	213	100	196
Conveyer. Endless	W. L. McCabe	707,618	Aug. 26	3086	695	100	1802
Conveyer. Endless	J. M. Dodge	709,759	Sept. 9	1382	316 / 317	100	2275
Conveyer. Endless-belt	P. M. De Jong	706,395	Aug. 5	794	173	100	1275
Conveyer. Horizontal	J. M. Dodge	708,698	Sept. 9	1359	299	100	2247
Conveyer. Pneumatic	J. W. Seifert	705,310	July 22	3787	821 / 822	100	815
Conveyer. Portable	W. L. McCabe	705,778	July 29	4754	1080	100	1021
Conveyer safety-stop	P. B. Clarke	709,202	Sept. 16	2297	521 / 522	100	2483
Conveyer. Spiral	C. G. Williams	710,337	Sept. 30	4612	1040	100	2998
Conveyers. Driving mechanism for portable electric	W. L. McCabe	707,614	Aug. 26	3087	695 / 696	100	1803
Conveying apparatus	J. W. Foreman	707,698	Aug. 26	3345	727	100	1885
Cooking and canning machine. Combined corn	L. S. Fleckenstein	706,401	Aug. 5	804	175 / 176	100	1277
Cooking apparatus	S. Szentjanossy	706,206	Aug. 5	398	84	100	1197
Cooking-cabinet	H. Faschian	709,476	Sept. 23	2951	643	100	2514
Cooking eggs. Means or apparatus for	L. H. Stocks	704,140	July 8	1465	313	100	308
Cooking utensil. Steam	G. F. Edmiston	707,217	Aug. 19	2329	521	100	1629
Cooking vessel	A. A. Brandenburg and W. C. Knobelock.	706,014	Aug. 5	19	5	100	1120
Cooler: *See* Beer-cooler. Candy-cooler. Water-cooler. Wine-cooler.							
Cooler	C. F. Conover	707,905	Aug. 26	3721	834	100	1998
Cooling and condensing apparatus	W. A. Maybach	709,416	Sept. 16	2726	612	100	2575
Cooling and ventilating system	J. E. Lawrence	706,327	Aug. 5	651	142	100	1246
Copper and nickel from sulfid compounds. Extracting	C. Hoepfner	704,660	July 15	2374	.....	100	511
Copper, &c. Electrometallurgic treatment of ores of	C. J. Tossizza	710,346	Sept. 30	4537	.....	100	2979
Copper matte to refined copper. Reducing	G. Mitchell	705,109	July 22	3348	.....	100	727
Copy-holder	W. R. Fox	704,018	July 8	1192	259	100	253
Copy-holder	J. C. Whitescarver	707,882	Aug. 26	3901	718	100	1827
Copy-holder	T. P. Chandler	708,203	Sept. 2	891	90	100	2061
Copying cloth and frame. Letter-press	L. Biersach	707,753	Aug. 26	3409	768	100	1867
Copying models. Apparatus for	W. A. C. Selke	706,459	Aug. 5	984	200	100	1309
Copying-press	E. E. Koken	705,097	July 22	3322	720 / 721	100	722
Copying-press. Roller	D. E. Hunter	705,352	July 22	3905	845 / 846	100	889
Cord-holding device	F. H. Knapp	707,341	Aug. 19	2364	530	100	1637
Core-oven	T. L. Grimth	705,665	July 29	4547	987	100	981
Corer and parer. Apple	J. P. Magney	706,428	Aug. 5	858	186	100	1288
Cork-fastener	L. Biersach	709,531	Sept. 23	2997	668	100	2644
Corkscrew	R. Runnalls	708,067	Sept. 9	1201	274	100	2236
Corn. Apparatus for the degermination and decortication of Indian	T. T. Gaff and J. F. Gent	707,057	Aug. 12	2015	450 / 451	100	1546
Corn-crib	J. M. Brokaw	709,220	July 1	978	63	100	56
Corn-husker	L. R. Loomis	705,770	July 29	4741	1026	100	1018
Corn-husker	A. W. Richards	707,013	Aug. 12	1981	432	100	1527
Corn-husking and fodder-shredding machine	J. L. and W. E. Alexander	706,511	July 22	3791	822 / 823	100	817
Corn-husking machine	J. K. Smith	708,500	Sept. 2	899	202 / 204	100	2164
Corn-husking-machine separating mechanism	O. Boyer	710,137	Sept. 30	4164	938 / 939	100	2809
Corn-pad	I. Duckworth	707,089	Aug. 19	2084	465	100	1576
Corn-shock carrier	N. W. Lyon	708,377	Sept. 2	680	158	100	2119
Corn-shock loader for vehicles	W. A. Tea	707,240	Aug. 19	2451	550	100	1655
Cornish roll	A. J. Gates	705,749	July 29	4710	1017	100	1012
Corset	N. Temple	708,852	July 1	881	194	100	176
Corset	J. E. Doolittle	704,007	July 8	1177	256	100	250
Corset	C. A. O'Loan	706,096	Aug. 5	177	36	100	1153
Corset	E. Farcy	706,307	Aug. 5	613	134	100	1239
Corset	J. Lindauer	708,773	Sept. 9	1404	322	100	2280
Corset	S. G. McClain	709,238	Sept. 16	2368	537	100	2498
Corset	C. W. Stimson	710,220	Sept. 30	4323	972	100	2993
Corset	L. B. Ingham	708,887	Sept. 9	1654	380	100	2332
Corset attachment and stocking-supporter	J. M. Van Orden	705,725	July 29	4662	1010	100	1003
Corset-cover	W. Golding	707,916	Aug. 26	3737	838	100	1932
Corset-cover	J. Britnell	705,641	July 29	4497	976	100	970
Corset-fastener	H. Torley	709,565	Sept. 23	3050	679	100	2654
Corset-stiffener	J. Davidoff	708,869	Sept. 9	1616	370	100	2325
Cot. Folding	J. H. Forister	705,746	July 29	4705	1018	100	1011
Cotton-chopper	J. T. Boyet	706,889	Aug. 12	1790	384 / 385	100	1486
Cotton-chopper	L. P. Fay	709,147	Sept. 16	2178	499	100	2460
Cotton-chopper and clod-crusher	M. B. Gooing	704,822	July 15	2720	589	100	582
Cotton-compress	J. L. Denton	707,679	Aug. 26	3925	794	100	1831
Cotton-compressor	F. L. White	704,998	July 15	3117	671	100	664
Cotton elevator and separator	C. R. Benefield	705,374	July 22	3044	864	100	847
Cotton-fiber condenser	J. M. Gardner	709,090	Sept. 16	2083	477	100	2439
Cotton-gin	J. T. Fuller	707,096	Aug. 19	2096	468	100	1578
Couch	C. F. Thayer	709,989	Sept. 30	3773	852	100	2816
Couch and folding bed. Combined	D. T. Owen	707,628	Aug. 26	3114	701	100	1809
Counter-shiving machine	J. R. Scott	703,617	July 1	428	99 / 100	100	85
Counting and registering machine	C. D. Grimes, W. W. Sunderland, and B. F. Ellerman.	706,652	Aug. 12	1256	278 / 279	100	1388
Counting-machine	T. W. Graham	706,048	Aug. 5	90	19	100	1135

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Drg.	Official Gazette. Vol.	Page.
Counting-machine	S. E. Heineman	707,068	Aug. 12	2026	453	100	1548
Coupling: *See* Car-coupling. Centrifugal coupling. Conduit-rod coupling. Electric-motor coupling. Hose-coupling. Hose or pipe coupling. Intermediate coupling. Pipe-coupling. Pitman-coupling. Rod-coupling. Shaft-coupling. Thill-coupling. Universal coupling. Wagon-coupling.							
Coupling	J. R. Carter and J. E. Hausfeld	707,674	Aug. 26	3818	722	100	1580
Coupling	F. A. Wareham	707,991	Aug. 26	3873	870	100	1959
Coupling device	J. G. Kanouse	704,545	July 15	2333	481	100	480
Coupling for cables, ropes, &c	T. Darling	706,393	Aug. 5	780	174	100	1274
Cover-lifting device for pails, &c	R. L. Baker	708,393	Sept. 2	551	125	100	2098
Cow-tail holder	J. D. Sturges	709,937	Sept. 30	3768	851	100	2814
Cracker-machine	A. W. Copland	705,040	July 22	3197	690 / 691	100	689
Cracker-machine	A. W. Copland	705,041	July 22	3202	691 / 692	100	698
Cracker-stacking machine	B. Prouty and W. H. Budd, Jr	708,255	Sept. 2	482	110 / 111	100	2079
Cradle and baby-jumper. Combined	J. W. Blackledge	704,774	July 15	2611	595	100	560
Crane. Electric locomotive	G. M. Brill	708,965	July 8	1137	246 / 247	100	341
Crane. Lifting	T. Kauffman	704,836	July 15	2739	592	100	586
Crank-hanger	W. B. Spencer	704,138	July 8	1462	313	100	307
Crate	R. De Wright	706,909	Aug. 12	1756	398	100	1493
Crate. Banana	W. H. Simpson	706,207	Aug. 5	394	84	100	1197
Crate. Banana	W. R. Montgomery	706,654	Sept. 9	1174	268	100	2251
Crate. Banana	C. A. Doud and C. B. Shouse	710,353	Sept. 30	4548	1026 / 1027	100	2981
Crate. Banana-shipping	M. Lombardo	709,166	Sept. 16	2228	506	100	2468
Crate. Egg	G. E. Palmer and J. N. Lake	705,286	July 22	3733	811 / 812	100	804
Crate. Folding	H. J. Schrock	706,692	Aug. 12	1337	297	100	1405
Crate. Folding	S. Greer and J. H. Gore	707,919	Aug. 26	3743	839	100	1933
Crate. Folding	C. W. Heller and E. A. Jones	709,542	Sept. 23	3013	671	100	2647
Crate. Folding	H. E. Clement	706,023	Aug. 5	54	7	100	1123
Crate. Knockdown	J. Conrad	710,268	Sept. 30	4380	985	100	2945
Crate. Knockdown banana-shipping	J. F. Lay	708,651	Sept. 9	1169	266	100	2250
Crate. Knockdown shipping	E. E. Williams	707,665	Aug. 26	3805	719	100	1828
Crate. Shipping	A. P. Peterson	704,865	July 8	1873	406	100	395
Crayon-sharpener	A. P. Laursen	710,280	Sept. 30	4434	997	100	2955
Cream-elevator	J. Seither	707,023	Aug. 12	1962	438	100	1531
Cream-separator	C. B. Phillips	708,780	Sept. 9	1323	302	100	2262
Cream-separator	M. A. Comstock	708,866	Sept. 9	1610	369	100	2324
Cream-separator	C. W. Parks	709,085	Sept. 16	1902	450	100	2412
Cream-separator	J. Klein	705,861	July 22	3923	849	100	843
Cream-separator and churn	D. M. Sullivan	709,853	Sept. 23	3542	798	100	2750
Creel for selvage-spools on slashers	H. Neuman	710,115	Sept. 30	4113	928	100	2895
Crib	H. G. Doran	704,443	July 8	2000	435	100	421
Crib and table. Combined	R. L. Porter	704,920	July 15	2988	630	100	632
Croquette-mold	J. E. Burns	706,523	Aug. 12	1096	238	100	1340
Cross-tie	M. C. Barry	705,754	July 1	699	155	100	140
Crossing-gate	B. G. Jayne	706,419	Aug. 5	843	184	100	1283
Craze-cutting machine	G. Schneider	707,868	Aug. 26	3844	821	100	1913
Crupper	C. H. Rudge	704,960	July 15	3039	657 / 658	100	658
Crupper-dock-forming machine	L. Herman	706,855	Aug. 12	1289	290	100	1390
Crusher: *See* Ice-crusher. Ore-crusher.							
Crushing and pulverizing machine	J. F. Sanders	705,870	July 29	4912	1068	100	1054
Crushing and pulverizing mill	W. F. Drew	705,741	July 29	4698	1017	100	1010
Crutch. Adjustable	P. W. Pratt	710,074	Sept. 30	4028	908	100	2870
Crutch, cane, &c	F. J. Roberts	704,111	July 8	1397	300	100	294
Cuff-holder	C. E. Hultquist	704,644	July 15	2479	515	100	518
Cuff-holder	J. F. Smith and J. S. Hull	704,765	July 15	2598	562	100	557
Cuff-holder	W. C. Kewin	707,427	Aug. 19	2722	616	100	1711
Cuff-holder	S. McCay	707,615	Aug. 26	3089	696	100	1803
Cuff-holder	L. H. Griste	708,783	July 1	748	165	100	150
Culinary device	C. W. Sleeter	704,131	July 8	1441	308	100	308
Cultivator	J. D. Riddle	704,376	July 8	1889	410	100	399
Cultivator	A. Harmon	704,538	July 15	2213	479	100	479
Cultivator	S. C. Cobb	705,308	July 22	3566	772	100	772
Cultivator	W. F. Cahoon	706,393	Aug. 5	765	167	100	1269
Cultivator	A. J. Comstock	706,726	Aug. 12	1592	340	100	1417
Cultivator	F. G. Hoag	706,942	Aug. 12	1810	405	100	1503
Cultivator	J. A. McKinnon	708,064	Sept. 2	120	28	100	2006
Cultivator	A. H. Kopperud	708,150	Sept. 2	280	67	100	2039
Cultivator	J. Franklin	710,263	Sept. 30	4397	900	100	2949
Cultivator	W. S. Graham	708,509	Sept. 2	929	209	100	2108
Cultivator. Lister	M. Christianson	706,160	Aug. 5	312	66	100	1139
Cultivator plant-guard attachment	R. W. Haulbrook	703,656	July 1	514	115	100	101
Cultivator plow attachment	B. F. Clark and W. Smith	704,515	July 15	2164	488	100	469
Cultivator-seat	J. Clausen	710,183	Sept. 30	4252	959	100	2917
Cultivator. Two-row	J. Bräuninger	710,188	Sept. 30	4159	939	100	2900
Cup	D. Laird	704,198	July 8	1567	338	100	328
Cupellation-furnace	J. R. Jecklin	707,115	Aug. 19	2133	476	100	1557
Curb and gutter block. Combined	J. T. Harrop	706,410	Aug. 5	823	180	100	1290
Curb mold. Cement or concrete	W. White	704,999	July 15	3118	672	100	665
Curbing and paving	L. T. Hankins	709,819	Sept. 16	2526	569	100	2583
Curd-knife and whey-strainer. Combined	C. W. Spaulding	707,081	Aug. 12	1965	441	100	1534
Curette	A. G. B. Scuri	704,890	July 8	1911	414	100	408
Curler. Hair							

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Current-meter	G. L. Gowland	706,406	Aug. 5	813	177	100	1278
					178		
Current-motor	L. Sprague	706,698	Aug. 12	1344	299	100	1407
Current-motor. Automatic	J. Rosh	705,967	July 29	5089	1109	100	1090
					1110		
Current motor. Synchronous alternating	A. Churchward	707,389	Aug. 19	2644	598	100	1695
Current motor. Synchronous alternating	A. Churchward	707,390	Aug. 19	2647	598	100	1695
Current protection. System of strong	F. B. Cook	707,051	Aug. 12	1999	448	100	1542
Current transformer. Constant	A. R. Everest	710,050	Sept. 30	5081	808	100	2950
Current-wheel	J. A. Wells and J. D. Sumrall	708,871	July 1	912	200	100	188
Currents. Means for changing the tension of	W. M. Fairfax	704,453	July 8	2027	440	100	427
Currycomb	A. Tepfer and O. M. Heltner	708,597	Sept. 9	1055	241	100	2208
Curtain and shade support. Window	J. Gale	704,532	July 15	2198	476	100	476
Curtain-bracket. Adjustable	L. A. Watts	708,280	Sept. 2	523	119	100	2068
Curtain-bracket. Adjustable	L. A. Watts	708,507	Sept. 2	917	208	100	2167
Curtain bracket. Window	A. C. Miller	708,881	Sept. 2	686	154	100	2120
Curtain-fixture	E. Flicek	708,955	July 1	1072	231	100	213
Curtain-fixture	S. T. Nakashjian	704,205	July 8	1577	340	100	330
Curtain-fixture and curtain-support. Combined	C. B. Jacoby	708,578	Sept. 23	3077	684	100	2660
Curtain fixture. Window	L. Strickler and C. H. Fisk	710,577	Sept. 30	4560	1035	100	2988
Curtain-pole	T. C. Richards	706,306	July 22	3755	815	100	810
Curtain pole and hanger	S. G. Greene	706,315	Aug. 5	627	137	100	1243
Curtain-pole and shade-fixture	E. H. Callen	710,352	Sept. 30	4548	1026	100	2980
Curtain-pole and shade-roller bracket	G. L. Lyons	704,351	July 8	1850	400	100	391
Curtain-pole. Ringless	H. H. Edgely	706,589	Aug. 12	1061	234	100	1345
Curtain. Storm	J. W. Simmons	708,461	Aug. 5	927	201	100	1308
					202		
Curtain-stretcher	W. A. Mayr	708,857	July 29	4864	1064	100	1051
Curtains. Device for holding spring-actuated	J. H. Milans	707,609	Aug. 26	3079	693	100	1801
Curtains or valances. Adjustable chain-heading for chain or rope	W. S. Hepburn and A. G. Morrison	704,709	July 15	2569	577	100	571
Cushion:							
See Pneumatic cushion. Spring-cushion.							
Cuspidor	R. A. Yochum	708,884	July 1	935	204	100	188
Cuspidor	J. Booth	708,375	July 22	3945	855	100	847
Cuspidor	S. H. Duncan	709,538	Aug. 12	1060	233	100	1345
Cuspidor	A. Lindsay	709,165	Sept. 16	2227	505	100	2468
Cuspidor	F. F. Ball	709,294	Sept. 2	552	125	100	2094
Cuspidor-rack	G. E. Andrews	707,894	Aug. 26	3700	831	100	1294
Cut-out. Automatic	F. O. Mechlin	706,078	Aug. 5	149	31	100	1147
Cutter:							
See Band-cutter. Boiler-tube cutter. Bolt and nut cutter. Bread-cutter. Butter-cutter. Buttonhole-cutter. Cheese-cutter. Cigar-cutter. Dado-cutter. Dough-cutter. Dredger-cutter. Gear-tooth cutter. Harvester-cutter. Kraut-cutter. Lawn-cutter. Leather-lace cutter. Milling-cutter. Rotary cutter. Stalk-cutter. Twine-cutter. Vegetable-cutter. Vegetable or meat cutter.

					642		
Cutter mechanism. Traveling	W. and A. Robertson	710,010	Sept. 30	3911	835	100	2945
					884		
Cutting and collating machine. Combined	A. A. Low	710,109	Sept. 30	4104	886	100	2954
Cutting device	J. P. Brophy	706,980	July 8	1142	248	100	243
Cutting worm threads. Machine for	G. Erlwein and A. Frank	708,535	Sept. 2	619		100	2107
Cyanid compound and making same	C. L. Horack	706,058	Aug. 5	107	23, 24	100	1139
Cycle	W. Brankowitch	708,197	Sept. 2	382	80	100	2060
Cycle-brake	L. M. Meyrick-Jones	709,549	Sept. 23	3085	673	100	2649
Cycle motor attachment	L. M. Meyrick-Jones	709,550	Sept. 23	3086	673	100	2649
					674		
Cycle motor attachment	H. U. von Troschke	709,588	Sept. 23	3089	685	100	2663
Cycle-rest	J. B. Brooks and J. Holt	708,891	July 1	950	209	100	191
Cycle saddle attachment	A. Pellant	704,668	July 15	2409	521	100	580
Cycles. Two-speed driving-gear for	T. W. Wright	710,389	Sept. 30	4614	1041	100	2994
D-handle	C. H. Archer	708,751	Sept. 9	1892	410	100	2271
Dado-cutter	C. Loeffler	708,965	Sept. 9	1790	414	100	2261
Damper	J. R. Stover	707,366	Aug. 19	2602	588	100	1595
Damper attachment. Stove	G. W. Bowen	705,199	July 22	3532	766	100	766
Damper for stovepipes. Ventilating	G. E. Archer	706,378	Aug. 5	737	160	100	1265
Damper mechanism. Time	G. Grobet and C. Bernasconi	708,807	Sept. 9	1493	340	100	2297
Damper-operating apparatus	S. Coats	708,319	Sept. 2	598	135	100	2102
Damper-regulator	E. M. Gleason	704,319	July 8	1772	387	100	372
Damper. Stove	A. D. Foote	704,181	July 8	1539	330	100	323
					331		
Dams. Building	G. C. Bushnell	704,812	July 15	2704	585	100	578
Dashboard	H. Shoemaker	710,372	Sept. 30	4581	1034	100	2987
Decoherer	W. E. Gard	704,627	July 15	2851	511	100	505
Decorating apparatus. Surface	C. R. McCluer	708,440	Aug. 5	893	193	100	1296
Deflector and screen. Combined	W. Scott	708,836	Sept. 9	1551	354	100	2310
					355		
Delivery mechanism	W. Scott	709,180	Sept. 16	2254	513	100	2474
Delivery mechanism	J. G. Bahr	705,895	July 29	4959	1079	100	1068
Demijohn-covering	F. S. and L. Thomas	708,427	Sept. 2	767	172	100	2186
Demijohn-covering	L. Ellertsen	702,973	Sept. 30	3956	868	100	2884
Dental apparatus	M. W. Hollingsworth	708,811	Sept. 9	1492	342	100	2299
Dental bridges. Machine for forcibly casting	J. L. Kelly	709,410	Sept. 16	2717	600	100	2572
Dental bridgework	J. E. Van Nostran	704,601	July 15	2313	502	100	499
Dental cuspidor	A. W. Schramm	704,967	July 15	2986	640	100	640
Dental engine	F. A. Brewer, Jr., and G. W. Harvey	706,016	Aug. 5	91	5	100	1120
Dental flask	S. H. B. Cochrane	705,890	July 22	3811	826	100	880
Dental forceps	R. J. Wenker	707,810	Aug. 26	3530	797	100	1802
Dental form for holding teeth

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Door-hanger	J. J. Hennessey	706,090	July 22	3278	710	100	718
Door-hanger	J. F. Lydon	706,262	July 22	3698	711	100	797
Door-hanger	P. H. Luitink	707,181	Aug. 19	2153	808	100	1501
Door-hanger	W. Louden	707,353	Aug. 26	3622	491	100	1909
Door-hanger	G. G. Meyer	708,060	Sept. 2	115	817	100	2005
Door-hanger	J. F. Clift	708,305	Sept. 2	392	91	100	2083
Door-hanger	P. A. Myers	709,029	Sept. 16	1955	447	100	2410
Door-hanger track	H. L. Ferris	709,314	Sept. 16	2517	567	100	2531
Door-hanger track	W. J. Chaffer	708,580	Sept. 9	980	217	100	2188
Door holder or bolt	L. H. Lucabaugh	708,288	Sept. 2	449	103	100	2078
Door-holding device	A. T. Hatfill and G. B. Lee	705,236	July 22	3039	798	100	787
Door-lock attachment	G. Rischmuller	705,147	July 22	3431	745	100	744
Door-opener	J. S. Johnson	705,355	July 22	3915	848	100	841
Door opening or closing apparatus. Automatic	J. Johnson	703,372	July 1	15	4	100	5
Door-operating device	P. J. Beisel	703,433	July 1	119	27	100	96
Door-operating means	F. Macey	710,229	Sept. 30	4341	976	100	2937
Door-operating mechanism	E. Wigle	708,327	Sept. 2	609	138	100	2105
Door or window alarm	J. G. Eberstein	706,905	Aug. 12	1900	426	100	1521
Door or window fastening means	J. W. Nippert	706,157	Aug. 5	809	65	100	1180
Door or window frame	G. Carr	707,546	Aug. 26	2952	668	100	1776
Door-plate	C. D. Brooke				835	100	1929
Door. Right and left opening	F. Fischer and L. Kiefer	707,910	Aug. 26	3727	836		
Door-securer	G. F. Hamilton	704,634	July 15	2362	513	100	509
Door-securer	H. Prud'homme	710,118	Sept. 30	4122	930	100	2888
Door signal or alarm	H. C. Atkinson	706,878	Aug. 12	1760	380	100	1492
Door. Sliding	J. F. Lydon	704,846	July 15	2758	596	100	590
Door. Sliding	G. A. Proctor and E. F. Carpenter	707,637	Aug. 26	3183	705	100	1813
Door-stop	C. C. Burritt	704,855	July 15	2773	600	100	594
Door-stop	J. C. Winn	706,804	July 29	4799	1042	100	1081
Door stop and catch. Combined	J. Daniel	706,904	Aug. 12	1751	391	100	1492
Door. Swinging	H. Meyer	706,966	Sept. 9	1801	414	100	2392
Doors. Means for automatically closing swinging	E. F. Huard	706,945	Aug. 12	1815	406	100	1504
Doors. Means for preventing dust, draft, and rain from entering under	J. Crowther	704,441	July 8	1908	435	100	420
Dough-cutter	G. F. Zinn	709,290	Sept. 16	2471	557	100	2521
Dough mixing and kneading apparatus	F. Brackett	708,890	Aug. 12	1722	395	100	1485
Doweling-gage. Hand	J. Corliss	705,392	Aug. 5	788	171	100	1274
Doweling-machine	W. J. Edwards and W. M. Wauters	705,657	July 29	4524	983	100	976
Draft apparatus. Forced-	J. S. Chapman	705,539	July 1	291	66	100	50
Draft attachment	N. Merches	705,248	Aug. 5	470	100	100	1211
Draft attachment	C. H. Falk	707,092	Aug. 19	2087	466	100	1576
Draft attachment	L. V. Warner	704,604	July 15	2316	503	100	499
Draft attachment. Spring	G. B. Rait	704,922	July 15	2942	631	100	633
Draft device and spark-arrester	B. Creplin	704,001	July 8	1171	255	100	248
Draft-equalizer	C. N. Trooien	705,163	July 22	3454	752	100	749
Draft-equalizer	W. E. Rivers	706,202	Aug. 5	388	83	100	1196
Draft-equalizer	T. W. Banta	707,539	Aug. 26	2933	664	100	1771
Draft-equalizer	A. Anderson	707,898	Aug. 26	3698	801	100	1924
Draft-equalizer	J. B. Hayden	709,092	Sept. 16	2085	478	100	2440
Draft-equalizer	M. W. Sleight	705,458	July 22	4094	890	100	878
Draft-evener	C. Scott-Snell	710,370	Sept. 30	4578	1032	100	2986
Draft. Producing	J. A. McAtee	707,789	Aug. 26	3499	1033	100	1888
Draft-regulating device. Automatic	H. C. Priebe	703,607	July 1	409	786	100	51
Draft-rigging	J. E. Guinn	703,955	July 1	1073	95, 96	100	61
Draft-rigging	W. H. Emerick	705,580	July 22	4217	232	100	215
Draft-rigging	W. E. Coffin	707,501	Aug. 19	2843	916	100	901
Drafting device	W. F. Hochspeier	709,219	Sept. 16	2325	643	100	1736
Drafting garments. Dress-cutting instrument for	G. V. Valentine	708,506	Sept. 2	913	644	100	2490
Drafting-plotter	R. L. Botts	709,736	Sept. 23	3337	207	100	2167
Drain-tile protector	J. W. Cook, Sr.	709,395	Sept. 16	2088	752	100	2714
Draper, &c	W. T. Gordon	704,823	July 15	2721	603	100	2585
Draw-off or stretching rollers for textile machinery	A. Bietenholz	709,694	Sept. 23	3373	589	100	2701
Drawer for furniture, &c	C. Mayer	708,890	Sept. 9	1760	729	100	2804
Drawers-supporter	H. C. Smith	705,879	July 29	4983	848	100	2804
Drawing and spinning frames. Drag device for bobbins of	S. Smith	705,158	July 22	3438	1073	100	1056
Drawing board and appliances	P. Schlachter, Sr., and A. W. Allen	707,165	Aug. 19	2226	747	100	746
Drawing-machine stop-motion	J. T. Meats and C. B. McGowan	704,704	July 15	2478	500	100	1605
Dredge	G. McKay	706,195	Aug. 5	874	535	100	534
Dredge	R. R. Osgood	708,657	Sept. 9	1180	80	100	1199
Dredge	R. R. Osgood	708,658	Sept. 9	1188	276	100	2388
Dredge and well-borer	C. Ehrenfeld	706,896	Aug. 5	796	270	100	2389
Dredge-bucket	A. W. Robinson	708,587	Sept. 9	1050	178	100	1275
Dredge-clam	E. Chaquette	706,231	Aug. 5	431	288	100	2205
Dredge. Clam or oyster	W. A. Thompson	706,975	July 29	5103	90	100	1508
Dredge. Hydraulic	L. W. Bates	704,231	July 8	1616	1113	100	1068
Dredge. Hydraulic	L. W. Bates	707,298	Aug. 19	2473	250	100	336
Dredge. Mining	H. J. Barton and A. C. La Bud	709,783	Sept. 23	3389	555	100	1659
Dredge. Sewer	E. Chaquette	705,646	July 29	4507	751	100	2718
Dredges, excavators, &c. Boom for	A. W. Robinson	708,588	Sept. 9	1051	978	100	978
Dredges, steam-shovels, &c. Hoisting-gear for dipper-buckets for use upon	A. W. Robinson	708,589	Sept. 9	1053	239	100	2205
Dredger	R. A. Perry	708,817	July 1	821	161	100	164
Dredger and excavator	I. B. Hammond	710,054	Sept. 30	3986	899	100	2861
Dredger cutter-head. Hydraulic	L. W. Bates	709,861	Sept. 30	3589	809	100	2779

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Dredger cutter. Hydraulic	R. A. Perry	705,784	July 29	4764	1088	100	1084
Dredging apparatus	G. G. Powell	708,583	Sept. 9	1042	236	100	2203
Dredging-bucket	C. Pay	709,480	Sept. 16	2792	237	100	2576
Dredging-scoop	H. G. Butler	708 753	Sept. 9	1365	618	100	2279
Dredging-scows. Hydraulic device for emptying	O. Frühling	708,541	Sept. 9	976	311	100	2190
Dress-shield	E. M. Cowles	706,802	Aug. 12	1561	221	100	1458
Dress-shield	A. T. Stevenson	709,935	Sept. 30	3766	349	100	2914
Drier: *See* Clothes-drier. Rotary drier. Fruit-drier. Hominy, meal, and grits drier.					851	100	2914
Drier	D. W. Elliot	707,765	Aug. 26	3498	772	100	1872
Drier	A. T. Welch	708,602	Sept. 9	1074	243	100	2210
Drier	A. T. Welch	708,603	Sept. 9	1082	244	100	2211
Drier	A. T. Welch	708,604	Sept. 9	1087	244	100	2212
Drying apparatus	C. J. Seltzer	703,746	July 1	688	152	100	137
Drying apparatus	J. C. Fleming	705,914	July 29	4999	1088	100	1071
Drying apparatus	H. C. Baughman	708,516	Sept. 9	941	213	100	2184
Drying apparatus	J. Keith and W. W. Wardle	709,689	Sept. 23	3178	708	100	2680
Drying-chambers. Apparatus for carrying goods through	A. Carey	704,814	July 15	2709	585	100	580
Drying-kiln	T. H. Savery	705,905	July 22	3775	586	100	813
Drying or heating cylinders. Air-exhaust for revolving steam	A. T. Welch	706,946	Sept. 9	1750	404	100	2258
Drying or treating. Heating materials for the purpose of	C. D. Weaver	708,184	Sept. 2	346	82	100	2052
Drying-reel	A. Prawatke	708,781	Sept. 9	1417	326	100	2388
Drying vegetables, fruits, &c. Apparatus for					327		
Drill: *See* Earth or rock drill. Rock-drill. Grain-drill.							
Drill-bits. Means for shaping and sharpening	J. Wagner	706,135	Aug. 5	348	52	100	1166
Drill-press	A. Vik	709,568	Sept. 23	3056	680	100	2656
Drill-rod grab	J. H. Adams	706,872	Aug. 12	1691	681	100	1480
Drill-shaper	D. Greenwalt and J. B. Dawson	707,584	Aug. 26	3084	378	100	1790
Drills. Water attachment for power	F. L. Whitehead	704,158	July 8	1490	683	100	313
Drilling edges of boards. Machine for	W. J. Edwards and W. M. Wauters	705,638	July 29	4581	320	100	978
Drilling-jig. Magnetic	A. L. De Leeuw	710,257	Sept. 30	4368	984	100	2947
Drilling-machine	T. E. O'Brien	704,567	July 15	2280	987	100	498
Drilling-machine	F. N. Gardner	707,507	Aug. 19	2853	489	100	1738
Drilling-machine	W. E. Butler	708,993	Sept. 16	1870	645	100	2394
Drilling-machine. Portable	J. Rourke	705,791	July 29	4775	430	100	1036
Drilling rivet-holes in wheel-hubs. Machine for	G. H. Everson	706,811	Aug. 12	1576	431	100	1036
Driving, braking, and coasting mechanism	F. B. Case	708,201	Sept. 2	266	353	100	1456
Driving mechanism	A. F. Spaulding	704,220	July 8	1508	90	100	2060
Drop	G. Miles	708,726	Sept. 9	1317	846	100	334
Drum. Heating	C. W. Davidson	705,217	July 22	3596	300	100	2260
Drum. Heating	E. Graham	705,981	July 29	5009	775	100	776
Drum. Heating	W. Vogel	707,990	Aug. 26	3872	1090	100	1078
Drum-stand	A. B. Hellenkamp	706,987	Aug. 12	1801	870	100	1958
Drums and cymbals. Pedal device for bass	W. C. L. Evans	704,808	July 8	1752	408	100	1502
Dumb-bell, Indian club, and pulling or swinging bar. Combined	F. R. Buck	708,313	Sept. 2	585	388	100	308
Dumb-waiter grip and friction-roller. Self-adjusting	F. Ackerman	705,010	July 22	3153	152	100	2100
Dumping apparatus. Log or freight	T. Alexander	707,951	Aug. 26	3708	681	100	699
Duplex hook for hitching-straps, &c	E. H. Moorman	706,678	Aug. 12	1314	852	100	1944
Duplicator	A. H. Ferris and C. A. Kenworthy	707,571	Aug. 26	3012	291	100	1400
Dust-applicator	T. H. Hunt	705,089	July 22	3308	677	100	1787
Dust-collector	L. R. Whitney	704,724	July 15	2519	718	100	717
Dust-collector	J. E. Mitchell	704,900	July 15	2852	544	100	542
Dust-collector	J. E. Mitchell	705,944	July 29	5050	618	100	611
Dust-collector and sweeper. Pneumatic	J. T. Hope	705,585	July 29	4998	1100	100	1069
Dust-guard	J. S. Patten	705,635	July 22	4052	954	100	951
Dust-guard	J. S. Patten	708,491	Sept. 2	887	879	100	870
Dust-guard	J. S. Patten	708,492	Sept. 2	889	201	100	2161
Dust-pan	W. E. Correll	704,861	July 15	2788	201	100	2162
Dye and making same. Anthracene	O. Bally	707,373	Aug. 19	2616	608	100	598
Dye and making same. Anthracene	O. Bally	707,374	Aug. 19	2616	------	100	1669
Dye and making same. Black sulfur	L. Lovinstein and C. Mensching	706,969	Aug. 12	1857	------	100	1669
Dye and making same. Blue	C. De la Harpe	707,882	Aug. 26	3584	------	100	1512
Dye and making same. Blue	C. De la Harpe	707,883	Aug. 26	3584	------	100	1908
Dye and making same. Blue	A. Weinberg and F. Klingemann	709,186	Sept. 16	2270	------	100	1908
Dye and making same. Blue anthraquinone	C. Hartmann	704,798	July 15	2668	------	100	9477
Dye and making same. Blue sulfur	A. F. Poirrier	708,669	Sept. 9	1195	------	100	571
Dye and making same. Blue sulfur	R. Herz	709,151	Sept. 16	2182	------	100	2394
Dye and making same. Green	J. Koetschet	709,160	Sept. 16	2201	------	100	2661
Dye and making same. Triphenyl-methane	F. Ach	707,818	Aug. 26	3535	------	100	9467
Dye and making same. Yellow acridin	A. Weinberg	709,187	Sept. 16	2271	------	100	1598
Dye. Brown-violet azo	P. Julius	710,050	Sept. 30	3998	------	100	9477
Dye. Red azo	W. Herzberg and O. Siebert	704,825	July 15	2722	------	100	2954
Dye. Red azo	W. Herzberg and O. Siebert	704,826	July 15	2725	------	100	561
						100	569

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Dyes. Making extract	R. Lepetit and E. Tagliani	704,843	July 15	2758		100	589
Dyeing apparatus	R. Illingworth, J. T. Mazey, and G. Naylor.	704,191	July 8	1558	334	100	325
Dyeing apparatus	R. Weiss	704,255	July 8	1715	374	100	360
Dyeing apparatus	D. Mattei	705,856	July 29	4892	1003 1064	100	1050
Dyeing, &c., apparatus	E. Hindley, S. Walker, and M. Rose.	706,657	Aug. 12	1276	261	100	1391
Dyeing, &c. Apparatus for	C. Corron	706,671	Aug. 12	1559	349	100	1456
Dyeing, &c. Apparatus for	C. M. Hanson	708,608	Sept. 9	1486	340 341	100	2898
Dyeing apparatus. Sliver-	W. H. Fletcher	706,171	Aug. 5	331	70, 71	100	1185
Dyeing-machine	J. L. Creveling	709,848	Sept. 23	3567	804	100	2762
Dynamo and driving-gear. Combined	N. H. Edgerton	708,808	Sept. 9	1474	336 337	100	2895
Dynamo and magneto-electric machine	N. H. Edgerton	708,875	Sept. 9	1638	374	100	2898
Dynamo and magneto-electric machine	W. L. Bliss	707,754	Aug. 26	3410	769	100	1868
Dynamo brush mechanism	W. A. Turbayne	705,487	July 22	4147	902	100	898
Dynamo-regulator. Automatic	F. D. Macbeth	706,978	Aug. 12	1865	417	100	1514
Ear-drum. Device for protecting the	L. Wile	708,646	Sept. 2	798	182	100	2143
Ear-muff	F. H. Dannhardt	705,910	July 29	4988	1086	100	1069
Earth or rock drill	H. Pope	707,941	Aug. 26	3788	848	100	1942
Eaves-trough hanger	W. L. Meuser	706,333	Aug. 5	662	144	100	1219
Eaves-trough protector	H. Graff	708,528	Sept. 2	434	97	100	2006
Eccentric. Adjustable	J. Rostochil	707,641	Aug. 26	3142	707	100	1614
Edging device	W. L. Smith	706,463	Aug. 5	952	204	100	1304
Educational apparatus	W. G. Browne. (Reissue)	12,026	Aug. 26	3398	876	100	1965
Egg-beater	J. A. Bastle and H. H. Weber	708,011	Sept. 2	19	4	100	1966
Egg-case	P. B. Taylor	704,977	July 15	3072	660 661	100	656
Egg-desiccating apparatus	A. F. Gardanier	706,649	Aug. 12	1253	277	100	1397
Egg-opener	M. E. Abrahams	708,791	Sept. 9	1449	331	100	2891
Egg-separator	J. Salomon	710,078	Sept. 30	4085	909	100	2871
Egg-stand	W. Schöning	709,583	Sept. 23	3082		100	2662
Eggs. Preserving	C. Reinhardt	707,009	Aug. 12	1924	431	100	1526
Eggs. Testing	M. T. Davidson and W. A. Drewett.	708,757	Sept. 9	1376	314 315	100	2274
Ejector apparatus	V. E. Belledin	707,752	Aug. 26	3408		100	1867
Elastic material which cannot be readily punctured. Manufacture of sheets of flexible	J. G. Moomy	709,998	Sept. 30	3884	876	100	2839
Elastic portion and a securing portion. Article of manufacture having an	P. W. Pratt and R. E. Foster	710,073	Sept. 30	4086	909	100	2870
Elastic tip	H. K. Blyth	706,898	Aug. 12	1719	394	100	1485
Elbow and pipe	H. Heinicke	704,744	July 15	2566	553	100	551
Electric accumulator	A. Fischer	708,834	Sept. 2	620	139 140	100	2107
Electric accumulator-plate	R. M. Hunter	708,420	July 1	98	21	100	22
Electric accumulator-plates. Making	R. Alexander-Katz	708,630	July 29	4484	973	100	967
Electric accumulator-plates. Separator for	F. C. Pickett	708,089	Sept. 16	1909	450	100	2413
Electric and gas lighting system. Combined	H. Shoemaker	710,373	Sept. 30	4588	1084	100	2987
Electric apparatus interrupter	J. C. Meloon	708,155	Sept. 2	289	69	100	2041
Electric attachment	M. W. Robinson	705,148	July 22	3433	746	100	744
Electric battery	E. R. Gill	705,919	July 29	5006	1090	100	1073
Electric battery	E. A. G. Street	707,731	Aug. 26	3331	746	100	1863
Electric battery	T. H. Klinker, Jr., and R. Gabrielsky.	710,278	Sept. 30	4491	997	100	2955
Electric battery and mounting same	E. A. Sperry	705,673	July 1	550	125	100	109
Electric cable	T. Rosati	705,599	Aug. 12	1165	58	100	1367
Electric-circuit breaker	H. W. Leonard and H. P. Ball	705,102	July 22	3332	728 734	100	724
Electric circuit. Composite	M. H. Howell	706,818	Aug. 5	534	138	100	1944
Electric-circuit-controlling means	J. J. Wood	706,143	Aug. 5	275	58	100	1173
Electric-circuit lead fuse	F. H. Krebs	709,334	Sept. 16	2549	574	100	2538
Electric circuit. Loaded	J. C. Lee and E. H. Colpitts	705,986	July 29	5084	1097	100	1078
Electric-circuit thermal protector	F. B. Cook	704,439	July 8	1998	433	100	419
Electric-circuit wires so as to equalize induction. Apparatus for transposing	J. O'Brien and J. Mattimore	710,906	Sept. 30	4868	967	100	2980
Electric circuits. Apparatus for maintaining uniform resistance in.	F. A. Gilbert and E. O. Lundin	710,068	Sept. 30	3985	899	100	2861
Electric condenser and making same	H. P. Clausen	709,906	Sept. 16	2808	623 624	100	2485
Electric controller	A. E. Hogrebe	704,808	July 15	2681	579	100	573
Electric controller	J. C. Henry	705,941	July 29	3647	790	100	788
Electric controller	W. H. Clarke	708,026	Sept. 2	43	10	100	1990
Electric controller	J. B. Linn	708,055	Sept. 2	107	25	100	2008
Electric controller	W. A. Carrell	710,096	Sept. 30	4078	920	100	2880
Electric controller	H. A. Rowlands	704,930	July 15	2976	637	100	698
Electric currents upon telegraph or other circuits. Means for impressing periodically-varying	G. N. Oehmen	704,361	July 8	1870	405	100	395
Electric cut-out	M. Otto	707,797	Aug. 26	3510	792	100	1888
Electric discharges. Rotary apparatus for the production of diffused	C. J. A. Michalke	704,464	July 8	2092	453	100	439
Electric-distribution system	H. F. Parshall	705,591	Aug. 12	1151	255	100	1364
Electric-distribution system	A. Parker	706,099	Aug. 5	181	37, 38	100	1154
Electric furnace	E. R. Taylor	706,128	Aug. 5	223	49	100	1165
Electric furnace	P. L. T. Héroult	707,776	Aug. 26	3458	779	100	1878
Electric furnace. Oscillating	J. H. Bickford	708,195	Sept. 2	370	87, 88	100	2057
Electric generating systems. Controlling device for	W. H. Cotton	704,955	July 15	3080	650 651	100	649
Electric generator	W. S. Hadaway, Jr	705,668	July 29	4551	998	100	981
Electric heater	G. L. Martin	706,578	Aug. 12	1194	248	100	1355
Electric-light fixture. Marine	C. Schürmann	708,587	July 1	858	187	100	171
Electric lighting, &c. Manufacture of braided cords or cables for	J. L. Creveling	707,092	Aug. 12	2008	448 449	100	1543
Electric-lighting systems. Regulation of	J. Burke	706,017	Aug. 5	22	5	100	1121
Electric machine. Dynamo-	H. G. Reist	706,108	Aug. 5	196	41	100	1157

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Electric machines. Means for regulating the output of dynamo-	J. L. Creveling	704,696	July 15	2464	532	100	531
Electric machinery. Control of dynamo-	E. R. Carichoff	706,723	Aug. 12	1886	309	100	1416
Electric meter	C. D. Haskins	706,555	Aug. 12	1096	240	100	1350
Electric meter	E. Thomson	706,612	Aug. 12	1186	263 264	100	1372
Electric meter	G. Stern	710,088	Sept. 30	4049	912	100	2874
Electric meter. Prepayment	G. L. Gowlland	706,047	Aug. 5	87	19	100	1134
Electric motor	A. B. Holson	706,817	Aug. 5	630	138	100	1343
Electric-motor control	H. W. Leonard	709,915	Sept. 30	3726	840	100	2806
Electric-motor controller	W. H. Chapman	707,300	Aug. 19	2484	558	100	1661
Electric-motor controller	L. A. Tirrill	708,096	Sept. 2	175	41, 42	100	2017
Electric-motor controller	F. A. Merrick and E. W. Stull	708,157	Sept. 2	292	70	100	2042
Electric-motor controller	F. A. Merrick and E. W. Stull	708,158	Sept. 2	295	71	100	2043
Electric-motor controller	E. W. Stull	709,182	Sept. 16	2259	514	100	2475
Electric-motor controlling apparatus	W. J. Richards	704,665	July 15	2413	522	100	520
Electric-motor coupling	F. E. Case	708,024	Sept. 2	40	10	100	1989
Electric-motor power-transmitting device	H. S. Miller and G. C. Marx	703,942	July 1	1043	226 227	100	907
Electric-motor regulation	O. H. and A. F. Pieper	704,099	July 8	1375	297	100	280
Electric motors. Controlling	J. C. Henry	708,960	Sept. 9	1786	412	100	2359
Electric motors. Controlling	J. C. Henry	708,961	Sept. 9	1790	412 413	100	2359
Electric motors. Controlling	H. W. Leonard	709,916	Sept. 30	3730	840	100	2807
Electric motors. Protective operating device for	A. C. Eastwood	704,447	July 8	2010	437	100	423
Electric regulator	A. R. Everest	706,039	Aug. 5	73	16	100	1122
Electric roller for massage and therapeutical purposes	J. W. Gibbs	707,508	Aug. 19	2856	647	100	1739
Electric signal	A. J. Haycox	705,583	July 29	4895	958	100	950
Electric snap-switch	L. W. Downes	708,211	Sept. 2	401	98	100	2053
Electric switch	A. P. Anderson	703,515	July 1	254	59	100	51
Electric switch	W. B. Potter	705,187	July 22	3414	742	100	740
Electric switch	E. R. Carichoff	706,527	Aug. 12	1040	220	100	1340
Electric switch	F. A. Merrick	706,581	Aug. 12	1159	249	100	1360
Electric switch	H. P. Ball	708,005	Sept. 2	11	3	100	1983
Electric switch	B. J. Foley	710,188	Sept. 30	4260	960	100	2919
Electric switch	F. H. Headley	710,270	Sept. 30	4408	993	100	2951
Electric switch	J. A. Heany	707,843	Aug. 26	3603	813	100	1905
Electric switch or cut-out	P. E. Chapman	706,598	Aug. 12	1554	348	100	1451
Electric testing apparatus	H. K. Gardner	710,146	Sept. 30	4182	942	100	2902
Electric time-switch. Automatic	R. W. Lyle	706,974	Aug. 12	1962	417	100	1518
Electric-wire conduit	B. McFarren	709,554	Sept. 23	3033	676	100	2651
Electric-wire pole	J. W. Seaman	706,786	Aug. 12	1580	339 340 341	100	1445
Electric wires in buildings. Junction-box for	B. W. Allen	704,494	July 8	1963	427	100	413
Electric wires in buildings. Junction-box for	B. W. Allen	704,495	July 8	1964	427	100	413
Electric wires. Safety contact-interrupter for	G. Bellangé	705,029	July 22	3170	684	100	692
Electric wires. Wall-plate or shield for	B. W. Allen	704,493	July 8	1962	426	100	413
Electrical apparatus. Circuit-closer for portable	W. Roche	704,113	July 8	1399	301	100	294
Electrical apparatus. Therapeutic	I. E. Shaffer	706,602	Aug. 12	1172	250	100	1359
Electrical circuits. Terminal box for protected	F. B. Cook	707,049	Aug. 12	1992	447	100	1540
Electrical conductors. Manufacturing	L. W. Downes	709,001	Sept. 16	1881	432	100	2396
Electrical connector	A. J. Wayman	704,670	July 15	2423	524	100	522
Electrical distribution for car-lighting purposes. System of	J. L. Creveling	706,165	Aug. 5	320	68	100	1182
Electrical-distribution system	J. L. Creveling	704,863	July 15	2784	602	100	596
Electrical-distribution system	J. L. Creveling	704,864	July 15	2788	603	100	597
Electrical-distribution system	J. L. Creveling	704,865	July 15	2791	603	100	597
Electrical-distribution system	C. P. Steinmetz	706,123	Aug. 5	290	46	100	1162
Electrical-distribution system	R. Fleming	706,544	Aug. 12	1069	235	100	1347
Electrical-distribution system	C. P. Steinmetz	706,607	Aug. 12	1179	261	100	1370
Electrical-distribution system	C. P. Steinmetz	706,608	Aug. 12	1181	262	100	1370
Electrical-distribution system	C. P. Steinmetz	706,609	Aug. 12	1183	262	100	1371
Electrical-distribution system	W. S. Moody	707,150	Aug. 19	2230	493	100	1600
Electrical-distribution system	A. D. Lunt	710,067	Sept. 30	4009	905	100	2867
Electrical-distribution system	C. P. Steinmetz and W. L. R. Emmet	710,081	Sept. 30	4043	911	100	2873
Electrical-distribution system	C. P. Steinmetz and W. L. R. Emmet	710,082	Sept. 30	4047	911	100	2874
Electrical-distribution system	C. P. Steinmetz and W. L. R. Emmet	710,158	Sept. 30	4205	948	100	2907
Electrical-distribution system	B. G. Lamme	704,649	July 15	2385	517	100	514
Electrical furnace for treating highly-refractory substances	H. Maxim	709,806	Sept. 23	3494	788	100	2745
Electrical indicator	H. S. Tittle	706,085	Aug. 5	159	33	100	1149
Electrical lighting and power system	M. Moskowitz	705,238	July 22	3542	788 789	100	787
Electrical machine	T. B. Hatch	705,494	July 22	4031	874	100	866
Electrical-panel-board attachment	E. W. Müller	708,478	Sept. 2	856	195	100	2155
Electrical position-indicator	A. S. Hubbard	707,050	Aug. 12	1996	448	100	1542
Electrical protector set	F. B. Cook	708,759	July 1	708	157	100	142
Electrical sparking device	A. C. Brown	707,505	Aug. 19	2849	645	100	1788
Electrical switch	L. L. Elden	706,759	Aug. 12	1480	328	100	1435
Electrical switch or cut-off	P. Kennedy	708,011	Aug. 5	14	4	100	1119
Electrical switches operated by electromagnets. Controlling	A. T. M. Thomson	705,161	July 22	3453	752	100	748
Electrical switchboards. Connecting-plug for	H. W. Leonard	709,714	Sept. 23	3302	742	100	2707
Electrical translating devices. Controlling the energy delivered to	H. F. Freed	704,019	July 8	1194	260	100	258
Electrical transportation system	W. L. R. Emmet	706,540	Aug. 12	1062	234	100	1345
Electrically-controlled switch	H. M. Sutton, W. L. Steele, and M. Coerver.	708,093	Sept. 2	169	39	100	2016
Electrically-protected structure	I. W. Heysinger	708,639	Sept. 9	1153	260	100	2226
Electrician's tool	E. L. Anderson	706,631	Aug. 12	1219	270	100	1378
Electricity. Chemical generator of	R. O. Vandercook	705,490	July 22	4153	903 904	100	880
Electricity. Means for dissipating static	R. Pintsch	704,573	July 15	2367	491	100	489
Electricity on running cars. Device for generating	G. Wilkinson	705,802	July 29	4796	1041	100	1081
Electricity-supply purposes. Cable-terminal box for							

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Electrochemical apparatus	C. C. Clark	705,529	Aug. 12	1045	220	100	1342
Electrochemical generator	H. S. Amwake. (Reissue)	12,019	Aug. 12	2043	456	100	1551
Electrochemical generator	H. S. Amwake	707,373	Aug. 19	2514	590	100	1689
Electrode. Battery-	T. A. Edison	704,305	July 8	1746	381	100	367
Electrode. Electric accumulator-	V. Cheval and J. Lindeman	704,859	July 15	2778	601	100	595
Electrode for storage batteries	C. W. Kennedy	705,569	Aug. 12	1104	245	100	1354
Electrode-separator. Battery-	A. W. Harrison	708,706	Sept. 9	1282	268	100	2252
Electrode. Storage-battery	H. Woodward	707,666	Aug. 26	3207	719	100	1858
Electrodes. Manufacture of carbon	C. M. Hall	705,076	July 22	3369	708	100	712
Electrolytic cell	A. Sommer	707,804	Aug. 26	3519	794	100	1890
Electrolytic cell and electrode therefor	A. A. Vogelsang	705,851	July 1	894	197	100	179
Electromagnetic switch	F. Bourne	706,012	Aug. 5	15	4	100	1119
Electromagnetic switch	J. L. Creveling	707,763	Aug. 26	3425	771	100	1871
Electromedical appliance	J. O. Fowler, Jr	708,216	Sept. 2	410	96	100	2005
Electromedical appliance	J. H. and A. T. Kliegl	708,365	Sept. 2	664	149 150	100	2115
Electromotive force. Means for generating counter	H. H. Dow	707,836	Aug. 26	3586	809	100	1902
Electroplating apparatus	T. F. Taylor	708,623	July 1	446	108	100	87
Electrotherapeutic battery	T. J. Dunn	707,502	Aug. 26	2982	673	100	1781
Electrotype-shaving machine	F. Wesel	709,435	Sept. 2	777	175	100	2138
Elevating and dumping apparatus	R. Hollopeter	708,144	Sept. 2	271	65	100	2027
Elevator: *See* Cotton-elevator. Grain-elevator. Hod-elevator. Inclined elevator. Pneumatic elevator. Safety-elevator. Tailings-elevator. Water-elevator.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Engine	V. L. Rice	705,145	July 22	3428	744 745	100	744
Engine	S. H. Short	706,120	Aug. 5	216	45	100	1161
Engine	W. G. Cowan, A. Jewett, and J. G. Wardell.	707,828	Aug. 26	3567	806	100	1899
Engine	T. Conlin	707,904	Aug. 26	3718	834	100	1928
Engine	T. Deakin	708,697	Sept. 9	1256	267 268	100	2247
Engine	W. A. Bole	710,136	Sept. 30	4162	928	100	2898
Engine and car draft-rigging	E. C. Washburn	705,109	July 22	3468	754 755	100	751
Engine attachment	V. Z. Caracristi	708,028	Sept. 2	37	9	100	1988
Engine attachment. Traction-	D. W. Combs	704,736	July 15	2540	549	100	546
Engine hydrocarbon-feeder. Explosive-	F. B. Warring	709,428	Sept. 16	2745	617	100	2579
Engine igniter. Explosive-	H. E. Barlow	710,312	Sept. 30	4479	1011	100	2966
Engine ignition-regulator. Gas-	M. J. Sullivan	705,881	July 29	4086	1073 1074	100	1059
Engine-indicator	H. A. C. A. W. Maihak	708,484	July 1	121	27	100	27
Engine link-motion. Steam-	M. A. Wharfield	705,174	July 22	3481	757	100	754
Engine-lubricating apparatus	E. T. McKaig	707,794	Aug. 26	3507	791	100	1887
Engine lubricator. Explosive-	C. W. Weise	710,086	Sept. 30	3940	889	100	2851
Engine regulators. Controlling mechanism for steam-	E. Reynolds	704,270	July 8	1695	367	100	353
Engine reversing-gear	V. W. Clough	706,627	Aug. 12	1227	272	100	1380
Engine reversing-gear	V. W. Clough	706,628	Aug. 12	1228	272	100	1380
Engine safety appliance	J. Karlik and M. Witte	710,155	Sept. 30	4301	946 947	100	2906
Engine sparking igniter. Explosive-	J. B. Hicks	708,042	Sept. 2	88	20	100	1999
Engine starting device. Explosive-	C. F. Cope	704,618	July 15	2734	507 508	100	503
Engine starting means. Explosive-	S. E. Poole	708,463	July 1	163	37	100	85
Engine-stop	H. Jones	706,952	Aug. 12	1825	409	100	1506
Engine-stop. Automatic	N. C. Locke	708,372	Sept. 2	671	151	100	2118
Engine stop-motion. Steam-	O. Williams	707,998	Aug. 26	3685	829	100	1962
Engine-support	A. W. Menns and A. T. Van Horn	709,445	Sept. 16	2779	625 626	100	2586
Engine tender. Traction-	A. Hildebrand	706,560	Aug. 12	1093	242	100	1352
Engine tender. Traction-	F. J. Wood	710,028	Sept. 30	3943	889 890	100	2852
Engine vaporizing device. Explosive-	B. C. Vandusen	709,126	Sept. 16	2139	490 491	100	2451
Engines. Apparatus for distributing the primary current for electric ignition by coils and igniters in explosive-	A. C. Krebs	708,053	Sept. 2	105	24	100	2008
Engines. Electric igniter for explosive-	H. A. Gray	709,698	Sept. 23	3106	698	100	2667
Engines. Fuel or other reservoir for internal-combustion	C. O. Hedstrom	707,923	Aug. 26	3753	841	100	1926
Engines. Ignition-gear for internal-combustion	F. R. Simms and R. Bosch	706,121	Aug. 5	217	45	100	1161
Engines. Incandescent igniter for explosive-	C. W. Weise	708,284	Sept. 2	533	121	100	2090
Engines. Sparker for explosive-	G. A. Graves	705,996	July 29	5187	1120	100	1100
Engines. Sparker for explosive-	H. H. and C. B. Segner	706,859	Aug. 12	1664	372	100	1475
Engines. Sparking igniter for explosive-	J. Lizotte	706,492	Aug. 5	976	214	100	1314
Engines. Vaporizer for explosive-	J. Lizotte	708,987	July 1	1084	225	100	206
Engines. Water cooling and circulating apparatus for explosion-	E. Estcourt	707,570	Aug. 26	3010	677	100	1786
Engraving-machine	W. E. Crane	708,719	July 1	632	141 142	100	125
Engraving-machine	B. Jay	704,193	July 8	1555	335	100	326
Engraving-machine	C. B. Bishop	709,863	Sept. 30	3592	810 811 812 813	100	2780
Engraving-machine. Pantograph	M. Barr	706,007	Aug. 5	8	2	100	1118
Envelop	C. E. Cather and L. H. Buckley	705,086	July 22	3191	699	100	696
Envelop	J. B. Howe	706,417	Aug. 5	841	183	100	1288
Envelop	L. A. Bennett	707,074	Aug. 19	2057	450	100	1670
Envelop	C. A. Dunn	707,308	Aug. 19	2498	551	100	1664
Envelop	J. E. Fitzgerald	707,963	Aug. 26	3819	859	100	1948
Envelop	G. D. Van Arsdale	708,098	Sept. 2	181	43	100	2019
Envelop	F. R. Stearns and C. R. Weber	709,805	Sept. 23	3468	788	100	2745
Envelop	A. J. Arendell	709,959	Sept. 30	3795	856	100	2891
Envelop	G. E. Hurst	708,555	Sept. 9	996	226	100	2196
Envelop-filler. Safety	W. T. Lee	710,200	Sept. 30	4285	955	100	2938
Envelop. Mailing-	H. G. Starmer	705,470	July 22	4111	893	100	882
Envelops. Means for detecting tampering with sealed	O. and F. Zoeller	705,189	July 22	3515	792	100	702
Equalizer. Four-horse	F. C. Raber	709,722	Sept. 23	3316	745	100	2709
Eraser. Blackboard-	F. H. Thibodo and S. S. Peckinpaugh.	706,980	Aug. 5	563	.....	100	1229
Etching and in etching such surfaces. Preparing surfaces for	I. Kitsee	708,052	Sept. 2	104	24	100	2003
Etching designs	C. Ordway	709,173	Sept. 16	2285	509	100	2470
Evaporating apparatus. Vacuum	W. Bender	709,397	Sept. 16	2487	559	100	2584
Evaporator	J. W. Sayre	707,946	Aug. 26	3789	851	100	1943
Evener. Four-horse	E. H. Browning	706,317	July 22	3907	825	100	880
Excavating and hoisting apparatus	W. Foglesong	704,740	July 15	2554	550 551	100	548
Excavating and loading apparatus	H. J. Bentson. (Reissue)	12,010	July 15	3140	678 679	100	670
Excavating-machine	O. B. H. Hanneborg	706,175	Aug. 5	337	72, 73	100	1195
Excavator	E. Schofield	708,972	July 1	1110	240	100	120
Excavator for trenches, cuttings, &c.	W. M. Moseley	708,343	Sept. 2	455	103	100	2074
Exercising device	J. C. Korth and A. Gansenmüller	704,840	July 15	2749	595	100	586
Exercising-machine	J. Y. Smith	705,718	July 29	4645	1006	100	980
Exhaust apparatus	D. M. Winans	708,087	Sept. 9	1286	288	100	1943
Exhibiting and vending machine	A. C. Argles	708,853	Sept. 9	1586	361 362	100	2118
Exhibiting device

Fastening device	P. Kleber	707,785	Aug. 26	3474	788	100	1881
Fastening device. String-	E. Flowers	704,016	July 8	1191	259	100	252
Fat-washing apparatus	D. I. Davis	706,033	Aug. 5	58	13	100	1129
Faucet	R. W. Booth	709,289	Sept. 16	2681	601	100	2565
Faucet and automatic graduate. Measuring-	G. J. Adams	707,539	Aug. 26	2924	661 / 662	100	1789
Faucet. Oil or molasses	C. F. Smith	704,942	July 15	2998	642	100	648
Faucet or tap	L. Wolf	709,189	Sept. 16	2273	516	100	2477
Feather crushing and pulverizing machine	F. Franke	708,133	Sept. 2	249	59	100	2034
Feather fabric. Woven	E. K. Warren and J. H. Holden	709,620	Sept. 23	3142	709	100	2674
Feather fabric. Woven	E. K. Warren and J. H. Holden	709,621	Sept. 23	3143	709	100	2674
Feather fabric. Woven	E. K. Warren and J. H. Holden	709,622	Sept. 23	3144	709	100	2674
Feather-quiller	F. Franke	703,723	July 1	544	143	100	128
Feed-box for live stock	G. M. Fillmore	709,439	Sept. 16	2766	628	100	2562
Feed mechanism	H. Maries	705,940	July 29	5040	1098	100	1079
Feed-regulator for steam-boilers. Automatic	J. S. V. Bickford	703,757	July 1	705	156	100	141
Feed-table mechanism	T. Morrison	704,890	July 15	2836	614	100	607
Feed-trough	J. W. Barnes	705,806	July 29	4961	1079	100	1064
Feed-water, burner, or like regulator	J. Johnston	704,342	July 8	1924	395	100	384
Feed-water heater	R. H. Hornbrook	704,879	July 15	2818	609	100	603
Feed-water heater	F. W. Reich	705,293	July 22	3751	814	100	809
Feed-water heater	G. Florack	707,575	Aug. 26	3018	679	100	1788
Feed-water heater and condenser	H. A. Fergusson	704,454	July 8	2030	440	100	428
Feed-water heater and purifier	H. J. Reynolds	708,782	Aug. 12	1523	338	100	1444
Feed-water heater and purifier	J. E. Crawley	708,028	Sept. 2	55	13	100	1992
Feed-water heater. Fuel-economizer	W. Downs	708,699	Sept. 9	1351	289	100	2243

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Feed-water-purification system	A. Sorge, Jr	708,088	Sept. 2	160	38	100	2014
Feeder. Automatic boiler-	C. Cummings	710,317	Sept. 30	4464	1012	100	2967
Feeding devices. Quick return for	W. J. Bussinger	708,803	Sept. 9	1606	367	100	2223
Feeding, printing, and cutting strips of material. Machine for	S. Kops	709,271	Sept. 16	2436	551	100	2515
Feeding rack and shearing table. Combination sheep	V. Baughman	708,297	Sept. 2	538	126 / 127	100	2095
Fellies or the like. Attachment for cutting	W. E. Swindell	707,179	Aug. 19	2258	505	100	1613
Fence	W. Crabb	706,641	Aug. 12	1243	274	100	1385
Fence	G. Gentalinger	709,215	Sept. 16	2319	536	100	2489
Fence-builder and hay-derrick	W. W. C. Hill	708,551	Sept. 9	989	223 / 224	100	2196
Fence clip. Wire-	F. Canfield	706,395	Aug. 5	771	108	100	1270
Fence fabric. Woven-wire	E. L. Warner	709,005	Sept. 16	2020	461	100	2424
Fence fastening-clip. Wire-	F. Canfield	706,220	Aug. 5	420	90	100	1202
Fence-lock	W. B. MacLean	705,961	July 29	5092	1102	100	1084
Fence machine. Wire-	P. M. Mishler	703,804	July 1	702	174	100	150
Fence machine. Wire-	G. P. A. Weisenborn	705,500	July 22	4170	907 / 908	100	892
Fence-making machine	E. E. Stewart	704,396	July 8	1923	416	100	405
Fence. Portable	J. Steiner	704,277	July 8	1702	371	100	358
Fence-post	A. Henry	704,035	July 8	1232	266	100	260
Fence-post	C. O. Peak	704,915	July 15	2922	626	100	629
Fence-post	J. W. Todd	704,988	July 15	3089	665	100	659
Fence-post	W. B. Johnson	709,224	Sept. 16	2331	528	100	2495
Fence-post	J. Buchtel	709,300	Sept. 16	2489	560	100	2524
Fence-post	C. O. Blee and J. H. Redding	709,735	Sept. 23	3336	752	100	2711
Fence-post	I. M. Warner	709,835	Sept. 23	3544	799	100	2757
Fence-post	V. H. Abbott	710,031	Sept. 30	3948	890	100	2953
Fence-post and fence-stay	W. M. Smith	708,067	Sept. 2	159	38	100	2014
Fence-post. Braced	D. W. Larimer and D. C. Elliott	704,842	July 15	2752	595	100	589
Fence-post. Composition	C. C. Hagerman	707,586	Aug. 26	3040	683	100	1793
Fence-post. Metal	O. A. Harker, Jr	708,726	July 1	653	144	100	131
Fence-post. Metallic	J. A. Utter	709,617	Sept. 23	3138	699	100	2673
Fence-post. Metallic	I. M. Warner	705,498	July 22	4106	907	100	891
Fence stretcher. Wire-	C. Whipple	705,504	July 22	4177	909	100	893
Fence tool. Wire-	L. C. Hoover	706,562	Aug. 12	1095	243	100	1353
Fence. Wire	C. S. Beebe	706,883	Aug. 12	1708	382	100	1483
Fence. Wire	M. D. Shipman	707,457	Aug. 19	2765	627	100	1719
Fence. Wire	I. N. O'Neal	708,391	Sept. 2	703	158	100	2124
Fence. Wire	M. M. Benster	703,756	July 1	704	156	100	141
Fence-wire fastener	W. Groves and G. D. O'Day	709,540	Sept. 23	3009	670	100	2647
Fences. Machine for weaving cross-wires in	M. D. Shipman	707,455	Aug. 19	2764	626	100	1719
Fencing. Wire	A. W. Wellman	707,743	Aug. 26	3378	759	100	1861
Fencing. Woven-wire							
Fender: *See* Boat-fender. Car-fender							
Ferrous liquors. Treating	A. S. Ramage	708,585	Sept. 9	1046	238	100	2204
Ferrule	C. Perdelwitz	708,457	July 1	155	36	100	38
Ferrule for fork-handles	G. A. McKeel	709,108	Sept. 16	2110	484	100	2445
Fertilizer and making same	G. H. Smith	705,462	July 22	4100		100	880
Fertilizer-distributer	C. Johnson and O. C. Rawley	704,747	July 15	2569	554	100	551
Fertilizer-distributer	A. McWhorter	705,858	July 29	4896	1065	100	1051
Fertilizer-distributer	E. L. Braxton	708,118	Sept. 2	215	51	100	2026
Fertilizer-distributer and seed-planter. Combined	W. B. Rohmer	710,011	Sept. 30	3914	884	100	2946
Fertilizers. Making	B. Terne	709,185	Sept. 16	2269	516	100	2477
Fibers from reeds, rushes, &c. Producing long and short	L. v. Ordody	708,814	July 1	816		100	163
Fibers of annual growth for industrial purposes. Treating	S. O. Edison	704,698	July 15	2469	533	100	532
Fibrous materials. Machine for circulating and separating waste	J. Marshall	707,133	Aug. 19	2156	484	100	1592
Fibrous plants. Machine for disintegrating	M. Prieto	705,140	July 22	3420	742 / 743	100	742
Fibrous substances. Treating	E. T. Holmes	704,259	July 8	1670	363	100	350

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Filter for recovering the liquid from slimes, sands, pulp, or such like in connection with cyanid or other chemical applications. Revolving vacuum-	G., Jr., and S. E. Fraser	706,980	Aug. 12	1774	397	100	1497
Filter-press	F. M. Locke	707,945	Aug. 19	2371	531	100	1638
Filter. Water-	A. G. Noack	705,686	July 29	4607	999 / 1000	100	992
Filtering apparatus	E. De Meulemeester	703,559	July 1	331	75	100	67
Filtering apparatus	D. Rojat	703,833	July 1	844	186	100	169
Filtering apparatus	C. Baechler	707,587	Aug. 26	2990	663	100	1771
Filtering apparatus	N. Rosen	704,273	July 8	1693	369	100	355
Finger-ring	M. Gottschalk	705,920	July 29	5008	1090	100	1073
Finger-straightening case	C. R. Harris	704,681	July 15	8428	527	100	525
Fire-alarm	M. K. Fred	703,909	July 1	967	215	100	197
Fire-alarm. Automatic	R. G. Callum	706,384	Aug. 5	767	167 / 168	100	1269
Fire-alarm-telegraph system	C. Allenou	710,091	Sept. 30	4067	917 / 918	100	2878
Fire. Apparatus for discharging inflammable or other liquids from storage-tanks at the outbreak of	W. Hartley, E. D. Rivers, and E. Beach.	706,384	July 22	3635	787	100	786
Firearm	J. M. Browning	708,794	Sept. 9	1455	332 / 333	100	2292
Firearm. Automatic	J. Bincette	708,304	Sept. 2	569	129	100	2097
Firearm. Breech-loading	N. Pieper	706,199	Aug. 5	382	82	100	1195
Firearm lock and extractor mechanism	E. P. Bergman and A. E. Renard	703,390	July 1	260	60	100	59
Firearm. Magazine	C. A. Young	709,245	Sept. 16	2658	599	100	2568
Firearm. Magazine	L. F. Bruce	708,311	Sept. 2	582	132	100	2100
Firearm-magazine	H. Mosbaugher	703,964	July 1	1098	236	100	218
Firearm palm-rest	J. F. Herndon	707,925	Aug. 26	3757	843	100	1997
Firearm safety attachment	J. T. Brayton	708,119	Sept. 2	217	52	100	2095
Firearm-sight	E. D. Fulford	704,025	July 8	1215	263	100	257
Firearm single trigger	E. D. Fulford	704,024	July 8	1213	263	100	257
Firearm single-trigger mechanism	A. Leven	709,100	Sept. 16	2100	481	100	2443
Firearms and artillery. Protection against shot from hand	H. J. Podlesák	709,607	Sept. 23	3120	695	100	2669
Fire-doors, &c. Electrical releaser for	G. P. Nice and E. F. Laedlein	704,086	July 8	1383	990	100	279
Fire-escape	C. Seessle	704,126	July 8	1430	306	100	301
Fire-escape	G. W. and J. C. Jones	704,834	July 15	2737	592	100	586
Fire-escape	J. T. Cowles	705,042	July 22	3205	692	100	699
Fire-escape	R. Hammerly	705,580	July 29	4390	962	100	949
Fire-escape	M. Abrams	705,891	July 29	4953	1078	100	1062
Fire-escape	D. Neale	707,346	Aug. 19	2570	561	100	1679
Fire-escape	S. B. Parker	707,715	Aug. 26	3296	736	100	1846
Fire-escape	J. M. Brazill	708,120	Sept. 2	219	52, 53	100	2027
Fire-escape	C. J. Haggstrom	708,546	Sept. 9	982	222	100	2191
Fire-escape	A. McCutcheon	708,777	Sept. 9	1410	323 / 324	100	2281
Fire-escape	B. V. Murray	708,825	Sept. 9	1527	349 / 350	100	2305
Fire-escape	A. Sferlozza	708,838	Sept. 9	1557	356	100	2311
Fire-escape	H. Vieregg	708,846	Sept. 9	1572	359	100	2315
Fire-escape	M. Wachter	709,127	Sept. 16	2141	491	100	2452
Fire-escape	W. H. Taylor	709,374	Sept. 16	2651	594	100	2559
Fire-escape	J. W. Smith	709,519	Sept. 23	2977	663 / 664	100	2640
Fire-escape	C. Schwarz and W. C. Bryant	705,710	July 29	4635	1004 / 1005	100	997
Fire-escape and water-tower. Combined	M. J. Johnston	706,666	Aug. 12	1291	294	100	1304
Fire-escape. Portable	R. W. Newton	708,658	July 1	539	120	100	104
Fire-extinguisher. Automatic	O. Hoffmann	704,682	July 15	9439	527	100	525
Fire-extinguisher. Automatic	L. Werlin	705,508	July 22	4173	908	100	893
Fire-extinguisher. Automatic chemical	W. A. Nickerson	710,069	Sept. 30	4013	906	100	2867
Fire-extinguishing and life-saving apparatus	J. S. Letts	703,663	July 1	528	119 / 120	100	104
Fire-extinguishing apparatus	C. B. Shaw	705,544	July 22	4323	985	100	921
Fire-extinguishing apparatus. Automatic alarm-valve for	J. Buchtel	710,246	Sept. 30	4371	982	100	2943
Fire-hose. Telegraph	J. Hazledine	705,925	July 29	5013	1091 / 1092	100	1074
Fire in oil-tanks, &c. Apparatus for extinguishing	H. Braby	710,315	Sept. 30	4483	1012	100	2967
Fire-lighter	A. R. Seaman	703,841	July 1	959	188	100	172
Fire-lighter. Automatic	J. R. Thomas	708,094	Sept. 2	171	40	100	2016
Fire-lighter blocks. Machine for making	E. Pollard and J. R. Thomas	708,073	Sept. 2	134	32, 33	100	2005
Fire-lighter machine	I. Cairns	705,032	July 22	3185	688	100	695
Fireman's hat	C. Poyner	705,595	Aug. 12	1160	257	100	1266
Fire-screen	H. W. Lloyd	707,704	Aug. 26	3377	732 / 734	100	1842
Fire truck and ladder	G. Vitti	710,398	Sept. 30	4338	975	100	2937
Fireplace	R. N. Johnson	706,182	Aug. 5	362	76	100	1188
Fireplaces. Heat-regulator for	T. Ohno	705,699	July 29	4615	1000 / 1001	100	998
Fire-protecting shutter. Automatic	W. R. Kinnear	704,546	July 15	2235	488	100	481
Fireproof blinds. Spring-roller for	W. R. Kinnear	706,569	Aug. 12	1107	245	100	1255
Fireproof blinds, &c. Spring-roller for	T. Bailey	704,771	July 15	2697	564	100	539
Fireproof building	F. W. Cooley	707,066	Aug. 19	2079	464 / 465	100	1575
Fireproof building	F. W. Cooley	707,210	Aug. 19	2315	518 / 519	100	1626
Fireproof building	S. G. Brinkman	707,301	Aug. 19	2301	514	100	1624
Fireproof ceiling and floor	W. R. Knox	705,760	Aug. 12	1491	------	100	1426
Fireproof cement. Hydraulic	G. R. King	705,360	July 22	3021	649	100	842
Fireproof floor construction	J. T. Simpson and M. N. Shoemaker	706,347	Aug. 5	687	150	100	1255
Fireproof floor construction	M. Watson	710,308	Sept. 30	4470	1008	100	2964
Fireproof floor construction	C. F. Haglin	708,764	Sept. 9	1889	317 / 318	100	2277
Fireproof flooring							

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Fireproof frame building	G. E. Voelkel	710,207	Sept. 30	4469	1008	100	2964
Fireproof partition structure	J. T. Simpson and M. N. Shoemaker	706,348	Aug. 5	690	150	100	1256
Fireproof wall-plaster	C. R. Harris and C. C. Barrick	708,354	Sept. 2	649	------	100	2113
Fireproof wall-plaster. Composition of	C. R. Harris and C. C. Barrick	708,353	Sept. 2	648	------	100	2113
Fish-flaking machine	E. M. Lawrence	706,764	Aug. 12	1487	329	100	1436
Fish, &c. Reducing or rendering	E. R. Edson	707,566	Aug. 26	2991	674	100	1788
Fish-trap	G. Merle	708,380	Sept. 2	685	154	100	2120
Fish-trap hook	M. Greer	705,750	July 29	4712	1019	100	1012
Fishing-reel	J. vom Hofe	703,585	July 1	371	86	100	73
Fishing-reel	A. B. Hendryx	705,758	July 29	4723	1022	100	1014
Fishing-reel	B. J. Warren	704,991	July 15	8105	669	100	662
Fishing-rod holder	E. C. and E. M. Cattley	703,909	July 8	1164	253	100	247
Fishing-rod line-guide	M. B. Eaton	704,525	July 15	2183	473	100	472
Flanger	J. H. Vanderslice	707,881	Aug. 26	3674	895 / 897	100	1920
Flanging-machine	W. J. Hagman	703,406	July 1	78	15	100	18
Flanging-press	C. H. Nichols	708,909	Sept. 9	1692	390	100	2341
Flash-light apparatus	A. Brebner	710,244	Sept. 30	4365	982	100	2942
Flashing apparatus. Revolving group-	F. Mackintosh	706,577	Aug. 12	1123	247	100	1358
Flashing lighthouse-lanterns. Electric switch for	A. Brebner	710,243	Sept. 30	4364	980 / 981	100	2942
Flashing lighthouse-lights, &c. Eclipsing-screen for revolving group-							
Flask: *See* Dental flask. Molding-flask.	E. Weidenbaker	709,509	Sept. 23	3059	681	100	2656
Flask	C. Phelps	709,925	Sept. 30	3746	844	100	2811
Flask support. Tilting-	W. Neuhs	706,283	July 22	3729	810 / 811	100	908
Flat-iron	H. Greenwood	703,609	July 1	604	134	100	119
Flat-iron handle attachment	J. D. Penn	706,776	Aug. 12	1510	335	100	1441
Flood-gate	A. Tretsven	710,769	Sept. 30	4227	953	100	2931
Floor clamp or jack	E. C. Goodrich	706,927	Aug. 12	1787	400	100	1499
Floor-key. Electrical	J. C. Daigneault	706,805	Aug. 12	1566	350 / 351	100	1454
Floor laying and nailing machine	G. W. and H. McNeely	705,601	July 29	4438	962	100	939
Floor-mat. Flexible metal	H. A. Fiske	708,335	Sept. 2	621	140	100	2108
Flow-arresting device	J. W. Nethery	707,712	Aug. 26	3269	736	100	1844
Flow-reducing device	B. D. Sanders	706,258	Aug. 5	493	105 / 106	100	1216
Flower support or holder	T. J. Hart	705,758	July 29	4715	1020	100	1013
Flue-cleaner	H. K. Swinscoe and E. J. McCarty	710,344	Sept. 30	4583	1023 / 1024	100	2978
Flue-scraper	J. Seither	707,022	Aug. 12	1950	437	100	1531
Flue-stop	E. Sette	706,861	Aug. 12	1667	374	100	1475
Fluid-compressor	W. H. Reynolds	710,212	Sept. 30	4310	969	100	2931
Fluid-meter	C. L. Bell and J. Halstead	710,397	Sept. 30	4629	1044	100	2997
Fluid-operated signal	H. H. Westinghouse	707,473	Aug. 19	2793	632	100	1725
Fluid-pressure brake	H. H. Westinghouse	707,474	Aug. 19	2795	632	100	1726
Fluid-pressure brake	H. J. Hedden	705,239	July 22	3643	799	100	788
Fluid-pressure brake system	R. W. Seyer and F. Pratt	707,651	Aug. 26	3172	714	100	1821
Fluid-pressure regulator	J. Hartness	708,410	July 1	88	16	100	19
Fluid-regulating device	W. J. Morton	706,891	July 29	4591	996	100	989
Fluids. Dispersing	E. Campbell	704,971	July 15	3064	658	100	654
Flume-gate	J. E. Keyt	705,933	July 29	5028	1096	100	1077
Flush. Trap-	J. M. Justen	708,890	Sept. 9	1662	381 / 382	100	2333
Flushing device. Closet-	A. M. Nelson	704,084	July 8	1329	249	100	278
Fly-screen attachment	E. Potter	705,959	July 29	5075	1106	100	1087
Fly-trap	J. T. Rice	704,875	July 8	1897	409	100	398
Flying-machine	C. L. Packer	709,506	Sept. 23	2947	657 / 658	100	2653
Fodder-loader	E. A. Gill	703,400	July 1	66	13	100	16
Fog-horn	B. B. McFadden	704,080	July 8	1324	288 / 289	100	277
Folding box	A. W. Beers	707,078	Aug. 19	2055	459 / 460	100	1570
Folding box	A. Vaught	708,943	Sept. 9	1744	403	100	2351
Folding box	F. Cunning	709,965	Sept. 30	3888	864	100	2830
Folding box or case	J. A. Hollem	706,057	Aug. 5	105	23	100	1139
Folding chair. Adjustable	F. Vogel	709,698	Sept. 23	3259	730	100	2697
Folding chair. Portable	B. J. Harrison	707,841	Aug. 26	3598	812	100	1904
Folding-machine	E. Collon	703,546	July 1	808	70	100	62
Folding rod	J. P. Johnson	708,976	Sept. 9	1826	420	100	2367
Folding table	E. P. Van Alstyne, Jr	706,868	Aug. 12	1583	377	100	1478
Folding table	G. E. Shorey	707,171	Aug. 19	2242	502	100	1610
Folding table	W. O. Nussbaumer	709,171	Sept. 16	2233	507	100	2460
Folio-holder	D. E. Hunter	709,221	Sept. 16	2328	527 / 528	100	2490
Food and making same. Stock-	S. L. Fraser	704,530	July 15	2191	475	100	475
Food. Cattle-	G. H. Hughes	707,113	Aug. 19	2132	------	100	1587
Food extracts. Obtaining	G. Eichelbaum	708,330	Sept. 2	615	------	100	2107
Food-guard	A. M. Stadelman	704,139	July 8	1464	313	100	307
Food products. Curing	C. B. Trescott	710,125	Sept. 30	4140	934	100	2893
Foot or head supporter	D. E. Morgan	707,860	Aug. 26	3631	818	100	1911
Foot-power device	G. P. Clark and G. H. Davis	709,435	Sept. 16	2760	621	100	2582
Foot-warmer. Vehicle	G. W. Dunham and J. W. Fox	707,908	Aug. 26	3725	835	100	1929
Forcing-frame or like sash or window	G. Knochenhauer	707,982	Aug. 26	3786	845	100	1939
Forging-press. Hydraulic	H. V. Loss	710,286	Sept. 30	4434	999 / 1000	100	2957
Fork: *See* Tobacco-fork.							
Forking, elevating, and conveying machine	A. P. Tatterson	709,248	Sept. 16	2388	540 / 541	100	2503
Formaldehyde. Solidifying	R. Groppler	705,637	July 29	4550	------	100	981
Formic aldehyde. Composition for the production of vapors of	J. J. A. Trillat	704,490	July 8	2104	------	100	442
Forming and pressing machine	W. H. Hayes	705,756	July 29	4718	1021	100	1013

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g	Official Gazette. Vol.	Official Gazette. Page.
Foundations. Building subaqueous	J. T. Ford	707,098	Aug. 19	2086	466	100	1579
Foundry pattern-clamp	E. J. Kiss	707,596	Aug. 26	3054	667	100	1776
Fountain-comb	J. R. Harrison	710,269	Sept. 30	4406	905	100	2551
Fracture apparatus	J. P. Gordon	708,340	Sept. 2	630	142	100	2109
Frame: *See* Door or window frame. Truck-frame. Vehicle-frame. Embroidery-frame. Window-frame. Spinning and twisting frame.							
Freezing. Protecting exposed filters or other confined liquid bodies from	L. K. Davis	705,740	July 29	4697	1016	100	1010
Friction-brake	H. A. House, Jr	707,222	Aug. 19	2355	598	100	1635
Friction-power	A. R. Moore	708,655	Sept. 9	1176	256	100	2231
Fruit brushing and cleaning machine	M. G. Swan and E. H. Richardson	709,562	Sept. 23	3044	678	100	2653
Fruit-drier	C. J. Kurtz	705,767	July 29	4737	1025	100	1017
Fruit for packing. Machine for facing	L. F. Graham	705,071	July 22	3269	706	100	710
Fruit-grader	W. C. Anderson	708,887	July 1	941	205 / 206	100	180
Fruit-grader	F. Stebler	709,618	Sept. 23	3180	697	100	2671
Fruit-jar	F. Wiese	705,182	July 22	3502	759	100	760
Fruit-knife	C. W. Prentiss	706,107	Aug. 5	195	40	100	115
Fruit. Means applicable for use in transporting	R. R. Blandy	706,537	July 29	4493	975	100	969
Fruit-picker	W. H. Rauch	705,141	July 22	3423	743	100	742
Fruit-picking device	I. Dinger	708,770	July 1	727	161	100	146
Fruit-quartering device	J. Goossen	706,174	Aug. 5	336	72	100	1195
Fruit-stemmer	J. A. North	707,154	Aug. 19	2307	494 / 495	100	1601
Fuel and preparing same. Artificial	B. M. Thomas	704,717	July 15	2502	----	100	539
Fuel. Apparatus for combustion of	C. Olsted	707,627	Aug. 26	3111	700 / 701	100	1808
Fuel. Apparatus for the combustion of finely-divided solid	J. W. Bailey	710,083	Sept. 30	3950	991	100	2854
Fuel. Artificial	J. T. Davis	705,216	July 22	3584	----	100	776
Fuel. Artificial	G. M. Dallas	706,533	Aug. 12	1052	----	100	1343
Fuel. Artificial	C. B. Harris	709,851	Sept. 23	3573	----	100	2763
Fuel compound	J. H. Ricker	707,722	Aug. 26	3810	----	100	1849
Fuel-feeding apparatus	W. G. Stones. (Reissue)	12,023	Aug. 19	2916	659 / 660	100	1751
Fuel. Manufacturing artificial	E. J. Hoffman	707,231	Aug. 19	2353	----	100	1634
Fuel-saver and smoke-consumer	C. W. Francisco	706,229	Aug. 5	440	98	100	1206
Fume-arrester	A. W. Gilliland	709,896	Sept. 30	3698	833	100	2799
Funnel	J. de St. Legier	706,465	Aug. 5	996	204	100	1305
Furnace: *See* Adjustable furnace. Annealing-furnace. Blast-furnace. Blast or other furnace. Boiler-furnace. Combination draft-furnace. Cupellation-furnace. Electric furnace. Electrical furnace. Gas-furnace. Garbage-furnace. Glass-furnace. Heating-furnace. Hot-air furnace. Hot-blast furnace. Melting-furnace. Muffle-furnace. Ore-roasting furnace. Perfect-combustion furnace. Regenerative furnace. Retort-furnace. Smelting-furnace. Smoke-preventing furnace. Zinc-furnace.							
Furnace	W. L. Ross	708,474	July 1	178	41, 42	100	88
Furnace	P. Corrigan	708,766	July 1	722	160	100	145
Furnace	C. Phillips	704,097	July 8	1354	295	100	283
Furnace	T. Murphy	705,276	July 22	3719	806	100	801
Furnace	E. O. Rickard	705,968	July 29	5084	1109	100	1088
Furnace	E. O. Rickard	706,498	Aug. 5	984	216 / 217	100	1315
Furnace	R. Halley	707,108	Aug. 19	2113	471 / 472	100	1592
Furnace	J. Reagan	707,157	Aug. 19	2212	495 / 496	100	1603
Furnace	J. Reagan	707,158	Aug. 19	2214	496	100	1603
Furnace	C. F. Smith	707,870	Aug. 26	3646	821	100	1913
Furnace	G. Westinghouse	708,107	Sept. 2	192	46	100	2021
Furnace	D. S. McDonald	709,107	Sept. 16	2108	483 / 484	100	2445
Furnace	H. Abbott	708,851	Sept. 9	1583	360 / 361	100	2318
Furnace air-feeding apparatus	J. H. McConnell	707,249	Aug. 19	2383	534	100	1640
Furnaces. Apparatus for increasing combustion in	G. M. Warner	707,923	Aug. 26	3875	870 / 871	100	1959
Furnaces. Apparatus for supplying fuel to	J. A. Cowan	706,532	Aug. 12	1049	231	100	1343
Furnaces. Automatic feeder for straw-burning	J. W. Cabot and S. W. Vaughen	710,247	Sept. 30	4372	988	100	2943
Furnace blast-regulator	L. L. Knox	708,719	Sept. 9	1305	298	100	2256
Furnace-door	W. H. Howard	705,246	July 22	3654	791	100	790
Furnace-feeding apparatus	H. L. Gantt	708,705	Sept. 9	1575	992	100	2251
Furnace for heating and melting iron, &c	T. V. Allis	704,286	July 8	1719	375	100	361
Furnace for progressive metal-heating	A. M. G. Sébillot	710,217	Sept. 30	4320	971	100	2933
Furnace for separating zinc from ores	E. Pollacsek	709,368	Sept. 16	2589	----	100	2546
Furnace-gases. Desulfurizing	A. G. Andrew	705,191	July 22	3516	768	100	763
Furnace-grate	J. Armstrong	705,382	July 22	3797	823	100	818
Furnace or forge	W. McClave	705,590	July 29	4454	951	100	956
Furnace-stoking mechanism	P. Meehan	704,356	July 15	2240	485	100	484
Furnace-top down-comer and explosion-pipe	W. R. Lee	704,199	July 8	1568	338	100	328
Furnaces. Apparatus for recovering minerals carried off in the fumes from smelting-Furnaces or the like. Burner for the removal of hardened masses in	H. A. E. Menne	705,418	July 22	4021	871	100	864

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g	Official Gazette. Vol.	Official Gazette. Page.
Furnaces. Reversing-valve for regenerative or similar	A. Fischer	707,572	Aug. 26	3014	678	100	1787
Furnaces. Steam and air feeding apparatus for boiler-	J. Marshall	708,732	July 1	661	146	100	122
Furnaces. Utilizing waste heat in connection with smelting-	R. Brown	708,018	Sept. 2	30	7	100	1987
Furnaces. Valve for heating-	W. F. Shick, R. J. Lehman, and I. J. Walker.	705,618	July 29	4466	988	100	964
Furniture-clamp	W. L. Tuell	706,705	Aug. 12	1353	301	100	1408
Furniture. Construction of metal	J. F. L. Uhl	705,498	July 22	4150	903	100	886
Furniture. Folding	W. Wenneis	707,289	Aug. 19	2466	553	100	1656
Furniture, &c. Leg or standard for	W. G. Davis	705,653	July 29	4520	981 / 982	100	975
Furniture spring-support	F. E. Ewles	708,776	July 1	736	163	100	148
Furs or skins. Machine for removing hard and stiff hairs from	G. Lafrique	706,904	Aug. 12	1849	414	100	1511
Fuse-box. Magazine	H. L. Hunt and W. E. Moon	706,088	Aug. 5	120	25	100	1142
Fuse-igniting tape	J. H. Garson	709,979	Sept. 30	3963	870	100	2835
Fuse safety device. Shell-	W. Ruegg	708,883	Sept. 9	1542	353	100	2300
Gage: *See* Boiler water-gage. Cigar-gage. Dental gage. Doweling-gage. Micrometer-gage. Speed-gage. Water-gage.							
Gage	G. Washington	706,505	Aug. 5	998	220	100	1319
Galley-lock	U. S. G. Peoples and C. F. Walther	704,918	July 15	2281	529	100	531
Galvanic battery	C. B. Schoenmehl	705,616	July 29	4465	968	100	964
Galvanic battery	E. L. Slocum	707,363	Aug. 19	2597	587	100	1684
Galvanic battery. Reversible	T. A. Edison	704,303	July 8	1743	331	100	366
Galvanic battery. Reversible	T. A. Edison	704,304	July 8	1744	----	100	366
Galvanic battery. Reversible	T. A. Edison	704,305	July 8	1748	381	100	367
Galvanic battery. Reversible	T. A. Edison	707,382	Aug. 19	2598	589	100	1669
Galvanizing-machine	R. Heathfield	705,186	July 22	3509	761	100	761
Galvanometer	A. Zeleny	706,982	Aug. 12	1875	420	100	1516
Galvanometer	C. L. R. E. Menges	708,608	Sept. 9	1092	245	100	2218
Gambrel	W. A. H. Zander	707,469	Aug. 19	2788	631	100	1734
Game	W. M. Wayts	704,164	July 8	1500	321	100	315
Game apparatus	M. R. Wright	706,658	Aug. 12	1277	281	100	1391
Game apparatus	W. R. Hock	706,873	Aug. 12	1692	379	100	1480
Game apparatus	J. S. Akerman	707,291	Aug. 19	2470	554	100	1656
Game apparatus	S. A. Akins	708,839	Sept. 9	1558	356	100	2312
Game apparatus	D. Smith	709,007	Sept. 16	1897	434	100	2400
Game apparatus	W. Gibb	709,144	Sept. 16	2174	498	100	2459
Game apparatus	C. E. Edgerly	709,622	Sept. 23	3164	706	100	2677
Game apparatus	H. A. Hannum	708,971	July 1	1109	239 / 240	100	220
Game-board	S. Schmid	705,776	July 29	4758	1029	100	1021
Game-board	F. E. Morrill	705,873	July 29	4923	1071	100	1056
Game-board	M. Schinkel	709,155	Sept. 16	2191	501	100	2463
Game-board	J. E. Johnston	709,534	Sept. 23	3105	705	100	2678
Game-board	H. L. Haskell	709,535	Sept. 23	3106	707	100	2678
Game-board	H. L. Haskell	709,661	Sept. 23	3212	717	100	2688
Game-board	A. Assorati	704,149	July 8	1476	316	100	310
Game-counter	E. T. Van Gieson	708,569	Sept. 9	1017	230	100	2198
Game indicator. Ball-	E. Manley	709,616	Sept. 23	3134	698	100	2672
Garbage, &c. Apparatus for the treatment of	R. Thorne	704,339	July 8	1367	404	100	394
Garbage-burner. Domestic	F. E. McGurrin	709,886	Sept. 23	3545	799	100	2757
Garbage-cooking apparatus	C. S. Wheelwright	709,946	Sept. 30	3786	854	100	2818
Garbage-furnace	R. L. Walker	708,711	July 1	619	139	100	122
Garbage or refuse can	E. C. Seaman	708,745	July 1	686	152	100	137
Garbage or refuse can	E. C. Seaman	709,963	Sept. 30	3909	871	100	2826
Garbage-receptacle	F. E. Holzhauer	705,718	July 29	4652	1008	100	1001
Garbage-receptacle and means for handling same	J. Thiele	709,384	Sept. 16	2605	598 / 599	100	2563
Garbage. Treating	S. E. Wilson	709,450	Sept. 16	2791	638	100	2580
Garbage-treating apparatus	E. M. Hartell	705,233	July 22	3633	787	100	780
Garden implement	W. P. C. Adams	708,751	July 1	695	154	100	130
Garment	H. S. Brewington	708,596	July 1	275	62	100	50
Garment-clasp	M. B. Hammond	704,587	July 15	2212	479	100	478
Garment-clasp	S. Katz	704,978	July 15	3066	659	100	555
Garment-clasp	B. G. Clark	706,799	Aug. 12	1557	348	100	1451
Garment-clasp	M. E. Buckley	709,200	Sept. 16	2295	521	100	2488
Garment. Combination nether	C. E. Kasselman	706,956	Aug. 12	1838	411	100	1509
Garment-fastener	W. L. Dingmoor	706,909	Aug. 12	1757	393	100	1491
Garment fastener and supporter	J. Jenkins	709,909	Sept. 30	3774	836	100	2804
Garment fastener or supporter	C. E. De Lancey	708,584	Sept. 9	1453	318	100	2159
Garment-fastening	N. Douglas	709,970	Sept. 30	3950	905	100	2832
Garment-holder	F. F. Crawford	706,495	Aug. 5	46	9	100	1127
Garment-stretcher	W. S. Hunkins	708,986	July 1	1011	230	100	202
Garment-supporter	J. Wilkinson	705,506	July 22	4185	910	100	895
Garment-supporter	F. Spiering	707,088	Aug. 12	1967	441	100	1585
Garment-supporter	B. L. Bargar	707,070	Aug. 19	2049	457	100	1569
Garment-supporter	S. C. Pearson	707,717	Aug. 26	3300	730	100	1847
Garment-supporter	W. G. Walton and D. W. Harner	707,736	Aug. 26	3340	748	100	1855
Garment-supporter	J. Sulzbacher	707,876	Aug. 26	3655	822	100	1915
Garment-supporter	H. C. Hine	708,963	Sept. 9	1795	413	100	2320
Garment-supporter	C. A. Deardorff	709,879	Sept. 30	3632	821	100	2768
Garment-supporter	A. A. Mudd	710,292	Sept. 30	4445	1002	100	2959
Garment-supporter	A. L. Matlack	705,690	July 29	4590	996	100	998
Garment-supporter and waist-adjuster	H. F. Stowell	705,476	July 22	4119	895	100	883
Garment-supporting button attachment. Separable	L. Roser, Jr	708,497	Sept. 2	897	208	100	2166
Garment-supporting device	C. A. Spurgin	706,464	Aug. 5	985	204	100	1304
Garment-supporting webbing	W. A. Graham	705,070	July 22	3261	705	100	710
Garment. Union	G. O. Cook	705,659	July 29	4517	981	100	974
Garment. Union	R. W. Schmelz	706,855	Aug. 12	1659	371	100	1474
Garter							

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Gas and air mixer	J. Seymour	704,762	July 15	2590	559	100	558
Gas and air mixer	S. Broichgans	708,208	Sept. 2	577	130	100	2098
Gas and air mixing machine	J. Seymour	704,763	July 15	2593	561	100	556
Gas and steam convertible engine	G. Dahlberg, J. Clicquennoi, and E. Uhlin. (Reissue.)	12,021	Aug. 19	2906	658	100	1749
Gas and steam convertible engine	G. Dahlberg, J. Clicquennoi, and E. Uhlin. (Reissue.)	12,024	Aug. 26	2894	875	100	1964
Gas and steam engine. Combined	W. Heckert	708,537	Sept 9	1147	259	100	2225
Gas. Apparatus for making carbonic-acid or other	V. W. Riesberg	704,272	July 8	1691	369	100	354
Gas. Apparatus for making oil	R. Dempster	708,901	July 1	975	212	100	195
Gas-burner	S. R. Treen	708,625	July 1	450	105	100	88
Gas-burner	J. Harris	704,835	July 15	2363	513	100	509
Gas-burner	A. M. Hewett	704,745	July 15	2566	553	100	551
Gas-burner	F. Harper	705,581	July 29	4301	959	100	949
Gas-burner	S. A. Politaky and J. Agust	705,862	July 29	4901	1066	100	1052
Gas-burner	A. Beler	706,633	Aug. 12	1221	271	100	1379
Gas-burner	J. G. Koegle	706,761	Aug. 12	1482	328	100	1436
Gas-burner	G. Lund	706,973	Aug. 12	1862	416	100	1513
Gas-burner	J. W. Piper	709,356	Sept. 16	2587	583	100	2546
Gas-burner	J. J. Graf	703,404	July 1	73	14	100	17
Gas burner. Acetylene	A. Murinick	705,950	July 29	5061	1102	100	1084
Gas-burner. Incandescent	E. W. Phelps	706,686	Aug. 12	1325	298	100	1408
Gas-burner. Incandescent	T. Gordon	708,222	Sept. 2	423	96	100	2067
Gas-burner. Incandescent	J. Buchanan	708,860	Sept. 9	1600	366	100	2222
Gas-burner. Incandescent	J. Buchanan	708,861	Sept. 9	1601	366	100	2222
Gas-burner. Incandescent	E. H. Kelly	706,831	Aug. 12	1613	362	100	1464
Gas-burner. Regenerative	S. H. Blodgett	705,315	July 22	3943	895	100	819
Gas-burner safety attachment	L. F. Ducker	705,329	July 22	3843	882	100	827
Gas-burners. Automatic cut-off for	E. B. and L. S. Cushman	703,695	July 1	509	133	100	119
Gas-engine	A. T. Brown	705,201	July 22	3534	766	100	767
Gas-engine	T. Doherty	706,167	Aug. 5	324	68, 69	100	1183
Gas-engine	W. A. Leonard	708,236	Sept. 2	442	101	100	2071
Gas-engine	G. Westinghouse	710,385	Sept. 30	4607	1039	100	2992
Gas-engine	B. W. Harris	707,774	Aug. 26	3455	778	100	1878
Gas-filter	M. J. Graham	706,928	Aug. 12	1787	400	100	1499
Gas-fixture valve	E. Luhmann	708,972	Aug. 12	1860	416	100	1513
Gas from carbonates in a continuous manner. Apparatus for the production of pure carbonic-acid	F. G. Hamer	705,077	July 22	3271	709	100	712
Gas-furnace	F. Bredel	706,504	July 15	2136	462	100	462
Gas-furnace. Retort	E. R. Cook	708,956	Sept. 9	1779	411	100	2357
Gas-generating apparatus. Acetylene	F. A. Feldkamp	705,570	July 29	4374	948 949	100	947
Gas-generating apparatus. Carbonic-acid	H. Strache	708,619	July 1	435	101	100	86
Gas-generating apparatus. Water	F. E. Caton and F. B. Warring	708,995	July 8	1161	258	100	246
Gas-generator	C. J. Luther	709,786	Sept. 23	3458	778	100	2738
Gas-generator	I. L. Harris	704,032	July 8	1227	264 265	100	259
Gas generator. Acetylene	A. Winch	704,226	July 8	1609	348	100	336
Gas generator. Acetylene	P. B. Perkins	704,664	July 15	2410	521	100	520
Gas generator. Acetylene	C. W. Söderberg	704,945	July 15	3002	643 644	100	644
Gas generator. Acetylene	F. L. Kincaid	704,967	July 15	3056	656 657	100	653
Gas generator. Acetylene	W. S. Hamm and J. A. Mosher	705,078	July 22	3278	709	100	712
Gas generator. Acetylene	J. A. Mosher	705,115	July 22	3358	728	100	729
Gas generator. Acetylene	D. J. Van Praag	705,166	July 22	3460	753	100	750
Gas generator. Acetylene	L. Montel	705,272	July 22	3711	804 805	100	799
Gas generator. Acetylene	A. and P. L. Davis	705,730	July 29	4698	1015 1016	100	1000
Gas generator. Acetylene	S. W. Ray	705,788	July 29	4771	1034	100	1025
Gas generator. Acetylene	H. L. Bugg	705,902	July 29	4970	1082	100	1056
Gas generator. Acetylene	A. Karg	706,057	Aug. 5	128	26	100	1143
Gas generator. Acetylene	A. C. Einstein	706,810	Aug. 12	1575	358	100	1455
Gas generator. Acetylene	D. W. Bishop	707,077	Aug. 19	2060	461	100	1571
Gas generator. Acetylene	D. W. Bishop	707,078	Aug. 19	2064	461	100	1572
Gas generator. Acetylene	D. W. Bishop	707,796	Aug. 26	3508	791	100	1868
Gas generator. Acetylene	S. L. Newlin and J. Mathisen	708,021	Sept. 2	33	8	100	1997
Gas generator. Acetylene	C. W. Caldwell	709,344	Sept. 16	2569	579	100	2542
Gas generator. Acetylene	C. W. Metcalf	709,470	Sept. 23	2851	640 641	100	2612
Gas generator. Acetylene	J. C. Charbeneau	12,041	Sept. 30	4645	1049 1050	100	3000
Gas generator. Acetylene	G. G. Smith. (Reissue)	710,159	Sept. 30	4208	948	100	2907
Gas generator. Acetylene	J. Ledru	709,004	Sept. 16	1887	433	100	2398
Gas generator. Chlorin	T. Edwards	708,883	Sept. 9	1645	378	100	2351
Gas-governor	D. E. Hodgens	710,248	Sept. 30	4574	993	100	2944
Gas-heater	J. W. Carter	709,495	Sept. 23	2912	649	100	2626
Gas-heating burner. Atmospheric	J. J. Lawler	705,111	July 22	3352	727	100	728
Gas-igniting device. Electric	J. A. Mosher	704,398	Sept. 2	718	161	100	2197
Gas-lighter. Electrical	J. G. Poppert	704,391	July 8	1913	415	100	403
Gas-lighting mechanism. Automatic	A. B. Shaw	708,076	Sept. 2	144	35	100	2011
Gas-main stopping or closing device	A. Postley	706,111	Aug. 5	201	42	100	1159
Gas. Making carbonic-acid	V. W. Riesberg	710,326	Sept. 30	4590	1018 1019	100	2975
Gas-manufacturing apparatus	H. M. Papst	707,788	Aug. 26	3472	789	100	1881
Gas. Manufacturing illuminating	C. W. Isbell	706,922	Aug. 12	1776	398	100	1497
Gas-meter. Prepayment	J. Geen	708,819	July 1	896	192	100	155
Gas, oil, and water separator	J. M. Powell	707,318	Aug. 19	2580	567	100	1668
Gas or other pipes. Pressure-reducer for	J. L. Geyer and R. A. Prime	703,758	July 1	698	154	100	139
Gas-pressure. Instrument for indicating	M. Arndt	704,527	July 15	2186	473 474	100	474
Gas-producer	W. J. Evans and F. Klepetko						

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Gas-producer	J. A. Herrick	705,840	July 29	4858	1055	100	1048
Gas-producer	J. A. Herrick	706,412	Aug. 5	827	180	100	1281
Gas-producer	J. A. Herrick	706,989	Aug. 12	1805	403	100	1508
Gas-producer	L. L. Merrifield	707,146	Aug. 19	2198	491 498	100	1599
Gas-producer and recuperative furnace. Combined	A. J. Maakrey	706,579	Aug. 12	1196	248 249	100	1359
Gas-producing apparatus	J. H. Miller, Jr	708,943	July 1	1046	227	100	908
Gas-purifying apparatus	H. A. Humphrey	709,773	Sept. 23	3431	772	100	2781
Gas-retort	C. W. Isbell	708,238	Aug. 5	455	97	100	1209
Gas-retorts. Means for charging	E. Drory	705,656	July 29	4328	982	100	975
Gas-service safety-valve	L. M. Osborne	705,125	July 22	3380	782	100	734
Gas-storage tank	J. A. Mosher	705,114	July 22	3357	727	100	739
Gas-tar residuum. Treating	J. T. Lowe	708,510	Sept. 2	921	209	100	2168
Gas traps. Apparatus for protecting seals of sewer-	J. P. Putnam	706,255	Aug. 5	488	104	100	1215
Gases. Apparatus for mixing	A. Molet	709,498	Sept. 23	2919	651	100	2698
Gases. Apparatus for washing	E. Theisen	704,593	July 15	2299	500	100	495
Gases to high-tension discharges. Apparatus for subjecting	C. S. Bradley and D. R. Lovejoy	709,808	Sept. 30	3614	817	100	2754
Gases. Treating	E. Theisen	709,527	Sept. 23	2998	667	100	2644
Gasolene-engine	E. T. McKaig	707,793	Aug. 26	3502	790	100	1886
Gasolene-regulator	C. J. Johnson	709,688	Sept. 23	3172	707	100	2679
Gate. *See* Automatic gate. Car guard-gate. Crossing-gate. End-gate. Farm-gate. Field-gate. Flood-gate. Flume-gate. Hinged gate. Lifting-gate. Race starting-gate. Railway-gate. Road-gate. Swinging gate. Water-gate.	W. A. Byerly	708,382	July 1	33	7	100	9
Gate	O. B. Jacobs	708,423	July 1	108	22	100	23
Gate	R. T. Van Valkenburg	704,602	July 15	2314	502	100	499
Gate	W. Fuller	705,395	July 22	3977	861	100	854
Gate	G. W. Simons	705,963	Aug. 5	510	109	100	1219
Gate	T. A. Hill	706,413	Aug. 5	828	180 181	100	1281
Gate	H. P. Egedal	707,218	Aug. 19	2231	521	100	1629
Gate	A. M. Lance	707,431	Aug. 19	2738	617	100	1712
Gate	W. H. Wright	707,956	Aug. 26	3200	720	100	1828
Gate	W. D. Ott and F. L. Preby l	708,915	Sept. 9	1702	392	100	2343
Gate	J. J. Hynding	709,153	Sept. 16	2188	501	100	2462
Gate	T. A. Hill	709,543	Sept. 23	3014	671	100	2647
Gate	J. Meyer	709,548	Sept. 23	3024	672	100	2649
Gate	I. L. Landis. (Reissue)	12,089	Sept. 30	4641	1048	100	2999
Gate	J. Clinton	710,250	Sept. 30	4377	984	100	2944
Gear. Driving	J. Nutry	708,579	Sept. 9	1086	234 235 1078	100	2302
Gear for traction-engines. Drive	D. B. Arnold	705,804	July 29	4957	1079	100	1063
Gear for varying speed and reversing. Driving	W. and G. F. Meischke-Smith	706,580	Aug. 12	1128	249	100	1359
Gear. Friction draft	G. P. Ritter	704,110	July 8	1894	300	100	293
Gear. Reversing	L. R. Jones	706,667	Aug. 12	1292	285	100	1395
Gear. Reversing	T. Holliday	706,752	Aug. 12	1465	323	100	1432
Gear-teeth. Machine for cutting helicoidal	L. F. A. Monneret	709,285	Sept. 16	2358	534 535 536	100	2497
Gear-tooth cutter	O. W. Plant	707,719	Aug. 26	3304	740	100	1847
Gear. Transmission	D. Fergusson	704,609	July 15	2471	533	100	532
Gear-tumbler	B. M. W. Hanson and F. W. Gordon	703,578	July 1	363	83	100	72
Gear. Variable-speed	H. F. Northrop	707,926	Aug. 26	3775	847	100	1940
Gear. Variable-speed and reversing	H. J. Westover	709,690	Sept. 23	3251	731	100	2698
Gear-wheel	G. S. Baker	707,672	Aug. 26	3214	721	100	1829
Gear-wheel. Two-speed	W. D. Wansbrough	709,381	Sept. 16	2660	596	100	2562
Gears. Quick-feed arrangement for	W. T. Emmes	707,589	Aug. 26	3006	676 677	100	1786
Gearing	L. Jones, Jr	703,593	July 1	381	88, 89	100	76
Gearing	C. H. Pelton	704,094	July 8	1347	293	100	281
Gearing	W. L. Voss	705,492	July 22	4157	904	100	869
Gearing	J. R. Carter and J. E. Hausfeld	708,315	Sept. 2	587	133	100	2101
Gearing	H. L. Wright	709,257	Sept. 16	2465	556	100	2519
Gearing. Compensating	E. Huber	705,568	July 29	4409	955 956	100	953
Gearing. Friction-wheel	G. Voigt	704,721	July 15	2508	549	100	540
Gearing. Frictional	W. D. Dalley	705,890	July 29	3987	869	100	858
Gearing. Frictional	G. W. Stinebring	705,714	July 29	4647	1006 1007	100	1000
Gearing. Multiplying	E. Benoit	706,794	Aug. 12	1548	347	100	1449
Gearing. Speed-changing friction	O. Marth	705,108	July 22	3347	726	100	727
Gearing. Variable-speed	L. T. Weiss	708,689	July 1	455	105	100	89
Gearing. Variable-speed	C. Stone	706,611	Aug. 12	1185	263	100	1371
Gem-cutting machine	G. Purper, J. Moser, and R. Boeklen	705,597	Aug. 12	1161	257 258	100	1366
Gem-setting	R. S. Bieber	708,579	Aug. 5	751	165	100	1267
Genealogical chain record	P. W. Gee	705,833	July 29	4848	1058	100	1041
Generator. *See* Ammonia-generator. Electric generator. Electrochemical generator. Gas-generator. Heat-generator. Oil-fuel generator. Pressure-generator. Steam-generator. Thermo-electric generator.							
Gib-and-key device	C. B. Post	709,510	Sept. 23	2954	659	100	2625

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Glass: See Opera-glass. Prism-glass.							
Glass-annealing apparatus. Plate	H. L. Dixon	707,884	Aug. 26	3585	809	100	1902
Glass articles. Apparatus for forming	J. A. Arnold	705,813	July 29	4818	1045 1046	100	1094
Glass articles. Apparatus for the manufacture of molded hollow	P. T. Sievert	704,488	July 8	2109	455	100	441
Glass articles. Making hollow	D. C. Ripley	709,796	Sept. 23	3477	783 91	100	2742
Glass-blowing machine	C. J. Koenig	708,599	July 1	392	92 93	100	78
Glass bodies. Producing hollow	P. T. Sievert	708,618	July 1	433	100 101	100	85
Glass-bottle-making machine	C. Leistner	704,055	July 8	1264	273 274	100	905
Glass by means of electricity. Manufacture of	J. Bronn	708,309	Sept. 2	580	131	100	2099
Glass. Composition for ruby	R. Zsigmondy	708,512	July 1	249	.....	100	50
Glass-finishing machine	L. T. Zimmerly	707,045	Aug. 12	1988	446	100	1539
Glass. Framing	J. Taluau and H. W. Scattergood	704,400	July 8	1928	417	100	406
Glass. Framing	J. Taluau	704,401	July 8	1931	418	100	407
Glass, &c. Framing	H. W. Scattergood	709,513	Sept. 23	2962	661	100	2657
Glass-furnace. Electric	A. Voelker	706,283	Aug. 5	567	122 123	100	1230
Glass grinding and polishing machine	W. Lahodny	709,020	Sept. 16	1930	443 444	100	2405
Glass-grinding machine	W. Lahodny	709,019	Sept. 16	1927	442 443	100	2405
Glass-ladle	E. N. Baldwin and I. M. Schellinger	708,113	Sept. 2	209	50	100	2025
Glass-making machine	H. Gollings	706,350	Aug. 12	1078	238	100	1349
Glass. Manufacture of window and plate	W. E. Heal	710,357	Sept. 30	4555	1028	100	2982
Glass-melting machine	J. C. Triance	709,727	Sept. 23	3324	748	100	2711
Glass panes. Strip for securing	J. Swannell	710,032	Sept. 30	3949	891	100	2853
Glass-plate-making machine	L. Appert	708,826	Sept. 2	606	187 188	100	2105
Glass-press	P. Ebeling	708,469	Sept. 2	843	192 193	100	2152
Glass-presses, &c. Stroke-regulating mechanism for	H. G. Sweeney	708,844	Sept. 9	1567	358	100	2314
Glass-rinsing device	D. C. Ripley	709,724	Sept. 23	3319	746	100	2710
Glass-shaping apparatus	C. Laval	709,386	Sept. 16	2557	575	100	2540
Glass-silvering trough	L. Houze	704,040	July 8	1240	267	100	961
Glass-tank	J. Q. Shaffer	706,863	Aug. 12	1675	375	100	1476
Glass tombstones, &c. Manufacturing	J. Taluau	704,399	July 8	1927	417	100	405
Glass window or similar object and making same. Stained-	H. Schaub	704,761	July 15	2588	559	100	555
Glassware. Apparatus for the manufacture of	D. C. Ripley	709,797	Sept. 23	3478	783 784	100	2742
Glassware. Apparatus for the manufacture of	F. R. Gillinder and K. Booth	704,790	July 15	2639	571	100	566
Glassware-finishing snap	H. Schaub	704,760	July 15	2587	559	100	555
Glassware. Manufacture of	R. M. Paxton	708,917	Sept. 9	1705	393 394	100	2343
Glassware. Plant for the manufacture of	J. H. Steffey	707,175	Aug. 19	2254	504	100	1613
Glazed structure	E. Leblanc	704,551	July 15	2232	488	100	482
Glove	M. E. Rollason	704,579	July 15	2277	494	100	491
Glove	S. M. Griffiths	704,961	July 15	3046	653 654	100	651
Glove	R. N. Carson	706,724	Aug. 12	1389	309 310	100	1416
Glove	J. Comrie	706,725	Aug. 12	1391	309 310	100	1417
Glove	J. C. Allen	707,069	Aug. 19	2048	457	100	1509
Glove	D. F. Morgan	708,160	Sept. 2	298	71	100	2043
Glove	R. N. Carson	709,595	Sept. 23	3102	691	100	2666
Glove	J. Gamble	705,915	July 29	5001	1088	100	1072
Glove. Boxing	W. F. Epperson	707,219	Aug. 19	2332	521	100	1520
Gluing-machine	H. B. Schmidt and O. T. Joslin	705,712	July 29	4642	1005	100	998
Glycerin-refining apparatus	F. Hofmann and J. Callsen	707,110	Aug. 19	2129	.....	100	1505
Glycolic menthyl ester	F. Blum	705,688	July 29	4494	.....	100	969
Glycosuria antidote and producing same	A. James	706,589	July 29	4410	956	100	953
Gold and silver from their solutions. Apparatus for precipitating	S. Trivick	708,965	Aug. 5	713	.....	100	1961
Gold and silver ores. Treatment of	D. C. Boley	709,598	Sept. 23	3097	690	100	2666
Gold or silver ores. Apparatus for treating pulverized	W. Pethybridge	709,038	Sept. 16	1968	.....	100	2413
Gold ores. Treating telluride	W. Pethybridge	709,037	Sept. 16	1967	.....	100	2413
Gold ores. Treatment of telluride	C. Ramos	704,372	July 8	1868	408	100	897
Gold-saving machine	B. H. Officer, J. W. Neill, J. H. Burfeind, and F. H. Officer.	705,698	July 29	4611	1000	100	993
Gold, silver, or other ores. Cyanid process of working	E. Kempshall	705,766	July 29	4735	1025	100	1017
Golf-ball	E. Kempshall	708,758	Aug. 12	1477	328	100	1455
Golf-ball	E. Kempshall	707,263	Aug. 19	2403	539	100	1544
Golf-ball	A. T. Saunders	708,896	July 1	970	.....	100	194
Golf-balls. Manufacture of	J. P. Cochrane	704,462	July 8	2047	444	100	431
Golf-balls. Manufacture of	E. Kempshall	708,575	Sept. 9	1082	233	100	2201
Golf-club	W. Mules	708,556	July 1	335	73	100	66
Gopher trap. Pocket-	J. J. Daniels	708,486	Sept. 2	872	198 199	100	2158
Governing and valve-operating mechanism for gas or vapor engines.	E. H. Korsmeyer	707,702	Aug. 26	3499	789	100	1886
Governor adjuster. Centrifugal	J. E. McIntosh and J. A. Seymour	709,059	Sept. 16	2008	457 458	100	2422
Governor. Engine	H. C. Strang	707,687	Aug. 26	3941	797	100	1934
Governor for fluid-compressors. Automatic	J. P. Fillingham	707,086	Aug. 12	1975	443 444	100	1536
Governor. Marine-engine	M. F. Volkmann	704,486	July 8	2098	455	100	441
Governor. Steam-engine	R. J. Patterson	709,795	Sept. 23	3473	782 783	100	2741
Governor. Steam-engine	R. J. Patterson	707,697	Aug. 26	3966	780	100	1940
Governor. Variable-speed	C. A. Huffmaster						

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Grab and scraper. Combined	W. A. H. Zander	708,009	Sept. 9	1068	246	100	2218
Grader. Road	J. H. Aldrich	708,977	July 8	1125	244	100	889
Grading and excavating machine	W. H. Morenus	709,921	Sept. 30	3738	842 843	100	2809
Grading machine. Electric road	J. W. Langfitt	706,671	Aug. 12	1302	287	100	1397
Grading machine. Road	R. E. Burke	706,382	Aug. 5	760	166 167	100	1266
Grain, &c. Apparatus for drying	M. König	705,849	July 29	4879	1060 1061	100	1048
Grain, &c. Apparatus for drying, cooling, or otherwise treating	G. H. Hess, Jr	707,328	Aug. 19	2529	569 570	100	1670
Grain. Apparatus for malting, drying, or otherwise treating	J. Sleeman	706,402	Aug. 5	929	202 203	100	1305
Grain-binder. Automatic	J. F. Appleby	708,002	Sept. 2	3	1, 2	100	1981
Grain-cleaner	H. Sommerfeld	705,154	July 22	3440	748	100	746
Grain-drill	O. A. Poirier	707,739	Aug. 26	3513	792 793	100	1889
Grain-drill	G. W. Compton	707,958	Aug. 26	3802	854	100	1946
Grain-drill	W. F. Hoyt	709,686	Sept. 23	3169	707	100	2679
Grain-drill	W. F. Hoyt and D. B. Saltsman	709,687	Sept. 23	3170	707	100	2679
Grain-drill	G. H. Burrill	709,741	Sept. 23	3370	756	100	2719
Grain-drill	G. G. Walton	705,497	July 22	4165	906	100	891
Grain-drill seeding attachment	W. F. Brown	705,030	July 22	3181	687	100	695
Grain-drill shoe	H. Funk	707,578	Aug. 26	3023	680	100	1789
Grain-drill shoe	L. J. Sanker and J. H. Sullivan	709,649	Sept. 23	3189	712	100	2668
Grain-drill tube	M. W. Heyenga	709,012	Sept. 16	1909	438 439	100	2402
Grain-elevating machine	W. M. McCammon and C. A. Lee	708,576	Sept. 9	1082	233	100	2201
Grain-elevator	H. C. Erbe	708,804	Sept. 9	1476	337 338	100	2296
Grain or hay deliverer	C. Otto	707,251	Aug. 19	2286	534	100	1541
Grain-separator	W. D. Dickson	708,208	Sept. 2	397	92	100	2092
Grain-spout	T. Birnbaum	705,686	July 29	4492	975	100	969
Gramophone turn or supporting plates. Driving mechanism for rotary	L. H. Chapman	703,764	July 1	717	159	100	144
Graphophone attachment	W. J. McDevitt	705,000	July 15	3135	677 678	100	668
Graphophones, graphophone-records, &c. Cabinet for	L. Lewin	709,415	Sept. 16	2725	611	100	2574
Graphoscope	A. Daily and R. Baker	709,750	Sept. 23	3386	759	100	2722
Grapple	G. F. Boltze	704,852	July 15	2767	597 598	100	598
Grappling device	J. Swanson	710,228	Sept. 30	4328	973	100	2984
Grass-cutting machine	J. B. Rhodes	708,737	Sept. 9	1393	304	100	2264
Grass-cutting shears	R. W. Hussey	708,556	Sept. 9	997	226	100	2195
Grass or grain cutting machine	T. J. Walton	705,865	July 1	898	198	100	180
Grate	G. Maag	707,855	Aug. 26	3625	817	100	1909
Grate	J. T. Vaughn	709,377	Sept. 16	2655	595	100	2560
Grate and grate-bar	W. McClave	707,790	Aug. 26	3490	786 787	100	1884
Grate-bar. Gas-burning	J. A. Abrams	709,951	Sept. 30	3793	856	100	2820
Grate-bar. Hollow	T. J. Pritchard	708,400	Sept. 2	723	162	100	2128
Grate. Roller	J. MacCormack	707,708	Aug. 26	3598	795	100	1844
Grate. Square shaking	F. W. Foster	706,546	Aug. 12	1072	236 237	100	1347
Grater	N. P. Lucas	706,837	Aug. 12	1623	365	100	1467
Grave-filler	U. H. Deering	707,508	Aug. 19	2845	604	100	1737
Grease. Extracting	D. Cameron	705,084	July 22	3188	688	100	696
Greenhouse construction	F. Van Assche	708,428	Sept. 2	768	172	100	2136
Greenhouse-window-operating mechanism	M. Prior	708,669	July 1	543	123	100	107
Grinding and polishing machine	C. Maldaner	705,593	July 29	4429	959	100	956
Grinding attachment for power-machines	E. W. Showalter	708,486	July 1	195	47	100	41
Grinding device	S. P. Hastings	704,324	July 8	1780	389 390	100	874
Grinding-machine	J. N. Lapointe	704,348	July 8	1839	399 400	100	906
Grinding-machine	J. Ettinger	705,226	July 22	3601	779 780	100	779
Grinding-machine	J. Bath	707,543	Aug. 26	2038	665 666	100	1772
Grinding-machine stop-motion. Cutlery	A. Gould	708,136	Sept. 2	255	61	100	2085
Grinding machine. Twist-drill	C. A. Chandler	707,549	Aug. 26	2268	660	100	1777
Grinding-mill	H. G. Johnson	704,195	July 8	1561	336 337	100	828
Grinding-mill. Centrifugal	J. H. Pendleton	706,102	Aug. 5	184	59	100	1154
Grinding or crushing head or roll	V. W. Mason, Jr.	709,642	Sept. 23	3177	709	100	2680
Grinding, polishing, or buffing machine	C. F. Church	708,127	Sept. 2	237	56	100	2083
Grindstone tool-guide	S. C. Schofield	709,177	Sept. 16	2245	510	100	2472
Grindstone tool holder and guide	S. C. Schofield	709,178	Sept. 16	2246	510 511	100	2472
Grip-actuating mechanism	S. S. Webber	706,369	Aug. 5	727	158	100	1263
Grit-mill	C. B. English and J. W. Thompson	708,645	Aug. 12	1947	476	100	1396
Grocer's bin	A. H. Miller and F. A. England	708,822	Sept. 9	1523	349	100	2304
Grooving assembled stock. Machine for	M. B. Tidey	705,483	July 22	4183	899 900	100	886
Grooving machine. Lumber	E. Pollard	708,074	Sept. 2	141	34, 35	100	2010
Grooving-tool. Rotary	A. R. Meister	705,868	July 22	3705	808	100	798
Guide. Adjustable	E. B. Stimpson	705,749	July 1	698	153	100	138
Gun. Automatic rapid-fire	V. P. De Knight	709,880	Sept. 30	3623	821 822 823	100	2788
Gun. Automatic rapid-fire	V. P. De Knight	709,881	Sept. 30	3646	824 825	100	2790
Gun. Automatic rapid-fire	V. P. De Knight	709,883	Sept. 30	3668	826 827 828	100	2794
Gun-barrel	C. J. Hamilton	704,962	July 15	3047	654	100	651
Gun. Cane	F. H. Jury	704,646	July 15	2382	516	100	513
Gun-carriage	K. Deinlein	708,900	July 1	978	212	100	195

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Gun-carriage	O. Behnke	707,376	Aug. 19	2621	590, 591	100	1689
Gun-carriage	A. T. Dawson and G. T. Buckham	707,398	Aug. 19	2569	602, 608	100	1699
Gun-carriage	A. T. Dawson and G. T. Buckham	707,399	Aug. 19	2671	603, 604	100	1700
Gun-carriage	O. Lauber	708,233	Sept. 2	441	100	100	3071
Gun-carriage	O. Lauber and F. Stock	707,423	Aug. 19	2730	617, 618	100	1712
Gun-carriages. Combined axle-seat and shield for	A. T. Dawson and G. T. Buckham	708,871	Sept. 9	1023	572	100	2327
Gun cartridge-extractor	G. H. Garrison	705,396	July 22	3979	882	100	854
Gun-cleaner	G. H. Garrison	707,913	Aug. 26	3734	837	100	1931
Gun-cleaner	E. A. Pugh	709,557	Sept. 23	3036	677	100	2552
Gun-cleaner	A. Vickers	708,850	July 1	892	196	100	179
Gun-feeding mechanism. Automatic	V. C. Tasker	710,194	Sept. 30	4137	983, 984	100	2892
Gun firing mechanism	E. M. Capps	709,301	Sept. 16	2490	560, 561, 562	100	2535
Gun. Machine	J. M. Browning	710,094	Sept. 30	4074	919	100	2879
Gun. Magazine	V. P. De Knight	709,882	Sept. 30	3659	825, 826, 827	100	2792
Gun. Rapid-fire	W. H. Pease	707,000	Aug. 12	1905	427	100	1522
Gun. Spring	J. P. Holland	708,532	Sept. 9	992	294	100	2198
Gun. Submarine or other	A. P. Collins	706,390	Aug. 5	785	170, 171	100	1273
Guns. Range-finder attachment for	C. P. E. Schneider and J. B. G. A. Canet.	706,345	Aug. 5	685	148, 149	100	1254
Guns with independent line of sight. Apparatus for sighting	A. Combanaire and J. De la Fresnaye.	704,677	July 15	9433	585	100	524
Gutta-percha. Purifying	D. G. Mattsson	706,206	July 22	3708	803	100	706
Gymnastic apparatus	P. Ponthus and L. Therrode	705,782	July 29	4023	1009	100	995
Gyroscope for obtaining artificial horizons. Collimator	J. A. Klarson	709,989	Sept. 30	3878	874	100	2888
Hair-crimper	W. P. Dun Lany	706,086	Aug. 5	66	14	100	1131
Hair-fastener	N. O. Hassum	703,412	July 1	98	18	100	90
Hair-pin	N. Harrison	708,959	Sept. 9	1795	412	100	2359
Hair-pin	L. D. Howard	709,355	Sept. 16	2402	544	100	2505
Hair-pin	W. S. Bechtold	709,950	Sept. 30	3792	856	100	2860
Hame and trace connector	G. B. Withers	706,912	Aug. 12	1763	394	100	1494
Hame-fastener	N. P. Erickson	707,497	Aug. 19	2888	641, 642	100	1735
Hame-fastener	E. G. Bennett	709,784	Sept. 23	3453	777	100	2737
Hame-hook	G. F. Lindsay	704,006	July 8	1176	256	100	349
Hammer	J. Dempsey	709,377	Sept. 23	3075	684	100	2660
Hammer. Drop	L. D. Howard	708,790	July 1	771	169	100	154
Hammer. Glazier's	D. M. Humiston	704,467	July 8	2055	445	100	432
Hammer. Magazine nailing	G. I. Smith	707,850	Aug. 19	2574	582	100	1690
Hammer. Pneumatic	C. K. Pickles	707,515	Aug. 19	2808	650, 651	100	1742
Hammer. Pneumatic	H. J. Kimman	707,920	Aug. 26	3744	840	100	1933
Hammer. Pneumatic	C. H. Haeseler	707,946	Aug. 19	2373	581, 582, 583	100	1638
Hammer. Pneumatic power	H. F. Massey	708,737	July 1	668	148	100	134
Hammer. Power	J. B. McLane	706,151	Aug. 5	289	60, 61	100	1176
Hammer. Power	W. Bauermeister	709,780	Sept. 23	3445	775	100	2735
Hammer. Power	C. H. Krehbiel	709,820	Sept. 23	3528	794	100	2752
Hammer. Power	J. H. Jackson	710,358	Sept. 30	4559	1028	100	2963
Hammer. Power	T. Holmstrom	709,067	Sept. 16	2022	461	100	2425
Hammer. Valveless	D. S. Waugh	705,045	July 22	3209	698	100	700
Hamper	G. M. Davidson	703,594	July 1	393	89	100	79
Hand-motor	P. J. Kamper	706,342	Aug. 5	678	147	100	1253
Hand-trap	J. C. Porterfield	705,196	July 22	3523	764	100	764
Handkerchief-holder	N. E. P. Bergmann						
Handle: *See* D-handle, Detachable handle, File-handle, Sad-iron handle, Tool-handle, Wrench-handle.	L. S. Kallajian	707,514	Aug. 19	2866	650	100	1741
Handle-bar support	W. A. Suttle	705,973	July 29	5100	1111	100	1092
Handles to tools. Coupling for connecting	F. C. Rockwell	709,114	Sept. 16	2121	486	100	2448
Handwriting-developer							
Hanger: *See* Adjustable hanger, Cable-hanger, Clothes-hanger, Crank-hanger, Door-hanger, Eaves-trough hanger, Insulating-hanger, Lamp-hanger, Paper-hanger, Pipe-hanger, Shade-hanger, Suit-hanger, Tobacco-hanger, Trousers-hanger, Window-screen hanger.	H. T. Hallowell	710,191	Sept. 30	4954	961, 962	100	2919
Hanger	J. J. Wood	708,870	Aug. 12	1695	378	100	1479
Hanger for transformers or the like	A. S. Alexander and A. Vischer	708,782	July 1	697	154	100	130
Harmonica attachment. Mouth	A. L. Hawkins	708,789	July 1	770	168	100	154
Harness	N. Herbrand	707,588	Aug. 26	3043	684	100	1794
Harness attachment	J. T. Surbaugh	708,676	Sept. 9	1218	277	100	2238
Harness attachment	H. D. McKinney	708,906	Sept. 9	1699	389	100	2340
Harness checking device	M. McNalley	708,808	July 1	798	175	100	160
Harness vehicle-fastening	K. Weigel	707,041	Aug. 12	1981	444, 445	100	1538
Harp	C. Shabley	704,587	July 15	2290	497	100	494
Harrow	E. F. May	704,897	July 15	2849	617	100	610
Harrow	M. E. Johnson	705,951	Aug. 12	1823	408, 409	100	1505
Harrow	E. R. Butts	709,256	Sept. 16	2408	544	100	2505

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Harrow draw-bar	A. O. Hoepner	709,769	Sept. 23	3424	769	100	2720
Harrow. Folding	A. T. Upton	709,589	Sept. 23	3060	688	100	2663
Harrow. Riding	L. P. Blood	704,500	July 15	2128	460, 461	100	461
Harrow. Rotary wheel	E. Brucker	705,557	July 29	4351	941	100	941
Harrow. Sulky	P. B. Christensen	707,903	Aug. 26	3715	833	100	1927
Harrow sulky attachment	H. T. Faure	706,040	Aug. 5	76	16	100	1132
Harvester	W. S. Washburn	706,997	Aug. 5	734	158	100	1263
Harvester	R. W. Hussey	708,557	Sept. 9	999	226	100	2195
Harvester and shocker. Combined cornstalk	H. Peckman	706,598	Aug. 12	1154	255, 256	100	1365
Harvester and shocker. Corn	G. G. Kimmell	704,839	July 15	2743	593, 594	100	587
Harvester. Beet	H. G. Hotchkiss	706,416	Aug. 5	838	183	100	1283
Harvester. Beet	W. Gary	707,097	Aug. 19	2100	469	100	1579
Harvester. Beet	J. J. Rookus	710,075	Sept. 30	4030	909	100	2970
Harvester-binder	J. A. Cowan	708,320	Sept. 2	595	135	100	2102
Harvester bundle-carrier. Automatic	W. Martens	708,776	Sept. 9	1408	323	100	2280
Harvester. Corn	F. R. Evers	703,396	July 1	60	11	100	14
Harvester. Corn	H. R., A. W., and G. S. Spaht	704,947	July 15	3005	644, 645	100	644
Harvester. Corn	J. E. Wood	706,142	Aug. 5	266	55, 56, 57	100	1179
Harvester. Corn	E. D. Wallis	706,614	Aug. 12	1192	264, 265	100	1372
Harvester. Corn	J. Strand	709,424	Sept. 16	2788	615, 616	100	2577
Harvester cutter. Corn	A. N. Hadley	705,928	July 29	5010	1091	100	1074
Harvester-divider	J. Macphail	704,063	July 8	1985	279	100	370
Harvester. Flax	D. L. Wellman	708,848	Sept. 9	1376	360	100	2316
Harvester-frame	C. S. Hodge	708,708	July 1	608	135	100	120
Harvester. Grain	H. P. Finley	707,896	Aug. 26	3587	810	100	1908
Harvester grain-divider	J. F. Steward	708,497	July 1	214	50	100	65
Harvester. Potato	D. T. Culbertson	704,519	July 15	2171	470	100	470
Harvester. Sugar-beet	R. M. Fraser	705,747	July 29	4707	1018, 1019	100	1011
Harvesting apparatus. Peat	A. Dobson	706,535	Aug. 12	1055	232	100	1344
Harvesting apparatus. Potato	E. Massey	706,961	Aug. 12	1873	419, 420	100	1516
Harvesting-binders. Grain-packer for	D. H. Thurston and J. F. Holden	706,362	Aug. 5	710	154	100	1260
Harvesting-machine	B. F. Rinker	705,298	July 22	3759	816	100	810
Harvesting-machine knotting device	A. Castelin	708,316	Sept. 2	598	133, 134	100	2101
Harvesting-machines. Finger-bar for	J. F. Steward	707,460	Aug. 19	2771	628	100	1720
Hasp-fastener	A. L. Weston	704,413	July 8	1949	422	100	410
Hat	A. L. Delion	708,872	Sept. 9	1624	373	100	2327
Hat attachment	A. Olson	708,913	Sept. 9	1690	392	100	2342
Hat-box	J. M. Bird	704,481	July 8	1976	430	100	415
Hat-brim stretcher	E. J. Mellen	709,643	Sept. 23	3179	709, 710	100	2681
Hat-brims. Machine for trimming curled	F. C. Craw	707,392	Aug. 19	2652	599	100	1696
Hat conformator, stretcher, &c. Combination	S. Mund	708,442	July 1	135	31	100	29
Hat-fastener	M. E. Waples	708,507	July 1	229	54	100	47
Hat-forming machine	J. Marshall	705,107	July 22	3346	726	100	727
Hat-hook	E. W. Higgins	704,827	July 15	2727	589	100	583
Hat-hook	J. Rodrigues	708,666	Sept. 9	1300	274	100	2226
Hat-pin	J. Wiesen	710,349	Sept. 30	4544	1025	100	2960
Hat-pin retainer	E. Krancher	708,795	July 1	778	171	100	156
Hat-stiffening machine	N. Leveque	708,054	Sept. 2	106	25	100	2023
Hat sweat-band	C. L. Johnson	707,784	Aug. 26	3473	782	100	1881
Hat. Ventilated	J. Wolbrecht	707,486	Aug. 19	2816	636	100	1730
Hats. Making	J. A. Byers	708,388	July 1	97	7	100	10
Hatter's hair-strainer	M. R. Foster, Jr	709,670	Sept. 23	3528	720	100	2691
Hatch-fastener	A. P. Rankin and A. C. Dierickx	709,928	Sept. 30	3752	847	100	2811
Hatchet shingle-gage	M. M. Kellogg	704,897	July 15	2740	593	100	567
Hay and stock rack	C. Scafe	705,448	July 22	4057	883	100	874
Hay derrick or stacker	W. G. Danielsen	708,685	Sept. 9	1116	251	100	2279
Hay-loading derrick. Portable	E. Brust	708,199	Sept. 2	384	89	100	2060
Hay-press door-closer	P. H. McVicar	710,166	Sept. 30	4295	952, 953	100	2910
Hay-rack	P. Plotnik	703,402	July 1	162	37	100	84
Hay-rack	J. Siemsen	708,928	Sept. 9	1781	397, 398	100	2347
Hay rake and loader	E. D. Doney	709,756	Sept. 23	3393	762	100	2723
Hay-rake. Sulky	J. J. Thompson	703,624	July 1	447	103	100	88
Head-covering	A. Boullly	707,956	Aug. 26	3709	853	100	1945
Head or search light	H. H. Taylor	707,982	Aug. 26	3853	865, 866	100	1955
Header-platforms. Mechanism for changing the elevation of	H. Green	704,632	July 15	2358	512, 513	100	508
Hearse	D. Johnston	704,340	July 8	1890	394	100	385
Heat bath. Radiant	G. Brueck	709,696	Sept. 23	3274	733	100	2701
Heat-distributing system	W. H. Pearce	705,287	July 22	3736	812	100	805
Heat-generator	G. S. Chase	708,540	July 1	398	87	100	59
Heater: *See* Electric heater, Feed-water heater, Gas-heater, Hot-air heater, Hot air and water or steam heater, Hydrocarbon-heater, Oil-heater, Sectional heater, Solar heater, Steam-heater, Tire-heater, Water-heater.	A. H. Humphrey	704,043	July 8	1944	398, 399	100	398
Heater	W. E. Vanstone	704,998	July 15	3097	667, 668	100	660

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Heater	W. L. Warner	709,947	Sept. 30	3787	855	100	2819
Heater mounting. Electric-	E. E. Gold	708,096	Sept. 2	78	18	100	1997
Heater or boiler	N. B. Wales	703,695	July 1	578	129	100	114
Heater, radiator, or stove	T. P. Keenan	707,970	Aug. 26	3833	861 / 862	100	1951
Heating and ventilating apparatus	J. Kallgren	706,984	Aug. 12	1882	410	100	1508
Heating and ventilating system	J. O. Randall	703,827	July 1	835	184	100	167
Heating apparatus	J. A. Kloeb	705,094	July 22	3313	730	100	720
Heating apparatus	F. Burger and H. M. Williams	706,796	Aug. 12	1551	347	100	1450
Heating apparatus	I. D. Smead	707,364	Aug. 19	2598	567	100	1684
Heating apparatus	E. Gerrard	707,691	Aug. 26	3258	729	100	1898
Heating apparatus	J. R. Quain	703,970	July 1	1107	239	100	219
Heating apparatus. Electrical	E. O. Haskins	707,229	Aug. 19	2350	527	100	1634
Heating-boiler. Sectional	F. H. Daniels	706,032	Aug. 5	56	12	100	1129
Heating-furnace	H. A. Fraser	708,217	Sept. 2	413	95	100	2066
Heating furnace. Water-	H. Vanderborght	704,090	July 15	2311	502	100	498
Heating liquids. Apparatus for rapidly	R. Commichau	709,875	Sept. 30	3626	819	100	2787
Heating or cooling pipe	J. Ebersole	704,009	July 8	1178	257	100	250
Heating system. Hot-water	H. A. R. Dietrich	704,623	July 15	2344	509	100	505
Heating system. Steam-	W. E. Roys	705,969	July 29	5093	1110	100	1091
Heating system. Steam-	J. R. Wade	708,101	Sept. 2	185	44	100	2020
Heating system. Vacuum steam-	T. J. Fuyat	704,455	July 8	2081	440	100	428
Heddle-frame	E. Stratton and F. A. Cole	710,343	Sept. 30	4532	1023	100	2978
Heel and edge trimming machine guard	W. S. Estey	708,033	Sept. 2	74	17	100	1997
Heel. Detachable cushion-	J. G. Buzzell	703,991	July 8	1155	251	100	245
Heel-front-abrading machine. Shoe-	H. Heilweg	703,581	July 1	366	84	100	72
Heel. Metallic shoe-	B. F. Mayo	707,144	Aug. 19	2187	490	100	1598
Heel-nailing machine	E. A. Lougee	707,143	Aug. 19	2185	490	100	1597
Heel-nailing machines. Means for detaining or releasing top lifts in	H. Y. B. Duff	707,559	Aug. 26	2978	672	100	1780
Hide-securing apparatus	F. J. Perkins and F. A. Parkhurst	704,095	July 8	1349	293 / 294	100	282
Hides or skins. Machine for treating	G. A. Learned	706,835	Aug. 12	1621	364	100	1466
High chair. Combination	C. H. McCauley	704,077	July 8	1319	288	100	276
Hinge	W. H. Thorp	704,982	July 15	3087	665	100	658
Hinge	C. H. Foster	708,214	Sept. 2	407	94	100	2065
Hinge	A. H. Hesterhagen	708,707	Sept. 9	1396	319	100	2278
Hinge	P. Fullam	710,051	Sept. 30	3983	891	100	2960
Hinge. Gate-	J. J. H. Sturmey	703,499	July 1	216	51	100	45
Hinge-joint	F. S. Brooke	707,547	Aug. 26	2952	668	100	1776
Hinge-joint for seating	H. J. Valentine	709,618	Sept. 23	3139	699	100	2573
Hinge-knob	D. S. Stimson and A. Stevenson	706,590	July 15	2293	498	100	494
Hinge. Pinless	L. D. Petre	708,163	Sept. 2	302	72	100	2044
Hinge. Seat-	E. Mathis	708,896	Sept. 9	1672	385	100	2336
Hinge. Spring	T. H. Penty and W. L. Bullard	704,487	July 8	2100	455	100	441
Hinge. Spring butt-	J. Holy	704,541	July 15	2216	480	100	479
Hinge. Window-sash	B. Wolverton	708,877	July 1	927	202	100	186
Hinged gate	P. K. Young	705,810	July 29	4810	1044	100	1033
Hitcher. Horse-	A. H. Debord	709,473	Sept. 23	2857	642	100	2613
Hitching device	L. H. Abbee	705,629	July 29	4493	972	100	967
Hitching device. Safety	A. Zierleyn	704,730	July 15	2528	546	100	544
Hitching-weight	J. Seng	710,218	Sept. 30	4321	971	100	2953
Hobby-horse	F. C. Dey	706,305	Aug. 5	609	132 / 133	100	1286
Hod elevator or hoist	S. Harper	709,903	Sept. 30	3706	835	100	2802
Hoe. Asphalt-	J. McClean and L. E. Phipps	709,997	Sept. 30	3890	877 / 878	100	2841
Hog-belly-rolling machine	E. B. Ridgway	707,015	Aug. 12	1934	433	100	1528
Hoist, &c. Fluid-pressure-actuated	A. E. Maccoun	704,264	July 8	1675	365	100	351
Hoists or elevators. Controlling system for electric	G. W. Menefee	709,547	Sept. 23	3022	672	100	2649
Hoister and conveyer	W. F. Pillmore and D. Anderegg	706,105	Aug. 5	189	40	100	1155
Hoisting and conveying apparatus. Driving mechanism for	W. H. Hatfield	709,905	Sept. 30	3708	836	100	2802
Hoisting and transporting device	E. H. Watlington	707,660	Aug. 26	3199	718	100	1826
Hoisting apparatus	C. W. Hunt	708,718	Sept. 9	1293	294	100	2255
Hoisting apparatus	A. Wirsing	705,806	July 29	4808	1042	100	1032
Hoisting-bucket carrier	A. Wirsing	707,484	Aug. 19	2813	636	100	1750
Hoisting-bucket mechanism	E. Stowell	704,222	July 8	1602	347	100	335
Hoisting device	P. Jablonowsky	709,222	Sept. 16	2220	528	100	2490
Hoisting device	A. Lambert	707,851	Aug. 26	3617	816	100	1908
Hoisting-engines. Derrick-swinging attachment for	S. Cowan	709,572	Sept. 23	3063	692	100	2657
Hoisting-hook	H. B. Gray	705,526	July 22	4293	922	100	911
Hoisting-hook for ore-buckets, &c. Safety	L. T. Pyott	705,256	Aug. 5	491	105	100	1216
Hoisting-machine	G. H. Reynolds	704,271	July 8	1687	367 / 368 / 369	100	354
Hoisting-machine control device	C. W. Carman	706,019	Aug. 5	95	6	100	1121
Hoisting mechanism	H. P. Jones	707,234	Aug. 19	2356	528	100	1635
Hoister	W. L. Burner	707,384	Aug. 19	2637	595	100	1698
Hominy, meal, and grits drier	T. Ryan	705,615	July 29	4462	967	100	964
Hoof-pad. Yielding	W. S. Casterlin	707,822	Aug. 26	3554	803	100	1897
Hoof-trimmer							
Hook: *See* Barrel-hook. Chatelaine-hook. Checkrein-hook. Clothes-hook. Duplex hook. Fish-trap hook. Hame-hook. Hat-hook. Hoisting-hook. Lacing-hook. Pail-hook. Releasing-hook. Springless hook. Suspension-hook. Type-writer-cover hook. Whiffletree-hook.							
Hook and eye	M. E. Campany	704,512	July 15	2158	467	100	468
Hook and eye	L. A. Sutherland	705,159	July 22	3481	751	100	748
Hook and eye	C. E. Devine	706,304	Aug. 5	608	129	100	1238
Hook and eye	W. Fleischer	708,084	Sept. 2	75	17	100	1997
Hook and eye	N. D. Garis	708,542	Sept. 9	977	221	100	2190
Hook and eye	J. R. Hard	709,902	Sept. 30	3705	835	100	2802

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Hoop: *See* Cheese-hoop. Rolling-hoop.							
Hoop-iron. Supporting device for lengths of	J. McQuiston	703,449	July 1	145	32	100	21
Hoop-lug	P. C. Jura, Jr.	708,283	Sept. 2	430	100	100	2071
Hoop lug. Tank-	A. J. Behrens	704,773	July 15	2610	565	100	560
Hoop-making machine	J. C. Perry	705,130	July 22	3388	784 / 785 / 786 / 787	100	735
Hoops. Clamp for tank or like	J. Weigel	706,137	Aug. 5	256	53	100	1171
Hopple. Horse-	W. L. Morrissey	708,053	Sept. 2	118	28	100	2006
Hopple or pastern-halter	H. A. Bostwick	705,556	July 29	4350	941	100	941
Horizontal positions. Means for keeping moving objects in	N. Ach	705,731	July 29	4674	1012	100	1004
Horn-stand	F. C. Hassett	706,176	Aug. 5	340	73	100	1186
Horse-detacher	E. D. Irwin	703,587	July 1	874	86	100	74
Horse-holding device	M. Lopisich	704,001	July 8	1283	277 / 278	100	270
Horse-overshoe	F. Schneider	708,668	Sept. 9	1302	274	100	2236
Horse-overshoe	J. Bartlett	708,963	Sept. 16	1845	425	100	2389
Horse-overshoe	R. M. Sebree	707,166	Aug. 19	2228	500	100	1605
Horse-protector	A. Graf	710,267	Sept. 30	4403	992	100	2951
Horses. Pad for treating shoe-boils on	R. B. Musgrave	708,902	Sept. 9	1684	387 / 388	100	2339
Horseshoe	F. N. Cline	704,175	July 8	1592	326 / 327	100	320
Horseshoe	J. Rice	705,144	July 22	3428	744	100	743
Horseshoe	J. W. Fisher	706,543	Aug. 12	1067	235	100	1546
Horseshoe	F. Sheesley	707,454	Aug. 19	2763	626	100	1719
Horseshoe	C. A. Judsen	707,594	Aug. 26	3050	687	100	1795
Horseshoe	E. D. Bangs	708,982	Sept. 16	1844	424	100	2389
Horseshoe	A. F. Schofield	706,205	Aug. 5	303	64	100	1197
Horseshoe. Calk-equipped	P. J. Coates	705,008	July 29	4382	1061	100	1068
Horseshoe. Cushioned	M. J. Kelly	704,049	July 8	1258	270 / 271	100	268
Horseshoe-machine	F. W. Wood and M. R. MacPherson	708,007	Sept. 9	1092	245	100	2218
Horseshoe-pad	B. P. Marcley	706,768	Aug. 12	1496	332	100	1438
Horseshoe. Soft-tread	I. G. Howell	707,417	Aug. 19	2704	612	100	1707
Horseshoes. Ice-sandal for flat	G. H. Frazier, J. W. Wagner, and H. G. Isenberg	706,815	Aug. 12	1581	355	100	1457
Hose-bridge	E. E. Gold	704,792	July 15	2642	571	100	567
Hose-coupling	M. C. Goodwin	709,216	Sept. 16	2320	526	100	2489
Hose-coupling. Electric	W. F. Bowers	708,117	Sept. 2	215	51	100	2026
Hose-coupling retainer	A. S. Cummins and A. J. Bland	705,210	July 22	3371	773	100	774
Hose-coupling. Train-pipe	B. L. Stowe	706,466	Aug. 5	938	205	100	1205
Hose. Hydraulic or fire	S. Hydén and K. A. Simonsson	704,045	July 8	1247	290	100	269
Hose or like pipes. Apparatus for cleaning the interior of	H. A. F. Petersen	706,847	Aug. 12	1646	368	100	1471
Hose or pipe coupling	G. E. Le Mond	706,966	Aug. 12	1856	415	100	1512
Hose-reel. Swiveled	M. H. Eiseman	705,519	July 22	4215	916	100	901
Hose-supporter	M. B. Hammond	708,087	Sept. 2	80	18	100	1998
Hose-supporter	M. B. Hammond	704,249	July 8	1642	356	100	343
Hose-supporter hook	M. B. Hammond	709,606	Sept. 23	3119	695	100	2669
Hose-supporter. Lady's	L. A. Negraval	708,378	Sept. 2	673	152	100	2118
Hot-air and water or steam heater. Combined	A. L. Logan	709,981	Sept. 30	3758	849	100	2812
Hot-air apparatus for the human body	G. W. Sawyer	704,309	July 8	1754	383	100	369
Hot-air furnace	G. H. Fouts	707,437	Aug. 19	2739	620	100	1713
Hot-air furnace	T. J. March	708,215	Sept. 2	409	94	100	2065
Hot-air furnace	C. H. Foster	708,563	Sept. 9	1006	228	100	2195
Hot-air furnace	J. F. Krauter	705,428	July 22	4027	873	100	865
Hot-air heater	M. B. Moore and G. W. Leddon	705,802	July 29	3538	767	100	767
Hot-air register	J. Buckman	705,609	July 29	4454	965	100	989
Hot-air wall-register	J. H. Pugh	705,640	July 29	4495	976	100	970
Hot-blast furnace	E. T. Bradford	706,503	Aug. 5	994	219	100	1318
Hot-plate	P. G. Van Wie	704,548	July 15	2238	482	100	481
Hotel-register	F. C. Klee						
House: *See* Lighthouse. Summer-house.							
Hub	J. W. Blodgett	710,941	Sept. 30	4360	980	100	2941
Hub and brake for motor-vehicles. Combined	F. Le Fiem	705,100	July 22	3389	723	100	723
Hub-attaching device	C. E. Davidson	703,643	July 1	499	110	100	96
Hub-attaching device	A. H. Worrest	705,185	July 22	3507	761	100	761
Hub-drilling machine. Metallic-	G. H. Everson	704,178	July 8	1534	329	100	322
Hub dust-cap	S. T. Copenhaver	706,530	Aug. 12	1047	230	100	1342
Hub-runner. Adjustable	F. O. Bailey	704,290	July 8	1725	376	100	362
Hub. Vehicle-	E. Keen	706,957	Aug. 12	1839	411	100	1509
Hub. Vehicle-	E. B. Stearns	708,421	Sept. 2	757	170	100	2154
Hub. Vehicle-	E. B. Phillips	709,941	Sept. 16	2873	634	100	2499
Hub. Wheel-	C. Anderegg	706,008	Aug. 5	8	1	100	1117
Hub. Wheel-	H. N. Thayer	709,875	Sept. 16	2652	595	100	2580
Hub. Wheel-	E. Nolan	710,009	Sept. 30	3899	879	100	2943
Hubs from tubular blanks. Machine for forming wheel-	E. Einfeldt	705,518	July 22	4213	915 / 916	100	900
Hydraulic jack	L. S. Pitcher	706,860	Aug. 12	1651	369	100	1475
Hydraulic motor	J. I. Newburg	703,451	July 1	148	33	100	32
Hydraulic motor	C. W. Schindler and J. Freeman	704,583	July 15	2282	496	100	492
Hydraulic press for thick fluid substances	G. von Bäsekind	708,180	Sept. 2	340	80, 81	100	2051
Hydraulic-press swinging table	M. Wilkes	709,285	Sept. 16	2460	555	100	2518
Hydrocarbon-burner	H. C. Martin	704,895	July 15	2846	616	100	610
Hydrocarbon-burner	J. F. Higgins	705,530	July 22	4272	924	100	918
Hydrocarbon-burner	M. W. Morgan	705,948	July 29	5059	1101	100	1094
Hydrocarbon-burner	W. R. Jeavons	706,064	Aug. 5	124	25	100	1142
Hydrocarbon-burner	A. A. Arnott	706,486	Aug. 5	988	212	100	1312
Hydrocarbon-burner	C. T. Pepper	707,001	Aug. 12	1908	427	100	1523
Hydrocarbon-burner	J. W. Neumann	708,389	Sept. 2	609	157	100	2123
Hydrocarbon-burner	W. N. Best	708,453	Sept. 2	813	185	100	2147
Hydrocarbon-burner	E. Betz	709,897	Sept. 16	2674	600	100	2564

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Hydrocarbon-burner	W. H. Stewart	709,448	Sept. 16	2775	625	100	2595
Hydrocarbon-burner	L. K. Leahy	708,942	Sept. 2	634	148	100	2110
Hydrocarbon-burner for stoves or furnaces	G. A. Greene	707,652	Aug. 26	3630	816	100	1908
Hydrocarbon-burner igniting device	G. Lane	707,689	Aug. 26	3647	728	100	1895
Hydrocarbon-burner vapor-generating apparatus	T. J. Forde	708,256	Sept. 2	487	111	100	2080
Hydrocarbon burning apparatus. Liquid	W. H. and G. E. Russell	710,106	Sept. 30	4108	926	100	2984
Hydrocarbon-heater	A. A. Low				204		
Hydrocarbon-motor	W. J. Still	708,503	Sept. 2	908	205	100	2165
					206		
Hydrocarbon-motor feed-controlling mechanism	W. W. Tuck and A. Wassmann	710,087	Sept. 30	4068	914	100	2976
					915		
Hydrocarbon-vapor burner	J. Johnston	708,591	July 1	879	87,88	100	75
Hydrocarbon-vapor burner	E. Le Pelletier	705,258	July 22	3698	800	100	796
Hydrocarbon-vapor-burning apparatus	A. B. Macklin	707,517	Aug. 19	2875	652	100	1743
Hydrostatic press	W. D. Butt	710,089	Sept. 30	3958	893	100	2856
Ice, &c. Apparatus for elevating or conveying and transferring	E. A. Wright	707,487	Aug. 19	2816	637	100	1731
Ice, &c. Apparatus for elevating or conveying and transferring	E. A. Wright	707,488	Aug. 19	2819	637	100	1731
					638		
Ice, &c. Apparatus for elevating or conveying and transferring	E. A. Wright	707,489	Aug. 19	2822	638	100	1732
					639		
Ice. Apparatus for manufacturing plate	E. Barrath	706,511	Aug. 12	1012	223	100	1336
					224		
Ice-breaker	C. Hilbert	704,801	July 15	2676	578	100	572
Ice-can	F. D. Swaney	705,893	July 29	4942	1074	100	1090
Ice-carrier	R. Bradley	707,818	Aug. 26	3544	799	100	1895
Ice-cream can	R. Bauers	705,551	July 29	4345	939	100	940
					425		
Ice-cream dipper	E. C. Baughman	708,967	Sept. 16	1851	426	100	2391
Ice-creeper. Adjustable	J. H. Downer	710,187	Sept. 30	4259	960	100	2918
Ice-crusher for refrigerators	F. H. Nichols	706,773	Aug. 12	1504	334	100	1440
Ice cutting or shaving machine	F. H. Lippincott	706,073	Aug. 5	142	30	100	1146
Ice-making machines. Congealing body or plate for	E. Barrath	705,015	July 22	3159	682	100	690

Lacing device	E. Savoye	704,261	July 8	1900	411	100	401
Lacing-eye for shoes, &c	L. Ballbach	706,218	Aug. 5	402	86	100	1198
Lacing-hook	W. P. Bartel	704,609	July 15	2234	504	100	501
Lacing-hook	G. W. Chipley	705,569	July 29	4302	945	100	944
Lacing-hook	W. A. Dunham	707,090	Aug. 19	2065	466	100	1576
Lacing-hook	E. L. Pupke	710,310	Sept. 30	4308	958	100	2981
Lacing-hook for flat laces	W. A. Kelly. (Reissue)	12,013	July 15	3149	680	100	673
Lacing-hook for women's shoes, &c	N. H. Clark	705,554	Sept. 23	3008	669	100	2645
Lacing-stud	L. L. Russell	704,118	July 8	1413	308	100	297
Lacing-tip machine. Shoe-	C. D. Weaver	708,522	Sept. 2	586	120 121	100	2066
Ladder	R. L. Scott	704,122	July 8	1419	304	100	299
Ladder	C. E. See	705,670	Sept. 9	1905	375	100	2287
Ladder	C. B. Smith	709,118	Sept. 16	2126	457	100	2449
Ladder	J. T. Writt	708,200	Sept. 2	547	124	100	2032
Ladder and bench. Combination step-	F. D. Allison	708,688	July 1	465	106	100	91
Ladder and settee. Combined	E. A. Herndon	709,402	Sept. 16	2698	605	100	2566
Ladder and truck therefor. Extension-	C. H. Schambers	708,696	July 1	849	187	100	170
Ladder. Extension-	W. H. Sibley	708,413	Sept. 2	742	167	100	2131
Ladder. Extension-	S. R. Henry	708,040	Sept. 2	84	19	100	1998
Ladder. Fire-	V. B. St. John	705,475	July 22	4118	892	100	888
Ladder. Step-							

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Ladder. Store-service	A. A. Coburn	706,162	Aug. 5	315	67	100	1181
Ladders or the like. Antislipping foot for	A. Kern	707,226	Aug. 19	2361	529	100	1626
Lamp	F. J. Cleare	704,290	July 8	1737	379	100	365
Lamp	C. E. Gervais	706,923	Aug. 12	1779	398	100	1498
Lamp	G. E. Gervais	706,924	Aug. 12	1782	399	100	1498
Lamp	F. A. Cortis	708,957	Sept. 9	1783	411	100	2358
Lamp	T. J. Litle, Jr	710,061	Sept. 30	4004	903 904	100	2965
Lamp. Acetylene-gas	A. K. Miller	710,203	Sept. 30	4295	956	100	2928
Lamp. Acetylene-gas	A. K. Miller	710,204	Sept. 30	4299	957	100	2929
Lamp and lantern. Combined	F. B. Waibel	709,654	Sept. 23	3196	713	100	2664
Lamp and socket. Incandescent electric	J. C. M. Brown	708,717	July 1	630	140	100	124
Lamp-burner	H. H. Zimmerman	704,462	July 8	1961	426	100	413
Lamp-burner	T. B. Abbott	707,811	Aug. 26	3531	798	100	1892
Lamp-burner	F. Lehmann	708,368	Sept. 2	668	150	100	2117
Lamp-burner	G. Wedderburn	707,190	Aug. 19	2289	511	100	1620
Lamp. Carbureting-	W. C. Burress	709,398	Sept. 16	2686	602	100	2560
Lamp-chimney protector	F. A. Gilbert	710,068	Sept. 30	4011	905	100	2967
Lamp circuits. Maintaining uniform resistance in arc-	H. Gilmore	706,314	Aug. 5	626	137	100	1242
Lamp. Compound incandescent electric	H. H. Beecher, Jr	704,851	July 15	2765	597	100	592
Lamp. Electric	A. M. Arter	704,495	July 15	2117	458	100	458
Lamp. Electric-arc	H. Etheridge	704,526	July 15	2184	473	100	473
Lamp. Electric-arc	J. S. Nowotny	705,122	July 22	3371	730 731	100	732
Lamp. Electric-arc	J. S. Nowotny	705,541	July 22	4313	933	100	930
Lamp. Electric-arc	R. Fleming	706,545	Aug. 12	1071	236	100	1347
Lamp. Electric-arc	F. A. Gilbert and E. O. Lundin	706,547	Aug. 12	1074	237	100	1348
Lamp. Electric-arc	C. L. Bundy	707,393	Aug. 19	2634	585	100	1642
Lamp. Electric-arc	E. A. Edwards	708,032	Sept. 2	70	16, 17	100	1995
Lamp. Electric-arc	R. Fleming	708,182	Sept. 2	248	55	100	2033
Lamp. Electric-arc	C. E. Harthan	710,055	Sept. 30	3991	900	100	2962
Lamp. Electric-arc	A. F. Shore	710,374	Sept. 30	4584	1034 1035	100	2987
Lamp-extinguisher	L. D. Lawrence	706,572	Aug. 12	1110	246	100	1356
Lamp glower and attaching terminal wires thereto. Electric-	E. R. Roberts	710,369	Sept. 30	4577	1032	100	2986
Lamp glowers. Circuit-breaker for electric-	F. M. Goddard	710,356	Sept. 30	4554	1027	100	2982
Lamp hanger. Adjustable electric-	H. G. Breitwieser	709,588	Sept. 23	3000	668	100	2645
Lamp-holders. Match-safe attachment for miners'	J. A. Brown	709,452	Sept. 16	2900	630	100	2501
Lamp. Hydrocarbon-	J. Bystrom	708,384	July 1	38	8	100	10
Lamp. Hydrocarbon-	W. Hawks	705,582	July 29	4394	953	100	950
Lamp. Hydrocarbon-	G. R. Stillman	707,177	Aug. 19	2256	501	100	1613
Lamp. Hydrocarbon incandescent	P. B. Curran	705,044	July 22	3207	693	100	699
Lamp. Hydrocarbon incandescent	G. Washington	706,504	Aug. 5	996	219	100	1318
Lamp. Incandescent	H. J. Jaeger	708,791	July 1	773	169	100	155
Lamp. Incandescent	H. E. Meyers	709,153	Sept. 2	297	71	100	2043
Lamp. Incandescent electric	H. Gilmore	706,313	Aug. 5	624	136	100	1242
Lamp. Incandescent electric	E. S. Gardner	707,099	Aug. 19	2102	469	100	1580
Lamp. Incandescent electric	G. C. Webster	708,432	Sept. 2	773	173	100	2137
Lamp. Incandescent electric	A. W. W. Miller	708,653	Sept. 9	1172	267	100	2230
Lamp. Incandescent electric	L. T. Alton	708,978	July 8	1127	244	100	239
Lamp. Incandescent gas	F. M. Brooks	705,818	July 29	4824	1047	100	1036
Lamp. Incandescent gas	G. Tresenreuter	707,185	Aug. 19	2273	509	100	1617
Lamp. Incandescent gas	H. N. Potter	707,975	Aug. 26	3841	863	100	1953
Lamp. Mercury-vapor	H. N. Potter	707,976	Aug. 26	3843	863	100	1953
Lamp. Mercury-vapor	H. E. Bottlewalla	706,717	Aug. 12	1375	306	100	1418
Lamp. Oil-	R. W. Schmeis	706,856	Aug. 12	1640	371	100	1474
Lamp shade-holder. Incandescent-electric-	R. W. Schmeis	708,739	Sept. 9	1326	305	100	2365
Lamp shade-holder. Incandescent-electric-	T. McWatters	705,280	July 22	3725	809	100	802
Lamp. Signal-	F. K. Wright	705,808	July 29	4806	1043	100	1032
Lamp. Signal-	G. H. Proctor	708,467	July 1	167	29	100	35
Lamp socket. Electric-incandescent-	C. A. Chase	707,290	Aug. 19	2482	557	100	1661
Lamp sockets. Machine for molding incandescent-	W. J. D. Mast	708,694	July 1	403	94	100	80
Lamp. Spirit-	C. M. Stead	707,533	Aug. 26	3191	716	100	1825
Lamp support. Electric-	W. F. Brewster	708,984	July 8	1136	246	100	241
Lamp-supporting device. Electric-	S. M. Meyer	705,773	July 29	4747	1028	100	1020
Lamps by electricity. Device for lighting	S. E. Doane	710,186	Sept. 30	4257	959	100	2918
Lamps. Exhausting incandescent electric	O. Kaufmann	708,812	Sept. 9	1495	342	100	2300
Lamps. Mantle for incandescent gas-	S. E. Doane	710,099	Sept. 30	4085	922	100	2981
Lamps of relatively low voltage. Exhausting in candescent electric	J. L. Mann	706,429	Aug. 5	861	189	100	1298
Lampblack apparatus	J. H. Mann	706,431	Aug. 5	873	190	100	1299
Lampblack-making apparatus	D. J. Ogilvy	706,001	July 29	5146	1122 1123	100	1102
Lampblack. Producing	A. Yoost	709,729	Sept. 23	3327	749	100	2712
Land-roller	A. T. Bishop	705,816	July 29	4821	1047	100	1036
Lantern	G. H. Bradet	707,545	Aug. 26	2950	667	100	1775
Lantern. Signal-	W. I. Lewis	710,107	Sept. 30	4099	925	100	2988
Lapping-machine	A. G. Fitz	705,574	July 29	4382	950	100	948
Last	F. J. Shainess	706,499	Aug. 5	989	218	100	1317
Last	J. D. Winchester	707,998	Aug. 26	3893	875	100	1964
Last	D. L. Purinton	708,077	Sept. 2	145	35	100	2011
Last	A. B. Taylor	709,425	Sept. 16	2742	616	100	2578
Last	M. G. Tilney	705,484	July 22	4142	900	100	897
Last. Darning-	N. F. Hagström	708,958	July 1	1077	232	100	214
Last. Sectional shoe-	M. F. Kelley. (Reissue)	12,012	July 15	3146	680	100	672
Lasting-machine	C. K. Pickles	704,098	July 8	1857	295 296	100	284
Lasting-machine. Pneumatic	J. W. Czernak and J. Tischler	708,642	July 1	487	110	100	96
Latch	E. J. Root	705,301	July 22	3764	817	100	811
Latch	D. W. Tower	708,097	Sept. 2	178	42	100	2018
Latch	O. H. Burden	708,982	Sept. 9	1604	366	100	2323
Latch	C. Garber	709,538	Sept. 23	3006	670	100	2646
Latch	D. W. Tower	708,975	July 1	1116	241	100	221
Latch and lock. Combined	G. G. Deffenbaugh	708,250	July 1	51	10	100	13
Latch. Sliding-door	F. Lorch	706,673	Aug. 12	1308	288	100	1309
Lathe							

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Lathe	J. L. Osgood	707,155	Aug. 19	2209	495	100	1602
Lathe auxiliary appliance	S. H. Croker	704,440	July 8	1996	434	100	420
Lathe back gearing	J. Hartness	708,411	July 1	85	16 17	100	20
Lathe centering attachment	J. M. Fleming	707,573	Aug. 26	3016	678	100	1787
Lathe. Engine-	W. T. S. Johnson	706,665	Aug. 12	1289	284	100	1394
Lathe for turning irregular forms	F. J. Leland	708,798	July 1	788	178	100	157
Lathes, &c. Spindle attachment for	A. C. Witzel	704,726	July 15	2523	545	100	543
Lathing. Metallic	F. A. Mitchell	704,072	July 8	1314	286	100	275
Laundry purposes. Polishing-block for	M. Lehmann	706,967	Aug. 12	1855	415	100	1512
Lawn cutter and roller. Motor-propelled	W. P. Simpson	706,864	Aug. 12	1676	375 376	100	1477
Lawn-sprinkler	P. Moderson	706,986	Aug. 12	1883	421	100	1518
Lawn-trimming implement	C. Fernstrom	709,976	Sept. 30	3859	969	100	2934
Leaching ores, &c. Apparatus for	G. Moore	706,334	Aug. 5	663	144	100	1249
Lead. Apparatus for producing white	J. W. Bailey	709,954	Sept. 30	3797	957	100	2921
Lead. Apparatus for producing white	J. W. Bailey	709,956	Sept. 30	3810	857 858	100	2924
Lead carbonate. Producing	J. W. Bailey	709,955	Sept. 30	3803	857 858	100	2923
Lead. Producing white	J. W. Bailey	709,957	Sept. 30	3814	859	100	2925
Leaf-holder	C. P. Weaver	704,410	July 8	1944	421	100	409
Leather	M. Pianko	704,707	July 15	2484	536	100	535
Leather-lace cutter	G. O. Bjorkander	704,294	July 8	1732	377	100	364
Leather-setting-frame clamp	J. T. Lykens	705,105	July 22	3343	725	100	726
Leather-skiving machine	J. W. Poole	707,351	Aug. 19	2576	582 583	100	1681
Leather-stretching clamp	J. Schneider	707,869	Aug. 26	3845	821	100	1913
Leather-stretching device	J. Caldwell	704,510	July 15	2147	465	100	466
Leather-working machines. Operating-roll for	A. F. Jones	710,102	Sept. 30	4090	883	100	2882
Leathers. Varnish for making enamel or patent	H. C. McKay	704,088	July 8	1327	278	100	278
Ledger	J. B. Winn	704,430	July 8	1959	436	100	412
Leer	R. Naysmith and B. F. Reese	707,843	Aug. 19	2505	579 580	100	1676
Leers. Adjustable sheave-arm for	J. Goodman	708,543	Sept. 9	978	221	100	2191
Leg. Artificial	M. C. Baldwin	708,005	Sept. 2	10	2	100	1988
Leg-improver	H. A. Rhonemus	707,258	Aug. 19	2396	537	100	1642
Lemon-squeezer	A. Baumgarten	708,517	July 1	256	59	100	51
Lemon-squeezer	J. G. Bulloch	708,988	July 8	1151	250	100	244
Lens-grinding machine	J. F. Byington	710,180	Sept. 30	4048	957	100	2916
Letter-box	J. E. Coursen	707,554	Aug. 26	2966	670	100	1778
Letter-box. Street	F. D. Osborn	705,957	July 29	3072	1105	100	1096
Letter-sheet and envelop. Combined	H. V. Wagoner	704,153	July 8	1485	318	100	311
Leucogallocyanin and making same	C. De la Harpe	704,301	July 8	1741	407	100	366
Level and plumb. Combined	R. W. Pritt	704,389	July 8	1877	1041	100	396
Level and plumb. Spirit-	S. Winberg	710,386	Sept. 30	4613	346	100	2994
Level. Gravity-	G. Seyffarth	704,219	July 8	1596	874 875	100	334
Level, plumb, and inclinometer	G. W. Lingle	709,990	Sept. 30	3879	135	100	2888
Level. Spirit-	J. A. Traut	708,678	July 1	502	505	100	111
Leveling device	T. E. Brown	704,611	July 15	2295	609 610	100	501
Leveling-machine	J. J. Heys	707,414	Aug. 19	2597	524 525	100	1705
Leveling-rods. Extension-fitting for	G. S. Goodale	707,225	Aug. 19	2344	788	100	1688
Lever mechanism	M. J. Todd	709,807	Sept. 23	3497	661	100	2746
Lever. Shunting-	W. Taylor	704,978	July 15	3 75	1112	100	657
Lever. Shunting-	W. Taylor	705,974	July 29	5101	901	100	1022
Lid or cover actuating device	J. C. Lodor	705,251	July 22	3696	302	100	796
Life-buoy. Night	C. C. A. E. Wiese	706,707	Aug. 12	1355	254 255	100	1409
Life-preserver	G. B. Conley	704,000	July 8	1169	1	100	248
Life-preserver	C. Hunt	710,275	Sept. 30	4416	995	100	2953
Life-preserver blank	H. A. Ayvad	708,363	July 1	2	1	100	3
Lifter: *See* Pan-lifter. Wagon-body lifter.							
Lifting device	P. Beider	704,692	July 15	2456	530	100	529
Lifting device. Article-	F. G. Neumann	704,661	July 15	2408	521	100	519
Lifting-gate	A. Miller	706,984	Aug. 12	1880	421	100	1517
Lifting-jack	J. Hüppi	704,693	July 15	2440	527	100	526
Lifting-jack	O. E. Fields	706,043	Aug. 5	80	17	100	1133
Lifting-jack	J. C. Barley	706,880	Aug. 12	1702	381	100	1482
Lifting-jack and air-pump. Combined	J. G. Schmidt and W. P. Mueller	708,408	Sept. 2	736	165	100	2130
Light: *See* Compass-light. Skylight. Display-light. Vault-light.							
Lighthouse. Floating	J. C. Williams	708,287	Sept. 2	537	122	100	2090
Lighting implement	C. Molitor	704,559	July 15	2245	486	100	483
Lightning-arrester	G. E. Egan	708,329	Sept. 2	613	139	100	2106
Lightning-rod	J. O. Wilson	708,188	Sept. 2	354	84, 85	100	2054
Limb. Artificial	E. F. Leeffler	708,431	July 1	117	26	100	25
Limb. Artificial	C. P. White	708,695	Sept. 9	1241	282	100	2342
Limb-support	M. H. Bigsby	705,024	July 22	3174	686	100	998
Lime-burning apparatus	G. A. Mace	708,240	Sept. 2	451	103	100	2079
Link-motion block	O. D. Holt	708,924	July 1	1009	219 220	100	201
Linoleum. Machine for the manufacture of inlaid	D. N. Melvin	704,068	July 8	1288	281 282	100	272
Linoleum. Machine for the manufacture of inlaid	D. N. Melvin	704,069	July 8	1308	283 284	100	274
Linoleum. Machine for the manufacture of inlaid	D. N. Melvin	704,070	July 8	1309	284 285 286	100	275
Linotype-machine	O. Mergenthaler and W. T. Hoofnagle.	707,645	Aug. 26	3154	709	100	1616
Linotype-machine attachment	A. D. Smith	708,416	Sept. 2	749	169	100	2133
Linotype-machines. Alining mechanism for	A. G. Cotsworth	705,886	July 22	3069	958	100	859

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Linotype-machines. Trimming mechanism for	F. J. Wich	705,801	July 29	4758	1040 1041	100	1080
Linotypes. Device for forming accents on	J. Pinel	708,661	Sept. 9	1191	272	100	2334
Liquid cooling or heating apparatus	J. Neubecker	707,863	Aug. 26	3635	819	100	1911
Liquid-defecating apparatus	J. E. Hatton	705,994	July 29	5011	1091	100	1074
Liquid-delivery apparatus	P. Sheedy and A. Campbell	704,199	July 8	1435	307	100	308
Liquid-dispensing apparatus	S. W. Moran	710,291	Sept. 30	4440	1001 1002	100	2956
Liquid-dispersing or spray-making apparatus	C. H. Prött	709,556	Sept. 23	3085	676	100	2851
Liquid distributing or dosing tank and mechanism	S. W. Miller	709,233	Sept. 16	2350	532 533	100	2495
Liquid-fuel burner	R. Halley	707,510	Aug. 19	2459	649	100	1740
Liquid-fuel burner	C. G. Lundholm	708,898	Sept. 9	1555	368 369	100	2334
Liquid-fuel spraying and burning apparatus	A. Köhler	709,579	Sept. 23	3178	694	100	2660
Liquid-heating apparatus	J. Fliegel	705,745	July 29	4702	1018	100	1010
Liquid heating or cooling apparatus	H. Feldmeier	706,170	Aug. 5	227	69, 70	100	1184
Liquid-receptacle	W. Elkan	709,211	Sept. 16	2313	585	100	2467
Liquid-separator	S. C. Hauberg	705,669	July 29	4553	988	100	992
Liquid-separator. Centrifugal	W. W. Marsh	707,182	Aug. 19	2154	484	100	1501
Liquids by means of steam or compressed air. Apparatus for raising	A. Scholl	708,669	Sept. 9	1203	274 275	100	2336
Liquids. Clarifying	H. Lubberger	706,075	Aug. 5	145		100	1146
Liquids from solids. Apparatus for separating	D. Stewart	708,846	July 1	887	190 191	100	174
Liquids. Machine or apparatus for raising or lowering the temperature of	F. H. Floyd	708,703	Sept. 9	1271	291	100	2250
Liquids with gases or gases with liquids. Apparatus for treating	A. Vosmaer and A. Lebret	709,379	Sept. 16	2056	506	100	2561
Liquors from kegs. Treating air for forcing malt	C. A. Bartliff	708,984	Sept. 16	1846	435	100	2290
Lithographing or printing press roller	A. W. Kling	710,327	Sept. 30	4505	1015	100	2972
Load-binder	J. F. Neville	706,090	Aug. 5	168	34	100	1151
Load-retaining apparatus for vehicles	W. M. Cain	708,526	Sept. 9	964	216	100	2185
Load-retaining means for vehicles	W. M. Cain	706,797	Aug. 12	1502	348	100	1450
Loads. Means for moving heavy	A. Schuls	704,287	July 8	1908	413	100	403
Loader and digger. Portable mechanical	G. C. Brown	709,190	Sept. 16	2291	520 521	100	2482
Loading apparatus	J. Straub	704,142	July 8	1468	314	100	308
Loading device	W. F. Murphy	708,444	July 1	136	31	100	30
Loading or unloading device	M. F. Johnson	708,980	Sept. 2	657	148	100	2114
Loading or unloading device. Lumber	W. Saantry	707,162	Aug. 19	2328	498	100	1604
Location-tracer	H. S. Bacon	708,713	Aug. 12	1369	305	100	1412
Lock: *See* Alarm-lock. Loom-beam lock. Bicycle-lock. Loom shuttle-lock. Car-check lock. Nut-lock. Check-lock. Padlock. Combination-lock. Permutation-lock. End-gate lock. Safe-door lock. Fence-lock. Seal-lock. Firearm-lock. Switch-lock. Galley-lock. Table-lock. Keyless lock.							
Lock	C. Kunselmann	708,429	July 1	112	25, 26	100	25
Lock	A. F. Wahlberg	708,506	July 1	225	53	100	47
Lock	J. F. Allen	708,514	July 1	262	58	100	51
Lock	C. S. Huntington	708,987	July 1	1018	220	100	202
Lock	J. F. Lydon	708,992	July 1	1095	236	100	217
Lock	A. R. Fergusson	704,180	July 8	1537	330	100	328
Lock	J. L. Coulter	704,802	July 15	2783	602	100	596
Lock	A. B. Wallace	705,495	July 22	4151	906	100	890
Lock	A. R. Fergusson	705,660	July 29	4585	986	100	979
Lock	W. A. Markey	705,942	July 29	5044	1099	100	1030
Lock	H. W. Simpson	707,028	Aug. 12	1959	420	100	1532
Lock	H. Bryda	707,757	Aug. 26	3416	709	100	1859
Lock	C. Kunselmann	709,018	Sept. 16	1923	441 442	100	2405
Lock	G. G. Smith	709,056	Sept. 16	2004	457	100	2421
Lock	H. W. Eicher	709,309	Sept. 16	2508	555	100	2539
Lock	W. B. Paige and H. A. Hoods	710,071	Sept. 30	4020	907 908	100	2966
Lock and latch. Combined	J. B. Cox	706,887	July 22	3961	858	100	950
Locks. Gage for measuring keys for pin-tumbler	E. S. Phelps	709,940	Sept. 16	2870	537 538	100	2408
Locking device	J. W. Gonce	709,010	Sept. 16	1908	437	100	2400
Locking-hook. Safety	A. H. Noyes	708,910	Sept. 9	1694	350	100	2341
Locomotive	L. Atwood	708,992	Sept. 2	550	125	100	2098
Locomotive	J. H. Williams	709,429	Sept. 16	2747	617 618	100	2579
Locomotive-boiler	J. J. Gage	705,490	Aug. 5	974	214	100	1318
Locomotive-boiler	C. Vanderbilt	707,657	Aug. 26	3193	717	100	1925
Locomotive-boiler	J. H. Williams	709,430	Sept. 16	2750	618	100	2580
Locomotive-cylinder circulator	P. Sheedy and A. Campbell	704,180	July 8	1438	308	100	308
Locomotive driving-wheel	L. H. Kenyon	707,385	Aug. 19	2553	575 576	100	1675
Locomotive emergency-gear	W. W. Murch	706,988	Aug. 12	1895	428	100	1518
Locomotive-engine. Compound	C. M. Muchnic	705,599	July 29	4594	997	100	989
Locomotive forced-draft appliance	J. A. Eson	705,225	July 22	3599	779	100	779
Locomotive loading device	G. Hoffman	707,997	Aug. 26	3768	843	100	1987
Locomotive-pedestal	T. E. Collins	707,508	Aug. 19	2645	604	100	1737
Locomotive sand-delivering pipe	I. T. Lewis	709,414	Sept. 16	2793	611	100	2574
Locomotive sanding device	J. C. Hooper	704,087	July 8	1285	266	100	280
Log register. Electric	W. B. Armstrong	705,691	July 1	598	131 132	100	117
Log-releasing device for scows	E. W. Spencer	705,485	July 22	4108	898	100	880
Logs. Means for chaining	H. McFadden	704,908	July 15	2856	619	100	612

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Dr'g.	Official Gazette. Vol.	Page.
Loom	D. F. Conklin and T. G. Singer	705,649	July 29	4510	979 980	100	978
Loom	F. Barlet	706,376	Aug. 5	746	163 164	100	1007
Loom	O. L. Owen	708,251	Sept. 2	469	107	100	2077
Loom	O. L. Owen	703,667	July 1	540	122	100	106
Loom-beam lock	H. H. McLean	708,246	Sept. 2	463	105	100	2076
Loom-beam lock	E. S. Stimpson	710,023	Sept. 30	3302	888	100	2849
Loom. Filling-replenishing	C. Foster	707,490	Aug. 26	3257	728	100	1838
Loom-fixer's knife	A. F. McCollum	709,447	Sept. 16	2782	626 627	100	2566
Loom for weaving pile fabrics	C. H. Landenberger	706,072	Aug. 5	135	28, 29	100	1145
Loom for weaving tufted pile fabrics Loom for weaving velvets	W. G. Hartley	703,580	July 1	365	84	100	72
Loom harness-controlling mechanism	T. H. McNerney	706,835	Aug. 5	665	144 145	100	1949
Loom. Kindergarten-	B. E. Lindberg	708,799	July 1	785	172	100	157
Loom. Kindergarten-	J. E. Painter	708,815	July 1	817	180	100	163
Loom. Kindergarten-	L. M. Comstock	709,585	Sept. 23	3008	669	100	2045
Loom. Leno-	E. H. Ballou	708,951	Sept. 9	1764	407 408	100	2355
Loom let-off-arresting mechanism	E. S. Stimpson	710,024	Sept. 30	3085	888	100	2850
Loom loose-reed motion	E. Herzig	710,192	Sept. 30	4265	962	100	2920
Loom. Narrow-ware	J. C. Brooks	704,295	July 8	1725	378	100	364
Loom picker-check	A. St. Andrews	706,270	Aug. 5	540	117	100	1225
Loom shaking-strap	O. Hoffmann	704,549	July 15	2378	515	100	512
Loom shedding mechanism	G. W. Stafford	709,453	Sept. 16	2901	630 631	100	2591
Loom shedding mechanism	G. W. Stafford	709,454	Sept. 16	2906	631	100	2592
Loom shedding mechanism	G. W. Stafford	709,455	Sept. 16	2909	632	100	2593
Loom shedding mechanism	L. W. Campbell	708,999	July 8	1157	251	100	245
Loom-shuttle	H. Bardsley	705,898	July 29	4965	1081	100	1065
Loom-shuttle	A. Schaub	708,592	Sept. 9	1058	240	100	2305
Loom-shuttle	E. S. Stimpson	703,498	July 1	215	51	100	45
Loom shuttle-binder	F. A. Guillette, W. J. Lynch, and H. A. Guillette.	709,317	Sept. 16	2522	568	100	2532
Loom shuttle-binder	C. H. Draper	705,911	July 29	4991	1096	100	1070
Loom-shuttle-checking mechanism	W. W. Tubby and W. H. Broomhead	705,940	July 29	5108	1114	100	1094
Loom-shuttle-checking mechanism	J. Houston	703,419	July 1	97	21	100	22
Loom shuttle-driving means	F. A. Mills	706,190	Aug. 5	367	79	100	1192
Loom shuttle-lock	A. Barbier	708,752	Sept. 9	1363	310 311	100	2273
Loom-shuttles. Apparatus for operating guided	W. T. Lucie	707,190	Aug. 19	2152	483	100	1591
Loom stopping device Loom stopping mechanism	H. Côté	706,164	Aug. 5	318	67, 68	100	1180
Loom-stopping mechanism. Automatic	A. D. Emery	705,913	July 29	4995	1087 1088	100	1071
Loom-swivel	J. Wadsworth	706,133	Aug. 5	245	51, 52	100	1168
Loom take-up	F. C. Gerfin	704,314	July 8	1765	385	100	371
Loom take-up mechanism	G. Schmidt, Sr	709,582	Sept. 23	3081	686	100	2061
Loom thread-parter	E. S. Stimpson	704,715	July 15	2497	540	100	538
Loom warp stop-motion	H. A. Owen	703,666	July 1	538	121 122	100	106
Loom warp stop-motion	C. H. Draper	708,536	Sept. 9	968	219	100	2189
Loom. Weft-replenishing	W. E. Moore and F. R. Clark	704,485	July 8	2004	454 455	100	440
Loom. Weft-replenishing	H. I. Harriman	709,440	Sept. 16	2769	624	100	2584
Loom weft-replenishing mechanism	R. Talbot and W. Rossetter	710,379	Sept. 30	4593	1036	100	2999
Looms at intervals. Means for stopping	G. A. Cluff	706,436	July 8	1996	432	100	418
Looms by the quantity of weft in the shuttles. Mechanism for controlling	J. H. Klerx	709,910	Sept. 30	3716	838	100	2804
Looms by the quantity of weft in the shuttles. Mechanism for controlling	J. H. Klerx	709,911	Sept. 30	3719	838 839	100	2805
Looms. Connector for sweep-sticks and picker-sticks of	H. E. Taplin	708,745	Sept. 9	1846	307	100	2267
Looms. Filling-carrier receptacle for weft-replenishing	J. L. Burton	708,524	Sept. 9	951	216	100	2186
Looms. Shuttle-guide for weft-replenishing	A. E. Stafford	708,672	Sept. 9	1207	275	100	2227
Low-water alarm. Electric	E. W. Rider	703,472	July 1	176	41	100	37
Lubricating device	B. H. Locke	704,555	July 15	2239	485	100	483
Lubricating device	H. G. Reist	708,170	Sept. 2	323	77	100	2047
Lubricating device	F. B. Duncan	708,324	Sept. 2	604	137	100	2104
Lubricating-pad grapple	J. Loesewitz	709,604	Sept. 23	3117	694	100	2059
Lubricating-pump-operating apparatus	B. Ivor	709,996	Sept. 30	3874	872 873	100	2837
Lubricator: *See* Automatic lubricator. Axle-lubricator. Engine-lubricator. Pneumatically-operated lubricator. Pulley-lubricator. Trolley-lubricator. Truck-lubricator. Valve-lubricator.							
Lubricator	J. Gottbreht	708,408	July 1	72	14	100	17
Lubricator	J. M. Pfaudler	705,608	July 29	4450	965	100	951
Lubricator	W. F. Richards	706,201	Aug. 5	335	82	100	1195
Lubricator	F. W. Edwards	706,234	Aug. 5	429	91	100	1204
Lubricator	O. G. Kipp	706,570	Aug. 12	1108	245	100	1355
Lubricator	F. Cartlidge	708,062	Sept. 2	36	8, 9	100	1988
Lubricator	C. F. Clements	710,184	Sept. 30	4254	959	100	2918
Lubricator and liquid-dispenser	M. H. Halloran	709,318	Sept. 16	2525	568	100	2533
Lubricator for elevator-ropes, &c	J. A. Britton	707,755	Aug. 26	3418	769	100	1926
Luggage-carrier	S. H. Smith	704,944	July 15	3001	643	100	643
Lumber. Compound	E. E. Thomas	707,806	Aug. 26	3523	795 796	100	1991
Lumber-conveyer	W. S. Huntington	709,686	Sept. 23	2905	649	100	2035
Lumber. Making artificial	J. W. Aldridge	705,939	Aug. 12	1217	270	100	1378
Machine-wrench	E. M. Cobb and E. A. Spaulding	709,573	Sept. 30	3694	819	100	2786
Machinist's V-block	F. Elias	709,096	Sept. 16	2063		100	2494
Magnesium. Making peroxid of							

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Dr'g.	Official Gazette. Vol.	Page.
Magnet. Blow-out	W. B. Potter	705,188	July 22	3418	742	100	741
Magnetic and non-magnetic materials from one another. Apparatus for separating	J. W. R. T. Heberle	709,992	Sept. 30	3868	871	100	2836
Magnetic core for inductance-coils	J. C. Lee and E. H. Colpitts	705,935	July 29	5080	1096 1097	100	1078
Magnetic separator	A. Dings	707,088	Aug. 19	2082	465	100	1576
Magnetic separator	J. P. Wetherill	708,185	Sept. 2	348	83	100	2052
Magnetic separator	J. P. Wetherill	708,186	Sept. 2	350	83, 84	100	2053
Magnetic separator	J. P. Wetherill	708,187	Sept. 2	352	84	100	2054
Magnetic separator	J. P. Wetherill	709,484	Sept. 23	2898	647	100	2034
Magnetic wheel	J. O. Heinze, Jr	703,980	July 8	1158	250	100	244
Magneto-therapeutic apparatus	J. Burry	704,904	July 15	2857	620	100	512
Mail-bag catcher	C. C. McIlvar	706,323	Aug. 5	645	141	100	1245
Mail-bag catcher	G. B. and J. C. Klink	707,267	Aug. 19	2410	540	100	1545
Mail-bag catcher	G. W. Smith	708,980	Sept. 9	1783	398	100	2347
Mail-bag catcher	R. L. Slagle	707,017	Aug. 12	1939	433 434	100	1529
Mail-bag catching and delivering machine	W. B. Rohmer	706,271	Aug. 5	541	117	100	1225
Mail-bag fastener and lock	E. Stevenson	707,412	Aug. 19	2691	608	100	1704
Mail-bag receiving and delivering apparatus	A. P. Hauss	708,843	Aug. 12	1639	367	100	1470
Mail-box	W. N. Moore	703,920	July 1	1004	218	100	200
Mail-box indicator	C. E. Herd	703,441	July 1	133	30	100	29
Mail-carrier	A. L. Mumma	707,696	Aug. 26	3364	730	100	1859
Mail-catcher	C. E. P. Hobart	708,950	Sept. 9	1763	406	100	2355
Mail-chute	A. C. Badger	708,890	Sept. 2	700	157 158	100	2123
Mail delivering and catching device	W. J. Noble	705,982	July 29	5114	1114 1115	100	1095
Mail delivery and collection system	F. S. Vogue	705,440	July 22	4039	880	100	872
Mail-matter-carrying apparatus	G. S. Pothe	704,757	July 15	2582	558	100	554
Mail-pouches to railway-cars. Device for delivering	J. W. Reynolds	707,500	Aug. 19	2841	643	100	1736
Mail receiving and delivering mechanism for railways.	F. H. Burr	706,694	Aug. 12	1340	298	100	1406
Mail-wagon door	W. F. Shelly	707,059	Aug. 12	2080	.....	100	1546
Maize for the production of grits, flakes, &c. Treatment of	T. T. Gaff and J. F. Gent	707,058	Aug. 12	2018	451	100	1546
Maize or Indian corn. Degerming	T. T. Gaff and J. F. Gent	709,558	Sept. 23	3038	677	100	2032
Malt-houses. Apparatus for conveying grain in	W. P. Rice	704,597	July 15	2305	501	100	497
Malt-kiln	P. G. Toepfer	706,716	Aug. 12	1372	305	100	1412
Malting-kiln. Pneumatic	B. Berg	704,891	July 15	2828	614	100	508
Manifold device	E. Lesser	709,853	Sept. 23	3575	805	100	2764
Manifold duplicating device	H. H. Norrington	708,781	July 1	744	165	100	149
Manifolding sales device	C. E. Frisbie	708,393	Sept. 2	698	155	100	2121
Mantle-support	J. E. Murray and J. J. Hoover	709,044	Sept. 16	1950	432	100	2416
Mantle-trimming mechanism	J. T. Robin	705,929	July 29	5021	1094	100	1076
Manure-distributer	J. Howell	707,886	Aug. 26	3692	.....	100	1922
Manure from apatite or similar mineral phosphate. Manufacturing	J. G. Wiborgh and W. Palmaer	704,621	July 15	2341	.....	100	504
Marble. Manufacturing artificial	J. Czermak	708,487	July 1	190	47	100	41
Marine brake	H. Simpson	709,011	Sept. 16	1905	437 438	100	2401
Marking-machine	F. J. Hagen	709,108	Sept. 16	2103	492	100	2444
Massaging device	C. E. Mason	707,080	Aug. 19	2069	.....	100	1573
Mat: *See* Floor-mat.	C. M. Bowman	706,578	July 29	4398	952	100	949
Match	J. B. Frederick	707,277	Aug. 19	2447	549	100	1554
Match-box	C. St. Jacques	709,645	Sept. 23	3181	710 711	100	2051
Match-box. Combination	S. E. Pasfield	703,698	July 1	541	122	100	106
Match-boxes, &c. Apparatus for applying the preparation to striking-surfaces of	M. Paridon	705,087	July 22	3198	680	100	997
Match-boxing machine	C. F. Christ	707,568	Aug. 26	3000	674 675 676	100	1784
Match-boxing machine	A. E. Ellinwood	709,267	Sept. 16	2425	549 550	100	2511
Match-boxing machine	W. F. Hutchinson	709,268	Sept. 16	2122	549	100	2510
Match-machine	W. F. Hutchinson	709,190	Sept. 16	2274	517	100	2478
Match-machine dipping-roll	J. P. Wright	708,453	July 1	150	34	100	32
Matches. Making	W. H. Parker	704,091	July 8	1339	292	100	280
Matches. Making	W. H. Parker	710,300	Sept. 30	4456	1005	100	2962
Mattes. Treating	J. A. Potter and W. C. Harvie	707,745	Aug. 26	3376	780	100	1861
Mattress-filling machine	K. Wessel	707,746	Aug. 26	3381	761	100	1855
Mattress-filling machine	K. Wessel	710,076	Sept. 30	4082	909	100	2871
Mattress. Hospital-	D. T. Rosett	708,658	July 1	516	116	100	101
Mattress-stuffing machine	C. W. Johansen	703,959	July 1	1104	238 239	100	219
Mattress-stuffing machine	H. W. Pennypacker	706,970	Aug. 12	1498	416	100	1512
Mattress. Wire	C. S. Lloyd	709,856	Sept. 30	3540	808	100	2779
Measuring and emptying device for bottles	B. Arthurs	706,940	Aug. 12	1807	404 405	100	1508
Measuring coal to gas-retorts. Mechanism for	W. R. Herring	707,599	Aug. 26	3158	688	100	1796
Measuring depths. Lead for	E. Krumhoff	708,389	Aug. 5	788	170	100	1272
Measuring device	C. Christensen	709,600	Sept. 23	3111	698	100	2068
Measuring device	E. Hill	709,665	Sept. 23	3217	718	100	2089
Measuring device. Shoemaker's	T. Cort	706,361	Aug. 5	709	154	100	1259
Measuring electric currents. Instrument for	W. Thomson	707,802	Aug. 26	3683	819	100	1911
Measuring horses. Standard for	W. H. Netherland	704,363	July 8	1674	364	100	351
Measuring instrument	G. J. Luck	708,520	Sept. 9	947	214	100	2165
Measuring instrument	C. A. Brown and R. C. Kerr	704,543	July 15	2216	480	100	479
Measuring instrument. Electrical	E. B. Jacobson	708,725	July 1	649	144	100	130
Measuring instrument. Lens	F. Hardinge	709,231	Sept. 16	2345	531 532	100	2494
Measuring-machine for rolled goods	H. R. Meade	707,164	Aug. 19	2225	499	100	1505
Measuring the degree of exposure to light. Instrument for	F. Schoeler	706,800	Aug. 12	1538	348	100	1432
Meat-chopper	L. B. Cobb and C. M. Jenkins						

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Meat-curing apparatus	J. C. Lincoln	705,257	July 29	3085	858	100	545
Meat, &c. Machine for cutting	F. Graff	709,580	Sept. 23	3008	670	100	2545
Meat-reducing device	H. C. Chambers	709,497	Sept. 23	2976	738	100	2701
Mechanical motor	R. K. McLellan	709,044	Sept. 16	3179	710	100	2081
Mechanical motor	H. S. Durand	709,595	Sept. 23	3383	719	100	2691
Mechanical movement	H. H. Fefel	708,196	July 1	61	11, 12	100	15
Mechanical movement	J. and C. Quist	708,395	July 1	634	102	100	299
Mechanical movement	A. Wahle	705,499	July 22	4156	904	100	899
Mechanical movement	T. J. Lockwood	707,705	Aug. 26	3593	734	100	1843
Mechanical movement	O. C. Burdict and B. C. Candee	707,930	Aug. 19	3208	615	100	1584
Mechanical movement for nut-making or other machinery.	G. G. Marshall	707,696	Aug. 19	2730	680	100	1714
Medical electrode	E. M. Pond	706,778	Aug. 12	1515	336	100	1442
Medicated tampon	W. P. and E. H. King	705,251	July 22	3065	702	100	791
Medicine-administering apparatus	A. C. Bechtold	705,018	July 22	3167	684	100	699
Medicine-bottle dropping attachment	D. S. Kann	710,060	Sept. 30	3699	902	100	2954
Medicine-capsule	E. H. Schwartz	708,192	Sept. 9	1416	397	100	2268
Melting-furnace	M. Frings	704,531	July 15	2194	475 476	100	475
Mercerizing-machine	G. D. Bulmer	708,701	July 1	711	157 158	100	142
Merry-go-round	C. Looff, Jr.	708,801	July 1	788	173	100	158
Merry-go-round	G. W. Schofield	708,535	Sept. 9	1549	354	100	2210
Merry-go-round	E. Bollinger	709,462	Sept. 23	2883	636 637	100	2609
Merry-go-round. Land, marine, or submarine	A. Davidson	710,048	Sept. 30	3967	895	100	2857
Merry-go-round, seesaw, and jogger-board attachment.	W. W. Curtright	707,855	Aug. 26	2968	671	100	1779
Message-box	A. F. Shriver	708,594	Sept. 9	1080	246	100	2207
Metal-bending machine	F. Ditchfield	709,753	Sept. 23	3389	760 761	100	2733
Metal-bending machine	F. Ditchfield	709,754	Sept. 23	3390	761	100	2733
Metal-bending tool	J. J. Dolan and E. Estep	704,521	July 15	2175	471	100	479
Metal-boring machine	C. C. Roberts	707,016	Aug. 12	1096	433	100	1538
Metal can	F. P. McColl	708,445	July 1	138	31	100	30
Metal can	J. N. Bradley	706,298	Aug. 5	348	120	100	1295
Metal cleaning and preserving composition	W. C. Oberwalder	705,956	July 29	5071	------	100	1086
Metal-crimping machine	G. Cunin	706,190	Aug. 5	51	11, 12	100	1139
Metal-cutting tool	C. McRorie and D. J. Hunter	705,696	July 29	4606	999	100	992
Metal-cutting-tool holder	F. W. Taylor and S. Newbold	709,526	Sept. 23	2990	666	100	2643
Metal-dressing machine	F. P. Stiker and O. C. Burton	707,272	Aug. 19	2490	541 542 543 544 545	100	1648
Metal-dressing machines. Slide for	F. P. Stiker and O. C. Burton	707,273	Aug. 19	2485	546	100	1650
Metal-foil fabric	H. L. Parker	706,100	Aug. 5	182	98	100	1154
Metal for electrical or other purposes. Means and appliances for the manufacture of covered strips of soft	I. W. Heysinger	706,052	Aug. 5	99	21, 22	100	1137
Metal-piercing machinery for making hollow bodies	B. F. McTear	705,780	July 29	4757	1080 1081 1082	100	1022
Metal-plate-lifting device	E. B. Clark, 2nd	710,041	Sept. 30	3963	894	100	2857
Metal-sawing apparatus	C. O. Morgan	705,946	July 1	1050	228	100	159
Metal-shearing-machine frame	B. Wesselmann	710,310	Sept. 30	4473	1009 1010	100	2965
Metal sheets in packs. Compound for use in reducing	T. V. Allis	704,395	July 8	1718	------	100	361
Metal sheets. Producing	T. V. Allis	704,397	July 8	1722	375	100	362
Metal upon another. Impacting one	S. H. Thurston	705,701	Aug. 12	1348	300	100	1407
Metal wheel	E. Einfeldt	708,697	July 1	602	133	100	119
Metal-working tool	A. Tindel	707,085	Aug. 12	1070	442	100	1585
Metals and alloys. Treating metallic oxids in the production of	F. C. Weber	705,737	July 29	4664	1011	100	1008
Metals from mixtures of metals. Eliminating	G. H. Clamer	707,551	Aug. 26	2951	------	100	1777
Metals from ores. Apparatus for extracting	J. Randall	708,494	Sept. 2	802	202	100	2168
Metals from their ores. Apparatus for separating	W. A. R. Loose	708,567	Sept. 9	1012	229 230	100	2197
Metals from their ores, &c., in electrically-heated furnaces. Reduction of	R. C. Contardo	706,651	July 29	4515	980 981	100	974
Metals from their ores. Leaching and extraction of	C. Hoepfner	704,630	July 15	2379	------	100	511
Metals. Fusion of	H. A. E. Menne	708,940	July 1	1089	225	100	207
Metals in a finely-divided state. Producing	E. Pohl	708,475	Aug. 5	951	207	100	1308
Metals. Melting and treating	E. H. Schwartz	708,788	Sept. 9	1423	337	100	2284
Metallic strap	E. H. Vogel	706,026	July 29	4479	971	100	966
Metallic tie	W. W. Pike	709,850	Sept. 23	3572	805	100	2763
Metallic tie and rail-fastener	A. Scholer	706,617	July 29	4465	968	100	964
Metallic tie and rail-joint	J. F. Cleary	705,563	July 29	4364	945	100	945
Meter: *See* Current-meter. Electric meter. Fluid-meter. Gas-meter. Water-meter.							
Metering apparatus. Multirate	E. Oxley	710,070	Sept. 30	4016	907	100	2968
Metering system. Multirate	A. D. Lunt	705,575	Aug. 12	1119	447	100	1357
Micrometer	C. J. Banks	705,148	Aug. 5	295	60	100	1175
Micrometer-gage	R. J. Simpson	705,606	Aug. 12	1342	298	100	1406
Microtome-knife	E. Bausch	708,208	Sept. 2	556	127	100	2095
Milk-albumen. Producing oxidized	H. Oppermann	704,669	July 15	2409	------	100	530
Milk-albumen. Producing soluble	H. V. Dunham	709,008	Sept. 16	1886	------	100	2497
Milk and cream. Acid-mixer for facilitating the testing of	M. D. Beach	709,461	Sept. 23	2881	636	100	2608
Milk-can	C. M. Hopkins and E. H. Dorn	705,404	July 22	3091	864	100	857
Milk-can	H. S. Reynolds	707,011	Aug. 12	1038	431	100	1536
Milk pasteurizer and sterilizer	C. E. Hinman	705,945	July 22	3052	790	100	789

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Mfiker. Cow-	F. A. West	710,284	Sept. 30	4005	1089	100	2998
Milking-shield	H. H. Kagey	709,774	Sept. 23	3458	775	100	2783
Mill: *See* Bronze-mill. Chilian mill. Grinding-mill. Grit-mill. Pulverizing-mill. Roller-mill. Rolling-mill. Stamping-mill. Windmill.							
Mill	A. Thirion	707,805	Aug. 26	3592	794 795	100	1960
Mills. Bur for	J. Jorgensen	705,410	July 22	4008	867	100	861
Milling-cutter	B. M. W. Hanson	708,577	July 1	861	83	100	72
Milling-machine	G. W. Smith and E. J. Lees	704,194	July 8	1445	309 810 811 812	100	304
Milling-machine feed mechanism	W. R. Fox and M. Lund	707,095	Aug. 19	2092	467	100	1577
Millstones. Grooving	J. Schweitzer	706,259	Aug. 5	494	105	100	1216
Mine-exploder. Electric	W. Norres	707,696	Aug. 26	3110	700	100	1808
Mine-ventilator	P. T. Reynolds	708,831	July 1	841	185	100	169
Miner's tool. Combination	M. Hardaocg	705,997	July 29	5138	1130	100	1100
Mineral compound	M. Arnu	708,516	July 1	955	------	100	51
Minerals by the selective action of oils, &c. Apparatus for the separation of	A. S. Elmore	708,905	July 1	989	214	100	196
Mirror. Adjustable	M. H. Moss	707,151	Aug. 19	2208	498	100	1601
Mirror-adjuster	A. J. Banks	704,497	July 15	2121	459	100	459
Mirror-frames, &c. Adjustable standard for	J. Lowenthal	707,707	Aug. 26	3295	725	100	1844
Mirror-hanging	J. G. Allen	710,285	Sept. 30	4051	978	100	2989
Mirror-support. Folding	B. C. Lyon	709,259	Sept. 9	449	102	100	2073
Miter-box	F. E. Abbott and B. H. Randel	709,351	Sept. 16	2206	542	100	2505
Mitering and tool-guiding device	J. M. J. Phelan	704,919	July 15	2082	629 630	100	631
Mitering-machine	J. L. Tyler	707,734	Aug. 26	3336	747	100	1854
Mitten	A. J. Breda	704,508	July 15	2135	462	100	462
Mitten	R. B. McMasters	709,350	Sept. 16	2579	582	100	2544
Mixer: *See* Air and gas mixer. Gas and air mixer. Rotary mixer.							
Mixing-machine	E. Ruttkamp	707,261	Aug. 19	2400	539	100	1563
Mixing-machine	J. H. Elward	707,404	Aug. 19	2677	604	100	1701
Moistener	L. S. Duncan	708,771	July 1	1078	161	100	146
Moistener and sealer. Envelop	F. A. Jones	705,581	July 22	4274	984	100	913
Moistening-machine	P. C. Crawford	704,779	July 15	2617	587	100	561
Mold: *See* Brick-mold. Bullet-mold. Croquette-mold. Curb-mold. Ingot-mold. Tooth-mold.							
Mold for hollow concrete articles	W. W. Reeves	705,789	July 29	4772	1085 647	100	1026
Mold-forming apparatus. Sand-	S. J. Adams	704,951	July 15	2613	648 649	100	646
Mold opening or closing device	W. F. Koeppen	708,614	Sept. 9	1507	345	100	2201
Molds. Forming sand-	S. J. Adams	704,958	July 15	2622	646	100	648
Molders' chaplets. Apparatus for the manufacture of	R. B. Haskins	709,541	Sept. 23	3011	671	100	2647
Molding apparatus	J. C. Reed	708,740	July 1	672	149 150	100	135
Molding-flask	J. Mills	710,331	Sept. 30	4512	1016 1017	100	2973
Molding-machine	B. A. Franklin	708,647	July 1	496	112	100	97
Molding-machine	W. M. Duncan	704,712	July 15	2493	539 540	100	537
Molding-machine	J. R. Thomas	706,180	Aug. 5	2.38	49, 50	100	1167
Molding-machine	J. N. Battenfeld	706,487	Aug. 5	970	212	100	1312
Molding-machine	C. Herman	706,751	Aug. 12	1461	322	100	1481
Molding-machine	J. P. Appleby	707,585	Aug. 26	2927	562 563	100	1770
Molding machine. Sand-	J. J. McClelland	704,078	July 8	1320	288	100	277
Molding machine. Sand-	J. R. Davies	705,215	July 22	3582	774 775	100	775
Money-changer. Mechanical	G. W. Castlen	709,744	Sept. 23	3373	757	100	2687
Money holder or envelop. Folding	E. L. Miller	709,496	Sept. 23	2916	650	100	1030
Monkey-wrench	C. P. Whittemore	705,799	July 29	4790	1039	100	2509
Monorailway	E. A. Green	709,903	Sept. 16	2415	547	100	2306
Mooring block or clump	G. C. L. Lenox	709,914	Sept. 30	3725	839	100	2320
Mop and wringer. Combined	F. Bracey	708,857	Sept. 9	1502	385	100	2210
Mop-head	J. C. Look	705,244	Aug. 5	464	90	100	1210
Mop holder and wringer	A. W. Smith	704,182	July 8	1443	306	100	303
Mop holder and wringer	A. W. Smith	704,183	July 8	1444	308	100	304
Mop-wringer	J. von Kanel	707,585	Aug. 19	2358	539	100	1635
Mop-wringer	J. C. Thomson	709,586	Sept. 23	3084	687	100	2662
Mopping device	H. F. Ackerman	704,571	July 15	2424	534	100	522
Mortar composition	E. K. Welch	706,188	Aug. 5	257	------	100	1171
Mortising-machine	C. J. Seaquest	706,458	Aug. 5	922	200	100	1302
Mosaics. Means for setting	F. Akan	706,874	Aug. 12	1693	379	100	1480
Mosquito-canopy	M. E. Webber	709,528	Sept. 23	2995	667	100	2544
Motion-converting mechanism	J. Horrocks	707,112	Aug. 19	2181	475	100	1586
Motion. Means for transmitting rotary	P. W. Dunne	704,945	July 8	1698	354	100	342
Motion. Mechanical movement for converting	J. T. Watts	705,499	July 22	4168	907	100	891
Motion. Mechanism for converting rotary into reciprocatory	B. H. Locke	704,810	July 15	2701	984	100	577
Motion-transmitting device	C. F. Stokes and C. E. McGlinchey	705,634	July 29	4474	970 971	100	966

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Motive-power engine	M. T. Minogue	706,494	Aug. 5	979	215	100	1314
Motor: *See* Air-motor. Air and vapor motor. Car-motor. Current-motor. Electric motor. Hand-motor. Hydraulic motor. Hydrocarbon-motor. Internal-combustion motor. Mechanical motor. Pneumatic motor. Rotary motor. Spring-motor. Steam-motor. Switch-motor. Tidal-motor. Wave-motor. Weight-motor. Wind-motor.							
Motor	C. M. Kiler	708,496	July 1	109	24	100	34
Motor	R. Widner	705,001	July 15	3121	673	100	666
Motor	J. Ulrich	705,489	July 22	4151	963	100	889
Motor	R. L. Barnhart	705,897	July 29	4962	1080	100	1054
Motor	W. Evans	706,489	Aug. 5	973	214	100	1313
Motor	M. Villazon	707,869	Aug. 26	3529	797	100	1892
Motor	C. J. Cullen	709,877	Sept. 30	3628	820	100	2767
Motor	F. A. Merrick and J. D. Forrer	708,794	Sept. 9	1314	300	100	2260
Motor-controller-operating mechanism	J. H. Diggle	708,208	July 1	977	213	100	196
Motors. Protecting device for induction-	R. Field and A. Hanson	708,805	Sept. 9	1480	339	100	2296
Mouth-organ	H. D. Meier	710,202	Sept. 30	4289	966	100	2927
Movement-controlling mechanism. Variable-	W. A. Thiermann	706,281	Aug. 5	564	122	100	1229
Movements and indicating positions electrically. Means for transmitting	W. A. Thiermann	705,462	July 22	4131	898 899	100	865
Movements and indicating the position of indicators or the like. System of and apparatus for transmitting	J. Q. Adams and S. Hough	708,519	July 1	250	58	100	50
Mower	A. Mayer	710,230	Sept. 30	4428	1001	100	2958
Mower	W. J. Gleason	708,650	July 1	508	113 114	100	99
Mower attachment. Lawn-	W. H. H. Heydrick	707,334	Aug. 19	2536	570	100	1671
Mower. Lawn-	F. L. Adams	710,131	Sept. 30	4156	936	100	2927
Mower. Lawn-	T. and W. H. Coldwell	707,204	Aug. 19	2492	559 560	100	1663
Mower. Motor lawn-	E. A. Johnston	708,146	Sept. 2	274	66	100	2088
Mowers, reapers, &c. Cutting apparatus for	E. A. Johnston	708,147	Sept. 2	275	65	100	2088
Mowers, reapers, &c. Cutting apparatus for	P. L. Shepler	707,981	Aug. 26	3662	865	100	1954
Mowing-machine	B. C. White and T. J. Jones	710,228	Sept. 30	4329	976	100	2927
Mowing-machine	J. T. Myers	708,806	July 1	795	175	100	160
Mowing-machine cutter-bar	H. Henniger	704,894	July 15	2722	589	100	503
Muffle-furnace for irons	H. N. Motsinger	706,844	Aug. 12	1641	367	100	1471
Muffler	R. E. Bousfield	706,636	Aug. 12	1295	272	100	1380
Muffler. Exhaust-	H. A. W. Wood. (Reissue)	12,016	July 22	4333	986 987	100	903
Multipress. Double	C. M. Halvorsen	708,139	Sept. 2	268	63	100	2036
Music-chart. Mechanical	A. D. Crist	704,003	July 8	1172	255	100	249
Music-holder	G. E. Adams	707,671	Aug. 26	3611	720	100	1829
Music-leaf turner	J. Ahern	709,625	Sept. 23	3148	702	100	2674
Music-leaf turner	J. Rawlins	704,104	July 8	1382	298	100	291
Music retainer. Sheet-	C. H. Shaw	709,054	Sept. 16	2002	450	100	2480
Music-sheet for automatic musical instruments. Perforated	C. E. Bertogliatti	705,023	July 22	3173	686	100	908
Music-sheet turner	H. E. Beach	709,296	Sept. 16	2484	559	100	2524
Music-sheets. End-fastener for perforated	H. E. Beach	709,295	Sept. 16	2483	559	100	2523
Musical instrument. Electrical self-playing	J. McTammany	705,962	July 29	5063	1102 1103	100	1084
Musical instrument. Mechanical	R. Gabrielsky	708,337	Sept. 2	625	141	100	2108
Musical instrument. Mechanical stringed	K. Grienauer	708,572	July 1	346	79	100	70
Musical instrument. Stringed	P. Péchenart	705,298	July 22	3740	812	100	805
Musical-instrument strings. Tension apparatus for stringed	M. Clark	709,063	Sept. 30	3833	863	100	2899
Musical-instrument transposing device	E. S. Votey	707,268	Aug. 19	2469	551	100	1655
Musical instruments. Operating-sheet for automatic	H. M. Salyer	708,748	July 1	679	151	100	135
Musical instruments. Playing attachment for key-							
Nail: *See* Wall-nail.							
Nail-assorting apparatus	B. F. Mayo	707,137	Aug. 19	2163	485 486	100	1503
Nail-assorting apparatus	B. F. Mayo	707,139	Aug. 19	2175	488 489	100	1595
Nail-assorting apparatus	A. D. Elliott	707,140	Aug. 19	2178	490	100	1596
Nail-assorting machines. Raceway for	B. F. Mayo	707,142	Aug. 19	2184	493	100	1597
Nail-assorting mechanism	B. F. Mayo	707,136	Aug. 19	2160	495	100	1593
Nail-assorting mechanism	B. F. Mayo and A. D. Elliott	707,138	Aug. 19	2166	496 497 498	100	1595
Nail-assorting mechanism	C. C. Small	707,141	Aug. 19	2181	499	100	1596
Nail-extractor	E. N. Sperry	708,841	Sept. 9	1561	356	100	2312
Nail-machine	E. Schwarz	705,450	July 22	4082	887	100	876
Napkin-support	W. R. Walker	708,864	July 1	808	197	100	180
Nebulizer	C. Truax	707,292	Aug. 19	2457	551	100	1656
Necktie	D. Oppenheimer	704,509	July 15	2262	490	100	498
Necktie	H. G. Streat	704,501	July 15	2205	498	100	495
Necktie	F. A. Arbenz	708,192	Sept. 2	363	86	100	2055
Necktie	C. Reynolds	708,680	Sept. 23	2944	725	100	2695
Necktie	J. A. Clinton	708,892	July 29	3965	857	100	849
Necktie-fastener	J. Weil	708,501	July 29	4175	908	100	892
Necktie-fastener	O. Kraus	707,786	Aug. 26	3476	788	100	1851
Necktie-fastener	M. E. Whittemore	708,800	July 29	4791	1040	100	1060
Needle. Tape-	O. A. Aicardi	707,191	Aug. 19	2398	511	100	1660
Needle-threader							

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Negative plates for bichromated-gelatin processes. Producing	A. Leuchter	710,106	Sept. 30	4096	935	100	2892
Negatives. Producing trichromatic half-tone-process	F. E. Ives	707,491	Aug. 19	2710	614	100	1708
Net. Landing-	T. S. Coffin	708,797	Sept. 9	1461	334	100	2302
Newspapers. Inserting-machine for	S. R. Hayden	707,587	Aug. 26	3041	691	100	1798
Nickel and copper-nickel ores. Treatment of	C. Perron	709,277	Sept. 16	2445		100	2515
Nickel. Melting	H. L. Haas	709,218	Sept. 16	2393		100	2489
Nipple	E. E. Menges	710,114	Sept. 30	4113	936	100	2886
Nipple. Bottle-	P. Gauss	705,916	July 29	5009	1069	100	1072
Nitro compounds. Separating solvents from	E. Gathmann	704,688	July 15	2353	511	100	507
Nitrogen compounds from atmospheric nitrogen. Manufacturing	C. S. Bradley and D. R. Lovejoy	709,867	Sept. 30	3811	816 817	100	2784
Nozzle	C. R. Harris	705,734	July 29	4716	1020	100	1018
Nozzle for urinals. Spray-	W. U. Griffiths	708,651	July 1	505	114	100	99
Nozzle-grip	W. G. Esch	708,537	Sept. 9	969	219	100	2139
Nozzle-grip	W. G. Esch	708,538	Sept. 9	970	219	100	2139
Nozzles. Safety attachment for hydraulic	P. Bouéry	708,603	Sept. 9	1349	295	100	2245
Numbering apparatus. Consecutive-	O. G. Bartusch	708,206	Sept. 2	554	126	100	2094
Numbering-machine	A. P. Waterman and G. H. E. Berthod.	709,128	Sept. 16	2143	491 492	100	2452
Numbering-machine	J. J. Chattaway	710,140	Sept. 30	4171	940	100	2900
Numbering-machine	F. M. Turck	710,380	Sept. 30	4594	1037	100	2989
Nut-cracker	K. Hordish	706,179	Aug. 5	347	74	100	1187
Nut-cracker	A. Wickstrom	707,997	Aug. 26	3692	874	100	1964
Nut-lock	M. Bartley. (Reissue)	12,006	July 1	1120	242	100	222
Nut-lock	J. Butler	708,380	July 1	31	7	100	9
Nut-lock	A. McKinley	708,448	July 1	148	32	100	31
Nut-lock	J. W. B. Turk	708,504	July 1	228	53	100	46
Nut-lock	J. F. Robinson	708,612	July 1	430	98	100	83
Nut-lock	G. H. Layng	704,053	July 8	1260	272	100	264
Nut-lock	F. K. Popplewell	704,101	July 8	1378	297	100	290
Nut-lock	R. D. Hughes	704,332	July 8	1704	362	100	377
Nut-lock	G. Coleman	704,617	July 15	2328	507	100	503
Nut-lock	A. Grumme	704,633	July 15	2361	513	100	509
Nut-lock	J. McVey	705,130	July 22	3367	730	100	731
Nut-lock	R. Mingres and J. Ewell, Jr.	705,430	July 22	4053	872	100	864
Nut-lock	C. L. Dunham	705,743	July 29	4700	1017	100	1010
Nut-lock	G. W. Vandevender	705,797	July 29	4787	1039	100	1029
Nut-lock	H. Anderson	705,812	July 29	4812	1044	100	1054
Nut-lock	O. Baillargeon	706,212	Aug. 5	401	86	100	1198
Nut-lock	H. W. Langham	706,325	Aug. 5	648	141	100	1246
Nut-lock	F. Hart	706,409	Aug. 5	882	179	100	1289
Nut-lock	R. Kantner	706,955	Aug. 12	1636	411	100	1508
Nut-lock	W. Graham	707,103	Aug. 19	2112	471	100	1582
Nut-lock	J. P. Birmingham	707,499	Aug. 19	2540	642	100	1736
Nut-lock	L. McConnell	708,398	Sept. 2	602	156	100	2121
Nut-lock	E. S. Grise	708,695	Sept. 9	1134	256	100	2223
Nut-lock	C. H. Chittum	708,865	Sept. 9	1609	398	100	2324
Nut-lock	G. H. Roberts, Sr	709,043	Sept. 16	1978	432	100	2416
Nut-lock	G. L. Pittman	709,357	Sept. 16	2599	584	100	2546
Nut-lock	S. C. Baughn, Jr	709,433	Sept. 16	2758	619	100	2581
Nut-lock	T. Lynch	709,717	Sept. 23	3309	743	100	2708
Nut. Lock-	P. J. Wilson	704,162	July 8	1496	321	100	314
Nut-lock for rail-joints	C. W. Robinson	705,612	July 29	4457	966	100	963
Nut. Vehicle-axle lock-	W. Belfield, R. Shearer, J. Findlay, and G. Belfield.	710,340	Sept. 30	4359	980	100	2941
Nut-wrench. Adjustable	J. T. Viles	710,382	Sept. 30	4401	1038	100	2990
Nut wrench. Axle-	R. A. Moody	707,348	Aug. 19	2382	533	100	1640
Oar attachment	M. A. Linder	708,158	Sept. 2	287	69	100	2041
Oar. Bow-facing	R. B. Hanson	706,491	Aug. 5	975	214	100	1313
Oar-lock guard	D. W. Marion	706,857	Sept. 23	3333	719	100	2650
Odds-indicator	H. Ditchburn	708,379	Sept. 2	688	154	100	2120
Oil and air mixing and gas-generating apparatus	J. Behm	704,732	July 15	2531	547	100	544
Oil and making same. Paint-	J. F. Krebs	705,961	Aug. 12	1846		100	1510
Oil. Apparatus for separating naphtha from	E. R. Edson	704,011	July 8	1184	258	100	251
Oil-burner	A. H. Fox	708,566	July 1	340	77	100	68
Oil-burner	E. B. Raymond	704,374	July 8	1395	309	100	308
Oil-burner	J. W. Lewellen	705,418	July 22	4013	868	100	862
Oil-burner	J. S. Chenhalls	705,820	July 29	4827	1048	100	1037
Oil-burner	L. A. Pfeiffer and L. D. Staples	706,341	Aug. 5	670	147	100	1202
Oil-burner	G. W. Arper	708,091	Sept. 9	1244	286	100	2245
Oil-burner	O. Tillman	708,978	Sept. 9	1829	421	100	2368
Oil-burner	E. Stewart	709,370	Sept. 16	2643	598	100	2629
Oil-burner	J. P. Simonsen	709,808	Sept. 23	3491	787	100	2744
Oil-burner	S. M. Trapp	709,941	Sept. 30	3775	832	100	2816
Oil burner. Crude-	J. A. Meyer	708,706	July 1	611	136	100	121
Oil burner. Crude-	H. G. Tucker	704,669	July 15	2492	532	100	532
Oil-cake-packing apparatus	A. W. French	708,218	Sept. 2	414	95	100	2066
Oil-can	T. Vojta	708,566	July 1	896	197	100	150
Oil-can	J. A. Baeuerle	705,013	July 22	3187	681	100	689
Oil-distributing apparatus for calming waves	N. Salvesen	710,013	Sept. 30	3980	895	100	2947
Oil. Extracting	L. D. Vorce	704,989	July 15	2099	666	100	661
Oil-feeder. Water-pressure safety	J. C. Quinn	708,484	July 1	883	188	100	166
Oil-fuel generator	W. H. Dye	705,565	July 29	4857	946	100	945
Oil heater, strainer, and separator	E. A. Burrow	707,780	Aug. 26	3421	770	100	1870
Oil-hole protector	F. L. Everhardt and H. F. Emme	706,809	Aug. 12	1573	338	100	1455
Oil. Paint-	W. E. Dempster	706,907	Aug. 12	1755		100	1498
Oil. Producing cotton-seed	C. O. Phillips	705,785	July 29	4795	1033	100	1034
Oil-refining apparatus	E. Douillet	707,980	Aug. 26	3811	856	100	1947
Oil-retaining box	G. W. Wilmot, N. Maley, and G. T. Brown.	707,043	Aug. 12	1964	445	100	1529
Oil-separator	R. Schulz	707,728	Aug. 26	3398	745	100	1858
Oil-spraying apparatus	W. S. Proskey	707,686	Aug. 26	3131	705	100	1813
Oil-vapor engine	G. Wood	708,511	July 1	243	53,57	100	80
Oil-yieldable or oil-containing material. Drying	E. R. Edson	708,585	July 1	57	11	100	14

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Oils. Apparatus for separating solvents from	L. D. Vorce	704,990	July 15	2102	668	100	661
Oils. Extracting	A. F. Lundeberg	707,856	Aug. 26	3024	817	100	1909

Optical instrument. Educational	G. W. McFatrich	709,792	Sept. 23	3465	780 781	100	2740
Optical-instrument guard	P. S. Reid	708,881	Sept. 9	1541	352	100	2308
Optical wire	D. V. Brown	704,778	July 15	2617	566	100	561
Orange or lemon cleaner	J. T. Haley	708,916	July 1	996	217	100	199
Ordnance	J. Kurig	708,181	Sept. 2	282	67.68	100	2039
Ordnance. Breech block and chamber for	C. Holmström	705,841	July 29	4860	1055	100	1043
Ordnance. Breech-loading	J. W. Stockett	705,187	July 22	3445	749	100	747
Ordnance breech mechanism	H. Maxim	708,894	Sept. 9	1647	378 379	100	2331
Ordnance. Device for the prevention of erosion in	K. Deinlein	707,135	Aug. 19	2158	485	100	1592
Ordnance firing-gear	G. Ehrhardt	704,896	July 15	2703	603 604	100	598
Ordnance. Firing-pin arrangement for breech-loading	R. T. Brankston	709,701	Sept. 23	3282	735	100	2702
Ordnance-loading apparatus	A. T. Dawson and J. Horne	704,955	July 15	3029	650	100	649
Ordnance ramming apparatus	W. H. Bevans	708,870	Sept. 9	1618	370 371 372	100	2326
Ordnance. Semi-automatic breech-loading	G. H. Hulett	708,375	July 1	21	5	100	7
Ore-bin	A. C. Calkins	708,761	July 29	4727	1023	100	1015
Ore-breaker	H. S. Bailey and W. E. Wild	707,385	Aug. 19	2540	596	100	1694
Ore-concentrator	A. J. Petter	706,793	Aug. 12	1542	345 346	100	1447
Ore crusher and pulverizer	C. C. Lane	708,451	July 1	100	37	100	34
Ore-crushing machine	J. Brown	709,822	Sept. 23	3528	795	100	2753
Ore-leaching apparatus	W. H. Motter	709,135	Sept. 16	2160	495	100	2456
Ore-roasting and fume-saving apparatus. Combined	A. M. Beam	708,977	Sept. 9	1827	420 421	100	2367
Ore-roasting apparatus	D. C. Jackling	708,415	Sept. 9	1108	247 824 825 826 827	100	2215
Ore-roasting furnace	S. E. Bretherton	706,756	Aug. 12	1471	596 599	100	1433
Ore-sampler	B. C. Cook	704,858	July 15	2769	598	100	593
Ore-separating apparatus	H. L. Sulman and H. F. Kirkpatrick-Picard.	706,163	Aug. 5	316	67	100	1181
Ore slimes. Treatment of	H. E. Way	708,504	Sept. 2	910	206	100	2166
Ore-testing tablet	J. M. Longan	704,409	July 8	1942	420	100	409
Ore washer and separator	A. W. Chase	705,104	July 22	3340	725	100	726
Ores and by-products containing sulfur and iron. Treating	T. A. Edison	709,745	Sept. 23	3377	758	100	2720
Ores. Apparatus for concentrating magnetic iron	C. E. Dolbear	704,010	July 8	1180	237	100	250
Ores. Electrolytically treating	A. D. Elbers	709,817	Sept. 23	3519	.....	100	2751
Ores for blast-furnaces. Treating fine iron	F. T. Mumford	708,331	Sept. 2	616	.....	100	2107
Ores or slimes. Apparatus for the electrolytical treatment of	A. D. Carmichael	706,436	Aug. 5	887	191	100	1294
Ores preparatory to smelting. Desulfurizing of sulfid	J. Herman	705,904	July 29	4974	.....	100	1067
Ores. Treating	E. Ferraris	707,107	Aug. 19	2123	.....	100	1585
Ores. Treating mixed sulfid	W. E. and C. S. Haskell	707,506	Aug. 19	2859	.....	100	1788
Organ	J. A. and W. McIntosh	708,765	Sept. 9	1391	318	100	2277
Organ-pipe. Compensating	R. H. Page	709,349	Sept. 16	2577	581	100	2543
Organic peroxids. Making	J. P. Rudolph	710,005	Sept. 30	3902	881	100	2843
Ornamenting surfaces	J. Koetschet	708,498	Sept. 2	898	208	100	2164
Ortho-sulfonated toluylic aldehyde and making same.	W. H. Forker	709,159	Sept. 16	2220	.....	100	2467
Oval-cutting machine	S. A. Henry	705,576	July 29	4985	950 951	100	948
Oven	G. F. Smith	704,828	July 8	1798	391	100	375
Oven. Baker's	C. E. Glafke	706,851	Aug. 5	695	152	100	1256
Oven. Baker's	W. H. Dahman	708,975	Sept. 9	1824	410	100	2306
Oven. Knockdown	J. W. Lewellen	704,300	July 8	1738	379 380	100	365
Oven or furnace	J. Nestor	710,284	Sept. 30	4432	999	100	2967
Oven. Portable bake-	F. H. Van Houten	704,660	July 15	2406	520	100	519
Oven. Rotary bake-	G. W. Treichel	707,187	Aug. 19	2278	510	100	1619
Oven-swab	B. W. Tucker	708,979	July 29	5108	1114	100	1094
Overseaming-machine. Blind-stitch	H. A. Hamilton and F. H. Crawford.	708,486	July 22	4144	901 902	100	897
Overshoe	A. N. Dubois	708,547	Sept. 9	993	222	100	2192
Oxidizing apparatus	S. Blagden	708,874	Sept. 9	1620	374	100	2337
Oyster-opening tool	A. Vosmaer	708,014	Sept. 2	24	6	100	1986
Ozonizing apparatus	E. H. Davis	709,427	Sept. 16	2744	617	100	2578
Package	O. M. Pond	708,696	Sept. 9	1254	286	100	2246
Package-carrier	E. J. Stewart	704,368	July 8	1870	406	100	396
Package-carrier	S. de Pless Pol	709,986	Sept. 30	3767	851	100	2814
Package-carrying device	A. C. McLoon	705,439	July 22	4058	890	100	872
Package for lobsters, &c.	W. H. Doble	704,563	July 15	2258	488	100	495
Packaging-machine		708,627	Sept. 9	1122	252 253	100	2290

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Packing case or box	C. Thiebaut	707,188	Aug. 19	2269	507	100	1616
Packing-holder for piston-rods	A. E. Macindoe	706,976	Aug. 12	1866	417	100	1514
Packing mechanism	O. Tyberg	708,688	Sept. 9	1288	281	100	2240
Packing mechanism	O. Tyberg	708,787	Sept. 9	1498	328 329	100	2286
Packing. Metallic	A. J. Zwart	706,290	Aug. 5	579	125 126	100	1223
Packing. Metallic	T. Smith	708,208	Sept. 2	501	115	100	2038
Packing powdery substances	A. Wultze	704,728	July 15	2527	546	100	543
Packing-ring	T. Officer	704,568	July 15	2261	489	100	488
Packing-ring	H. Kirschning	707,980	Aug. 26	3753	844	100	1988
Packing. Rod-	S. Udstad	704,598	July 15	2307	501	100	497
Packing. Rod-	A. B. Pratt	710,337	Sept. 30	4321	1019	100	2975
Packing sliding gate-valves. Device for	L. Hirt	708,588	July 1	509	85	100	73
Packing structure. Cellular	H. H. Higham	707,415	Aug. 19	2701	611	100	1705
Packing. Stuffing-box	W. Reinhold	708,469	July 1	149	39	100	86
Packing. Stuffing-box	P. Redford	709,511	Sept. 23	2955	660	100	2635
Pad: *See* Corn-pad. Hoof-pad. Horseshoe-pad. Saddle-pad. Stair-pad. Writing or copying pad.							
Paddle-wheel	F. Exline	704,477	July 8	2376	450	100	437
Paddle-wheel	F. Exline	704,478	July 8	2379	451	100	437
Paddle-wheel	J. J. Graham	705,397	July 22	3980	862	100	854
Padlock	F. W. Pinson	704,269	July 8	1683	367	100	353
Padlock. Permutation-	D. R. Coughlen	707,676	Aug. 26	3252	723	100	1681
Pail and heater. Dinner	J. H. Ablett	704,492	July 15	2111	457	100	457
Pail attachment. Milk-	M. F. Potter	708,582	Sept. 9	1041	235	100	2208
Pail bottom. Milk-	C. S. Crow	703,551	July 1	317	72	100	64
Pail-filling and indicating device	J. H. Wilson	710,230	Sept. 30	4342	976	100	2938
Pail-hook	C. W. Mitchell	709,019	Sept. 30	3735	841	100	2810
Pail. Milk-	S. Bruckmann	705,642	July 29	4498	976	100	970
Pail. Milk-	J. H. King	705,678	July 29	4574	993	100	986
Pail. Slop-	R. Logan	708,971	Aug. 12	1850	416	100	1512
Pail. Wash-	F. E. Libenow	704,481	July 8	2387	453	100	439
Paint	G. W. and A. J. Doore	704,959	July 15	3041	.....	100	650
Paint	W. Lennard-Foote	705,938	July 29	5088	.....	100	1079
Paint	J. C., W. J., and R. E. Shaw	706,119	Aug. 5	215	.....	100	1160
Paint	F. H. Crass	707,677	Aug. 26	3223	.....	100	1681
Paint or varnish. Composition for removing	F. Priestman	705,189	July 22	3420	.....	100	742
Painter's tool	G. Henderson	705,340	July 22	3902	844	100	808
Painting apparatus	C. L. Bauer	708,370	July 1	11	3	100	5
Painting apparatus	H. D. Carryl	708,385	July 1	40	8	100	10
Painting metal furniture. Drip-pan for	H. E. Crome	707,087	Aug. 19	2080	465	100	1575
Pan: *See* Ash-pan. Dust-pan. Extensible pan. Soot or ash pan.							
Pan-lifter	F. Lombard	708,432	July 1	118	26.27	100	95
Panel-board. Electrical	H. Krantz	705,850	July 29	4882	1061	100	1048
Panel, lining, ceiling, and floor for buildings, &c., and paving for streets. Wooden	W. T. Crosse	705,737	July 29	4690	1014 1015	100	1008
Paper bag	N. Laird	708,234	Sept. 2	440	100	100	2071
Paper-bag fastener	S. S. Smith	707,030	Aug. 12	1964	440	100	1584
Paper-bag machine	W. I. Baldwin and E. A. Kline	708,625	July 1	468	107	100	92
Paper-bag machine	H. E. Westervelt	709,120	Sept. 16	2146	492 493	100	2452
Paper-bag-making machine	C. F. Kellner	704,807	July 15	2980	580 581 582	100	575
Paper bags. Making	D. Appel	708,001	Sept. 2	1	1	100	1991
Paper-blank feeding and scoring machine	C. H. Palmer and J. W. Denmead	705,098	Aug. 5	179	37	100	1153
Paper-board burial-caskets. Mold for making	E. A. Post	708,075	Sept. 2	143	35	100	2010
Paper box	H. S. Miller	709,345	Sept. 16	2572	580	100	2542
Paper-box blanks. Furniture for forming	J. T. Craw and F. Schley	705,389	July 22	3985	859	100	851
Paper box. Folding blank	D. I. Winslow	708,298	Sept. 2	538	122	100	2091
Paper-clip	S. R. Strattan	709,583	Sept. 23	2985	665	100	2649
Paper clip or fastener	A. Shedlock	708,485	July 1	194	46	100	41
Paper-coating machine	J. Chevalier, N. and E. Lajoie	704,434	July 8	1992	431	100	417
Paper cutting and collating machine	W. Y. Dear	704,472	July 8	2065	447 448	100	434
Paper-cutting machine	C. D. Blackhall	707,294	Aug. 19	2474	555	100	1659
Paper-cutting machine	H. W. Mather	708,722	Sept. 9	1311	299	100	2259
Paper-drying machine	A. G. Paul and H. A. Joslin	705,606	July 29	4446	964	100	961
Paper feeder	E. Dummer	704,444	July 8	2002	436	100	421
Paper hanger. Wall-	J. P. Cannon	708,194	Sept. 2	282	54	100	2029
Paper-holder	E. Brugeolles	704,734	July 15	2537	548	100	546
Paper-machine couch-roll attachment	F. E. McEvoy	704,079	July 8	1322	288	100	277
Paper machine. Lace-	J. R. Thompson	709,615	Sept. 23	3133	698	100	2672
Paper machine. Wall-	C. B. Weston	707,299	Aug. 19	2468	553	100	1656
Paper-machines. Apparatus for removing rolls of material from	M. A. Craft	705,388	July 22	3963	858	100	851
Paper-machines. Wire-cloth for	R. Kron, Jr.	709,228	Sept. 16	2342	531	100	2498
Paper, &c. Machinery for cutting and folding	R. C. Seymour	710,080	Sept. 30	4088	910 911	100	2872
Paper, &c. Machinery for folding, packing, and stacking sheets of	R. C. Seymour	706,292	Aug. 5	508	107 108 109	100	1217
Paper-making	A. Outerson	704,572	July 15	2286	491	100	489
Paper-making machine	C. H. Warner	708,714	July 1	625	139 140	100	128
Paper-making machine	G. Ehrhart	708,775	July 1	735	153	100	148
Paper-making machine	G. S. Witham	704,607	July 15	2319	503 504	100	500
Paper-making machine	J. F. Richards	707,014	Aug. 12	1928	432 433	100	1567

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drf.	Official Gazette. Vol.	Official Gazette. Page.
Paper-making machine suction-box cover	W. M. and T. M. Gilbert and W. C. Nash.	708,219	Sept. 2	417	96	100	2066
Paper-making machines. Suction-box for	J. B. Lynch	705,884	July 29	4581	995	100	987
Paper-making wire for paper-making machines	H. Parker	709,084	Sept. 16	1968	449	100	2412
Paper. Package for carbon or other thin	J. T. Miller	704,558	July 15	2944	486	100	485
Paper-perforating machine	S. Wheeler	707,895	Aug. 26	3680	488	100	1921
Paper-pulp strainer	N. L. Vrooman and R. R. Kirkland.	708,582	July 1	571	127 128	100	113
Paper-roll holder	W. H. Belknap	710,084	Sept. 30	3958	891	100	2854
Paper-roll mandrel	F. Schön	708,740	Sept. 9	1837	305	100	2365
Paper trimming and pasting machine. Wall-	J. P. Sproot	708,419	Sept. 2	753	169 170	100	2133
Paper-tube-making machine	J. H. and E. L. White	710,386	Sept. 30	4606	1040	100	2998
Paper-tube-refolding machine	H. S. Munson	709,501	Sept. 23	3584	654 655	100	2631
Paper-tube-refolding machine	H. S. Munson	709,502	Sept. 23	3588	655	100	2632
Paper-tube-refolding machine	H. S. Munson	709,503	Sept. 23	3641	656	100	2633
Paper. Waterproofing	C. S. Bird and J. B. Hanscom	708,454	Sept. 2	816	195	100	2147
Papers and letters. Receptacle for	D. F. Bennett	708,617	Sept. 9	1106	248	100	2216
Parcel receiving and delivering device	T. L. Brooks	708,859	Sept. 9	1595	365 366	100	2321
Parchment free from germs. Producing vegetable.	A. Mackensen	705,687	July 29	4597	.....	100	988
Parer and slicer	G. W. Paul	707,798	Aug. 26	3518	799	100	1899
Parer. Apple-	J. Jacobs	707,700	Aug. 26	3270	731	100	1841
Parer. Apple-	M. B. Brooks	710,351	Sept. 30	4546	1025 1026	100	2980
Parer feeding apparatus. Fruit-	L. I. Yeomans	710,390	Sept. 30	4616	1041	100	2994
Pasteurizing apparatus	B. F. Schirmer	708,739	Sept. 9	1354	304	100	2264
Pattern. Dress-skirt	H. Guidez	704,794	July 15	2646	572	100	567
Pattern-plate	C. R. Davis	707,397	Aug. 19	2668	601 602	100	1699
Paving. Manufacture of bituminous	W. S. Wilkinson	705,728	July 29	4657	.....	100	1004
Paving mixture or composition. Asphaltic	W. S. Wilkinson and C. H. Burchinal.	705,803	July 29	4797	.....	100	1051
Pea-sheller	L. A. Aspinwall	709,657	Sept. 23	3300	714 715	100	2665
Peat for fuel purposes. Preparing bog-	A. Charon	709,664	Sept. 23	3217	.....	100	2599
Peat-press	W. A. Milne	708,574	Sept. 9	1690	239	100	2201
Pedestal-clamp	J. A. Lindstrom	706,553	July 15	2235	484	100	483
Pegging-machine	J. E. Bickford	707,398	Aug. 19	2639	642	100	1736
Pegging-machine horns. Peg-cutter for	J. E. Bickford	708,961	July 1	1056	230	100	210
Pellet or tablet making apparatus	E. Petranyi	708,777	Aug. 12	1510	335 336	100	1441
Pen	S. H. Crocker	708,549	July 1	815	71	100	84
Pen. Fountain-	J. Holland	708,418	July 1	96	21	100	22
Pen. Fountain-	W. W. Sanford	708,479	July 1	185	44	100	39
Pen. Fountain-	W. E. Lindsay	704,222	July 8	1673	364	100	350
Pen. Fountain-	J. Bovill	705,316	July 22	3965	825	100	819
Pen. Fountain-	R. C. Paine	705,956	July 29	5074	1105	100	1098
Pen. Fountain-	P. E. Wirt	708,140	Aug. 5	259	54	100	1171
Pen. Fountain-	P. E. Wirt	708,141	Aug. 5	263	54, 55	100	1172
Pen. Fountain-	P. E. Wirt	708,221	Sept. 2	420	96	100	2097
Pen. Fountain-	R. T. Gillespie	708,572	Sept. 9	1098	232	100	2201
Pen. Fountain-	C. F. Miller	709,307	Sept. 16	2504	564	100	2598
Pen. Fountain-	R. B. Dickie	704,691	July 15	2455	530	100	598
Pen fountain-holder	A. L. Baer	708,641	July 1	497	110	100	96
Penholder	S. H. Crocker	709,180	Sept. 16	2152	494	100	2454
Penholder	F. M. Zeek	710,293	Sept. 30	4446	1002	100	2959
Pen or pencil holder	J. S. McClung	709,260	Sept. 16	2409	545	100	2507
Pen. Reservoir-	R. T. Gillespie	709,731	Sept. 23	3359	749	100	2718
Pens. Filling or refilling fountain-	R. H. Ashcroft	708,964	Sept. 9	1798	413	100	2351
Pencil and making same	L. Holzworth	710,255	Sept. 30	4385	986	100	2940
Pencil and sharpener therefor	R. Y. Cormack	709,337	Sept. 16	2358	575	100	2540
Pencil-case	W. A. Leary	705,900	July 29	4968	1081	100	1065
Pencil. Lead-	L. C. Benitz	708,907	July 1	1101	237	100	218
Pencil-sharpener	W. O'Byrne	705,323	July 22	3815	827	100	821
Pencil-sharpener	F. A. Cortis	708,721	July 1	643	142	100	128
Pencil-tip	L. W. Faber	705,647	July 29	4508	979	100	973
Pendulum. Conical	F. M. Clark	706,554	Aug. 12	1668	371	100	1474
Perambulator	C. W. R. Schulze	704,988	July 15	3048	654	100	651
Perch. Poultry-	O. L. Harrod	709,571	Sept. 23	3051	668	100	2657
Perfect-combustion furnace	W. N. Best	709,566	Sept. 23	3051	679 680	100	2654
Perforating-machine	E. A. Trussell	708,626	Sept. 9	1134	256 257 258	100	2226
Perforating, ring forming, and inserting machine. Combined	T. Hawthorne	706,152	Aug. 5	290	61 62 63	100	1176
Permutation-lock	W. Beebe	704,307	July 8	1751	389	100	366
Perspectograph	O. Eichenberger	705,385	July 22	3782	811	100	804
Pessary	B. F. Overton	705,393	July 22	3970	860	100	852
Pessary	D. B. De Waltoff	709,675	Sept. 23	3535	723	100	2693
Pessary	C. Hollweg	705,772	July 29	4744	1037	100	1019
Phonogram-reproducing apparatus	W. F. Messer	707,749	Aug. 26	3400	766 767	100	1866
Phonograph	H. Winkelmann	708,561	Sept. 9	1040	235	100	2206
Phonograph	W. Peisker	706,937	Aug. 12	1715	369	100	1479
Phonograph attachment	M. M. Worthington	708,980	July 1	1087	235	100	207
Phonograph-record-supporting device	G. Madison	708,774	July 1	783	162 163	100	147
Phonograph-reproducer	T. A. Edison	709,984	Sept. 30	4970	878	100	2986
Phonograph resonator or amplifier	W. S. How	707,904	Aug. 19	2305	516	100	1685
Phonographs, &c. Recorder for	H. V. Butterworth	708,989	July 1	1019	221	100	208
Photochromoscopic and trichromatic apparatus	F. E. Ives	710,227	Sept. 30	4354	978 979	100	2940
Photochromoscopic apparatus	T. K. Barnard	708,496	Sept. 2	779	178	100	2159
Photo-engravers' plates. Machine for beveling	F. Wesel						

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drf.	Official Gazette. Vol.	Official Gazette. Page.
Photograph-burnisher	C. J. Dorticus	709,757	Sept. 23	3395	753	100	2734
Photograph-holder	H. J. G. Lambrecht and C. Schielke.	707,850	Aug. 26	3516	815	100	1908
Photograph-mounting apparatus	I. G. Grant	708,349	Sept. 2	631	142 143	100	2109
Photograph-toning apparatus	A. Schwarz	708,671	July 1	646	124	100	108
Photographs in relief. Producing	W. Ohse	706,774	Aug. 12	1506	334	100	1440
Photographs, &c. Producing enameled polychrome.	H. Perrin	708,918	Sept. 9	1707	.....	100	2344
Photographic apparatus. Automatic	G. N. Pifer	708,166	Sept. 2	807	73 74 75	100	2045
Photographic apparatus. Coin-controlled	G. N. Pifer	708,167	Sept. 2	815	75	100	2045
Photographic apparatus. Means for loading automatic	G. N. Pifer	708,164	Sept. 2	804	73	100	2044
Photographic apparatus. Panoramic	A. and L. Lumière	708,775	Sept. 9	1406	323	100	2260
Photographic apparatus. Shutter for automatic	G. N. Pifer	708,168	Sept. 2	818	76	100	2046
Photographic attachment for optical instruments	F. E. Ives	707,422	Aug. 19	2712	614 615	100	1708
Photographic card-mounts. Device for manufacture of	P. J. Stuparich	708,675	Sept. 9	1212	276	100	2228
Photographic developer	A. Eichengrün	707,408	Aug. 19	2677	.....	100	1701
Photographic developing apparatus	E. Rimailho	707,450	Aug. 19	2756	625	100	1717
Photographic developing-case or dark cabinet. Portable and separable	T. T. Patchel	706,101	Aug. 5	183	38	100	1154
Photographic emulsion	Y. Schwartz	710,019	Sept. 30	3928	.....	100	2940
Photographic-exposure meter	R. W. Whitney	709,350	Sept. 16	2305	542	100	2405
Photographic film	C. H. Shaw	709,058	Sept. 16	2000	466	100	2420
Photographic film and making same. Casein	O. Buss	705,642	July 29	4499	.....	100	971
Photographic films. Apparatus for developing	A. W. McCurdy	707,791	Aug. 26	3498	787 788 789	100	1884
Photographic films. Apparatus for developing and fixing cartridge	M. Reichert	706,852	Aug. 12	1654	370	100	1473
Photographic or similar apparatus. Adjustable support for	P. Thill	704,403	July 8	1984	419	100	407
Photographic plate	G. N. Pifer	708,165	Sept. 2	806	73	100	2045
Photographic-plate holder	W. H. Lewis	708,870	Sept. 2	660	151	100	2117
Photographic prints. Revolving trimmer for	J. Mathein	704,352	July 8	1651	401	100	391
Photographic-printing frame	W. H. Lewis	708,869	Sept. 2	668	151	100	2117
Photographic-printing frame	S. S. Johnson	708,770	Sept. 9	1400	321	100	2279
Photographic recording apparatus. Automatic	A. de Khotinsky	708,813	Sept. 9	1496	343 344 345	100	2300
Photographic shutter	G. S. Dey	704,781	July 15	2619	567 568	100	562
Photographic shutter	W. F. Folmer	706,507	Aug. 5	1000	220	100	1319
Photographic shutter	E. Dönitz	709,079	Sept. 16	2053	468 469	100	2432
Photographic-shutter mechanism	C. A. Muller	709,500	Sept. 23	2980	654	100	2630
Photographic-shutter releasing or operating mechanism	A. H. Edwards	708,876	Sept. 9	1630	374 375	100	2298
Photographic view-finder	J. A. Robertson and C. E. Hutchings.	704,379	July 8	1896	410	100	400
Photographing and exhibiting kinematographic pictures. Apparatus for	L. U. Kamm	708,148	Sept. 2	276	66	100	2038
Photography. Apparatus for animated	H. M. Reichenbach	710,339	Sept. 30	4594	1080 1081	100	2976
Photosculpture apparatus	W. A. C. Selke	706,860	Aug. 12	1665	373 374	100	1475
Piano extension-pedal	R. F. Lotspeich	707,706	Aug. 26	3284	725	100	1843
Piano foot-rest and pedal extension	A. M. Bates	704,498	July 15	2123	459	100	459
Pianoforte-action	G. M. Guild	709,630	Sept. 23	3158	705	100	2676
Pianoforte wrist-supporting attachment	A. M. Jones	704,343	July 8	1825	396	100	385
Piano-player	A. E. Whitehead	705,000	July 15	3119	672	100	665
Piano-player. Pneumatic	S. B. Locklin	706,574	Aug. 12	1114	246 247	100	1356
Piano-player valve	J. H Chase	710,097	Sept. 30	4070	920 921	100	2980
Piano self-playing attachments. Pedal for	J. Wieser	705,002	July 15	3123	673	100	666
Piano-string bearing	H. McClellan	708,708	July 1	613	136	100	121
Pick. Coal-	F. Horn	704,039	July 8	1239	266	100	261
Picker: *See* Fruit-picker.							
Picker-stick strap	C. Faber	707,406	Aug. 19	2681	605	100	1702
Pickling and swilling apparatus	J. R. Phillips	708,860	Sept. 9	1190	271 272	100	2234
Picture-mat-cutting machine	C. I. Shawver	709,116	Sept. 16	2128	497	100	2448
Picture or design and making same	C. Naylor	704,564	July 15	2254	488	100	487
Pictures. Apparatus for animated	J. Bianchi	708,305	Sept. 2	566	129	100	2097
Pigeon timing device. Carrier-	E. Buysse	708,381	July 1	32	7	100	9
Pigment	A. S. Ramage	708,584	Sept. 9	1045	.....	100	2204
Pigments. Making	J. Lones	707,434	Aug. 19	2733	.....	100	1713
Pile-driver	J. H. Hopkins	705,596	July 29	4402	954	100	952
Pile fabric. Producing figured	O. Timme	705,977	July 29	5106	1113	100	1093
Piling. Sheet-	L. P. Friestedt	707,687	Aug. 26	3589	810 811	100	1908
Pill-making machine	J. N. Dews	704,867	July 15	2796	604	100	598
Pillow-brusher	F. Franke	708,722	July 1	643	142	100	128
Pin: *See* Bowling-alley pin. Rolling-pin. Hair-pin. Safety-pin. Hat-pin.							
Pin	G. W. Dover	706,168	Aug. 5	325	69	100	1183
Pin-fastening device	J. Zelly	708,610	Sept. 9	1094	246	100	2214
Pin-tongue safety device	O. Wentzel	708,715	July 1	627	140	100	124
Ping-pong-table net-support	A. Ek	709,669	Sept. 23	3227	730	100	2691

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Pipe: *See* Heating or cooling pipe. Organ-pipe. Railway stand-pipe. Sheet-metal pipe. Smoking-pipe. Stovepipe. Tobacco-pipe.							
Pipe-bending apparatus	W. W. Benson	706,010	Aug. 5	13	3,4	100	1119
Pipe-bracket. Removable	F. F. Parsons	708,454	July 1	151	35	100	32
Pipe-clamp	H. P. G. Reed	706,780	Aug. 12	1518	387	100	1443
Pipe-cleaning apparatus	E. D. Case	709,302	Sept. 16	2495	562	100	2535
Pipe-coupling	J. W. S. Nycum	704,909	July 15	2598	624	100	696
Pipe-coupling	A. M. Kidd and W. A. Gibbons	709,779	Sept. 23	3444	775	100	2785
Pipe-coupling	L. S. Osgood	710,076	Sept. 30	3001	690	100	2943
Pipe-coupling	W. G. Trethewey	707,988	Aug. 26	3958	889	100	1958
Pipe coupling. Automatic train-	H. H. Warner	708,103	Sept. 2	188	44, 45	100	2080
Pipe coupling mechanism. Railway steam or air	T. M. Henderson	709,401	Sept. 16	2696	605	100	2568
Pipe coupling. Train-	A. G. Scherer	704,926	July 15	2985	639	100	640
Pipe-elbow and fastening means therefor. Adjustable	E. H. Smith	709,119	Sept. 16	2127	488	100	2449
Pipe-elbow blank	J. H. Schlafly	707,648	Aug. 26	3163	711	100	1818
Pipe ends. Machine for tapering corrugated-	C. W. Smart	705,971	July 29	5098	1111	100	1092
Pipe-hanger	A. J. Beaton	705,292	Aug. 5	585	127	100	1295
Pipe-hanger	J. Crawford	706,963	Aug. 12	1751	391	100	1498
Pipe-hanger	H. S. Collins	709,815	Sept. 23	3518	798	100	2751
Pipe-hanger	D. P. Upson	705,724	July 29	4661	1010	100	1002
Pipe holder or clutch	W. Kenneally	708,586	July 1	385	89	100	76
Pipe-joint	H. H. Warner	708,104	Sept. 2	189	45	100	2080
Pipe-joint. Flexible	F Burgers	705,878	July 22	3948	855, 856	100	848
Pipe-molds. Profile-tool for making	E. R. Graham	708,763	Sept. 9	1387	317	100	2276
Pipe-perforating machine	A. W. Cooksey	704,288	July 8	1638	352	100	340
Pipe or conduit	W. H. Enderton	705,054	July 22	3329	699	100	704
Pipe-wrench	T. T. Ford	705,080	July 22	3341	701	100	705
Pipe-wrench	H. Pease	705,128	July 22	3385	753	100	784
Pipe-wrench	J. G. Morith	705,356	July 29	4420	980	100	957
Pipe-wrench	C. L. Dunham	705,742	July 29	4700	1017	100	1010
Pipe-wrench	W. Holmes	706,753	Aug. 12	1467	328	100	1432
Pipe-wrench	F. A. Palmer and F. Sharpe	708,253	Sept. 2	471	107	100	2077
Pipe-wrench	E. A. Ware	709,054	Sept. 16	2019	461	100	2434
Pipe-wrench	C. C. Rueger	710,077	Sept. 30	4053	909	100	2971
Pipe-wrench	I. N. and J. H. Glauber	704,821	July 15	2719	588	100	582
Pipes. Plug and coupling for water or steam	P. Winn	708,790	Sept. 9	1448	331	100	2290
Pipes, rods, &c. Apparatus for cutting	G. Troxler, Jr	707,696	Aug. 12	1971	442	100	1536
Pistol	O. Johnson	708,569	July 1	377	87	100	75
Piston-ring. Extensible	A. Jones	710,058	Sept. 30	3996	902	100	2963
Pitch-board. Adjustable	A. J. Adamson	707,831	Aug. 26	2921	661	100	1799
Pith or core from the rind portion of fibrous material. Apparatus for separating the	J. R. Carter	707,886	Aug. 19	2641	596, 597	100	1694
Pitman-coupling	F. A. Cammann	708,718	July 1	631	141	100	125
Placket-fastener	N. R. Taylor and W. C. Atwater	708,750	July 1	694	154	100	128
Placket-fastener	J. R. Smith	705,463	July 22	4101	891	100	890
Placket-fastener	T. M. Stearn	710,123	Sept. 30	4136	932	100	2992
Placket-fastener	M. F. Koch	707,963	Aug. 26	3767	845, 846	100	1989
Plaiting-machine	A. L. Lundgren	706,576	Aug. 12	1120	247	100	1357
Plane	J. A. Traut	706,704	Aug. 12	1351	301	100	1408
Plane	A. W. Stanley	707,265	Aug. 19	2600	588	100	1685
Plane	L. C. Clark	708,318	Sept. 2	598	134	100	2102
Plane	J. A. Traut	707,281	Aug. 19	9458	550	100	1655
Plane. Grooving-	J. A. Traut and H. S. Walter	707,368	Aug. 19	2604	589	100	1686
Plane-iron cap	C. E. Riecker and H. S. Walter	707,356	Aug. 19	2586	584	100	1682
Plane-lift	F. Clayton	707,085	Aug. 19	2078	464	100	1575
Plane. Recessing or grooving	G. S. Myrick	705,540	July 22	4311	933	100	919
Planer-bed. Adjustable	E. H. Slater	705,264	Aug. 5	511	109	100	1219
Planing-machine cutting-tool	J. Lehmann and H. Maurer	705,852	July 29	4885	1092	100	1049
Planing-machine. Double-working	H. Hart	705,921	Aug. 12	1592	358	100	1439
Plant pot or holde-	J. W. Ross	704,116	July 8	1405	304	100	295
Plant-protector	E. C. H. Behrens	705,019	July 22	3169	694	100	992
Plant-protector	L. J. Merriman	707,247	Aug. 19	2380	533	100	1539
Plant-protector	R. Murphy	707,152	Aug. 19	2308	498, 494	100	1601
Planter	A. G. W. Foster, Sr	708,404	Aug. 5	809	176, 177	100	1277
Planter and fertilizer-distributer. Combined seed-	E. G. Henry	708,575	Sept. 23	3068	683	100	2958
Planter and fertilizer-distributer. Combined seed-	J. W. Stevens	708,674	Sept. 9	1210	276	100	2238
Planter and fertilizer-distributer. Corn-	M. Johnson	707,929	Aug. 26	3759	844	100	1988
Planter attachment	L. P. Graham	707,918	Aug. 26	3740	809	100	1984
Planter. Check-row	W. R. Buchtela	708,532	July 1	280	64	100	57
Planter. Check-row corn-	J. Hillery	709,408	Sept. 16	2700	606	100	2559
Planter. Check-row corn-	R. E. Dial and M. E. Garwood	706,622	July 15	2341	508, 509	100	504
Planter. Corn-	D. Eley	705,051	July 22	3219	696, 697	100	702
Planter. Corn-	D. Eley	705,052	July 22	3234	697, 698	100	703
Planter. Corn-	D. Eley	705,053	July 22	3238	698, 699	100	703
Planter. Corn-	W. F. Talbert	707,736	Aug. 26	3332	746	100	1858
Planter. Corn-	L. P Graham	707,771	Aug. 26	3447	777	100	1876
Planter. Corn-	L. P. Graham	708,137	Sept. 2	267	62	100	2085
Planter. Corn-	E. M. Heylman	709,979	Sept. 9	1830	421	100	2498
Planter. Corn-	J. Barclay	709,294	Sept. 16	2478	558	100	2532
Planter. Corn-	H. Rentsch	710,305	Sept. 30	4468	1007	100	2993
Planter. Corn-	J. A. McCain	705,598	July 29	4638	960	100	936
Planter. Cotton-	W. Furlong	709,925	Sept. 30	3991	882	100	2798
Planter. Cotton-	H. Rentsch	710,211	Sept. 30	4309	969	100	2981
Planter disk cutter attachment. Corn-

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Planter. Hand corn-	F. A. Collver	704,518	July 15	2169	469	100	470
Planter marker-bar	W. H. Glosser	704,791	July 15	2640	571	100	586
Planter. Potato-	L. A. Aspinwall	709,660	Sept. 23	3210	716	100	2688
Planter. Seed-	J. M. Higbe	709,442	Sept. 16	2774	624	100	2545
Plaster composition	M. T. J. Ochs	705,542	July 22	4319	.....	100	921
Plaster. Wall-	N. J. Ruggles	708,591	Sept. 9	1057	.....	100	2206
Plastic articles. Production of	E. Lottier	710,287	Sept. 30	4436	1000	100	2988
Plastic material. Feeding mechanism for presses for	J. R. Masecar and T. Bevington	708,059	Sept. 2	113	27	100	2005
Plate-feeding apparatus. Magazine	G. N. Pifer	708,498	Sept. 2	800	201	100	2169
Plate-handling machine	R. R. Spears	707,172	Aug. 19	2243	503	100	1610
Plate-holder. Magazine	A. A. Brooks and G. A. Watson	705,784	July 29	4679	1018	100	1006
Plate-holder. Magazine	C. P. Goerz	706,651	Aug. 12	1255	277, 278	100	1368
Plate treating and tinning apparatus	J. R. Phillips	708,970	Sept. 9	1613	418	100	2264
Platen. Adjustable	D. M. Lester	709,859	Sept. 16	2561	576	100	2540
Platen-press guard	F. Crewe	708,867	Sept. 9	1612	369	100	2326
Plating metal	W. Griffiths	704,798	July 15	2645	572	100	587
Playing-ball	E. Kempshall	704,748	July 15	2571	554	100	582
Playing-ball	E. Kempshall	704,838	July 15	2741	593	100	587
Playing-ball	E. Kempshall	704,881	July 15	2838	610	100	604
Playing-ball	E. Kempshall	704,882	July 15	2824	610	100	604
Playing-ball	E. Kempshall	705,349	July 22	3950	791	100	790
Playing-ball	E. Kempshall	705,350	July 22	3919	849	100	842
Playing-ball	E. Kempshall	705,764	July 29	4732	1024	100	1016
Playing-ball	E. Kempshall	705,765	July 29	4733	1024	100	1017
Playing-ball	E. Kempshall	708,488	Sept. 2	869	198	100	2167
Playing-ball	E. Kempshall	708,484	Sept. 2	871	198	100	2168
Playing-ball	E. Kempshall	709,411	Sept. 16	2718	610	100	2578
Playing-ball	E. Kempshall	709,412	Sept. 16	2720	610	100	2578
Pliers	M. M. Howland	707,418	Aug. 19	2705	612	100	1707
Plinth-block. Metal	J. J. Houlihan	709,320	Sept. 16	2326	527	100	2490
Plow	A. K. Goodrich	705,571	July 1	345	78	100	69
Plow	J. Michalka	705,808	July 1	790	174	100	159
Plow	O. L. Carmical	706,386	Aug. 5	772	168, 169	100	1270
Plow	S. Fannin	706,915	Aug. 12	1766	394	100	1495
Plow	A. Schuls	707,726	Aug. 26	3322	745	100	1851
Plow	S. H. Tinsman	707,878	Aug. 26	3650	824, 825	100	1916
Plow	J. Buchanan	708,122	Sept. 2	222	53	100	2087
Plow	J. A. and C. L. Shuping	708,365	Sept. 2	494	118	100	2081
Plow	H. Bryan	708,812	Sept. 2	568	132	100	2100
Plow	J. P. Mulrony	709,028	Sept. 16	1951	447	100	2410
Plow	E. Hankins	709,901	Sept. 30	3702	835	100	2931
Plow and planter. Combined	J. E. Park and J. L. Pickens	706,446	Aug. 5	907	196	100	1299
Plow attachment	W. H. Holsclaw	706,895	Aug. 12	1598	359, 360	100	1461
Plow-brace	D. W. Harris	706,985	Aug. 12	1708	402	100	1501
Plow. Cultivating-	A. Horner	709,601	Sept. 23	3113	693	100	2668
Plow. Disk	L. E. Waterman	705,627	July 22	4490	971	100	997
Plow. Grading-	J. Sowords	705,155	July 22	3442	748	100	746
Plow. Motor-	R. J. Gatling	705,587	July 22	3876	838	100	833
Plow-point	S. C. Myers	708,807	July 1	796	175	100	160
Plow-point. Detachable	C. A. Weimer	704,996	July 15	2115	671	100	664
Plow. Potato-	D. Jackson	707,114	Aug. 19	2183	475, 476	100	1587
Plow. Reversible	J. W. Glendy	709,439	Sept. 16	2767	623	100	2568
Plow. Riding-	C. S. Ruef and C. L. Tomlinson	704,274	July 8	1094	369, 370	100	355
Plow. Sugar-beet	J. T. Leinberger and J. G. Schmidt	706,705	Aug. 12	1486	330	100	1437
Plow. Sulky-	S. H. Tinsman	707,879	Aug. 26	3666	825, 826	100	1918
Plow. Sulky-	W. W. Robinson	708,405	Sept. 2	730	164	100	2129
Plow weed-cutting attachment	J. M. Robinson	707,801	Aug. 26	3516	793	100	1890
Plow. Wheel-	B. Cross	704,240	July 8	1030	253	100	241
Plow. Wheeled	L. E. Waterman	705,626	July 29	4492	973	100	997
Plow wing attachment	G. H. McGuire	709,505	Sept. 23	3246	657	100	2638
Plows or the like. Attachment for	H. H. Allen	706,875	Aug. 12	1595	359, 360	100	1460
Plug. Emergency safety-	F. Kostlan	708,562	Sept. 9	1005	227	100	2196
Plug-receptacle	C. J. Klein	707,516	Aug. 19	2872	651	100	1743
Plumb-bob, level, &c. Combined	D. L. McDermott	707,518	Aug. 19	2880	658	100	1744
Plumber's testing-plug	J. Flynn	705,050	July 22	3240	701	100	706
Pneumatic apparatus. Joint for use in	C. L. Davis	705,515	July 22	4205	914	100	899
Pneumatic cushion	J. H. Finney	709,977	Sept. 30	3960	869	100	2935
Pneumatic-despatch apparatus	J. T. Cowley	708,630	Aug. 12	1230	273	100	1381
Pneumatic-despatch-tube inlet	F. B. Talsey	705,884	July 29	4944	1073	100	1060
Pneumatic-despatch tubes. System and apparatus for transmitting carriers in	B. C. Batcheller	706,291	Aug. 5	562	136, 137	100	1233
Pneumatic elevator and weigher	R. B. Hilleary and C. Bradford	706,054	Aug. 5	108	22	100	1138
Pneumatic impact-tool	S. Oldham	704,918	July 15	2913	625	100	627
Pneumatic motor	G. B. Anderson	706,004	Aug. 5	3	1, 2	100	1117
Pneumatic tool	J. Keller	710,196	Sept. 30	4270	963	100	2981
Pneumatic-tube systems. Pneumatic time-lock for	B. C. Batcheller	707,071	Aug. 19	2050	457, 458	100	1569
Pneumatically-operated lubricator	H. Schmidt	708,973	Sept. 9	1822	419	100	2266
Pocket	R. Bartell	709,460	Sept. 23	2838	635, 636	100	2608
Poke. Animal-	J. I. Barnes	703,867	July 1	7	2	100	4
Poke. Animal-	A. D. Hale	703,407	July 1	79	15	100	18
Poke. Animal-	G. A. Ritchie	704,994	July 15	2945	632	100	636
Poke. Animal-	C. N. Trooien	705,169	July 22	3453	758	100	748
Poke. Animal-	H. E. Irish	706,062	Aug. 5	122	25	100	1144
Poke. Animal-	S. F. Webb and W. S. Huff	706,617	Aug. 12	1198	266	100	1374

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Poke. Animal-	H. E. Downing	709,474	Sept. 23	2958	642	100	2613
Poker and tongs. Combined fire-	J. C. Moyer	708,947	July 1	1052	208	100	200
Pole attachment. Carriage-	P. Masterson	707,439	Aug. 19	2740	680	100	1714
Pole cap. Wagon-	P. Holmstrom	708,754	Aug. 12	1467	333	100	1432
Pole. Carriage-	J. Seng	708,784	Sept. 9	1494	327	100	2226
Pole. Jointed	M. Nelson	709,994	Sept. 30	3745	844	100	2810
Pole. Push-	H. Wheler	708,179	July 22	3489	758	100	755
Pole-reverser. Automatic	M. Moskowitz	708,088	Aug. 5	155	32	100	1148
Policeman's club-holder	F. H. Audley	710,226	Sept. 30	4351	978	100	2940
Polishing-machine	M. H. Ballard	705,350	July 29	4312	920	100	989
Polishing-machine	J. W. Brown, Jr., and H. W. Yeager	707,819	Aug. 26	3545	799 800	100	1595
Polishing-machine	J. W. Brown, Jr	708,858	Sept. 9	1508	365	100	2230
Polishing-strip	C. C. Allen	708,000	Sept. 2	1	1	100	1931
Polishing-wheel	F. G. Farnham	709,312	Sept. 16	2512	566	100	2530
Polishing-wheel and manufacturing same	B. F. Elson	704,789	July 15	2638	570	100	566
Polishing-wheel. Automatically-inflated	I. P. Cadman	704,509	July 15	2145	464	100	464
Pool or billard apparatus	T. R. Lowerre	704,898	July 15	2839	615	100	608
Post: See Anchoring-post. Fence-post. Railway bumping-post. Tool-post.							
Post for fencing, &c	R. H. Guthrie	709,317	Sept. 16	2292	527	100	2489
Post-office-box indicating mechanism	T. F. Kelly	707,296	Aug. 19	2359	529	100	1695
Postal box and signal	F. C. Bates	707,195	Aug. 19	2298	513	100	1692
Postal-car and station appliance	L. Schmiedeke	708,174	Sept. 2	328	78, 79	100	2048
Postman's rack	C. J. Weeks	708,282	Sept. 2	582	121	100	2089
Pot: See Coffee-pot. Tea or coffee pot.							
Pot for containing shellac, &c	W. L. Morris	704,204	July 8	1576	340	100	330
Potassium cyanate. Producing	S. Zuckschwerdt	709,570	Sept. 23	3060		100	2657
Potato-creamer	F. W. Ruckstuhl and A. Pohlmann	707,019	Aug. 19	1944	435	100	1530
Potato-digger	J. Moran	708,707	July 1	612	136	100	121
Potato-digger	P. Hesselius	708,727	July 1	653	144 145	100	131
Potato-digger	J. L. Ingersoll	704,046	July 8	1248	289	100	292
Potato-digger	L. A. Aspinwall	709,659	Sept. 23	2906	716	100	2657
Potato-digger	F. O. Andrews	704,169	July 8	1510	323 324	100	317
Potato-digging machine	L. A. Aspinwall	709,658	Sept. 23	2903	715 716	100	2656
Potato-sorter	J. A. Smithline and A. F. Zaiser	709,561	Sept. 23	2943	678	100	2653
Pouch	C. T. Dörr	707,401	Aug. 19	2675		100	1701
Powder-bag. Ordnance	M. L. Gumaer	705,887	July 29	4954	1054	100	1042
Powder-puff							
Power: See Churn-power. Friction-power.							
Power. Electric transmission of	E. M. Hewlett	706,559	Aug. 12	1091	242	100	1352
Power equalizing, controlling, and storing apparatus.	L. H. Osterud	705,700	July 29	4617	1001	100	998
Power. Generation of motive	S. A. Rosenthal	709,115	Sept. 16	2122	486	100	2448
Power in varying directions. Apparatus for the transmission of	A. H. Edwards	708,904	July 1	980	213 214	100	195
Power mechanism	F. Clemens, Jr	709,304	Sept. 16	2499	568	100	2537
Power-shovel	R. Thew	710,223	Sept. 30	4330	973 974	100	2935
Power-transmission regulator for electromagnetic couplings.	R. Pintsch	704,574	July 15	2268	491 492	100	490
Power-transmitting device for hand-driven mechanisms.	F. W. Wild, Jr	708,286	Sept. 2	535	122	100	2090
Power-transmitting machinery	E. Winans	709,856	Sept. 23	3579	806	100	2764
Power-transmitting mechanism. Differential-speed	S. Jackson	706,664	Aug. 12	1286	293 294	100	1398
Precious metals. Extracting	W. Hilt and C. E. Lane	707,296	Aug. 26	3757	843	100	1987
Precious metals from ores. Extracting	L. B. Darling	706,308	Aug. 5	906	192	100	1237
Precious metals from ores. Means for extracting	L. B. Darling	706,302	Aug. 5	903	191	100	1237
Precious metals. Treating rebellious ores of the	W. F. Downs	707,214	Aug. 19	2294		100	1626
Preserving and storing building	J. M. Stukes	706,125	Aug. 5	990	220	100	1219
Preserving apparatus. Food-	M. D. Ellis	709,431	Sept. 16	2750	619	100	2580
Preserving food products	W. D. Baker	709,432	Sept. 16	2752	619	100	2580
Preserving food products	W. D. Baker	709,751	Sept. 23	3587	760	100	2722
Preserving frozen food products							
Press: See Bale-press. Baling-press. Brick-press. Copying-press. Drill-press. Filter-press. Flanging-press. Forging-press. Glass-press. Hydraulic press. Hydrostatic press. Peat-press. Printing-press. Soap-press. Stamping-press. Tile-press. Wine-press.							
Press for packing barrels or other packages	S. McCown	706,681	Aug. 12	1319	292	100	1401
Pressure-exerting machine	J. A. Costello and W. S. Bidle	707,558	Aug. 26	3964	870	100	1777
Pressure-generator	G. E. Blake	706,154	Aug. 5	301	64	100	1178
Pressure-regulator	J. L. Schureman	706,980	Aug. 5	496	105	100	1217
Primer-tray. Cellular	H. S. Burns and T. G. Bennett	705,318	July 22	3809	826	100	880
Print-making machine	R. A. Bell	708,999	Sept. 16	1853	426	100	2291
Prints. Machine for making blue-	R. A. Bell	704,238	July 8	1617	350	100	358
Printed matter. Producing	A. Baruch	707,541	Aug. 26	3936	665	100	1772
Printer. Starch-	D. M. Holmes	707,589	Aug. 26	3944	685	100	1794
Printer's form lock-up	E. G. Torrey	707,967	Aug. 26	3965	868	100	1967
Printer's furniture	W. G. Slauson	708,096	Sept. 2	158	38	100	2014
Printing, &c., and preparing same. Stone or plate for photomechanical	G. F. Wetherman and G. Holshausen.	707,747	Aug. 26	3884		100	1964
Printing apparatus. Blue-	S. B. Whinery	704,415	July 8	1980	422 423	100	410

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Printing apparatus for use with machines for making paper bags.	H. Hölscher	706,237	Aug. 5	452	95 96 97	100	1209
Printing apparatus. Stencil-	D. Gestetner	707,579	Aug. 26	3094	680 681	100	1789
Printing. Blanket for use in	J. E. Rhodes	705,294	July 22	3752	814	100	809
Printing color for lithographic or metallographic printing.	J. Adelsberger and H. Friedmann	710,283	Sept. 30	4349		100	2969
Printing device	W. L. Morris	709,556	Sept. 23	3098	674 675	100	2650
Printing-die	W. A. Force	705,228	July 22	3819	784	100	785
Printing-frame	J. M. Smith	708,672	July 1	549	124	100	108
Printing-machine	J. White	705,180	July 22	3489	758	100	755
Printing-machine	F. J. Martin	708,570	Sept. 9	1018	221	100	2192
Printing-machine	W. Scott	709,515	Sept. 23	2967	661 662	100	2638
Printing-machine	F. J. Wende and B. B. Carter	709,510	Sept. 23	3500	789 790 791	100	2746
Printing-machine feeding mechanism	J. White	705,181	July 22	3495	758 759	100	757
Printing machine. Multicolor-	H. F. Bechman	708,013	Sept. 2	22	5	100	1985
Printing-machine. Roller	T. J. Smith	709,983	Sept. 30	3762	850	100	2813
Printing machine. Stencil-	G. H. Davis	708,388	July 1	46	9	100	12
Printing-machine. Stencil-	A. B. Dick	709,685	Sept. 30	3674	828 829	100	2705
Printing machine. Web-	G. F. Read	705,142	July 22	3124	743	100	743
Printing machinery	S. G. Goss	707,100	Aug. 19	2108	469 470	100	1580
Printing. Multicolor-	H. F. Bechman	708,012	Sept. 2	20	5	100	1985
Printing on sheets. Cylinder-machine for	W. Spalckhaver	708,491	July 1	208	48, 49	100	43
Printing-plate holder	E. B. Storm	708,676	July 1	556	125	100	110
Printing-press	R. Miehle	708,438	July 1	198	29	100	28
Printing-press	T. M. North	708,665	July 1	535	121	100	105
Printing-press	W. Scott	704,194	July 8	1421	304 305	100	290
Printing-press	J. L. Firm	704,624	July 15	2347	510	100	505
Printing-press	M. Anthony	705,631	July 29	4485	973 974	100	968
Printing-press	H. B. Allen	706,709	Aug. 12	1360	303 304	100	1410
Printing-press	S. G. Goss	707,101	Aug. 19	2107	470 471	100	1581
Printing-press	A. Baruch	707,540	Aug. 26	2934	664	100	1771
Printing-press	M. Gally	707,770	Aug. 26	3445	776 777	100	1875
Printing-press addressing attachment	J. P. Bryan	706,720	Aug. 12	1380	307 308	100	1414
Printing-press controlling mechanism	W. C. Williams	706,622	Aug. 12	1205	967 968	100	1875
Printing-press controlling mechanism	W. C. Williams	706,623	Aug. 12	1209	968	100	1877
Printing-press envelop-feeder	M. W. Lilly	704,058	July 8	1273	875	100	907
Printing-press feed-gage	E. L. Megill	703,734	July 1	665	147	100	178
Printing-press gripper mechanism	R. Miehle	708,605	July 1	406	95	100	80
Printing-press gripping mechanism	M. Schmidt and E. J. Gebler	708,409	Sept. 2	757	166	100	2131
Printing-press ink-fountain	N. Nilson	707,625	Aug. 26	3109	700	100	1807
Printing-press sheet-aliner	O. S. Bowman	705,198	July 22	3581	765	100	766
Printing-press sheet-delivery	G. P. Fenner	708,878	Sept. 9	1634	376	100	2328
Printing-press sheet-delivery apparatus	G. P. Fenner	704,868	July 15	2797	604 605	100	599
Printing-press tympan-surface	A. S. Allen	705,011	July 22	3154	681	100	699
Printing press. Web-	W. Spalckhaver	706,209	Aug. 5	536	116	100	1224
Printing-presses. Adjustable and throw-off roller-track for	A. W. Fritz	707,313	Aug. 19	2511	564	100	1666
Printing-presses, &c. Automatic protector for	T. C. Dexter	705,220	July 22	3589	776 777	100	777
Printing-presses. Gripper for plates	A. L. Anderson	706,876	Aug. 12	1696	380	100	1481
Printing with sulfur dyes	E. Voetter	708,429	Sept. 2	769		100	2137
Prism-glass for skylights	G. E. Androvette	705,372	July 22	3941	864	100	846
Projectile	J. B. Semple	707,084	Aug. 12	1953	438	100	1582
Projectile	J. B. Semple	708,411	Sept. 2	740	166	100	2121
Projectile or shell for ordnance. Explosive	C. Puff	709,854	Sept. 23	3576	806	100	2764
Projectiles. Hardening	R. A. Hadfield	709,631	Sept. 23	3161	705	100	2677
Projecting apparatus	R. H. Edwards	704,449	July 8	2015	454	100	424
Projecting apparatus	A. and L. Lumière	705,771	July 29	4749	1057	100	1019
Propeller	D. Selkirk	709,801	Sept. 23	3488	786	100	2744
Propeller	C. A. Manker	710,111	Sept. 30	4109	927	100	2885
Propeller. Adjustable screw-	E. E. Funnell	705,866	July 29	4907	1067	100	1058
Propeller. Endless	A. Kuents	707,600	Aug. 26	3059	688 689 698	100	1796
Propeller-fan and propeller for ships. Rotary	S. C. Davidson	705,046	July 22	3210	694 695	100	700
Propeller. Oscillating	C. Hayes	705,348	July 22	3900	844	100	888
Propeller-shaft governor	W. R. May	705,417	July 22	4019	870 871	100	953
Propeller. Vibrating	W. W. Phares	706,198	Aug. 5	881	81	100	1194
Propellers of ships. Means for housing	J. Hamilton	707,411	Aug. 19	2090	507 508	100	1704
Propelling device. Boat	F. J. Gleason	704,186	July 8	1546	333	100	394
Protractor	W. Quayle	708,608	July 1	411	96	100	81
Puller: See Spike-puller. Tack-puller. Weed-puller.							
Pulley	W. E. Penn	705,129	July 22	3886	753	100	785
Pulley. Adjustable or separable	R. C. Fay	707,095	Aug. 26	3928	786	100	1883

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Drg.	Official Gazette. Vol.	Page.
Pulley-and-band power-transmitting appliance	J. Moorhouse	704,908	July 8	1575	340	100	330
Pulley-block. Differential-gear	R. Lavery	708,158	Sept. 2	285	68, 69	100	2040
Pulley lubricator. Loose-	C. S. Scobee	708,898	July 1	853	188	100	171
Pulley mechanism. Reversing-	J. Darling and C. C. Ellenberger, Jr.	707,896	Aug. 19	2665	601	100	1690
Pulley. Sash-cord	P. Dosch	709,000	Sept. 16	1680	426	100	2296
Pulley. Sheet-metal	C. A. Brinley	708,804	Aug. 12	1737	857	100	1499
Pulley. Split	H. W. Finch	708,917	Aug. 12	1769	895	100	1496
Pulp digesters. Valve for wood-	J. Joule	705,091	July 22	6307	719	100	718
Pulp-separator	J. K. McLaughlin	706,441	Aug. 5	895	193 194	100	1296
Pulp-strainer screen-plate	N. L. Vrooman and R. R. Kirkland	708,663	July 1	574	128	100	114
Pulp vessels. Apparatus for manufacturing closed	F. B. Howard	708,643	Sept. 9	1160	268	100	2298
Pulp vessels. Apparatus for the manufacture of closed	F. B. Howard	710,101	Sept. 30	4069	923	100	2982
Pulsometer	P. Haussmann	703,788	July 1	769	168	100	154
Pulverized-fuel burner	F. M. Reed	706,495	Aug. 5	992	215 216	100	1315
Pulverizer	J. C. Clark	708,542	July 1	298	67, 68	100	60
Pulverizer	R. Creuzbauer	705,323	July 22	3815	837 838	100	821
Pulverizer	A. C. and A. W. Hilsinger	708,640	Sept. 9	1156	260 261 262	100	2227
Pulverizing-mill	G. S. Maxwell	704,650	July 15	2886	223 517	100	515
Pulverizing-shoe	H. F. Deterding	706,729	Aug. 12	1397	311 312	100	1418
Pump	W. F. Garrison	703,648	July 1	498	113	100	98
Pump	P. H. Deis	705,047	July 22	3213	695	100	701
Pump	W. J. Hughes	705,351	July 22	3904	845	100	859
Pump	H. T. Henson	705,670	July 29	4554	989	100	992
Pump	B. Ivor and J. S. Ward	706,564	Aug. 12	1097	248	100	1353
Pump	B. H. Yale	709,288	Sept. 16	2468	556	100	2520
Pump	C. C. Worthington	710,080	Sept. 30	3946	860	100	2953
Pump	B. Musser	705,425	July 22	4032	874 901	100	866
Pump-actuating mechanism	T. N. Case	707,821	Aug. 26	3550	802 803	100	1896
Pump. Air-	E. Walther	708,944	Sept. 9	1747	406 404	100	2351
Pump. Air-	C. M. Day	709,968	Sept. 30	3847	895 896	100	2932
Pump. Air-	E. A. August	708,792	Aug. 12	1540	345	100	1447
Pump attachment. Beer-	J. Horn	708,657	July 1	515	115 116	100	101
Pump attachment. Plumber's	A. Bruzek	709,662	Sept. 23	3213	717	100	2688
Pump. Automatic siphon-	H. Sulzer	704,144	July 8	1471	315	100	309
Pump. Centrifugal	E. G. Harris	705,347	July 22	3907	843	100	857
Pump. Centrifugal	P. F. Oddie	708,912	Sept. 9	1696	391	100	2342
Pump equalizing device. Steam-	E. M. Ivens	705,844	July 29	4405	1057	100	1045
Pump mechanism	W. Wagner	707,384	Aug. 19	2461	588	100	1656
Pump. Hydraulic	S. W. Meals	708,897	Sept. 9	1674	385	100	2336
Pump. Oil-well	R. W. Elliott	709,313	Sept. 16	2314	525	100	2467
Pump. Pneumatic	W. W. Wainwright	704,236	July 8	1606	348	100	326
Pump. Rotary	S. M. Frank	709,597	Sept. 23	3105	692	100	2667
Pump. Rotary force-	F. Ray	704,756	July 15	2581	557	100	554
Pump runner. Centrifugal-	J. O. Bane	706,149	Aug. 5	267	60	100	1175
Pump-spring connection	P. F. Oddie	708,968	July 1	1102	237	100	218
Pump. Steam-	J. Kurtz	705,364	July 22	3931	852	100	844
Pump strainer. Mine-	W. R. Emerson	704,012	July 8	1186	258	100	251
Pump suction-pipe strainer	D. C. Word	708,508	Sept. 2	919	208	100	2194
Pump-valve	M. Potvliet	705,704	July 29	4027	1008	100	996
Pump. Water-sealed air-	E. Chaquette	708,997	July 8	1165	253	100	247
Pump. Wave-motion	A. C. Griscom	707,987	Aug. 26	3834	850	100	1949
Pumps. Automatic switch for electric	T. G. E. Lindmark	706,187	Aug. 5	961	78	100	1190
Pumping apparatus	F. M. Leavitt	704,054	July 8	1260	272	100	265
Pumping-engine. Condensing	J. T. Lally and J. J. English	706,425	Aug. 5	952	187	100	1286
Pumping-engine. Hot-air	H. S. Temple	705,379	Aug. 5	560	121	100	1299
Punch	J. F. Kidder	704,344	July 8	1895	396	100	385
Punch and shears. Combined	H. Cottrell	708,495	Sept. 2	839	191	100	2151
Punch. Ticket-	S. Treinis	706,898	Aug. 12	1679	376	100	1477
Punching-bag platform	G. S. Maxwell	710,112	Sept. 30	4112	928	100	2986
Punching-bag support	G. S. Maxwell	710,119	Sept. 30	4111	927	100	2986
Punching-bag-supporting device	J. Heimsenberger	708,959	July 1	1078	233	100	215
Punching-machine	B. F. Hall	706,552	Aug. 12	1081	239	100	1349
Punching-machine	J. E. Scott	708,601	Aug. 12	1167	259	100	1367
Punching-machine	E. B. Stimpson	708,747	July 1	699	158	100	137
Punching-machines, &c. Locking device for use in	E. G. Harcourt and M. B. Lloyd	704,222	July 8	1779	388	100	378
Push and switch. Electrical	W. J. Newton	707,622	Aug. 26	3108	699	100	1805
Push-button switch. Snap	H. Green	709,964	Sept. 16	2417	547 548	100	2509
Push-rake	E. T. Henneberry and M. M. Gleeson.	708,709	Sept. 9	1283	293	100	2262
Puttying-tool	J. H. O'Bern	704,089	July 8	1386	291	100	279
Puzzle	W. H. Emery	709,886	Sept. 30	3881	880	100	2795
Puzzle	P. F. De Ford	708,558	July 1	339	75	100	66
Puzzle device	E. Meyer	705,389	July 22	3706	804	100	798
Puzzle or game apparatus	F. Herd	705,759	July 29	4733	1082	100	1014
Puzzle. Wire	A. Eichengrün	710,047	Sept. 30	3976	.....	100	2959
Pyrotechnic compound	T. Lloyd	708,537	Sept. 2	447	108	100	2072
Pyrotechnic device	C. T. Bradshaw	708,519	Sept. 9	946	214	100	2184
Quoit	D. C. Jackling	706,755	Aug. 12	1468	333 334	100	1403
Rabble-carriage	J. P. Cornuault	707,708	Aug. 26	3434	771	100	1870
Race starting-gate	C. W. Crowley	705,043	July 22	3806	836 837	100	1790
Race-starting machine							

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Drg.	Official Gazette. Vol.	Page.
Race structure. Sack-	J. J. Wegner	706,467	Aug. 5	998	205	100	1305
Rack: See Cuspidor-rack. Hay and stock rack. Display-rack. Postman's rack. Feeding-rack. Wagon-rack. Hay-rack.							
Racket	A. Becker	708,519	July 1	200	89	100	52
Racking apparatus	D. Beebe	704,398	July 8	1788	377	100	363
Racking off beer. Apparatus for	H. Torchiani	708,942	Sept. 9	1742	403	100	2350
Radiator	E. Morita, L. N. Frymire, and S. Koons.	705,110	July 22	3251	726	100	727
Radiator	C. W. Rogers	705,614	July 29	4480	997	100	963
Radiator	A. Eichhorn	709,758	Sept. 23	3400	763	100	2725
Radiator attachment	G. W. Chipley	706,159	Aug. 5	812	66	100	1180
Radiator for smoke-pipes. Heat-	J. P. Schneller	709,051	Sept. 16	1993	455	100	2419
Radiator. Warm-air	J. Clements	706,161	Aug. 5	814	66, 67	100	1181
Rail-bond	M. F. Whiton	707,662	Aug. 26	3208	718	100	1827
Rail-bonds. Manufacture of	F. H. Daniels and H. W. Wyman	709,878	Sept. 30	3680	821	100	2788
Rail-clamp	W. C. Lee and M. F. Moore	708,480	July 1	113	26	100	25
Rail-fastener	J. M. Spaulding	704,221	July 8	1599	347	100	335
Rail-fastener	C. M. Reed	707,357	Aug. 19	2394	537	100	1642
Rail-fastener. Metallic-tie	C. S. Shallenberger	710,371	Sept. 30	4580	1033	100	2995
Rail-fastening	W. P. Patrick	706,999	Aug. 12	1005	427	100	1522
Rail-joint	S. M. Wixcel	703,876	July 1	996	202	100	186
Rail-joint	T. Huberdeau	704,100	July 8	1551	334	100	325
Rail-joint	G. L. Hall	705,345	July 22	3895	843	100	857
Rail-joint	C. R. Edwards	705,566	July 29	4369	946	100	946
Rail-joint	W. Floss	705,575	July 29	4384	950	100	948
Rail-joint	J. W. Dixon and J. D. Devine	705,827	July 29	4836	1050	100	1039
Rail-joint	V. L. Truxall	705,895	July 29	4945	1075	100	1060
Rail-joint	K. Kohn	706,241	Aug. 5	460	98	100	1210
Rail-joint	H. O. Baldwin	706,374	Aug. 5	738	161	100	1266
Rail-joint	C. C. Osenbaugh and R. L. Gibson	706,445	Aug. 5	907	196	100	1290
Rail-joint	D. H. Noble	707,447	Aug. 19	2782	623	100	1737
Rail-joint	O. S. Weddell	707,471	Aug. 19	2789	632	100	1725
Rail-joint	W. E. Randle	707,790	Aug. 26	3505	740	100	1848
Rail-joint	G. Gordon	707,996	Aug. 26	3821	859 860	100	1949
Rail-joint	M. Barschall	708,009	Sept. 2	17	4	100	1984
Rail-joint	J. E. Hammond	708,351	Sept. 2	646	146	100	2112
Rail-joint	W. Colloton	708,531	Sept. 9	960	217	100	2188
Rail-joint	L. Roth	709,045	Sept. 16	1981	453	100	2416
Rail-joint	J. W. Elzea	709,475	Sept. 23	2960	642	100	2514
Rail-joint	J. J. McDermott	710,000	Sept. 30	3496	878	100	2942
Rail-joint	H. Minck and H. L. Droste	710,290	Sept. 30	4439	1001	100	2958
Rail-joint fastener	J. C. Wentzel	706,469	Aug. 5	943	205	100	1306
Rail. Mine-car	J. A. Craig	707,999	Aug. 26	3804	875	100	1964
Rail-support	C. E. Neubauer	705,955	July 29	4069	1104	100	1065
Rail-support	W. E. Jaques	710,152	Sept. 30	4197	945	100	2965
Rail-support	W. E. Jaques	710,153	Sept. 30	4198	945	100	2965
Rail-support	W. E. Jaques	710,154	Sept. 30	4200	946	100	2965
Rail systems. Guard for third-	S. Elliott	708,563	July 1	358	76	100	69
Rail. Tramway-	F. E. Musgrave	708,901	Sept. 9	1683	387 388	100	2339
Railway-bed	M. Haas	708,347	Sept. 2	640	145	100	2111
Railway bumping-post	P. Scanlin	704,275	July 8	1099	270 271	100	357
Railway-cabs. Electric signal for	J. W. Frost	705,669	July 29	4542	987	100	980
Railway-carriages, &c. Coupling for	J. Willison	708,110	Sept. 2	197	47	100	2022
Railway-carriages. Safety-outlet in longitudinal walls of	D. Erdelbrock	709,573	Sept. 23	3064	682	100	2657
Railway. Combined overhead and underground electric	D. S. Bergin	707,075	Aug. 19	2068	460	100	1571
Railway contact system. Electric-	T. B. Patch	704,092	July 8	1341	292	100	280
Railway contact system. Electric-	T. B. Patch	704,093	July 8	1344	293	100	281
Railway cross-tie and chair. Combined	S. Love	709,787	Sept. 23	3456	778	100	2739
Railway-crossing and switch for same	C. Leiendecker	707,604	Aug. 26	3065	690	100	1798
Railway danger-signal	W. Washa	710,383	Sept. 30	4408	1038 1089	100	2991
Railway danger-signal device	F. G. Chamberlin	709,469	Sept. 23	2949	640	100	2512
Railway. Electric	F. W. Hild and S. B. Stewart, Jr	705,083	July 22	3288	712	100	714
Railway. Electric	W. Behrens and J. P. Tibon	705,373	July 22	3942	854	100	846
Railway. Electric	C. J. Kintner	705,848	July 29	4872	1059 1060	100	1046
Railway. Electric	W. B. Potter	706,106	Aug. 5	192	40	100	1156
Railway. Electric	C. R. Campbell	706,156	Aug. 5	807	65	100	1179
Railway. Electric	T. E. Murray and J. Van Vleck	708,656	Sept. 9	1177	298 299	100	2231
Railway. Electric	T. E. Murray and J. Van Vleck	708,960	Sept. 9	1806	416 417	100	2303
Railway-gate	J. Bowman	706,516	Aug. 12	1021	225	100	1357
Railway goods-vans. Sliding door for	A. Fischer	708,908	July 1	996	215	100	197
Railway heater system	S. H. Harrington	704,797	July 15	2667	577	100	570
Railway-joint	S. H. Deihl	704,817	July 15	2718	587	100	581
Railway-joint	T. L. Watts	707,468	Aug. 19	2786	631	100	1734
Railway rail-bond. Electric-	E. P. Frederick	708,779	July 1	741	164	100	149
Railway-rail joint	W. J. Austin	708,979	July 8	1139	244	100	239
Railway-rail joint	G. A. Weber	705,170	July 22	3471	755	100	752
Railway-rail joint	J. C. Fair	705,526	July 29	4371	947	100	946
Railway-rail joint	C. Rhoades	705,993	July 29	4151	1108	100	1098
Railway-rail joint	E. R. Avery	707,494	Aug. 19	2953	640	100	1734
Railway-rail joint	W. C. Wessel and H. W. Jacob	708,605	Sept. 9	1090	245	100	2218
Railway-rail joint	E. Lees and H. H. Sponenburg	708,608	July 1	899	94	100	79
Railway-rail stay	W. H. Bell	710,134	Sept. 30	4159	987	100	2989
Railway sand-distributer	J. Quin	704,210	July 8	1592	342	100	332
Railway-sander							

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Railway-semaphore, &c	W. D. Farren	704,015	July 8	1190	256	100	252
Railway-signal	W. C. Van Derlip, Sr	704,790	July 15	2506	541 542	100	540
Railway-signal	W. S. Bennett	705,313	July 22	2799	823 824	100	818
Railway-signal	J. D. Price	709,090	Sept. 16	1971	451	100	2414
Railway-signal	J. D. Price	709,243	Sept. 16	2376	539	100	2500
Railway-signal. Automatic	W. L. Harper	704,827	July 15	2812	606	100	602
Railway-signal. Automatic	A. Emerson and A. S. Hovander	707,405	Aug. 19	2680	605	100	1701
Railway-signal. Electric	C. D. Seaman	709,052	Sept. 16	1994	455	100	2419
Railway-signal. Pneumatic	C. S. Dean	709,258	Sept. 16	2405	545	100	2597
Railway signaling apparatus	J. D. Taylor	707,192	Aug. 19	2266	507	100	1616
Railway signaling apparatus	E. Rowe	709,798	Sept. 23	3481	784 785 786	100	2743
Railway signaling apparatus. Selector for	J. D. Taylor	707,180	Aug. 19	2260	505	100	1614
Railway signaling device	H. Pratt	708,899	Sept. 2	719	161 162	100	2127
Railway signaling. Electrical system of recording and checking as applied to	W. H. M. Weaver	710,848	Sept. 30	4529	1024 1025	100	2979
Railway signaling system	A. W. Knee	704,847	July 8	1823	398	100	396
Railway stand-pipe	J. W. Thomas, Jr	709,876	Sept. 16	2663	596	100	2560
Railway stock-guard	G. A. Williams and J. O. McCall	705,729	July 29	4670	1011	100	1094
Railway surface contact. Electric	E. M. Hewlett	705,682	July 22	3981	711	100	713
Railway. Suspension	A. H. Mayhew	709,343	Sept. 16	2568	578 579	100	2542
Railway-switch	S. A. Duvall	703,772	July 1	720	161	100	146
Railway-switch	W. Wharton, Jr	704,414	July 8	1950	422	100	410
Railway-switch	A. G. Turcotte	705,164	July 22	3456	753	100	749
Railway-switch	C. Johnston	706,950	Aug. 12	1822	408	100	1505
Railway-switch. Automatic	G. E. Janes	709,015	Sept. 16	1920	440 441	100	2404
Railway-switch danger-signal. Automatic	C. H. Remington	707,010	Aug. 12	1925	431	100	1526
Railway-switch detector-bar	L. Carrier	703,537	July 1	299	66	100	58
Railway-switch. Electric	J. A. Joyce	709,156	Sept. 16	2192	502	100	2468
Railway-switch. Electrically-operated	J. Loney	709,676	Sept. 23	3236	721	100	2698
Railway-switch-operating device	J. C. Booth	709,865	Sept. 30	3608	815	100	2783
Railway-switch-operating mechanism	E. Crapper, Jr	708,800	Sept. 9	1469	335 336	100	2294
Railway-switch-operating mechanism. Automatic	L. Pierce	709,111	Sept. 16	2116	485	100	2447
Railway switches and signals. Electrical apparatus for operating	T. Ducousso	704,177	July 8	1527	328 329	100	321
Railway switching and signal interlocking apparatus	J. D. Taylor	707,181	Aug. 19	2262	506 507	100	1614
Railway system. Electric	J. C. Henry	707,944	Aug. 26	3504	813	100	1905
Railway system. Electric	L. E. Walkins	709,063	Sept. 16	2017	460	100	2424
Railway system. Electric	W. B. Potter	710,072	Sept. 30	4025	908	100	2969
Railway systems. Electromagnetic switch for surface-contact electric	W. B. Potter	705,186	July 22	3410	741	100	789
Railway-tie	J. P. Lancaster	703,797	July 1	780	171	100	156
Railway-tie	B. H. Smith	704,894	July 8	1919	416	100	404
Railway-tie	J. Doyle and G. H. Kimball	706,808	Aug. 12	1572	352	100	1455
Railway-tie	W. C. Gregg, (Reissue)	12,025	Aug. 26	3697	876	100	1954
Railway-tie	E. M. Bunce	708,521	Sept. 9	948	215	100	2185
Railway-tie	E. M. Bunce	708,522	Sept. 9	949	215	100	2185
Railway-tie	J. L. Grieb	708,481	Sept. 23	2898	646	100	2623
Railway-tie	W. S. Dodd	704,788	July 15	2698	568	100	554
Railway-tie and fastener. Metallic	A. J. Reitz and J. H. Lange	704,989	July 15	2979	638	100	689
Railway-tie. Metal	S. A. Sharum	705,458	July 22	4084	988	100	877
Railway-tie. Metallic	J. F. Weisbrod	706,788	Aug. 12	1585	344	100	1446
Railway-tie. Metallic	H. W. Avery	710,172	Sept. 30	4284	955	100	3013
Railway-tie. Metallic	T. B. Modlin and W. H. Buhl	709,169	Sept. 16	2581	507	100	2469
Railway-tie plate	V. E. McBee	708,348	Sept. 16	2576	581	100	2543
Railway-tie plate	V. Berford	705,515	Aug. 19	1019	225	100	1397
Railway-track appliance. Sod-line-cutter mechanism for	H. L. Church	708,998	Sept. 16	1876	431	100	2395
Railway-track cattle-guard	L. B. West	706,619	Aug. 12	1302	287	100	1375
Railway-track foundations. Beam for	T. C. McLin	708,905	Sept. 9	1698	389	100	2341
Railway-track joint	H. Mann	708,641	Sept. 23	3178	709	100	2680
Railway-track-laying machine	G. M. Ervin	705,057	July 22	3234	700	100	704
Railway-track structure	J. H. Pflieger	705,131	July 22	3396	737	100	736
Railway-track structure	E. B. Entwisle	709,975	Sept. 30	3658	809	100	2684
Railway-track structure	W. Goldie	707,840	Aug. 26	3598	812	100	1904
Railway-tracks. Ballasting	J. T. Hambay	707,226	Aug. 19	2345	535 536	100	1638
Railway-trains. Electric block system for	W. Schmitz	703,175	Sept. 2	330	79	100	2048
Railway-vehicle. Suspended	A. Brooker	708,896	Aug. 12	1742	388 389	100	1490
Railway-wagons. Controlling device for couplings of	R. F. C. Rambeaud	703,670	July 1	545	123	100	107
Railway-wagons, &c. Coupling for	F. Barson	709,198	Sept. 16	2381	518	100	2479
Railway-wagons, &c. Door for	J. D. Miller and R. Yates	704,354	July 8	1656	401	100	392
Railway-wagons in loading or unloading. Apparatus for controlling	J. E. Spagnoletti	704,948	July 15	2007	645 646	100	645
Railways. Automatic electrical signaling apparatus for	T. T. Chaloner	704,174	July 8	1520	326	100	320
Railways. Automatic stop-signal for	J. L. Ricketts	707,639	Aug. 26	3195	705 706	100	1613
Railways. Electrical safety alarm and signal mechanism for	C. R. Campbell	705,219	Aug. 5	418	90	100	1201
Railways. Operating electric	W. and G. W. Drummond	704,786	July 15	2694	569 570	100	565
Railways. Tablet picking up and depositing apparatus for use on single lines of	G. Cawley	708,468	Sept. 2	896	190	100	2150
Railways. Vehicle to be used in electric traction on	H. A. L. Barry	707,542	Aug. 26	3987	866	100	1779
Raising or lowering materials. Means for							
Rake: *See* Hay-rake. Stalk-rake. Push-rake.							
Rake	C. H. Trumpler	704,719	July 15	2504	541	100	539

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Rake	A. S. Elliott	706,397	Aug. 5	798	174	100	1275
Rake	L. Terry	708,989	Sept. 9	1737	402	100	2350
Rake and fork. Combination	A. Zwicker	705,008	July 15	2133	577	100	668
Rake and stacker. Combined	J. H. Kindsvater	704,345	July 8	1899	306 307	100	285
Ram. Hydraulic	W. L. Deming	706,727	Aug. 12	1894	310 311	100	1418
Range-finder	I. N. Lewis	706,766	Aug. 12	1489	230	100	1437
Range-finder	A. H. Marindin	707,856	Aug. 26	3628	817	100	1909
Rat-killer	J. T. Prior	704,576	July 15	2373	492	100	490
Rat-trap	P. Olaffsen	704,910	July 15	2909	634	100	636
Rat-trap	B. F. Short	710,080	Sept. 30	3989	887	100	2949
Ratchet mechanism	C. Joss	705,981	July 29	5038	1095	100	1077
Ratchet-tool	E. E. Brown and T. B. McCall	705,089	July 22	3180	687	100	694
Ratchet-wrench	J. E. Dickie	710,185	Sept. 30	4258	959	100	3016
Rattle. Rythmical	L. S. Burbank	705,819	July 29	4895	1048	100	1086
Razor	C. Freitag	707,333	Aug. 19	2349	523	100	1628
Razor-cleaner	E. F. Ogborn	706,997	Aug. 12	1902	426	100	1521
Razor-cleaner	H. Schweitzer	708,262	Sept. 2	491	113	100	2089
Razor. Safety	M. H. Standish	708,845	July 1	965	190	100	178
Receptacle. Non-refillable	H. W. Avery	706,712	Aug. 12	1367	305	100	1411
Reclining-chair. Adjustable	J. E. Hanger	704,459	July 8	2044	442 443	100	430
Reclining-chair. Folding	P. B. Watson	707,884	Aug. 26	3678	827 828	100	1921
Recorder: *See* Time-recorder.							
Recorder	C. J. Roach	704,925	July 15	2946	632	100	634
Recorder	E. A. Neubauer	706,682	Aug. 12	1320	292	100	1402
Recording apparatus for reciprocating bodies. Distance	E. A. Whitehead	708,440	Sept. 2	787	178 179	100	2140
Recording-machine	E. Larsen	703,935	July 1	1029	223 224	100	205
Recording or registering the maximum movement of any mechanism. Mechanism for	L. B. Atkinson	706,146	Aug. 5	262	59	100	1175
Reel: *See* Chain-reel. Drying-reel. Fishing-reel. Hose-reel. Rod-reel. Wire-reel.							
Reel	J. Shaw	708,293	Sept. 2	492	113	100	2081
Refining-engine	E. Churchill, Jr., and H. A. Hall	704,698	July 15	2457	530 531	100	529
Reflector or lamp-shade and collar. Combined	J. A. Carlstedt	704,711	July 15	2491	539	100	537
Refrigerating apparatus	J. C. Fox	703,646	July 1	494	111 112	100	97
Refrigerating apparatus	C. J. Coleman	709,814	Sept. 23	3516	793	100	2750
Refrigerating apparatus. Absorption	N. W. Condict	706,902	Aug. 12	1750	391	100	1492
Refrigerating apparatus. Still for absorption	N. W. Condict	706,901	Aug. 12	1749	390 391	100	1492
Refrigerating, heating, drying, impregnating, or otherwise treating goods. Apparatus for	J. McRae	705,279	July 22	3723	807 808 809	100	802
Refrigerating-machine	W. J. Woodcock	706,695	Aug. 12	1212	259	100	1377
Refrigerating plants. Ammonia-purifier for	J. Scheideman	704,392	July 8	1901	411	100	401
Refrigerating plants. Purifying refrigerants in circulation in	J. Scheideman	704,393	July 8	1902	411	100	401
Refrigerator	F. R. Beal	705,510	July 22	4192	912	100	896
Refrigerator	N. Bosmann	708,992	Sept. 16	1851	428	100	2392
Refrigerator	H. Aylmer	710,173	Sept. 30	4255	955	100	2913
Refrigerator-car	W. J. Hughes	706,061	Aug. 12	1981	288	100	1392
Refrigerator-car ice-tank	T. B. Kirby	704,197	July 8	1365	337 338	100	338
Refrigerator, freezer, and churn	S. Sweeney	704,768	July 15	2803	568	100	556
Refrigerator-pan alarm	P. Yon and L. Laprise	705,990	July 29	5128	1118	100	1096
Regenerative furnace	F. H. Treat	705,978	July 29	5106	1113	100	1093
Regenerator-burner	C. W. Weiss	710,180	Sept. 30	4154	936	100	2990
Register: *See* Autographic register. Barrel-register. Cash-register. Hot-air register. Hot-air wall-register. Hotel-register.							
Register	J. Alexander	707,751	Aug. 26	3405	768	100	1867
Register and alarm	L. E. Fugate	708,688	Sept. 9	1139	254	100	2338
Register, ventilator, &c	H. S. Hart	708,409	July 1	82	16	100	19
Regulator: *See* Air-pressure regulator. Damper-regulator. Dynamo-regulator. Electric regulator. Engine ignition-regulator. Fluid-pressure regulator. Gasolene-regulator. Power-transmission regulator. Pressure-regulator. Speed-regulator. Temperature-regulator. Voltage-regulator. Windmill-regulator.							
Regulator	H. B. P. Wrenn	708,289	Sept. 2	540	122 123	100	2091
Rein-guard	J. T. West	705,986	July 29	5121	1117	100	1096
Rein-holder	T. L. Thompson	709,585	Sept. 23	3084	686	100	2662
Rein-holder	W. P. Sampson	709,855	Sept. 23	3578	806	100	2764
Relay. Supervisory	W. Kaisling	705,098	July 22	3308	719	100	719
Relay. Vibratory-current	J. M. Fell	708,589	Sept. 9	971	220	100	2190
Releasing-hook for handling logs, &c	E. F. Marr	706,946	Aug. 5	467	99	100	1211
Reminder system. Perpetual	B. Piroah	704,100	July 8	1277	257	100	220
Rendering apparatus	D. Cameron	705,033	July 22	3125	698	100	695
Rendering apparatus	E. R. Edson	707,565	Aug. 26	3595	874	100	1761
Rendering apparatus	E. R. Edson	707,567	Aug. 26	3595	874	100	1762

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Rendering apparatus	C. Turner	708,845	Sept. 9	1570	358	100	2315
Resistance-coil and support therefor	H. P. Davis	710,143	Sept. 30	4177	941	100	2901
Resistance of resilient devices. Means for automatically regulating	P. C. Ewart	708,306	Aug. 5	612	132	100	1239
Respirator	L. M. A. Munts	708,948	July 1	1058	229	100	289
Respirator	G. L. Fowler	704,017	July 8	1198	259	100	253
Respirator	W. B. Chapman	705,907	July 29	4979	1084	100	1023
Retort-furnace	J. C. Dods	706,642	Aug. 12	1543	275	100	1929
Retort-mouthpiece clamp	E. Depetro	707,907	Aug. 26	3794	.....	100	959
Retting ramie, &c	S. Nielsen	705,608	July 29	4440	962	100	959
Reversing mechanism	R. R. Reck	705,961	July 29	5078	1107	100	1097
Reversing mechanism	O. Crosby	706,027	Aug. 5	47	9,10	100	1157
Reversing mechanism	F. M. Broun	706,719	Aug. 12	1377	307	100	1414
Reversing mechanism	C. W. James	706,827	Aug. 12	1604	350	100	1462
Reversing mechanism	J. D. Robertson	708,078	Sept. 2	146	36	100	2011
Revolver	J. D. Robertson	710,008	Sept. 30	3907	868	100	2944
Revolver ejector mechanism	J. H. Wesson	708,437	Sept. 2	781	177	100	2130
Revolver-lock	P. J. O'Brien	706,094	Aug. 5	174	33,36	100	1159
Revolving bar or counter	A. C. Eastwood	704,448	July 8	2014	437	100	494
Rheostat	J. A. Mosher	705,112	July 22	3354	727	100	728
Rheostat	W. H. Chapman	705,561	July 29	4361	945	100	944
Rheostat	H. P. Ball	707,194	Aug. 19	2295	511	100	1621
Rheostat or heater. Electric	H. W. Leonard	707,344	Aug. 19	2366	521	100	1637
Rheostats, electric heaters, &c. Resistance for	J. H. Whittington	707,479	Aug. 19	2407	535	100	1738
Ribbon and stock supporter	J. B. Cornwall	707,311	Aug. 19	2318	519	100	1627
Rice-hulling machine	R. W. Welch	706,985	July 29	5119	1116	100	1096
Rice, &c. Machine for cleaning	E. Huber	706,061	Aug. 5	120	25	100	1142
Riddle	J. H. Carl	705,736	July 29	4688	1014	100	1008

Road-roller. Steam	T. Wright	708,882	July 1	982	203 / 204	100	187
Roaster: *See* Coffee-roaster.							
Roaster	J. A. Ogden	708,798	Sept. 9	1821	401	100	2261
Rock-boring machine	J. Brejcha and E. Schulte	708,890	July 1	949	207	100	191
Rock-cutting apparatus	F. Lobnitz	707,128	Aug. 19	2149	468	100	1560
Rock-drill	R. Avery	709,191	Sept. 16	2275	517	100	2478
Rock-drill drill-holding chuck-bolt	O. H. Bossert	704,508	July 15	2138	461	100	402
Rock-drill. Percussive	Z. W. Daw	705,394	Aug. 5	791	173	100	1274
Rock-drilling engine	J. G. Leyner	709,022	Sept. 16	1984	444 / 445	100	2406
Rocking-chair. Adjustable	C. A. Bergstrom	710,085	Sept. 30	3954	892	100	2955
Rod: *See* Folding rod.							
Rod-coupling	J. A. Fitzpatrick	709,400	Sept. 16	2295	505	100	2368
Rod coupling. Connecting	J. Horsley	708,985	July 1	1010	220	100	201
Rod-reel	B. H. Gedge	707,317	Aug. 19	2318	507	100	1667
Roll mechanism	C. H. Davis	708,999	Sept. 16	1978	432	100	2366
Roller: *See* Cigarette-roller. Land-roller. Road-roller. Shade-roller.							
Roller attachment. Elevating	A. H. Centner	705,905	July 29	4975	1092 / 1093	100	1057
Roller-brake	L. H. Bill	708,114	Sept. 2	211	50	100	2095
Roller-mill	W. A. Dunn	709,093	Sept. 16	2056	471	100	2453
Roller-mill and cutter	W. A. Dunn	709,094	Sept. 16	2062	473	100	2434
Rolling apparatus. Sheet-metal	F. O. Stromborg	708,690	July 1	627	101	100	86
Rolling car-wheels. Machine for	H. V. Loss	708,674	Aug. 12	1509	289	100	1599
Rolling flat sheet metal. Apparatus for	T. Whitehouse	705,667	July 29	4948	1076	100	1061
Rolling-hoop	E. P. Hinman	708,143	Sept. 2	270	64	100	2087
Rolling metal I-beams, channel-beams, &c. Machine for	W. A. Dunn	709,088	Sept. 16	2050	471 / 472	100	2434
Rolling metal I-beams, channel-beams, &c. Machine for	W. A. Dunn	709,095	Sept. 16	2068	473 / 474	100	2434
Rolling metal tubes or other hollow or solid bodies	A. E. Beck	709,956	Sept. 30	3818	859	100	2936
Rolling-mill	P. Girin	706,548	Aug. 12	1076	237 / 238	100	1548
Rolling-mill	V. E. Edwards	709,972	Sept. 30	3808	857 / 858	100	2933
Rolling mill. Rod	C. A. Nighman	705,998	Aug. 19	1894	434 / 435	100	1580
Rolling-pin	B. Djup	705,654	July 29	4581	982	100	975
Rolling rods	C. A. Nighman	706,904	Aug. 12	1808	435	100	1591
Rolling sheet-metal cylinders. Machine for	M. M. Parker	710,117	Sept. 30	4117	929 / 930	100	2939
Roof, ceiling, and floor construction	B. McDougall	707,980	Aug. 19	2384	534	100	1640
Roof or structure. Glazed	E. Van Noorden	705,491	July 22	4155	904	100	869
Roofing. Cement	H. Brock	708,807	Sept. 2	576	130	100	2098
Roofing compound	F. A. Mitchell	707,710	Aug. 26	3698	.....	100	1644

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Rope-grip for snatfing	J. H. Wallace	704,282	July 8	1718	373 / 374	100	260
Rotary and folding chair	J. A. Wilkinson	709,286	Sept. 16	2461	555	100	2518
Rotary apparatus or plow for treatment of ground	A. Castelin	704,857	July 15	2776	600 / 601	100	595
Rotary cutter	J. Ettinger	704,260	July 15	2042	658	100	650
Rotary cutters. Manufacturing	B. Jansen	705,280	July 1	1021	.....	100	208
Rotary drier	L. Grill	709,704	Sept. 23	3287	737	100	2718
Rotary engine	C. Tuckfield	708,508	July 1	221	52	100	46
Rotary engine	C. Tuckfield	708,679	July 1	566	126 / 127	100	112
Rotary engine	A. T. Stimson	704,260	July 8	1706	373 / 374	100	260
Rotary engine	H. E. Hodgson	704,627	July 15	2365	514	100	509
Rotary engine	H. E. Hodgson	704,628	July 15	2369	514	100	510
Rotary engine	F. A. Pallé	704,913	July 15	2917	625	100	598
Rotary engine	W. D. Williams	705,004	July 15	3126	674	100	666
Rotary engine	C. O. Morley	705,274	July 22	3716	805 / 806	100	800
Rotary engine	G. Cassady	705,390	July 22	3951	856	100	848
Rotary engine	J. E. Cary	705,544	July 29	4501	977	100	971
Rotary engine	F. G. Grove	705,835	July 29	4851	1052	100	1042
Rotary engine	W. J. Mason	706,077	Aug. 5	147	31	100	1147
Rotary engine	A. P. Charles	706,158	Aug. 5	310	65, 66	100	1180
Rotary engine	W. Alsop	706,372	Aug. 5	738	160	100	1264
Rotary engine	G. E. Woodard	706,485	Aug. 5	967	212	100	1312
Rotary engine	J. N. Edwards	706,731	Aug. 12	1401	303 / 313	100	1419
Rotary engine	J. P. Pollard	707,003	Aug. 12	1911	498	100	1523
Rotary engine	W. F. Stanley	707,174	Aug. 19	2253	503 / 504	100	1612
Rotary engine	A. Dahlén	708,129	Sept. 2	243	57, 58	100	2092
Rotary engine	A. C. Eek and A. F. Cederquist	708,328	Sept. 2	611	129 / 130	100	2106
Rotary engine	E. L. Sill	708,414	Sept. 2	744	167	100	2132
Rotary engine	E. L. Sill	708,415	Sept. 2	745	167 / 168	100	2132
Rotary engine	M. M. Lockerby	708,566	Sept. 9	1011	229	100	2197
Rotary engine	G. Speice	708,742	Sept. 9	1343	306	100	2257
Rotary engine	P. Studer and P. Rupp	708,987	Sept. 9	1732	401	100	2349
Rotary engine	T. D., J. C., and H. A. Prescott	709,242	Sept. 16	2275	538 / 539	100	2499
Rotary engine	S. J. Webb	709,628	Sept. 23	3145	700 / 701	100	2574
Rotary engine	B. W. Fellows	709,708	Sept. 23	3283	735 / 736	100	2702
Rotary engine	O. C. Jones	709,778	Sept. 23	3438	772 / 773	100	2732
Rotary engine	W. Jamieson	709,908	Sept. 30	3711	837	100	2903
Rotary engine	T. J. Bush	709,961	Sept. 30	3823	860	100	2927
Rotary engine	W. F. Evans	710,261	Sept. 30	4205	989	100	2949
Rotary engine or motor	N. J. Fortunesco and A. Georges	708,879	Sept. 9	1657	377 / 93	100	2329
Rotary mixer for concrete, &c	W. J. Judd	708,494	July 1	104	23 / 24	100	33
Rotary motor	T. U. Gray	704,456	July 8	2032	441	100	429
Rotary motor	D. F. Smith	704,943	July 15	2999	643 / 643	100	643
Rotary motor	C. J. Skowen	705,457	July 22	4091	889 / 890	100	878
Rotary motor	R. C. Sayer	706,116	Aug. 5	209	43, 44	100	1159
Rotary motor	C. A. and O. W. Hult	706,181	Aug. 5	351	75, 76	100	1188
Rotary motor	A. L. Becht	709,254	Sept. 16	2400	544	100	2506
Rotary motor	P. A. Dupont	706,780	Aug. 12	1399	312	100	1418
Rotary motor. Two-cycle	G. W. Mudd	709,106	Sept. 16	2107	483	100	2444
Rotary shears	J. T. Hays and J. W. Wilson	705,079	July 22	3276	710	100	718
Rotary steam-engine	I. W. Wepplo	708,694	Sept. 9	1330	281 / 282	100	2343
Rotary steam-engine	J. W. K. Hodge	709,288	Sept. 16	2529	569 / 570	100	2534
Roundabout	N. F. Felton	708,540	Sept. 9	975	220	100	2190
Roundabout	M. J. Doner	708,872	Sept. 9	1685	373	100	2337
Roving-guide	F. Stevens	707,874	Aug. 26	3659	823	100	1915
Rowing appliance	W. B. Goodwin	710,147	Sept. 30	4185	943	100	2908
Rubber-coated materials. Preparing and treating	J. Minder	708,883	Sept. 9	1594	.....	100	2365
Rubber-dam holder	G. W. Todd	710,306	Sept. 30	4408	1008	100	2954
Rubber. Producing a composition of matter to be used as a substitute for	O. A. Baller	708,003	Sept. 2	7	.....	100	1992
Rubber. Treatment of crude	J. Thame	707,654	Aug. 26	3192	.....	100	1825
Ruffling and sewing machine	R. G. Woodward	706,484	Aug. 5	965	211	100	1311
Rule	B. M. Gerardin	704,313	July 8	1758	385	100	371
Rule cutting and bending machine	J. Welty	707,744	Aug. 26	3374	759	100	1851
Rule. Drafting	M. C. Kelley	709,776	Sept. 23	3440	774	100	2734
Rule. Measuring	A. Latshaw	706,943	Aug. 5	498	98	100	1210
Rule, square, compasses, and comb. Combined pocket	C. P. Hartley	708,355	Sept. 2	650	147	100	2118
Ruler. Parallel	J. Sternfeld	705,473	July 22	4115	894	100	883
Ruling device	B. H. Joy	706,066	Aug. 5	126	26	100	1143
Ruling machine. Paper	W. H. Jordan	709,285	Sept. 16	2553	580 / 581	100	2491
Sad-iron	E. Blechmann	704,775	July 15	2612	595	100	570
Sad-iron	G. Finn	705,573	July 29	4380	930	100	948
Sad-iron handle	W. B. Fenn	708,812	Aug. 12	1577	353 / 354	100	1456
Sad-iron handle	W. B. Fenn	708,813	Aug. 12	1578	354	100	1456
Sad-iron. Self-heating	W. G. Burns	705,304	July 22	3553	768	100	768

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Saddle	J. R. and C. B. Hastings	709,904	Sept. 30	3707	825	100	2808
Saddle. Harness	J. Bromberek	704,205	July 15	2187	462 / 463	100	468
Saddle. Harness track	L. B. Allen	706,514	Sept. 9	981	211	100	2148
Saddle-pad. Pneumatic	H. R. Rensman	709,280	Sept. 30	3757	849	100	2812
Safe	W. E. Arnold	706,977	Aug. 12	1608	380	100	1481
Safe. Burglar-proof	D. Neale	707,344	Aug. 19	2568	580	100	1678
Safe-door lock	H. H. Tislow	707,655	Aug. 26	3193	716	100	1885
Safe or vault door	H. D. Hibbard	708,041	Sept. 2	86	20	100	1999
Safe. Screw-door	J. B. Boos	708,691	Sept. 16	1859	427	100	2398
Safety-box	M. Klein	704,549	July 15	2230	483	100	482
Safety device	A. Sundh	704,998	July 8	1925	417	100	405
Safety-elevator	P. H. Burgart	710,088	Sept. 30	3957	898	100	2855
Safety-pin	E. McConnell	708,965	July 1	1099	237	100	218
Safety-pin	W. F. Baldwin	709,860	Sept. 30	3588	808	100	2779
Salt-making apparatus	J. S. Clarke	705,881	July 22	2953	856 / 857	100	849
Sample-case. Folding	C. S. Morris	708,489	Sept. 2	885	200	100	2161
Sand and producing same. Artificial	J. A. Shinn	707,170	Aug. 19	2241	501	100	1610
Sand-blast apparatus	A. G. Warren	707,527	Aug. 19	2899	656	100	1747
Sand-blast apparatus	T. A. Sippel	709,181	Sept. 16	2258	512	100	2474
Sand-blast-controlling apparatus	J. Shaver	709,448	Sept. 16	2788	627	100	2538
Sand-blast machine	F. J. Heideger	708,880	Sept. 9	1638	377	100	2299
Sander	S. T. Simmons and W. T. Moore	708,929	Sept. 9	1723	398	100	2347
Sandpapering-machine	C. H. Driver	704,785	July 15	2031	460	100	564
Sandpapering-machine	J. A. Halidea	705,222	July 22	2627	736	100	794
Sash adjuster and lock	F. W. G. Boettcher	708,517	Sept. 9	943	218	100	2184
Sash-balance	J. Barrow	706,008	Aug. 5	10	3	100	1118
Sash-balance connection	A. Weingaertner	704,225	July 8	1607	348	100	335
Sash-fastener	A. Brauer	704,433	July 8	1980	431	100	417
Sash-fastener	W. Rundell	704,580	July 15	2278	494	100	492
Sash-fastener	J. C. Lodor	705,260	July 22	2604	801	100	796
Sash-fastener	W. H. Nelson	705,282	July 22	2728	810	100	808
Sash-fastener	J. E. Gibbs	709,148	Sept. 16	2179	499	100	2460
Sash-fastener	E. A. Sacket	706,456	Aug. 5	920	199	100	1202
Sash-fastener and shade-support. Combined	W. M. Reely	708,929	July 1	889	185	100	166
Sash-holder	B. D. Berry	708,889	July 1	946	207	100	190
Sash-holder	H. A. Baker	708,634	July 1	467	106	100	98
Sash-lock	A. M. Southard	708,976	July 1	1117	249	100	221
Sash-lock	J. A. Espitallier	704,014	July 8	1180	258	100	262
Sash-lock	C. Stimpson	704,279	July 8	1705	372	100	358
Sash-lock	V. R. McBride	706,945	Aug. 12	1643	367	100	1471
Sash-lock	N. M. Hutton	706,947	Aug. 12	1818	407	100	1505
Sash-lock	E. A. Patterson	707,940	Aug. 26	3781	848	100	1941
Sash-lock	E. P. Armstrong	708,911	Sept. 9	1097	246	100	2214
Sash lock	J. T. Pethick	708,919	Sept. 9	1708	394	100	2344
Sash-lock	W. Bennett	709,591	Sept. 23	3098	689	100	2664
Sash-lock	D. Forbes	710,189	Sept. 30	4261	960 / 961	100	2919
Sash lock and lift	R. H. Price	708,465	July 1	165	38	100	85
Sash lock and lift	C. W. Robison	708,406	Sept. 2	733	165	100	2130
Sash-weight	J. D. Ansley	705,992	July 29	5131	1119	100	1099
Sash-weight	G. A. Beckwith and C. L. Lamphere	707,197	Aug. 19	2295	513	100	1623
Sash-weights. Flask for making seamless	A. S. Hodges	709,768	Sept. 23	3481	769	100	2730
Sash. Window	E. Héroux	707,105	Aug. 19	2118	473	100	1584
Sashes. Automatic releasing device for window	C. Rupp	709,900	Sept. 23	3487	786	100	2743
Saw	R. E. Martin	704,898	July 15	2241	515	100	509
Saw	J. Tutterrow	708,278	Sept. 2	516	117	100	2088
Saw	W. G. Anderson	709,857	Sept. 30	3585	808	100	2779
Saw attachment. Gang	J. E. Duchanois	704,767	July 15	2085	570	100	565
Saw-clamp	A. J. Jaeger	705,920	July 29	5085	1098	100	1077
Saw. Double-acting	G. R. Peart	706,447	Aug. 5	908	196	100	1299
Saw-filing device	A. J. Beck	703,909	July 29	4967	1081	100	1065
Saw-frame. Butcher's	D. S. Cole	704,517	July 15	2167	469	100	470
Saw log-carriage offset	S. Erb	709,890	Sept. 30	3664	830 / 831	100	2797
Sawmill-carriage steam-feed	E. E. Thomas	706,508	Sept. 9	1066	242	100	2306
Sawmill-carriages. Offset mechanism for	J. J. Galway	706,311	Aug. 5	690	136	100	1241
Sawmill-dog	D. L. Cole	705,089	July 22	3196	690	100	697
Sawmill-feed	A. C. Osborn	706,339	Aug. 5	671	146	100	1251
Sawmill-knee indicator	J. D. Beatty	710,226	Sept. 30	4356	979	100	2941
Sawmill log-reflector	W. T. S. Diggins	709,687	Sept. 23	3159	708 / 709	100	2675
Sawmill set-works	J. Walton	707,370	Aug. 19	2800	589	100	1696
Sawmill steam set-works	D. C. Prescott	708,889	Sept. 9	1587	368	100	2326
Saw. Power-driven	W. D. Lloyd	709,785	Sept. 23	3455	777	100	2736
Saw-repairing machine	W. Travis	705,730	July 29	4955	1009	100	1001
Saw-set	C. Morrill	703,440	July 1	131	30	100	29
Saw-set	D. W. Solomon	708,895	Aug. 12	1478	370	100	1477
Saw-set	H. E. Vick	709,100	Sept. 2	194	44	100	2019
Saw-set	A. M. Giles	709,788	Sept. 9	1395	317	100	2270
Saw-setting machine	J. E. Hillstrom	709,013	Sept. 16	1916	440	100	2408
Saw slabbing-machine. Twin	E. E. Thomas	707,184	Aug. 19	2259	507 / 508 / 509	100	1616
Saw-spacing device	F. Yost	708,450	Sept. 2	809	185	100	2145
Saw-tooth tool	T. Olsen	709,355	Sept. 16	2587	588	100	2546
Saw-tooth wrench	G. H. Shellaberger	705,454	July 22	4085	888 / 889	100	877
Saw wheel. Band	T. S. Wilkin	708,850	Sept. 9	1542	360	100	2317
Sawing crooked timber. Timber-drag for	P. M. Qvarnström	705,443	July 22	4068	881	100	878
Sawing-machine	P. P. Batte	708,170	July 8	1519	334	100	318
Sawing machine. Circular	W. Miller	703,770	Aug. 19	1500	333 / 335	100	1439
Sawing machine. Circular	H. J. Colburn	707,675	Aug. 26	3219	728 / 729	100	1820

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Scaffold-splicer	J. Lally	704,884	July 15	2226	511	100	605
Scale	A. De Vilbiss, Jr. (Reissue)	12,009	Sept. 9	1788	488	100	2269
Scale. Color	C. J. Jorgensen	709,288	Sept. 16	2541	579	100	2535
Scale. Computing	C. T. Tipton	704,268	July 15	2080	523	100	522
Scale for railway mileage-books. Computing	J. G. Goldfoot	705,046	Aug. 5	85	18, 19	100	1134
Scale. Platform	A. Doering	708,288	July 1	55	10	100	14
Scale platform-support	F. C. Osborn	710,009	Sept. 30	3900	879 / 880	100	2843
Scale. Price	L. T. Johnson	706,229	Aug. 5	456	97	100	1200
Scale. Price	H. B. Sherwood	706,460	Aug. 5	994	201	100	1306
Scale. Slide	J. S. Merritt	708,437	July 1	195	28	100	87
Scale. Weighing and price spring-balance	O. O. Ozias	708,238	Sept. 2	707	159	100	2125
Scales. Spring-balance	O. O. Ozias	708,239	Sept. 2	704	158	100	2124
Scales. Stock-rack for platform	C. B. Hurst	708,595	July 1	372	86	100	74
Scarf. Waterproof	W. O. Chisholm	709,138	Sept. 16	2160	495	100	2457
Scenery-brace	F. T. Lippincott	704,708	July 15	2077	535	100	554
Scoop and scraper	W. R. Lee	708,529	Aug. 12	1529	364	100	1467
Scoop. Measuring	L. M. Reed	704,961	July 15	2078	537	100	539
Scoring-machines. Adjustable receiving-table for	C. W. Hobbs	705,988	July 29	5139	1121	100	1101
Scraper and scoop. Wheeled	T. D. Radcliffe	707,977	Aug. 26	3546	864	100	1953
Scraper. Wheeled	W. S. Livengood	708,800	July 1	786	173	100	157
Scraper. Wheeled	T. D. Radcliffe	706,342	Aug. 5	680	147 / 148	100	1253
Scrapers. Safety-catch for wheeled earth	C. J. Whiting	706,706	Aug. 12	1354	301	100	1409
Screen: *See* Fire-screen. Window-screen. Well-tube sand-screen.							
Screen	G. W. Cross	704,004	July 8	1173	256	100	249
Screens, blinds, &c. Brace for	M. H. Stevens	710,022	Sept. 30	3951	868	100	2849
Screw-cap closure	H. J. S. Hall	707,230	Aug. 19	2535	568	100	1669
Screw-cutting die	C. J. Jackson	707,288	Aug. 19	2356	528	100	1635
Screw-cutting machine	D. Lake and E. W. Crellin	705,526	July 22	4995	928 / 929	100	917
Screw-driver	J. D. Campbell and J. K. Gunn	708,636	July 1	473	108	100	98
Screw-driver	G. E. Gay	705,917	July 29	5008	1089	100	1072
Screw-driver	J. F. Larson	709,608	Sept. 23	3116	694	100	2659
Screw-jack	C. P. Storrs	707,790	Aug. 26	3329	745	100	1853
Screw protector. Set	T. F. Kelley	705,093	July 22	3311	719	100	790
Screw. Spur-shore	W. S. Rendle	708,880	July 1	940	195	100	168
Sculpturing-machine	A. Bontempi	709,388	Sept. 16	2076	600 / 601	100	2564
Scuttle, bucket, &c	E. M. Lockwood, Jr	706,074	Aug. 5	144	30	100	1146
Scuttle-covers. Means for operating and locking	E. F. Johnson	706,880	Aug. 12	1611	362	100	1464
Scythe-snath-bending machine	G. M. Fenn	707,221	Aug. 19	2295	582 / 583	100	1631
Scythe-snath-fastening device	P. Forbes	705,814	Aug. 12	1580	354	100	1450
Seal	E. J. Brooks	709,086	Sept. 23	3150	702	100	2675
Seal. Bottle	E. D. Schmitt. (Reissue)	12,088	Sept. 16	2819	633	100	2496
Seal. Bottle	E. D. Schmitt. (Reissue)	12,089	Sept. 16	2821	633	100	2500
Seal. Car	J. N. Brunner	707,088	Aug. 19	2074	463	100	1574
Seal. Cording	E. J. Brooks	704,672	July 15	2028	534	100	533
Seal. Dress-pattern	J. Broach and G. W. Goodrich	709,464	Sept. 23	3037	667	100	2609
Seal-lock	C. J. Reynolds	704,107	July 8	1257	269	100	292
Seal-lock	J. P. Kernbaum	709,777	Sept. 23	3440	774	100	2734
Sealing attachment	C. C. Armstrong	704,993	July 15	2112	457	100	457
Sealing-cap for bottles. Sheet-metal	N. B. Abbott	704,167	July 8	1305	288	100	316
Sealing device. Bottle	G. A. Brooks	708,580	July 1	278	63	100	56
Sealing device. Vacuum fruit-jar	S. Adlam	708,191	Sept. 2	362	86	100	2055
Sealing machine. Bottle	W. S. Dorman	705,564	July 29	4965	946	100	945
Sealing machine. Bottle	H. T. Gay	707,816	Aug. 19	2616	566	100	1667
Sealing machine. Envelop	H. E. Gavitt	709,761	Sept. 23	3404	764 / 765	100	2720
Sealing of tins, &c. Hermetic	J. R. Croft	708,868	Sept. 9	1614	380	100	2295
Sealing-wax can. Tin	W. E. Moyer	704,075	July 8	1317	297	100	270
Seam or joint. Sheet-metal	J. W. Mathis	708,722	Sept. 9	1313	290	100	2260
Seam. Stitched	G. H. Dimond	708,467	Sept. 2	841	193	100	2152
Seat: *See* Adjustable seat. Car-seat. Cultivator-seat. Implement-seat. Water-closet seat. Window-seat.							
Secondary battery	J. B. Entz	704,789	July 15	2253	550	100	548
Secondary battery	E. G. Steinmetz	704,797	July 15	2201	563	100	558
Secondary battery	W. L. Silvey	709,611	Sept. 23	3196	696 / 697	100	2670
Sectional heater	J. G. Langdon	705,029	July 22	3227	723	100	723
Seed-cake trimmer	S. J. Ellis and C. Neilsen	709,760	Sept. 23	3408	764	100	2721
Seed-cleaner and grain-separator	B. F. Hatfield	709,765	Sept. 23	3417	768	100	2725
Seed-drill furrow opening and covering attachment	L. C. Sweet	710,378	Sept. 30	4329	1086	100	2989
Seed-gatherer	J. Pence	709,086	Sept. 16	1966	450	100	2418
Seed. Treating beet	A. R. Black	704,610	July 15	2225	505	100	501
Seeding-machine	E. M. Heylman	707,846	Aug. 26	3507	814	100	1906
Seeding-machine	F. E. Davis	709,473	Sept. 23	3054	641 / 642	100	2618
Seeding-machine	R. L. Rhea	710,119	Sept. 30	4193	980	100	2888
Seeding-machine	F. G. Colley	710,251	Sept. 30	4379	995	100	2945
Seeding-machine	J. S. Heath and E. Baseman	710,273	Sept. 30	4411	994	100	2952
Seeding-machine	C. D. Ehret	707,056	Aug. 12	3012	450	100	1545
Selective system. Automatic	G. H. Chimnock	707,550	Aug. 26	2980	670	100	1777
Self-healing material	A. C. Johnson	708,982	July 1	1023	221	100	204
Semaphore	J. N. Harper	704,288	July 8	1778	388	100	374
Semaphore-signal. Automatic electric	J. J. McGill	706,586	Aug. 12	1157	251 / 252	100	1261
Semaphore-signal. Automatic electromechanical	C. A. Kellogg	706,328	Aug. 5	644	140	100	1245
Separable ring							

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Separator: *See* Ammonia-separator. Bean-separator. Centrifugal separator. Cream-separator. Egg-separator. Gas, oil, and water separator. Grain-separator. Liquid-separator. Magnetic separator. Oil-separator. Steam and oil separator.							
Separator	F. Cutler	704,241	July 8	1632	253	100	341
Separator	G. M. Jackson	707,701	Aug. 26	3273	731	100	1841
Sewed articles. Covered seam for	C. McNeil	703,966	July 1	1100	257	100	218
Sewer-pipe connection	F. W. Carlson	705,298	Aug. 5	596	130	100	1225
Sewer-trap	J. Pratt	710,209	Sept. 30	4306	998	100	2269
Sewing and welt-beveling machine. Shoe-	J. B. Hadaway	704,457	July 8	2093	441	100	429
Sewing and welt-beveling machine. Shoe-	J. B. Hadaway	704,458	July 8	2093	442	100	429
Sewing edgings. Guide for	J. Davis	705,166	Aug. 5	332	68	100	1183
Sewing-machine	J. T. Hogan	710,150	Sept. 30	4193	944 945	100	2904
Sewing-machine attachment for overedge or blind stitching.	E. Donaldson	709,308	Sept. 16	2506	564 565	100	2588
Sewing-machine attachment-holder	F. Jacob, Jr	705,354	July 22	3913	845	100	840
Sewing-machine attachment-holder	H. P. Steward	705,472	July 22	4114	894	100	882
Sewing-machine automatic thread-feeder	J. L. Saillet	704,690	July 15	2454	530	100	588
Sewing-machine. Blind-stitch	C. A. Dearborn	705,895	July 22	3925	829	100	888
Sewing-machine-bobbin holder-case	A. Döring	708,886	Sept. 30	3679	829	100	2796
Sewing machine. Book-	F. Kugler	706,363	July 22	3927	850 851	100	843
Sewing-machine braiding attachment	L. Smith	709,418	Sept. 2	758	169	100	2132
Sewing machine. Button-	B. T. String	709,194	Aug. 5	222	47	100	1162
Sewing machine. Buttonhole-	F. T. Leilich	705,257	July 22	3679	795 796 797 798 799 800	100	795
Sewing machine. Buttonhole-	J. T. Hogan	710,149	Sept. 30	4188	943 944	100	2903
Sewing-machine. Chain-stitch	H. J. Hancock	707,227	Aug. 19	2348	526 527	100	1662
Sewing-machine cutting attachment	G. S. Hill	703,960	July 1	1080	283 284	100	215
Sewing machine. Eyelet-	D. Noble	705,253	Aug. 5	479	102 103	100	1213
Sewing machine. Fabric-	J. W. Hyatt	708,480	Sept. 2	869	196 197	100	2155
Sewing-machine feed mechanism	J. A. Batchelor and F. E. Hall	705,633	July 29	4488	974	100	968
Sewing-machine feeder	C. Förster	708,681	Sept. 9	1126	254	100	2221
Sewing-machine feeding mechanism	L. Onderdonk	703,811	July 1	810	178	100	162
Sewing-machine feeding mechanism	D. M. Smyth	704,137	July 8	1459	312 318	100	207
Sewing-machine feeding mechanism	C. A. Dearborn	705,896	July 22	3930	830 831	100	894
Sewing-machine feeding mechanism	C. H. Foster	705,577	July 29	4586	961	100	949
Sewing-machine feeding mechanism	L. Onderdonk and A. A. Merritt	705,604	July 29	4442	962 963	100	959
Sewing-machine feeding mechanism	L. Onderdonk	705,605	July 29	4444	963 964	100	960
Sewing-machine feeding mechanism	J. V. Eves	709,311	Sept. 16	2511	566	100	2589
Sewing-machine feeding mechanism. Shoe-	Z. T. French and W. C. Meyer	705,068	July 22	3943	702	100	706
Sewing-machine folder	W. L. Swift and E. Burk	705,278	Aug. 5	559	121	100	1226
Sewing-machine guide	A. Lennox	704,200	July 8	1560	336	100	329
Sewing-machine guide	F. W. Gerlach and F. W. Moore	705,663	July 29	4544	967	100	980
Sewing-machine hemming attachment	T. F. Dennison	706,223	Aug. 5	626	91	100	1208
Sewing-machine. Lock-stitch	K. S. Klogel	708,771	Sept. 9	1401	331	100	2270
Sewing machine. Lock-stitch shoe-	A. B. Fowler	707,094	Aug. 19	2099	467	100	1577
Sewing-machine needle	F. W. Merrick	708,941	July 1	1041	226	100	207
Sewing-machine needle-controlling mechanism	J. V. Eves	709,310	Sept. 16	2509	565 566	100	2589
Sewing-machine overseaming and blindstitching attachment.	W. D. Beam	704,991	July 8	1795	376	100	253
Sewing-machine overseaming attachment	J. C. Moore	708,894	Sept. 9	1525	349	100	2305
Sewing-machine presser-foot and needle-bar lifting mechanism combined.	E. G. O'Donnell	709,354	Sept. 16	2584	582 583	100	2545
Sewing-machine presser-foot-lifting mechanism	C. Theobald	708,940	Sept. 9	1788	402	100	2350
Sewing-machine presser-foot-locking mechanism	H. A. Klemm	706,068	Aug. 5	129	26	100	1143
Sewing-machine pull-off mechanism	J. L. Kieffer	708,670	Aug. 12	1969	396	100	1396
Sewing-machine ring-shuttle	H. Regenstein	704,923	July 15	2944	631	100	633
Sewing-machine rotary take-up	M. Hemleb	705,240	July 22	3645	789	100	788
Sewing-machine rotary take-up	P. Diehl and M. Hemleb	705,887	July 22	3888	831	100	895
Sewing-machine rotary take-up device	P. Diehl and M. Hemleb	705,221	July 22	3639	777 778	100	777
Sewing-machine ruffler	P. Diehl	705,517	July 22	4211	915	100	900
Sewing machine. Shoe-	Z. T. French and W. C. Meyer	705,053	July 22	3945	702 708	100	706
Sewing-machine shuttle	H. R. Tracy	704,406	July 8	1988	419	100	408
Sewing-machine stitch-forming mechanism	L. Onderdonk	703,812	July 1	812	179	100	163
Sewing-machine stitch-forming mechanism	L. Onderdonk	703,813	July 1	815	180	100	163
Sewing-machine stitch-forming mechanism	H. H. Fefel	705,569	July 29	4372	948	100	946
Sewing-machine table or cabinet head	J. Cuber and A. Hackenbroch	710,042	Sept. 30	3905	824	100	2267
Sewing-machine take-up	J. J. M. Chauvet and J. W. Coulter	704,297	July 8	1785	378	100	264
Sewing-machine take-up	F. W. Merrick	707,145	Aug. 19	2189	490 491	100	1508
Sewing-machine take-up and tension	A. Godfrey	706,045	Aug. 5	82	18	100	1133
Sewing-machine take-up device	P. Diehl	705,398	July 22	3841	831 832	100	826
Sewing-machine thread-controlling device	E. B. Allen	709,456	Sept. 23	2823	634	100	2607

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Sewing-machine treadle-power stand	G. M. Eames	704,594	July 15	2161	472	100	473
Sewing-machine tuck-creaser	H. P. Steward	705,471	July 22	4113	894	100	882
Sewing-machines. Purling device for overedge	J. G. Greene	705,220	July 22	3824	785	100	788
Shade adjustment	F. H. Knapp	707,240	Aug. 19	2363	530	100	1636
Shade and curtain-pole bracket. Window-	J. P. and T. W. Sweeney	708,505	Sept. 2	912	207	100	2105
Shade and curtain-pole holder. Adjustable window-	G. T. Ashton and J. F. Bainter	705,548	July 29	4341	939	100	939
Shade and fixture. Window	J. Eckert	703,773	July 1	731	162	100	147
Shade-bracket	F. Yahn	706,287	Aug. 5	574	124	100	1228
Shade-bracket. Adjustable	A. Hanson	708,226	Sept. 2	427	97	100	2095
Shade-bracket. Adjustable	L. A. Watts	708,281	Sept. 2	594	130	100	2095
Shade-bracket. Adjustable	W. H. Sattelberg	710,215	Sept. 30	4317	970	100	2892
Shade-carrier. Adjustable window-	A. W. Ellis	708,629	Sept. 9	1126	253	100	2221
Shade-fixture	E. L. A. Cureau	704,816	July 15	2712	586	100	580
Shade fixture. Window-	C. I. Wimmer	709,842	Sept. 23	3556	809	100	2759
Shade-hanger	M. H. Boyce	707,900	Aug. 26	3713	839	100	1997
Shade hanger. Window-	S. Blaustein	708,378	July 1	27	6	100	8
Shade hanger. Window-	J. B. Merkel	708,156	Sept. 2	291	70	100	2041
Shade-holder	T. B. Nowlin	706,098	Aug. 5	174	35	100	1152
Shade holder. Adjustable window-	F. D. Hewes and F. J. Bittner	707,418	Aug. 19	2095	469	100	1705
Shade holder. Window-	J. H. Donaldson	708,468	Sept. 2	841	192	100	2158
Shade-roller	O. M. Edwards	704,736	July 15	2547	550	100	547
Shade-roller	O. M. Edwards	708,701	Sept. 9	1954	290	100	2248
Shade-roller and curtain-pole holder. Combined	H. S. De Sollar	706,738	Aug. 12	1305	311	100	1418
Shade roller and fixture	G. C. Mathers	706,594	July 29	4428	959	100	956
Shade-roller bracket	W. Clowse and O. M. Stevens	709,964	Sept. 30	3837	803	100	2820
Shade-roller-hanging apparatus	J. Stonebraker	708,090	Sept. 2	153	39	100	2115
Shade-roller roller-bearing support	J. Renner	708,736	Sept. 9	1332	304	100	2264
Shade-support	E. A. Livet	707,433	Aug. 19	2731	618	100	1718
Shade support. Window-	W. K. Martin	704,894	July 15	2843	615 616	100	609
Shade support. Window-	F. R. Mease	705,595	July 29	4430	960	100	957
Shades and curtains. Roller-bracket for window	F. A. Giorgio	705,339	July 22	3898	840	100	834
Shades. Device for spring-actuated	E. T. Burrowes	705,031	July 22	3182	688	100	695
Shades. Means for sustaining and adjusting window-	A. Serafinski	710,079	Sept. 30	4026	910	100	2872
Shadowgraph	J. G. Hirsch	708,416	July 1	93	20	100	21
Shaft-coupling	I. Lehman	705,366	July 22	3983	852	100	844
Shaft-coupling	R. W. Scott	707,453	Aug. 19	2762	586	100	1719
Shaft-coupling. Flexible	G. C. Hicks, Jr	708,582	July 1	357	85	100	72
Shaft-coupling. Power-	O. Rudd	707,357	Aug. 19	2587	551	100	1692
Shaft cross-bar. Vehicle-	S. H. Hayden and H. D. Hathaway	704,460	July 8	2045	443	100	430
Shaft-mounting	H. McCornack	706,098	Aug. 5	164	34	100	1150
Shaft-shackle. Vehicle	S. R. Bailey	703,864	July 1	3	2	100	3
Shaft-shackle. Vehicle	S. R. Bailey	703,865	July 1	4	2	100	3
Shaft support. Vehicle-	I. D. Cady	708,320	Sept. 2	21	7	100	1987
Shafts. Device for hitching horses to	C. B. Johnson	706,550	Sept. 9	1003	227	100	2196
Shafts. Electromagnetic device for controlling the rotation of	P. V. Avril	710,311	Sept. 30	4476	1010	100	2965
Sharpener	C. F. Brown	707,088	Aug. 19	2073	462	100	1574
Sharpener. Harrow-disk	A. E. Durner	708,932	Sept. 9	1472	336	100	2295
Sharpener. Knife and pencil	L. Johnson	707,118	Aug. 19	2137	478	100	1588
Sharpener. Mower or reaper knife	S. McCay	707,616	Aug. 26	3091	696	100	1804
Sharpener. Shears	K. Roesler	709,648	Sept. 23	3188	712	100	2663
Sharpening-machine	F. A. Reichardt and H. Wilcox	704,106	July 8	1284	298 299	100	291
Shearing tool or clipper	J. K. Stewart	709,522	Sept. 23	2983	665	100	2642
Shears: *See* Grass-cutting Rotary shears. shears.							
Shears	W. Richard	705,444	July 22	4063	881	100	873
Shears	A. E. Wales	708,683	Sept. 9	1229	291	100	2242
Shears	S. N. Fortney	709,478	Sept. 23	2998	644	100	2682
Sheep-trail	J. Cherpaw and F. McGuire	705,999	July 8	1168	254	100	948
Sheet-delivering apparatus	A. Cowan	708,958	Sept. 9	1784	411 412 413	100	2358
Sheet-delivery mechanism	W. Scott	708,741	Sept. 9	1337	305 306	100	2265
Sheet-metal bailed can or vessel	B. H. Larkin	704,961	July 8	1672	364	100	350
Sheet-metal can	F. Tyson	709,496	Sept. 16	2743	616	100	2578
Sheet-metal pipe	F. L. Filson	710,269	Sept. 30	4396	990	100	2949
Sheet-metal pipe-elbows. Manufacturing	E. H. Smith	708,932	Sept. 9	1726	390	100	2348
Sheet-metal siding	E. G. Charlebois	705,207	July 22	3565	771	100	772
Sheet-metal-vessel spout-brace	C. L. Wagandt	704,408	July 8	1941	420	100	409
Sheet-metal vessels. Machine for fastening the bottoms in angular	W. Carljude	704,785	July 15	2538	548 549	100	545
Sheet. Reversible suspended flexible	W. E. Elam	708,304	July 1	58	11	100	14
Sheet-transferring mechanism	G. F. Read	707,721	Aug. 26	3306	740 741	100	1848
Shelf. Bracket-	R. R. Walker	704,154	July 8	1486	318	100	312
Shelving-bracket. Subsidiary	W. G. Croom	704,957	July 15	2683	651	100	649
Shelving. Metallic	W. H. Taylor	707,968	Aug. 26	3856	896	100	1955
Sheller: *See* Pea-sheller.							
Shield. Adhesive	W. J. Müller	706,250	Aug. 5	474	101	100	1212
Shield for personal wear	L. H. Catzen	708,817	Sept. 2	591	134	100	2101
Shift-key-actuating device	R. S. Cope	709,748	Sept. 23	2284	750	100	2721
Shingling-bracket	M. Choquette	703,894	July 1	967	211	100	198
Shingling carriage and gage	F. C. Leek	710,281	Sept. 30	4437	998	100	2956
Ship construction	R. T. Green	705,342	July 22	3830	824	100	825
Ship construction	A. B. Wolvin	706,708	Aug. 12	1857	408	100	1409
Ships. Mooring	W. M. Walters	704,155	July 8	1487	319	100	312
Shipping-box	J. T. Hicks	710,100	Sept. 30	4087	922	100	2891
Shirt	M. P. Magly	708,781	July 1	689	146	100	192
Shirt-front and braces. Combined	M. E. Ppore	708,307	Sept. 2	717	160 161	100	2126

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Shirt-vest	G. W. Sheckells	704,368	July 8	1917	415	100	404
Shock-loader	A. C. Houdyshell	708,045	Sept. 2	98	31	100	2000
Shoe-fastener	A. T. Jordan	705,356	July 22	3016	848	100	841
Shoe-fastener	M. S. Brown	705,817	July 29	4883	1047	100	1106
Shoe-fastener	J. F. Hawkes	707,694	Aug. 26	2262	730	100	1339
Shoe-fastener	H. B. Walker	708,686	July 1	570	139	100	115
Shoe form or last	C. B. Corwin	707,906	Aug. 26	3722	884	100	1689
Shoe-lining trimmer	M. Levy	707,708	Aug. 26	3676	728	100	1142
Shoe-polishing machine	A. Eppler, Jr	706,088	Aug. 5	70	15,16	100	1132
Shoe-turning machine	W. E. Ellis	704,451	July 8	2021	429	100	426
Shoe-upper fastener	J. T. Thompson	704,960	July 15	3088	664	100	658
Shoestring							
Shovel: See Power-shovel. Steam-shovel.							
Shovel attachment	W. T. Spillane	707,948	Aug. 26	3790	851	100	1943
Shovel-support	J. Baker	709,192	Sept. 16	2279	518	100	2479
Show-case	J. S. Lewis and D. F. Grow	704,056	July 8	1970	275	100	957
Show-case	W. Kinsy	709,331	Sept. 16	2545	572	100	2536
Show-case	S. Himmel	709,709	Sept. 23	3295	739	100	2705
Show-case	J. L. Crane	710,141	Sept. 30	4174	940	100	2900
Show-case or show-front	C. H. Goldman	708,912	July 1	990	216	100	198
Show-top	H. Hunter	709,985	Sept. 30	3871	872	100	2887
Show-window construction	E. E. Jones	708,592	July 1	380	88	100	75
Shredder snapping-rolls	O. Näther	708,727	Sept. 9	1880	300 / 301	100	2261
Shutter. Curtain-	K. Unterlechner	704,599	July 15	2310	501	100	496
Shutter-fastener	W. R. Briggs	708,619	Sept. 9	1108	249	100	2217
Shutter-fastener	G. Orth	704,755	July 15	2580	557	100	558
Shutter-setting mechanism. Automatic	J. G. Busch	705,217	Aug. 5	409	87,88	100	1300
Shutter. Window-	T. Scheltenbach	708,923	Sept. 9	1713	395	100	2345
Shuttle-check	J. T. Hicks	708,043	Sept. 2	90	20	100	2000
Sideboard. Combination-	A. Teichmann	705,717	July 29	4651	1008	100	1001
Sieve	A. C. Brantingham	705,027	July 22	3178	697	100	694
Sieve. Self-cleaning	I. H. Taylor	706,129	Aug. 5	236	49	100	1166
Sifter. Ash-	A. L. Rundell	708,357	Sept. 2	496	111	100	2079
Sifter. Ash-	E. Willcox	709,393	Sept. 16	2564	598	100	2562
Sifter. Ash-	H. Maynard	709,852	Sept. 23	3574	805	100	2726
Sifter. Cinder-	J. Lorich, Jr.	709,094	Sept. 16	1943	445	100	2408
Sign	J. M. Niesen	705,781	July 29	4751	1032	100	1023
Sign-board	T. E. Murray	705,507	July 29	4492	960	100	957
Sign. Electric	M. Norden	705,429	July 22	4068	875	100	887
Sign. Electric-light	C. C. Scott	704,122	July 8	1418	304	100	298
Sign. Illuminated display	J. W. Lieb, Jr., and J. H. Tyler	709,063	Sept. 16	1942	445	100	2408
Sign-illuminating device. Street-							
Signal: Door-signal. Railway-signal. Electric signal. Railway danger-signal. Elevator-signal. Semaphore-signal. Fluid-operated signal.							
Signal	R. Herman	704,800	July 15	2670	577 / 578	100	571
Signal and engine-driver recorder	J. P. de Braam	706,993	Sept. 16	1854	398	100	2396
Signal device	H. S. Balliet	705,549	July 29	4341	929	100	939
Signal mechanism	R. Herman	705,594	July 29	4396	955 / 956 / 176 / 177 / 178	100	951
Signal system. Telegraphically-operated	J. N. Newsom	703,810	July 1	799	177	100	161
Signaling apparatus	J. R. Mead	708,487	Sept. 2	890	199	100	2159
Signaling apparatus	H. A. Fessenden	710,390	Sept. 30	4498	1013	100	2999
Signaling apparatus. Pneumatic	J. H. Brady	708,687	July 1	470	107	100	93
Signaling apparatus. Train	W. D. Clopton	709,746	Sept. 23	3396	756	100	2721
Signaling by electromagnetic waves	R. A. Fessenden	706,745	Aug. 12	1443	319	100	1426
Signaling by electromagnetic waves	R. A. Fessenden	706,746	Aug. 12	1448	319	100	1427
Signaling by electromagnetic waves. Apparatus for	R. A. Fessenden	706,747	Aug. 12	1450	319	100	1428
Signaling-machine	H. L. McGowan	708,904	Sept. 9	1686	386	100	2340
Signaling. Semaphore-indicator for electric	H. Gulliver	708,957	July 1	1076	232	100	214
Signaling system	J. J. Ruddick	704,117	July 8	1406	302	100	296
Signaling system and apparatus used therein. Electric	R. G. Callum	706,218	Aug. 5	412	88, 89	100	1200
Signaling. Wireless	R. A. Fessenden	706,740	Aug. 12	1428	316	100	1424
Signaling. Wireless	R. A. Fessenden	706,742	Aug. 12	1433	317 / 318	100	1425
Signaling. Wireless	R. A. Fessenden	706,743	Aug. 12	1440	318	100	1426
Silk fiber. Intensifying the luster of	C. Stuart	705,715	July 29	4649	1007	100	1000
Silk. Intensifying the luster of	C. Stuart	709,594	Sept. 23	3267	665	100	2643
Silk-lustering machine	C. Stuart	705,716	July 29	4650	1007 / 1008	100	1000
Silo	G. W. Manlove	708,189	Aug. 5	366	79	100	1191
Silo	E. B. Lacey and A. J. Fuller	707,123	Aug. 19	2742	480	100	1589
Sinew-extractor	J. C. Scannell	706,858	Aug. 12	1657	370	100	1473
Singletree attachment	J. W. Magarvy	707,935	Aug. 26	3774	847	100	1940
Singletree-clip	C. J. Burch	708,897	Aug. 12	1745	389	100	1491
Siphon for dispensing liquids	A. Kleinfeldt	706,423	Aug. 5	849	186	100	1285
Skate. Automatic cycle or bicycle	E. E. Ries	706,788	Aug. 12	1524	338	100	1444
Skein-holder	L. M. Tressel	710,196	Sept. 30	4143	935	100	2993
Skelp-bending machine	G. G. and R. O. Blakey	708,015	Sept. 2	25	6	100	1995
Skins. Splitting	F. W. Moore	708,388	Sept. 2	647		100	2208
Skirt-elevator	C. W. L. Barber	709,450	Sept. 23	2923	654	100	2780
Skirt-holder	C. W. Baughman	709,862	Sept. 30	3591	810	100	2758
Skirt-holder or skirt-suspender	W. Mehlfeld	709,823	Sept. 23	3529	795	100	2753
Skirt-protector	J. Cathrein	707,387	Aug. 19	2643	597	100	1694
Skirt-retainer	M. C. Huffman	704,042	Aug. 5	1243	268	100	991
Skirt-supporter	L. H. Flory	706,178	Aug. 5	333	71	100	1185
Skirt-supporter	L. E. Hachereile	706,592	July 8	444	93	100	1207
Skylight	E. J. Hulse	707,419	Aug. 19	2707	613	100	1707
Slab or tile for building purposes	N. Poulson	707,685	Aug. 26	3131	704	100	1812

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Slabs with plain or ornamental surfaces of plastic cement or composition. Machinery for making	G. B. Hall	707,921	Aug. 26	3750	840 / 841	100	1986
Slack-adjuster	W. H. Sauvage	704,970	July 15	3061	658	100	654
Slack-adjuster	W. J. Keville and J. P. Carey	710,361	Sept. 30	4563	1029	100	2983
Slag-heating apparatus	J. A. Potter	709,112	Sept. 16	2118	486	100	2447
Slat-forming machine	G. W. Packer	705,434	July 22	4049	877 / 878	100	870
Sled	C. Miller	705,943	July 29	5045	1099	100	1089
Sleeper or tie. Metallic	J. I. Newburg	706,587	Aug. 12	1141	253	100	1362
Sleeve-holder	A. J. Barber	708,866	July 1	6	2	100	4
Sleigh	P. R. Gwyn	708,914	July 1	994	216	100	198
Sleigh-runner	W. N. Williams	708,510	July 1	242	56	100	49
Sleigh-runner. Detachable	W. W. Topliff	708,856	July 1	888	195	100	178
Slicer and cutter. Potato	L. L. Stevens	710,065	Sept. 30	4052	912 / 913	100	2874
Sliding bolt	C. E. Long	708,892	Sept. 9	1664	362	100	2334
Slugging and nailing machine jack	L. A. Casgrain	705,512	July 22	4199	913	100	898
Smelting-furnace	C. Laughlin	707,601	Aug. 26	3061	689	100	1797
Smelting-furnace	C. Laughlin	707,602	Aug. 26	3062	689	100	1797
Smelting-furnace. Electric	F. C. Weber	704,908	July 15	3108	669 / 670	100	663
Smoke and spark-preventing device	W. S. Hughes	707,332	Aug. 19	2548	574	100	1674
Smoke-consumer	W. T. Keogh	706,420	Aug. 5	844	185	100	1284
Smoke-consumer	L. E. Morgal	707,341	Aug. 19	2564	578	100	1677
Smoke-consumer	J. P. Kelly	708,302	Sept. 2	660	148 / 149	100	2115
Smoke-consumer	J. W. Johnson	708,644	Sept. 9	1162	264	100	2228
Smoke-consuming apparatus for steam-boiler or like furnaces	B. D. Brett	707,957	Aug. 26	3800	853 / 854	100	1945
Smoke-consuming appliance for furnaces	J. Alves	707,534	Aug. 26	2926	662	100	1770
Smoke-conveyer	W. L. Gale	708,085	Sept. 2	75	17	100	1997
Smoke-preventing furnace	H. F. Hayden	704,325	July 8	1782	389	100	374
Smoke-preventing furnace	H. F. Hayden	704,326	July 8	1785	390	100	375
Smoking-pipe	A. S. Speirs	707,268	Aug. 19	2414	541	100	1646
Smoking-pipe	C. P. Remore	708,404	Sept. 2	728	164	100	2129
Smoothing-iron	J. Jones	705,248	July 22	3057	791	100	790
Snow guard or fender	F. A. Peter	706,684	Aug. 12	1324	292	100	1402
Snow-plow	P. W. Martin	706,980	Aug. 12	1872	419	100	1515
Snow-plow. Cylinder rotary	H. H. Kryger	707,121	Aug. 19	2140	478 / 479	100	1588
Soap	H. C. Peffer	704,864	July 8	1872		100	705
Soap cutting and spreading machine	T. Gaynor, Jr	705,067	July 22	3255	704 / 705	100	709
Soap-holder	J. P. Eustis	708,877	Sept. 9	1633	375	100	2328
Soap-holder	A. E. Dusek	709,143	Sept. 16	2173	498	100	2459
Soap-holder. Pendent	R. H. Neamann	706,992	Aug. 12	1803	424	100	1520
Soap-press	J. J. Forster and R. L. Murdock	706,919	Aug. 12	1771	396 / 397	100	1496
Soap. Reservoir for dispensing liquid	E. Lee	708,652	Sept. 9	1171	267	100	2230
Socket-cover and globe-holder	J. F. Wride	708,880	July 1	980	203	100	187
Socket. Regulating-	L. F. Bogia, Jr	708,016	Sept. 2	26	6	100	1986
Socket-wrench. Adjustable	J. L. Paxson	708,816	July 1	819	181	100	164
Soda-water-dispensing fountain	M. H. Petigor	708,659	Sept. 9	1187	271	100	2233
Sodium cyanid. Making	F. Roessler	708,079	Sept. 2	147		100	2011
Sodium peroxid. Compressing	G. F. Jaubert	709,490	Sept. 23	2908		100	2626
Solar heater	P. G. Hubert	705,850	July 22	3903	845	100	889
Solder for soldering aluminium	J. C. Webster	707,470	Aug. 19	2788		100	1725
Solder to metal blanks. Machine for applying	J. Lee	705,937	July 29	5035	1097 / 1098	100	1078
Soldering-iron	G. Guntz	705,752	July 29	4714	1020	100	1012
Soldering-iron	J. C. Covert	707,212	Aug. 19	2330	519	100	1627
Soldering machine. Can-	J. G. Hodgson and J. C. Taliaferro	704,257	July 8	1665	362 / 363	100	349
Soldering machine. Can-	B. Coll	708,798	Sept. 9	1402	334 / 335 / 360	100	2296
Soldering machine for sheet-metal cans. Automatic side-seam-	J. G. Hodgson and J. C. Taliaferro	704,256	July 8	1658	361 / 362	100	347
Soles. Machine for making pieced	G. E. Warren	706,615	Aug. 12	1194	265	100	1378
Soot or ash pan	T. K. Stanton	705,468	July 22	4107	893	100	881
Sorting and addressing machine	S. Elliott	707,961	Aug. 26	3812	856 / 857 / 858	100	1947
Sound-modifier	N. C. Durand	707,909	Aug. 26	3726	835	100	1929
Sound-record of celluloid	A. N. Petit	708,828	Sept. 9	1537	351	100	2308
Sound-record reproducer	T. A. Edison	705,889	July 29	4838	1051	100	1039
Sound-records in celluloid. Producing	A. N. Petit	710,299	Sept. 30	4435		100	2962
Sound recording and reproducing apparatus. Horn for	G. Osten and W. P. Spalding	705,196	July 22	3382	732	100	734
Sound recording and reproducing device	E. R. Johnson	704,047	July 8	1250	270	100	263
Sound-reproducer	H. G. A. I. Wieder	708,849	Sept. 9	1581	360	100	2317
Soup material and making same	W. T. Scheele	707,646	Aug. 26	3155		100	1817
Spark and cinder arrester for locomotive smoke-stacks	L. C. Laurent	707,068	Aug. 12	2027	453	100	1548
Spark arresting and discharging device	E. J. Smith	705,461	July 22	4099	891	100	879
Spark-preventer for locomotive or other engines	D. Drummond	704,008	July 8	1178	257	100	250
Sparking-coil casing	C. F. Splitdorf	704,589	July 15	2298	498	100	494
Spectacle attachment	A. A. Laforest	704,714	July 15	2496	540	100	537
Spectacle-frame	F. Schick	710,015	Sept. 30	3923	845	100	2947
Spectacle or eyeglass case	C. M. Wells	705,502	July 22	4174	908	100	892
Spectacles	M. H. Cohen	709,874	Sept. 30	3634	819	100	2795
Spectacles or eyeglasses	W. S. Essick	709,891	Sept. 30	3696	831	100	2797
Speed-changing device	C. C. Tyler	710,325	Sept. 30	4336	975	100	2986
Speed device. Variable-	W. E. Crane	705,809	July 22	3567	779	100	778
Speed device. Variable-	B. M. W. Hanson and F. W. Gordon	706,049	Aug. 5	92	19, 20	100	1135

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page
Speed driving mechanism. Two-	F. L. Sanders	707,944	Aug. 26	3785	840	100	1942
Speed-gage	H. S. Credlebaugh	705,514	July 22	4208	913	100	608
Speed-indicating system	J. L. Hall	706,554	Aug. 12	1085	914	100	1350
Speed mechanism	J. S. and L. Heath and E. Baseman	710,371	Sept. 30	4409	240	100	2052
Speed mechanism. Differential-	H. R. Isler	704,645	July 15	2980	994	100	513
Speed mechanism. Variable-	R. K. Le Blond	706,186	Aug. 5	358	515	100	1189
Speed regulating and reversing device for power-transmitting mechanism.	F. H. Bates	704,430	July 8	1974	516	100	415
Speed-regulator	J. E. Johnson	706,331	Aug. 5	641	77	100	1245
Speed-regulator	H. P. White	708,439	Sept. 2	786	140	100	2140
Speeds are exceeded by vehicles. Apparatus for indicating when certain predetermined	A. F. Poillevillain, (dit P. Villain)	707,254	Aug. 19	2300	178	100	1641
Spelling-manual	R. R. Riordon	707,800	Aug. 26	3514	535	100	1889
Spike-puller	N. F. Murphy	708,443	July 1	186	736	100	29
Spindle: *See* Spinning-spindle. Vehicle-wheel spindle.					31		
Spinning and doubling fibrous substances. Machinery for	G. H. Milward	705,774	July 29	4749	1028	100	1020
Spinning and doubling machine flier	T. Watson	708,945	Sept. 9	1748	1029	100	2351
Spinning and twisting frame. Ring	A. Hitchon	706,414	Aug. 5	882	404	100	1282
Spinning apparatus. Yarn-	J. Booth	705,733	July 29	4678	181	100	1005
Spinning apparatus. Yarn-	G. O. Draper	707,215	Aug. 19	2326	182	100	1629
Spinning-band	G. M. Beadle	708,988	Sept. 16	1853	1012	100	2301
Spinning-head	F. A. Breeze	706,893	Aug. 12	1733	520	100	1488
Spinning-head	F. A. Breeze	708,458	Sept. 2	824	387	100	2148
Spinning-machine cleaner	S. Mock and C. D. Robinson	708,051	Sept. 2	116	28	100	2095
Spinning-machine shell-rolls	A. G. Boozer	709,298	Sept. 16	2467	559	100	2524
Spinning machine. Twine-	R. A. Myers	706,989	Aug. 12	1888	423	100	1519
Spinning or roving machine	W. V. Threlfall	707,462	Aug. 19	2773	628	100	1721
Spinning-ring-truing mechanism	C. F. Roper	709,512	Sept. 23	2955	629	100	2535
Spinning-spindle	C. E. Lovejoy	708,874	Sept. 2	674	660	100	2118
Spittoon. Fountain-	C. M. Freeman	707,912	Aug. 26	3730	152	100	1939
Splint-boxing machinery	A. B. Calkins	704,511	July 15	2148	836	100	399
Spoke for vehicle-wheels. Elastic steel	H. G. M. Howard	706,650	Aug. 12	1278	465	100	465
Spoke-setting machine	G. P. Yeakel	708,893	July 1	934	466	100	1392
Spoke-tightener	V. J. La Bauve	706,071	Aug. 5	134	467	100	187
Spool for sand-reels, &c	K. Chickering	704,435	July 8	1964	204	100	1144
Spool-stand	E. Buffum	710,095	Sept. 30	4076	37	100	417
Spraying apparatus	M. J. Caswell	705,645	July 29	4504	481	100	2879
Spring: *See* Bed-spring. Vehicle-seat spring.					432		
Spring-cushion	E. Denegre	709,989	Sept. 30	3848	919	100	2879
Spring-cushion	A. C. McCord	709,998	Sept. 30	3892	920	100	2879
Spring-cushion	A. C. McCord	709,999	Sept. 30	3895	977	100	972
Spring-cushion	C. P. Byrnes	704,818	July 15	2705	866	100	2832
Spring-cushioning device	T. S. Brown	707,756	Aug. 26	3414	878	100	2841
Spring key or cotter	A. Bender	708,373	July 1	17	878	100	2842
Spring-motor	W. G. Engle	710,260	Sept. 30	4394	585	100	578
Spring-structure support	J. Dicalre	709,142	Sept. 16	2172	4	100	6
Spring-wheel	A. R. Cole and P. J. Donnelly	708,128	Sept. 2	240	989	100	2948
Springs or coils. Apparatus for the continuous manufacture of spiral					497	100	2459
Springless hook. Self-locking	D. E. Barton	708,368	July 1	8	57	100	2081
Sprinkler: *See* Lawn-sprinkler.					2,3	100	4
Sprinkler-head	P. Huebner	709,907	Sept. 30	3711	837	100	2803
Sprocket-wheel	D. C. Jackling	708,288	Sept. 2	438	100	100	2071
Sputum-rebeptacle and holder. Aseptic	C. M. Langhorne	709,164	Sept. 16	2296	506	100	2498
Square	A. L. Lundgren	708,876	Sept. 2	679	153	100	2119
Square and level. Combination	H. H. Richardson	705,867	July 29	4966	1067	100	1053
Square and protractor. Combinaton	E. Oehrle	706,095	Aug. 5	175	36	100	1152
Square. Carpenter's folding	E. J. Morrell	704,074	July 8	1316	287	100	276
Square. Engineer's	W. Chesterman	707,301	Aug. 19	2487	558	100	1602
Square. Separable	C. L. F. and M. C. Hooker	705,403	July 22	3990	864	100	857
Square. Try-	P. E. Eilenberger	709,759	Sept. 23	3402	703	100	2725
Squeezer	A. Baumgarten	708,518	July 1	258	59	100	52
Stack former and protector	E. M. Stipp	706,610	Aug. 12	1184	262	100	1371
Stacker. Hay-	T. Cascaden, Jr.	706,299	Aug. 5	597	263	100	1236
Stacker. Pneumatic	E. Huber and J. W. Miller	705,407	July 22	3995	130	100	858
Stacker. Pneumatic	J. H. Elward	706,087	Aug. 5	67	865	100	1131
Stacker. Pneumatic	J. H. Elward. (Reissue)	12,023	Aug. 19	2909	15	100	1749
Stacker. Straw-	C. B. Hazard	703,414	July 1	90	658	100	21
Stacker. Straw-	J. B. Bartholomew	706,314	Aug. 5	408	659	100	1199
Stacker. Wind-	W. H. McWilliams	704,905	July 15	2861	19	100	613
Stage or turn-table. Pivotal	A. Fryers	704,696	July 15	2851	690	100	505
Staging-clamp	J. Lally	706,185	Aug. 5	356	511	100	1189
Staircase. Winding	H. Snider	705,794	July 29	4782	77	100	1189
Stair-pad	M. H. Marcus	707,606	Aug. 26	3077	1087	100	1028
Stair-pad	H. H. Sanderson	708,960	Sept. 2	499	1088	100	1028
Stairway. Moving	J. M. Dodge. (Reissue)	12,026	Sept. 30	4632	698	100	1801
Staking-machine	F. J. Perkins	704,096	July 8	1859	112	100	2090
Stalk-chopper	W. L. Adamson	710,232	Sept. 30	4347	1044 1045 1046 1047	100	2906
					294	100	283
					977	100	2989

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page
Stalk-cutter	M. D. Williams	705,188	July 22	3503	760	100	760
Stalk-rake	J. L. Clark	704,516	July 15	2165	469	100	470
Stall. Animal-	R. Smith	707,947	Aug. 26	3789	851	100	1943
Stall. Cattle-	G. E. Horr	704,643	July 15	2878	515	100	512
Stall for cattle. Folding	R. A. McLery, J. W. Wilbur, and A. S. Wooster.	706,772	Aug. 12	1503	334	100	1439
Stamp-affixer	E. A. Bienenstok	707,198	Aug. 19	2290	513	100	1623
Stamp-affixer	H. D. Long and J. Jackson	709,272	Sept. 16	2440	552	100	2514
Stamp-affixing machine	R. H. Strong	708,424	Sept. 2	762	171	100	2135
Stamp detaching and affixing machine	J. A. Chambliss	706,387	Aug. 5	774	169 170	100	1271
Stamp. Hand-	L. J. Hendershott	704,189	July 8	1550	354	100	335
Stamp. Hand-	J. Durand	704,302	July 8	1742	280	100	366
Stamp-mill mortar	W. A. Merralls	709,104	Sept. 16	2104	482	100	2444
Stamp-mill tappet	J. C. H. Vaught	708,980	July 1	568	127	100	112
Stamp-tappet	C. C. Rueger	707,259	Aug. 19	2297	537	100	1648
Stamp. Time-	N. Collins	705,909	July 29	4983	1085	100	1068
Stamp. Time-	C. F. Johnson	706,889	Sept. 9	1657	380 381	100	2383
Stamps, drop-hammers, &c. Safety device for	C. A. Thornton and C. W Whittemore.	708,005	Sept. 2	178	40, 41	100	2017
Stamps. Operating device for dating or other	H. De Wallace	710,144	Sept. 30	4178	941	100	2001
Stamps or labels upon envelops, cards, &c. Machine for affixing postage-	R. H. Strong	708,423	Sept. 2	760	171	100	2135
Stamping mill or machine. Metalliferous	J. G. Daw	707,678	Aug. 26	3224	723 724	100	1831
Stamping press. Relief-color-	R. F. Sproule	708,420	Sept. 2	756	170	100	2134
Stamping-presses, &c. Automatic feeding mechanism for	G. P. Schmidt	705,308	July 22	3783	820 821	100	815
Stand: *See* Adjustable stand. Egg-stand. Bicycle-stand. Horn-stand. Camera-stand. Spool-stand. Drum-stand. Switch-stand.							
Staple forming and driving machine	G. W. Packer	705,433	July 22	4047	877	100	869
Starch. Making laundry	C. H. Tolhurst and A. G. Goldthwait.	707,985	Aug. 26	3861	867 868	100	1956
Starch material. Treating	A. P. Anderson	707,892	Aug. 26	3695	880	100	1924
Starch or other amylaceous substances. Manufacturing rice-	E. Leconte and J. Loiselet	704,340	July 8	1847	400	100	390
Starch-treating apparatus	C. H. Tolhurst and A. G. Goldthwait.	707,986	Aug. 26	3863	868	100	1957
Station-indicator	H. T. Smith and A. J. Tarrant	704,135	July 8	1456	312	100	306
Station-indicator	J. S. Anderson	709,293	Sept. 16	2475	557 558	100	2522
Station-indicator	A. Kuentz	709,912	Sept. 30	3722	839	100	2806
Stationery packing and display box	W. A. Pike	704,708	July 15	2485	536	100	535
Statuary or other ornamental structures. Forming	F. Peano	706,775	Aug. 12	1508	334	100	1440
Steam and oil separator	E. Friesdorf	704,022	July 8	1902	902	100	255
Steam-boiler	C. P. Altmann	703,862	July 1	1	1	100	3
Steam-boiler	J. P. Simmons	704,588	July 15	2291	497 498	100	494
Steam-boiler	G. D. Miller	704,753	July 15	2577	556 557	100	553
Steam-boiler	E. W. McCanna	705,779	July 29	4756	1080	100	1022
Steam-boiler	J. J. Hoppes	706,563	Aug. 12	1096	243	100	1353
Steam-boiler	J. Piatko	707,002	Aug. 12	1909	438	100	1523
Steam-boiler	H. A. Duc, Jr.	707,216	Aug. 19	2287	530	100	1629
Steam-boiler	J. A. Schlehr	708,407	Sept. 2	785	165	100	2130
Steam-boiler	C. Olson	709,082	Sept. 16	1959	448	100	2411
Steam-boiler. Vertical	W. Penman	708,720	Sept. 9	1322	301	100	2262
Steam-boiler. Water-tube	A. Mehlhorn	707,440	Aug. 19	2742	620 621	100	1714
Steam connection. Revolving	F. Murgatroyd	708,900	Sept. 9	1681	387	100	2339
Steam-engine	J. A. Jenney	706,320	Aug. 5	689	139	100	1244
Steam-engine	M. J. Verret and H. N. Samstag	709,062	Sept. 16	2014	480	100	2423
Steam-engine	A. P. Moresi and H. J. Bergeron	709,719	Sept. 23	3312	743 744	100	2708
Steam engine. Aero-	S. J. Corrigan	708,027	Sept. 2	46	11 12 13	100	1990
Steam-engine. Compound	J. Patten	707,716	Aug. 26	3297	738 739	100	1846
Steam-generating and water-heating boiler	F. Logan	705,682	July 29	4577	994	100	986
Steam-generator	W. Roussanoff	708,884	July 1	845	186 187	100	109
Steam-generator	O. D. Orvis	704,571	July 15	2264	490 491	100	488
Steam-generator	C. and A. Musker and W. G. Hay	704,680	July 15	2452	529	100	528
Steam-generator	J. C. Walker	704,722	July 15	2508	542 543	100	540
Steam-generator	J. L. Giroux	704,743	July 15	2564	553	100	550
Steam-generator	C. A. Kitts	705,533	July 22	4277	925	100	914
Steam-generator	W. A., Sr., and W. A. Kitts, Jr.	707,931	Aug. 26	3764	844	100	1936
Steam-generator	P. H. White	707,996	Aug. 26	3901	874	100	1963
Steam-generator	W. Norris and H. Spurrier	708,056	Sept. 2	124	29	100	2007
Steam-generator	P. Stoltz	709,371	Sept. 16	2644	598	100	2558
Steam-generator	E. de Porto-Riche	709,926	Sept. 30	3748	844 845 846	100	2811
Steam-generator	R. J. Barton	710,818	Sept. 30	4480	1011	100	2986
Steam-generator header. Sectional	J. H. Rosenthal	704,968	July 15	2068	657	100	658
Steam-generator of the locomotive type	H. Plowman	709,421	Sept. 16	2784	614	100	2577
Steam-generator or hot-water heater	W. H. Page	706,846	Aug. 12	1644	368	100	1471

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Pages.
Steam-generator or water-heater	B. A. Geurink	709,006	Sept. 16	1895	434	100	2399
Steam-generator or water-heater	C. M. Raymond	709,042	Sept. 16	1976	451	100	2415
Steam-generators. Superheater for	H. Webster	708,433	Sept. 2	774	174	100	2139
Steam-heater. Low-pressure	F. Tudor	705,981	July 29	5111	1114	100	1095
Steam-motor	I. S. Davis	708,758	Sept. 9	1378	315 / 316	100	2275
Steam or vapor. Generating	E. C. Newcomb	704,908	July 15	2890	622 / 623	100	622
Steam or vapor generating apparatus	E. C. Newcomb	704,907	July 15	2862	621 / 622	100	613
Steam-plant purge-feeding apparatus	J. Angell	704,469	July 8	2059	446	100	432
Steam-shovel, &c	A. W. Robinson	708,590	Sept. 9	1051	239 / 240	100	2205
Steam. Superheating	H. Webster	709,655	Sept. 23	3197	714	100	2684
Steam-trap	W. H. Reynolds	706,781	Aug. 12	1590	338	100	1443
Steam-trap	J. Bonar	707,295	Aug. 19	2476	555 / 556	100	1659
Steam-trap	J. Campbell	708,996	Sept. 16	1873	431	100	2395
Steam-trap	J. Morehead	709,347	Sept. 16	2574	580 / 581	100	2543
Steel from oxid-of-iron ore. Producing	D. Reynolds	707,698	Aug. 26	3184	705	100	1818
Steel ingots for forging. Treatment of	C. T. Dudley	705,330	July 22	3845	.....	100	827
Steel. Manufacture of crucible	E. B. Clarke	708,543	July 1	298	.....	100	60
Steel. Manufacturing basic Bessemer	S. McDonald	706,069	Aug. 5	167	.....	100	1151
Steering and braking device	C. F. Weeber, Jr	704,158	July 8	1488	319	100	312
Steering apparatus. Ship's	M. E. Lowell	707,607	Aug. 26	3076	602	100	1801
Steering apparatus. Vessel	P. L. Ennor	708,332	Sept. 2	618	139	100	2107
Steering-gear	W. A. Crowdus	708,558	July 1	317	72	100	64
Steering-gear. Electrical	M. W. Day	710,045	Sept. 30	3970	895 / 896	100	2858
Steering machinery	A. B. Brown	707,382	Aug. 19	2692	594	100	1692
Steering mechanism	F. E. Allen and R. H. Danforth	705,862	July 29	4953	1078	100	1062
Stencil-frame	S. Elliott	708,626	Sept. 9	1125	253	100	2221
Stencils from which music-sheets are printed. Machine for forming	G. H. Davis	708,382	July 1	48	10	100	12
Stereoscope	H. E. Richmond	705,706	July 29	4629	1008	100	996
Stereotype. Asbestos	L. Elias	709,398	Sept. 16	2692	.....	100	2567
Stereotyping-matrix	J. E. Weigl	709,284	Sept. 16	2458	.....	100	2518
Sterilizing water, &c. Apparatus for	D. Grove	705,751	July 29	4713	1020	100	1012
Stethoscopic instrument	A. A. Knudson and F. H. Clark	705,934	July 29	5029	1096	100	1077
Stiff-finished woven fabric	A. McLean	708,907	Sept. 9	1690	389	100	2340
Stiffening-band	H. H. Taylor	708,623	July 1	445	102	100	87
Still. Ammonia	G. Stroh	710,221	Sept. 30	4325	972 / 973	100	2984
Still. Turpentine	J. T. Gilmer	709,315	Sept. 16	2518	567 / 568	100	2531
Stilt	D. McDonough	704,658	July 15	2404	520	100	518
Stirrup	C. W. Gillespie	704,184	July 8	1544	332	100	324
Stirrup-strap	L. P. Wellman	706,468	Aug. 5	941	205	100	1306
Stitch-ripper	F. L. Marshall	709,917	Sept. 30	3733	840	100	2808
Stitch-separating machine	J. B. Hadaway	708,573	July 1	347	79, 80	100	70
Stitch-separating machine	J. B. Hadaway	708,574	July 1	351	80, 81	100	70
Stitch-separating machine	J. B. Hadaway	708,575	July 1	356	81, 82	100	71
Stitching machine. Bar	F. T. Leilich	705,256	July 22	3671	793 / 794 / 795	100	798
Stitching machine. Wire	F. P. Rosback	706,660	Aug. 12	1333	296	100	1404
Stock and die	H. L. Manson and J. Kamphues	706,977	Aug. 12	1867	417	100	1514
Stock-tank	W. C. Wright	707,530	Aug. 19	2904	657	100	1748
Stocking. Elastic	W. F. Ware and W. R. Cartledge	707,659	Aug. 26	3198	717	100	1826
Stocking-supporter	E. H. Waterman	709,066	Sept. 16	2021	461	100	2424
Stoker. Mechanical	A. F. Nagle	708,450	July 1	147	33	100	32
Stoker. Mechanical	G. Howard and G. Gibbs	704,880	July 15	2820	610	100	608
Stoker. Mechanical	N. S. Arthur and J. S. Binnie	710,171	Sept. 30	4231	954 / 955	100	2912
Stone and forming articles therefrom. Making artificial	G. P. Chappell	708,640	July 1	485	.....	100	96
Stone. Artificial	V. Conti, G. de Geofroy, and G. le Gall du Tertre.	705,850	July 29	4514	.....	100	974
Stone. Artificial	F. Boas	707,898	Aug. 26	3708	.....	100	1926
Stone board. Artificial	A. McDougall	709,791	Sept. 23	3468	780	100	2739
Stone facing. Artificial	C. W. Stevens	705,156	July 22	3444	749	100	747
Stone facing for buildings. Artificial	T. Kelly and F. C. Sarazin	705,846	July 29	4869	1058	100	1046
Stone-handling apparatus	C. N. Owen	706,197	Aug. 5	378	81	100	1194
Stone. Mold for making cement	R. B. Coltrin	708,582	Sept. 9	561	218	100	2198
Stone. Molding artificial	F. Orlikowski	708,248	Sept. 2	465	106	100	2076
Stone-molding machine. Artificial	N. F. Palmer	708,452	July 1	149	34	100	32
Stone or ore crusher	D. C. Robinson	708,495	Sept. 2	894	202	100	2163
Stones, &c. Apparatus for separating	J. C. W. Stanley	707,173	Aug. 19	2351	503	100	1612
Stones. Molding-box for the manufacture of building-	E. Levi	709,495	Sept. 23	3914	650	100	2927
Stones or mortar. Composition for making	J. Loewenthal	707,129	Aug. 19	2151	.....	100	1591
Stool. Foldable	P. R. Anton	705,858	July 29	4955	1078	100	1063
Stop-box	R. McBee	704,656	July 15	2400	519	100	517
Stopper-fastener	J. A. Jones	705,675	July 29	4551	991	100	983
Storage battery	M. O. Smith	708,490	July 1	201	48	100	42
Storage system	J. R. Rector	706,451	Aug. 5	914	198	100	1300
Stove	E. J. Lahan	704,061	July 8	1256	271	100	264
Stove	W. Heuermann	705,928	July 29	5021	1094	100	1076
Stove	W. H. Null	708,589	Aug. 12	1147	254	100	1263
Stove	H. Hoefli	710,198	Sept. 30	4266	982	100	2920

Stopper:
See Bottle-stopper. Expansible stopper.

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Pages.
Stove. Cooking	R. Galbraith	706,750	Aug. 12	1460	321	100	1431
Stove. Cooking	W. N. Moore	708,062	Sept. 2	117	28	100	2066
Stove. Cooking or heating oil	M. L. Stone	708,508	Sept. 2	900	206	100	2166
Stove-door hinge	F. L. Sheppard	707,025	Aug. 12	1955	436	100	1532
Stove. Gas	H. Bonsor	708,982	July 8	1134	245	100	940
Stove. Gas	J. C. Forster	706,309	Aug. 5	616	134	100	1240
Stove. Gas	M. Griswold, Jr	710,053	Sept. 30	3987	899	100	2951
Stove. Gas-heating	G. R. Moon	710,162	Sept. 30	4212	949	100	2908
Stove-grate	T. Partridge, Jr	708,455	July 1	152	35	100	32
Stove. Heating	L. Howard	704,331	July 8	1798	392	100	376
Stove. Heating	J. L. Bangley	704,470	July 8	2061	447	100	433
Stove. Heating	C. Matthews	704,889	July 15	2835	618	100	607
Stove. Heating	W. Drengwitz	705,928	July 29	4837	1050	100	1089
Stove. Heating	H. R. Oney	706,097	Aug. 5	178	36	100	1153
Stove. Heating	L. W. Hemp	709,673	Sept. 23	3233	723	100	2692
Stove. Heating	L. W. Hemp	709,674	Sept. 23	3234	723	100	2693
Stove-leg. Extension	J. Barbee	706,377	Aug. 5	750	164	100	1257
Stove or range	G. A. Tuckfield	707,969	Aug. 26	3871	870	100	1958
Stovepipe	C. C. Halstead	708,702	July 1	608	135	100	120
Stovepipe	B. A. Williamson	706,507	July 22	4187	910	100	895
Stovepipe attachment	W. H. Etcheson and L. R. Witherell	706,734	Aug. 12	1405	314	100	1420
Stovepipe attachment	J. C. Hoyt	709,545	Sept. 23	3019	672	100	2648
Stovepipe-cleaner	B. C. Oblinger and A. H. C. Beatty	707,713	Aug. 26	3290	736	100	1845
Stovepipe-holder	J. S. Rhodes	705,964	July 29	5083	1109	100	1088
Stovepipe holder or collar	J. E. Faulkner	709,067	Sept. 16	2066	474	100	2435
Stovepipe-thimble	A. Staub	710,168	Sept. 30	4227	953	100	2911
Stovepipe-ventilator	F. E. Taft	709,525	Sept. 23	2980	666	100	2643
Stove. Portable	E. C. Leonard	707,243	Aug. 19	2367	531	100	1637
Stove. Summer cook	C. E. Cooke	709,876	Sept. 30	3627	820	100	2787
Stoves. Force-draft attachment for	S. J. Walker	707,188	Aug. 19	2280	510	100	1619
Stoves. Heat-reflector for	B. C. Oblinger and A. H. C. Beatty	706,996	Aug. 12	1901	426	100	1521
Strabismus. Device for the cure of	J. E. Stierle	709,058	Sept. 16	2007	457	100	2422
Strainer and ventilator. Combined milk	P. Weise	708,285	Sept. 2	584	121	100	2099
Strainer. Coffee-pot	E. J. Guenzel	708,544	Sept. 9	979	221	100	2191
Strainer. Sink	S. F. Williams	706,621	Aug. 12	1204	267	100	1375
Strap: *See* Metallic strap. Stirrup-strap. Picker-stick strap.							
Straw-carrier raddle	M. Heineke	705,528	July 22	4270	923	100	913
Street-cleaning machine	J. Théry	707,367	Aug. 19	2602	588	100	1695
Street-receiver	T. J. O'Brien	705,697	July 29	4610	1000	100	992
Street-sprinkling device. Automatic	T. D. Young	706,289	Aug. 5	576	125	100	1232
Stretcher	F. X. Aigner	706,371	Aug. 5	782	159	100	1264
Stretcher or cot. Folding	J. H. Koons	709,332	Sept. 16	2546	573	100	2537
Strong light body and producing same	J. E. Seeley	706,498	Aug. 5	988	218	100	1316
Stuffing-box for piston-rods	D. W. Dougan and F. C. Watson	706,536	Aug. 12	1057	232 / 233	100	1344
Submarine transportation system	A. Davidson	710,044	Sept. 30	3989	895	100	2857
Sucker-rod stub	I. Ralliston	705,443	July 22	4063	881	100	873
Suckers or drinking-tubes. Machine for making	L. H. Britton and H. W. Morrow	706,895	Aug. 12	1739	388	100	1499
Sugar. Apparatus for the manufacture of	J. A. Morrell	708,489	July 1	129	29, 30	100	28
Sugar-boiling	C. Steffen	708,496	July 1	212	50	100	45
Sugar. Converting wood into	A. Classen	707,903	Aug. 26	3717	.....	100	1928
Sugar from its solutions. Extracting	A. Wohl	707,889	Aug. 26	3666	.....	100	1922
Sugar-juices. Purifying	H. Gouthiere	704,087	July 8	1221	.....	100	258
Sugar-refining apparatus	J. Robin-Langlois	705,869	July 29	4911	1067	100	1054
Suit-hanger	D. B. Salmon and D. C. Mitchell	706,497	Aug. 5	987	217	100	1316
Sulfocyanids from coal-gas. Making	H. W. Smith, W. T. Gidden, and A. G. Salamon.	705,152	July 22	3437	747	100	745
Sulfur from sulfid ores. Eliminating the	A. Gutensohn	709,482	Sept. 23	2894	646	100	2623
Sulky	J. B. Tait	708,436	Sept. 2	766	172	100	2136
Summer-house	G. R. Lockwood	708,705	July 1	610	135	100	121
Superheater and steam-generator. Combined	R. Schulz	707,021	Aug. 12	1946	436 / 437	100	1530
Support. Adjustable	A. Fleming	706,228	Aug. 5	430	92	100	1206
Surgical appliance	P. H. T. Paulinetti	708,068	Sept. 2	126	30	100	2007
Surgical instrument	R. H. Simpson	709,367	Sept. 16	2638	592	100	2557
Surgical-instrument hinge	C. J. Filling and G. T. Barber	704,807	July 8	1579	341	100	331
Surveying and reconnaissance instrument	J. C. Sale	707,161	Aug. 19	2219	498	100	1604
Surveying instrument	T. T. H. Ferguson	709,313	Sept. 16	2514	567	100	2530
Suspended carrier	R. A. Bruce	706,521	Aug. 12	1682	227	100	1389
Suspender attachment	C. R. Harris	706,983	Aug. 12	1796	402	100	1501
Suspender-end loop	H. E. Barnett	710,092	Sept. 30	4072	918	100	2878
Suspenders	C. Bloomberg	708,981	July 8	1132	245	100	240
Suspenders	J. W. Burgett	705,805	July 22	3546	768	100	769
Suspenders	J. M. Sundean	706,387	Aug. 5	704	153	100	1258
Suspenders	C. O. Luce	708,154	Sept. 2	288	69	100	2041
Suspenders and trousers connection	R. T. Clarke	708,886	July 1	43	9	100	11
Suspenders and trousers connection	R. T. Clarke	705,648	July 29	4509	979	100	978
Suspenders. Cast-off connection for	E. T. Specht	705,691	July 29	4471	969	100	965
Suspenders or other garment-supporter	H. C. Hine	708,882	Sept. 9	1641	378	100	2330
Suspension-clamp	J. R. Fletcher	706,227	Aug. 5	437	92	100	1205
Suspension-hook	J. F. Kerr and A. Lauster	710,061	Sept. 30	3999	902	100	2864
Suture-clamp	H. Brown	709,302	Sept. 16	2684	602	100	2566
Sweetmeat-machine	W. L. White	709,382	Sept. 16	2662	597 / 598	100	2562
Swing	A. C. Jacobs	704,192	July 8	1553	335	100	326
Swing	J. Bany, Sr	705,014	July 22	3158	682	100	690
Swing	E. Lurch. (Reissue)	12,018	July 29	5149	1123	100	1102
Swing	W. C. Tuttle	709,981	Sept. 16	2451	554	100	2516
Swing. Lawn or house	O. R. Olson	709,110	Sept. 16	2114	484 / 485	100	2446
Swing. Portable chair	A. T. Dowden	704,523	July 15	2179	472	100	472

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Swinging gate	S. Hamilton	705,401	July 22	3987	863	100	856
Swinging gate	J. W. Reames and C. F. Heffington	707,256	Aug. 19	2898	535	100	1642
Switch: *See* Automatic switch. Charging-switch. Electric switch. Electric snap-switch. Electrical switch. Electrically-controlled switch. Electromagnetic switch. Push-button switch. Railway-switch. Telephone-switch. Telephone hook-switch. Tongue-switch. Tramway-switch. Trolley-track switch.							
Switch	S. J. Harris	708,917	July 1	999	217	100	199
Switch	G. H. Smith	708,266	Aug. 5	512	110	100	1219
Switch and lightning-arrester. Combined	W. J. Bell	708,980	July 8	1131	245	100	240
Switch-controlling apparatus. Fluid-pressure electric-	A. Sundh	708,478	Aug. 5	954	208	100	1308
Switch-lock. Automatic	J. E. Gillmor	709,629	Sept. 23	3155	708 / 704	100	3676
Switch motor. Reversing-	J. D. Ihlder	708,386	July 8	1801	398	100	378
Switch-operating device	F. S. Jones	707,929	Aug. 26	3761	844	100	1926
Switch-operating device	F. E. Quest	708,971	Sept. 9	1815	418 / 419	100	2364
Switch-operating device	J. and F. Stupar	709,168	Sept. 16	2364	514 / 515	100	2476
Switch-operating mechanism	G. L. Cooper	708,034	Aug. 5	36	8	100	1123
Switch safety appliance	S. J. Harris	708,918	July 1	1000	218	100	199
Switch-stand	J. J. Schrag	707,560	Aug. 19	2598	596	100	1683
Switch-stand	A. A. Strom	709,614	Sept. 23	3131	697 / 698	100	2671
Switch-stand attachment	H. F. Ong	704,368	July 8	1871	405	100	395
Switch-stand. Upright automatic	D. H. Foreman	707,066	Aug. 12	2085	454 / 455	100	1550
Switch-throwing device	T. J. Kent	706,668	Aug. 12	1294	285	100	1395
Switch-throwing device	U. F. Beeghly	709,134	Sept. 16	2157	496	100	2455
Switching apparatus	C. Michalke	704,302	July 8	1578	339	100	329
Synchronous motion. Means for producing and maintaining	H. A. Rowland	704,929	July 15	2970	637	100	637
Syringe	F. C. Gundlach and W. R. Ludewig	708,224	Sept. 2	425	97	100	2068
Syringe. Vaginal	N. C. E. Schwartz	708,615	July 1	424	99	100	84
Syringe. Vaginal	N. C. E. Schwartz	708,616	July 1	426	99	100	84
Tab-cutting machine	E. B. Stimpson	708,748	July 1	691	153	100	138
Table: *See* Extension-table. Folding table.							
Table	G. H. Bullock	705,903	July 29	4972	1068	100	1066
Table and ironing-board. Combination	P. Rothenbusch	709,176	Sept. 16	2242	510	100	2471
Table-fastener	J. Neumueller	709,561	Sept. 23	3090	685	100	2661
Table lock. Pedestal-extension-	E. Tyden	707,186	Aug. 19	2274	509	100	1618
Table-server	A. T. Hatch	705,227	July 22	3540	788	100	787
Table-spread and napkin-holder. Combined	C. M. Wales	705,496	July 22	4164	906	100	891
Table-spread support	D. C. Jordan	708,049	Sept. 2	99	23	100	2002
Tables, chairs, &c. Collapsible support or frame for	F. Mack	706,675	Aug. 12	1311	289 / 290	100	1400
Tablet. Manifolding-	B. F. Hoard	707,511	Aug. 19	2960	649	100	1740
Tack-machine form	F. A. Snell	706,268	Aug. 5	535	116	100	1224
Tack-puller	T. G. Bladen	705,554	July 29	4348	940	100	941
Tag	C. B. Fairchild	708,698	July 1	608	134	100	119
Tag-holder	W. S. Jacobs	705,762	July 29	4729	1023	100	1015
Tallings-elevator. Centrifugal	W. Peck	709,721	Sept. 23	3315	745	100	2709
Tailor's pressing-machine	J. Dziech	705,896	July 29	4955	1050	100	1089
Talking-machine. Coin-operated	B. G. Royal	708,268	Aug. 5	389	83	100	1197
Talking-machine horn	E. A. Heyl	708,810	Sept. 9	1491	341	100	2299
Talking-machines. Horn-supporting arm for	L. P. Valiquet	705,165	July 22	3458	753	100	749
Talley-sheet attachment for billing-platens	R. J. Fisher	705,522	July 22	4223	918	100	903
Tank: *See* Battery-tank. Gas-storage tank. Glass-tank. Stock-tank.							
Tank	E. N. Harmon	704,539	July 15	2214	479	100	479
Tank construction	E. D. Chester	709,303	Sept. 16	2496	562 / 563	100	2586
Tank or ice-chest	T. B. Rogers	706,455	Aug. 5	919	199	100	1301
Tanning	W. H. Philippi	708,396	Sept. 2	716		100	2126
Tap-holder. Reversing	H. Wharton	708,748	Sept. 9	1356	309	100	2270
Tape inserting and stitching mechanism	M. H. Powell	707,004	Aug. 12	1913	429	100	1523
Tape into edging. Machine for inserting	M. H. Powell	707,005	Aug. 12	1914	429	100	1524
Tape into edging. Machine for inserting	E. P. Hatch	707,061	Aug. 12	2083	452	100	1547
Tape into edgings. Machine for threading	D. Grotta	707,585	Aug. 26	3095	668	100	1791
Tape into edgings. Machine for threading	J. Davis	708,120	Sept. 2	245	58	100	2082
Taper-grinding device	W. Y. Allen	704,428	July 8	1969	428	100	414
Tapping and stud-setting device	C. G. Osteman and C. W. H. Blood	710,116	Sept. 30	4114	928 / 929	100	2897
Target	G. S. Goodale	704,631	July 15	2357	512	100	506
Target	J. L. McCullough	707,617	Aug. 26	3098	697	100	1804
Target apparatus	J. L. McCullough	708,345	Sept. 2	459	104 / 105	100	2075
Target. Signaling-	G. A. Wirt	708,189	Sept. 2	355	83	100	2054
Tea or coffee pot	F. A. Harrison	708,919	July 1	1002	218	100	200
Teaching apparatus. Music-	H. Woodson	708,688	Sept. 9	1239	284 / 285 / 662	100	2243
Teaching device. Arithmetic-	J. J. Terrazas	704,979	July 15	3077	563 / 664	100	657
Teaching gun practice. Apparatus for	C. A. Sporrong	707,729	Aug. 26	3327	745	100	1852
Teaching primary arithmetic. Apparatus for	A. F. Lorensen	708,588	Sept. 9	1014	230	100	2198
Telegraph	C. E. Fritts	704,023	July 8	1305	262	100	255
Telegraph and telephone signal. Combined district	C. Selden	704,127	July 8	1432	305	100	311

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Telegraph. Facsimile-	E. E. Kleinschmidt	709,158	Sept. 16	2195	502 / 503 / 504 / 505	100	2468
Telegraph-keys. Automatic circuit-closer for	J. E. Folsom	707,312	Aug. 19	2510	564	100	1666
Telegraph or telephone lines. Selective call for	W. Palmer, Jr	710,326	Sept. 30	4518	1018	100	2974
Telegraph. Page-printing	G. Musso	707,612	Aug. 26	3083	694	100	1802
Telegraph. Printing	T. M. Foote	705,227	July 22	3606	781 / 782 / 783 / 784	100	780
Telegraph system. Wireless-	G. W. Pickard	708,071	Sept. 2	130	31	100	2008
Telegraph system. Wireless-	H. Shoemaker	710,121	Sept. 30	4127	981	100	2890
Telegraph system. Wireless-	H. Shoemaker	710,122	Sept. 30	4130	981 / 982	100	2890
Telegraph system. Wireless-	C. D. Ehret	710,354	Sept. 30	4549	1027	100	2981
Telegraph system. Wireless-	C. D. Ehret	710,355	Sept. 30	4552	1027	100	2981
Telegraph-transmitter. Mechanical	J. W. McDonald	706,251	Aug. 5	475	101	100	1212
Telegraphs. Transmitting apparatus for electric-	T. D. Penniman and H. H. Wiegand	704,917	July 15	2929	629	100	630
Telegraphic apparatus	C. M. Davis	707,557	Aug. 26	2972	671	100	1779
Telegraphic code	J. E. Dempsey	708,891	July 1	52	10	100	13
Telegraphic distribution	H. A. Rowland	704,928	July 15	2964	634 / 635 / 636	100	636
Telegraphic receiving-tapes for translation. Means for handling	P. B. Delany	709,752	Sept. 23	3388	760	100	2722
Telegraphic safety device	S. R. Wright	704,165	July 8	1501	322	100	315
Telegraphy	A. C. Crehore	707,829	Aug. 26	3568	806 / 807	100	1900
Telegraphy	A. C. Crehore	707,830	Aug. 26	3576	806	100	1901
Telegraphy	A. C. Crehore	707,959	Aug. 26	3808	854 / 855	100	1946
Telegraphy and telephony. Apparatus for composite systems of simultaneous	J. M. Fell	709,427	Sept. 16	2763	622	100	2582
Telegraphy. Apparatus for wireless	R. A. Fessenden	706,736	Aug. 12	1410	315	100	1421
Telegraphy. Apparatus for wireless	R. A. Fessenden	706,741	Aug. 12	1430	317	100	1424
Telegraphy. Conductor for wireless	R. A. Fessenden	706,789	Aug. 12	1424	316	100	1423
Telegraphy. Electric	S. G. Brown	708,892	July 1	951	208 / 209 / 210	100	191
Telegraphy keyboard	H. A. Rowland	704,927	July 15	2950	633 / 634	100	635
Telegraphy. Multiple	M. I. Pupin	707,007	Aug. 12	1918	430	100	1525
Telegraphy. Multiple	M. I. Pupin	707,008	Aug. 12	1921	430	100	1525
Telegraphy. Wireless	H. Shoemaker	708,712	July 1	621	138	100	122
Telegraphy. Wireless	H. Shoemaker	708,849	July 1	880	199	100	172
Telegraphy. Wireless	H. Shoemaker	706,500	Aug. 5	990	218	100	1317
Telegraphy. Wireless	R. A. Fessenden	706,735	Aug. 12	1406	314 / 315	100	1420
Telegraphy. Wireless	R. A. Fessenden	706,737	Aug. 12	1415	316	100	1422
Telegraphy. Wireless	R. A. Fessenden	706,738	Aug. 12	1421	316	100	1423
Telegraphy. Wireless	H. Shoemaker	707,064	Aug. 12	2029	453	100	1548
Telegraphy. Wireless	G. W. Pickard	708,072	Sept. 2	132	31, 32	100	2008
Telephone-booth	F. L. Tufts	704,986	July 15	3095	667	100	660
Telephone-booth	F. L. Tufts	704,987	July 15	3096	667	100	660
Telephone-cable connection	T. P. Jones	706,567	Aug. 12	1103	244	100	1354
Telephone-call annunciator	Z. E. Jackson	709,327	Sept. 16	2540	571	100	2585
Telephone-circuit	I. H. Farnham	706,308	Aug. 5	614	134	100	1239
Telephone-circuit	M. H. Howell	706,319	Aug. 5	636	139	100	1244
Telephone-circuit	S. P. Grey	708,188	Sept. 2	260	62	100	2085
Telephone-exchange. Automatic	A. M. Bullard	709,739	Sept. 23	3341	753 / 754	100	2715
Telephone-exchange system and apparatus. Automatic	A. M. Bullard and M. C. Rorty	709,740	Sept. 23	3351	754 / 755	100	2716
Telephone-exchange toll apparatus	W. W. Dean	710,318	Sept. 30	4488	1019	100	2968
Telephone hook-switch	W. W. Dean	704,697	July 15	2466	532 / 533	100	531
Telephone-lines. Selective calling appliance for	F. R. McBerty	710,333	Sept. 30	4514	1017	100	2974
Telephone-mouthpiece. Antiseptic	W. M. English and G. A. Burns	706,169	Aug. 5	326	69	100	1183
Telephone-mouthpiece antiseptic attachment	H. C. Smith and M. H. Woolsey	708,671	Sept. 9	1206	275	100	2237
Telephone or telegraph pole	I. M. Warner	708,277	Sept. 2	521	119	100	2087
Telephone-receiver	L. Mellett	707,441	Aug. 19	2743	621	100	1715
Telephone. Self-restoring	L. J. Loeffler	710,065	Sept. 30	4006	904	100	2966
Telephone-switch	C. B. McPherson	709,351	Sept. 16	2540	582	100	2584
Telephone-switchboard signal-lamp	F. R. McBerty and F. H. Loveridge	709,998	Sept. 30	3888	877	100	2840
Telephone-switchboard supervisory signal	C. E. Scribner. (Reissue)	12,007	July 1	1121	243	100	222
Telephone system	F. W. Dunbar. (Reissue)	12,031	Sept. 16	2611	632	100	2598
Telephone systems. Toll-collecting and call-recording device for	J. B. Gill. (Reissue)	12,015	July 22	4328	985 / 986	100	922
Telephone toll-line coin-collector	J. J. O'Connell	704,268	July 8	1681	366	100	352
Telephone-transmitter	M. Weisser	710,309	Sept. 30	4472	1008	100	2965
Telephone-wires. Device for preventing humming of	M. Grover	705,073	July 22	3265	707	100	711
Telephony	J. Lyons	705,685	July 29	4582	995	100	987
Telephony	J. Lyons	705,686	July 29	4585	995	100	987
Telescope. Binocular prism-	C. P. Goerz	709,808	Sept. 30	3878	833	100	2800
Telescope. Prismatic sighting-	A. König	708,720	Sept. 9	1346	298	100	2258
Telescopic compound engine	W. Schneider	707,647	Aug. 26	3156	710	100	1817
Telesig. Multiplex	W. S. Burnett and W. H. Goodall	705,511	July 22	4194	913 / 914	100	898
Tellurian	J. A. B. Lovett	704,350	July 8	1848	400	100	391
Temperature-exchanging apparatus	J. Desmaroux	704,818	July 15	2714	587 / 588	100	581
Temperature. Means for automatically indicating changes in	R. Keyte	704,966	July 15	3055	656	100	652
Temperature of heating systems. Means for regulating	W. P. Powers	710,801	Sept. 30	4458	1005 / 1006	100	2966

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Temperature-regulator	A. Roesch	705,613	July 29	4458	966	100	963
Tempering-bath	J. E. Lawrence	706,966	Aug. 12	1854	967	100	1511
Tempering-vat, churn, and butter-worker. Combined	P. M. Sharples	706,118	Aug. 5	213	44	100	1160
Temple-attaching device	F. G. Hirst	707,109	Aug. 19	2127	474	100	1566
Tenoning-machine. Hand	R. A. Mills	707,859	Aug. 26	3080	818	100	191
Tension device	H. A. Webster	704,411	July 8	1045	421	100	409
Tent	J. P. Nelson	707,847	Aug. 19	2571	581	100	1679
Theater. Portable revolving	C. F. Bramhall	706,891	Aug. 12	1729	396	100	1497
Theatrical scenery	L. J. Carter	708,763	July 1	714	158	100	143
Thermo-electric element	C. B. Thwing	704,595	July 15	2302	159	100	496
Thermo-electric generator	C. B. Thwing	704,596	July 15	2303	500	100	496
Thermocauter	L. Wirsching	706,482	Aug. 5	962	210	100	1310
Thermometer. Multiplex electric	A. Zeleny	705,187	July 22	3511	761	100	762
Thermophore	F. Heiliger	708,549	Sept. 9	995	223	100	2192
Thermostat	A. Roesch	704,115	July 8	1408	302	100	295
Thermostats. Means for testing	T. M. Heaphy	706,177	Aug. 5	341	73, 74	100	1186
Thill-coupling	L. G. Sprague	708,675	July 1	554	125	100	110
Thill-coupling	C. A. Smith	705,151	July 22	3436	747	100	745
Thill-coupling	G. H. Spitzli and G. E. Lord	705,795	July 29	4784	1038	100	1028
Thill-coupling	T. F. Ware	707,741	Aug. 26	3399	758	100	1860
Thill-coupling	A. H. Worrest	708,690	Sept. 9	1243	295	100	2244
Thill-coupling	C. C. Bradley. (Reissue)	12,084	Sept. 23	3581	807	100	2765
Thill-coupling	C. C. Bradley. (Reissue)	12,085	Sept. 23	3582	807	100	2767
Thill-coupling	J. M. Bryant	710,316	Sept. 30	4493	1012	100	2967
Thill-coupling	A. Mendenhall	710,365	Sept. 30	4570	1030	100	2985
Thill-coupling	J. E. Whitney	704,160	July 8	1494	320	100	314
Thill-coupling antirattler	F. Ach	708,513	Sept. 9	929		100	2181
Thioxanthin and making same	H. B. Yates	705,809	July 29	4809	1044	100	1033
Thread-cutting tool. Adjustable	J. A. Paris, E. B. Steelman, and J. L. Haverfield.	710,366	Sept. 30	4570	1031	100	2985
Thresher. Pea-	J. H. Jensen	707,067	Aug. 12	2040	455	100	1551
Thresher-screen	J. G. Walker	707,287	Aug. 19	2465	552	100	1657
Threshing-machine attachment	F. A. Ferguson	704,528	July 15	2188	553	100	474
Threshing-machines and grain-separators. Self-propelling truck and motor for	G. E. Wilson	705,997	July 29	5123	474	100	1097
Threshing or separating machine	C. R. Sowden	704,395	July 8	1921	1117	100	404
Threshold. Automatic	S. Dancyger	708,756	Sept. 9	1375	416	100	2274
Ticket fastener. String-	J. P. Kuhns	709,492	Sept. 23	2911	814	100	2626
Ticket. Pin-	E. B. Cade	708,461	Sept. 2	834	649	100	2150
Tidal motor					190	100	2150
Tie: *See* Bale-tie, Cross-tie, Metallic tie, Necktie, Rail-tie, Railway-tie, Wire-tie.	C. S. Shallenberger	707,902	Aug. 19	2596	586	100	1684
Tie-plate	G. L. Bender	708,755	July 1	701	155	100	140
Tie-plating machine	W. M. Fridericia	708,780	July 1	742	156	100	149
Tie plug or dowel	C. Worth	704,727	July 15	2525	165	100	543
Tile	W. C. State	704,766	July 15	2600	545	100	558
Tile	F. R. Lawrence	707,125	Aug. 19	2145	481	100	1590
Tile	A. L. Flood	708,470	Sept. 2	846	193	100	2153
Tile	A. L. Flood	708,471	Sept. 2	847	193	100	2153
Tile	A. L. Flood	708,472	Sept. 2	848	193	100	2153
Tile-machine and pug-mill. Combined	W. R. Cunningham	707,831	Aug. 26	3581	808	100	1901
Tile-press	X. P. Gillardoni	706,936	Aug. 12	1785	399	100	1499
Tile-press	W. P. Meeker	708,241	Sept. 2	453	103	100	2074
Tile setting or removing apparatus	H. Schmidt, Jr	707,264	Aug. 19	2406	539	100	1644
Tiles. Laying	E. S. Hutchinson	703,928	July 1	1018	221	100	203
Tiles. Making decorative	E. E. Tabouret	708,680	Sept. 9	1230	280	100	2240
Tiles. Setting	J. H. Munro	706,474	Aug. 5	950	207	100	1308
Tiling	G. H. Bennett	708,194	Sept. 2	808	87	100	2056
Till	C. S. Clark and J. T. Jones	709,870	Sept. 30	3616	817	100	2785
Time-recorder	T. D. Greene	707,583	Aug. 26	3080	692	100	1790
Time-recorder for workmen or servants or like apparatus.	F. Brook	704,854	July 15	2770	599	100	598
Time-recorder. Workman's	A. L. Jaynes	704,194	July 8	1556	600	100	326
Time-recorder. Workman's	G. M. Jaynes and J. W. Deübner	704,544	July 15	2219	335	100	480
Time-switch mechanism	G. Zaepfel	705,991	July 29	5129	481	100	1098
Tin-plate-cleaning machine	J. C. Taliaferro and C. M. Reynard	709,184	Sept. 16	2266	515	100	2476
Tin. Recovering metallic	D. H. Browne and J. M. Neil	704,673	July 15	2431	516	100	524
Tire and fastener for vehicle-wheels	J. C. Haines	709,468	Sept. 23	2966	525	100	2825
Tire and manufacturing same	J. W. Blodgett	708,954	Sept. 9	1772	647	100	2356
Tire and manufacturing same. Elastic	F. E. Hall	708,225	Sept. 2	426	409	100	2068
Tire and manufacturing same. Pneumatic	J. W. Blodgett	708,952	Sept. 9	1767	97	100	2355
Tire and manufacturing same. Pneumatic	J. W. Blodgett	708,953	Sept. 9	1770	409	100	2356
Tire armor. Vehicle-	C. H. Paschke	707,989	Aug. 26	3779	848	100	1941
Tire. Bicycle-	H. D. Lefferts	709,021	Sept. 16	1982	444	100	2406
Tire for vehicle-wheels. Resilient	W. E. Carmont	708,864	Sept. 9	1608	367	100	2324
Tire for vehicle-wheels. Spring-	H. C. Shearman	707,169	Aug. 19	2220	801	100	1606
Tire-heater	J. Gogel	705,840	July 22	3884	840	100	835
Tire-inflating device. Pneumatic-	F. W. Claesgens and J. G. Magin	708,021	Aug. 5	33	7	100	1123
Tire. Pneumatic	M. Weiss	707,651	Aug. 26	3200	718	100	1827
Tire. Pneumatic	T. B. Jeffery	708,482	Sept. 2	867	197	100	2157

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Tire. Pneumatic	I. Tennant	709,280	Sept. 16	2449	551	100	2516
Tire rim and felly. Rubber vehicle	J. Baker	707,538	Aug. 26	2981	663	100	1771
Tire. Rubber	W. R. Harris	708,408	July 1	80	16	100	19
Tire. Rubber	A. W. Grant	705,072	July 22	3264	707	100	711
Tire-setter	F. W. Mitchell	706,583	Aug. 12	1132	250	100	1360
Tire setter. Rubber	H. R. Auld	704,953	July 15	3025	649	100	548
Tire-setting machine. Rubber	J. C. Blake	710,185	Sept. 30	4161	937	100	2908
Tire. Solid-rubber	C. H. Wheeler and F. W. Kremer	705,178	July 22	3487	758	100	755
Tire-tightener	H. P. Dickinson	708,535	Sept. 9	966	219	100	2189
Tire tubes. Tip for the ends of pneumatic	J. G. Moomy	709,994	Sept. 30	4085	876	100	2840
Tire valve. Pneumatic	H. W. Hodgetts	706,944	Aug. 12	1813	406	100	1504
Tire. Vehicle	J. Christy, Jr	705,088	July 22	3195	690	100	697
Tire. Vehicle	C. H. Wheeler and F. W. Kremer	705,175	July 22	3482	757	100	754
Tire. Vehicle	F. E. Osgood and F. F. Bradley	706,509	Aug. 12	1149	254	100	1364
Tire. Vehicle	W. I. Gregory	707,562	Aug. 26	3029	682	100	1790
Tire. Vehicle	F. P. Brining	709,959	Sept. 30	3819	859	100	2895
Tire. Vehicle-wheel	E. Belledin-Gras and F. S. de Mondran.	707,378	Aug. 19	2626	592	100	1690
Tire. Vehicle-wheel	M. C. Carter	708,997	Sept. 16	1875	431	100	2295
Tire. Wheel	H. Lieberthal	705,768	July 29	4788	1025	100	1018
Tire. Wheel	E. Horton	710,274	Sept. 30	4414	995	100	2958
Tires before fitting them into their rims. Means for longitudinally compressing wired-on cushion-	G. Robson	704,214	July 8	1540	344	100	333
Tires. Machine for smoothing rubber vehicle	S. S. Miller and L. E. Clough	708,967	Sept. 9	1803	414	100	2262
Tobacco box and cutter. Combined	F. Laporte and L. Baptiste	704,052	July 8	1258	272	100	264
Tobacco-cutting machine	M. Himoff	707,778	Aug. 26	3405	781	100	1879
Tobacco-fork	W. L. Moore	705,775	July 29	4751	1029	100	1020
Tobacco-hanger	W. M. Ketchin	704,196	July 8	1564	337	100	328
Tobacco-holster	W. P. Henry	706,052	Aug. 5	98	21	100	1137
Tobacco-leaf-sorting machine	E. A. Rollman	705,800	July 22	3762	816	100	811
Tobacco-leaf-stringing machine	S. D. Wheeler	710,027	Sept. 30	3942	889	100	2932
Tobacco-ordering chamber	J. M. Taliaferro	709,938	Sept. 30	3709	851	100	2815
Tobacco-pipe	H. L. Austwick	706,193	July 22	3519	762	100	763
Tobacco-pipe	H. M. Willis	705,998	July 29	5126	1117	100	1098
Tobacco-pipe	M. B. Hern	708,142	Sept. 2	260	64	100	2037
Tobacco-pipe	N. Allison	708,852	Sept. 9	1584	361	100	2318
Tobacco-pouch	G. Frank	706,648	Aug. 12	1252	277	100	1387
Tobacco spinning-machine. Chewing	W. Schertiger	708,172	Sept. 2	325	77, 78	100	2047
Tobacco-stringing machine	C. G. Wells	708,434	Sept. 2	775	174	100	2138
Tobacco-truck	W. G. Little	709,785	Sept. 23	3454	777	100	2787
Toe. Box-	H. H. Beckwith	710,289	Sept. 30	4357	979	100	2941
Tongs for handling ingots, &c	J. M. Lafferty	706,324	Aug. 5	646	141	100	1246
Tongue-switch	G. M. Ervin	705,056	July 22	3232	690	100	704
Tool	J. W. East	704,819	July 15	2716	598	100	581
Tool	J. H. Koch	706,184	Aug. 5	355	76	100	1188
Tool. Combination-	F. A. Robbins	707,723	Aug. 26	3310	741	100	1849
Tool. Combination-	J. L. Wood and W. G. Lawrence	708,447	Sept. 2	790	182	100	2143
Tool. Compound	J. F. Koelmel	708,598	July 1	391	91	100	78
Tool. Compound	W. Offutt	706,196	Aug. 5	377	81	100	1194
Tool construction. Machine	W. H. Baush	709,258	Sept. 16	2398	542	100	2505
Tool. Fluid-pressure-operated	J. V. W. Reynders and W. T. Sears	706,688	Aug. 12	1330	294	100	1404
Tool. Fluid-pressure-operated	H. H. Vaughan	707,735	Aug. 26	3337	747	100	1855
Tool handle. Adjustable garden-	W. V. Magee	705,689	July 29	4580	996	100	986
Tool-holder	S. Welter and J. Armstrong	707,472	Aug. 19	2791	639	100	1725
Tool-holder	C. T. Shafer	708,176	Sept. 2	331	79	100	2049
Tool-holder	J. F. Bachmann	709,953	Sept. 30	3796	856	100	2921
Tool-holder	A. H. and J. A. Bedworth	710,174	Sept. 30	4257	956	100	2913
Tool-holder for planers, &c. Duplex	J. H. Wicksteed	708,947	Sept. 9	1757	405	100	2353
Tool-post	J. R. Back	709,603	Sept. 23	3271	782	100	2700
Tool-shanks. Machine for making tubular	F. P. Bates	706,513	Aug. 12	1016	224	100	1336
Tool-stock	O. L. Cheney	707,901	Aug. 26	3714	833	100	1927
Tooth. Artificial	J. J. Reynolds	705,143	July 22	3426	744	100	743
Tooth. Artificial	T. Steele	705,546	July 22	4326	935	100	922
Tooth mold. Artificial	T. Steele	705,972	July 29	5099	1111	100	1092
Tooth mount. Artificial	H. D. Justi	705,532	July 22	4277	924	100	914
Toothpick-drying machine	C. F. Scamman	709,050	Sept. 16	1992	455	100	2419
Toothpick forming and drying machine	C. F. Scamman	709,049	Sept. 16	1991	454	100	2418
Tooth-powder or other material. Receptacle for	J. C. Allen	706,710	Aug. 12	1262	304	100	1410
Top. Spinning-	E. Hazlehurst	708,766	Sept. 9	1393	319	100	2278
Top-spinning device	F. W. Kranz	705,252	July 22	3665	792	100	792
Torch	E. H. Wagner	706,134	Aug. 5	947	52	100	1168
Torch. Vapor-burning	W. Mitchell	706,842	Aug. 12	1685	366	100	1469
Torpedo and means for propelling same	A. Klinger	704,050	July 8	1255	271	100	264
Torpedo-firing apparatus. Pneumatic	S. Lake	709,335	Sept. 16	2551	574	100	2538
Torpedo-launching apparatus	S. J. J. Drzewiecki	708,081	Sept. 2	65	15, 16	100	1995
Torpedo. Railway-	E. S. Lafferty	710,302	Sept. 30	4563	1090	100	2984
Torpedo-setting device	P. Beattie	704,499	July 15	2124	459	100	459
Torpedo-shell protector	J. M. Hatfield	710,323	Sept. 30	4500	1014	100	2971
Towing mechanism. Canal	S. W. Wood	707,320	Aug. 19	2901	656	100	1748
Toy	J. Jackson	708,422	July 1	102	22	100	33
Toy	H. Jenson	708,931	July 1	1023	221	100	204
Toy	F. D. Rettich	706,110	Aug. 5	199	41	100	1157
Toy	H. T. Kingsbury	708,421	Aug. 5	845	185	100	1284
Toy	F. A. Richter	706,699	Aug. 12	1333	295	100	1404
Toy	J. J. Fitzpatrick	706,918	Aug. 12	1770	395	100	1496
Toy	C. H. Fox and W. H. Randolph, Jr.	707,577	Aug. 26	3023	680	100	1788
Toy	J. B. Sloane	709,117	Sept. 16	2123	487	100	2448

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Toy	J. M. K. Waldbjorn	709,738	Sept. 23	3825	748	100	2712
Toy	D. J. Wilson	710,090	Sept. 30	4066	917	100	2976
Toy. Aerial	F. M. Osgood	704,090	July 8	1337	291 / 298	100	279
Toy air-gun	P. D. Horton	710,359	Sept. 30	4560	1028	100	2983
Toy bank	O. G. Crannell	704,239	July 8	1029	252	100	340
Toy bank	H. T. Kingsbury	706,422	Aug. 5	846	185 / 186	100	1284
Toy banks. Slot-guard for	J. W. Eshleman	706,913	Aug. 12	1764	394	100	1495
Toy biograph	W. Maxwell	709,543	Sept. 16	2567	577 / 578	100	2542
Toy blocks	E. A. Cannon	709,467	Sept. 23	2842	638 / 639	100	2610
Toy boat	E. E. Mitchell	707,148	Aug. 19	2198	492	100	1600
Toy bowling-alley	F. W. Gibson	706,926	Aug. 12	1784	399	100	1498
Toy bubble-blower	L. H. Rockwell	705,966	July 29	5088	1109	100	1090
Toy building-blocks, &c. Composition suitable for use in making	J. Stephan	708,422	Sept. 2	758	.....	100	2134
Toy cannon	A. G. Fifer	706,899	Aug. 5	802	175	100	1276
Toy cart	F. H. Harris	706,936	Aug. 12	1797	402	100	1501
Toy-cartridge exploder	R. L. Short	708,088	Sept. 2	155	37	100	2013
Toy fence. Portable	C. J., Jr., J. E., and L. A. Youse	708,248	Aug. 5	575	134	100	1232
Toy game	R. Astarita	705,532	July 29	4487	974	100	968
Toy gun. Magazine	I. T. Smith	708,417	Sept. 2	750	169	100	2133
Toy horn	F. J. Gustine	705,308	July 22	3981	862	100	855
Toy. Mechanical	A. Honrath	708,158	Sept. 2	655	147	100	2114
Toy milk-wagon	H. T. Kingsbury	704,346	July 8	1833	397	100	336
Toy. Musical	H. P. Brown	704,228	July 8	1619	350	100	328
Toy or advertising device	J. A. Mangold	705,835	July 29	4900	1063	100	1050
Toy pistol	C. F. Paulus	707,232	Aug. 19	2357	525	100	1641
Toy railway	A. Schütze	709,635	Sept. 23	3254	729	100	2696
Toy railway-track joint	H. C. Ives	708,698	Sept. 9	1655	380	100	2232
Toy. Sounding	L. Long	705,589	July 29	5039	1098	100	1079
Toy. Top-spinning	G. R. Mann	706,676	Aug. 12	1312	290	100	1400
Toy. Walking	E. A. Jeffreys	709,987	Sept. 30	3875	874	100	2837
Trace-chain slip-link	W. J. Case	705,085	July 22	3190	689	100	696
Trace-fastener	S. E. Foreman	704,741	July 15	2557	551	100	549
Trace-fastener	W. H. Thompson	705,719	July 29	4653	1009	100	1001
Track-brake	T. S. Butler	709,743	Sept. 23	3372	756	100	2719
Track-indicator	S. A. Staege	705,467	July 22	4105	892	100	881
Track-sander	W. C. Gardner	708,473	Sept. 2	849	194	100	2153
Track-sander. Pneumatic	E. M. Hedley	705,757	July 29	4719	1021	100	1014
Track-sanding apparatus	J. J. Dolan, Jr	704,784	July 15	2620	568	100	564
Traction-engine	J. O. Wells	708,872	July 1	918	200 / 201	100	183
Traction-engine	G. D. Miller	704,632	July 15	2592	517 / 518	100	516
Traction-engine	S. S., W. S., and R. L. Morton, W. and W. H. Evans.	706,191	Aug. 5	368	79	100	1192
Traction-engine	J. S. Pfremmer	705,685	Aug. 12	1325	298	100	1402
Traction-engine	D. Best	709,592	Sept. 23	3096	689	100	2664
Train-connector. Electric	C. E. Felt and D. A. Kimbark	705,256	Aug. 5	433	92	100	1205
Train-control system	C. E. Barry	705,016	July 22	3161	682	100	990
Train-control system	F. E. Case	706,030	Aug. 5	30	6	100	1122
Train-controlling apparatus	J. D. Price and A. C. Miller	705,201	July 22	3747	814	100	908
Train-lines. Cut-off device for	G. C. Moore	706,483	Aug. 5	885	191	100	1294
Train manipulation. System of	L. A. and C. I. Freedman	704,030	July 8	1199	261 / 262	100	254
Train message-delivering device	P. P. Shives	709,518	Sept. 23	2974	663	100	2639
Train-order holder	L. C. Gibbs	710,265	Sept. 30	4401	991	100	2950
Train-starting mechanism	J. B. Blood	705,295	Aug. 5	590	128 / 129	100	1234
Training apparatus	J. McMaster	704,915	July 8	1677	365	100	351
Tram protecting-rollers. Safety-ball for	E. Raus	707,255	Aug. 19	2302	506	100	1642
Tramway. Overhead	A. M. Acklin	709,692	Sept. 23	3268	732	100	2710
Tramway-switch	A. B. Robinson	707,640	Aug. 26	3141	707	100	1814
Transfer system	E. W. McKenna	705,119	July 22	3364	729 / 730	100	731
Transformer. Rotary	A. Churchward	708,025	Sept. 2	42	10	100	1989
Transforming apparatus. Rotary	E. W. Rice, Jr	706,508	Aug. 12	1163	258	100	1367
Transit instruments. Solar attachment for	O. F. Shattuck	705,970	July 29	5095	1110 / 1111	100	1091
Transits. Meridian attachment for solar	J. H. Young	709,249	Sept. 16	2470	557	100	2520
Transmitting mechanism	C. W. Hunt	709,265	Sept. 16	2420	548	100	2510
Trap: *See* Amalgam-trap. Animal-trap. Fish-trap. Fly-trap. Gopher-trap. Hand-trap. Insect-trap. Rat-trap. Sewer-trap. Steam-trap. Turtle-trap. Waste-trap. Waste-pipe trap. Water-trap.							
Trap	J. W. Zehringer	708,831	July 1	461	105	100	91
Trap	J. A. Clukies	709,871	Sept. 30	3622	818	100	2786
Trap or separator	G. I. Roberts	708,810	July 1	414	97	100	92
Traveling-bag. Telescopic	E. U. Phillips and F. J. McHenry	705,438	July 22	4057	890	100	872
Tread or tire. Pneumatic	F. L. Beamond	706,293	Aug. 5	567	127	100	1234
Tree-limb support	S. T. Hall	704,951	July 8	1226	264	100	259
Trestle	W. A. Kibbe	704,687	July 15	2449	529	100	528
Triangle	C. W. Fuller	706,230	Aug. 5	442	93	100	1205
Trimmer: *See* Hoof-trimmer. Seed-cake trimmer. Shoe-lining trimmer.							
Tripod. Portable	C. Whetham	708,873	July 1	917	201	100	184
Trolley	W. L. von Hardenberg	705,798	July 29	4788	1030	100	1029

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Trolley	T. W. Sutton	705,882	July 29	4940	1074	100	1059
Trolley	P. E. Loree	707,388	Aug. 19	2559	577	100	1676
Trolley	J. W. Brooks	708,198	Sept. 2	368	89	100	2050
Trolley	F. A. Merrick	709,168	Sept. 16	2220	507	100	2409
Trolley. Electric-car	C. J. Johnson and C. W. Benedict	708,589	July 1	876	66	100	74
Trolley for use in electric traction	J. G. Lister	707,606	Aug. 26	3074	690 / 691 / 692	100	1800
Trolley-fork	E. L. Gentis	708,782	July 1	746	165	100	150
Trolley-guard	E. Gagné	709,060	Sept. 16	2080	477	100	2438
Trolley harp or fork	O. P. Johnson and F. P. Crockett	708,048	Sept. 2	98	23	100	2001
Trolley head and wheel	W. A. E. Davis	705,825	July 29	4834	1050	100	1038
Trolley-lubricator	P. E. Loree	707,339	Aug. 19	2561	578	100	1676
Trolley. Overhead	G. H. Russell	708,476	July 1	181	43	100	88
Trolley-pole	J. D. Hickman	708,921	July 1	1004	218	100	200
Trolley-pole	C. D. Jenney	708,559	Sept. 9	1002	227	100	2196
Trolley-pole	W. Pullman and C. C. Field	709,113	Sept. 16	2119	486	100	2447
Trolley-pole	C. P. Lapham	704,749	July 15	2573	554	100	255
Trolley-pole attachment	J. A. Norton	706,092	Aug. 5	172	35	100	1152
Trolley-pole catch	F. A. Howarth	707,591	Aug. 26	3047	685 / 686 / 688 / 689	100	1794
Trolley system. Underground	P. F. Werner	709,590	Sept. 23	3091	689	100	2664
Trolley-track switch	P. F. Werner	706,139	Aug. 5	256	54	100	1171
Trolley-track switch. Overhead tubular	W. F. Hall	708,700	July 1	605	134	100	120
Trolley-wheel	W. F. Hall	708,701	July 1	607	134	100	120
Trolley-wheel	R. H. Apelt	706,211	Aug. 5	400	85	100	1198
Trolley-wheel	W. W. Annable	708,451	Sept. 2	810	185	100	2146
Trolley-wheel	G. W. Hammond	708,786	July 1	761	167	100	152
Trolley-wheels from leaving the feed-wire. Apparatus for preventing	L. C. Nolan	706,938	Aug. 5	670	146	100	1250
Trolley-wire finder	G. R. Floyd	707,222	Aug. 19	2341	523	100	1632
Trolley-wires. Automatic line-catch for	A. Springer	706,699	Aug. 12	1346	299	100	1407
Trolley-wires. Treating							
Trough: *See* Watering-trough.							
Trousers	G. M. Dane	707,556	Aug. 26	2960	671	100	1779
Trousers clamp and hanger	G. W. Shelton	704,940	July 15	2996	641	100	642
Trousers-former	L. F. Anderson	704,811	July 15	2703	584 / 585	100	578
Trousers-guard	J. H. Hardy	708,579	July 1	804	84	100	72
Trousers-hanger	J. H. Howe	706,080	Aug. 5	119	24	100	1141
Trousers-supporter	L. O. Miller	706,498	Aug. 5	978	215	100	1314
Trousers-supporter	J. D. Aiken	707,192	Aug. 19	2285	511	100	1621
Trowel	E. A. Benninghofen	706,514	Aug. 12	1018	225	100	1537
Truck	G. H. Steer	707,950	Aug. 26	3792	852	100	1944
Truck	G. H. Grondin, S. Brillard, and J. L. Labranche.	708,846	Sept. 2	630	144	100	2111
Truck. Baggage	G. W. Burton	708,990	July 8	1154	250	100	244
Truck-bearing. Adjustable	W. S. Adams	708,980	Sept. 16	1841	434	100	2389
Truck-bolster	H. R. Keithley	705,858	July 22	3918	849	100	842
Truck-bolster	C. Vanderbilt	707,656	Aug. 26	3195	717	100	1695
Truck. Car	B. Haskell	704,188	July 8	1549	333 / 334	100	325
Truck. Car	H. A. Dorner	705,049	July 22	3217	695 / 696	100	701
Truck. Car	G. C. Murray	706,584	Aug. 12	1138	250	100	1360
Truck. Car	G. C. Murray	706,585	Aug. 12	1135	251	100	1361
Truck. Car	J. C. Barber	708,855	Sept. 9	1588	363 / 364	100	2319
Truck. Car	J. A. Brill	708,994	Sept. 16	1867	429	100	2398
Truck. Car	W. S. Adams	709,071	Sept. 16	2081	463 / 464	100	2427
Truck construction. Car	W. S. Adams	709,072	Sept. 16	2083	464	100	2428
Truck. Elevating	A. A. Scott	708,744	July 1	695	151	100	136
Truck. Elevating	A. A. Scott	709,945	Sept. 16	2383	539	100	2502
Truck-frame for railway-cars	J. M. Hansen	706,283	Aug. 5	445	94	100	1207
Truck-frame for railway-cars	J. M. Hansen	706,284	Aug. 5	447	94	100	1207
Truck. Locomotive	E. Shay	706,604	Aug. 12	1175	260	100	1389
Truck lubricator. Car	J. A. Bradford	708,806	Sept. 2	575	130	100	2168
Truck. Railway-car	H. R. Keithley	705,763	July 29	4730	1034	100	1016
Truck side and center bearing. Car	E. Cliff	707,208	Aug. 19	2312	517	100	1626
Truck. Stove	J. H. Smith	710,804	Sept. 30	4624	1043	100	2996
Truck. Street-car	R. H. Hornbrook and W. H. Woodcock.	709,406	Sept. 16	2710	607	100	2571
Truck. Vehicle swivel	F. Burger	708,523	Sept. 9	950	215	100	2185
Trumpet. Ear	E. De Meulemeester	705,218	July 22	3586	775	100	776
Trunk. Wardrobe	J. J. Cannan	705,560	July 29	4358	944 / 945	100	943
Truss. Hernial	L. A. Stewart	708,847	July 1	868	191	100	174
Truss. Hernial	J. H. Sherman	705,453	July 22	4044	888	100	877
Truss. Hernial	J. H. and D. L. Chesterman	705,821	July 29	4828	1048	100	1037
Truss. Hernial	J. H. McKague	707,619	Aug. 26	3008	698	100	1805
Truss-rod beam	A. W. Henry	706,654	Aug. 12	1267	280	100	1389
Tub: *See* Bath-tub.							
Tube clamping, cutting, and expanding machine	H. Del Mar	704,520	July 15	2173	470 / 471	100	471
Tube-cleaning device	S. S. Bushnell	708,300	Sept. 2	386	89	100	2060
Tube-drawing machine	J. Gieshoidt	704,316	July 8	1767	386	100	371
Tube-expander	H. M. Barr	707,292	Aug. 19	2472	554	100	1659
Tube-machine	F. Deming	710,046	Sept. 30	3974	896 / 897	100	2958
Tube-treating machine	J. H. Russell	704,581	July 15	2270	494 / 495	100	492
Tubes, &c. Making collapsible	L. Feval	706,541	Aug. 12	1064	234	100	1345

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Tubes with wooden cores. Filling metal	O. Steiner	708,501	Sept. 2	902	204	100	2164
Tubing. Machine for making spiral	G. E. Grimm	706,618	Aug. 12	1587	356 357	100	1456
Tug and trace coupling	A. M. Craig	709,471	Sept. 23	2853	641	100	2612
Tug-fastener	H. J. Ormsby	704,570	July 15	2263	490	100	488
Tunnel construction. Subaqueous	J. F. O'Rourke	708,249	Sept. 2	466	106 107	100	2076
Tunnel-ventilating system	J. Kress	704,808	July 15	2696	583	100	576
Tunnels. Constructing	J. Breuchaud	706,390	Aug. 5	732	165 166	100	1267
Turbine flue-cleaner	J. P. Prentice and R. G. Gregory	708,254	Sept. 2	480	110	100	2078
Turbine-gate-balancing device	W. W. Tyler	710,381	Sept. 30	4599	1038	100	2990
Turbine. Steam-	R. Schulz	707,737	Aug. 26	3324	743 744	100	1852
Turbine. Steam-	R. B. Hewson	708,227	Sept. 2	428	98	100	2069
Turbine. Steam-	C. A. Parsons	708,780	Sept. 9	1415	325 326	100	2282
Turbine. Steam-	A. Krank	708,815	Sept. 9	1509	345 346	100	2302
Turbine. Steam or gas	H. Zoelly	705,890	July 29	4051	1077	100	1092
Turbine-wheel support. Steam-	J. A. Bomgren	705,025	July 22	3176	686	100	693
Turbines. Apparatus for controlling the speed of steam-	G. O. M. Olsson	705,194	July 22	3378	731 732	100	733
Turtle-trap	E. J. Rusk	708,475	July 1	181	43	100	38
Twine-cutter	I. Shafer	708,484	July 1	192	46	100	40
Twyer. Furnace-	E. H. Messiter	706,282	Aug. 5	659	143	100	1348
Tying device. Parcel-	J. S. Dean and W. H. Thomas	706,054	Aug. 5	90	19	100	1130
Tympan-surface bed	A. S. Allen	705,012	July 22	3156	681	100	699
Type-bar for matrix-plates. Master	J. R. Reynolds	707,323	Aug. 19	2980	654	100	1746
Type-carrier action and means for mounting same	F. X. Wagner	704,152	July 8	1482	317 318	100	311
Type-casting	H. Barth	708,010	Sept. 2	18	4	100	1985
Type casting and setting machine	G. A. Goodson	705,841	July 22	3895	840 841	100	835
Type casting and setting machine	J. C. and J. C. Fowler, Jr	705,925	July 22	4349	921 922	100	908
Type-casting. Metal-pump for	F. Wicks. (Reissue)	12,017	July 22	4337	938	100	924
Type-chase for making matrix-plates	J. R. Reynolds	707,322	Aug. 19	2987	654	100	1745
Type-containing channel	L. K. Johnson and A. A. Low	708,645	Sept. 9	1164	264 265	100	2228
Type-distributing apparatus	A. A. Low	710,066	Sept. 30	4007	904 905	100	2866
Type-line-detaching mechanism	L. K. Johnson and A. A. Low	710,057	Sept. 30	3995	901	100	2863
Type-stick. Compositor's	L. K. Johnson	708,646	Sept. 9	1165	265	100	2229
Type-writer	W. H. Young	703,489	July 1	586	130 131	100	116
Type-writer	J. D. Griffen	704,535	July 15	2205	477 478	100	477
Type-writer	C. Sears	706,858	Aug. 12	1661	372	100	1474
Type-writer	W. H. Campbell	707,548	Aug. 26	2956	668 669	100	1776
Type-writer	W. Hunt	709,152	Sept. 16	2183	500	100	2461
Type-writer	J. E. Neahr	709,678	Sept. 23	3240	724	100	2694
Type-writer cabinet	J. E. Anderson	705,509	July 22	4190	911	100	895
Type-writer card-holder	L. S. Burridge and S. T. Smith	706,534	Aug. 12	1637	228	100	1340
Type-writer carriage mechanism	C. Sears	710,393	Sept. 30	4621	1042	100	2995
Type-writer copy-holder	E. A. Holrits	708,554	Sept. 9	995	225	100	2194
Type-writer cover	H. P. Childress	704,237	July 8	1625	351 352	100	339
Type-writer-cover hook	E. A. Smith	706,350	Aug. 5	604	151	100	1256
Type-writer. Electrical	C. Gibbs	710,964	Sept. 30	4899	989 990	100	2949
Type-writer hammer mechanism	S. J. Seifried	704,218	July 8	1595	345 346	100	334
Type-writer line-spacing mechanism	F. X. Wagner	708,600	Sept. 9	1070	242	100	2209
Type-writer or analogous key cap	W. B. Savell	705,709	July 29	4533	1004	100	997
Type-writer type-bar and support	C. Spiro	708,270	Sept. 2	513	116	100	2085
Type-writer type-holder	I. H. Mallin	709,341	Sept. 16	2565	577	100	2541
Type-writer's copy-holder	A. Ryden	704,119	July 8	1415	303	100	298
Type-writers. Paper-feeding machine for	H. C. Tobey	705,282	Aug. 5	566	122	100	1230
Type-writing machine	M. W. Weir	708,509	July 1	257	56, 56	100	49
Type-writing machine	G. B. Webb	708,966	July 1	900	198	100	180
Type-writing machine	R. M. Bullard	708,997	July 8	1145	249	100	248
Type-writing machine	T. D. Robinson	704,112	July 8	1398	301	100	294
Type-writing machine	N. C. Darrow	704,242	July 8	1632	353 354	100	341
Type-writing machine	J. E. Neahr	705,281	July 22	3726	809 810	100	802
Type-writing machine	W. W. Morrison	705,423	July 22	4028	873	100	955
Type-writing machine	C. F. Laganke	705,585	July 22	4280	925 926	100	914
Type-writing machine	T. Cahill	705,559	July 29	4355	943 944	100	942
Type-writing machine	C. W. Howell, Jr	705,587	July 29	4403	955	100	952
Type-writing machine	E. B. Cram	706,025	Aug. 5	87	8, 9	100	1124
Type-writing machine	M. W. Weir	706,136	Aug. 5	249	53	100	1169
Type-writing machine	E. B. Cram	706,640	Aug. 12	1234	274	100	1382
Type-writing machine	W. R. Fox and G. J. Barrett	706,749	Aug. 12	1454	320 321	100	1429
Type-writing machine	E. M. Bennett	707,817	Aug. 26	3541	799	100	1894
Type-writing machine	J. H. Vink	707,893	Aug. 26	3676	827	100	1920
Type-writing machine	R. J. Fisher	708,218	Sept. 2	403	93, 94	100	2064
Type-writing machine	W. J. Barron	708,702	Sept. 9	1450	331 332	100	2291
Type-writing machine	S. L. W. Merlin	708,821	Sept. 9	1521	348	100	2304

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Type-writing machine	J. Felbel	709,088	Sept 16	2067	474 475 476	100	2435
Type-writing machine	M. S. Eylar	709,898	Sept. 30	3689	831	100	2798
Type-writing machine	C. F. Hopkins	709,906	Sept. 30	3709	836 837	100	2802
Type-writing machine	G. H. Williams	710,089	Sept. 30	4002	915 916	100	2877
Type-writing-machine accounting attachment	O. L. Ingram	705,409	July 22	4004	867	100	860
Type-writing-machine card or sheet platen	R. J. Fisher	709,005	Sept. 16	1889	433 434	100	2398
Type-writing-machine feeding attachment	M. S. Eylar	707,220	Aug. 19	2333	521 522	100	1630
Type-writing-machine line-spacing-lock mechanism	R. J. Fisher	708,954	July 1	1065	231	100	212
Type-writing-machine line-spacing mechanism	C. F. Laganke	708,961	July 1	1086	235	100	216
Type-writing-machine platen	R. J. Fisher	705,521	July 22	4220	917	100	902
Type-writing-machine platens. Follower-plate for	C. F. Laganke	704,479	July 8	2081	451 452	100	407
Type-writing-machine ribbon-fastener	F. O. Garrison	707,098	Aug. 19	2101	469	100	1580
Type-writing-machine work-gage	C. F. Laganke	705,537	July 22	4290	927 928	100	916
Type-writing-machine work gage and clamp	C. F. Laganke	705,536	July 22	4284	926	100	915
Type-writing-machine work-gage attachment	H. J. Halle	705,527	July 22	4265	922 923	100	911
Type-writing machines. Carbon-roll billing-platen for	R. J. Fisher and R. D. Stackpole	705,524	July 22	4240	919 920	100	906
Type-writing machines. Ribbon-feeding mechanism for	R. J. Fisher	705,523	July 22	4234	919	100	905
Types or matrices. Mechanism for justifying lines composed of	E. Müllendorff	705,693	July 29	4597	997 998 999	100	990
Umbrella	E. M. Zeek	709,624	Sept. 23	3147	701	100	2674
Umbrella drip-cup	P. W. Pray	708,823	July 1	832	183	100	166
Umbrella. Folding	A. and F. Schaefer	707,451	Aug. 19	2757	625	100	1718
Umbrella-frame	S. S. Fretz	703,910	July 1	988	215	100	197
Umbrella rib and stretcher-joint	C. MacMillan	710,328	Sept. 30	4506	1015	100	2972
Umbrella-runner	W. W. Kenney and J. W. Fogler	707,237	Aug. 19	2360	527	100	1636
Umbrella-runner	W. H. Gaskill	707,858	Aug. 26	3591	811	100	1903
Umbrella-runner retainer	W. S. Seymour	704,128	July 8	1434	307	100	302
Umbrella-stick	T. H. Smith	706,352	Aug. 5	696	152	100	1257
Uncoupling device	H. Bruns	705,735	July 29	4686	1014	100	1007
Underskirt. Lady's	C. L. Hermann	706,235	Aug. 5	449	95	100	1208
Undervest and corset-cover. Combined	C. Dufour	707,558	Aug. 26	2977	672	100	1780
Universal coupling	A. G. Mather	709,902	Sept. 30	3863	875 876	100	2839
Universal joint for shafting	J. L. Follett	706,403	Aug. 5	808	176	100	1277
Unloading apparatus	F. H. Treat	710,224	Sept. 30	4334	974 975	100	2936
Upholstering-clip	H. J. Jacobs	704,542	July 15	2217	480	100	479
Upholstering-machine button-holder	P. Boller	704,501	July 15	2131	461	100	461
Urinal	H. D. Janes	706,566	Aug. 12	1702	344	100	1354
Vaccine-container	H. M. Alexander	710,334	Sept. 30	4350	977	100	2939
Vaginal injector	A. Anderson and M. B. S. B. Packness	706,371	July 22	3939	853	100	846
Valise. Telescoping	C. A. Bodwell, Jr	710,037	Sept. 30	3956	892	100	2855
Valve	C. P. Lynch	708,963	July 1	1097	236	100	218
Valve	N. Z. Norrington	704,087	July 8	1334	291	100	279
Valve	S. B. Moffitt and C. O. Weisenburger	704,654	July 15	2398	518	100	517
Valve	J. H. Koch	707,337	Aug. 19	2557	577	100	1676
Valve	B. Ivor and J. S. Ward	708,145	Sept. 2	272	65	100	2037
Valve	J. H. Bickford	708,990	Sept. 16	1855	426 427	100	2391
Valve	E. G. Watrous	710,129	Sept. 30	4150	935	100	2895
Valve. Air and vacuum	E. P. Allen	703,886	July 1	937	205	100	188
Valve. Air-brake	F. Strattner	708,062	Sept. 2	160	39	100	2015
Valve attachment for traps. Air-	C. A. Tilly	703,855	July 1	895	195	100	177
Valve. Automatic	C. W. Hall, Jr., and B. J. Berwald	705,344	July 22	3898	842	100	836
Valve. Automatic	N. Curtis	707,395	Aug. 19	2661	600	100	1598
Valve. Automatic	H. E. Stager	708,179	Sept. 2	338	80	100	2050
Valve. Balanced slide-	J. T. Wilson	705,780	July 29	4671	1011	100	1004
Valve. Brake-	G. Gregory	707,581	Aug. 26	3067	681	100	1789
Valve. Check-	W. R. Michener	704,557	July 15	2343	496	100	484
Valve. Check or clack	F. W. Leidecker	705,255	July 22	3670	798	100	798
Valve cushioning device	E. Rost	707,160	Aug. 19	2218	497	100	1608
Valve. Engine-	E. U. Down	705,224	July 22	3597	779	100	778
Valve. Engineer's brake-	P. Synnestvedt	708,677	July 1	550	126	100	111
Valve. Engineer's brake-	H. R. Mason	709,027	Sept. 16	1949	447	100	2409
Valve. Equalizing-	P. Whiting	707,476	Aug. 19	2799	633 634	100	1727
Valve. Fluid-pressure engine	P. T. Stillman	709,946	Sept. 16	2385	540	100	2503
Valve. Fluid-pressure-regulated gas-	A. Beier	706,158	Aug. 5	298	63, 64	100	1177
Valve. Flushing-	J. O. Rathbun	704,211	July 8	1584	342	100	332
Valve for gas-engines. Fuel-	J. B. Fenner	706,916	Aug. 12	1767	395	100	1495
Valve for gas or gasolene engines. Mixing-	R. E. Hardy	706,050	Aug. 5	94	20	100	1136
Valve for pumps, &c.	T. A. MacDonald	709,273	Sept. 16	2441	552	100	2514
Valve for pumps, compressors, or motors. Rotary slide-	L. Roedel	709,682	Sept. 23	3246	725 726 727	100	2695
Valve for pumps, compressors, or motors. Rotary slide-	L. Roedel	709,683	Sept. 23	3252	728	100	2696
Valve for reservoirs containing fluid under pressure. Relief-	H. E. Warren	708,697	July 1	581	129	100	115
Valve for steam-chests. Vertical-lift lubricating-	G. Wiesseckel	708,106	Sept. 2	195	46	100	2032
Valve for steam-engines. Distributing-	C. Tuckfield	706,181	Aug. 5	343	51	100	1167
Valve-gate. Electrically-operated	A. Orr	707,988	Aug. 26	3777	848	100	1941
Valve-gear	K. C. Geele	708,569	July 1	843	78	100	69
Valve-gear	R. T. Love	705,414	July 22	4014	869	100	863

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drfg.	Official Gazette. Vol.	Official Gazette. Page.
Valve-gear	H. White and W. G. Taylor	707,995	Aug. 26	3888	873 / 874	100	1902
Valve-gear	P. H. White	709,949	Sept. 30	3791	855	100	2820
Valve-gear. Engine	O. Hove	705,088	July 22	3300	717 / 718	100	717
Valve-gear. Governor-controlled	J. A. Groshon	704,536	July 15	2210	478	100	478
Valve-gear. Reversing	A. B. Leftwich	708,993	July 1	1033	294	100	205
Valve gear. Slide	S. S. Younghusband	708,995	July 1	996	205	100	188
Valve. Governor	L. J. Watson	706,616	Aug. 12	1197	266	100	1374
Valve-lever spool	P. Thomas	709,940	Sept. 30	3774	852	100	2815
Valve-lubricator	P. F. Laban	708,968	Aug. 12	1848	413	100	1510
Valve mechanism	R. Berg	708,895	Aug. 12	1714	393	100	1484
Valve mechanism. Explosive-engine	R. P. Hansen	708,932	Aug. 12	1794	401	100	1500
Valve mechanism for fluid-supply pipes	A. S. Kiefer	709,096	Sept. 16	2091	479	100	2441
Valve mechanism for steam-carriage burners	R. H. White	707,478	Aug. 19	2805	634	100	1728
Valve mechanism. Water-heater	A. Buerkle	707,758	Aug. 26	3418	770	100	1869
Valve-motion	G. M. Schwend	707,452	Aug. 19	2759	625	100	1718
Valve. One-way	E. H. Gold	709,262	Sept. 16	2413	547	100	2508
Valve-operating means	C. G. Y. King	705,250	July 22	3659	792	100	791
Valve. Pop safety	B. Hellwig	709,089	Sept. 2	88	19	100	1998
Valve. Pressure-reducing	C. H. Buckelew	706,721	Aug. 12	1382	308	100	1415
Valve. Quadruple	P. Whiting	707,477	Aug. 19	2802	634	100	1727
Valve. Retaining	W. V. Turner and F. C. Farquharson	706,867	Aug. 12	1680	377	100	1478
Valve. Safety	W. C. Field	708,572	July 29	4379	949	100	947
Valve. Safety	W. Wishart and B. Seidel	707,485	Aug. 19	2814	636	100	1730
Valve. Self-closing	F. H. Mason	706,482	Aug. 5	878	190	100	1292
Valve. Steam	H. W. Waite	706,613	Aug. 12	1190	264	100	1372
Valve. Steam-engine	W. Wright	708,750	Sept. 9	1360	310	100	2271
Valve. Stop	J. A. Ellison	708,564	July 1	339	77	100	68
Valve. Straightway	E. M. Erdman	709,146	Sept. 16	2177	498	100	2469
Valve. Straightway	D. Kennedy	709,491	Sept. 23	2900	649	100	2626
Valve. Street-sprinkler	M. G. Bunnell	709,960	Sept. 30	3820	860	100	2826
Valve. Tank	S. J. Asbell	704,230	July 8	1615	349	100	337
Valve. Throttle	J. S. Chambers	706,900	Aug. 5	599	131	100	1296
Valve. Water-cooled reversing	L. L. Knox	708,718	Sept. 9	1308	297	100	2257
Valves, &c. Operating mechanism for gas-engine	J. B. Fenner	705,058	July 22	3236	700 / 701	100	705
Vamp-snipper	J. G. Grall	705,069	July 22	3250	705	100	719
Vanner	C. C. Pratt	706,687	Aug. 12	1328	293 / 294	100	1403
Vapor-burner	A. Lecomte	708,661	July 1	527	119	100	103
Vapor-burner	W. J. Smart	705,459	July 22	4005	890	100	878
Vapor-burner	C. S. and C. E. Shattuc	708,926	Sept. 9	1718	397	100	2346
Vapor generation	A. Scharffe	705,906	July 22	3779	820	100	814
Vaporizer for cold vapors, &c	E. Josse	708,647	Sept. 9	1166	265	100	2229
Varnishes. Manufacture of	E. H. Strange and E. Graham	708,985	Sept. 9	1729	400	100	2348
Varnishing	G. Tüschel	705,723	July 29	4661	.....	100	1002
Vat: *See* Bleaching-vat. Tempering-vat.							
Vault and constructing same. Burial	L. Miller	704,899	July 15	2851	618	100	611
Vault. Burial	J. T. McKim and L. Miller	704,850	July 15	2764	597	100	592
Vault-cover	P. S. Knapp and J. Steinberg	705,679	July 29	4575	994	100	991
Vault-light	A. De Man	709,849	Sept. 23	3560	805	100	2702
Vegetable albumen. Extracting	F. W. Gaertner	710,190	Sept. 30	4292	961	100	2919
Vegetable-cutter	J. C. Ivey, Sr	708,598	July 1	375	86	100	74
Vegetable or meat cutter	F. Barr	706,881	Aug. 12	1705	381	100	1483
Vegetable-roots. Machine for cutting	H. Webb	706,368	Aug. 5	736	158	100	1263
Vehicle	J. Krauss	708,601	July 1	398	98	100	79
Vehicle	L. B. Truslow	705,732	July 29	4659	1010	100	1002
Vehicle	A. A. Kellogg	706,958	Aug. 12	1841	412	100	1509
Vehicle	N. P. Mader	708,056	Sept. 2	109	26	100	2004
Vehicle	C. W. Hunt	708,231	Sept. 2	437	99	100	2070
Vehicle	L. H. Sohn	704,946	July 15	3004	644	100	644
Vehicle and stationary scale. Combination	C. F. Putnam	704,309	July 8	1581	341	100	331
Vehicle-body	F. Charron and L. Girardot	707,806	Aug. 19	2810	515 / 517	100	1625
Vehicle body. Motor	J. E. Cryderman	708,207	Sept. 2	396	91, 92	100	2062
Vehicle-body raiser	F. Corssen	709,396	Sept. 16	2680	608	100	2567
Vehicle-body spring suspension	C. B. Fairchild	704,452	July 8	2022	439 / 440	100	426
Vehicle-brake	J. Ortelg	705,491	July 22	4040	876	100	868
Vehicle-brake	W. F. Hitchcock	706,824	Aug. 12	1596	359	100	1460
Vehicle-brake	G. W. Burton	706,898	Aug. 12	1746	390	100	1491
Vehicle-brake	J. A. Tautphaeus	708,272	Sept. 2	515	117	100	2095
Vehicle-brake. Automatic	E. G. Stone	704,281	July 8	1710	373	100	360
Vehicle brake mechanism. Motor	J. Unser	709,124	Sept. 16	2133	489	100	2450
Vehicle brake mechanism. Motor	J. Unser	709,125	Sept. 16	2137	489 / 490	100	2451
Vehicle-drag	S. S. Stanley	704,976	July 15	3071	660	100	656
Vehicle driving-gear and brake combined. Motor	H. H. Hennegin	708,356	Sept. 2	651	147	100	2113
Vehicle driving-gear. Motor	E. E. Wright	708,881	July 1	981	208	100	187
Vehicle driving mechanism. Road	W. S. Taylor, Jr	707,994	Aug. 26	3857	866 / 867	100	1956
Vehicle. Electric	J. C. Henry	708,962	Sept. 9	1792	413	100	2360
Vehicle-frame	J. Dawson	706,584	Aug. 12	1053	231	100	1343
Vehicle-gear	F. E. Wilcox	709,069	Sept. 16	2027	462	100	2425
Vehicle-gear	F. E. Wilcox	709,069	Sept. 16	2028	462	100	2426
Vehicle-gear	F. E. Wilcox	709,070	Sept. 16	2029	463	100	2426
Vehicle-jack	A. Zwicker	709,730	Sept. 23	3327	749	100	2712
Vehicle lighting and heating device	P. F. Schwemle and J. W. Case	708,598	Sept. 9	1059	240	100	2306
Vehicle. Motor	W. Maybach	708,426	July 1	124	28	100	27
Vehicle. Motor	G. E. De Long	708,789	July 1	725	160	100	145
Vehicle. Motor	C. T. B. Sangster	705,804	July 22	3769	818 / 819	100	812
Vehicle. Motor	H. M. McCall	706,489	Aug. 5	892	198	100	1295
Vehicle. Motor	H. J. Marks	706,978	Aug. 12	1868	418	100	1514

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drfg.	Official Gazette. Vol.	Official Gazette. Page.
Vehicle. Motor	J. H. Hoadley	707,695	Aug. 26	3363	730	100	1889
Vehicle. Motor	H. F. Borbein	708,758	Sept. 9	1454	339	100	2291
Vehicle. Motor	E. A. Wright	708,949	Sept. 9	1759	405 / 406	100	2353
Vehicle. Motor	W. C. Baker	709,859	Sept. 30	3586	808	100	2779
Vehicle. Motor	F. C. Goddard	709,897	Sept. 30	3895	883	100	2799
Vehicle motor mechanism. Road	E. Perks and F. Birch	708,827	Sept. 9	1533	350 / 351	100	2307
Vehicle propelling means	A. Rieber	704,877	July 8	1808	410	100	400
Vehicle. Road	P. Christiansson	710,249	Sept. 30	4376	983 / 984	100	2944
Vehicle running-gear	H. A. Wise	706,483	Aug. 5	903	210	100	1310
Vehicle running-gear	W. N. Mecklan	708,488	Sept. 2	883	200	100	2160
Vehicle running-gear. Motor	F. J. Stallings	708,844	July 1	863	189 / 190	100	173
Vehicle safety device. Motor	H. Charles	704,616	July 15	2232	507	100	502
Vehicle safety device. Motor	A. L. Riker	709,681	Sept. 23	3245	725	100	2695
Vehicle-seat brace	G. W. Vinson	709,878	Sept. 16	2656	596	100	2761
Vehicle seat-spring	E. G. Blaine	708,115	Sept. 2	212	50	100	2025
Vehicle. Self-propelled	E. R. Gill	705,649	July 1	500	113	100	98
Vehicle single-perch gear	F. E. Wilcox	709,449	Sept. 16	2790	628	100	2588
Vehicle. Steam-propelled	H. K. Hess	704,253	July 8	1647	358	100	345
Vehicle. Steam-propelled	H. K. Hess	704,254	July 8	1650	359	100	345
Vehicle steering and controlling device. Road	M. D. Porter	704,102	July 8	1370	297	100	290
Vehicle steering mechanism. Locking device for	C. S. Van Wagoner	707,464	Aug. 19	2778	629 / 630	100	1722
Vehicle-top	L. Gillaspy	706,816	Aug. 12	1582	355	100	1457
Vehicle-wheel	N. A. Newton	705,121	July 22	3369	730	100	731
Vehicle-wheel	C. H. Wheeler and F. W. Kremer	705,176	July 22	3483	757	100	754
Vehicle-wheel	C. H. Wheeler and F. W. Kremer	705,177	July 22	3485	757	100	755
Vehicle-wheel	G. S. Lee	709,546	Sept. 23	3021	672	100	2648
Vehicle wheel. Motor	G. O. Venner	704,151	July 8	1481	317	100	311
Vehicle-wheel spindle	E. E. Root	705,968	July 29	5091	1110	100	1091
Vehicles. Brake for pivotal running-gear of	W. Wiedinmyer	707,481	Aug. 19	2809	635	100	1729
Vehicles. Chain-adjusting device for motor	C. O. Hedstrom	707,923	Aug. 26	3754	841 / 842	100	1936
Vehicles. Combined muffle and mud-guard for motor	R. M. Keating	705,357	July 22	3917	848	100	841
Vehicles. Differential gear for self-propelling	A. Herschmann	705,671	July 29	4556	989	100	982
Vehicles. Expansible pulley for motor	P. I. Viel	708,860	July 1	893	196 / 197	100	179
Vehicles from slipping sidewise. Means for preventing road	E. T. L. Williams	709,858	Sept. 23	3551	800	100	2758
Vehicles. Machine for handling	G. E. and J. S. Myers	706,437	Aug. 5	869	192	100	1296
Vehicles. Mechanism for electric propulsion of road	D. S. Bergin	708,374	July 1	19	4, 5	100	7
Vehicles. Metallic chest for motor	F. Charron and L. Girardot	704,676	July 15	2432	525	100	524
Vehicles. Tubular pole or shaft for	H. McLoughlin	705,427	July 22	4034	874	100	866
Vehicles. Two-speed and differential gear for motor	J. C. Robbins	705,790	July 29	4773	1035	100	1026
Velocipede and wagon. Combined	E. L. Hoy	704,041	July 8	1242	267	100	261
Velocipede driving-gear	F. A. Rich	707,012	Aug. 12	1929	432	100	1527
Velocipede. Folding railway	H. Barry	704,672	July 15	2429	524	100	523
Velocipede or the like	W. H. Hayes	708,809	Sept. 9	1485	341	100	2298
Vending apparatus. Coin-controlled	O. Ashton	708,198	Sept. 2	363	86, 87	100	2056
Vending apparatus. Newspaper	L. C. Overpeck	704,466	July 8	2052	445	100	432
Vending-machine	E. A. Wilcox	705,005	July 15	3127	675 / 676	100	667
Vending-machine. Automatic	S. Mayer	704,752	July 15	2576	555	100	553
Vending-machine. Coin-actuated	F. M. Sears	707,584	Aug. 19	2898	654 / 655	100	1746
Vending-machine. Coin-controlled	D. K. Stone and W. W. Healy	705,477	July 22	4120	896	100	864
Vending-machine. Coin-operated	P. G. MacLean	704,801	July 8	1571	339	100	329
Vending-machines. Valve mechanism for coin-controlled	W. J. Strong	704,950	July 15	3011	646 / 647	100	646
Veneer-bending machine	E. Aber	710,231	Sept. 30	4344	976 / 977	100	2933
Veneer-box-making machine	W. H. Stout	706,274	Aug. 5	846	118 / 119 / 120	100	1286
Veneer-cutting machine	L. G. Merritt	706,331	Aug. 5	857	143	100	1345
Veneer-drying machine	M. Rossow	705,708	July 29	4631	1003 / 1004	100	906
Veneer-slicer	J. N. Roberts	704,213	July 8	1586	343	100	332
Veneers. Apparatus for edge-uniting	W. M. Boenning	709,864	Sept. 30	3602	813 / 814 / 815	100	2782
Ventilating-T	E. F. Wixted	708,606	Sept. 9	1091	245	100	2213
Ventilator: *See* Mine-ventilator. Window-ventilator. Stovepipe-ventilator.							
Ventilator	T. M. Carpenter and F. L. Baker	708,782	July 1	712	158	100	142
Ventilator	J. W. Maus	709,220	Sept. 16	2344	531	100	2494
Ventilator	W. T. Cottier	709,656	Sept. 23	3279	734	100	2709
Ventilator	J. R. Wild	710,350	Sept. 30	4545	1025	100	2980
Ventilator and mirror-protector	W. C. McBride	704,076	July 8	1318	287	100	276
Vessel. Bulk-cargo	J. R. Oldham	704,992	July 8	1870	405	100	395
Vessel. Tilting	A. J. Betteridge	706,795	Aug. 12	1550	347	100	1450
Vessels at sea. Apparatus for repairing	N. J. McLaughlin	704,905	July 15	2950	650	100	618
Vessels. Construction of composite	E. Hayes	708,418	July 1	89	18	100	20
Vessels. Device for retarding the speed of	A. Zerbe	704,739	July 15	2527	546	100	544
Veterinary appliance	N. Stalker	708,271	Sept. 2	514	117	100	2085
Veterinary obstetric instrument	C. Gilts	704,689	July 15	2355	512	100	507
Veterinary surgeon's float	P. J. Weder	708,857	July 1	938	198	100	181
Veterinary surgeon's float	P. J. Weder	708,868	July 1	936	198	100	181
Veterinary surgeon's float	P. J. Weder	708,869	July 1	937	199	100	182

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Victual-protector	W. M. and J. M. Sausser	709,048	Sept. 16	1990	454	100	2418
Viscose. Manufacture of	A. Fielding	708,760	Sept. 9	1384	------	100	2276
Viscose on textiles, &c. Fixing	A. Fielding	708,761	Sept. 9	1385	------	100	2276
Vise	C. D. Bingham	703,878	July 1	24	5	100	8
Vise	W. E. Snediker	709,120	Sept. 16	2128	488	100	2449
Vise	J. F. Emmert	709,399	Sept. 16	2693	604	100	2567
Vise and bracket	C. B. Harper	708,089	Sept. 2	81	19	100	1998
Vise, drill, and bolt-holder. Combined	E. L. Kennedy	705,938	July 29	5027	{1095 / 1096	100	1077
Vise. Pipe-	J. B. Vogelbach and T. Gray	709,944	Sept. 30	3783	854	100	2818
Vise. Rapid-acting	H. D. Chipman	703,705	July 1	718	159	100	144
Voltage-regulator	T. M. Pusey	704,871	July 8	1879	{407 / 408	100	897
Voting-machine	C. F. Harrington	708,787	July 1	762	168	100	152
Voting-machine	W. Langrill	706,326	Aug. 5	649	141	100	1246
Voucher	H. Wise	706,807	July 29	4804	1043	100	1692
Wagon-body lifter	G. H. Wade	707,466	Aug. 19	2783	630	100	1723
Wagon-body lifter	H. Soetebier	709,588	Sept. 23	3092	686	100	2662
Wagon-body top-box fastener	C. A. Roberts	704,925	July 15	2948	692	100	634
Wagon-box. Metallic	W. Grosvenor and W. Milner	709,705	Sept. 23	3288	{737 / 738	100	2704
Wagon-boxes. Bump-board for	L. L. Haworth	706,832	Aug. 12	1504	358	100	1460
Wagon-brake	C. A. Francis	705,061	July 22	3242	{701 / 702	100	706
Wagon-brake	P. Lewis	708,564	Sept. 9	1008	{228 / 229	100	2197
Wagon-brake	T. J. Swisher, V. A. A. and E. Burger	710,345	Sept. 30	4535	1024	100	2979
Wagon. Chute-	A. Ray	709,783	Sept. 23	3316	745	100	2710
Wagon-coupling	W. S. Chapman	704,858	July 15	2727	601	100	595
Wagon. Dump-	B. H. Gleason	704,318	July 8	1769	396	100	372
Wagon. Dumping-	W. McIntosh	707,618	Aug. 26	3095	{697 / 698	100	1805
Wagon. Dumping-	R. J. Glenn	708,134	Sept. 2	251	60	100	2034
Wagon. Dumping-	J. J. Eagen	709,210	Sept. 16	2312	525	100	2487
Wagon. Dumping-	W. Leonhardt	709,715	Sept. 23	3307	742	100	2707
Wagon. Dumping-	E. M. Sandy	710,214	Sept. 30	4313	970	100	2931
Wagon. Dumping-	J. D. Mack	705,853	July 29	4887	1062	100	1049
Wagon-jack	H. Harris and S. M. Reese	705,735	July 29	4718	1021	100	1013
Wagon-rack	A. Z. Thomas	704,594	July 15	2300	500	100	496
Wagon-rack for hay-loaders	F. H. Pickard	707,520	Aug. 19	2868	658	100	1745
Wagon running-gear	J. E. Bennett	707,806	Aug. 26	3704	831	100	1925
Wagon running-gear	M. Stangel	703,494	July 1	209	49	100	44
Wagon-seat support	G. Mock	708,908	Sept. 9	1805	415	100	2263
Wagon-standard	G. B. Marx	708,819	Sept. 9	1518	348	100	2208
Wagons, &c. Lifting device for coal-	E. G. D. Wade	703,684	July 1	576	128	100	114
Waistcoat	J. C. Kimsey	707,399	Aug. 19	2362	530	100	1636
Waist former. Long-	A. H. Moses	707,444	Aug. 19	2747	622	100	1716
Wall and bricks for same. Masonry	A. De Man	705,048	July 22	3216	695	100	701
Wall. Building-	R. Völker	703,863	July 1	897	------	100	180
Wall-covering. Embossed	G. W. Wodicka	709,188	Sept. 16	2272	------	100	2477
Wall-finish and making same	A. Hofmann	703,704	July 1	609	135	100	120
Wall-nail	F. A. Bone	705,732	July 29	4675	1012	100	1006
Wall. Retaining-	L. Robertson	710,009	Sept. 30	3908	{882 / 883	100	2844
Wardrobe	P. D. Graaff	708,341	Sept. 2	631	142	100	2109
Wardrobe. Portable	F. J. Meier	705,967	July 22	3703	803	100	798
Warmer	A. E. Rhoades	703,471	July 1	175	40	100	37
Warper stop-motion mechanism	L. A. Robbins	706,795	Aug. 12	1529	339	100	1445
Washbench	W. B. Murphy	705,116	July 22	3360	728	100	730
Washboard	G. W. Newsom	705,284	July 22	3730	811	100	808
Washboard	S. McCay	706,192	Aug. 5	370	79	100	1192
Washboard	W. R. McPherson and H. E. Eurich	707,861	Aug. 26	3632	819	100	1911
Washboard	G. Leeson	707,126	Aug. 19	2146	481	100	1590
Washboiler	J. L. Powers	709,555	Sept. 23	3084	676	100	2651
Washboiler attachment	S. B. Woodford	707,667	Aug. 26	3908	719	100	1828
Washer: *See* Axle-washer. Dish-washer. Can-washer. Ore-washer.							
Washing and wringing machine. Combined	J. W. Rogers	704,484	July 15	2966	639	100	639
Washing device. Diaper-	J. W. Reed	708,920	Sept. 9	1710	394	100	2344
Washing-machine	J. Knoche	708,428	July 1	111	25	100	95
Washing-machine	J. P. Gordon	708,913	July 1	991	216	100	198
Washing-machine	E. F. Miller	704,071	July 8	1313	286	100	275
Washing-machine	J. B. Rentzel	705,962	July 29	5080	{1107 / 1108	100	1088
Washing-machine	G. Thomas	705,976	July 29	5104	1113	100	1098
Washing-machine	W. Sparkman	706,353	Aug. 5	700	152	100	1258
Washing-machine	A. C. Israel	706,418	Aug. 5	841	184	100	1283
Washing-machine	L. B. Parker	706,592	Aug. 12	1153	255	100	1364
Washing-machine	T. H. C. Beall	707,072	Aug. 19	2053	{458 / 459	100	1570
Washing-machine	J. M. Lawrence	707,242	Aug. 19	2365	530	100	1637
Washing-machine	O. Guitar	707,409	Aug. 19	2687	606	100	1704
Washing-machine	J. G. Gibbs	707,608	Aug. 26	3261	729	100	1835
Washing-machine	C. F. Schmidt	707,867	Aug. 26	3642	821	100	1913
Washing-machine	P. H. Gendron	708,338	Sept. 2	627	141	100	2109
Washing-machine	F. G. Hyatt	708,568	Sept. 9	1000	227	100	2195
Washing-machine	M. E. Kelly	709,016	Sept. 16	1921	441	100	2404
Washing-machine	A. G. Brandt and D. L. Griffiths	709,813	Sept. 23	3514	792	100	2750
Washing-machine gearing	J. H. Stanfield	707,949	Aug. 26	3791	852	100	1944
Washing-machine reversing mechanism	D. B. Willock	708,444	Sept. 2	794	{180 / 181	100	2142
Washstands, bath-tubs, &c. Fixture for	A. P. Windolph	704,419	July 8	1956	435	100	412
Washstands. Means for attaching bowls to the slabs of	J. A. Clukies	709,872	Sept. 30	3693	818	100	2786
Waste-pipe trap	V. E. Lombard and C. E. Cole	705,769	July 29	4740	1026	100	1018

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Waste-trap	J. W. McAuliffe	705,777	July 29	4788	1030	100	1021
Watchcase	E. Kuhn	707,430	Aug. 19	2727	617	100	1711
Watch-dial illuminator	F. M. Durkee	704,446	July 8	2009	437	100	423
Watch-movement fastener	L. G. Solenberger	709,121	Sept. 16	2129	488	100	2449
Watch-protector	F. A. Chervenka	704,226	July 8	1634	351	100	339
Watch. Stem-winding	W. E. Porter	705,708	July 29	4627	1002	100	995
Watch. Stem-winding	C. T. Higginbotham	706,656	Aug. 12	1279	281	100	1390
Watch. Stem-winding	M. Bassoff	708,985	Sept. 16	1847	452	100	2390
Watch. Stem-winding	M. Bassoff	708,986	Sept. 16	1849	425	100	2390
Watch. Stop-	G. M. Sawyer	706,204	Aug. 5	392	83	100	1197
Watch-winding device	L. J. Williams	707,887	Aug. 26	3683	829	100	1922
Watchmaker's staking-tool	E. E. Menges	706,330	Aug. 5	656	143	100	1247
Water-bottles, water-bags, &c. Package for	F. A. Wells	708,106	Sept. 2	191	45	100	2021
Water-closet	D. S. Schureman	710,342	Sept. 30	4530	{1022 / 1023	100	2978
Water-closet bowl	H. T. Bush	705,819	July 22	3810	826	100	820
Water-closet bowl	P. J. McGuire	706,090	Aug. 12	1890	423	100	1519
Water-closet bowls or washbasins. Mechanism for temporarily locking	E. Woodruff	706,869	Aug. 12	1684	377	100	1479
Water-closet seat	W. C. Anderson	706,791	Aug. 12	1539	345	100	1447
Water-closet seat. Detachable	H. M. Solveson	710,021	Sept. 30	3930	888	100	2849
Water-closet valve	E. G. Watrous	710,128	Sept. 30	4147	935	100	2894
Water-closet ventilator attachment	S. C. Brown	704,471	July 8	2064	447	100	434
Water-cooler	G. W. Born	705,876	July 22	3946	855	100	847
Water-cooling apparatus	W. J. Dossey	709,887	Sept. 30	3680	830	100	2706
Water-cooling tower	C. H. Wheeler and L. L. Pratt	707,042	Aug. 12	1981	445	100	1538
Water distribution	W. O'Neill and W. H. Gordon	707,448	Aug. 19	2733	{623 / 624	100	1717
Water-elevator	L. Wells	709,849	Sept. 23	3499	789	100	2746
Water-gage	F. M. Ashley	705,192	July 22	3518	768	100	765
Water-gage attachment	F. J. Knox	706,959	Aug. 12	1843	412	100	1560
Water-gage connection	J. B. L. McKenzie	709,289	Sept. 16	2399	537	100	2498
Water-gage safety device	J. A. Mosher	705,118	July 22	3353	727	100	728
Water-gate	D. N. B. Coffin	707,825	Aug. 26	3558	804	100	1898
Water-gate	J. H. Martin and D. Ormand	709,102	Sept. 16	2102	481	100	2443
Water-heater	H. W. O'Dowd	703,788	July 1	669	148	100	134
Water-heater	J. Foster	705,385	July 22	3872	837	100	882
Water-heater	T. L. Phillips	707,849	Aug. 19	2578	582	100	1679
Water-heater	R. J. Gibbons	709,091	Sept. 16	2095	478	100	2439
Water-heater. Combined solar and artificial heat	F. Walker	705,167	July 22	3462	754	100	750
Water-heater. Wall	J. H. Mackley	709,340	Sept. 16	2563	{576 / 577	100	2541
Water-heating apparatus	E. W. Higbee	704,880	July 8	1791	391	100	376
Water-meter	H. F. Brown	703,716	July 1	628	140	100	124
Water-meter	G. B. Bassett	708,206	Sept. 2	555	126	100	2004
Water-motor	N. Schmidt	709,279	Sept. 16	2448	558	100	2516
Water-purifier	C. C. Clark	703,541	July 1	294	67	100	50
Water-purifying apparatus	C. L. Kennicott	708,596	July 1	887	{89 / 90 / 91	100	77
Water-purifying apparatus	J. Davis	704,244	July 8	1685	354	100	342
Water-purifying apparatus	C. L. Kennicott	708,717	Sept. 9	1302	297	100	2257
Water-raising apparatus	G. R. Young and C. Shaw	704,608	July 15	2221	504	100	500
Water. Removing oil from	A. E. Krause	705,253	July 22	3666		100	792
Water-tower. Portable	H. H. Gorter	708,185	Sept. 2	252	60, 61	100	2034
Water-trap	F. Camentz, Jr	708,529	Sept. 9	959	217	100	2187
Water-tube boiler	N. Vicente	706,787	Aug. 12	1533	{341 / 342 / 343 / 344	100	1446
Water-tube boiler	E. G. Rust	710,840	Sept. 30	4598	{1021 / 1022	100	2977
Water-wheel	S. M. Thurman	704,405	July 8	1937	419	100	408
Water-wheel	J. W. Houtz	705,087	July 22	3299	717	100	717
Water-wheel	T. S. Barwis	706,150	Aug. 5	298	60	100	1176
Water-wheel	G. W. Johnston	708,715	Sept. 9	1297	295	100	2255
Water-wheel	R. E. Woolman	710,029	Sept. 30	3945	890	100	2858
Water-wheel. Submerged	G. Marburg	707,857	Aug. 26	3628	818	100	1910
Water-wheel system. Horizontal	A. Giesler	705,993	July 29	5133	1119	100	1099
Water-wheel system. Turbine-	A. Giesler	705,994	July 29	5134	1119	100	1099
Waterer. Stock-	J. W. Kelley and C. W. Adkins	708,361	Sept. 2	659	148	100	2114
Watering trough, bowl, or basin	N. W. Griswold	708,345	Sept. 2	637	144	100	2111
Wave-detecting device	H. Shoemaker and G. W. Pickard	707,266	Aug. 19	2408	540	100	1645
Wave-motor	E. Chaquette	703,998	July 8	1166	254	100	247
Wave-motor	H. Williams	706,620	Aug. 12	1208	267	100	1375
Wave-power. Device for utilizing	J. C. Hergenhan and C. C. Von der Ahe	706,558	Aug. 12	1090	241	100	1351
Wave-responsive device. Current-actuated	R. A. Fessenden	706,744	Aug. 12	1441	318	100	1436
Wax. Prepared sealing-	T. Ardizone	709,182	Sept. 16	2155	494	100	2454
Weaner. Calf-	G. W. Moody	705,945	July 1	1048	228	100	209
Weaner. Calf-	L. H. Saunders	707,020	Aug. 12	1945	435	100	1530
Weaner. Calf-	D. Daggett	709,140	Sept. 16	2168	497	100	2458
Weaving-diagrams. Producing	J. Szczepanik	703,849	July 1	872	{192 / 193	100	174
Weaving-diagrams. Producing	J. Szczepanik	703,850	July 1	875	198	100	175
Weaving-diagrams. Producing	J. Szczepanik	703,851	July 1	879	194	100	176
Web-folding machine	R. C. Seymour	706,962	Aug. 12	1668	{374 / 375	100	1476
Weed-puller	J. A. Whelan	707,475	Aug. 19	2798	633	100	1726
Weeder	B. F. Clark and W. Smith	704,514	July 15	2162	468	100	469
Weeder tooth-fastener	G. A. Niles	707,624	Aug. 26	3108	700	100	1867
Weeding implement	B. Sandle	704,190	July 8	1416	303	100	298
Weigher. Automatic grain-	A. and J. H. McLeod	708,442	Aug. 5	906	{194 / 195	100	1297
Weighing apparatus	J. Manes	704,065	July 8	1289	279	100	271
Weighing-machine	D. S. Cook	703,547	July 1	311	70	100	63

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Weighing-machine	E. H. Cook	706,799	Sept. 9	1466	335	100	2294
Weighing-machine. Automatic	F. Barto	704,429	July 8	1970	429	100	415
					430		
Weighing-machine. Automatic	U. S. James	706,505	Aug. 12	1099	243	100	1353
					244		
Weighing-machine feeding apparatus	W. E. Nickerson	705,586	Aug. 12	1144	253	100	1353
					254		
Weighing-machine. Rotary	P. B. Clarke	708,544	July 1	300	68, 69	100	61
Weighing or packaging machine feed apparatus	W. H. Doble	705,222	July 22	3594	778	100	778
Weight-motor and governor mechanism	W. D. Bell	707,377	Aug. 19	2622	591	100	1660
Weir. Self-adjusting	C. C. Carlisle	706,586	Aug. 12	1040	229	100	1340
Welding and tapering sockets	P. Boyd	706,519	Aug. 12	1027	226	100	1338
					227		
Welding and tapering sockets. Apparatus for	P. Boyd	706,517	Aug. 12	1022	225	100	1337
					226		
Welding and tapering sockets. Apparatus for	P. Boyd	706,518	Aug. 12	1025	226	100	1338
Welding and tapering sockets. Apparatus for	P. Boyd	706,520	Aug. 12	1030	227	100	1338
Well-casing perforators. Automatic stop and lock for oil-	T. E. Clark	707,552	Aug. 26	2992	670	100	1777
Well-drilling machine	M. Williams	704,770	July 15	2205	564	100	559
Well-drilling tools. Fluid-pressure apparatus for	G. B. Gallagher and C. J. Macomber	705,173	Aug. 5	334	71	100	1185
Well-inlet	D. H. Maury	704,896	July 15	2847	616	100	610
Well-measuring device. Artesian	S. McCaughtry	706,488	Aug. 5	890	192	100	1295
Well-rig	E. A. Hardison	704,250	July 8	1642	356	100	343
					357		
Well-tube sand-screen	C. Monjeau	707,611	Aug. 26	3092	694	100	306
Wells. Expanding reamer for oil or Artesian	J. P. Smith	704,136	July 8	1457	312	100	2661
Wells, &c. Sucker-rod grab for oil-	W. La Barte	709,580	Sept. 23	3079	695	100	2105
Wells, &c. Tool for oil-	W. J. Dunlap	708,325	Sept. 2	605	137

Wheels and the product thereof. Molding spoke-	G. H. Dickerson and J. M. Gordon	707,213	Aug. 19	2321	520	100	1628
Wheels on shafts. Means for securing	C. C. Smalley	706,265	Aug. 5	511	110	100	1219
Wheelbarrow	W. A. House and W. F. Hosken	705,406	July 22	3994	865	100	858
Whiffletree	R. W. McKinley	707,795	Aug. 26	3507	791	100	1888
Whiffletree attachment	N. Reisner	706,109	Aug. 5	198	41	100	1157
Whiffletree-clip	W. R. Ayer	706,879	Aug. 12	1701	391	100	1482
Whiffletree-hook	C. V. Hoover	707,779	Aug. 26	3466	781	100	1879
Whiffletree-mounting	E. W. M. Bailey	706,004	Sept. 2	8	2	100	1982
Whip	M. O. Felker	708,397	July 1	63	12	100	15
Whips. Butt-loading for	H. W. Larsson	707,124	Aug. 19	2143	480	100	1589
Whist tray. Duplicate-	R. B. Starkweather	705,469	July 22	4109	893	100	892
Wind-motor	J. M. Cochran	708,766	July 1	720	159	100	144
					160		
Wind-motor	C. F. Bamford	705,195	July 22	3521	764	100	764
Wind-motor	A. Gran	705,922	July 29	5009	1090	100	1073
Wind-turbine	J. Kaiser	710,277	Sept. 30	4418	996	100	2954
Wind-wheel	A. J. Bolton	705,639	July 29	4495	975	100	970
Windmill	L. A. Haight	704,080	July 8	1225	264	100	258
Windmill	R. Bruneau	704,507	July 15	2141	463	100	463
Windmill	T. W. Lowe	708,375	Sept. 2	675	152	100	2118
					153		
Windmill and pump coupling mechanism	W. F. Pflueger	707,718	Aug. 26	3302	739	100	1847
					740		
Windmill-controller	W. J. Banish	706,714	Aug. 12	1370	305	100	1412
Windmill. Governor for	C. F. Ohler	705,782	July 29	4761	1082	100	1023
					1083		
Windmill-regulator. Automatic	E. A. Bromley	708,620	Sept. 9	1109	249	100	2217
Winding-machine	R. C. and F. L. Fay	707,684	Aug. 26	3233	725	100	1882
					726		
Winding machine. Cross-	R. Voigt	709,653	Sept. 23	3194	713	100	2054
Windlass	F. S. Manton	708,818	Sept. 9	1514	847	100	2303
					848		
Windlass. Ship's	C. W. Blake	708,455	Sept. 2	818	186	100	2147
					187		
Windlass. Sweep-operated hoisting-	E. R. Storrs	705,880	July 29	4984	1073	100	1058
Window	E. Kraft	708,600	July 1	896	98	100	79
Window	P. Lalor	705,098	July 22	3325	721	100	722
Window	J. Horsfield	705,999	July 29	5141	1121	100	1101
					796		
Window	H. Vettel	707,808	Aug. 26	3527	797	100	1892
					798		
Window and window-frame. Metal	W. R. Mudd	709,257	Sept. 16	2366	537	100	2498
Window appliance	C. E. Bradshaw	709,582	Sept. 23	2998	668	100	2045
Window brace and fastener	O. J. Jenks	706,065	Aug. 5	125	26	100	1143
Window-cleaner	E. B. Beeler	708,299	Sept. 2	560	127	100	2095

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Window-cleaning apparatus	S. C. Lawlor	706,834	Aug. 12	1619	363	100	1465
					364		
Window-cleaning apparatus	H. Baird	708,854	Sept. 9	1587	393	100	2219
Window-cleaning chair	S. Rabinowitz	705,262	July 22	3749	814	100	809
Window-fastener	W. W. Potter	706,595	Aug. 12	1158	257	100	1363
Window-fastener	L. D. Parks	708,067	Sept. 2	125	30	100	2007
Window-fastening device	D. Snell	709,736	Sept. 23	3822	747	100	2711
Window frame and sash	C. L. Wall	708,480	Sept. 2	770	173	100	2187
Window frame and sash	E. Davey	709,666	Sept. 23	3219	718	100	2090
					719		
Window frame and sash. Sheet-metal	C. B. Schilling	709,514	Sept. 23	2965	661	100	2037
Window-guard	H. P. Culver and M. Leichtentritt	706,029	Aug. 5	50	10	100	1138
Window-guard. Bowed nursery	G. C. and E. A. Williams	708,442	Sept. 2	791	179	100	2141
Window-guard. Nursery	G. C. and E. A. Williams	708,441	Sept. 2	790	179	100	2141
Window-locking device	J. Wanless	707,089	Aug. 12	1978	444	100	1537
Window-opener	J. Horsfield	705,405	July 22	3993	865	100	857
Window-screen	C. B. Warner	704,992	July 15	3107	669	100	662
Window-screen	J. P. McKeever	705,278	July 22	3722	807	100	801
Window-screen	M. Kolf	706,762	Aug. 12	1484	329	100	1426
Window-screen	O. Ouellette	707,449	Aug. 19	2754	594	100	1717
Window-screen	E. G. Holden	708,357	Sept. 2	553	147	100	2113
Window-screen	H. D. Mills	709,346	Sept. 16	2573	580	100	2543
Window-screen	E. Hipolito	709,405	Sept. 16	2709	607	100	2570
Window-screen	A. L. Taber	704,667	July 15	2419	523	100	521
Window-screen hanger	L. Wagener	710,127	Sept. 30	4144	935	100	2954
Window-seat	W. E. Hardeman	710,322	Sept. 30	4497	1014	100	2970
Window. Sliding	A. Gnezda and F. Hücker	708,401	July 1	68	13	100	16
Window support. Casement-	J. A. Russell	705,303	July 22	3767	817	100	812
Window-ventilator	D. O. Davis	706,905	Aug. 12	1753	392	100	1468
Window-ventilator	J. E. Meyer	705,270	July 22	3707	804	100	799
Wine-cooler	L. Perotti	705,437	July 22	4055	879	100	871
Wine-press	P. Garrett	704,533	July 15	2200	476	100	476
Wines. Preparing sparkling	W. H. Farrell	704,872	July 15	2803	606	100	600
Wire-bending machine	G. F. Pross and A. P. Tucker	707,006	Aug. 12	1916	429	100	1524
					430		
Wire. Combination-tool for manipulating	E. C. Cullen	709,749	Sept. 23	3385	739	100	2722
Wire-covering machine	A. Kreidler	704,550	July 15	2231	483	100	482
Wire-fabric machine	T. Sutherland	708,679	Sept. 9	1213	277	100	2238
					278		
					279		
					280		
Wire-grip	J. D. Campbell and R. C. Kyle	708,314	Sept. 2	586	132	100	2101
Wire machine. Barb-	H. Gauerman and D. Pryde	707,315	Aug. 19	2514	566	100	1666
					567		
Wire machine. Barbed-	E. F. Shellaberger	704,710	July 15	2489	538	100	536
					539		
Wire machine. Barbed-	W. Emery	705,304	July 22	3972	860	100	852
					861		
Wire-machine tension device. Barbed-	F. W. Macke and M. Miller	705,688	July 29	4588	996	100	988
Wire reel. Barbed-	Z. D. Smith	708,596	Sept. 9	1063	241	100	2207
Wire-reel truck	F. W. Schooley	709,982	Sept. 30	3760	849	100	2813
					850		
Wire-rope machine	E. P. Frederick	708,778	July 1	739	164	100	148
Wire-straightener	J. G. Iverson	710,151	Sept. 30	4195	945	100	2904
Wire-stretcher	W. M. Halpain	704,875	July 15	2807	607	100	601
Wire-stretcher	C. Lienhardt	705,259	July 22	3693	801	100	796
Wire-stretcher	J. Stevenson	705,547	July 22	4327	935	100	929
Wire-stretcher	R. F. Boatright	705,555	July 29	4349	941	100	941
Wire-stretcher	S. Bates	705,684	July 29	4490	974	100	969
Wire-stretcher	M. E. Shinn and F. J. Herbert	707,526	Aug. 19	2898	655	100	1747
Wire-stretcher	E. E. Swarm	707,782	Aug. 26	3531	746	100	1853
Wire-stretcher	F. C. Garton	708,474	Sept. 2	850	194	100	2154
Wire-stretcher	A. J. Goldsby	708,706	Sept. 9	1278	292	100	2251
Wire-stretcher	H. Hyde	705,843	July 29	4864	1057	100	1044
Wire-stretching machine	D. W. Aylworth	708,612	Sept. 9	1098	247	100	2214
Wire-tie	J. Imbler	706,948	Aug. 12	1820	407	100	1505
Wire tie. Stay-	T. Spriggs	706,606	Aug. 12	1178	261	100	1370
Wire-tightener	S. W. Bradbury	708,196	Sept. 2	881	88	100	2059
Wire twisting and reeling machine	W. Emery	705,331	July 22	3846	833	100	827
Wire. Weaving	C. W. James	704,339	July 8	1819	394	100	393
Wires, conductors, &c. Coupling for	J. Fischer and H. Schneider	704,869	July 15	2798	605	100	599
Wires. Metal fastening for cross-	B. S. Blake	709,695	Sept. 23	3278	733	100	2701
Wireworking-tool	D. M. Bailey	708,613	Sept. 9	1099	247	100	2215
Wiring wood slats. Machine for	C. M. Alger	708,111	Sept. 2	199	47, 48	100	2023
Wood-bending	S. Clark	709,304	Sept. 16	2302	523	100	2485
Wood-cutting machine	J. A. Crismore	705,324	July 22	3823	828	100	823
